[4] There are further reasons why we should sometimes dispense with *partition*. In the first place there are many points which can be produced in a more attractive manner, if they appear to be discovered on the spot and not to have been brought ready made from our study, but rather to have sprung from the requirements of the case itself while we were speaking. Thus we get those not unpleasing figures such as "It has almost escaped me," "I had forgotten," or "You do well to remind me." For if we set forth all that we propose to prove in advance, we shall deprive ourselves of the advantage springing from the charm of novelty.

[5] interim vero etiam fallendus est iudex et variis artibus subeundus, ut aliud agi quam quod petimus putet. nam est nonnunquam dura propositio, quod iudex si providit, non aliter praeformidat quam qui ferrum medici priusquam curetur aspexit; at si re non ante proposita securum ac nulla denuntiatione in se conversum intrarit oratio, efficiet, quod promittenti non crederetur.

[5] Sometimes we shall even have to hoodwink the judge and work upon him by various artifices so that he may think that our aim is other than what it really is. For there are cases when a *proposition* may be somewhat startling: if the judge foresees this, he will shrink from it in advance, like a patient who catches sight of the surgeon's knife before the operation. On the other hand, if we have given him no preliminary notice and our words take him unawares, without his interest in them having been previously roused by any warning, we shall gain a credence which we should not have secured had we stated that we were going to raise the point.

[6] interim refugienda non modo distinctio quaestionum est, sed omnino tractatio; adfectibus turbandus et ab intentione auferendus auditor. Non enim solum oratoris est docere, sed plus eloquentia circa movendum valet. cui rei contraria est maxime tenuis illa et scrupulose in partes secta divisionis diligentia eo tempore quo cognoscenti iudicium conamur auferre.

[6] At times we must not merely avoid distinguishing between the various questions, but must omit them altogether, while our audience must be distracted by appeals to the emotion and their attention diverted. For the duty of the orator is not merely to instruct: the power of eloquence is greatest in emotional appeals. Now there is no room for passion if we devote our attention to minute and microscopic division at a time when we are seeking to mislead the judgment of the person who is trying the case.

[7] quid quod interim, quae per se levia sunt et infirma, turba valent? ideoque congerenda sunt potius et velut eruptione pugnandum; quod tamen rarum esse debet et ex necessitate demum, cum hoc ipsum quod dissimile rationi est coegerit ratio.

[7] Again, there are certain arguments which are weak and trivial when they stand alone, but which have great force when produced in a body. We must, therefore, concentrate such arguments, and our tactics should be those of a sudden charge in mass. This, however, is a practice which should be resorted to but rarely and only under extreme necessity when reason compels us to take a course which is apparently irrational.

[8] praeter haec in omni partitione est utique aliquid potentissimum, quod cum audivit iudex cetera tanquam supervacua gravari solet. itaque si plura vel obicienda sunt vel diluenda, et utilis et iucunda partitio est ut, quid quaque de re dicturi simus, ordine appareat; at si unum crimen varie defendemus, supervacua.

[8] In addition it must be pointed out that in any *partition* there is always some one point of such special importance, that when the judge has heard it he is impatient with the remainder, which he regards as superfluous. Consequently if we have to prove or refute a number of points *partition* will be both useful and attractive, since it will indicate in order what we propose to say on each subject. On the other hand, if we are defending one point on various grounds *partition* will be unnecessary.

[9] ut si illa partiamur, dicam non talem esse hunc quem tueor reum, ut in eo credibile videri possit homicidium; dicam occidendi causam huic non fuisse; dicam hunc eo tempore quo homo occisus est trans mare fuisse, omnia, quae ante id quod ultimum est exsequeris, inania videri necesse est.

[9] If you were to make a *partition* such as the following, "I will not say that the character of my client is such as to render him incapable of murder, I will

only say that he had no motive for murder and that at the time when the deceased was killed he was overseas,” in that case all the proofs which you propose to bring before this, the final proof, must needs seem superfluous to the judge.

[10] *festinat enim iudex ad id quod potentissimum est. et velut obligatum promisso patronum, si est patientior, tacitus appellat; si vel occupatus vel in aliqua potestate vel etiam si moribus inkompositus, cum convicio efflagitat.*

[10] For the judge is always in a hurry to reach the most important point. If he has a patient disposition he will merely make a silent appeal to the advocate, whom he will treat as bound by his promise. On the other hand, if he is busy, or holds exalted position, or is intolerant by nature, he will insist in no very courteous manner on his coming to the point.

[11] *itaque non defuerunt, qui Ciceronis illam pro Cluentio partitionem improbarent, qua se dicturum esse promisit primum, neminem maioribus criminibus, gravioribus testibus, in iudicium vocatum quam Oppianicum; deinde praeiudicia esse facta ab ipsis iudicibus, a quibus condemnatus sit; postremo, iudicium pecunia temptatum non a Cluentio, sed contra Cluentium; quia, si probari posset, quod est tertium,*

[11] For these reasons there are some who disapprove of the *partition* adopted by Cicero in the *pro Cluentio*, where he premises that he is going to show, first, “that no man was ever arraigned for greater crimes or on stronger evidence than Oppianicus,” secondly, “that previous judgments had been passed by those very judges by whom he was condemned,” and finally, “that Cluentius made no attempt to bribe the jury, but that his opponent did.” They argue that if the third point can be proved, there is no need to have urged the two preceding.

[12] *nihil necesse fuerit dicere priora. rursus nemo tam erit iniustus aut stultus, quin eum fateatur optime pro Murena esse partitum: intelligo, indices, tris totius accusationis fuisse partis, et earum unam in reprehensione vitae, alteram in contentione dignitatis, tertiam in criminibus ambitus esse versatam. nam sic et ostendit lucidissime causam et nihil fecit altero supervacuum.*

[12] On the other hand you will find no one so unreasonable or so foolish as to deny that the *partition* in the *pro Murena* is admirable. “I understand, gentlemen, that the accusation falls into three parts, the first aspersing my client’s character, the second dealing with his candidature for the magistracy, and the third with charges of bribery.” These words make the case as clear as possible, and no one division renders any other superfluous.

[13] *de illo quoque genere defensionis plerique dubitant: si occidi, recte feci; sed non occidi; quo enim prius pertinere, si sequens firmum sit? haec invicem obstore, et utroque utentibus in neutro haberi fidem. quod sane in parte verum*

est, et illo sequenti, si modo indubitabile est,

[13] There are also a number who are in doubt as to a form of defence which I may exemplify as follows: "If I murdered him, I did right; but I did not murder him." What, they ask, is the value of the first part, if the second can be proved, since they are mutually inconsistent, and if anyone employs both arguments, we should believe neither? This contention is partially justified; we should employ the second alone only if the fact can be proved without a doubt.

[14] sit solo utendum. At si quid in eo, quod est fortius, timebimus, utraque probatione nitemur. alius enim alio moveri solet, et qui factum putavit, iustum credere potest; qui tanquam iusto non movebitur, factum fortasse non credet. ut certa manus uno telo possit esse contenta, incerta plura spargenda sunt,

[14] But if we have any doubts as to being able to prove the stronger argument, we shall do well to rely on both. Different arguments move different people. He who thinks that the act was committed may regard it as a just act, while he who is deaf to the plea that the act was just may perhaps believe that it was never committed: one who is confident of his powers as a marksman may be content with one shaft, whereas he who has no such confidence will do well to launch several and give fortune a chance to come to his assistance.

[15] ut sit et fortunate locus. egregie vero Cicero pro Milone insidiatorem primum Clodium ostendit, tum addidit ex abundanti, etiamsi id non fuisset, talem tamen civem cum summa virtute interfectoris et gloria necari potuisse.

[15] Cicero in the *pro Milone* reveals the utmost skill in showing first that Clodius laid an ambush for Milo and then in adding as a supernumerary argument that, even if he had not done so, he was nevertheless so bad a citizen that his slaying could only have done credit to the patriotism of the slayer and redounded to his glory.

[16] neque illum tamen ordinem, de quo prius dixi, damnaverim; quia quaedam, etiamsi ipsa sunt dura, in id tamen valent, ut ea molliant quae sequuntur. nec omnino sine ratione est quod vulgo dicitur: iniquum petendum, ut aequum feras.

[16] I would not however entirely condemn the order mentioned above, since there are certain arguments which, though hard in themselves, may serve to soften those which come after. The proverb, "If you want to get your due, you must ask for something more,"

[17] quod tamen nemo sic accipiat ut omnia credat audenda. recte enim Graeci praecipunt, Non temptanda, quae effici omnino non possint. Sed quotiens hac, de qua loquor, duplici defensione utemur, id laborandum est, ut in illam partem sequentem fides ex priore ducatur. potest enim videri, qui tuto etiam confessorus fuit, mentiendi causam in negando non habere.

[17] is not wholly unreasonable. Still no one should interpret it to mean that you must stop short of nothing. For the Greeks are right when they lay it down as a rule that we should not attempt the impossible. But whenever the double-barrelled defence of which I am speaking is employed, we must aim at making the first argument support the credibility of the second. For he who might without danger to himself have confessed to the commission of the act, can have no motive for lying when he denies the commission.

[18] et illud utique faciendum est, ut, quotiens suspicabimur a iudice aliam probationem desiderari quam de qua loquimur, promittamus nos plene et statim de eo satis esse facturos, praecipueque si de pudore agetur.

[18] Above all it is important, whenever we suspect that the judge desires a proof other than that on which we are engaged, to promise that we will satisfy him on the point fully and without delay, more especially if the question is one of our client's honour.

[19] frequenter autem accidit, ut causa parum verecunda iure tuta sit; de quo ne inviti iudices audiant et aversi, frequentius sunt admonendi, secururam defensionem probitatis et dignitatis; exspectent paulum et agi ordine sinant.

[19] But it will often happen that a discreditable case has the law on its side, and to prevent the judges giving us only a grudging and reluctant hearing on the point of law, we shall have to warn them with some frequency that we shall shortly proceed to defend our client's honour and integrity, if they will only wait a little and allow us to follow the order of our proofs.

[20] quaedam interim nos invitis litigatoribus simulandum est dicere, quod Cicero pro Cluentio facit circa iudiciariam legem; nonnunquam, quasi interpellamur ab iis, subsistere; saepe convertenda ad ipsos oratio; hortandi ut sinant nos uti nostro consilio. ita surrepetur animo iudicis et, dum sperat probationem pudoris, asperioribus illis minus repugnabit.

[20] We may also at times pretend to say certain things against the wishes of our clients, as Cicero does in the *pro Cluentio* when he discusses the law dealing with judicial corruption. Occasionally we may stop, as though interrupted by our clients, while often we shall address them and exhort them to let us act as we think best. Thus we shall make a gradual impression on the mind of the judge, and, buoyed up by the hope that we are going to clear our client's honour, he will be less ill-disposed toward the harder portions of our proof. And when he has accepted these,

[21] quae cum receperit, etiam verecundiae defensioni facilius erit. sic utraque res invicem iuvabit, eritque iudex circa ius nostrum spe modestiae attentior, circa modestiam iuris probatione proclivior.

[21] he will be all the readier to listen to our defence of our client's character.

Thus the two points will render mutual assistance to each other; the judge will be more attentive to our legal proofs owing to his hope that we shall proceed to a vindication of character and better disposed to accept that vindication because we have proved our point of law.

[22] Sed ut non semper necessaria aut utilis est partitio, ita opportune adhibita plurimum orationi lucis et gratiae confert. neque enim solum id efficit, ut clariora fiant, quae dicuntur, rebus velut ex turba extractis et in conspectu iudicum positis; sed reficit quoque audientem certo singularum partium fine, non aliter quam facientibus iter multum detrahunt fatigationis notata inscriptis lapidibus spatia.

[22] But although *partition* is neither always necessary nor useful, it will, if judiciously employed, greatly add to the lucidity and grace of our speech. For it not only makes our arguments clearer by isolating the points from the crowd in which they would otherwise be lost and placing them before the eyes of the judge, but relieves his attention by assigning a definite limit to certain parts of our speech, just as our fatigue upon a journey is relieved by reading the distances on the milestones which we pass.

[23] nam et exhausti laboris nosse mensuram voluptati est, et hortatur ad reliqua fortius exsequenda scire quantum supersit. nihil enim longum videri necesse est, in quo, quid ultimum sit, certum est.

[23] For it is a pleasure to be able to measure how much of our task has been accomplished, and the knowledge of what remains to do stimulates us to fresh effort over the labour that still awaits us. For nothing need seem long, when it is definitely known how far it is to the end.

[24] nec immerito multum ex diligentia partiendi tulit laudis Q. Hortensius, cuius tamen divisionem in digitos diductam nonnunquam Cicero leviter eludit. nam est suus et in gestu modus, et vitanda, utique maxime, concisa nimium et velut articulosa partitio.

[24] Quintus Hortensius deserves the high praise which has been awarded him for the care which he took over his *partitions*, although Cicero more than once indulges in kindly mockery of his habit of counting his headings on his fingers. For there is a limit to gesture, and we must be specially careful to avoid excessive minuteness and any suggestion of articulated structure in *our partition*. If our divisions are too small,

[25] nam et auctoritati plurimum detrahunt minuta illa nec iam membra sed frustra, et huius gloriae cupidi, quo subtilius et copiosius divisisse videantur, et supervacua adsumunt et quae natura singularia sunt secant, nec tam plura faciunt quam minora; deinde cum fecerunt mille particulas, in eandem incidunt obscuritatem, contra quam partitio inventa est.

[25] they cease to be limbs and become fragments, and consequently detract not

a little from the authority of our speech. Moreover, those who are ambitious of this sort of reputation, in order that they may appear to enhance the nicety and tile exhaustive nature of their division, introduce what is superfluous and subdivide things which naturally form a single whole. The result of their labours is, however, not so much to increase the number of their divisions as to diminish their importance, and after all is done and they have split up their argument into a thousand tiny compartments, they fall into that very obscurity which the *partition* was designed to eliminate.

[26] et divisa autem et simplex propositio, quotiens utiliter adhiberi potest, primum debet esse aperta atque lucida (nam quid sit turpius, quam id esse obscurum ipsum, quod in eum solum adhibetur usum, ne sint cetera obscura?), tum brevis nec ullo supervacuo onerata verbo. Non enim, quid dicamus, sed de quo dicturi simus ostendimus.

[26] The *proposition*, whether single or multiple, must, on every occasion when it can be employed with profit, be clear and lucid; for what could be more discreditable than that a portion of the speech, whose sole purpose is to prevent obscurity elsewhere, should itself be obscure? Secondly it must be brief and must not be burdened with a single superfluous word; for we are not explaining what we *are* saying, but what we are going to say.

[27] obtinendum etiam, ne quid in ea desit, ne quid supersit. superest autem sic fere, cum aut in species partimur, quod in genera partiri sit satis, aut genere posito subiicitur species, ut dicam de virtute, iustitia, continentia, cum iustitia atque continentia virtutis sint species.

[27] We must also ensure that it is free alike from omissions and from redundancy. Redundance as a rule occurs through our dividing into *species* when it would be sufficient to divide into *genera*, or through the addition of *species* after stating the *genus*. The following will serve as an example: "I will speak of virtue, justice and abstinence." But justice and abstinence are *species* of tile *genus* virtue.

[28] partitio prima est, quid sit de quo conveniat, quid de quo ambigatur. In eo, quod convenit, quid adversarius fateatur, quid nos; in eo, de quo ambigatur, quae nostrae propositiones, quae partis adversae. pessimum vero, non eodem ordine exsequi, quo quidque proposueris.

[28] Our first *partition* will be between admitted and disputed facts. Admitted facts will then be divided into those acknowledged by our opponent and those acknowledged by ourselves. Disputed facts will be divided into those which we and those which our opponents allege. But the worst fault of all is to treat your points in an order different from that which was assigned them in your *proposition*.

LIBER V — BOOK V

pr. fuerunt et clari quidem auctores, quibus solum videretur oratoris officium docere; namque et adfectus duplici ratione excludendos putabant, primum quia vitium esset omnis animi perturbatio, deinde quia iudicem a veritate depelli misericordia gratia similibusque non oporteret, et voluptatem audientium petere, cum vincendi tantum gratia diceretur, non modo agenti supervacuum, sed vix etiam viro digium arbitrabantur;

[1] There have been certain writers of no small authority who have held that the sole duty of the orator was to instruct: in their view appeals to the emotions were to be excluded for two reasons, first on the ground that all disturbance of the mind was a fault, and secondly that it was wrong to distract the judge from the truth by exciting his pity, bringing influence to bear, and the like. Further, to seek to charm the audience, when the aim of the orator was merely to win success, was in their opinion not only superfluous for a pleader, but hardly worthy of a self-respecting man.

[2] plures vero, qui nec ab illis sine dubio partibus rationem orandi summovent, hoc tamen proprium atque praecipuum crederent opus, sua confirmare et quae ex adverso proponerentur refutare.

[2] The majority however, while admitting that such arts undoubtedly formed part of oratory, held that its special and peculiar task is to make good the case which it maintains and refute that of its opponent.

[3] utrumcunque est (neque enim hoc loco meam interpono sententiam), hic erit liber illorum opinione maxime necessarius, quia toto haec sola tractantur; quibus sane et ea, quae de iudicialibus causis iam dicta sunt, serviunt.

[3] Whichever of these views is correct (for at this point I do not propose to express my own opinion), they will regard this book as serving a very necessary purpose, since it will deal entirely with the points on which they lay such stress, although all that I have already said on the subject of judicial causes is subservient to the same end.

[4] nam neque prooemii neque narrationis est alius usus, quam ut iudicem huic praeparent; et status nosse atque ea, de quibus supra scripsimus, intueri supervacuum foret, nisi ad hanc perveniremus.

[4] For the purpose of the *exordium* and the *statement of facts* is merely to prepare the judge for these points, while it would be a work of supererogation to know the *bases* of cases or to consider the other points dealt with above, unless we intend to proceed to the consideration of the *proof*. Finally,

[5] denique ex quinque quas iudicialis materiae fecimus partibus, quaecunque alia potest aliquando necessaria causae non esse; lis nulla est, cui probatione

opus non sit. eius praecepta sic optime divisuri videmur, ut prius, quae in commune ad omnes quaestiones pertinent, ostendamus; deinde, quae in quoque causae genere propria sint, exsequamur.

[5] of the five parts into which we divided judicial cases, any single one other than the *proof* may on occasion be dispensed with. But there can be no suit in which the *proof* is not absolutely necessary. With regard to the rules to be observed in this connexion, we shall, I think, be wisest to follow our previous method of classification and show first what is common to all cases and then proceed to point out those which are peculiar to the several kinds of cases.

1. ac prima quidem illa partitio ab Aristotele tradita consensum fere omnium meruit, alias esse probationes, quas extra dicendi rationem acciperet orator, alias, quas ex causa traheret ipse et quodam modo gigneret. ideoque illas ἄτεχνοὺς, id est inartificiales, has ἐντέχνοὺς, id est artificiales, vocaverunt.

1. 1. To begin with it may be noted that the division laid down by Aristotle has met with almost universal approval. It is to the effect that there are some proofs adopted by the orator which lie outside the art of speaking, and others which he himself deduces or, if I may use the term, begets out of his case. The former therefore have been styled ἄτεχνοί or *inartificial* proofs, the latter ἐντέχνοί or *artificial*.

[2] Ex illo priore genere sunt praeiudicia, rumores, tormenta, tabulae, iusiurandum, testes, in quibus pars maxima contentionum forensium consistit. Sed ut ipsa per se carent arte, ita summis eloquentiae viribus et adlevanda sunt plerumque et refellenda. Quare mihi videntur magnopere damnandi, qui totum hoc genus a praeceptis removerunt.

[2] To the first class belong decisions of previous courts, rumours, evidence extracted by torture, documents, oaths, and witnesses, for it is with these that the majority of forensic arguments are concerned. But though in themselves they involve no art, all the powers of eloquence are as a rule required to disparage or refute them. Consequently in my opinion those who would eliminate the whole of this class of proof from their rules of oratory, deserve the strongest condemnation.

[3] nec tamen in animo est omnia, quae aut pro his aut contra dici solent, complecti. Non enim communes locos tradere destinamus, quod esset operis infiniti, sed viam quandam atque rationem. Quibus demonstratis, non modo in exsequendo suas quisque vires debet adhibere, sed etiam inveniando similia, ut quaeque condicio litium poscet. neque enim de omnibus causis dicere quisquam potest saltem praeteritis, ut taceam de tuturis.

[3] It is not, however, my intention to embrace all that can be said for or against these views. I do not for instance propose to lay down rules for commonplaces, a task requiring infinite detail, but merely to sketch out the

general lines and method to be followed by the orator. The method once indicated, it is for the individual orator not merely to employ his powers on its application, but on the invention of similar methods as the circumstances of the case may demand. For it is impossible to deal with every kind of case, even if we confine ourselves to those which have actually occurred in the past without considering those which may occur in the future.

2. iam praeiudiciorum vis omnis tribus in generibus versatur: rebus, quae aliquando ex paribus causis sunt iudicatae, quae exempla rectius dicuntur, ut de rescissis patrum testamentis vel contra filios confirmatis; iudiciis ad ipsam causam pertinentibus, unde etiam nomen ductum est, qualia in Oppianicum facta dicuntur et a senatu adversus Milonem; aut cum de eadem causa pronuntiatum est, ut in reis deportatis et assertione secunda et partibus centumviralium, quae in duas hastas divisae sunt.

2. As regards decisions in previous courts, these fall under three heads. First, we have matters on which judgment has been given at some time or other in cases of a similar nature: these are, however, more correctly termed precedents, as for instance where a father's will has been annulled or confirmed in opposition to his sons. Secondly, there are judgments concerned with the case itself; it is from these that the name *praeiudicium* is derived: as examples I may cite those passed against Oppianicus or by the senate against Milo. Thirdly, there are judgments passed on the actual case, as for example in cases where the accused has been deported, or where renewed application is made for the recognition of an individual as a free man, or in portions of cases tried in the centumviral court which come before two different panels of judges.

[2] confirmantur praecipue duobus: auctoritate eorum, qui pronuntiaverunt, et similitudine rerum, de quibus quaeritur; refelluntur autem raro per contumeliam iudicum, nisi forte manifesta in iis culpa erit. vult enim cognoscentium quisque firmam esse alterius sententiam, et ipse pronuntiaturus, nec libenter exemplum, quod in se fortasse recidat, facit.

[2] Such previous decisions are as a rule confirmed in two ways: by the authority of those who gave the decision and by the likeness between the two cases. As for their reversal, this can rarely be obtained by denouncing the judges, unless they have been guilty of obvious error. For each of those who are trying the case wishes the decision given by another to stand, since he too has to give judgment and is reluctant to create a precedent that may recoil upon himself.

[3] confugiendum ergo est in duobus superioribus, si res feret, ad aliquam dissimilitudinem causae; vix autem ulla est per omnia alteri similis. si id non continget aut eadem causa erit, actionum incusanda negligentia aut de infirmitate personarum querendum, contra quas erit iudicatum, aut de gratia,

quae testes corruperit, aut de invidia aut de ignorantia, aut videndum, quid causae postea accesserit.

[3] Consequently, as regards the first two classes, we must, if possible, take refuge in some dissimilarity between the two cases, and two cases are scarcely ever alike in all their details. If, however, such a course is impossible and the case is the same as that on which the previous decision was given, we must complain of the negligence shown in the conduct of the previous case or of the weakness of the parties condemned, or of undue influence employed to corrupt the witnesses, or again of popular prejudice or ignorance which reacted unfavourably against our client; or else we must consider what has occurred since to alter the aspect of the case.

[4] quorum si nihil erit, licet tamen dicere multos iudiciorum casus ad inique pronuntiandum valere ideoque damnatum Rutilium, absolutos Clodium atque Catilinam. rogandi etiam iudices, ut rem potius intueantur ipsam, quam iuriurando alieno suum donent.

[4] If none of these courses can be adopted, it will still be possible to point out that the peculiar circumstances of many trials have led to unjust decisions; hence condemnations such as that of Rutilius and acquittals such as those of Clodius and Catiline. We must also ask the judges to consider the facts of the case on their merits rather than make their verdict the inevitable consequence of a verdict given by others.

[5] adversus consulta autem senatus et decreta principum vel magistratuum remedium nullum est, nisi aut inventa quantulacunque causae differentia aut aliqua vel eorundem vel eiusdem potestatis hominum posterior constitutio, quae sit priori contraria; quae si deerunt, lis non erit.

[5] When, however, we are confronted by decrees of the senate, or ordinances of emperors or magistrates, there is no remedy, unless we can make out that there is some difference, however small, between the cases, or that the same persons or persons holding the same powers have made some subsequent enactment reversing the former decision. Failing this, there will be no case for judgment.

3. famam atque rumores pars altera consensum civitatis et velut publicum testimonium vocat, altera sermonem sine ullo certo auctore dispersum, cui malignitas initium dederit, incrementum credulitas; quod nulli non etiam innocentissimo possit accidere fraude inimicorum falsa vulgantium. exempla utrinque non deerunt.

3. With regard to rumour and common report, one party will call them the verdict of public opinion and the testimony of the world at large; the other will describe them as vague talk based on no sure authority, to which malignity has given birth and credulity increase, an ill to which even the most

innocent of men may be exposed by the deliberate dissemination of falsehood on the part of their enemies. It will be easy for both parties to produce precedents to support their arguments.

4. sicut in tormentis quoque, qui est locus frequentissimus, cum pars altera quaestionem vera fatendi necessitatem vocet, altera saepe etiam causam falsa dicendi, quod aliis patientia facile mendacium faciat, aliis infirmitas necessarium. quid attinet de his plura? plenae sunt orationes veterum ac novorum.

4. A like situation arises in the case of evidence extracted by torture: one party will style torture an infallible method of discovering the truth, while the other will allege that it also often results in false confessions, since with some their capacity of endurance makes lying an easy thing, while with others weakness makes it a necessity. It is hardly worth my while to say more on the subject, as the speeches both of ancient and modern orators are full of this topic.

[2] quaedam tamen in hac parte erunt propria cuiusque litis. nam sive de habenda quaestione agetur, plurimum intererit, quis et quem postulet aut offerat et in quem et ex qua causa; sive iam erit habitat, quis ei praefuerit, quis et quomodo sit tortus, incredibilia dixerit an inter se constantia, perseveraverit in eo quod coeperat. an aliquid dolore mutarit, prima parte quaestionis an procedente cruciatu. Quae utrinque tam infinita sunt quam ipsa rerum varietas.

[2] Individual cases may however involve special considerations in this connexion. For if the point at issue is whether torture should be applied, it will make all the difference who it is who demands or offers it, who it is that is to be subjected to torture, against whom the evidence thus sought will tell, and what is the motive for the demand. If on the other hand torture has already been applied, it will make all the difference who was in charge of the proceedings, who was the victim and what the nature of the torture, whether the confession was credible or consistent, whether the witness stuck to his first statement or changed it under the influence of pain, and whether he made it at the beginning of the torture or only after it had continued some time. The variety of such questions is as infinite as the variety of actual cases.

5. contra tabulas quoque saepe dicendum est, cum eas non solum refelli sed etiam accusari sciamus esse usitatum. cum sit autem in his aut scelus signatorum aut ignorantia, tutius ac facilius id, quod secundo loco diximus, tractatur, quod pauciores rei fiunt.

5. It is also frequently necessary to speak against documents, for it is common knowledge that they are often not merely rebutted, but even attacked as forgeries. But as this implies either fraud or ignorance on the part of the signatories, it is safer and easier to make the charge one of ignorance, because by so doing we reduce the number of the persons accused.

[2] Sed hoc ipsum argumenta ex causa trahit, si forte aut incredibile est id actum esse, quod tabulae continent, aut, ut frequentius evenit, aliis probationibus aequae inartificialibus solvitur; si aut is in quem signatum est, aut aliquis signator dicitur afuisse vel prius esse defunctus; si tempora non congruunt; si vel antecedentia vel insequentia tabulis repugnant. inspectio etiam ipsa saepe falsum deprehendit.

[2] But our proceedings as a whole will draw their arguments from the circumstances of the case at issue. For example, it may be incredible that an incident occurred as stated in the documents, or, as more often happens, the evidence of the documents may be overthrown by other proofs which are likewise of an *inartificial* nature; if, for example, it is alleged that the person, whose interests are prejudiced by the document, or one of the signatories was absent when the document was signed, or deceased before its signature, or if the dates disagree, or events preceding or following the writing of the document are inconsistent with it. Even a simple inspection of a document is often sufficient for the detection of forgery.

6. iusiurandum litigatores aut offerunt suum aut non recipiunt oblatum, aut ab adversario exigunt aut recusant, cum ab ipsis exigatur. offerre suum sine illa condicione, ut vel adversarius iuret, fere improbum est.

6. With regard to oaths, parties either offer to take an oath themselves, or refuse to accept the oath of their opponent, demand that their opponent should take an oath or refuse to comply with a similar demand when proffered to themselves. To offer to take an oath unconditionally without demanding that one's opponent should likewise take an oath is as a rule a sign of bad faith.

[2] qui tamen id faciet, aut vita se tuebitur, ut eum non sit credibile peieraturum; aut ipsa vi religionis, in qua plus fidei consequetur, si id egerit, ut non cupide ad hoc descendere sed ne hoc quidem recusare videatur; aut, si causa patietur, modo litis, propter quam devoturus se ipse non fuerit; aut praeter alia causae instrumenta adiicit ex abundanti hanc quoque conscientiae suae fiduciam.

[2] If, however, anyone should take this course, he will defend his action by appealing to the blamelessness of his life as rendering perjury on his part incredible, or by the solemn nature of the oath, with regard to which he will win all the greater credence, if without the least show of eagerness to take the oath he makes it clear that he does not shrink from so solemn a duty. Or again, if the case is such as to make this possible, he will rely on the trivial nature of the point in dispute to win belief, on the ground that he would not incur the risk of the divine displeasure when so little is at stake. Or, finally, he may in addition to the other means which he employs to win his case offer to take an oath as a culminating proof of a clear conscience.

[3] qui non recipiet, et iniquam condicionem et a multis contemni iurisiurandi

metum dicet, cum etiam philosophi quidam sint reperti, qui deos agere rerum humanarum curam negarent; eum vero, qui nullo deferente iurare sit paratus, et ipsum velle de causa sua pronuntiare et, quam id quod offert leve ac facile credat, ostendere.

[3] The man who refuses to accept his opponent's offer to take an oath, will allege that the inequality of their respective conditions are not the same for both parties and will point out that many persons are not in the least afraid of committing perjury, even philosophers having been found to deny that the gods intervene in human affairs; and further that he who is ready to take an oath without being asked to do so, is really proposing to pass sentence on his own case and to show what an easy and trivial thing he thinks the oath which he offers to take.

[4] At is, qui defert, agere modeste videtur, cum litis adversarium iudicem faciat, et eum cuius cognitio est onere liberat, qui profecto alieno iureiurando stari quam suo mavult.

[4] On the other hand the man who proposes to put his opponent on oath appears to act with moderation, since he is making his adversary a judge in his own case, while he frees the actual judge from the burden of coming to a decision, since the latter would assuredly prefer to rest on another man's oath than on his own.

[5] quo difficilior recusatio est, nisi forte res est ea, quam credibile sit notam ipsi non esse. quae excusatio si deerit, hoc unum relinquetur, ut invidiam sibi quaeri ab adversario dicat atque id agi, ut in causa, in qua vincere non possit, queri possit; itaque hominem quidem malum occupaturum hanc condicionem fuisse, se autem probare malle quae adfirmet, quam dubium cuiquam relinquere, an peierarit.

[5] This fact makes the refusal to take an oath all the more difficult, unless indeed the affair in question be of such a nature that it cannot be supposed that the facts are known to the person asked to take the oath. Failing this excuse, there is only one course open to him: he must say that his opponent is trying to excite a prejudice against him and is endeavouring to give the impression that he has real ground for complaint though he is not in a position to win his case; consequently, though a dishonest man would eagerly have availed himself of the proposal, he prefers to prove the truth of his statements rather than leave a doubt in anyone's mind as to whether he has committed perjury or no.

[6] Sed nobis adolescentibus seniores in agendo facti praecipere solebant, ne temere unquam iusiurandum deferremus, sicut neque optio iudicis adversario esset permittenda nec ex advocatis partis adversae iudex eligendus; nam, si dicere contraria turpe advocato videretur, certe turpius habendum, facere quod noceat.

[6] But in my young days advocates grown old in pleading used to lay it down as a rule that we should never be in a hurry to propose that our opponent should take an oath, just as we should never allow him the choice of a judge nor select our judge from among the supporters of the opposite side: for if it is regarded as a disgrace to such a supporter to say anything against his client, it is surely a still worse disgrace that he should do anything that will harm his client's case.

7. Maximus tamen patronis circa testimonia sudor est. ea dicuntur aut per tabulas aut a praesentibus. simplicior contra tabulas pugna. nam et minus obstitisse videtur pudor inter paucos signatores, et pro diffidentia premitur absentia. si reprehensionem non capit ipsa persona, infamare signatores licet.

7. It is, however, the evidence that gives the greatest trouble to advocates. Evidence may be given either in writing or orally by witnesses present in court. Documentary evidence is easier to dispose of. For it is likely that the deponent was less ashamed of himself in the presence of a small number of witnesses, and his absence from court is attacked as indicating a lack of confidence. If we cannot call the character of the deponent in question, we may attack the witnesses to his signature.

[2] tacita praeterea quaedam cogitatio refragatur his omnibus, quod nemo per tabulas dat testimonium nisi sua voluntate; quo ipso non esse amicum ei se, contra quem dicit, fatetur. neque tamen protinus cesserit orator, quo minus et amicus pro amico et inimicus contra inimicum possit verum, si integra sit ei fides, dicere. Sed late locus uterque tractatur.

[2] Further there is always a certain tacit prejudice against documentary evidence, since no one can be forced to give such evidence save of his own free will, whereby he shows that he harbours unfriendly feelings towards the person against whom he bears witness. On the other hand an advocate should be chary of denying that a friend may give true evidence against a friend or an enemy against an enemy, provided they are persons of unimpeachable credit. But the subject admits of copious discussion, from whichever side it be regarded.

[3] cum praesentibus vero ingens dimicatio est, ideoque velut duplici contra eos proque iis acie configitur actionum et interrogationum. In actionibus primum generaliter pro testibus atque in testes dici solet. et hic communis locus,

[3] The task of dealing with the evidence of witnesses present in court is, however, one of great difficulty, and consequently whether defending or impugning them the orator employs a twofold armoury in the shape of a set speech and examination. In set speeches it is usual to begin with observations either on behalf of or against witnesses in general.

[4] cum pars altera nullam firmiorem probationem esse contendit, quam quae sit hominum scientia nixa; altera ad detrahendam illis fidem omnia, per quae fieri soleant falsa testimonia, enumerat.

[4] In so doing we introduce a commonplace, since one side will contend that there can be no stronger proof than that which rests on human knowledge, while the other, in order to detract from their credibility, will enumerate all the methods by which false evidence is usually given.

[5] sequens ratio est cum specialiter quidem, sed tamen multos pariter invadere patroni solent. nam et gentium simul universarum elevata testimonia ab oratoribus scimus et tota genera testimoniorum: ut de auditionibus; non enim ipsos esse testes sed iniuratorum adferre voces; ut in causis repetundarum, qui se reo numerasse pecunias iurant, litigatorum non testium habendos loco.

[5] The next procedure is the common practice of making a special attack, which all the same involves impugning the validity of evidence given by large numbers of persons. We know, for instance, that the evidence of entire nations and whole classes of evidence have been disposed of by advocates. For example, in the case of hearsay evidence, it will be urged that those who produce such evidence are not really witnesses, but are merely reporting the words of unsworn persons, while in cases of extortion, those who swear that they paid certain sums to the accused are to be regarded not as witnesses, but as parties to the suit.

[6] interim adversus singulos dirigitur actio; quod insectationis genus et permixtum defensionis legimus in orationibus plurimis et separatim editum, sicut in Vatinius testem.

[6] Sometimes however the advocate will direct his speech against single individuals. Such a form of attack may be found in many speeches, sometimes embedded in the speech for the defence and sometimes published separately like the speech against the evidence of Vatinius.

[7] totum igitur excutiamus locum, quando universam institutionem aggressi sumus. sufficiebant alioqui libri duo a Domitio Afro in hanc rem compositi, quem adolescentulus senem colui, ut non lecta mihi tantum ea, sed pleraque ex ipso sint cognita. is verissime praecepit primum esse in hac parte officium oratoris, ut totam causam familiariter norit; quod sine dubio ad omnia pertinet.

[7] The whole subject, therefore, demands a thorough investigation, as the task which we have in hand is the complete education of an orator. Otherwise the two books written on this subject by Domitius Afer would suffice. I attended his lectures when he was old and I was young, and consequently have the advantage not merely of having read his book, but of having heard most of his views from his own lips. He very justly lays down the rule that in this connexion it is the first duty of an orator to make himself thoroughly

acquainted with the case, a remark which of course applies to all portions of a speech.

[8] id quomodo contingat, explicabimus, cum ad destinatum huic parti locum venerimus. ea res suggeret materiam interrogationi et veluti tela ad manum subministrabit; eadem docebit, ad quae iudicis animus actione sit praeparandus. debet enim vel fieri vel detrahi testibus fides oratione perpetua, quia sic quisque dictis movetur, ut est ad credendum vel non credendum ante formatus.

[8] How such knowledge may be acquired I shall explain when I come to the appropriate portion of this work. This knowledge will suggest material for the examination and will supply weapons ready to the speaker's hand: it will also indicate to him the points for which the judge's mind must be prepared in the set speech. For it is by the set speech that the credit of witnesses should be established or demolished, since the effect of evidence on the individual judge depends on the extent to which he has been previously influenced in the direction of believing the witness or the reverse.

And since there are two classes of witnesses

[9] et quoniam duo genera sunt testium, aut voluntariorum aut eorum, quibus in iudiciis publicis lege denuntiari solet, quorum altero pars utraque utitur, alterum accusatoribus tantum concessum est, separemus officium dantis testes et refellentis.

[9] those who testify of their own free will and those who are summoned to attend in the public courts of whom the former are available to either party, the latter solely to the accusers, we must distinguish between the duties of the advocate who produces witnesses and the advocate who refutes them.

[10] qui voluntarium producit, scire quid is dicturus sit potest; ideoque faciliorem videtur in rogando habere rationem. Sed haec quoque pars acumen ac vigilantiam poscit, providendumque, ne timidus, ne inconstans,

[10] He who produces a voluntary witness is in a position to know what he is likely to say: consequently the task of examining him would seem to be rendered easier. But even here such cases make a great demand on the acumen and watchfulness of the advocate, who must see that his witness is neither timid, inconsistent nor imprudent.

[11] ne imprudens testis sit; turbantur enim et a patronis diversae partis inducuntur in laqueos et plus deprehensi nocent quam firmi et interriti profuissent. multum igitur domi ante versandi, variis percontationibus, quales haberi ab adversario possint, explorandi sunt. sic fit, ut aut constent sibi aut, si quid titubaverint, opportuna rursus eius a quo producti sunt interrogatione velut in gradum reponantur. In iis quoque adhuc,

[11] For the opposing counsel have a way of making a witness lose his head or of leading him into some trap; and once a witness trips, he does more harm to his own side than he would have done good, had he retained his composure and presence of mind. The advocate must therefore put his witnesses through their paces thoroughly in private before they appear in court and must test them by a variety of questions such as may well be put to them by his opponent. The result will be that they will not contradict themselves or, if they do make some slip, can be set upon their feet again by a timely question from the advocate who produces them.

[12] *qui constiterint sibi, vitandae insidiae; nam frequenter subiici ab adversario solent et omnia profutura polliciti diversa respondent et auctoritatem habent non arguentium illa, sed confitentium.*

[12] Still, even in the case of witnesses whose evidence is consistent, we must be on our guard against treachery. For such witnesses are often put up by one's opponent and, after promising to say everything that will help our case, give answers of exactly the opposite character and carry more weight by the admission of facts which tell against us than they would have done had they disproved them.

[13] *explorandum igitur, quas causas laedendi adversarium adferant; nec id sat est inimicos fuisse, sed an desierint, an per hoc ipsum reconciliari velint, ne corrupti sint, ne paenitentia propositum mutaverint. quod cum in iis quoque, qui ea, quae dicturi videntur, re vera sciunt, necessarium est praecavere; multo magis in iis, qui se dicturos, quae falsa sunt, pollicentur.*

[13] We must therefore discover what motives they have for doing our opponent a hurt, and the fact that they were once his enemies will not suffice our purpose: we must find out whether they have ceased to be ill-disposed to him or whether they desire by means of their evidence to effect a reconciliation with him, in order to assure ourselves that they have not been bribed or repented of their previous attitude and changed their purpose. Such precautions are necessary even with witnesses who know that what they propose to say is true; but it is still more necessary with those who promise to give false evidence.

[14] *nam et frequentior eorum paenitentia est et promissum suspectius et, si perseverarint, reprehensio faciliior.*

[14] For experience shows that they are more likely to repent of their purpose, their promises are less to be relied on, and, if they do keep their promise, their evidence is easier to refute.

[15] *eorum vero, quibus denuntiatur, pars testium est quae reum laedere velit, pars quae nolit, idque interim scit accusator interim nescit. fingamus in praesentia scire; in utroque tamen genere summis artibus interrogantis opus*

est.

[15] Witnesses appearing in answer to a subpoena may be divided into two classes: those who desire to harm the accused, and those who do not. The accuser sometimes is aware of their disposition, sometimes unaware. For the moment let us assume that he is aware of their disposition, although I must point out that in either case the utmost skill is required in their examination.

[16] nam si habet testem cupidum laedendi, cavere debet hoc ipsum, ne cupiditas eius appareat, nec statim de eo, quod in iudicium venit, rogare, sed aliquo circuitu ad id pervenire, ut illi, quod maxime dicere voluit, videatur expressum; nec nimium instare interrogationi, ne ad omnia respondendo testis fidem suam minuat, sed in tantum evocare eum, quantum sumere ex uno satis sit.

[16] For if an advocate is producing a witness who is desirous of harming the accused, he must avoid letting this desire become apparent, and must not at once proceed to question him on the point at issue. On the contrary this point must be approached by a circuitous route in such a manner as to make it seem that the statement which the witness is really desirous of making has been forced from him. Again lie should not press the witness too much, for fear he should impair his credit by the glibness with which lie answers every question, but should draw from him just so much as may seem reasonable to elicit from a single witness.

[17] At in eo, qui verum invitus dicturus est, prima felicitas interrogantis extorquere quod is noluerit. hoc non alio modo fieri potest quam longius interrogatione repetita. respondebit enim, quae nocere causae non arbitrabitur; ex pluribus deinde, quae confessus erit, eo perducetur ut quod dicere non vult negare non possit. nam,

[17] On the other hand in the case of a witness who is reluctant to tell the truth, the essential for successful examination is to extort the truth against his will. This can only be done by putting questions which have all the appearance of irrelevance. If this he done, he will give replies which he thinks can do no harm to the party which he favours, and subsequently will be led on from the admissions which he has made to a position which renders it impossible for him to deny the truth of the facts which he is reluctant to state.

[18] ut in oratione sparsa plerumque colligimus argumenta, quae per se nihil reum aggravare videantur, congregatione deinde eorum factum convincimus, ita huiusmodi testis multa de anteactis, multa de insecutis, loco, tempore, persona, ceteris est interrogandus, ut in aliquod responsum incidat, post quod illi vel fateri quae volumus necesse sit vel iis quae iam dixerit repugnare.

[18] For just as in a set speech we usually collect detached arguments which in themselves seem innocuous to the accused, but taken together prove the case

against him, so we must ask the reluctant witness a number of questions relative to acts antecedent or subsequent to the case, places, dates, persons, etcetera, with a view to luring him into some reply which will force him to make the admissions which we desire or to contradict his previous evidence.

[19] *id si non contingit, reliquum erit, ut eum nolle dicere manifestum sit, protrahendusque, ut in aliquo, quod vel extra causam sit, deprehendatur; tenendus etiam diutius, ut omnia ac plura quam res desiderat pro reo dicendo suspectus iudici fiat; quo non minus nocebit, quam si vera in reum dixisset.*

[19] If this fails, we must content ourselves with making it clear that he is reluctant to tell what he knows, and lead him with a view to tripping him up on some point or other, even though it be irrelevant to the case; we must also keep him in the witness-box for an unusual length of time, so that by saying everything that can be said and more than is necessary on behalf of the accused, he may be rendered suspect to the judge. Thus he will do the accused no less harm than if he had told the truth against him.

[20] *At si (quod secundo loco diximus) nesciet actor, quid propositi testis attulerit, paulatim et, ut dicitur, pedetentim interrogando experietur animum eius et ad id responsum quod eliciendum erit per gradus ducet.*

[20] But if (to proceed to our second supposition) the advocate does not know what the intentions of the witness may be, he must advance gradually inch by inch and sound him by examination and lead him step by step to the particular reply which it is desired to elicit.

[21] *Sed, quia nonnunquam sunt hae quoque testium artes, ut primo ad voluntatem respondeant, quo maiore fide diversa postea dicanti est actoris suspectum testem, dum prodest, dimittere.*

[21] But since these witnesses are sometimes so artful that their first replies are designed to meet the wishes of the questioner, in order to win all the greater credit when subsequently they answer in a very different way, it will be the duty of the advocate to dismiss a suspect witness while he can still do so with advantage.

[22] *patronorum in parte expeditior, in parte difficilior interrogatio est. difficilior hoc, quod raro unquam possunt ante indicium scire, quid testis dicturus sit; expeditior, quod, cum interrogandus est, sciunt quid dixerit.*

[22] In the case of advocates for the defence examination is in some respects easier, in some more difficult. It is more difficult because it is rarely possible for them to have any previous knowledge of what the witness is likely to say, and easier because, when they come to cross-examine, they know what he has already said.

[23] *itaque, quod in eo incertum est, cura et inquisitione opus est, quis reum*

premat, quas et quibus ex causis inimicitias habeat: eaque in oratione praedicenda atque amolienda sunt, sive odio conflatos testes sive invidia sive gratia sive pecunia videri volumus. et si deficietur numero pars diversa, paucitatem; si abundabit, conspiracyem; si humiles producet, vilitatem; si potentes, gratiam oportebit incessere.

[23] Consequently in view of the uncertainty involved, there is need for careful inquiry with a view to discovering the character of the witness against the accused and what are his motives for hostility and what its extent: and all such points about the witness should be set forth in advance and disposed of, whether we desire to represent the evidence against the accused as instigated by hatred, envy, bribery or influence. Further, if our opponents bring forward only a small number of witnesses, we must attack them on that head; if on the other hand they produce an excessive number, we must accuse them of conspiracy: if the witnesses are persons of inconspicuous rank, we must minimise their importance, while if they are powerful, we shall accuse our adversaries of bringing undue influence to bear.

[24] plus tamen proderit causas, propter quas reum laedant, exponere; quae sunt variae et pro condicione cuiusque litis aut litigatoris. nam contra illa, quae supra diximus, simili ratione responderi locis communibus solet, quia ut in paucis atque humilibus accusator simplicitate gloriari potest, quod neminem praeter eos, qui possint scire, quaesierit et multos atque honestos commendare aliquanto est facilius.

[24] It will, however, be still more helpful if we expose the motives which they have for desiring to injure the accused, and these will vary according to the nature of the case and the parties concerned. For the other lines of argument mentioned above are often answered by the employment of commonplaces on similar lines, since the prosecutor, if he produce but few witnesses of inconspicuous rank, can parade the simple honesty of his methods on the ground that he has produced none save those who are in a position to know the real facts, while if he produce a number of distinguished witnesses, it is even easier to commend them to the court.

[25] verum interim et singulos ut exornare, ita destruere contingit, aut recitatis in actione testimoniis aut testibus nominatis. quod iis temporibus, quibus testis non post finitas actiones rogabatur, et facilius et frequentius fuit. quid autem in quemque testium dicendum sit, sumi nisi ex ipsorum personis non potest.

[25] But at times, just as we have to praise individual witnesses, so we may have to demolish them, whether their evidence has been given in documentary form or they have been summoned to appear in person. This was easier and of more frequent occurrence in the days when the examination of the witnesses was not deferred till after the conclusion of the pleading. With regard to what we should say against individual witnesses, no general rules can be laid down:

it will depend on the personality of the witness.

[26] reliquae interrogandi sunt partes. qua in re primum est nosse testem. nam timidus terreri, stultus decipi, iracundus concitari, ambitiosus inflari potest; prudens vero et constans vel tanquam inimicus et pervicax dimittendus statim vel non interrogatione, sed brevi interlocutione patroni refutandus est aut aliquo, si continget, urbane dicto refrigerandus aut, si quid in eius vitam dici poterit, infamia criminum destruendus.

[26] It remains to consider the technique to be followed in the examination of witnesses. The first essential is to know your witness. For a timid witness may be terrorised, a fool outwitted, an irascible man provoked, and vanity flattered. The shrewd and self-possessed witness, on the other hand, must be dismissed at once as being malicious and obstinate; or refuted, not by cross-examination, but by a brief speech from the counsel for the defence; or may be put out of countenance by some jest, if a favourable opportunity presents itself; or, if his past life admits of criticism, his credit may be overthrown by the scandalous charges which can be brought against him.

[27] probos quosdam et verecundos non aspere incessere profuit; nam saepe, qui adversus insectantem pugnassent, modestia mitigantur. omnis autem interrogatio aut in causa est aut extra causam. In causa, sicut accusatori praecepimus, patronus quoque altius et unde nihil suspecti sit repetita percontatione, priora sequentibus applicando saepe eo perducit homines, ut invitis quod prosit extorqueat.

[27] It has been found advantageous at times when confronted with an honest and respectable witness to refrain from pressing him hard, since it is often the case that those who would have defended themselves manfully against attack are mollified by courtesy. But every question is either concerned with the case itself or with something outside the case. As regards the first type of question counsel for the defence may, by adopting a method which I have already recommended for the prosecutor, namely by commencing his examination with questions of an apparently irrelevant and innocent character and then by comparing previous with subsequent replies, frequently lead witnesses into such a position that it becomes possible to extort useful admissions from them against their will.

[28] eius rei sine dubio neque disciplina ulla in scholis neque exercitatio traditur, et naturali magis acumine aut usu contingit haec virtus. si quod tamen exemplum ad imitationem demonstrandum sit, solum est, quod ex dialogis Socraticorum maximeque Platonis duci potest; in quibus adeo scitae sunt interrogationes, ut, cum plerisque bene respondeatur, res tamen ad id quod volunt efficere perveniat.

[28] The schools, it is true, give no instruction either as to theory or practice in this subject, and skill in examination comes rather from natural talent or

practice. If, however, I am asked to point out a model for imitation, I can recommend but one, namely that which may be found in the dialogues of the Socratics and more especially of Plato, in which the questions put are so shrewd that although individually as a rule the answers are perfectly satisfactory to the other side, yet the questioner reaches the conclusion at which he is aiming.

[29] *illud fortuna interim praestat, ut aliquid, quod inter se parum consentiat, a teste dicatur; interim, quod saepius evenit, ut testis testi diversa dicat. acuta autem interrogatio ad hoc, quod casu fieri solet,*

[29] Fortune sometimes is so kind that a witness gives an answer involving some inconsistency, while at times (and this is a more frequent occurrence) one witness contradicts another. But acute examination methodically conducted will generally reach the same result which is so often reached by chance.

[30] *etiam ratione perducet. extra causam quoque multa, quae prosint, rogari solent, de vita testium aliorum, de sua quisque, si turpitudine, si humilitas, si amicitia accusatoris, si inimicitiae cum reo, in quibus aut dicant aliquid quod prosit, aut in mendacio vel cupiditate laedendi deprehendantur. Sed in primis interrogatio cum debet esse circumspecta,*

[30] There are also a number of points strictly irrelevant to the case on which questions may be put with advantage. We may for example ask questions about the past life of other witnesses or about the witness' own character, with a view to discovering whether they can be charged with some disgraceful conduct, or degrading occupation, with friendship with the prosecutor or hostility toward the accused, since in replying to such questions they may say something which will help our cause or may be convicted of falsehood or of a desire to injure the accused. But above all our examination must be circumspect,

[31] *quia multa contra patronos venuste testis saepe respondet, eique praecipue vulgo favetur; tum verbis quam maxime ex medio sumptis, ut qui rogatur (is autem est saepius imperitus) intelligat aut ne intelligere se neget, quod interrogantis non leve frigus est.*

[31] since a witness will often launch some smart repartee in answering counsel for the defence and thereby win marked favour from the audience in general. Secondly, we must put our questions as far as possible in the language of everyday speech that the witness, who is often an uneducated man, may understand our meaning, or at any rate may have no opportunity of saying that he does not know what we mean, a statement which is apt to prove highly disconcerting to the examiner.

[32] *illae vero pessimae artes, testem subornatum in subsellia adversarii*

mittere, ut inde excitatus plus noceat vel dicendo contra reum cum quo sederit, vel, cum adiuvisse testimonio videbitur, faciendo ex industria multa immodeste atque intemperanter, per quae non a se tantum dictis detrahat fidem, sed ceteris quoque, qui profuerant, auferat auctoritatem; quorum mentionem habui, non ut fierent, sed ut vitarentur.

saepe inter se collidi solent inde testatio hinc testes; locus utrinque; haec enim se pars iureiurando, illa consensa signantium tuetur.

[32] I must however express the strongest disapproval of the practice of sending a suborned witness to sit on the benches of the opposing party, in order that on being called into the witness-box from that quarter he may thereby do all the more damage to the case for the accused by speaking against the party with whose adherents he was sitting or, while appearing to help him by his testimony, deliberately giving his evidence in such an extravagant and exaggerated manner, as not only to detract from the credibility of his own statements, but to annul the advantage derived from the evidence of those who were really helpful. I mention this practice not with a view to encourage it, but to secure its avoidance.

Documentary evidence is not frequently in conflict with oral. Such a circumstance may be turned to advantage by either side. For one party will rest its case on the fact that the witness is speaking on oath, the other on the unanimity of the signatories.

[33] saepe inter testes et argumenta quaesitum est. inde scientiam in testibus et religionem, ingenia esse in argumentis dicitur; hinc testem gratia, metu, pecunia, ira, odio, amicitia, ambitu fieri; argumenta ex natura duci, in his iudicem sibi, in illis alii credere.

[33] Again there is often a conflict between the evidence and the arguments. One party will argue that the witnesses know the facts and are bound by the sanctity of their oath, while the arguments are nought but ingenious juggling with the facts. The other party will argue that witnesses are procured by influence, fear, money, anger, hatred, friendship, or bribery, whereas arguments are drawn from nature; in giving his assent to the latter the judge is believing the voice of his own reason, in accepting the former he is giving credence to another.

[34] communia haec pluribus causis, multumque iactata sunt et semper tamen iactabuntur. aliquando utrinque sunt testes, et quaestio sequitur ex ipsis, utri meliores viri; ex causis, utri magis credibilia dixerint; ex litigatoribus, utri gratia magis valuerint.

[34] Such problems are common to a number of cases, and are and will always be the subject of vehement debate. Sometimes there are witnesses on both sides and the question arises with regard to themselves as to which are the

more respectable in character, or with regard to the case, which have given the more credible evidence, with regard to the parties to the case, which has brought the greater influence to bear on the witnesses.

[35] his adiicere si qui volet ea, quae divina testimonia vocant, ex responsis, oraculis, ominibus, duplicem sciat esse eorum tractatum; generalem alterum, in quo inter Stoicos et Epicuri sectam secutos pugna perpetua est, regaturne providentia mundus; specialem alterum circa partes divinationis, ut quaeque in quaestionem cadit.

[35] If to this kind of evidence anyone should wish to add evidence of the sort known as supernatural, based on oracles, prophecies and omens, I would remind him that there are two ways in which these may be treated. There is the general method, with regard to which there is an endless dispute between the adherents of the Stoics and the Epicureans, as to whether the world is governed by providence. The other is special and is concerned with particular departments of the art of divination, according as they may happen to affect the question at issue.

[36] aliter enim oraculorum aliter haruspicum augurum, coniectorum, mathematicorum fides confirmari aut refelli potest, cum sit rerum ipsarum ratio diversa. circa eiusmodi quoque instrumenta firmanda vel destruenda multum habet operis oratio, si quae sint voces per vinum, somnum, dementiam emissae, vel excepta parvulorum indicia, quos pars altera nihil fingere, altera nihil iudicare dictura est. nec tantum praestari hoc genus potenter,

[36] For the credibility of oracles may be established or destroyed in one way, and that of soothsayers, augurs, diviners and astrologers in another, since the two classes differ entirely in nature. Again the task of establishing or demolishing such evidence as the following will give the orator plenty to do; as for example if certain words have been uttered under the influence of wine, in sleep or in a fit of madness, or if information has been picked up from the mouths of children, whom the one party will assert to be incapable of invention, while the other will assert that they do not know what they are saying.

[37] sed etiam, ubi non est, desiderari solet: pecuniam dedisti; quis numeravit? ubi? unde? venenum arguis; ubi emi? a quo? quanti? per quem dedi? quo conscio? quae fere omnia pro Cluentio Cicero in crimine veneficii excutit. haec de inartificialibus quam brevissime potui.

[37] The following method may not merely be used with great effect, but may even be badly missed when it is not employed. *You gave me the money. Who counted it out? Where did this occur and from what source did the money come? You accuse me of poisoning. Where did I buy the poison and from whom? What did I pay for it and whom did I employ to administer it? Who*

was my accomplice? Practically all these points are discussed by Cicero in dealing with the charge of poisoning in the *pro Cluentio*. This concludes my observations upon inartificial proofs. I have stated them as briefly as I could.

8. pars altera probationum, quae est tota in arte constatque rebus ad faciendam fidem appositis, plerumque aut omnino negligitur aut levissime attingitur ab iis, qui argumenta velut horrida et confragosa vitantes amoenioribus locis desident, neque aliter quam ii, qui traduntur a poetis gustu cuiusdam apud Lotophagos graminis et Sirenum cantu deleniti voluptatem saluti praetulisse, dum laudis falsam imaginem persequuntur, ipsa, propter quam dicitur, victoria cedunt.

8. The second class of proofs are wholly the work of art and consist of matters specially adapted to produce belief. They are, however, as a rule almost entirely neglected or only very lightly touched on by those who, avoiding arguments as rugged and repulsive things, confine themselves to pleasanter regions and, like those who, as poets tell, were bewitched by tasting a magic herb in the land of the Lotus-eaters or by the song of the Sirens into preferring pleasure to safety, follow the empty semblance of renown and are robbed of that victory which is the aim of eloquence.

[2] atqui cetera, quae continuo magis orationis tractu decurrunt, in auxilium atque ornamentum argumentorum comparantur, nervisque illis, quibus causa continetur, adiiciunt inducti super corporis speciem: ut, si forte quid factum ira vel metu vel cupiditate dicatur, latius, quae cuiusque adfectus natura sit, prosequamur. iisdem laudamus, incusamus, augemus, minuimus, describimus, deterremus, querimus, consolamur, hortamur.

[2] And yet those other forms of eloquence, which have a more continuous sweep and flow, are employed with a view to assisting and embellishing the arguments and produce the appearance of super inducing a body upon the sinews, on which the whole case rests; thus if it is asserted that some act has been committed under the influence of anger, fear or desire, we may expatiate at some length on the nature of each of these passions. It is by these same methods that we praise, accuse, exaggerate, attenuate, describe, deter, complain, console or exhort.

[3] Sed horum esse opera in rebus aut certis aut de quibus tanquam certis loquimur potest. nec abnuerim esse aliquid in delectatione, multum vero in commovendis adfectibus; sed haec ipsa plus valent, cum se didicisse iudex putat, quod consequi nisi argumentatione aliaque omni fide rerum non possumus.

[3] But such rhetorical devices may be employed in connexion with matters about which there is no doubt or at least which we speak of as admitted facts. Nor would I deny that there is some advantage to be gained by pleasing our audience and a great deal by stirring their emotions. Still, all these devices are

more effective, when the judge thinks he has gained a full knowledge of the facts of the case, which we can only give him by argument and by the employment of every other known means of proof.

[4] quorum priusquam partiamur species, indicandum est esse quaedam in omni probationum genere communia. nam neque ulla quaestio est, quae non sit aut in re aut in persona; neque esse argumentorum loci possunt nisi in iis, quae rebus aut personis accidunt,

[4] Before, however, I proceed to classify the various species of artificial proof, I must point out that there are certain features common to all kinds of proof. For there is no question which is not concerned either with things or persons, nor can there be any ground for argument save in connexion with matters concerning things or persons, which may be considered either by themselves or with reference to something else;

[5] eaque aut per se inspicere solent aut ad aliud referri; nec ulla confirmatio nisi aut ex consequentibus aut ex repugnantibus, et haec necesse est aut ex praeterito tempore aut ex coniuncto aut ex insequenti petere; nec ulla res probari nisi ex alia potest, eaque sit oportet aut maior aut par aut minor.

[5] while there can be no proof except such as is derived from things consequent or things opposite, which must be sought for either in the time preceding, contemporaneous with or subsequent to the alleged fact, nor can any single thing be proved save by reference to something else which must be greater, less than or equal to it.

[6] argumenta vero reperiuntur aut in quaestionibus, quae etiam separatae a complexu rerum personarumque spectari per se possint, aut in ipsa causa, cum invenitur aliquid in ea non ex communi ratione ductum, sed eius iudicii, de quo cognoscitur, proprium. probationum praeterea omnium aliae sunt necessariae, aliae credibiles, aliae non repugnantes.

[6] As regards arguments, they may be found either in the questions raised by the case, which may be considered by themselves quite apart from any connexion with individual things or persons, or in the case itself, when anything is discovered in it which cannot be arrived at by the light of common reason, but is peculiar to the subject on which judgment has to be given. Further, all proofs fall into three classes, necessary, credible, and not impossible.

[7] et adhuc omnium probationum quadruplex ratio est, ut vel quia est aliquid, aliud non sit; ut dies est, nox non est; vel quia est aliquid, et aliud sit: sol est supra terram, dies est; vel quia aliquid non est, aliud sit: nox non est, dies est; vel quia aliquid non est, nec aliud sit: Non est rationalis, nec homo est. his in universum praedictis partes subiiciam.

[7] Again there are four forms of proof. First, we may argue that, because one

thing is, another thing is not; as *It is day and therefore not night*. Secondly, we may argue that, because one thing is, another thing is; as *The sun is risen, thereit is day*. Thirdly, it may be argued that because one thing is not, another thing is; as *It is not night, therefore it is day*. Finally, it may be argued that, because one thing is not, another thing is not; as *He is not a reasoning being, therefore he is not a man*. These general remarks will suffice by way of introduction and I will now proceed to details.

9. omnis igitur probatio artificialis constat aut signis aut argumentis aut exemplis. nec ignoro plerisque videri signa partem argumentorum. quae mihi separandi ratio haec fuit prima, quod sunt paene ex illis inartificialibus; cruenta enim vestis et clamor et livor et talia sunt instrumenta, qualia tabulae, rumores, testes; nec inveniuntur ab oratore, sed ad eum cum ipsa causa deferuntur;

9. Every artificial proof consists either of indications, arguments or examples. I am well aware that many consider indications to form part of the arguments. My reasons for distinguishing them are twofold. In the first place indications as a rule come under the head of inartificial proofs: for a bloodstained garment, a shriek, a dark blotch and the like are all evidence analogous to documentary or oral evidence and rumours; they are not discovered by the orator, but are given him with the case itself.

[2] altera, quod signa, sive indubitata sunt, non sunt argumenta, quia, ubi ilia sunt, quaestio non est, argumento autem nisi in re controversa locus esse non potest; sive dubia, non sunt argumenta sed ipsa argumentis egent.

[2] My second reason was that indications, if indubitable, are not arguments, since they leave no room for question, while arguments are only possible in controversial matters. If on the other hand they are doubtful, they are not arguments, but require arguments to support them.

[3] dividuntur autem in has duas primas species, quod eorum alia sunt, ut dixi, quae necessaria sunt, alia quae non necessaria. Priora illa sunt quae aliter habere se non possunt, quae Graeci vocant τεκμήρια, quia sunt ἄλυστα σημεῖα, quae mihi vix pertinere ad praecepta artis videntur; nam ubi est signum insolubile, ibi ne lis quidem est.

[3] The two first species into which artificial proofs may be divided are, as I have already said, those which involve a conclusion and those which do not. The former are those which cannot be otherwise and are called τεκμήρια, by the Greeks, because they are indications from which there is no getting away. These however seem to me scarcely to come under the rules of art. For where an indication is irrefutable, there can be no dispute as to facts.

[4] id autem accidit, cum quid aut necesse est fieri factumve esse aut omnino non potest fieri vel esse factum; quo in causis posito non est lis facti. hoc

genus per omnia tempora perpendi solet.

[4] This happens whenever there can be no doubt that something is being or has been done, or when it is impossible for it to be or have been done. In such cases there can be no dispute as to the fact. This kind of proof may be considered in connexion with past, present or future time.

[5] nam et coisse eam cum viro, quae peperit, quod est praeteriti, et fluctus esse, cum magna vis venti in mare incubuit, quod coniuncti, et eum mori, cuius cor est vulneratum, quod futuri, necesse est. nec fieri potest, ut ibi messis sit, ubi satum non est, ut quis Romae sit, cum est Athenis, ut sit ferro vulneratus, qui sine cicatrice est.

[5] For example, a woman who is delivered of a child must have had intercourse with a man, and the reference is to the past. When there is a high wind at sea, there must be waves, and the reference is to the present. When a man has received a wound in the heart, he is bound to die, and the reference is to the future. Nor again can there be a harvest where no seed has been sown, nor can a man be at Rome when he is at Athens, nor have been wounded by a sword when he has no scar. Some have the same force when reversed:

[6] Sed quaedam et retrorsum idem valent, ut vivere hominem qui spirat, et spirare qui vivit. quaedam in contrarium non recurrent; nec enim, quia movetur qui ingreditur, etiam ingreditur qui movetur.

[6] a man who breathes is alive, and a man who is alive breathes. Some again cannot be reversed: because he who walks moves it does not follow that he who moves walks.

[7] Quare potest et coisse cum viro, quae non peperit, et non esse ventus in mari, cum est fluctus, neque utique cor eius vulneratum esse, qui perit. ac similiter satum fuisse potest, ubi non fuit messis, nec fuisse Romae, qui non fuit Athenis, nec fuisse ferro vulneratus, qui habet cicatricem.

[7] So too a woman, who has not been delivered of a child, may have had intercourse with a man, there may be waves without a high wind, and a man may die without having received a wound in the heart. Similarly seed may be sown without a harvest resulting, a man, who was never at Athens, may never have been at Rome, and a man who has a scar may not have received a sword-wound.

[8] alia sunt signa non necessaria, quae εἰκότα Graeci vocant; quae etiamsi ad tollendam dubitationem sola non sufficiunt, tamen adiuncta ceteris plurimum valent.

[8] There are other indications or εἰκότα, that is probabilities, as the Greeks call them, which do not involve a necessary conclusion. These may not be sufficient in themselves to remove doubt, but may yet be of the greatest value

when taken in conjunction with other indications.

[9] *signum vocatur, ut dixi, σημεῖον* quamquam id quidam indicium quidam vestigium nominaverunt, per quod alia res intellegitur, ut per sanguinem caedes. At sanguis vel ex hostia respersisse uestem potest vel e naribus profluxisse: non utique, qui vestem cruentam habuerit, homicidium fecerit.

[9] The Latin equivalent of the Greek *σημεῖον* is *signum*, a sign, though some have called it *indicium*, an indication, or *vestigium*, a trace. Such signs or indications enable us to infer that something else has happened; blood for instance may lead us to infer that a murder has taken place. But bloodstains on a garment may be the result of the slaying of a victim at a sacrifice or of bleeding at the nose. Everyone who has a bloodstain on his clothes is not necessarily a murderer.

[10] Sed ut per se non sufficit, ita ceteris adiunctum testimonii loco ducitur, si inimicus, si minatus ante, si eodem in loco fuit; quibus signum cum accessit, efficit ut, quae suspecta erant, certa videantur.

[10] But although such an indication may not amount to proof in itself, yet it may be produced as evidence in conjunction with other indications, such for instance as the fact that the man with the bloodstain was the enemy of the murdered man, had threatened him previously or was in the same place with him. Add the indication in question to these, and what was previously only a suspicion may become a certainty.

[11] alioqui sunt quaedam signa utrique parti communia, ut livores, tumores (nam videri possunt et veneficii et cruditatis) et vulnus in pectore sua manu et aliena perisse dicentibus, in quo est. haec proinde firma habentur atque extrinsecus adiuvantur.

[11] On the other hand there are indications which may be made to serve either party, such as livid spots, swellings which may be regarded as symptoms either of poisoning or of bad health, or a wound in the breast which may be treated as a proof of murder or of suicide. The force of such indications depends on the amount of extraneous support which they receive.

[12] eorum autem, quae signa sunt quidem, sed non necessaria, genus Hermagoras putat, non esse virginem Atalantam, quia cum iuvenibus per silvas vagetur. quod si receperimus, vereor, ne omnia quae ex facto ducuntur signa faciamus. eadem tamen ratione qua signa tractantur.

[12] Hermagoras would include among such indications as do not involve a necessary conclusion, an argument such as the following, "Atalanta cannot be a virgin, as she has been roaming the woods in the company of young men." If we accept this view, I fear that we shall come to treat all inferences from a fact as indications. None the less such arguments are in practice treated exactly as if they were indications.

[13] nec mihi videntur Areopagitae, cum damnaverint puerum coturnicum oculos eruentem, aliud iudicasse quam id signum esse perniciosissimae mentis multisque malo futurae, si adolevisset. unde Spurii Maelii Marcique Manlii popularitas signum adfectati regni est existimatum.

[13] Nor do the Areopagites, when they condemned a boy for plucking out the eyes of quails, seem to have had anything else in their mind than the consideration that such conduct was an indication of a perverted character which might prove hurtful to many, if he had been allowed to grow up. So, too, the popularity of Spurius Maelius and Marcus Manlius was regarded as an indication that they were aiming at supreme power.

[14] Sed vereor, ne longe nimium nos ducat haec via. nam si est signum adulterae lavari cum viris, erit et convivere cum adolescentibus, deinde etiam familiariter alicuius amicitia uti; fortasse corpus vulsum, fractum incessum, vestem muliebrem dixerit mollis et parum viri signa, si cui (cum signum id proprie sit, quod ex eo, de quo quaeritur, natum sub oculos venit) ut sanguis e caede, ita illa ex impudicitia fluere videantur.

[14] However, I fear that this line of reasoning will carry us too far. For if it is an indication of adultery that a woman bathes with men, the fact that she revels with young men or even an intimate friendship will also be indications of the same offence. Again depilation, a voluptuous gait, or womanish attire may be regarded as indications of effeminacy and unmanliness by anyone who thinks that such symptoms are the result of an immoral character, just as blood is the result of a wound: for anything, that springs from the matter under investigation and comes to our notice, may properly be called an indication.

[15] ea quoque quae, quia plerumque observata sunt, vulgo signa creduntur, ut prognostica. vento rubet aurea Phoebe et cornix plena pluviam vocat improba voce, si causas ex qualitate caeli trahunt, sane ita appellentur.

[15] Similarly it is also usual to give the names of signs to frequently observed phenomena, such as prognostics of the weather which we may illustrate by the Vergilian

For wind turns Phoebe's face to ruddy gold

Verg. G. i. 431.

and

The crow

With full voice, good-for-naught, invites the rain.

ib. i. 388.

If these phenomena are caused by the state of the atmosphere, such an

appellation is correct enough.

[16] nam si vento rubet luna, signum venti est rubor. et si, ut idem poeta colligit, densatus et laxatus aer facit, ut sit inde ille avium concentus, idem sentiemus. sunt autem signa etiam parva magnorum, ut vel haec ipsa cornix; nam maiora minorum esse, nemo miratur.

[16] For if tile moon turns red owing to the wind, her hue is certainly a sign of wind. And if, as the same poet infers, the condensation and rarification of the atmosphere causes that “concert of bird-voices” of which he speaks, we may agree in regarding it as a sign. We may further note that great things are sometimes indicated by trivial signs, witness the Vergilian crow; that trivial events should be indicated by signs of greater importance is of course no matter for wonder.

10. nunc de argumentis. hoc enim nomine complectimur omnia, quae Graeci ἐνθυμήματα, ἐπιχειρήματα, ἀποδείξεις, vocant, quanquam apud illos est aliqua horum nominum differentia, etiamsi vis eodem fere tendit. nam enthymema (quod nos commentum sane aut commentationem interpretemur, quia aliter non possumus, Graeco melius usuri) unum intellectum habet, quo omnia mente concepta significat (sed nunc non de eo loquimur); alterum, quo sententiam cum ratione;

10. I now turn to arguments, the name under which we comprise the ἐνθυμήματα, ἐπιχειρήματα, and ἀποδείξεις of the Greeks, terms which, in spite of their difference, have much the same meaning. For the *epicheireme* (which we translate by *commentum* or *commentatio*, there being no alternative, though we should be wiser to use the Greek name) has three meanings: firstly it means anything conceived in the mind (this is not however the sense of which I am now speaking);

[2] tertium, quo certam quandam argumenti conclusionem vel ex consequentibus vel ex repugnantibus, quanquam de hoc parum convenit. sunt enim, qui illud prius epichirema dicant, pluresque invenias in ea opinione, ut id demum, quod pugna constat, enthymema accipi velint, et ideo illud Cornificius contrarium appellat.

[2] secondly it signifies a proposition with a reason, and thirdly a conclusion of an argument drawn either from denial of consequents or from incompatibles; although there is some controversy on this point. For there are some who style a conclusion from consequents an *epicheireme*, while it will be found that the majority hold the view that an *epicheireme* is a conclusion from incompatibles: wherefore Cornificius styles it a *contrarium* or argument from contraries. Some again call it a rhetorical

[3] hunc alii rhetoricum syllogismum, alii imperfectum syllogismum vocaverunt, quia nec distinctis nec totidem partibus concluderetur; quod sane

non utique ab oratore desideratur.

[3] syllogism, others an incomplete syllogism, because its parts are not so clearly defined or of the same number as those of the regular syllogism, since such precision is not specially required by the orator. Valgius translates ἐπιχειρημα by *aggressio*,

[4] epichirema Valgius aggressionem vocat; verius autem iudico, non nostram administrationem sed ipsam rem quam aggredimur, id est argumentum, quo aliquid probaturi sumus, etiamsi nondum verbis explanatum, iam tamen mente conceptum, epichirema dici.

[4] that is an attempt. It would however, in my opinion, be truer to say that it is not our handling of the subject, but the thing itself which we attempt which should be called an ἐπιχειρημα, that is to say the argument by which we try to prove something and which, even if it has not yet been stated in so many words, has been clearly conceived by the mind.

[5] aliis videtur non destinata vel inchoata, sed perfecta probatio hoc nomen accipere, ultima specie; ideoque propria eius appellatio et maxime in usu est posita, qua significatur certa quaedam sententiae comprehensio, quae ex tribus minimum partibus constat.

[5] Others regard it not as an attempted or imperfect proof, but a complete proof, falling under the most special species of proof; consequently, according to its proper and most generally received appellation it must be understood in the sense of a definite conception of some thought consisting of at least three parts. Some call an ἐπιχειρημα a *reason*,

[6] quidam epichirema rationem appellarunt, Cicero melius ratiocinationem, quanquam et ille nomen hoc duxisse magis a syllogismo videtur. nam et statum syllogisticum ratiocinativum appellat, exemplisque utitur philosophorum. et quoniam est quaedam inter syllogismum et epichirema vicinitas, potest videri hoc nomine recte abusus.

[6] but Cicero is more correct in calling it a *reasoning*, although he too seems to derive this name from the syllogism rather than anything else; for he calls the *syllogistic basis* a *ratiocinative basis* and quotes philosophers to support him. And since there is a certain kinship between a syllogism and an *epicheireme*, it may be thought that he was justified in his use of the latter term.

[7] Ἀπόδειξις est evidens probatio, ideoque apud Geometras γραμμικὰ ἀποδείξεις dicuntur Hanc et ab epichiremate Caecilius putat differre solo genere conclusionis et esse apodixin imperfectum epichirema eadem causa, qua diximus enthymema syllogismo distare. nam et epichirema syllogismi pars est. quidam inesse epichiremati apodixin putant et esse partem eius confirmantem.

[7] Ἀν ἁπόδειξις is a clear proof; hence the use of the term γραμμικαὶ ἀποδείξεις, “linear demonstrations” by the geometricians. Caecilius holds that it differs from the *epicheireme* solely in the kind of conclusion arrived at and that an *apodeixis* is simply an incomplete *epicheireme* for the same reason that we said an enthymeme differed from a syllogism. For an *epicheireme* is also part of a syllogism. Some think that an *apodeixis* is portion of an *epicheireme*, namely the part containing the proof.

[8] utrumque autem quanquam diversi auctores eodem modo finiunt, ut sit ratio per ea, quae certa sunt, fidem dubiis adferens; quae natura est omnium argumentorum, neque enim certa incertis declarantur. haec omnia generaliter πιστεῖς appellant, quod etiamsi propria interpretatione dicere fidem possumus, apertius tamen prolationem interpretabimur. Sed argumentum quoque plura significat.

[8] But all authorities, however much they may differ on other points, define both in the same way, in so far as they call both a method of proving what is not certain by means of what is certain. Indeed this is the nature of all arguments, for what is certain cannot be proved by what is uncertain. To all these forms of argument the Greeks give the name of πιστεῖς, a term which, though the literal translation is *fides* “a warrant of credibility,” is best translated by *probatio* “proof.” But *argument* has several other meanings.

[9] nam et fabulae ad actum scenarum compositae argumenta dicuntur, et orationum Ciceronis velut thema ipse exponens Pedianus, argumentum, inquit, tale est; et ipse Cicero ad Brutum ita scribit: ueritus fortasse, ne nos in Catonem nostrum transterremus illinc aliquid, etsi argumentum simile non erat. quo apparet omnem ad scribendum destinatam materiam ita appellari.

[9] For the plots of plays composed for acting in the theatre are called arguments, while Pedianus, when explaining the themes of the speeches of Cicero, says *The argument is as follows*. Cicero himself in writing to Brutus says, *Fearing that I might transfer something from that source to my Cato, although the argument is quite different*. It is thus clear that all subjects for writing are so called.

[10] nec mirum, cum id inter opifices quoque vulgatum sit, unde Vergilius, argumentum ingens; vulgoque paulo numerosius opus dicitur argumentosum. Sed nunc de eo dicendum argumento est, quod probationem praestat. Celsus quidem probationem, indicium, fidem, adgressionem eiusdem rei nomina facit, parum distincte, ut arbitror.

[10] Nor is this to be wondered at, since the term is also in common use among artists; hence the Vergilian phrase *A mighty argument*. Again a work which deals with a number of different themes is called “rich in argument.” But the sense with which we are now concerned is that which provides proof Celsus indeed treats the terms, proof, indication, credibility, attempt, simply as

different names for the same things, in which, to my thinking, he betrays a certain confusion of thought.

[11] nam probatio et fides efficitur non tantum per haec quae sunt rationis, sed etiam per inartificialia. signum autem, quod ille indicium vocat, ab argumentis iam separavi. ergo, cum sit argumentum ratio probationem praestans, qua colligitur aliud per aliud, et quae quod est dubium per id quod dubium non est confirmat, necesse est esse aliquid in causa, quod probatione non egeat.

[11] For proof and credibility are not merely the result of logical processes, but may equally be secured by inartificial arguments. Now I have already distinguished signs or, as he prefers to call them, indications from arguments. Consequently, since an argument is a process of reasoning which provides proof and enables one thing to be inferred from another and confirms facts which are uncertain by reference to facts which are certain, there must needs be something in every case which requires no proof.

[12] alioqui nihil erit quo probemus, nisi fuerit quod aut sit verum aut videatur, ex quo dubiis fides fiat. pro certis autem habemus primum, quae sensibus percipiuntur, ut quae uidemus, audimus, qualia sunt signa; deinde ea, in quae communi opinione consensum est, deos esse,

[12] Otherwise there will be nothing by which we can prove anything; there must be something which either is or is believed to be true, by means of which doubtful things may be rendered credible. We may regard as certainties, first, those things which we perceive by the senses, things for instance that we hear or see, such as signs or indications; secondly, those things about which there is general agreement, such as the existence of the gods or the duty of loving one's parents;

[13] praestandam pietatem parentibus; praeterea, quae legibus cauta sunt, quae persuasione etiamsi non omnium hominum, eius tamen civitatis aut gentis, in qua res agitur, in mores recepta sunt, ut pleraque in iure non legibus sed moribus constant; si quid inter utramque partem convenit, si quid probatum est, denique cuicunque adversarius non contradicit. sic enim fiet argumentum,

[13] thirdly, those things which are established by law or have passed into current usage, if not throughout the whole world, at any rate in the nation or state where the case is being pleaded — there are for instance many rights which rest not on law, but on custom; finally, there are the things which are admitted by either party, and whatever has already been proved or is not disputed by our adversary.

[14] cum providentia mundus regatur, administranda respublica est; sequitur ut administranda respublica sit, si liquebit mundum prouidentia regi.

[14] Thus for instance it may be argued that since the world is governed by providence, the state should similarly be governed by some controlling power:

it follows that the state must be so governed, once it is clear that the world is governed by providence.

[15] debet etiam nota esse recte argumenta tractaturo vis et natura omnium rerum, et quid quaeque earum plerumque efficiat; hinc enim sunt, quae εἰκότα dicuntur.

[15] Further, the man who is to handle arguments correctly must know the nature and meaning of everything and their usual effects. For it is thus that we arrive at probable arguments or εἰκότα as the Greeks call them.

[16] credibilium autem genera sunt tria: unum firmissimum, quia fere accidit, ut liberos a parentibus amari; alterum velut propensius, eum qui recte valeat in crastinum perventurum; tertium tantum non repugnans, in domo furtum factum ab eo qui domi fuit.

[16] With regard to credibility there are three degrees. First, the highest, based on what usually happens, as for instance the assumption that children are loved by their parents. Secondly, there is the highly probable, as for instance the assumption that a man in the enjoyment of good health will probably live till to-morrow. The third degree is found where there is nothing absolutely against an assumption, such as that a theft committed in a house was the work of one of the household.

[17] ideoque Aristoteles in secundo de Arte Rhetorica libro diligentissime est exsecutus, quid cuique rei et quid cuique homini soleret accidere, et quas res quosque homines quibus rebus aut hominibus vel conciliasset vel alienasset ipsa natura: ut divitias quid sequatur aut ambitum aut superstitionem, quid boni probent, quid mali petant, quid milites, quid rustici, quo quaeque modo res vitari vel appeti soleat. verum hoc exsequi mitto;

[17] Consequently Aristotle in the second book of his *Rhetoric* has made a careful examination of all that commonly happens to things and persons, and what things and persons are naturally adverse or friendly to other things or persons, as for instance, what is the natural result of wealth or ambition or superstition, what meets with the approval of good men, what is the object of a soldier's or a farmer's desires, and by what means everything is sought or shunned.

[18] non enim longum tantum, sed etiam impossibile aut potius infinitum est, praeterea positum in communi omnium intellectu. si quis tamen desideraverit, a quo peteret, ostendi. omnia autem credibilia,

[18] For my part I do not propose to pursue this subject. It is not merely a long, but an impossible or rather an infinite task; moreover it is within the compass of the common understanding of mankind. If, however, anyone wishes to pursue the subject, I have indicated where he may apply.

[19] in quibus pars maxima consistit argumentationis, ex huiusmodi fontibus fluunt: an credibile sit a filio patrem occisum, incestum cum filia commissum; et contra, veneficium in noverca, adulterium in luxurioso; illa quoque, an scelus palam factum, an falsum propter exiguam summam, quia suos quidque horum velut mores habet, plerumque tamen, non semper; alioqui indubitata essent, non argumenta.

[19] But all credibility, and it is with credibility that the great majority of arguments are concerned, turns on questions such as the following: whether it is credible that a father has been killed by his son, or that a father has committed incest with his daughter, or to take questions of an opposite character, whether it is credible that a stepmother has poisoned her stepchild, or that a man of luxurious life has committed adultery; or again whether a crime has been openly committed, or false evidence given for a small bribe, since each of these crimes is the result of a special cast of character as a rule, though not always; if it were always so, there would be no room for doubt, and no argument.

[20] excutiamus nunc argumentorum locos; quanquam quibusdam hi quoque, de quibus supra dixi, videntur. locos appello non, ut vulgo nunc intelliguntur, in luxuriam et adulterium et similia; sed sedes argumentorum, in quibus latent, ex quibus sunt petenda. nam,

[20] Let us now turn to consider the “places” of arguments, although some hold that they are identical with the topics which I have already discussed above. But I do not use this term in its usual acceptance, namely, commonplaces directed against luxury, adultery, and the like, but in the sense of the secret places where arguments reside, and from which they must be drawn forth.

[21] ut in terra non omni generantur omnia, nec avem aut feram reperias, ubi quaeque nasci aut morari soleat ignarus, et piscium quoque genera alia planis gaudent alia saxosis, regionibus etiam litoribusque discreta sunt, nec helopem nostro mari aut scarum ducas, ita non omne argumentum undique venit ideoque non passim quaerendum est.

[21] For just as all kinds of produce are not provided by every country, and as you will not succeed in finding a particular bird or beast, if you are ignorant of the localities where it has its usual haunts or birthplace, as even the various kinds of fish flourish in different surroundings, some preferring a smooth and others a rocky bottom, and are found on different shores and in divers regions (you will for instance never catch a sturgeon or wrasse in Italian waters), so not every kind of argument can be derived from every circumstance, and consequently our search requires discrimination.

[22] multus alioqui error est; exhausto labore, quod non ratione scrutabimur, non poterimus invenire nisi casu. At si scierimus, ubi quodque nascatur, cum ad locum ventum erit, facile quod in eo est pervidebimus.

[22] Otherwise we shall fall into serious error, and after wasting our labour through lack of method we shall fail to discover the argument which we desire, unless assisted by some happy chance. But if we know the circumstances which give rise to each kind of argument, we shall easily see, when we come to a particular “place,” what arguments it contains.

[23] In primis igitur argumenta a persona ducenda sunt; cum sit, ut dixi, divisio, ut omnia in haec duo partimur, res atque personas, ut causa, tempus, locus, occasio, instrumentum, modus et cetera, rerum sint accidentia. personis autem non quidquid accidit exsequendum mihi est, ut plerique fecerunt, sed unde argumenta sumi possunt.

[23] Firstly, then, arguments may be drawn from persons; for, as I have already said, all arguments fall into two classes, those concerned with things and those concerned with persons, since causes, time, place, occasion, instruments, means and the like are all accidents of things. I have no intention of tracing all the accidents of persons, as many have done, but shall confine myself to those from which arguments may be drawn.

[24] ea porro sunt, genus, nam similes parentibus ac maioribus suis plerumque creduntur, et nonnunquam ad honeste turpiterque vivendum inde causae fluunt; natio, nam et gentibus proprii mores sunt, nec idem in barbaro, Romano, Graeco probabile est;

[24] Such are birth, for persons are generally regarded as having some resemblance to their parents and ancestors, a resemblance which sometimes leads to their living disgracefully or honourably, as the case may be; then there is nationality, for races have their own character, and the same action is not probable in the case of a barbarian, a Roman and a Greek;

[25] patria, quia similiter etiam civitatum leges, instituta, opiniones habent differentiam; sexus, ut latrocinium facilius in viro, veneficium in femina credas; aetas, quia aliud aliis annis magis convenit; educatio et disciplina, quoniam refert, a quibus et quo quisque modo sit institutus; habitus corporis,

[25] country is another, for there is a like diversity in the laws, institutions and opinions of different states; sex, since for example a man is more likely to commit a robbery, a woman to poison; age, since different actions suit different ages; education and training, since it makes a great difference who were the instructors and what the method of instruction in each individual case;

[26] ducitur enim frequenter in argumentum species libidinis, robor petulantiae, his contraria in diversum; fortuna, neque enim idem credibile est in divite ac paupere, propinquis amicis clientibus abundante et his omnibus destitute; condicionis etiam distantia, nam clarus an obscurus, magistratus an privatus, pater an filius, civis an peregrinus, liber an servus, maritus an caelebs, parens

liberorum an orbus sit, plurimum distat; animi natura,

[26] bodily constitution, for beauty is often introduced as an argument for lust, strength as an argument for insolence, and their opposites for opposite conduct; fortune, since the same acts are not to be expected from rich and poor, or from one who is surrounded by troops of relations, friends or clients and one who lacks all these advantages; condition, too, is important, for it makes a great difference whether a man be famous or obscure, a magistrate or a private individual, a father or a son, a citizen or a foreigner, a free man or a slave, married or unmarried, a father or childless.

[27] etenim avaritia, iracundia, misericordia, crudelitas, severitas aliaque his similia adferunt frequenter fidem aut detrahunt, sicut victus luxuriosus an frugi an sordidus, quaeritur; studia quoque, nam rusticus, forensis, negotiator, miles, navigator, medicus aliud atque aliud efficiunt.

[27] Nor must we pass by natural disposition, for avarice, anger, pity, cruelty, severity and the like may often be adduced to prove the credibility or the reverse of a given act; it is for instance often asked whether a man's way of living be luxurious, frugal or parsimonious. Then there is occupation, since a rustic, a lawyer, a man of business, a soldier, a sailor, a doctor all perform very different actions.

[28] intuendum etiam, quid adfectet quisque, locuples videri an disertus, iustus an potens. spectantur ante acta dictaque, ex praeteritis enim aestimari solent praesentia. his adiiciunt quidam commotionem; hanc accipi volunt temporarium animi motum, sicut iram, pavorem;

[28] We must also consider the personal ambitions of individuals, for instance whether they wish to be thought rich or eloquent, just or powerful. Past life and previous utterances are also a subject for investigation, since we are in the habit of inferring the present from the past. To these some add passion, by which they mean some temporary emotion such as anger or fear; they also add design, which may refer to the past,

[29] consilia autem et praesentis et praeteriti et futuri temporis; quae mihi, etiamsi personis accidunt, per se referenda tamen ad illam partem argumentorum videntur, quam ex causis ducimus; sicut habitus quidam animi, quo tractatur, amicus an inimicus. ponunt in persona et nomen;

[29] present or future. These latter, however, although accidents of persons, should be referred to that class of arguments which we draw from causes, as also should certain dispositions of mind, for example when we inquire whether one man is the friend or enemy of another.

[30] quod quidem ei accidere necesse est, sed in argumentum raro cadit, nisi cum aut ex causa datum est, ut Sapiens, Magnus, Pius; aut et ipsum alicuius cogitationis attulit causam, ut Lentulo coniurationis, quod libris Sibyllinis

aruspicumque responsis dominatio dari tribus Corneliis dicebatur, seque eum tertium esse credebat post Sullam Cinnamque, quia et ipse Cornelius erat. nam et illud apud Euripidem frigidum sane,

[30] Names also are treated as accidents of persons; this is perfectly true, but names are rarely food for argument, unless indeed they have been given for some special reasons, such as the titles of Wise, Great, Pious, or unless the name has suggested some special thought to the bearer. Lentulus for instance had the idea of conspiracy suggested to him by the fact that according to the Sibylline books and the Responses of the soothsayers the tyranny was promised to three members of the Cornelian family, and he considered himself to be the third in succession to Sulla and Cinna, since he too bore the name Cornelius.

[31] quod nomen Polynicis, ut argumentum morum, frater incessit. iocorum tamen ex eo frequens materia, qua Cicero in Verrem non semel usus est. haec fere circa personas sunt aut his similia. neque enim complecti omnia vel hac in parte vel in ceteris possumus, contenti rationem plura quaesituris ostendere.

[31] On the other hand the conceit employed by Euripides where he makes Eteocles taunt his brother Polynices on the ground that his name is evidence of character, is feeble in the extreme. Still a name will often provide the subject for a jest, witness the frequent jests of Cicero on the name of Verres. Such, then, and the like are the accidents of persons. It is impossible to deal with them all either here or in other portions of this work, and I must content myself with pointing out the lines on which further enquiry should proceed.

[32] nunc ad res transeo, in quibus maxime sunt personis iuncta, quae agimus, ideoque prima tractanda. In omnibus porro, quae fiunt, quaeritur aut Quare? aut Ubi? aut Quando? aut Quomodo? aut Per quae facta sunt?

[32] I now pass to things: of these actions are the most nearly connected with persons and must therefore be treated first. In regard to every action the question arises either Why or Where or When or How or By what means the action is performed.

[33] ducuntur igitur argumenta ex causis factorum vel futurorum; quarum materiam, quam quidam ὕλην, alii δυνάμιν nominaverunt, in duo genera, sed quaternas utriusque dividunt species. nam fere versatur ratio faciendi circa bonorum adaptionem, incrementum, conservationem, usum, aut malorum evitacionem, liberationem, imminutionem, tolerantiam;

[33] Consequently arguments are drawn from the causes of past or future actions. The matter of these causes, by some called ὕλη, by others δυνάμις, falls into two genera, which are each divided into four species. For the motive for any action is as a rule concerned with the acquisition, increase, preservation and use of things that are good or with the avoidance,

diminution, endurance of things that are evil or with escape there from. All these considerations carry great weight in deliberative oratory as well.

[34] quae et in deliberando plurimum valent. Sed honestas causas habent recta, prava contra ex falsis opinionibus veniunt. nam est his initium ex iis, quae credunt bona aut mala; inde errores existunt et pessimi adfectus, in quibus sunt ira, odium, invidia, cupiditas, spes, ambitus, audacia, metus, cetera generis eiusdem. accedunt aliquando fortuita, ebrietas, ignorantia, quae interim ad veniam valent, interim ad probationem criminis, ut si quis, dum alii insidiatur, alium dicitur interemisse.

[34] But right actions have right motives, while evil actions are the result of false opinions, which originate in the things which men believe to be good or evil. Hence spring errors and evil passions such as anger, hatred, envy, desire, hope, ambition, audacity, fear and others of a similar kind. To these accidental circumstances may often be added, such as drunkenness or ignorance, which serve sometimes to excuse and sometimes to prove a charge, as for instance when a man is said to have killed one person while lying in wait for another. Further,

[35] causae porro non ad convincendum modo, quod obiicitur, sed ad defendendum quoque excuti solent, cum quis se recte fecisse, id est honesta causa, contendit; qua de re latius in tertio libro dictum est.

[35] motives are often discussed not merely to convict the accused of the offence with which he is charged, but also to defend him when he contends that his action was right, that is to say proceeded from an honourable motive, a theme of which I have spoken more fully in the third book.

[36] finitionis quoque quaestiones ex causis interim pendent. An tyrannicida, qui tyrannum, a quo deprehensus in adulterio fuerat, occidit? An sacrilegus, qui, ut hostes urbe expelleret, arma templo adfixa detraxit?

[36] Questions of definition are also at times intimately connected with motives. Is a man a tyrannicide if he kills a tyrant by whom he has been detected in the act of adultery? Or is he guilty of sacrilege who tore down arms dedicated in a temple to enable him to drive the enemy from the city?

[37] ducuntur argumenta et ex loco. spectatur enim ad fidem probationis, montanus an planus, maritimus an mediterraneus, consitus an incultus, frequens an desertus, propinquus an remotus, opportunus consiliis an adversus; quam partem videmus vehementissime pro Milone tractasse Ciceronem.

[37] Arguments are also drawn from place. With a view to proving our facts we consider such questions as whether a place is hilly or level, near the coast or inland, planted or uncultivated, crowded or deserted, near or far, suitable for carrying out a given design or the reverse. This is a topic which is treated

most carefully by Cicero in his *pro Milone*.

[38] et haec quidem ac similia ad coniecturam frequentius pertinent, sed interim ad ius quoque: privatus an publicus, sacer an profanus, noster an alienus; ut in persona, magistratus, pater, peregrinus. hinc enim quaestiones oriuntur:

[38] These points and the like generally refer to questions of fact, but occasionally to questions of law as well. For we may ask whether a place is public or private, sacred or profane, our own or another's, just as where persons are concerned we ask whether a man is a magistrate, a father, a foreigner.

[39] privatam pecuniam sustulisti; uerum quia de templo, non furtum sed sacrilegium est. occidisti adulterum, quod lex permittit; sed quia in lupanari, caedes est. iniuriam fecisti; sed quia magistratui, maiestatis actio est.

[39] Hence arise such questions as the following. "You have stolen private money, but since you stole it from a temple, it is not theft but sacrilege." "You have killed adulterers, an act permitted by law, but since the act was done in a brothel, it is murder." "You have committed an assault, but since the object of your assault was a magistrate, the crime is lèse-majesté.

[40] vel contra: licuit, quia pater eram, quia magistratus. Sed circa facti controuersiam argumenta praestant, circa iuris lites materiam quaestionum. ad qualitatem quoque frequenter pertinet locus, neque enim idem ubique aut licet aut decorum est; quin etiam in qua quidque civitate quaeratur interest, moribus enim et legibus distant.

[40] Similarly it may be urged in defence, "The act was lawful, because I was a father, a magistrate." But such points afford matter for argument when there is a controversy as to the facts, and matter for enquiry when the dispute turns on a point of law. Place also frequently affects the quality of an action, for the same action is not always lawful or seemly under all circumstances, while it makes considerable difference in what state the enquiry is taking place, for they differ both in custom and law.

[41] ad commendationem quoque et invidiam valet. nam et Ajax apud Ovidium: ante rates, inquit, agimus causam, et mecum confertur Ulixes? et Miloni inter cetera obiectum est, quod Clodius in monumentis ab eo maiorum suorum esset occisus.

[41] Further arguments drawn from place may serve to secure approval or the reverse. Ajax for instance in Ovid says: —

"What! do we plead our cause before the ships?
And is Ulysses there preferred to me?
"

Again one of the many charges brought against Milo was that he killed

Clodius on the monument of his ancestors.

[42] ad suadendi momenta idem valet, sicut tempus, cuius tractatum subiungam. eius autem, ut alio loco iam dixi, duplex significatio est; generaliter enim et specialiter accipitur. prius illud est: — nunc, olim, sub Alexandro, cum apud Ilium pugnatum est, denique praeteritum, instans, futurum. hoc sequens habet et constituta discrimina: — aestate, hieme, noctu, interdiu; et fortuita: — in pestilentia, in bello, in convivio.

[42] Such arguments may also carry weight in deliberative oratory, as may those drawn from time, which I shall now proceed to discuss. Time may, as I have said elsewhere, be understood in two different senses, general and special. The first sense is seen in words and phrases such as “now,” “formerly,” “in the reign of Alexander,” “in the days of the siege of Troy,” and whenever we speak of past, present or future. The second sense occurs when we speak either of definite periods of time such as “in summer,” “in winter,” “by night,” “by day,” or of fortuitous periods such as “in time of pestilence,” “in time of war,” “during a banquet.”

[43] Latinorum quidam satis significari putaverunt, si illud generale tempus, hoc speciale tempora vocarent. quorum utrorumque ratio et in consiliis quidem et in illo demonstrativo genere versatur, sed in iudiciis frequentissima est.

[43] Certain Latin writers have thought it a sufficient distinction to call the general sense “time,” and the special “times.” In both senses time is of importance in advisory speeches and demonstrative oratory, but not so frequently as in forensic.

[44] nam et iuris quaestiones facit et qualitatem distinguit et ad coniecturam plurimum confert: ut cum interim probationes inexpugnabiles adferat, quales sunt, si dicatur (ut supra posui) signator, qui ante diem tabularum decessit, aut commisisse aliquid, vel cum infans esset vel cum omnino natus non esset;

[44] For questions of law turn on time, while it also determines the quality of actions and is of great importance in questions of fact; for instance, occasionally it provides irrefragable proofs, which may be illustrated by a case which I have already cited, when one of the signatories to a document has died before the day on which it was signed, or when a person is accused of the commission of some crime, although he was only an infant at the time or not yet born.

[45] praeter id, quod omnia facile argumenta aut ex iis, quae ante rem facta sunt, aut ex coniunctis rei aut insequentibus ducuntur. Ex antecedentibus: mortem minatus es, noctu existi, proficiscentem antecessisti; causae quoque factorum praeteriti sunt temporis.

[45] Further, all kinds of arguments may easily be drawn either from facts

previous to a certain act, or contemporary or subsequent. As regards antecedent facts the following example will illustrate my meaning; “You threatened to kill him, you went out by night, you started before him.” Motives of actions may also belong to past time.

[46] secundum tempus subtilius quidam, quam necesse erat, diviserunt, ut esset iuncti sonus auditus est; adhaerentis clamor sublatus est. insequentis sunt illa latuisti, profugisti, livores et tumores apparuerunt. iisdem temporum gradibus defensor utetur ad detrahendam ei quod obiicitur fidem.

[46] Some writers have shown themselves over-subtle in their classification of the second class of circumstances, making “a sound was heard” an example of circumstances *combined* with an act and “a shout was raised” an instance of circumstances *attached* to an act. As regards subsequent circumstances I may cite accusations such as “You hid yourself, you fled, livid spots and swellings appeared on the corpse.” The counsel for the defence will employ the same divisions of time to discredit the charge which is brought against him.

[47] In his omnis factorum dictorumque ratio versatur, sed dupliciter. nam fiunt quaedam quia aliud postea futurum est, quaedam quia aliud ante factum est: ut, cum obiicitur reo lenocinii, speciosae marito, quod adulterii damnatam quondam emerit; aut parricidii reo luxurioso, quod dixerit patri, Non amplius me obiurgabis. nam et ille non quia emit leno est, sed quia leno erat emit; nec hic, quia sic erat locutus, occidit, sed, quia erat occisurus, sic locutus est.

[47] In these considerations are included everything in connexion with words and deeds, but in two distinct ways. For some things are done because something else is like to follow, and others because something else has previously been done, as for instance, when the husband of a beautiful woman is accused of having acted as a procurer on the ground that he bought her after she was found guilty of adultery, or when a debauched character is accused of parricide on the ground that he said to his father “You have rebuked me for the last time.” For in the former case the accused is not a procurer because he bought the woman, but bought her because he was a procurer, while in the latter the accused is not a parricide because he used these words, but used them because he intended to kill his father.

[48] casus autem, qui et ipse praestat argumentis locum, sine dubio est ex insequentibus, sed quadam proprietate distinguitur, ut si dicam: melior dux Scipio quam Hannibal; vicit Hannibalem. bonus gubernator; nunquam fecit naufragium. bonus agricola; magnos sustulit fructus. et contra: sumptuosus fuit; patrimonium exhaustit. turpiter vixit; omnibus invisus est.

[48] With regard to accidental circumstances, which also provide matter for arguments, these clearly belong to subsequent time, but are distinguished by a certain special quality, as for instance if I should say, “Scipio was a better general than Hannibal, for he conquered Hannibal”; “He was a good pilot, for

he was never shipwrecked”; “He was a good farmer, for he gathered in huge harvests”; or referring to bad qualities, “He was a prodigal, for he squandered his patrimony”; “His life was disgraceful, for he was hated by all.”

[49] *intuendae sunt praecipueque in coniecturis et facultates; credibilis est enim occisos a pluribus pauciores, a firmioribus imbecilliores, a vigilantibus dormientes, a praeparatis inopinantes;*

[49] We must also consider the resources possessed by the parties concerned, more especially when dealing with questions of fact; for it is more credible that a smaller number of persons were killed by a larger, a weaker party by a stronger, sleepers by men that were wide awake, the unsuspecting by the well-prepared, while the converse arguments may be used to prove the opposite.

[50] *quorum contraria in diversum valent. haec et in deliberando intuemur, et in iudiciis ad duas res solemus referre, an voluerit quis, an potuerit; nam et voluntatem spes facit. hinc illa apud Ciceronem coniectura, insidiatus est Clodius Miloni, non Milo Clodio; ille cum servis robustis, hic cum mulierum comitatu, ille equis, hic in raeda, ille expeditus, hic paenula irretitus.*

[50] Such considerations arise both in deliberative and forensic oratory: in the latter they occur in relation to two questions, namely, whether some given person had the will, and whether he had the power to do the deed; for hope will often create the will to act. Hence the well-known inference in Cicero: “Clodius lay in wait for Milo, not Milo for Clodius, for Clodius had a retinue of sturdy slaves, while Milo was with a party of women; Clodius was mounted, Milo in a carriage, Clodius lightly clad, Milo hampered by a cloak.”

[51] *facultati autem licet instrumentum coniungere; sunt enim in parte facultatis et copiae. Sed ex instrumento aliquando etiam signa nascuntur, ut spiculum in corpore inventum.*

[51] With resources we may couple instruments, which form part of resources and means. But sometimes instruments will provide us with indications as well, as for instance if we find a javelin sticking in a dead body.

[52] *his adiicitur modus, quem τρόπον dicunt, quo quaeritur, quemadmodum quid sit factum. idque tum ad qualitatem scriptumque pertinet, ut si negemus adulterum veneno licuisse occidere, tum ad coniecturas quoque, ut si dicam bona mente factum, ideo palam; mala, ideo ex insidiis, nocte, in solitudine. In rebus autem omnibus,*

[52] To these we may add manner, the Greek *τρόπος*, in regard to which we ask how a thing was done. Manner is concerned sometimes with quality and the letter of the law (we may for instance argue that it was unlawful to kill an adulterer by poison), sometimes with questions of fact, as for example if I argue that an act was committed with a good intent and therefore openly, or with a bad intent and therefore treacherously, by night, in a lonely place.

[53] de quarum vi ac natura quaeritur, quasque etiam citra complexum personarum ceterorumque ex quibus fit causa, per se intueri possumus, tria sine dubio rursus spectanda sunt, An sit, Quid sit, Quale sit. Sed, quia sunt quidam loci argumentorum omnibus communes, dividi haec tria genera non possunt, ideoque locis potius, ut in quosque incurrent, subiicienda sunt.

[53] In all cases, however, in which we enquire into the nature and meaning of an act, and which can be considered by themselves apart from all considerations of persons and all else that gives rise to the actual cause, there are clearly three points to which we must give attention, namely Whether it is, What it is and Of what kind it is. But as there are certain “places” of argument which are common to all three questions, this triple division is impracticable and we must therefore consider these questions rather in connexion with those “places” in which they most naturally arise.

[54] ducuntur ergo argumenta ex finitione seu fine; nam utroque modo traditur. eius duplex ratio est; aut enim simpliciter quaeritur, sitne hoc virtus; aut praecedente finitione, quid sit virtus. id aut universum verbis complectimur, ut rhetorice est bene dicendi scientia; aut per partes, ut rhetorice est inveniendi recte et disponendi et eloquendi cum, firma memoria et cum dignitate actionis scientia.

[54] Arguments, then, may be drawn from definition, sometimes called *finitio* and sometimes *finis*. Definition is of two kinds. We may ask whether a particular quality is a virtue or make a definition precede and ask what is the nature of a virtue. Such a definition is either stated in general terms, such as *Rhetoric is the science of speaking well*, or in detail, such as *Rhetoric is the science of correct conception, arrangement and utterance, coupled with a retentive memory and a dignified delivery*. Further,

[55] praeterea finimus aut vi, sicut superiora, aut ἔτυμολογίᾳ, ut si assiduum ab asse dando, et locupletem a locorum, pecuniosum a pecorum copia. finitioni subiecta maxime videntur genus, species, differens,

[55] we may define a word by giving its content as in the preceding instances, or by etymology: we may for instance explain *assiduus* by deriving it from *as* and *do*, *locuples* by deriving it from *copia locorum*, *pecuniosus* from *copiaepecorum*. *Genus, species, difference* and *property* seem more especially to afford scope for definition, for we derive arguments from all of these.

[56] proprium; ex iis omnibus argumenta ducuntur. genus ad probandam speciem minimum valet, plurimum ad refellendam. itaque non, quia est arbor, platanus est, at quod non est arbor, utique platanus non est; nec quod virtus est, utique iustitia est, at quod non est virtus, utique non potest esse iustitia. Itaque a genere perveniendum ad ultimam species: ut homo est animal non est satis, id enim genus est; mortale, etiamsi est species, cum aliis tamen communis finitio; rationale, nihil supererit ad demonstrandum id quod velis.

contra species firmam probationem habet generis,

[56] *Genus* is of little use when we desire to prove a *species*, but of great value for its elimination. A tree is not necessarily a plane tree, but that which is not a tree is certainly not a plane tree; again, a virtue is not necessarily the virtue of justice, but that which is not a virtue is certainly not justice. We must proceed from the *genus* to the ultimate *species*; for example, to say that man is an animal will not suffice; for animal merely gives us the *genus*: nor yet will the addition of the words “subject to death” be adequate; for although this epithet gives us a *species*, it is common to other animals as well. If, however, we define man as a rational animal, we need nothing further to make our meaning clear.

[57] infirmam refutationem. nam, quod iustitia est, utique virtus est; quod non est iustitia, potest esse virtus, si est fortitudo, constantia, continentia. nunquam itaque tolletur a specie genus, nisi ut omnes species, quae sunt generi subiectae, removeantur, hoc modo, quod nec rationale nec morale est neque animal, homo non est.

[57] On the other hand *species* will give us clear proof of *genus*, but is of little service for its elimination. For example, justice is always a virtue, but that which is not justice may still be a virtue, such as fortitude, constancy or self-control. *Genus* therefore cannot be eliminated by *species* unless all the *species* included in the *genus* be eliminated, as for instance in the following sentence: *That which is neither rational nor mortal nor an animal is not a man.*

[58] his adiiciunt propria et differentia. propriis confirmatur finitio, differentibus solvitur Proprium autem est aut quod soli accidit, ut homini sermo, risus; aut quidquid utique accidit sed non soli, ut igni calfacere. et sunt eiusdem rei plura propria, ut ipsius ignis lucere, calere. itaque, quodcunque proprium deerit, solvit finitionem; non utique, quodcunque erit, confirmat.

[58] To these they add *property* and *difference*. *Properties* serve to establish definitions, *differences* to overthrow them. A *property* is that which happens to one particular object and that alone; speech and laughter for instance are *properties* of man. Or it may be something specially belonging to an object, but not to it alone; heating for instance is a *property* of fire. The same thing may also have a number of *properties*: light and heat are both *properties* of fire. Consequently, the omission of any *property* in a definition will impair it, but the introduction of a *property*, whatever it may be, will not necessarily establish a definition.

[59] saepissime autem, quid sit proprium cuiusque, quaeritur: ut, si per ἐτυμολογίαν dicatur, tyrannicidae proprium est tyrannum, occidere, negemus; non enim, si traditum sibi eum carnifex occiderit, tyrannicida dicatur, nec si imprudens vel invitus.

[59] We have, however, often to consider what is a *property* of some given object; for example, if it should be asserted, on the ground of etymology, that the peculiar *property* of a tyrannicide is to kill tyrants, we should deny it: for an executioner is not *ipso facto* a tyrannicide, if he executes a tyrant who has been delivered to him for the purpose, nor again is he a tyrannicide who kills a tyrant unwittingly or against his will.

[60] quod autem proprium non erit, differens erit, ut aliud est servum esse aliud servire; qualis esse in addictis quaestio solet: qui servus est, si manu mittatur, fit libertinus, non item addictus;

[60] What is not a *property* will be a *difference*: it is, for instance, one thing to be a slave, and another to be in a state of servitude; hence the distinction raised in connexion with persons assigned to their creditors for debt: *A slave, if he is manumitted becomes a freedman, but this is not the case with one who is assigned.* There are also other points of difference which are dealt with elsewhere.

[61] et plura, de quibus alio loco. illud quoque differens vocant, cum, genere in species diducto, species ipsa discernitur. animal genus, morale species, terrenum vel bipes differens; nondum enim proprium est sed iam differt a marino vel quadripede; quod non tam ad argumentum pertinet quam ad diligentem finitionis comprehensionem.

[61] Again, the term difference is applied in cases when the *genus* is divided into *species* and one *species* is subdivided. Animal, for instance, is a genus, mortal a *species*, while terrestrial or biped is a *difference*: for they are not actually properties, but serve to show the difference between such animals and quadrupeds or creatures of the sea. This distinction, however, comes under the province not so much of argument as of exact definition. Cicero separates *genus* and *species*,

[62] Cicero genus et speciem, quam eandem formam vocat, a finitione deducit et iis, quae ad aliquid sunt, subiicit: ut, si is, cui argentum omne legatum est, petat signatum quoque, utatur genere; at si quis, cum legatum sit ei, quae viro materfamilias esset, neget deberi ei, quae in manum non convenerit, specie; quoniam duae formae sint matrimoniorum.

[62] which latter he calls *form*, from definition and includes them under relation. For example, if a person to whom another man has left all his silver should claim all his silver money as well, he would base his claim upon *genus*; on the other hand if when a legacy has been left to a married woman holding the position of *materfamilias*, it should be maintained that the legacy is not due to a woman who never came into the power of her husband, the argument is based on *species*, since there are two kinds of marriage. Cicero

[63] division autem adiuvari finitionem docet, eamque differre a partitione,

quod haec sit totius in partes, illa generis in formas; partes incertas esse, ut Quibus constet respublica; formas certas, ut Quot sint species rerum publicarum, quas tris accepimus, quae populi, quae paucorum, quae unius potestate regerentur.

[63] further shows that definition is assisted by *division*, which he distinguishes from *partition*, making the latter the dissection of a whole into its parts and the former the division of a *genus* into its *forms* or *species*. The number of parts he regards as being uncertain, as for instance the elements of which a state consists; the *forms* or *species* are, however, certain, as for instance the number of forms of government, which we are told are three, democracy, oligarchy, and monarchy. It is true that he does not use these illustrations,

[64] et ille quidem non iis exemplis utitur, quia scribens ad Trebatium ex iure ducere ea maluit; ego apertiora posui. propria vero ad coniecturae quoque pertinent partem: ut, quia proprium est boni recte facere, iracundi verbis aut manu male facere, facta haec ab ipsis esse credantur aut contra. nam ut quaedam in quibusdam utique sunt, ita quaedam in quibusdam utique non sunt: et ratio, quamvis sit ex diverso, eadem est.

[64] since, as he was writing to Trebatius, he preferred to draw his examples from law. I have chosen my illustrations as being more obvious. *Properties* have relation to questions of fact as well; for instance, it is the *property* of a good man to act rightly, of an angry man to be violent in speech or action, and consequently we believe that such acts are committed by persons of the appropriate character, or not committed by persons of inappropriate character. For just as certain persons possess certain qualities, so certain others do not possess certain qualities, and the argument is of precisely the same nature, though from opposite premises.

[65] divisio et ad probandum simili via valet et ad refellendum. probationi interim satis est unum habere, hoc modo, ut sit civis, aut natus sit oportet aut factus; utrumque tollendum est, nec natus nec factus est.

[65] In a similar way *division* is valuable both for proof and refutation. For proof, it is sometimes enough to establish one thing. "To be a citizen, a man must either have been born or made such." For refutation, both points must be disproved: "he was neither born nor made a citizen."

[66] fit hoc et multiplex, idque est argumentorum genus ex remotione, quo modo efficitur totum falsum, modo id, quod relinquitur, verum. totum falsum est hoc modo, pecuniam credidisse te dicis; aut habuisti ipse aut ab aliquo accepisti aut invenisti aut surripuisti. si neque domi habuisti neque ah aliquo accepisti aut cetera, non credidisti.

[66] This may be done in many ways, and constitutes a form of argument by elimination, whereby we show sometimes that the whole is false, sometimes

that only that which remains after the process of elimination is true. An example of the first of these two cases would be: “You say that you lent him money. Either you possessed it yourself, received it from another, found it or stole it. If you did not possess it, receive it from another, find or steal it, you did not lend it to him.”

[67] *reliquum fit verum sic, hic servus, quem tibi vindicas, aut verum tuus est aut emptus aut donatus aut testamento relictus aut ex hoste captus aut alienus; deinde remotis prioribus supererit alienus. periculosum et cum cura intuendum genus, quia, si in proponendo unum quodlibet omiserimus, cum risu quoque tota res solvitur.*

[67] The residue after elimination is shown to be true as follows: “This slave whom you claim was either born in your house or bought or given you or left you by will or captured from the enemy or belongs to another.” By the elimination of the previous suppositions he is shown to belong to another. This form of argument is risky and must be employed with care; for if, in setting forth the alternatives, we chance to omit one, our whole case will fail, and our audience will be moved to laughter. It is safer to do what Cicero

[68] *tutius, quod Cicero pro Caecina facit, cum interrogat, si haec actio non sit, quae sit? simul enim remouentur omnia. vel cum duo ponuntur inter se contraria, quorum tenuisse utrumlibet sufficiat, quale Ciceronis est, unum quidem certe, nemo erit tam inimicus Cluentio, qui mihi non concedat; si constet corruptum illud esse indicium, aut ab Habito aut ab Oppianico esse corruptum; si doceo non ab Habito, vinco ab Oppianico; si ostendo ab Oppianico, purgo Habitu.*

[68] does in the *pro Caecina*, when he asks, “If this is not the point at issue, what is?” For thus all other points are eliminated at one swoop. Or again two contrary propositions may be advanced, either of which if established would suffice to prove the case. Take the following example from Cicero: “There can be no one so hostile to Cluentius as not to grant me one thing: if it be a fact that the verdict then given was the result of bribery, the bribes must have proceeded either from Habitus or Oppianicus: if I show that they did not proceed from Habitus I prove that they proceeded from Oppianicus: if I demonstrate that they were given by Oppianicus, I clear Habitus.”

[69] *fit etiam ex duobus, quorum necesse est alterum verum, eligendi adversario potestas, efficiturque, ut, utrum elegerit, noceat. facit hoc Cicero pro Oppio: utrum, cum Cottam appetisset, an cum ipse sese conaretur occidere, telum e manibus ereptum est? et pro Vareno: optio vobis datur, utrum velitis casu illo itinere Varenum usum esse an huius persuasu et inductu. deinde utraque facit accusatori contraria.*

[69] Or we may give our opponent the choice between two alternatives of which one must necessarily be true, and as a result, whichever he chooses, lie

will damage his case. Cicero does this in the *pro Oppio*: “Was the weapon snatched from his hands when he had attacked Cotta, or when he was trying to commit suicide?” and in the *pro Vareno*: “You have a choice between two alternatives: either you must show that the choice of this route by Varenus was due to chance or that it was the result of this man’s persuasion and inducement.” He then shows that either admission tells against his opponent. Sometimes again,

[70] interim duo ita proponuntur, ut utrumlibet electum idem efficiat, quale est, philosophandum est, etiamsi non est philosophandum. et illud vulgatum, quo schema, si intelligitur? quo, si non intelligitur? et, mentietur in tormentis, qui dolorem pati potest; mentietur, qui non potest.

[70] two propositions are stated of such a character that the admission of either involves the same conclusion, as in the sentence, “We must philosophise, even though we ought not,” or as in the common dilemma, “What is the use of a figure, if its meaning is clear? And what is its use, if it is unintelligible?” or, “He who is capable of enduring pain will lie if tortured, and so will he who cannot endure pain.”

[71] ut sunt autem tria tempora, ita ordo rerum tribus momentis consertus est; habent enim omnia initium, incrementum, summam, ut iurgium deinde pugna, tum caedes. est ergo hic quoque argumentorum locus invicem probantium. nam et ex initiis summa colligitur, quale est, Non possum togam praetextam sperare, cum exordium pullum videam; et contra, non dominationis causa Sullam arma sumpsisse, argumentum est dictatura deposita.

[71] As there are three divisions of time, so the order of events falls into three stages. For everything has a beginning, growth and consummation, as for instance a quarrel, blows, murder. Thus arise arguments which lend each other mutual support; for the conclusion is inferred from the beginnings, as in the following case: “I cannot expect a purple-striped toga, when I see that the beginning of the web is black”; or the beginning may be inferred from the conclusion: for instance the fact that Sulla resigned the dictatorship is an argument that Sulla did not take up arms with the intention of establishing a tyranny.

[72] similiter ex incremento in utramque partem ducitur rei ratio cum in coniectura tum etiam in tractatu aequitatis, an ad initium summa referenda sit, id est, an ei caedes imputanda sit, a quo iurgium coepit.

[72] Similarly from the growth of a situation we may infer either its beginning or its end, not only in questions of fact but as regards points of equity, such as whether the conclusion is referable to the beginning, that is, “Should the man that began the quarrel be regarded as guilty of the bloodshed with which it ended?”

Arguments are also drawn from similarities:

[73] *est argumentorum locus ex similibus: si continentia virtus, utique et abstinentia; fidem debet tutor, et procurator. hoc est ex eo genere, quod ἐπαγωγή Graeci vocant, Cicero inductionem. Ex dissimilibus: Non, si laetitia bonum, et voluptas; Non, quod mulieri, idem pupillo. Ex contrariis: frugalitas bonum, luxuria enim malum; Si malorum causa bellum est, erit emendatio pax; Si veniam meretur, qui imprudens nocuit, non meretur praemium, qui imprudens profuit.*

[73] “If self-control is a virtue, abstinence is also a virtue.” “If a guardian should be required to be faithful to his trust, so should an agent.” To this class belongs the type of argument called ἐπαγωγή by the Greeks, *induction* by Cicero. Or arguments may be drawn from unlikes: “It does not follow that if joy is a good thing, pleasure also is a good thing”: “It does not follow that what applies to the case of a woman applies also to the case of a ward.” Or from contraries: “Frugality is a good thing, since luxury is an evil thing”: “If war is the cause of ill, peace will prove a remedy”: “If he who does harm unwittingly deserves pardon, he who does good unwittingly does not deserve a reward.”

[74] *Ex pugnantibus: qui est sapiens, stultus non est. Ex consequentibus sive adiunctis: si bonum iustitia, est recte iudicandum; si malum perfidia, non est fallendum. idem retro. nec sunt his dissimilia ideoque huic loco subiicienda, cum et ipsa naturaliter congruant: quod quis non habuit, non perdidit; Quem quis amat, sciens non laedit; Quem quis heredem suum esse voluit, carum habuit, habet, habebit. Sed cum sint indubitata, vim habent paene signorum immutabilium.*

[74] Or from contradictions: “He who is wise is not a fool.” Or from consequences necessary or probable: “If justice is a good thing, we must give right judgment”: “If breach of faith is a bad thing, we must not deceive.” And such arguments may also be reversed. Similar to these are the following arguments, which must therefore be classed under this same head, since it is to this that they naturally belong: “A man has not lost what he never had”: “A man does not wittingly injure him whom he loves”: “If one man has appointed another as his heir, he regarded, still regards and will continue to regard him with affection.” However, such arguments, being incontrovertible, are of the nature of absolute indications.

[75] *Sed haec consequentia dico, ἀκόλουθα; est enim consequens sapientiae bonitas; illa insequentia, παρεπόμενα, quae postea facta sunt aut futura. nec sum de nominibus anxius; vocet enim, ut voluerit quisque, dum vis rerum ipsa manifesta sit, appareatque hoc temporis, illud esse natura.*

[75] These, however, I call *consequent* or ἀκόλουθα goodness, for instance, is consequent on wisdom: while in regard to things which merely have taken

place afterwards or will take place I use the term *insequent* or παρεπόμενα, though I do not regard the question of terminology as important. Give them any name you please, as long as the meaning is clear and it is shown that the one depends on time, the other on the nature of things.

[76] itaque non dubito haec quoque vocare consequentia, quamvis ex prioribus dent argumentum ad ea quae sequuntur, quorum duas quidam species esse voluerunt: actionis, ut pro Oppio, quos educere inuitos in provinciam non potuit, eos invitos retinere qui potuit? temporis, in Verrem, Si finem praetoris edicto adferunt Kalendae Ian., cur non initium quoque edicti nascatur a Kalendis Ian.?

[76] I have therefore no hesitation in calling the following forms of argument also *consequential*, although they argue from the past to the future: some however divide them into two classes, those concerned with *action*, as in the *pro Oppio*, “How could he detain against their will those whom he was unable to take to the province against their will?” and those concerned with *time*, as in the *Verrines*, “If the first of January puts an end to the authority of the praetor’s edict, why should the commencement of its authority not likewise date from the first of January?”

[77] quod utrumque exemplum tale est, ut idem in diversum, si retro agas, valeat. consequens enim est, eos, qui inviti duci non potuerint, invitos non potuisse retineri.

[77] Both these instances are of such a nature that the argument is reversible. For it is a necessary *consequence* that those who could not be taken to the province against their will could not be retained against their will.

[78] illa quoque, quae ex rebus mutuam confirmationem praestantibus ducuntur (quae proprii generis videri quidam volant et vocant ἐκ τῶν πρὸς ἄλληλα, Cicero ex rebus sub eandem rationem venientibus) fortiter consequentibus iunxerim: si portorium Rhodiis locare honestum est, et Hermocreonti conducere, et quod discere honestum, et docere.

[78] So too I feel clear that we should rank as *consequential* arguments those derived from facts which lend each other mutual support and are by some regarded as forming a separate kind of argument, which they call ἐκ τῶν πρὸς ἄλληλα, arguments from things mutually related, while Cicero styles them arguments drawn from things to which the same line of reasoning applies; take the following example: “If it is honourable for the Rhodians to let out their harbour dues, it is honourable likewise for Hermocreon to take the contract,” or “What it is honourable to learn, it is also honourable to teach.” Such also is the fine sentence of Domitius Afer,

[79] unde illa non hac ratione dicta sed efficiens idem Domitii Afri sententia est pulchra: Ego accusavi, vos damnastis. est invicem consequens et quod ex

diversis idem ostendit; ut, qui mundum nasci dicit, per hoc ipsum et deficere significet, quia deficit omne quod nascitur.

[79] which has the same effect, though it is not identical in form: “I accused, you condemned.” Arguments which prove the same thing from opposites are also mutually *consequential*; for instance, we may argue that he who says that the world was created thereby implies that it is suffering decay, since this is the property of all created things.

[80] simillima est his argumentatio, qua colligi solent ex iis quae faciunt ea quae efficiuntur, aut contra, quod genus a causis vocant. haec interim necessario fiunt, interim plerumque sed non necessario.

nam corpus in lumine utique umbram facit, et umbra, ubicunque est, ibi esse corpus ostendit.

[80] There is another very similar form of argument, which consists in the inference of facts from their efficient causes or the reverse, a process known as argument from causes. The conclusion is sometimes necessary, sometimes generally without being necessarily true. For instance, a body casts a shadow in the light, and the shadow wherever it falls indicates the presence of a body.

[81] alia sunt, ut dixi, non necessaria, vel utrinque vel ex altera parte: sol colorat; non utique, qui est coloratus, a sole est. iter pulverulentum facit; sed neque omne iter pulverem movet nec, quisuis est pulverulentus, ex itinere est.

[81] There are other conclusions which, as I have said, are not necessary, whether as regards both cause and effect or only one of the two. For instance, “the sun colours the skin, but not everyone that is coloured receives that colour from the sun; a journey makes the traveller dusty, but every journey does not produce dust, nor is everyone that is dusty just come from a journey.”

[82] quae utique fiunt, talia sunt: si sapientia bonum virum facit, bonus vir est utique sapiens; itemque boni est honeste facere, mali turpiter; et qui honeste faciunt, boni, qui turpiter, mali iudicantur; recte. At, exercitatio plerumque robustum corpus facit; sed non quisquis est robustus exercitatus, nec quisquis exercitatus robustus; nec, quia fortitudo praestat ne mortem timeamus, quisquis mortem non timuerit, vir fortis erit existimandus; nec, si capitis dolorem facit, inutilis hominibus sol est.

[82] As examples of necessary conclusions on the other hand I may cite the following: “If wisdom makes a man good, a good man must needs be wise”; and again, “It is the part of a good man to act honourably, of a bad man to act dishonourably,” or “Those who act honourably are considered good, those who act dishonourably are considered bad men.” In these cases the conclusion is correct. On the other hand, “though exercise generally makes the body robust, not everyone who is robust is given to exercise, nor is everyone that is

addicted to exercise robust. Nor again, because courage prevents our fearing death, is every man who has no fear of death to be regarded as a brave man; nor is the sun useless to man because it sometimes gives him a headache.”

[83] haec ad hortativum maxime genus pertinent: virtus facit laudem, sequenda igitur; at voluptas infamiam, fugienda igitur. recte autem monemur, causas non utique ab ultimo esse repetendas, ut Medea, utinam ne in nemore Pelio;

[83] Arguments such as the following belong in the main to the hortative department of oratory:— “Virtue brings renown, therefore it should be pursued; but the pursuit of pleasure brings ill-repute, therefore it should be shunned.” But the warning that we should not necessarily search for the originating cause is just: an example of such error is provided by the speech of Medea beginning

[84] quasi vero id eam fecerit miseram aut nocentem, quod illic ceciderint abiegnae ad terram trabes; et Philocteta Paridi, Si impar esses tibi, ego nunc non essem miser; quo modo pervenire quolibet retro causas legentibus licet. illud his adiicere ridiculum putarem,

[84] “Ah! would that never there in Pelion’s grove,” as though her misery or guilt were due to the fact that there

“The beams of fir had fallen to the ground”;

or I might cite the words addressed by Philoctetes to Paris,

“Hadst thou been other than thou art, then I
Had ne’er been plunged in woe.
“

By tracing back causes on lines such as these we may arrive anywhere.

[85] nisi eo Cicero uteretur, quod coniugatum vocant, ut eos, qui rem iustam faciunt, iuste facere (quod certe non eget probatione), quod compascuum est, compascere licere. quidam haec,

[85] But for the fact that Cicero has done so, I should regard it as absurd to add to these what is styled the *conjugate* argument, such as “Those who perform a just act, act justly,” a self-evident fact requiring no proof; or again, “Every man has a common right to send his cattle to graze in a common pasture.”

[86] quae vel ex causis vel ex efficientibus diximus, alieno nomine uocant ἐκβάσεις id est exitus. nam nec hic aliud tractatur quam quid ex quoque eveniat.

adposita vel comparativa dicuntur, quae minora ex maioribus, maiora ex minoribus, paria ex paribus

[86] Some call these arguments derived from causes or efficientes by the Greek

name ἔκβασις that is, results; for in such cases the only point considered is how one thing results from another.

Those arguments which prove the lesser from the greater or the greater from the less or equals from equals are styled *apposite or comparative*.

[87] probant. confirmatur coniectura ex maiore, si quis sacrilegium facit, faciet et furtum; ex minore, qui facile ac palam mentitur, peierabit; ex pari, qui ob rem iudicandam pecuniam accepit, et ob dicendum falsum testimonium accipiet.

[87] A conjecture as to a fact is confirmed by argument from something greater in the following sentence: "If a man commit sacrilege, he will also commit theft"; from something less, in a sentence such as "He who lies easily and openly will commit perjury"; from something equal in a sentence such as "He who has taken a bribe to give a false verdict will take a bribe to give false witness."

[88] iuris confirmatio huiusmodi est: ex maiore, si adulterum occidere licet, et loris caedere; ex minore, si furem nocturnum occidere licet, quid latronem? ex pari, quae poena adversus interfectorem patris iusta est, eadem adversus matris; quorum omnium tractatus versatur in syllogismis.

[88] Points of law may be proved in a similar manner; from something greater, as in the sentence "If it is lawful to kill an adulterer, it is lawful to scourge him"; from something less, "If it is lawful to kill a man attempting theft by night, how much more lawful is it to kill one who attempts robbery with violence"; from something equal, "The penalty which is just in the case of parricide is also just in the case of matricide." In all these cases we follow the syllogistic method.

[89] ilia magis finitionibus aut qualitatibus prosunt, si robur corporibus bonum est, non minus sanitas; Si furtum scelus, magis sacrilegium; Si abstinencia virus, et continentia; Si mundus providentia regitur, administranda respublica; Si domus aedificari sine ratione non potest, quid urbs agenda? si agenda est navalium cura, et armorum. ac mihi quidem sufficeret hoc genus,

[89] The following type of argument on the other hand is more serviceable in questions turning on definition or quality. "If strength is good for the body, health is no less good." "If theft is a crime, sacrilege is a greater crime." "If abstinence is a virtue, so is self-control." "If the world is governed by providence, the state also requires a government." "If a house cannot be built without a plan, what of a whole city?" "If naval stores require careful supervision, so also do arms."

[90] sed in species secatur. nam ex pluribus ad unum et ex uno ad plura (unde est quod semel, et saepius), et ex parte ad totum et ex genere ad speciem, et ex eo quod continet ad id quod continetur, aut ex difficilioribus ad faciliora et ex

longe positis ad propiora et ad omnia, quae contra haec sunt, eadem ratione argumenta ducuntur.

[90] I am content to treat this type of argument as a *genus* without going further; others however divide it into *species*. For we may argue from several things to one or from one thing to several; hence arguments such as “What has happened once may happen often.” We may also argue from a part to a whole, from *genus* to *species*, from that which contains to that which is contained, from the difficult to the easy, from the remote to the near, and similarly from the opposites of all these to their opposites.

[91] sunt enim et haec maiora et minora aut certe vim similem obtinent, quae si persequamur, nullus erit ea concidendi modus. infinita est enim rerum comparatio, iucundiora, graviora, magis necessaria, honestiora, utiliora. Sed mittamus plura, ne in eam ipsam, quam vito, loquacitatem incidam.

[91] Now all these arguments deal with the greater or the less or else with things that are equal, and if we follow up such fine distinctions, there will be no limit to our division into species. For the comparison of things is infinite; things may be more pleasant, more serious, more necessary, more honourable, more useful. I say no more for fear of falling into that very garrulity which I deprecate.

[92] exemplorum quoque ad haec infinitus est numerus, sed paucissima attingam. Ex maiore pro Caecina, quod exercitus armatos movet, id advocationem togatorum non videbitur movisse? Ex faciliore in Clodium et Curionem, ac vide, an facile fieri tu potueris, cum is factus non sit, cui tu concessisti.

[92] The number of examples of these arguments which I might quote is likewise infinite, but I will only deal with a very few. As an example of argument from something greater take the following example from the *pro Caecina* “Shall we suppose that that which alarms whole armies caused no alarm to a peaceful company of lawyers?” As an instance of argument from something easier, take this passage from the speech against Clodius and Curio: “Consider whether it would have been easy for you to secure the praetorship, when he in whose favour you withdrew failed to secure election?”

[93] Ex difficiliore, vide quaeso, Tubero, ut, qui de meo facto non dubitem, de Ligarii audeam dicere. et ibi, An sperandi Ligario casa non sit, cum mihi apud te locus sit etiam pro altero deprecandi? Ex minore pro Caecina, itane scire esse armatos sat est, ut vim factam probes;

[93] The following provides an example of argument from something more difficult: “I beg you, Tubero, to remark that I, who do not hesitate to speak of my own deed, venture to speak of that performed by Ligarius”; and again,

“Has not Ligarius reason for hope, when I am permitted to intercede with you for another?” For an argument drawn from something less take this passage from the *pro Caecina*: “Really! Is the knowledge that the men were armed sufficient to prove that violence was offered, and the fact that he fell into their hands insufficient?”

[91] in manus eorum incidere non est satis? ergo, ut breviter contraham summam, ducuntur argumenta a personis, causis, locis, tempore (cuius tres partes diximus, praecedens, coniunctum, insequens), facultatibus (quibus instrumentum subieciimus), modo (id est, ut quidque sit factum), finitione, genere, specie, differentibus, propriis, remotione, divisione, initio, incrementis, summa, similibus, dissimilibus, pugnantibus, consequentibus, efficientibus, effectis, eventis, comparatione, quae in plures diducitur species.

[94] “ Well, then, to give a brief summary of the whole question, arguments are drawn from persons, causes, place and time (which latter we have divided into preceding, contemporary and subsequent), from resources (under which we include instruments), from manner (that is, how a thing has been done), from definition, genus, species, difference, property, elimination, division, beginnings, increase, consummation, likes, unlikes, contradictions, consequents, efficientes, effects, results, and comparison, which is subdivided into several species.

[95] illud adiiciendum videtur, duci argumenta non a confessis tantum sed etiam a fictione, quod Graeci καθ’ ὑπόθεσιν vocant; et quidem ex omnibus iisdem locis, quibus superiora, quia totidem species esse possunt fictae quot verae.

[95] I think I should also add that arguments are drawn not merely from admitted facts, but from fictitious suppositions, which the Greeks style καθ’ ὑπόθεσιν and that this latter type of argument falls into all the same divisions as those which I have mentioned above, since there may be as many species of fictitious arguments as there are of true arguments.

[96] nam fingere hoc loco hoc est proponere aliquid, quod, si verum sit, aut solvat quaestionem aut adiuvet; deinde id, de quo quaeritur, facere illi simile. id quo facilius accipiant iuvenes nondum scholam egressi, primo familiaribus magis ci aetati exemplis ostendam.

[96] When I speak of fictitious arguments I mean the proposition of something which, if true, would either solve a problem or contribute to its solution, and secondly the demonstration of the similarity of our hypothesis to the case under consideration. To make this the more readily intelligible to youths who have not yet left school, I will first of all illustrate it by examples of a kind familiar to the young.

[97] lex: qui parentes non aluerit, vinciatur. Non alit aliquis, et vincula

nihilominus recusat. utitur fictione, si miles, si infans sit, si reipublicae causa absit. et illa contra optionem fortium, si tyrannidem petas, si templorum eversionem.

[97] There is a law to the effect that “the man who refuses to support his parents is liable to imprisonment.” A certain man fails to support his parents and none the less objects to going to prison. He advances the hypothesis that he would be exempt from such a penalty if he were a soldier, an infant. or if he were absent from home on the service of the state. Again in the case where a hero is allowed to choose his reward we might introduce the hypotheses of his desiring to make himself a tyrant or to overthrow the temples of the gods.

[98] plurimum ea res virium habet contra scriptum. utitur his Cicero pro Caecina, unde tu aut familia aut procurator tuus. si me villicus tuus solus deiecisset — si vero ne habeas quidem servum praeter eum, qui me deiecerit, et alia in eodem libro plurima.

[98] Such arguments are specially useful when we are arguing against the letter of the law, and are thus employed by Cicero in the *pro Caecina*: “[The interdict contains the words,] ‘whence you or your household or your agent had driven him.’ If your steward alone had driven me out, [it would not, I suppose, be your household but a member of your household that had driven me out]. . . . If indeed you owned no slave except the one who drove me out, [you would cry, ‘If I possess a household at all, I admit that my household drove you out’].” Many other examples might be quoted from the same work.

[99] verum eadem fictio valet et ad qualitates: si Catilina cum suo consilio nefariorum hominum, quos secum eduxit hoc de re posset iudicare, condemnaret L. Murenam; et ad amplificationem: si hoc tibi inter cenam in illis immanibus poculis tuis accidisset. sic et, si respublica vocem haberet.

[99] But fictitious suppositions are also exceedingly useful when we are concerned with the quality of an act: “If Catiline could try this case assisted by a jury composed of those scoundrels whom he led out with him he would condemn Lucius Murena.” It is useful also for amplification: “If this had happened to you during dinner in the midst of your deep potations”; or again, “If the state could speak.”

[100] has fere sedes accepimus probationum in universum, quas neque generatim tradere sat est, cum ex qualibet earum innumerabilis argumentorum copia oriatur, neque per singulas species exsequi patitur natura rerum, quod qui sunt facere conati, duo pariter subierunt incommoda, ut et nimium dicerent nec tamen totum.

[100] Such in the main are the usual topics of proof as specified by teachers of rhetoric, but it is not sufficient to classify them generically in our instructions, since from each of them there arises an infinite number of arguments, while it

is in the very nature of things impossible to deal with all their individual species. Those who have attempted to perform this latter task have exposed themselves in equal degree to two disadvantages, saying too much and yet failing to cover the whole ground.

[101] inde plurimi, cum in hos inexplicabiles laqueos inciderunt, omnem, etiam quem ex ingenio suo poterant habere, conatum velut adstricti certis legum vinculis perdidierunt, et magistrum respicientes naturam ducem sequi desierunt.

[101] Consequently the majority of students, finding themselves lost in an inextricable maze, have abandoned all individual effort, including even that which their own wits might have placed within their power, as though they were fettered by certain rigid laws, and keeping their eyes fixed upon their master have ceased to follow the guidance of nature.

[102] nam ut per se non sufficiet scire, omnes probationes aut a personis aut a rebus peti, quia utrumque in plura dividitur, ita ex antecedentibus et iunctis et insequentibus trahenda esse argumenta qui acceperit, num protinus in hoc sit instructus ut, quid in quaque casa ducendum sit ex his, sciat?

[102] But as it is not in itself sufficient to know that all proofs are drawn either from persons or things, because each of these groups is subdivided into a number of different heads so he who has learned that arguments must be drawn from antecedent, contemporary or subsequent facts will not be sufficiently instructed in the knowledge of the method of handling arguments to understand what arguments are to be drawn from the circumstances of each particular case;

[103] praesertim, cum plurimae probationes in ipso causarum complexu reperiantur, ita ut sint cum alia lite nulla communes, eaeque sint et potentissimae et minime obviae, quia communia ex praeceptis accepimus, propria invenienda sunt.

[103] especially as the majority of proofs are to be found in the special circumstances of individual cases and have no connexion with any other dispute, and therefore while they are the strongest, are also the least obvious, since, whereas we derive what is common to all cases from general rules, we have to discover for ourselves whatever is peculiar to the case which we have in hand.

[104] hoc genus argumentorum sane dicamus ex circumstantia, quia περιστάσειν dicere aliter non possumus, vel ex iis quae cuiusque causae propria sunt: ut in illo adultero sacerdote, qui lege, qua unius servandi potestatem habebat, se ipse servare voluit, proprium controversiae est dicere, Non unum nocentem servabas, quia te dimisso adulteram occidere non licebat. hoc enim argumentum lex facit, quae prohibet adulteram sine adultero occidere.

[104] This type of argument may reasonably be described as drawn from circumstances, there being no other word to express the Greek *περίστασις* or from those things which are peculiar to any given case. For instance, in the case of the priest who having committed adultery desired to save *his own* life by means of the law which gave him the power of saving *one* life, the appropriate argument to employ against him would run as follows: “You would save more than one guilty person, since, if you were discharged, it would not be lawful to put the adulteress to death.” For such an argument follows from the law forbidding the execution of the adulteress apart from the adulterer.

[105] et illa, in qua lata lex est, ut argentarii dimidium ex eo quod debebant solverent, creditum suum totum exigerent. argentarius ab argentario solidum petit. proprium ex materia est argumentum creditoris, idcirco adiectum esse in lege, ut argentarius totum exigeret; adversus alios enim non opus fuisse lege, cum omnes praeterquam ab argentariis totum exigendi ius haberent.

[105] Again, take the case falling under the law which lays down that bankers may pay only half of what they owe, while permitted to recover the whole of what they are owed. One banker requires payment of the whole sum owed him by another banker. The appropriate argument supplied by the subject to the creditor is that there was special reason for the insertion of the clause sanctioning the recovery of the whole of a debt by a banker, since there was no need of such a law as against others, inasmuch as all have the right to recover the whole of a debt from any save a banker.

[106] cum multa autem novantur in omni genere materiae tum praecipue in iis quaestionibus, quae scripto constant, quia vobis est in singulis ambiguitas frequens et adhuc in coniunctis magis.

[106] But while some fresh considerations are bound to present themselves in every kind of subject, this is more especially the case in questions turning on the letter of the law, since not merely individual words, but still more whole phrases are frequently ambiguous.

[107] et haec ipsa plurium legum aliorumve scriptorum vel congruentium vel repugnantium complexu variantur necesse est, cum res rei aut ius iuris quasi signum est. Non debui tibi pecuniam; nunquam me appellasti, usuram non accepisti, ultro a me mutuatus es. lex est, qui patri prodictionis reo non adfuerit, exheres sit. negat filius, nisi si pater absolutus sit. quid signi? lex altera, prodictionis damnatus cum avvocato exulet.

[107] And these considerations must vary according to the complexity of laws and other documents, whether they are in agreement or contradictory, since fact throws light on fact and law on law as in the following argument: “I owed you no money: you never summoned me for debt, you took no interest from me, nay, you actually borrowed money from me.” It is laid down by law that

he who refuses to defend his father when accused of treason thereby loses his right to inherit. A son denies that he is liable to this penalty unless his father is acquitted. How does he support this contention? There is another law to the effect that a man found guilty of treason shall be banished and his advocate with him.

[108] Cicero pro Cluentio Publium Popilium et

tiberium Guttam dicit non iudicii corrupti sed ambitus esse damnatos. quid signi? quod accusatores eorum, qui erant ipsi ambitus damnati, e lege sint post hanc victoriam restituti.

[108] Cicero in the *pro Cluentio* says that Publius Popilius and Tiberius Gutta were not condemned for receiving bribes to give a false verdict, but for attempting to bribe the jury. What is his argument in support of this view? That their accusers, who were themselves found guilty of bribing the jury, were restored in accordance with law after winning their case.

[109] nec minus in hoc curae debet adhiberi, quid proponendum quam quomodo sit quod proposuerimus probandum. hic immo vis inventionis, si non maior, certe prior. nam ut tela supervacua sunt nescienti, quid petat, sic argumenta, nisi provideris cui rei adhibenda sint. hoc est, quod comprehendere arte non possit.

[109] But the consideration as to what argument should be put forward requires no less care than the consideration of the manner in which we are to prove that which we have put forward. Indeed in this connexion invention, if not the most important, is certainly the first consideration. For, just as weapons are superfluous for one who does not know what his target is, so too arguments are useless, unless you see in advance to what they are to be applied. This is a task for which no formal rules can be laid down.

[110] Ideoque, cum plures eadem didicerint, generibus argumentorum similibus utentur; alius alio plura, quibus utatur, inveniet. sit exempli gratia proposita controversia, quae communes minime cum aliis quaestiones habet:

[110] Consequently, though a number of orators, who have studied the same rules, will use similar kinds of arguments, one will discover a greater number of arguments to suit his case than another. Let us take as an example a controversial theme involving problems that have little in common with other cases.

[111] cum Thebas evertisset Alexander, inuenit tabulas, quibus centum talenta mutua Thessalis dedisse ‘Thebanos continebatur. has, quia erat usus commilitio Thessalorum, donavit his ultro; postea restituti a Cassandro Thebani reposcunt Thessalos. apud Amphictyonas agitur. centum talenta et credidisse eos constat et non recepissee.

[111] “When Alexander destroyed Thebes, he found documents showing that the Thebans had lent a hundred talents to the Thessalians. These documents he presented to the Thessalians as a reward for the assistance they had given him in the campaign. Subsequently the Thebans, after the restoration of their city by Cassander, demanded that the Thessalians should repay the money.” The case is tried before the Amphictyonic council. It is admitted that the Thebans lent the money and were not repaid.

[112] *lis omnis ex eo, quod Alexander ea Thessalis donasse dicitur, pendet. constat illud quoque, non esse iis ab Alexandro pecuniam data; quaeritur ergo, an proinde sit, quod datum est, ac si pecuniam dederit?*

[112] The whole dispute turns on the allegation that Alexander had excused the Thessalians from payment of the debt. It is also admitted that the Thessalians had received no money from Alexander. The question is therefore whether his gift is equivalent to his having given them money.

[113] *quid proderunt argumentorum loci, nisi haec prius videro, nihil eum egisse donando, non potuisse donare, non donasse? et prima quidem actio facilis ac favorabilis repetentium iure quod vi sit ablatum; sed hinc aspera et uehemens quaestio exoritur de iure belli, dicentibus Thessalis, hoc regna, populos, fines gentium atque urbium contineri.*

[113] What use will formal topics of argument be in such a case, unless I first convince myself that the gift of Alexander made no difference, that he had not the power to make it, and that he did not make it? The opening of the Thebans’ plea presents no difficulty and is likely to win the approval of the judges, since they are seeking to recover by right what was taken from them by force. But out of this point arises a violent controversy as to the right of war, since the Thessalians urge that kingdoms and peoples and the frontiers of nations and cities depend upon these rights.

[114] *inveniendum contra est, quo distet haec causa a ceteris, quae in potestatem victoris venirent; nec circa probationem res haeret, sed circa propositionem. dicamus inprimis: in eo, quod in iudicium deduci potest, nihil valere ius belli nec armis erepta nisi armis posse retineri; itaque, ubi illa valeant, non esse iudicem; ubi iudex sit, illa nihil valere.*

[114] To meet this argument it is necessary to discover in what respect this case differs from others which are concerned with property that has fallen into the hands of the victor: the difficulty moreover lies not so much in the proof as in the way it should be put forward. We may begin by stating that the rights of war do not hold good in any matter which can be brought before a court of justice, and that what is taken by force of arms can only be retained by force of arms, and consequently, wherever the rights of war hold good, there is no room for the functions of a judge, while on the contrary where the functions of the judge come into play, the rights of war cease to have any force.

[115] hoc inveniendum est, ut adhiberi possit argumentum: ideo captivos, si in patriam suam redierint, liberos esse, quia bello parta nonnisi eadem vi possideantur. proprium est et illud causae, quod Amphictyones iudicant (ut alia apud centumviros, alia apud privatum iudicem in iisdem quaestionibus ratio);

[115] The reason why it is necessary to discover this principle is to enable us to bring the following argument into play: that prisoners of war are free on returning to their native land just because the gains of war cannot be retained except by the exercise of the same violence by which they were acquired. Another peculiar feature of the case is that it is tried before the Amphictyonic council, and you will remember that we have to employ different methods in pleading a case before the centumviral court and before an arbitrator, though the problems of the cases may be identical.

[116] tum secundo gradu, non potuisse donari a victore ius, quia id demum sit eius, quod teneat; ius, quod sit incorporate, adprehendi manu non posse. hoc reperire est difficilius quam, cum inveneris, argumentis adiuvere, ut alia sit condicio heredis, alia victoris, quia ad illum ius, ad hunc res transeat.

[116] Secondly we may urge that the right to refuse payment could not have been conferred by the victor because he possesses only what he holds, but a right, being incorporeal, cannot be grasped by the hand. It is more difficult to discover this principle than, once discovered, to defend it with arguments such as that the position of an heir and a conqueror are fundamentally different, since right passes to the one and property to the other.

[117] proprium deinde materiae, ius publici crediti transire ad victorem non potuisse, quia, quod populus crediderit, omnibus debeatur, et, quamdiu quilibet unus superfuerit, esse eum totius summae creditorem, Thebanos autem non omnes in Alexandri manu fuisse.

[117] It is further an argument peculiar to the subject matter of the case that the right over a public debt could not have passed to the victor, because the repayment of a sum of money lent by a whole people is due to them all, and as long as any single one of them survives, he is creditor for the whole amount: but the Thebans were never all of them to a man in Alexander's power.

[118] hoc non extrinsecus probatur, quae vis est argumenti, sed ipsum per se valet. tertii loci pars prior magis vulgaris, non in tabulis esse ius; itaque multis argumentis defendi potest. mens quoque Alexandri duci debet in dubium, honorarit eos an deceperit. illud iam rursus proprium materiae et velut novae controversiae, quia restitutione recepissee ius, etiamsi quod amiserint, Thebani videntur. hic et, quid Cassander velit, quaeritur: sed vel potentissima apud Amphictyonas aequi tractatio est.

[118] The force of this argument resides in the fact that it is not based on any

external support, but holds good in itself. Proceeding to the third line of argument we may note that the first portion of it is of a more ordinary type, namely that the right to repayment is not based on the actual document, a plea which can be supported by many arguments. Doubt may also be thrown on Alexander's purpose: did he intend to honour them or to trick them? Another argument peculiar to the subject (indeed it practically introduces a new discussion) is that the Thebans may be regarded as having in virtue of their restoration recovered the right even though it be admitted that they had lost it. Again Cassander's purpose may be discussed, but, as the case is being pleaded before the Amphictyonic council, we shall find that the most powerful plea that can be urged is that of equity.

[119] *haec non idcirco dico, quod inutilem horum locorum, ex quibus argumenta ducuntur, cognitionem putem, alioqui nec tradidissem; sed ne se, qui cognoverint ista, si cetera negligant, perfectos protinus atque consummatos putent et, nisi in ceteris, quae mox praecipienda sunt, elaboraverint, mutam quandam scientiam consecutos intelligant.*

[119] I make these remarks, not because I think that a knowledge of the "places" from which arguments may be derived is useless (had I thought so, I should have passed them by) but to prevent those who have learnt these rules from neglecting other considerations and regarding themselves as having a perfect and absolute knowledge of the whole subject, and to make them realise that, unless they acquire a thorough knowledge of the remaining points which I am about to discuss, they will be the possessors of what I can only call a dumb science.

[120] *neque enim artibus editis factum est, ut argumenta inveniremus, sed dicta sunt omnia, antequam praeciperentur, mox ea scriptores observata et collecta ediderunt. cuius rei probatio est, quod exemplis eorum veteribus utuntur et ab oratoribus ilia repetunt, ipsi nullum novum et quod dictum non sit inveniunt.*

[120] For the discovery of arguments was not the result of the publication of text-books, but every kind of argument was put forward before any rules were laid down, and it was only later that writers of rhetoric noted them and collected them for publication. A proof of this is the fact that the examples which they use are old and quoted from the orators, while they themselves discover nothing new or that has not been said before.

[121] *artifices ergo illi qui dixerunt; sed habenda his quoque gratia est, per quos labor nobis est detractus. nam, quae priores beneficio ingenii singula invenerunt, nobis et non sunt requirenda et notata sunt omnia. Sed non magis hoc sat est quam palaestram didicisse, nisi corpus exercitatione, continentia, cibis, ante omnia natura iuvatur, sicut contra ne illa quidem satis sine arte profuerint.*

[121] The creators of the art were therefore the orators, though we owe a debt of

gratitude also to those who have given us a short cut to knowledge. For thanks to them the arguments discovered by the genius of earlier orators have not got to be hunted out and noted down in detail. But this does not suffice to make an orator any more than it suffices to learn the art of gymnastic in school: the body must be assisted by continual practice, self control, diet and above all by nature; on the other hand none of these are sufficient in themselves without the aid of art.

[122] *illud quoque studiosi eloquentiae cogitent, neque omnibus in causis, quae demonstravimus, cuncta posse reperiri; neque, cum proposita fuerit materia dicendi, scrutanda singula et velut ostiatim pulsandum, ut sciant, an ad probandum id, quod intendimus, forte respondeant, nisi cum discunt et adhuc usu carent.*

[122] I would also have students of oratory consider that all the forms of argument which I have just set forth cannot be found in every case, and that when the subject on which we have to speak has been propounded, it is no use considering each separate type of argument and knocking at the door of each with a view to discovering whether they may chance to serve to prove our point, except while we are in the position of mere learners without any knowledge of actual practice.

[123] *infinitam enim faciat ista res dicendi tarditatem, si semper necesse sit, ut temptantes unumquodque eorum, quod sit aptum atque conveniens, experiendo noscamus; nescio an etiam impedimento futura sint, nisi et animi quaedam ingenita natura et studio exercitata velocitas recta nos ad ea, quae conveniunt causae, ferant. nam,*

[123] Such a proceeding merely retards the process of speaking to an incalculable extent, if it is always necessary for us to try each single argument and thus learn by experiment what is apt and suitable to our case. In fact I am not sure that it will not be an actual obstacle to progress unless a certain innate penetration and a power of rapid divination seconded by study lead us straight to the arguments which suit our case.

[124] *ut cantus vocis plurimum iuvat sociata nervorum concordia, si tamen tardior manus nisi inspectis demensisque singulis, quibus quaeque vox fidibus iungenda sit, dubitet, potius fuerit esse contentum eo, quod simplex canendi natura tulerit, ita huiusmodi praeceptis debet quidem aptata esse et citharae modo intenta ratio doctrinae;*

[124] For just as the melody of the voice is most pleasing when accompanied by the lyre, yet if the musician's hand be slow and, unless he first look at the strings and take their measure, hesitate as to which strings match the several notes of the voice, it would be better that he should content himself with the natural music of the voice unaccompanied by any instrument; even so our theory of speaking must be adapted and, like the lyre, attuned to such rules as

these.

[125] sed hoc exercitatione multa consequendum, ut, quemadmodum illorum artificum, etiamsi alio spectant, manus tamen ipsa consuetudine ad graves, acutos, medios nervorum sonos fertur, sic oratoris cognitionem nihil moretur haec varietas argumentorum et copia, sed quasi offerat se et occurrat, et, ut litterae syllabaeque scribentium cogitationem non exigunt, sic rationem sponte quadam sequantur.

[125] But it is only by constant practice that we can secure that, just as the hands of the musician, even though his eyes be turned elsewhere, produce bass, treble or intermediate notes by force of habit, so the thought of the orator should suffer no delay owing to the variety and number of possible arguments, but that the latter should present themselves uncalled and, just as letters and syllables require no thought on the part of a writer, so arguments should spontaneously follow the thought of the orator.

11. tertium genus ex iis, quae extrinsecus adducuntur in causam, Graeci vacant παράδειγμα, quo nomine et generaliter usi sunt in omni similium adpositione et specialiter in iis, quae rerum gestarum auctoritate nituntur. nostri fere similitudinem vocari maluerunt, quod ab illis παραβολή dicitur, alterum exemplum, quanquam et hoc simile est et illud exemplum.

11. The third kind of proof, which is drawn into the service of the case from without, is styled a παράδειγμα by the Greeks, who apply the term to all comparisons of like with like, but more especially to historical parallels. Roman writers have for the most part preferred to give the name of comparison to that which the Greeks style παραβολή, while they translate παράδειγμα by example, although this latter involves comparison, while the former is of the nature of an example.

[2] nos, quo facilius propositum explicemus, utrumque παράδειγμα esse credamus, et ipsi appellemus exemplum. nec vereor, ne videar repugnare Ciceroni, quanquam collationem separat ab exemplo. nam idem omnem argumentationem dividit in duas partes, inductionem et ratiocinationem, ut plerique Graecorum in παραδείγματα et ἐπιχειρήματα dixeruntque παράδειγμα ῥητορικὴν ἐπαγωγὴν.

[2] For my own part, I prefer with a view to making my purpose easier of apprehension to regard both as παραδείγματα and to call them examples. Nor am I afraid of being thought to disagree with Cicero, although he does separate comparison from example. For he divides all arguments into two classes, induction and ratiocination, just as most Greeks divide it into παραδείγματα and ἐπιχειρήματα, explaining παράδειγμα as a rhetorical induction.

[3] nam illa, qua plurimum est Socrates usus, hanc habuit viam, ut cum plura

interrogasset, quae fateri adversario necesse esset, novissime id, de quo quaerebatur, inferret, ut simile concessis. Id est inductio. hoc in oratione fieri non potest; sed, quod illic interrogatur, hic fere sumitur.

[3] The method of argument chiefly used by Socrates was of this nature: when he had asked a number of questions to which his adversary could only agree, he finally inferred the conclusion of the problem under discussion from its resemblance to the points already conceded. This method is known as induction, and though it cannot be used in a set speech, it is usual in a speech to assume that which takes the form of a question in dialogue.

[4] sit igitur illa interrogatio talis: quod est pomum generosissimum? nonne quod optimum? concedetur. quid equus? qui generosissimus? nonne qui optimus? et plura in eundem modum. deinde, cuius rei gratia rogatum est, quid homo? nonne is generosissimus, qui optimus? fatendum erit.

[4] For instance take the following question: "What is the finest form of fruit? Is it not that which is best?" This will be admitted. "What of the horse? What is the finest? Is it not that which is the best?" Several more questions of the same kind follow. Last comes the question for the sake of which all the others were put: "What of man? Is not he the finest type who is best?" The answer can only be in the affirmative.

[5] hoc in testium interrogatione valet plurimum, in oratione perpetua dissimile est; aut enim sibi ipse respondet orator aut quod illic interrogatur, hic fere sumitur. quod pomum generosissimum? puto, quod optimum; et equus? qui velocissimus: ita hominum, non qui claritate nascendi sed qui uirtute maxime excellet.

omnia igitur ex hoc genere sumpta necesse est aut similia esse aut dissimilia aut contraria. similitudo adsumitur interim et ad orationis ornatum; sed illa, cum res exiget, nunc ea, quae ad probationem pertinent, exsequar.

[5] Such a procedure is most valuable in the examination of witnesses, but is differently employed in a set speech. For there the orator either answers his own questions or makes an assumption of that which in dialogue takes the form of a question. "What is the finest fruit? The best, I should imagine. What is the finest horse? The swiftest. So too the finest type of man is not he that is noblest of birth, but he that is most excellent in virtue."

All arguments of this kind, therefore, must be from things like or unlike or contrary. Similes are, it is true, sometimes employed for the embellishment of the speech as well, but I will deal with them in their proper place; at present I am concerned with the use of similitude in proof.

[6] potentissimum autem est inter ea quae sunt huius generis, quod proprie vocamus exemplum, id est rei gestae aut ut gestae utilis ad persuadendum id quod intenderis commemoratio. intuendum igitur est, totum simile sit an ex

parte, ut aut omnia ex eo sumamus aut quae utilia sunt. simile est, iure occisus est Saturninus sicut Gracchi. dissimile,

[6] The most important of proofs of this class is that which is most properly styled example, that is to say the adducing of some past action real or assumed which may serve to persuade the audience of the truth of the point which we are trying to make. We must therefore consider whether the parallel is complete or only partial, that we may know whether to use it in its entirety or merely to select those portions which are serviceable. We argue from the like when we say, "Saturninus was justly killed, as were the Gracchi"; from the unlike when we say,

[7] Brutus occidit liberos prodicionem molientes; Manlius virtutem filii morte multavit. contrarium, Marcellus ornamenta Syracusanis hostibus restituit; Verres eadem sociis abstulit. et probandorum et culpandorum ex iis confirmatio eosdem gradus habet.

[7] "Brutus killed his sons for plotting against the state, while Manlius condemned his son to death for his valour"; from the contrary when we say, "Marcellus restored the works of art which had been taken from the Syracusans who were our enemies, while Verres took the same works of art from our allies." The same divisions apply also to such forms of proof in panegyric or denunciation.

[8] etiam in iis, quae futura dicemus, utilis similium admonitio est, ut si quis dicens, Dionysium idcirco petere custodes salutis suae, ut eorum adiutus armis tyrannidem occupet, hoc referat exemplum, eadem ratione Pisistratum ad dominationem pervenisse.

[8] It will also be found useful when we are speaking of what is likely to happen to refer to historical parallels: for instance if the orator asserts that Dionysius is asking for a bodyguard that with their armed assistance he may establish himself as tyrant, he may adduce the parallel case of Pisistratus who secured the supreme power by similar means.

[9] Sed ut sunt exempla interim tota similia ut hoc proximum, sic interim ex maioribus ad minora, ex minoribus ad maiora ducuntur. urbes eversae proper matrimonia eversae sunt; quid fieri adultero par est? tibicines, cum ab urbe discessissent, publice revocati sunt; quanto magis principes civitatis viri et bene de republica meriti,

[9] But while examples may at times, as in the last instance, apply in their entirety, at times we shall argue from the greater to the less or from the less to the greater. "Cities have been overthrown by the violation of the marriage bond. What punishment then will meet the case of adultery?" "Fluteplayers have been recalled by the state to the city which they had left. How much more then is it just that leading citizens who have rendered good service to

their country should be recalled from that exile to which they have been driven by envy.”

[10] cum invidiae cesserint, ab exilio reducendi? ad exhortationem vero praecipue valent imparia. admirabilior in femina quam in viro virtus. Quare, si ad fortiter faciendum accendatur aliquis, non tantum adferent momenti Horatius et Torquatus quantum illa mulier cuius manu Pyrrhus est interfectus, et ad moriendum non tam Cato et Scipio quam Lucretia; quod ipsum est ex maioribus ad minora.

[10] Arguments from unlikes are most useful in exhortation. Courage is more remarkable in a woman than in a man. Therefore, if we wish to kindle someone’s ambition to the performance of heroic deeds, we shall find that parallels drawn from the cases of Horatius and Torquatus will carry less weight than that of the woman by whose hand Pyrrhus was slain, and if we wish to urge a man to meet death, the cases of Cato and Scipio will carry less weight than that of Lucretia. These are however arguments from the greater to the less.

[11] singula igitur horum generum ex Cicerone (nam unde potius?) exempla ponamus. simile est hoc pro Murena, etenim mihi ipsi accidit, it cum duobus patriciis, altero improbissimo et audacissimo altero modestissimo atque optimo viro, peterem; superavi tamen dignitate Catilinam, gratia Galbam.

[11] Let me then give you separate examples of these classes of argument from the pages of Cicero; for where should I find better? The following passage from the *pro Murena* is an instance of argument from the like: “For it happened that I myself when a candidate had two patricians as competitors, the one a man of the most unscrupulous and reckless character, the other a most excellent and respectable citizen. Yet I defeated Catiline by force of merit and Galba by my popularity.”

[12] maius minoris, pro Milone, negant

intueri lucem esse fas ei qui a se hominem occisum esse fateatur. In qua tandem urbe hoc homines stultissimi disputant? nempe in ea quae primum iudicium de capite vidit M. Horatii, fortissimi viri, qui nondum libera civitate tamen populi Romani comitiis liberatus est, cum sua mann sororem esse interfectam fateretur. minus maioris: occidi, occidi, non Spurium Maelium, qui annona levanda iacturisque rei familiaris, quia nimis amplecti plebem videbatur, in suspicionem incidit regni adfectandi, et cetera, deinde, Sed eum (auderet enim dicere, cum patriam periculo liberasset) cuius nefandum adulterium in pulvinaribus, et totus in Clodium locus.

[12] The *pro Milone* will give us an example of argument from the greater to the less: “They say that he who confesses to having killed a man is not fit to look upon the light of day. Where is the city in which men are such fools as to

argue thus? It is Rome itself, the city whose first trial on a capital charge was that of Marcus Horatius, the bravest of men, who, though the city had not yet attained its freedom, was none the less acquitted by the assembly of the Roman people, in spite of the fact that he confessed that he had slain his sister with his own hand.” The following is an example of argument from the less to the greater: “I killed, not Spurius Maelius, who by lowering the price of corn and sacrificing his private fortune fell under the suspicion of desiring to make himself king, because it seemed that he was courting popularity with the common people overmuch,” and so on till we come to, “No, the man I killed (for my client would not shrink from the avowal, since his deed had saved his country) was he who committed abominable adultery even in the shrines of the gods”; then follows the whole invective against Clodius.

[13] *dissimile plures causas habet, fit enim genere, modo, tempore, loco, ceteris, per quae fere omnia Cicero praeiudicia, quae de Cluentio videbantur facta, subvertit; contrario vero exemplo censoriam notam laudando censorem Africanum, qui eum, quem peierasse conceptis verbis palam dixisset, testimonium etiam pollicitus, si quis contra diceret, nullo accusante, traducere equum passus esset; quae, quia erant longiora, non suis verbis exposui.*

[13] Arguments from unlikes present great variety, for they may turn on kind, manner, time, place, etcetera, almost every one of which Cicero employs to overthrow the previous decisions that seemed to apply to the case of Cluentius, while he makes use of argument from contraries when he minimises the importance of the censorial stigma by praising Scipio Africanus, who in his capacity of censor allowed one whom he openly asserted to have committed deliberate perjury to retain his horse, because no one had appeared as evidence against him, though he promised to come forward himself to bear witness to his guilt, if any should be found to accuse him. I have paraphrased this passage because it is too long to quote.

[14] *breve autem apud Vergilium contrarii exemplum est:*

At non ille, satum quo te mentiris, Achilles
talis in hoste fuit Priamo.

[14] A brief example of a similar argument is to be found in Virgil,

“But he, whom falsely thou dost call thy father,
Even Achilles, in far other wise
Dealt with old Priam, and Priam was his foe.
“

[15] *quaedam autem ex iis, quae gesta sunt, tota narrabimus, ut Cicero pro Milone: pudicitiam cum eriperet militi tribunus militaris in exercitu C. Marii, propinquus eius imperatoris, interfectus ab eo est, cui vim adferebat. facere enim probus adolescens periculose quam perpeti turpiter maluit; atque hunc*

ille summus vir scelere solutum periculo liberavit.

[15] Historical parallels may however sometimes be related in full, as in the *pro Milone*: “When a military tribune serving in the army of Gaius Marius, to whom he was related, made an assault upon the honour of a common soldier, the latter killed him; for the virtuous youth preferred to risk his life by slaying him to suffering such dishonour. And yet the great Marius acquitted him of all crime and let him go scot free.”

[16] quaedam significare satis erit, ut idem ac pro eodem: neque enim posset Ahala ille Servilius aut P. Nasica aut L. Opimius aut me consule senatus non nefarius haberi, si sceleratos interfici nefas esset. haec ita dicentur, prout nota erunt vel utilitas causae aut decor postulabit.

[16] On the other hand in certain cases it will be sufficient merely to allude to the parallel, as Cicero does in the same speech: “For neither the famous Servilius Ahala nor Publius Nasica nor Lucius Opimius nor the Senate during my consulship could be cleared of serious guilt, if it were a crime to put wicked men to death.” Such parallels will be adduced at greater or less length according as they are familiar or as the interests or adornment of our case may demand.

[17] eadem ratio est eorum, quae ex poeticis fabulis ducuntur, nisi quod iis minus adfirmationis adhibetur; cuius usus qualis esse deberet, idem optimus auctor ac magister eloquentiae ostendit.

[17] A similar method is to be pursued in quoting from the fictions of the poets, though we must remember that they will be of less force as proofs. The same supreme authority, the great master of eloquence, shows us how we should employ such quotations.

[18] nam huius quoque generis in eadem oratione reperietur exemplum itaque hoc, iudices, non sine causa etiam fictis fabulis doctissimi homines memoriae prodiderunt, eum, qui patris ulciscendi causa matrem necauisset, variatis hominum sentiis, non solum divina sed sapientissimae deae sententia liberatum.

[18] For an example of this type will be found in the same speech: “And it is therefore, gentlemen of” the jury, that men of the greatest learning have recorded in their fictitious narratives that one who had killed his mother to avenge his father was acquitted, when the opinion of men was divided as to his guilt, not merely by the decision of a deity, but by the vote of the wisest of goddesses.”

[19] illae quoque fabellae, quae, etiamsi originem non ab Aesopo acceperunt (nam uidetur earum primus auctor Hesiodus), nomine tamen Aesopi maxime celebrantur, ducere animos solent praecipue rusticorum et imperitorum, qui et simplicius, quae ficta sunt, audiunt, et capti voluptate facile iis quibus

delectantur consentiunt: siquidem et Menenius Agrippa plebem cum patribus in gratiam traditur reduxisse nota ilia de membris humanis adversus ventrem discordantibus fabula.

[19] Again those fables which, although they did not originate with Aesop (for Hesiod seems to have been the first to write them), are best known by Aesop's name, are specially attractive to rude and uneducated minds, which are less suspicious than others in their reception of fictions and, when pleased, readily agree with the arguments from which their pleasure is derived. Thus Menenius Agrippa is said to have reconciled the plebs to the patricians by his fable of the limbs' quarrel with the belly. Horace

[20] et Horatius ne in poemate quidem humilem generis huius usum putavit in illis versibus, Quod dixit uulpes aegroto cauta leoni. Ἀῖνον Graeci vocant et αἰσωπειούς ut dixi, λόγους et λιθυκοῦς; nostrorum quidam, non sane recepto in usum nomine, apologationem.

[20] also did not regard the employment of fables as beneath the dignity even of poetry; witness his lines that narrate "What the shrewd fox to the sick lion told." The Greeks call such fables αῖνοι (tales) and, as I have already remarked, Aesopean or Libyan stories, while some Roman writers term them "apologues," though the name has not found general acceptance.

[21] cui confine est παροιμία genus illud, quod est velut fabella brevior et per allegorian accipitur: Non nostrum inquit onus; bos clitellas.

[21] Similar to these is that class of proverb which may be regarded as an abridged fable and is understood allegorically: "The burden is not mine to carry," he said, "the ox is carrying panniers."

[22] proximas exempli vires habet similitudo, praecipue illa, quae ducitur citra ullam translationum mixturam ex rebus paene paribus: ut, qui accipere in Campo consuerunt, iis candidatis, quorum nummos suppressos esse putant, inimicissimi solent esse, sic eiusmodi indices infesti tum reo venerunt.

[22] *Simile* has a force not unlike that of *example*, more especially when drawn from things nearly equal without any admixture of metaphor, as in the following case: "Just as those who have been accustomed to receive bribes in the Campus Martius are specially hostile to those whom they suspect of having withheld the money, so in the present case the judges came into court with a strong prejudice against the accused."

[23] nam παραβολή quam Cicero collationem vocat, longius res quae comparentur repetere solet. neque hominum modo inter se opera similia spectantur, ut Cicero pro Murena facit: quodsi e portu solventibus, qui iam in portum ex alto invehuntur, praecipere summo studio solent et tempestatum rationem et praedonum et locorum (quod natura adfert, ut iis faveamus, qui eadem pericula, quibus nos perfuncti sumus, ingrediantur), quo me tandem

animo esse oportet, prope iam ex magna iactatione terram videntem, in hunc, cui video maximas tempestates esse subeundas? sed et a mutis atque etiam inanimis interim simile huiusmodi ducitur.

[23] For παραβολή, which Cicero translates by “comparison,” is often apt to compare things whose resemblance is far less obvious. Nor does it merely compare the actions of men as Cicero does in the *pro Murena*: “But if those who have just come into harbour from the high seas are in the habit of showing the greatest solicitude in warning those who are on the point of leaving port of the state of the weather, the likelihood of falling in with pirates, and the nature of the coasts which they are like to visit (for it is a natural instinct that we should take a kindly interest in those who are about to face the dangers from which we have just escaped), what think you should be my attitude who am now in sight of land after a mighty tossing on the sea, towards this man who, as I clearly see, has to face the wildest weather?” On the contrary, similes of this kind are sometimes drawn from dumb animals and inanimate objects.

[24] et quoniam similitum alia facies in alia ratione, admonendum est rarius esse in oratione illud genus, quod εἰκὼνα Graeci vocant (quo exprimitur rerum aut personarum imago, ut Cassius: quis istam faciem planipedis senis torquens?) quam id, quo probabilius fit quod intendimus: ut, si animum dicas excolendum, similitudine utaris terrae, quae neglecta spinas ac dumos, culta fructus creat; aut si ad curam rei publicae horteris, ostendas apes etiam formicasque, non modo muta, sed etiam parva animalia, in commune tamen laborare.

[24] Further, since similar objects often take on a different appearance when viewed from a different angle, I feel that I ought to point out that the kind of comparison which the Greeks call εἰκὼν, and which expresses the appearance of things and persons (as for instance in the line of Cassius —

“Who is he yonder that doth writhe his face
Like some old man whose feet are wrapped in
wool?”
“

should be more sparingly used in oratory than those comparisons which help to prove our point. For instance, if you wish to argue that the mind requires cultivation, you would use a comparison drawn from the soil, which if neglected produces thorns and thickets, but if cultivated will bear fruit; or if you are exhorting someone to enter the service of the state, you will point out that bees and ants, though not merely dumb animals, but tiny insects, still toil for the common weal.

[25] Ex hoc genere dictum illud est Ciceronis: ut corpora nostra sine mente, ita civitas sine lege suis partibus, ut nervis ac sanguine et membris, uti non

potest. Sed ut hac corporis humani pro Cluentio, ita pro Cornelio equorum, pro Archia saxorum quoque usus est similitudine.

[25] Of this kind is the saying of Cicero: "As our bodies can make no use of their members without a mind to direct them, so the state can make no use of its component parts, which may be compared to the sinews, blood and limbs, unless it is directed by law." And just as he draws this simile in the *pro Cluentio* from the analogy of the human body, so in the *pro Cornelio* he draws a simile from horses, and in the *pro Archia* from stones.

[26] illa (ut dixi) propiora: ut remiges sine gubernatore, sic milites sine imperatore nihil valere. solent tamen fallere similitudinum species, ideoque adhibendum est iis iudicium. neque enim, ut navis utilior nova quam vetus, sic amicitia; vel, ut laudanda, quae pecuniam suam pluribus largitur, ita, quae formam. verba sunt in his similia uetustatis et largitionis, vis quidem longe diversa navis et amicitiae, pecuniae et pudicitiae.

[26] As I have already said, the following type of simile comes more readily to hand: "As oarsmen are useless without a steersman, so soldiers are useless without a general." Still it is always possible to be misled by appearances in the use of simile, and we must therefore use our judgment in their employment. For though a new ship is more useful than one which is old, this simile will not apply to friendship: and again, though we praise one who is liberal with her money, we do not praise one who is liberal with her embraces. In these cases there is similitude in the epithets *old* and *liberal*, but their force is different, when applied to ships and friendship, money and embraces.

[27] itaque in hoc genere maxime quaeritur, an simile sit, quod infertur. etiam in illis interrogationibus Socratis, quarum paulo ante feci mentionem, cavendum, ne incaute respondeas; ut apud Aeschinen Socraticum male respondit Aspasiae Xenophontis uxor, quod Cicero his verbis transfert: Dic mihi,

[27] Consequently, it is allimportant in this connexion to consider whether the simile is really applicable. So in answering those Socratic questions which I mentioned above, the greatest care must be taken to avoid giving an incautious answer, such as those given by the wife of Xenophon to Aspasia in the dialogue of Aeschines the Socratic: the passage is translated by Cicero as follows:

[28] quaeso, Xenophontis uxor, si vicina tua melius habeat aurum, quam tu habes: utrumne illud an tuum malis? illud, inquit. quid si uestem et ceterum ornatum muliebrem pretii maioris habeat, quam tu, tuumne an illius malis? respondit, Illius vero. age sis, inquit, si virum illa meliorem habeat, quam tu> habes, utrumne tuum virium malis an illius?

[28] "Tell me, pray, wife of Xenophon, if your neighbour has finer gold

ornaments than you, would you prefer hers or yours?" "Hers," she replied. "Well, then, if her dress and the rest of her ornaments are more valuable than yours, which would you prefer, hers or yours?" "Hers," she replied. "Come, then," said she, "if her husband is better than yours, would you prefer yours or hers?" At this the wife of Xenophon not unnaturally blushed; for she had answered ill in replying that she would prefer her neighbour's gold ornaments to her own, since it would be wrong to do so. If on the other hand she had replied that she would prefer her ornaments to be of the same quality as those of her neighbour, she might have answered without putting herself to the blush that she would prefer her husband to be like him who was his superior in virtue.

[29] hic mulier erubuit, merito; male enim responderat se malle alienum aurum quam suum; nam est hoc improbum. At, si respondisset malle se aurum suum tale esse, quale illud esset, potuisset pudice respondere malle se virum suum talem esse, qualis melior esset.

[30] I am aware that some writers have shown pedantic zeal in making a minute classification of similes, and have pointed out that there is lesser similitude (such as that of a monkey to a man or a statue when first blocked out to its original), a greater similitude (for which compare the proverb "As like as egg to egg"), a similitude in things dissimilar (an elephant, for instance, and an ant both belong to the genus *animal*), and dissimilitude in things similar (puppies and kids, for example, are unlike the parents, for they differ from them in point of age).

[30] scio quosdam inani diligentia per minutissimas ista partes secuisse, et esse aliquid minus simile, ut simia homini et marmora deformata prima manu, aliquid plus, ut illud, Non ovum tam simile ovo; et dissimilibus inesse simile, ut formicae et elephanto genus, quia sunt animalia; et similibus dissimile, ut canibus catulos et matribus haedos, differunt enim aetate; contrariorum quoque aliter accipi opposita,

[31] So too they distinguish between contraries: some are opposites, as night to day, some hurtful, as cold water to a fever, some contradictory, as truth to falsehood, and some negative, as things which are not hard when contrasted with things which are hard. But I cannot see that such distinctions have any real bearing on the subject under discussion.

[31] ut noctem luci, aliter noxia, ut aquam frigidam febrī, aliter repugnantia, ut verum falso, aliter disparata, ut dura non duris; sed, quid haec ad praesens propositum magnopere pertineant, non reperio. Illud est adnotandum magis,

[32] It is more important for our purpose to note that arguments may be drawn from similar, opposite, and dissimilar points of law. As an example of the first, take the following passage from the *Topica* of Cicero, where he argues that a man to whom the usufruct of a house has been left will not restore it in

the interests of the heir if it collapses; just as lie would not replace a slave if he should die. The following will provide an example of an argument drawn from opposite points of law: “The absence of a formal contract is no bar to the legality of a marriage, provided the parties cohabit by mutual consent, since the signing of a formal document will count for nothing in the absence of such mutual consent.” An instance of an argument drawn from dissimilar points of law occurs in the *pro Caecina* of Cicero:

[32] argumenta duci ex iure simili: ut Cicero in Topicis, eum, cui domus usus fructus relictus sit, non restitutum heredi, si corruerit, quia non restitutum servum, si is decesserit; ex contrario: Nihil obstat quo minus iustum matrimonium sit mente coeuntium, etiamsi tabulae signatae non fuerint. nihil enim proderit signasse tabulas, si mentem matrimonii non fuisse constabit; ex dissimili, quale est Ciceronis pro Caecina:

[33] “If anyone had driven me from my house by armed violence, I should have ground for action against him. Have I then no ground, if he has prevented me from entering my house?” Dissimilar points may be illustrated by the following example: “Because a man has bequeathed all his silver to a given person and this bequest is regarded as including silver coin as well as plate, it does not follow that he intended all outstanding debts to be paid to the legatee.”

[33] ut, si qui me exire domo coegisset armis, haberem actionem, si qui introire prohibuisset, non haberem? dissimilia sic deprehenduntur, Non si, qui argentum omne legarit, videri potest signatam quoque pecuniam reliquisse, ideo etiam, quod est in nominibus, dari voluisse creditur.

[34] Some draw a distinction between *analogy* and *similarly*, but personally I regard the former as included under the latter. For the statement that the relation of 1 to 10 is the same as that of 10 to certainly involves similarity,

[34] Ἀναλογίαν quidam a simili separaverunt, nos eam subiectam huic generi putamus. nam, ut unum ad decem, ita decem ad centum simile certe est; et ut hostis, sic malus civis. quanquam haec ulterius quoque procedere solent: si turpis dominae consuetudo cum servo, turpis domino cum ancilla; si mutis animalibus finis voluptas, idem homini.

[100] just as does the statement that a bad citizen may be compared to an actual enemy. But arguments of this kind are carried still further: “If connexion with a male slave is disgraceful to the mistress of the house, so is the connexion of the master with a female slave. If pleasure is an end sought by dumb animals, so also must it be with men.”

[35] cui rei facillime occurrit ex dissimilibus argumentatio: Non idem est dominum cum ancilla coisse, quod dominam cum servo; nec, si mutis finis voluptas, rationalibus quoque; immo ex contrario: quia mutis, ideo non

rationalibus.

[35] But these arguments may readily be met by arguments from dissimilars: “It is not the same thing for the master of the house to have intercourse with a female slave as for the mistress to have intercourse with a male slave; nor does it follow that because dumb animals pursue pleasure, reasoning beings should do likewise.” Or they may even be met by arguments from opposites; as for instance, “Because pleasure is an end sought by dumb animals, it should not be sought by reasoning beings.”

[36] adhibebitur extrinsecus in causam et auctoritas. haec secuti Graecos, a quibus κρισεις dicuntur, iudicia aut indicationes vocant, non de quibus ex causa dicta sententia est (nam ea quidem in exemplorum locum cedunt), sed si quid ita visum gentibus, populis, sapientibus viris, claris civibus, illustribus poetis referri potest.

[36] Authority also may be drawn from external sources to support a case. Those who follow the Greeks, who call such arguments κρισεις, style them *judgments* or *adjudications*, thereby referring not to matters on which judicial sentence has been pronounced (for such decisions form examples or precedents), but to whatever may be regarded as expressing the opinion of nations, peoples, philosophers, distinguished citizens, or illustrious poets. Nay,

[37] ne haec quidem vulgo dicta et recepta persuasione populari sine usu fuerint. testimonia sunt enim quodammodo vel potentiora etiam, quod non causis accommodata, sed liberis odio et gratia mentibus ideo tantum dicta factaque, quia aut honestissima aut verissima videbantur.

[37] even common sayings and popular beliefs may be found to be useful. For they form a sort of testimony, which is rendered all the more impressive by the fact that it was not given to suit special cases, but was the utterance or action of minds swayed neither by prejudice or influence, simply because it seemed the most honourable or honest thing to say or do.

[38] An vero me de incommodis vitae disserentem non adiuvabit earum persuasio nationum, quae fletibus natos, laetitia defunctos prosecuntur? aut si misericordiam commendabo iudici, nihil proderit, quod prudentissima civitas Atheniensium non eam pro adfectu sed pro numine accepit?

[38] For instance, if I am speaking of the misfortunes of this mortal life, surely it will help me to adduce the opinion of those nations who hold that we should weep over the new-born child and rejoice over the dead. Or if I am urging the judge to shew pity, surely my argument may be assisted by the fact that Athens, the wisest of all states, regarded pity not merely as an emotion, but even as a god. Again,

[39] iam illa septem praecepta sapientium nonne quasdam vitae leges

existimamus? si causam ueneficii dicat adultera, non M. Catonis iudicio damnata videatur, qui nullam adulteram non eandem esse ueneficam dixit? nam sententiis quidem poetarum non orationes modo sunt refertae sed libri etiam philosophorum, qui quanquam inferiora omnia praeceptis suis ac litteris credunt, repetere tamen auctoritatem a plurimis versibus non fastidierunt.

[39] do we not regard the precepts of the Seven Wise Men as so many rules of life? If an adulteress is on her trial for poisoning, is she not already to be regarded as condemned by the judgment of Marcus Cato, who asserted that every adulteress was as good as a poisoner? As for reflexions drawn from the poets, not only speeches, but even the works of the philosophers, are full of them; for although the philosophers think everything inferior to their own precepts and writings, they have not thought it beneath their dignity to quote numbers of lines from the poets to lend authority to their statements.

[40] neque est ignobile exemplum, Megarios ab Atheniensibus, cum de Salamine contenderent, victos Homeri versu, qui tamen ipse non in omni editione reperitur, significans Aiace[m] naves suas Atheniensibus iunxisse. ea quoque,

[40] Again, a remarkable example of the weight carried by authority is provided by the fact that when the Megarians disputed the possession of Salamis with the Athenians, the latter prevailed by citing a line from Homer, which is not however found in all editions, to the effect that Ajax united his ships with those of the Athenians.

[41] quae vulgo recepta sunt, hoc ipso, quod incertum auctorem habent, velut omnium fiunt: quale est, Ubi amici, ibi opes, et, conscientia mille testes, et apud Ciceronem, pares autem (ut est in vetere proverbio) cum paribus maxime congregantur; neque enim durassent haec in aeternum, nisi vera omnibus, uiderentur.

[41] Generally received sayings also become common property owing to the very fact that they are anonymous, as, for instance, "Friends are a treasure," or "Conscience is as good as a thousand witnesses," or, to quote Cicero, "In the words of the old proverb, birds of a feather flock together." Sayings such as these would not have acquired immortality had they not carried conviction of their truth to all mankind.

[42] ponitur a quibusdam et quidem in parte prima deorum auctoritas, quae est ex responsis, ut, Socraten esse sapientissimum. id rarum est, non sine usu tamen. utitur eo Cicero in libro de aruspicum responsis et in contione contra Catilinam, cum signum Iovis columnae impositum populo ostendit, et pro Ligario, cum causam C. Caesaris meliorem, quia hoc dii iudicaverint, confitetur. quae cum propria causae sunt, divina testimonia vocantur; cum aliunde arcessuntur, argumenta.

[42] Some include under this head the supernatural authority that is derived from oracles, as for instance the response asserting that Socrates was the wisest of mankind: indeed, they rank it above all other authorities. Such authority is rare, but may prove useful. It is employed by Cicero in his speech on the Replies of the Soothsayers and in the oration in which he denounced Catiline to the people, when he points to the statue of Jupiter crowning a column, and again in the *pro Ligario*, where he admits the cause of Caesar to be the better because the gods have decided in his favour. When such arguments are inherent in the case itself they are called supernatural evidence; when they are adduced from without they are styled supernatural arguments.

[43] nonnunquam contingit iudicis quoque aut adversarii aut eius, qui ex diverso agit, dictum aliquid aut factum adsumere ad eorum, quae intendimus, fidem. propter quod fuerunt, qui exempla et has auctoritates inartificialium probationum esse arbitrarentur, quod ea non inveniret orator,

[43] Sometimes, again, it may be possible to produce some saying or action of the judge, of our adversary or his advocate in order to prove our point. There have therefore been some writers who have regarded examples and the use of authorities of which I am speaking as belonging to *inartificial* proofs, on the ground that the orator does not discover them, but receives them readymade. But the point is of great importance.

[44] sed acciperet. plurimum autem refert. nam testis et quaestio et his similia de ipsa re, quae in iudicio est, pronuntiant; extra petita, nisi ad aliquam praesentis disceptationis utilitatem ingenio applicantur, nihil per se valent.

[44] For witnesses and investigation and the like all make some pronouncement on the actual matter under trial, whereas arguments drawn from without are in themselves useless, unless the pleader has the wit to apply them in such a manner as to support the points which he is trying to make.

12. haec fere de probatione vel ab aliis tradita vel usu percepta in hoc tempus sciebam. neque mihi fiducia est, ut ea sola esse contendam, quin immo hortor ad quaerendum et inveniri posse fateor; quae tamen adiecta fuerint, non multum ab his abhorrebunt. nunc breviter, quemadmodum sit utendum iis, subiungam.

12. Such in the main are the views about proof which I have either heard from others or learned by experience. I would not venture to assert that this is all there is to be said; indeed I would exhort students to make further researches on the subject, for I admit the possibilities of making further discoveries. Still anything that may be discovered will not differ greatly from what I have said here. I will now proceed to make a few remarks as to how proofs should be employed.

[2] traditum fere est argumentum oportere esse confessum; dubiis enim probari

dubia qui possunt Quaedam tamen, quae in alterius rei probationem ducimus, ipsa probanda sunt. occidisti virum, eras enim adultera. prius de adulterio convincendum est ut, cum id coeperit esse pro certo, fiat incerti argumentum. spiculum tuum in corpore occisi inventum est; negat suum: ut probationi prosit, probandum est.

[2] It has generally been laid down that an argument to be effective must be based on certainty; for it is obviously impossible to prove what is doubtful by what is no less doubtful. Still some things which are adduced as proof require proof themselves. "You killed your husband, for you were an adulteress." Adultery must first be proved: once that is certain it can be used as an argument to prove what is uncertain. "Your javelin was found in the body of the murdered man." He denies that it was his. If this point is to serve as a proof, it must itself be proved. It is,

[3] *illud hoc loco monere inter necessaria est, nulla esse firmiora quam quae ex dubiis facta sunt certa. caedes a te commissa est, cruentam enim vestem habuisti; non est tam grave argumentum, si fatetur quam si convincitur. nam si fatetur, multis ex causis potuit cruenta esse vestis; si negat, hic causae cardinem ponit, in quo si victus fuerit, etiam in sequentibus ruit. Non enim videtur in negando mentiturus fuisse, nisi desperasset id posse defendi, si confiteretur.*

[3] however, necessary in this connection to point out that there are no stronger proofs than those in which uncertainty has been converted into certainty. "You committed the murder, for your clothes were stained with blood." "This argument is not so strong if the accused admits that his clothes were bloodstained as if the fact is proved against his denial. For if he admits it, there are still a number of ways in which the blood could have got on to his clothes: if on the other hand he denies it, lie makes his whole case turn on this point, and if his contention is disproved, he will be unable to make a stand on any subsequent ground. For it will be thought that he would never have told a lie in denying the allegation, unless he had felt it a hopeless task to justify himself if he admitted it.

[4] *firmissimis argumentorum singulis instandum, infirmiora congreganda sunt, quia illa per se fortia non oportet circumstantibus obscurare, ut qualia sunt appareant, haec imbecilla natura mutuo auxilio sustententur.*

[4] In insisting on our strongest arguments we must take them singly, whereas our weaker arguments should be massed together: for it is undesirable that those arguments which are strong in themselves should have their force obscured by the surrounding matter, since it is important to show their true nature: on the other hand arguments which are naturally weak will receive mutual support if grouped together.

[5] *ita quae non possunt valere, quia magna sint, valebunt, quia multa sunt; utique vero ad eiusdem rei probationem omnia spectant. ut, si quis hereditatis gratia hominem occidisse dicatur: hereditatem sperabas et magnam hereditatem, et pauper eras et tum maxime a creditoribus appellabaris; et offenderas eum, cuius eras heres, et mutaturum tabulas sciebas. singula levia sunt et communia, universa vero nocent etiamsi non ut fulmine, tamen ut*

grandine.

[5] Consequently arguments which have no individual force on the ground of strength will acquire force in virtue of their number, since all tend to prove the same thing. For instance, if one man is accused of having murdered another for the sake of his property, it may be argued as follows: "You had expectations of succeeding to the inheritance, which was moreover very large: you were a poor man, and at the time in question were specially hard pressed by your creditors: you had also offended him whose heir you were, and knew that he intended to alter his will." These arguments are trivial and commonplace in detail, but their cumulative force is damaging. They may not have the overwhelming force of a thunderbolt, but they will have all the destructive force of hail.

[6] quaedam argumenta ponere satis non est, adiuvanda sunt: cupiditas causa sceleris fuit, quae sit vis eius: ira, quantum efficiat in animis hominum talis affectio; ita et firmiora erunt ipsa et plus habebunt decoris, si non nudos et velut carne spoliatos artus ostenderint.

[6] There are certain arguments, which must not merely be stated, but supported as well. If we say, "The motive for the crime was greed," we must show the force of greed as a motive: if we say that anger was the motive, we must show the sway that this passion has over the minds of men. Thus our arguments will not only be strengthened, but will be more ornamental as well, since we shall have produced something more than a mere fleshless skeleton. It also makes an enormous difference,

[7] multum etiam refert, si argumento nitimur odii, utrum hoc ex invidia sit an ex iniuria an ex ambitu, vetus an novum, adversus inferiorem, parem, superiorem, alienum, propinquum. suos habent omnia ista tractatus et ad utilitatem partis eius quam tuemur referenda sunt.

[7] supposing that we allege hatred as the motive for a crime, whether such hatred was due to envy, injury or unlawful influence, whether it was recent or of long standing, whether it was directed against an inferior, an equal or a superior, against a stranger or a relative. There are special methods for the treatment of all these arguments, and the treatment to be selected will depend on the interests of the case which we are defending.

[8] nec tamen omnibus semper, quae invenerimus, argumentis onerandus est iudex, quia et taedium adferunt et fidem detrahunt. neque enim potest iudex credere satis esse ea potentia, quae non putamus ipsi sufficere qui diximus. In rebus vero apertis argumentari tam sit stultum quam in clarissimum solem mortale lumen inferre.

[8] On the other hand we must not always burden the judge with all the arguments we have discovered, since by so doing we shall at once bore him

and render him less inclined to believe us. For he will hardly suppose those proofs to be valid which we ourselves who produce them regard as insufficient. On the other hand, where the facts are fairly obvious, it would be as foolish to argue about them as to bring some artificial light into broad sunlight.

[9] his quidam probationes adiiciunt, quas παθητικὰς vocant, ductas ex affectibus. atque Aristoteles quidem potentissimum putat ex eo, qui dicit, si sit vir bonus; quod ut optimum est, ita longe quidem, sed sequitur tamen, videri.

[9] To these proof's some authorities would add those which they call *pathetic* or *emotional*. Aristotle indeed holds that the strongest argument in support of a speaker is that he is a good man. This no doubt is the best support, but to seem good is also of value, though the semblance is but a bad second to the reality.

[10] inde enim ilia nobilis Scauri defensio: Q. Varius Sucronensis ait Aemilium Scaurum rem publicam populi Romani prodidisse; Aemilius, Scaurus negat. cui simile quiddam fecisse Iphicrates dicitur, qui cum Aristophontem, quo accusante similis criminis reus erat, interrogasset, an is accepta pecunia rem publicam proditurus esset; isque id negasset: quod igitur, inquit, tu non fecisses, ego feci?

[10] Of this nature is the noble defence of Scaurus. "Quintus Varius of Sucro asserts that Aemilius Scaurus has betrayed the interests of the Roman people: Aemilius Scaurus denies it." A similar defence is said to have been employed by Iphicrates : he asked Aristophon who was accusing him on a similar charge of treason whether he would consent to betray his country for a bribe: when Aristophon replied in the negative, he continued, "Have I then done what you would have refused to do?"

[11] intuendum autem et qui sit apud quem dicimus, et id quod illi maxime probabile videatur requirendum; qua de re locuti sumus in prohoemii et suasoriae praeceptis.

[11] We must however take the character of the judge into consideration and seek out such arguments as will appeal to him. I have already spoken of this in the rules which I laid down for the exordium and for deliberative oratory.

[12] altera ex adfirmatione probatio est: ego hoc feci; Tu mihi hoc dixisti; et O facinus indignum! et similia; quae non debent quidem deesse orationi et, si desunt, multum nocent; non tamen habenda sunt inter magna praesidia, cum hoc in eadem causa fieri ex utraque parte similiter possit. illae firmiores ex sua cuique persona probationes,

[12] Another form of proof is provided by asseveration as in "I did this," "You told me this," or "O outrageous crime!" and the like. Every pleading should

contain some such asseverations; if it does not, the loss will be considerable. Still asseverations must not be regarded as supports of the first importance, since they can be produced by either party in the same case with the same emphasis.

[13] quae credibilem rationem subiectam habeant: ut vulneratus aut filio orbatus non fuerit alium accusaturus quam nocentem, quando, si negotium innocenti facit, liberet eum noxa qui admiserit. hinc et patres adversus liberos et adversus suos quisque necessarios auctoritatem petunt.

[13] A more forcible kind of proof is that drawn from character and supported by some plausible reason, as for instance, "It is not likely that a wounded man or one who has lost his son would accuse anyone who is not guilty, since if he accused an innocent man, he would free the real offender from all risk of punishment." It is from such arguments that fathers seek support when pleading against their sons or one relative against another.

[14] quaesitum etiam, potentissima argumenta primone ponenda sint loco, ut occupent animos, an summo, ut inde dimittant, an partita primo summoque, quod Homericis dispositione in medio sint infirma, ut ab aliis crescant? quae prout ratio causae cuiusque postulabit, ordinabuntur, uno, ut ego censeo, excepto, ne a potentissimis ad levissima decrescat oratio.

[14] The further question has been raised as to whether the strongest arguments should be placed first, to take possession of the judge's mind, or last, to leave an impression on it; or whether they should be divided between the commencement and close of the proof, adopting the Homeric disposition of placing the weakest in the centre of the column, so that they may derive strength from their neighbours. But in the disposition of our arguments we must be guided by the interests of the individual case: there is only one exception to this general rule in my opinion, namely, that we should avoid descending from the strongest proofs to the weakest.

[15] ego haec breviter demonstrasse contentus ita posui, ut locos ipsos et genera quam possem apertissime ostenderem. quidam exsecuti sunt verbosius, quibus placuit,proposita locorum communium materia, quo quaeque res modo dici posset, ostendere; sed mihi supervacuum videbatur.

[15] I have been content to give a brief outline of my views concerning these points, and have put them forward in such a way as to show as clearly as was in my power the various topics and kinds of arguments. Others have dealt with the subject at greater length, preferring to deal with the whole subject of commonplaces and to show how each topic may be treated.

[16] nam et fere apparet, quid in iniuriam, quid in avaritiam, quid in testem inimicum, quid in potentes amicos dicendum sit; et de omnibus his omnia dicere infinitum est, tam hercule quam si controversiarum, quae sint quaeque

futurae sint, quaestiones, argumenta, sententias tradere velim.

[16] This seems to me unnecessary, since it is as a rule obvious what should be said against the injurious conduct or avarice of our opponents, or against a hostile witness or powerful friends; to say everything on all these subjects is an endless task, as endless in fact as if I were to attempt to lay down rules for dealing with every dispute that can ever occur and all the questions, arguments and opinions thereby involved.

[17] ipsas autem argumentorum velut sedes non me quidem omnes ostendisse confido, plurimas tamen.

quod eo diligentius faciendum fuit, quia declamationes, quibus ad pugnam forensem velut praepilatis exerceri solebamus, olim iam ab illa vera imagine orandi recesserunt atque ad solam compositae voluptatem nervis carent, non alio medius fidius vitio dicentium, quam quo mancipiorum negotiatores formae puerorum virilitate excisa lenocinantur.

[17] I do not venture to suppose that I have pointed out all the circumstances that may give rise to arguments, but I think that I have done so in the majority of cases.

This was a task which required all the more careful handling because the declamations, which we used to employ as foils wherewith to practise for the duels of the forum, have long since departed from the true form of pleading and, owing to the fact that they are composed solely with the design of giving pleasure, have become flaccid and nerveless: indeed, declaimers are guilty of exactly the same offence as slave-dealers who castrate boys in order to increase the attractions of their beauty.

[18] nam ut illi robur ac lacertos barbamque ante omnia et alia, quae natura proprie maribus dedit, parum existimant decora, quaeque fortia, si liceret, forent ut dura molliunt, ita nos habitum ipsum orationis virilem et illam vim stricte robusteque dicendi tenera quadam elocutionis cute operimus et, dum levia sint ac nitida, quantum valeant, nihil interesse arbitramur.

[18] For just as the slave-dealer regards strength and muscle, and above all, the beard and other natural characteristics of manhood as blemishes, and softens down all that would be sturdy if allowed to grow, on the ground that it is harsh and hard, even so we conceal the manly form of eloquence and power of speaking closely and forcibly by giving it a delicate complexion of style and, so long as what we say is smooth and polished, are absolutely indifferent as to whether our words have any power or no.

[19] Sed mihi naturam intuenti nemo non vir spadone formosior erit, nec tam aversa unquam videbitur ab opere suo providentia, ut debilitas inter optima inventa sit, nec id ferro speciosum fieri putabo, quod, si nasceretur, monstrum erat. libidinem iuvet ipsum effeminati sexus mendacium, numquam tamen hoc

continget malis moribus regnum ut, si qua pretiosa fecit, fecerit et bona.

[19] But I take Nature for my guide and regard any man whatsoever as fairer to view than a eunuch, nor can I believe that Providence is ever so indifferent to what itself has created as to allow weakness to be an excellence, nor again can I think that the knife can render beautiful that which, if produced in the natural course of birth, would be regarded as a monster. A false resemblance to the female sex may in itself delight lust, if it will, but depravity of morals will never acquire such ascendancy as to succeed in giving real value to that to which it has succeeded in giving a high price.

[20] quapropter eloquentiam, licet hanc (ut sentio enim, dicam) libidinosam resupina voluptate auditoria probent, nullam esse existimabo, quae ne minimum quidem in se indicium masculi et incorrupti, ne dicam gravis et sancti viri, ostendet.

[20] Consequently, although this debauched eloquence (for I intend to speak with the utmost frankness) may please modern audiences by its effeminate and voluptuous charms, I absolutely refuse to regard it as eloquence at all: for it retains not the slightest trace of purity and virility in itself, not to say of these qualities in the speaker.

[21] An vero statuarum artifices pictoresque clarissimi, cum corpora quam speciosissima fingendo pingendove efficere cuperent, numquam in hunc inciderunt errorem, ut Bagoam aut Megabyzum aliquem in exemplum operis sumerent sibi, sed Doryphoron illum aptum vel militiae vel palaestrae, aliorum quoque iuvenum bellicosorum et athletarum corpora decora vere existimaverunt: nos, qui oratorem studemus effingere, non arma sed tympana eloquentiae demus?

[21] When the masters of sculpture and painting desired to carve or paint forms of ideal beauty, they never fell into the error of taking some Bagoas or Megabyzus as models, but rightly selected the well-known Doryphorus, equally adapted either for the fields of war or for the wrestling school, and other warlike and athletic youths as types of physical beauty. Shall we then, who are endeavouring to mould the ideal orator, equip eloquence not with weapons but with timbrels?

[22] igitur et ille, quem instituimus, adolescens, quam maxime potest, componat se ad imitationem veritatis, initurusque frequenter forensium certaminum pugnam iam in schola victoriam spectet et ferire vitalia ac tueri sciat; et praeceptor id maxime exigat, inventum praecipue probet. nam, ut ad peiora iuvenes laude ducuntur, ita laudari in bonis malent. nunc illud male est,

[22] Consequently, let the youth whom we are training devote himself, as far as in him lies, to the imitation of truth and, in view of the fact that the battles of the forum that await him are not few, let him strive for victory in the schools

and learn how to strike the vitals of his foe and protect his own; and let his instructor insist on his doing this above all else and reserve his special approval for the mastery of this art. For though young men may be lured to evil practices by praise, they still prefer to be praised for what is right.

[23] quod necessaria plerumque silentio transeunt, nec in dicendo videtur inter bona utilitas. Sed haec et in alio nobis tractata sunt opere et in hoc saepe repetenda. nunc ad ordinem inceptum.

[23] At the present time the misfortune is that teachers more often than not pass over what is necessary in silence, and utility is not accounted one of the good qualities of eloquence. But I have dealt with these points in another work, and shall often have to recur to them in this. I will now return to my prescribed course.

13. refutatio dupliciter accipi potest. nam et pars defensoris tota est posita in refutatione, et quae dicta sunt ex diverso debent utrinque dissolvi. et hoc est proprie, cui in causis quartus adsignatur locus. Sed utriusque similis condicio est. neque vero ex aliis locis ratio argumentorum in hac parte peti potest quam in confirmatione, nece locorum aut sententiarum aut verborum et figurarum alia condicio est.

13. Refutation may be understood in two senses. For the duty of the defence consists wholly in refutation, while whatever is said by our opponents must be rebutted, whether we are speaking for the defence or the prosecution. It is in this sense that refutation is assigned the fourth place in pleadings, but the methods required in either case are identical. For the principles of argument in refutation can only be drawn from the same sources as those used in proof, while topics and thoughts, words and figures will all be on the same lines.

[2] adfectus plerumque haec pars mitiores habet. Non sine causa tamen difficilius semper est creditum, quod Cicero saepe testatur, defendere quam accusare. primum, quod est res illa simplicior, proponitur enim uno modo, dissolvitur varie, cum accusatori satis sit plerumque, verum esse id, quod obiecerit, patronus neget, defendat, transferat, excuset, deprecetur, molliat, minuatur, avertat, despiciat, derideat. Quare inde recta fere atque, ut sic dixerim, clamosa est actio; hinc mille flexus et artes desiderantur.

[2] As a rule no strong appeal to the emotions is made in refutation.

It is not, however, without reason that, as Cicero so often testifies, the task of defence has always been considered harder than that of prosecution. In the first place accusation is a simpler task: for the charge is put forward in one definite form, but its refutation may take a number of different forms, since as a rule it is sufficient for the accuser that his charge should be true, whereas counsel for the defence may deny or justify the facts, raise the question of competence, make excuses, plead for mercy, soften, extenuate, or divert the

charge, express contempt or derision. The task of the accuser is consequently straightforward and, if I may use the phrase, vociferous; but the defence requires a thousand arts and stratagems.

[3] tum accusator praemeditata pleraque domo adfert, patronus etiam inopinatis frequenter occurrit. accusator dat testem, patronus ex re ipsa refellit. accusator e criminum invidia, etsi falsa sit, materiam dicendi trahit, de parricidio, sacrilegio, maiestate; quae patrono tantum neganda sunt. ideoque accusationibus etiam mediocres in dicendo suffecerunt; bonus defensor nemo nisi qui eloquentissimus fuit. quanquam ut, quod sentio, semel finiam, tanto est accusare quam defendere, quanto facere quam sanare vulnera, facilius.

[3] Moreover the prosecutor generally produces a speech which he has prepared at home, while the counsel for the defence has frequently to deal with quite unexpected points. The prosecutor brings forward his witnesses, while counsel for the defence has to refute the charge by arguments drawn from the case itself. The prosecutor draws his material from the odium excited by the charges, even though it have no justification, denouncing parricide, sacrilege, or treason, whereas counsel for the defence can only deny them. Consequently quite moderate speakers have proved adequate in prosecution, while no one can be a good counsel for the defence unless he possesses real eloquence. In a word, it is just so much easier to accuse than to defend as it is easier to inflict than to heal a wound.

[4] plurimum autem refert, et quid proposuerit adversarius et quomodo. primum igitur intuendum est, id, cui responsuri sumus, proprium sit eius iudicii an ad causam extra arcessitum. nam si est proprium, aut negandum aut defendendum aut transferendum; extra haec in iudiciis fere nihil est.

[4] The nature of the arguments put forward by our opponent and the manner in which he produces them will, however, make an enormous difference to our task. We must therefore first consider what it is to which we have to reply, whether it is part and parcel of the actual case or has been introduced from circumstances lying outside the case. For in the former case we must deny or justify the facts or raise the question of competence: for these are practically the sole methods of defence available in the courts. Pleas for mercy,

[5] deprecatio quidem, quae est sine ulla specie defensionis, rara admodum et apud eos solos indices, qui nulla certa pronuntiandi forma tenentur. quamquam illae quoque apud C. Caesarem et triumviros pro diuersarum partium hominibus actiones, etiamsi precibus utuntur, adhibent tamen patrocinia; nisi hoc non fortissime defendentis est dicere, quid aliud egimus, Tubero, nisi ut,

[5] which are not in any sense a method of actual defence, can rarely be used, and only before judges who are not limited to some precise form of verdict. Even those speeches delivered before Gaius Caesar and the triumvirs on

behalf of members of the opposite party, although they do employ such pleas for mercy, also make use of the ordinary methods of defence. For I think you will agree with me that the following passage contains arguments of a strongly defensive character: "What was our object, Tubero, save that we might have the power that Caesar has now" But if,

[6] *quod hic potest, nos possemus? quodsi quando apud principem aliumve, cui utrum velit liceat, dicendum erit, dignum quidem morte eum, pro quo loquemur, clementi tamen servandum esse vel talem, primum omnium non erit res nobis cum adversario sed cum iudice, deinde forma deliberativae magis materiae quam iudicialis utemur. suadebimus enim ut laudem humanitatis potius quam voluptatem ultionis concupiscat.*

[6] when pleading before the emperor or any other person who has power either to acquit or condemn, it is incumbent on us to urge that, while our client has committed an offence that deserves the death penalty, it is still the duty of a merciful judge to spare him despite his sins, it must be noted in the first place that we have to deal, not with our adversary, but with the judge, and secondly that we shall have to employ the deliberative rather than the forensic style. For we shall urge the judge to fix his desire rather on the glory that is won by clemency than on the pleasure that is given by vengeance.

[7] *apud indices quidem secundum legem dicturos sententiam de confessis praecipere ridiculum est. ergo, quae neque negari neque transferri possunt, utique defendenda sunt, qualiacunque sunt, aut causa cedendum. negandi duplicem ostendimus formam, aut non esse factum aut non hoc esse, quod factum sit. quae neque defendi neque transferri possunt, utique neganda, nec solum si finitio potest esse pro nobis, sed etiam si nuda infitatio superest.*

[7] On the other hand, when we are pleading before judges who have to give their verdict in accordance with the prescriptions of law, it would be absurd to give them advice as to how they should deal with a criminal who admits his guilt. Consequently, when it is impossible either to deny the facts or to raise the question of competence, we must attempt to justify the facts as best we can, or else throw up the case. I have pointed out that there are two ways in which a fact can be denied: it can be denied absolutely, or it may be denied that a fact is of the nature alleged. When it is impossible to plead justification or to raise the question of competence, we must deny the facts, and that not merely when a definition of the facts will serve our case, but even when nothing except an absolute denial is left for us.

[8] *testes erunt, multa in eos dicere licet; chirographum, de similitudine litterarum disseremus. utique nihil erit peius quam confessio. ultima est actionis controversia, cum defendendi negandive non est locus,*

[8] If witnesses are produced, there is much that may be said to discredit them; if a document is put forward, we may hold forth on the similarity of the

handwritings. In any case there can be no worse course than confession of guilt. When denial and justification are both impossible, we must as a last resort base our defence on the legal point of competence.

[9] id est translatio. Atqui quaedam sunt, quae neque negari neque defendi neque transferri possunt. adulterii rea est quae, cum anno vidua fuisset, enixa est; lis non erit. Quare illud stultissime praecipitur, quod defendi non possit, silentio dissimulandum: siquidem est id, de quo iudex pronuntiaturus est.

[9] Still, there are some cases in which none of these three courses is possible. "She is accused of adultery on the ground that after a widowhood of twelve months she was delivered of a child." In this case there is no ground for dispute. Consequently I regard as the height of folly the advice that is given in such cases, that what cannot be defended should be ignored and passed over in silence, at any rate if the point in question is that on which the judge has to give his decision.

[10] At si extra causam sit adductum et tantum coniunctum, malim quidem dicere, nihil id ad quaestionem nec esse in iis morandum et minus esse quam adversarius dicat; tamen velut huic simulationi oblivionis ignoscam. debet enim bonus advocatus pro rei salute brevem negligentiae reprehensionem non pertimescere. videndum etiam,

[10] On the other hand, if the allegation is irrelevant to the actual case and no more than accessory, I should prefer simply to state that it has nothing to do with the question at issue, that it is not worth our attention, and that it has not the importance given to it by our opponent, though in such a case I should be prepared to pardon a policy of ignoring the charge such as I have just mentioned. For a good advocate ought not to be afraid of incurring a trivial censure for negligence, if such apparent negligence is likely to save his client.

[11] simul nobis plura aggredienda sint an amolienda singula. plura simul invadimus, si aut tam infirma sunt, ut pariter impelli possint, aut tam molesta, ut pedem conferre cum singulis non expediat; tum enim toto corpore obnitendum et, ut sic dixerim, directa fronte pugnandum est. interim,

[11] We must further consider whether we should attack our opponent's arguments *en masse* or dispose of them singly. We shall adopt the former course if the arguments are so weak that they can be overthrown simultaneously, or so embarrassing that it would be inexpedient to grapple with them individually. For in such a case we must fight with all the force at our disposal and make a frontal attack. Sometimes,

[12] si resolvere ex parte diversa dicta difficilius erit, nostra argumenta cum adversariorum argumentis conferemus, si modo haec ut valentiora videantur effici poterit. quae vero turba ualebunt, diducenda erunt, ut, quod paulo ante dixi: heres eras et pauper et magna pecunia appellaberis a creditoribus et

offenderas et mutaturum tabulas testamenti sciebas.

[12] if it is difficult to refute the statements made by our opponents, we may compare our arguments with theirs, at least if by such a procedure it is possible to prove the superiority of our own. On the other hand, those arguments which rely on their cumulative force must be analysed individually, as for example in the case which I cited above: “You were the heir, you were poor and were summoned by your creditors for a large sum: you had offended him and knew that he intended to change his will.”

[13] urgent universa; at si singula quaeque dissolveris, iam illa flamma, quae magna congerie convaluerat, diductis quibus alebatur, concidet, ut, si vel maxima flumina in rivos diducantur, qualibet transitum praebent. itaque propositio quoque secundum hanc utilitatem accommodabitur, ut ea nunc singula ostendamus, nunc complectamur universa.

[13] The cumulative force of these arguments is damaging. But if you refute them singly, the flame which derived its strength from the mass of fuel will die down as soon as the material which fed it is separated, just as if we divert a great stream into a number of channels we may cross it where we will. We shall therefore adapt our method of refutation to the exigencies of our case, now dealing with individual arguments and now treating them in bulk.

[14] nam interim quod pluribus collegit adversarius, sat est semel proponere; ut, si multas causas faciendi, quod arguit, reo dicet accusator fuisse, nos, non enumeratis singulis, semel hoc in totum negemus, quia non, quisquis causam faciendi sceleris habuit, et fecerit.

[14] For at times we may include in a single proposition the refutation of an argument which our opponent has constructed of a number of different points. For instance, if the accuser allege that the accused had a number of motives for committing a crime, we may make a general denial of the fact without dealing singly with each alleged motive, because the fact that a man has had a motive for committing a crime does not prove that he has actually committed it.

[15] saepius tamen accusatori congerere argumenta, reo dissolvere expediet.

id autem, quod erit ab aduersario dictum, quomodo refutari debeat, intuendum est. nam si erit palam falsum, negare satis est, ut pro Cluentio Cicero eum, quem dixerat accusator epoto poculo concidisse, negat eodem die mortuum.

[15] It will however as a rule be expedient for the prosecution to employ massed arguments, and for the accused to refute them in detail.

We must, however, also consider the manner in which we should refute the arguments of our opponent. If his statements be obviously false, it will be sufficient to deny them. This is done by Cicero in the *pro Cluentio*, where he

denies that the man alleged by the accuser to have fallen dead on the spot after drinking the contents of the cup, died on the same day.

[16] *palam etiam contraria et supervacua et stulta reprehendere nullius est artis, ideoque nec rationes eorum nec exempla tradere necesse est. id quoque (quod obscurum vocant), quod secreto et sine teste aut argumento dicitur factum, satis natura sua infirmum est; sufficit enim, quod adversarius non probat; item si ad causam non pertinet.*

[16] Again, it requires no skill to rebut arguments which are obviously contradictory, superfluous or foolish, and consequently I need give no examples nor instructions as to the method to be employed. There is also the type of charge which is known as obscure, where it is alleged that an act was committed in secret without witnesses or any evidence to prove it: this suffers from an inherent weakness, since the fact that our opponent can produce no proof is sufficient for our purpose: the same applies to arguments which are irrelevant to the case.

[17] *est tamen interim oratoris efficere, ut quid aut contrarium esse aut a causa diversum aut incredibile aut supervacuum aut nostrae potius causae videatur esse coniunctum. obiicitur Oppio, quod de militum cibariis detraxerit; asperum crimen, sed id contrarium ostendit Cicero, quia iidem accusatores obiecerint Oppio, quod is voluerit exercitum largiendo corrumpere.*

[17] It is, however, sometimes an orator's duty to make it appear that some argument of his opponent is contradictory or irrelevant or incredible or superfluous or really favourable to his own client. Oppius is charged with having embezzled the supplies intended to feed the troops. It is a serious charge, but Cicero shows that it contradicts other charges, since the same accusers also charged Oppius with desiring to corrupt the army by bribes.

[18] *testes in Cornelium accusator lecti a tribuno codicis pollicetur; facit hoc Cicero supervacuum, quia ipse fateatur. petit accusationem in Verrem Q. Caecilius, quod fuerat quaestor eius; ipsum Cicero ut pro se videretur effecit.*

[18] The accuser of Cornelius offers to produce witnesses to show that he read out the law when tribune: Cicero makes this argument superfluous by admitting it. Quintus Caecilius demands to be entrusted with the task of accusing Verres on the ground that he had been the latter's quaestor: Cicero actually makes this argument tell in his own favour.

[19] *cetera, quae proponuntur, communis locus habet. aut enim coniectura excutiuntur, an vera sint; aut finitione, an propria; aut qualitate, an inhonesta, iniqua, improba, inhumana, crudelia et cetera, quae ei generi accident.*

[19] As regards other charges, they may all be dealt with by very similar methods. For they may be demolished either by conjecture, when we shall consider whether they are true, by definition, when we shall examine whether

they are relevant to the case, by quality, when we shall consider whether they are dishonourable, unfair, scandalous, inhuman, cruel, or deserve any other epithet coming under the head of quality.

[20] *eaque non modo in propositionibus et rationibus sed in toto genere actionis intuenda: an sit crudelis, ut Labieni in Rabirium lege perduellionis; inhumana, ut Tuberonis Ligarium exulem accusantis atque id agentis ne ei Caesar ignoscat;*

[20] Such questions have to be considered, not merely in connection with the statement of the charges or the reasons alleged, but with reference to the nature of the case in its entirety. For instance, the question of cruelty is considered with regard to the charge of high treason brought against Rabirius by Labienus; of inhumanity in the case of Tubero who accused Ligarius when he was an exile and attempted to prevent Caesar from pardoning him; of arrogance as in the case of the charge brought against Oppius on the strength of a letter of Cotta.

[21] *superba, ut in Oppium ex epistola Cottae reum factum. perinde praecipites, insidiosae, impotentes deprehenduntur. Ex quibus tamen fortissime invaseris, quod est aut omnibus periculosum, ut dicit Cicero pro Tullio: quis hoc statuit unquam, aut cui concedi sine summo omnium periculo potest, ut eum iure potuerit occidere, a quo metuisse se dicat, ne ipse posterius occideretur? aut ipsis iudicibus, ut pro Oppio monet pluribus, ne illud actionis genus in equestrem ordinem admittant.*

[21] Similarly, it may be shown that charges are hasty, insidious or vindictive. The strongest argument, however, which can be brought against a charge is that it involves peril to the community or to the judges themselves; we find an example of the former in the *pro Tullio*, where Cicero says "Who ever laid down such a principle as this, or who could be allowed, without grave peril to the community, to kill a man, just because he asserts that he feared that he himself might be killed by him?" An instance of the latter occurs in the *pro Oppio*, where Cicero warns the judges at some length not to permit such an action to be brought against the equestrian order.

[22] *nonnunquam tamen quaedam bene et contemnuntur vel tanquam levia vel tanquam nihil ad causam pertinentia. multis hoc locis fecit Cicero; et haec simulatio interim huc usque procedit, ut, quae dicendo refutare non possumus, quasi fastidiendo calcemus.*

[22] On the other hand there are certain arguments which at times may best be treated with contempt, as being trivial or irrelevant. This course is frequently pursued by Cicero, indeed this affectation of indifference is sometimes carried so far that we trample disdainfully under foot arguments which we should never succeed in refuting by counter-argument.

[23] quoniam vero maxima pars eorum similibus constat, rimandum erit diligentissime, quid sit in quoque, quod adsumitur, dissimile. In iure facile deprehenditur. est enim scriptum de rebus utique diversis, tantoque magis ipsarum rerum differentia potest esse manifesta. illas vero similitudines, quae ducuntur ex mutis animalibus aut inanimis, facile est eludere.

[23] Since, however, the majority of such arguments are based on similarity, we must make diligent search to discover if any discrepancy is to be found in what is put forward. It is easy to do this where points of law are concerned. For the law was drafted to cover cases quite other than the present, and consequently it is all the easier to show the difference between case and case. As to parallels drawn from dumb animals or inanimate objects, they are easy to make light of.

[24] exempla rerum varie tractanda sunt, si nocebunt; quae si vetera erunt, fabulosa dicere licebit; si indubia, maxime quidem dissimilia. neque enim fieri potest, ut paria sint per omnia, ut si Nasica post occisum Gracchum defendatur exemplo Ahalae, a quo Maelius est interfectus, Maelium regni adfectatorem fuisse, a Graccho leges modo latas esse populares, Ahalam magistrum equitum fuisse, Nasicam privatum esse dicatur. si defecerint omnia, videndum erit, an obtineri possit, ne illud quidem recte factum. quod de exemplis, idem etiam de iudicatis observandum.

[24] Examples drawn from facts, if damaging to our case, must be treated in various ways: if they are ancient history, we may call them legendary, while if they are undoubted, we may lay stress on their extreme dissimilarity. For it is impossible for two cases to be alike in every detail. For instance, if the case of Ahala,² by whom Maelius was killed, is quoted to justify Nasica for the slaying of Tiberius Gracchus, we may argue that Maelius was endeavouring to make himself king, while all that Gracchus had done was to bring forward laws in the interest of the people, and that while Ahala was Master of the Horse, Nasica was a private citizen. In the last resort, if all else prove unavailing, we must see if we can show that the action adduced as a parallel was itself unjustifiable. These remarks as to examples apply also to previous decisions in the courts.

[25] quod autem posui, referre, quo quidque accusator modo dixerit, huc pertinet, ut, si est minus efficaciter elocutus, ipsa eius verba ponantur; si acri et vehementi fuerit usus oratione, eandem rem nostris verbis mitioribus proferamus, ut Cicero de Cornelio, codicem attigit;

[26] With regard to my statement that the manner in which the accuser stated his charges was of importance, I would point out in this connexion that if he has spoken but feebly, we may repeat his actual words; while, if he has used bitter and violent language, we may restate the facts in milder terms, as Cicero does in the *pro Cornelio*, where he says, "He put his hand to the tablet

containing the law”:

[26] et protinus cum quadam defensione, ut, si pro luxurioso dicendum sit, obiecta est paulo liberalior vita. sic et pro sordido parcum, pro maledico liberum dicere licebit.

[25] and we may do this in such a way as to defend our client; for instance, if our client is addicted to luxury, we may say, “He has been charged with living in a somewhat too liberal style.” So, too, we may call a mean man thrifty and a slanderous tongue free.

[27] utique committendum nunquam est, ut adversariorum dicta cum sua confirmatione reteramus, aut etiam loci alicuius executione adiuvemus, nisi cum eludenda erunt: apud exercitum mihi fueris, inquit; tot annis forum non attigeris, ab fueris tamdiu et, cum tam longo intervallo veneris, cum his, qui in foro habitarunt,

[27] But we must never under any circumstances repeat our opponent’s charges together with their proofs, nor emphasise any of his points by amplifying them, unless we do so with a view to making light of them, as for instance in the following passage: “You have been with the army, he says, and have not set foot in the forum for so many years, and do you now on returning after so long an interval seek to compete for a post of high dignity with those who have made the forum their home?”

[28] de dignitate contendas Praeterea in contradictione interim totum crimen exponitur, ut Cicero pro Scauro circa Bostarem facit veluti orationem diversae partis imitatus, aut pluribus propositionibus iunctis, ut pro Vareno, cum iter per agros et loca sola faceret cum Pompuleno, in familiam Ancharianam incidisse dixerunt, deinde Pompulenum occisum esse, illico eo fieri vellet. quod est utile, si erit incredibilis rei ordo et ipsa expositione fidem perditurus. interim per partes dissolvitur, quod contextu nocet; et plerumque id est tutius. quaedam contradictiones natura sunt singulae; id exemplis non eget.

[28] Again, when we are replying to the accuser we may sometimes set forth the whole charge, as Cicero does in the *pro Scauro* with reference to the death of Bostar, where he virtually parodies the speech of his opponent, or we may take a number of points raised in the course of the accusation and put them together as in the *pro Vareno*: “They have asserted that, when he was journeying with Pompulenus through a lonely stretch of country, he fell in with the slaves of Ancharius, that Pompulenus was then killed and Varenus imprisoned on the spot until such time as this man should indicate what he wished to be done with him.” Such a procedure is useful, if the sequence of facts alleged by the prosecution is incredible, and likely to lose its force by restatement. Sometimes, on the other hand, we may destroy the cumulative force of a number of statements by refuting them singly; in fact this is generally the safest course. Sometimes, again, the different portions of our

reply will be independent of one another, a case which requires no illustration.

[29] communia bene apprehenduntur non tantum, quia utriusque sunt partis, sed quia plus prosunt respondenti. neque enim pigebit, quod saepe monui, referre; commune qui prior dicit, contrarium facit. est enim contrarium, quo adversarius bene uti potest:

[29] Common arguments are readily appropriated, not merely because they can be used by either party, but because they are of greater service to the speaker who is replying; for I shall not scruple to repeat the warning which I have often given already; the speaker who is first to employ such an argument makes it tell against himself.

[30] At enim non verisimile est, tantum scelus M. Cottam esse commentum. quid? hoc verisimile est, tantum scelus Oppium esse conatum? artificis autem est invenire in actione adversarii quae contra semet ipsa pugnent aut pugnare videantur, quae aliquando ex rebus ipsis manifesta sunt, ut in causa Caeliana Clodia aurum se Caelio commodasse dicit, quod signum magnae familiaritatis est; venenum sibi paratum, quod summi odii argumentum est.

[30] For an argument must needs tell against a speaker if it be one which his opponent can use with effect. "But, you say, it is not probable that a crime of this magnitude was designed by Marcus Cotta. Is it probable then that a crime of this magnitude was attempted by Oppius?" On the other hand it is a task for a real artist to discover inconsistencies, real or apparent, in the speech of his opponent, though such inconsistencies are sometimes evident from the bare facts, as for instance in the case of Caelius, where Clodia asserts on the one hand that she lent Caelius money, which is an indication of great intimacy, and on the other hand that he got poison to murder her, which is a sign of violent hatred. Tubero similarly

[31] Tubero Ligarium accusat, quod is in Africa fuerit, et queritur, quod ab eo ipse in Africam non sit admissus. aliquando vero praebet eius rei occasionem minus considerata ex adverso dicentis oratio; quod accidit praecipue cupidis sententiarum, ut ducti occasione dicendi non respiciant quid dixerint, dum locum praesentem non totam causam intuentur.

[31] accuses Ligarius of having been in Africa, and complains that Ligarius refused to allow him to land in Africa. At times, however, some ill-advised statement by our opponent will give us an opportunity of demolishing his arguments. This is specially likely to occur with speakers who have a passion for producing impressive thoughts: for the temptation to air their eloquence is such that they take no heed of what they have said already, being absorbed by the topic immediately before them to the detriment of the interests of the case as a whole.

[32] quid tam videri potest contra Cluentium quam censoria nota? quid tam

contra eundem, quam filium ab Egnatio corrupti iudicii, quo Cluentius Oppianicum circumvenisset, crimine exheredatum?

[32] What is there likely to tell so heavily against Cluentius as the stigma inflicted by the censors? What can be more damaging than the fact that Egnatius disinherited his son on the ground that he had been bribed to give a false verdict in the trial in which Cluentius secured the condemnation of Oppianicus? But Cicero

[33] At haec Cicero pugnare invicem ostendit: Sed tu, Atti, consideres, censeo, diligenter, utrum censorium iudicium grave velis esse an Egnatii. si Egnatii, leave est, quod censores de ceteris subscripserunt. ipsum enim Egnatium, quem tu gravem esse vis, ex senatu eiecerunt. sin autem censorium, hunc Egnatium, quem pater censoria subscriptione exheredarit, censores in senate, cum pardem eiecissent, retinuerunt.

[33] shows that the two facts tell against one another. "But, Attius, I would urge you to give the closest consideration to the following problem. Which do you desire to carry the greater weight — the judgment of the censors, or of Egnatius? If the latter, you regard the judgment of the censors in other cases as counting for little, since they expelled this same Gnaeus Egnatius, on whose authority you lay such stress, from his place in the senate. On the other hand, if you attach most weight to the judgment of the censors, I must point out that the censors retained the younger Egnatius, whom his father disinherited by an act resembling a censorial decision, in his position as senator, although they had expelled his father." As regards errors such as the following,

[34] illa magis vitiose dicuntur quam acute reprehenduntur, argumentum dubium pro necessario, controversum pro confesso, commune pluribus pro proprio, vulgare, supervacuum, constitutum contra fidem. nam et illa accidunt parum cautis, ut crimen augeant, quod probandum est; de facto disputent, cum de auctore quaeratur; impossibilia aggrediantur, pro effectis relinquunt vixdum inchoata, de homine dicere quam de causa malint;

[34] the folly shown in their commission is out of all proportion to the skill required to deal with them: I refer to mistakes such as advancing a disputable argument as indisputable, a controversial point as admitted, a point common to a number of cases as peculiar to the case in hand, or the employment of trite, superfluous, or incredible arguments. For careless speakers are liable to commit a host of errors: they will exaggerate a charge which has still got to be proved, will argue about an act when the question is who committed it, will attempt impossibilities, drop an argument as if it were complete, whereas it is scarcely begun, speak of the individual in preference to the case,

[35] hominum vitia rebus adsignent, ut, si quis decemviratum accuset non Appium; manifestis repugnent; dicant, quod aliter accipi possit; summam

quaestionis non intueantur, non ad proposita respondeant; quod unum aliquando recipi potest, cum mala causa adhibitis extrinsecus remediis tuenda est, ut cum peculatus reus Verres fortiter et industrie tuitus contra piratas Siciliam dicitur.

[35] and attribute personal faults to circumstances, as for instance if a speaker should attack the decemvirate instead of Appius. They will also contradict what is obvious, speak ambiguously, lose sight of the main issue of the case, or give replies which have no relation to the charges made. This latter procedure may, it is true, be occasionally employed when we have a bad case which requires to be supported by arguments drawn from matters foreign to the case. The trial of Verres provides an example; when accused of peculation it was alleged that he had shown courage and energy in his defence of Sicily against the pirates.

[36] eadem adversus contradictiones nobis oppositas praecepta sunt, hoc tamen amplius, quod circa eas multi duobus vitiis diversis laborant. nam quidam etiam in foro tanquam rem molestam et odiosam praetereunt, et iis plerumque, quae composita domo attulerunt, contenti sine adversario dicunt; et scilicet multo magis in scholis, in quibus non solum contradictiones omittuntur, verum etiam materiae ipsae sic plerumque finguntur, ut nihil dici pro parte altera possit.

[36] The same rules apply to objections which we may have to meet. But there is one point which requires special attention, since in such cases many speakers fall into two very different faults. For some even in the courts will pass by such objections when raised by their opponents as troublesome and vexatious details, and, contenting themselves with the arguments which they have brought ready-made from their study, will speak as if their opponent did not exist. This error is of course far more common in the schools, for there objections are not merely disregarded, but the subjects for declamation are generally framed in such a way that there is nothing to be said on the opposite side.

[37] alii diligentia lapsi verbis etiam uel sententiolis omnibus respondendum putant, quod est et infinitum et supervacuum; non enim causa reprehenditur sed actor; quem ego semper videri malim disertum, ut, si dixerit quod rei prosit, ingenii credatur laus esse non causae; si forte laedat, causae non ingenii culpa.

[37] On the other hand there are some who suffer from excess of zeal, and think it their duty to reply to every word and even every trifling reflexion, a task which is at once endless and superfluous. For it is not the case. but the pleader, whom they are refuting. Personally I should always prefer that a speaker should reveal his eloquence in such a way that, if what he says advances his case, the credit will be given to his talent and not to the nature of

his case, while if what he says damages his case the blame will attach to the case and not to his powers.

[38] itaque illae reprehensiones aut obscuritatis, qualis in Rullum est, aut infantiae in dicendo, qualis in Pisonem, aut inscitiae rerum verborumque et insulsiatatis etiam, qualis in Antonium est, animo dantur et iustis odiis, suntque utiles ad conciliandum iis, quos invisos facere volueris, odium.

[38] Consequently when we come across denunciations such as that directed against Rullus for the obscurity of his language, or against Piso for his utter incapacity as a speaker, or against Antony for his lack of taste and his complete ignorance both of words and things, we shall give then our sanction as reasonable concessions to passion and just resentment, and as useful in stirring up hatred against those whom it is desired to render unpopular.

[39] alia respondendi patronis ratio; et aliquando tamen eorum non oratio modo, sed vita etiam, vultus denique, incessus, habitus recte incusari solet; ut adversus Quintium Cicero non haec solum, sed ipsam etiam praetextam demissam ad talos insectatus est. presserat enim turbulentis contionibus Cluentium Quintius.

[39] The method of reply to our opponent's counsel should be on different lines. Sometimes however we are justified in attacking, not merely their manner of speaking, but also their character, their appearance, their gait or bearing. Indeed, in his attack on Quintius, Cicero does not confine himself to these topics, but even attacks his purple-bordered toga that goes trailing to his heels: for Quintius had caused Cluentius grave embarrassment by his turbulent harangues.

[40] nonnunquam elevandae invidiae gratia, quae asperius dicta sunt, eluduntur, ut a Cicerone Triarius. nam cum Scauri columnas per urbem plaustris vectas esse dixit, ego porro, inquit, qui Albanas habeo columnas, clitellis eas apportavi. et magis hoc in accusatores concessum est, quibus conviciari aliquando patrocinii fides cogit.

[40] Sometimes, in order to dispel the unpopularity excited by bitter criticism, the latter may be disposed of by a jest, as for example Cicero disposes of Triarius. For to the allegation that the pillars destined for the house of Scaurus were carried on waggons through the city streets he replied, "I got my pillars from the quarries of Alba, and had them brought in panniers!" Such tactics are more readily allowed against an accuser, for the duties of counsel for the defence sometimes force him to make such personal attacks.

[41] illa vero adversus omnes et recepta et non inhumana conquestio, si callide quid tacuisse, breviasse, obscurasse distulisse dicuntur.

[41] On the other hand there is no objection to complaining of the conduct of the advocates on either side, so long as our complaint follows accepted

practice and does not overstep the limits imposed by good manners; I refer to complaints such as that our opponents have abridged, obscured or postponed the discussion of some point, or with deliberate cunning have avoided discussing it at all.

[42] defensionis quoque permutatio reperienditur saepe, ut Attius adversus Cluentium, Aeschines adversus Ctesiphontem facit, cum ille Ciceronem lege usurum modo, hic minime de lege dicturum Demosthenen queritur.

declamatores vero inprimis sunt admonendi, ne contradictiones eas ponant, quibus facillime responderi possit, neu sibi stultum adversarium fingant. facimus autem (quod maxime uberes loci popularesque sententiae nascuntur materiam dicendi nobis, quod volumus, ducentibus) ut non sit ille inutilis versus:

Non male respondit, male enim prior ille rogarat.

Fallet haec nos in foro consuetudo, ubi adversario,

[42] A change in the tactics of defence is also often selected for censure. For example, Attius in his speech against Cluentius complains that Cicero insists on the letter of the law, and Aeschines in his speech against Ctesiphon complains that Demosthenes refuses to consider the legal aspect of the case.

It is however necessary to issue a special warning to declaimers that they should not put forward objections that can easily be met or assume that their opponent is a fool. As it is, owing to our tendency to think that the subject-matter of our speech may be drawn from our own fancy, florid commonplaces and epigrams designed to bring down the house occur to our minds with the utmost readiness, with the result that we should do well to bear in mind the lines:

A shrewd retort! Could it be otherwise?

A foolish question makes for smart replies.

Origin unknown.

[43] non ipsi nobis respondebimus. aiunt Accium interrogatum, cur causas non ageret, cum apud eum in tragoediis tanta vis esset optime respondendi, hanc reddidisse rationem, quod illic ea dicerentur quae ipse vellet, in foro dicturi adversarii essent quae minime vellet.

[43] But such a practice will be fatal in the courts, where we have to answer our opponent and not ourselves. It is said that Accius, when asked why he did not turn advocate in view of the extraordinary skill in making apt replies which his tragedies revealed, replied that in his plays the characters said what he himself wanted them to say, whereas in the courts his adversaries would probably say just what he least wanted them to say.

[44] *ridiculum est ergo in exercitationibus, quae foro praeparant, prius cogitare quid responderi quam quid ex diverso dici possit. et bonus praeceptor non minus laudare discipulum debet, si quid pro diversa quam si quid pro sua parte acriter excogitavit.*

[44] It is therefore ridiculous in exercises which prepare the student for the actual courts to consider what answer can be made before ever giving a thought to what the opposing counsel is likely to say. And a good teacher should commend a pupil no less for his skill in thinking out arguments that may be put forward for the opposite side than in discovering arguments to prove his own case.

[45] *rursus aliud in scholis permittendum semper, in foro rarum. nam loco a petitore primo contradictione uti qui possumus, ubi vera res agitur, cum adversarius adhuc nihil dixerit?*

[45] Again, there is another practice which is always permissible in the schools, but rarely in the courts. For when we speak first as claimants in a real case, how can we raise objections, seeing that our opponent has so far said nothing?

[46] *incidunt tamen plerique in hoc vitium vel consuetudine declamatoria vel etiam cupiditate dicendi, dantque de se respondentibus venustissimos lusus, cum modo, se vero nihil dixisse neque tam stulte dicturos; modo, bene admonitos ab adversario et agere gratias, quod adiuti sint, iocantur; frequentissime vero, id quod firmissimum est, nunquam iis responsurum adversarium fuisse, quae proposita non essent, nisi illa sciret vera esse et ad fatendum conscientia esset impulsus; ut pro Cluentio Cicero:*

[46] Still, many fall into this error either because they have acquired the habit in declamation or simply owing to a passion for hearing their own voice, thereby affording fine sport to those who reply: for sometimes the latter will remark sarcastically that they never said anything of the kind and have no intention of saying anything so idiotic, and sometimes that they are grateful for the admirable warnings so kindly given by their opponent: but most often they will say, and this is the strongest line that they can take, that their opponent would never have replied to objections which had never been raised had he not realised that these objections were justified and been driven to admit it by his consciousness of the fact.

[47] *nam hoc persaepe dixisti, tibi sic renuntiari, me habere in animo causam hanc praesidio legis defendere. itane est? ab amicis imprudentes videlicet prodimur? et est nescio quis de iis, quos amicos nobis arbitramur, qui nostra consilia ad adversarium deferat? quisnam hoc tibi renuntiavit? quis tam improbus fuit; cui ego autem narravi? nemo, ut opinor, in culpa est; nimirum tibi istud lex ipsa renuntiavit.*

[47] We may find an example of this in the *pro Cluentio* of Cicero: “You have

frequently asserted that you are informed that I intend to base my defence on the letter of the law. Really! I suppose that my friends have secretly betrayed me, and that there is one among those whom I believe to be my friends who reports my designs to my opponent. Who gave you this information? Who was the traitor? And to whom did I ever reveal my design? No one, I think, is to blame. It must have been the law itself that told you.” But there are some who,

[48] At quidam contradictione non contenti totos etiam locos explicant: scire se hoc dicturos adversarios et ita persecuturos. quod factum venuste nostris temporibus elusit Vibius Crispus, vir ingenii iucundi et elegantis: ego vero, inquit, ista non dico; quid enim attinet illa bis dici?

[48] not content with raising imaginary objections, develop whole passages on such themes, saying that they know their opponents will say this and will proceed to argue thus and thus. I remember that Vibius Crispus in our own day disposed of this practice very neatly, for he was a humorous fellow with a very pretty wit: “I do not make those objections which you attribute to me,” he said, “for what use would it be to make them twice?”

[49] nonnunquam tamen aliquid simile contradictioni poni potest, si quid ab adversario testationibus comprehensum in advocationibus iactatum sit; respondebimus enim rei ab illis dictae, non a nobis excogitatae; aut, si id genus erit causae, ut proponere possimus certa, extra quae dici nihil possit: ut, cum res furtiva in domo deprehensa sit, dicat necesse est reus aut se ignorante illatam aut depositam apud se aut donatam sibi; quibus omnibus, etiamsi proposita non sunt, responderi potest.

[49] Sometimes however it may be possible to put forward something not unlike such objections, if some point included by our opponent in the depositions which he produces has been discussed among his advocates: for then we shall be replying to something which they have said and not to an objection which has been invented by ourselves; or again, this will be possible if the case is of such a nature that we are in a position to state certain definite objections which are absolutely essential to our opponent’s case: for instance, if stolen goods have been discovered in a house, the accused must of necessity allege either that they were brought there without his knowledge or deposited with him or given to him and we may therefore answer all these points even although they have not been put forward.

[50] At in scholis recte et propositionibus et contradictionibus occurremus, ut in utrumque locum, id est primum et secundum, simul plurimum exerceamur. quod nisi fecerimus, nunquam utemur contradictione; non enim erit, cui respondeamus.

[50] On the other hand, in the schools we are quite justified in answering both statements and imaginary objections; for by these means we shall train

ourselves at one and the same time for speaking either first or second. Unless we do this, we shall have no chance of employing objections, since there is no adversary to whom we can reply.

[51] est et illud vitium nimium sollicite et circa omnia momenta luctantis; suspectam enim facit iudici causam, et frequenter, quae statim dicta omnem dubitationem sustulissent, dilata ipsis praeparationibus fidem perdunt, quia patronus et aliis crediderit opus fuisse. fiduciam igitur orator prae se ferat semperque ita dicat, tanquam de causa optime sentiat;

[51] There is another serious fault into which pleaders fall: the anxious over-elaboration of points. Such a procedure makes his case suspect to the judges, while frequently arguments which, if stated without more ado, would have removed all doubt, lose their force owing to the delay caused by the elaborate preparations made for their introduction, due to the tact that the advocate thinks that they require additional support. Our orator must therefore adopt a confident manner, and should always speak as if he thought his case admirable. This quality, like all other good qualities, is particularly evident in Cicero.

[52] quod sicut omnia in Cicerone praecipuum est. nam illa summa cura securitatis est similis, tantaque in oratione auctoritas, ut probationis locum obtineat dubitare nobis non audentibus. porro, qui scierit, quid pars adversa, quid nostra habeat valentissimum, facile iudicabit, quibus maxime rebus vel occurrendum sit vel instandum.

[52] For the extraordinary care which he takes gives the impression of confidence and carries such weight when he speaks that it does not permit us to feel the least doubt and has all the force of genuine proof. Further, the advocate who knows what are the strongest points in his own and his opponent's case will easily be able to decide what points it will be most necessary for him to emphasise or to counter.

[53] ordo quidem in parte nulla minus adfert laboris. nam si agimus, nostra confirmanda sunt primum, tum, quae nostris opponuntur refutanda; si respondemus,

[53] As regards order, there is no part of a case which involves less trouble. For, if we are prosecuting, our first duty will be to prove our own case, our second to refute the arguments brought against it. If, on the other hand, we are defending, we must begin by refutation.

[54] prius incipiendum est a refutatione. nascuntur autem ex his, quae contradictioni opposuimus, aliae contradictiones, euntque interim longius; ut gladiatorum manus, quae secundae vocantur, fiunt et tertiae, si prima ad evocandum adversarii ictum prolata erat, et quartae, si geminata captatio est, ut bis cavere, bis repetere oportuerit; quae ratio et ultra ducit.

[54] But from our answers to objections fresh objections will arise, a process which may be carried to some length. The *strokes* of gladiators provide a parallel. If the first stroke was intended to provoke the adversary to strike, the second will lead to the third, while if the challenge be repeated it will lead to the fourth stroke, so that there will be two parries and two attacks. And the process may be prolonged still further.

[55] Sed illam etiam, quam supra ostendi, simplicem ex adfectibus atque ex adfirmatione sola probationem recipit refutatio, qualis est illa Scauri, de qua supra dixi; quin nescio an etiam frequentior, ubi quid negatur. videndum praecipue utrique parti, ubi sit rei summa. nam fere accidit, ut in causis multa dicantur, de paucis iudicetur.

[55] But refutation also includes that simple form of proof, which I described above, based on an appeal to the emotions and mere assertion; for an example see the words of Scaurus which I have already quoted. Nay, I am not sure that this form of proof is not actually of more frequent occurrence when something is denied. It is, however, specially important for both parties that they should see where the main issue lies. For it often happens that the points raised in pleading are many, although those on which a decision is given are few.

[56] In his probandi refutandique ratio est, sed adiuvanda viribus dicentis et ornanda. quamlibet enim sint ad dicendum, quod volumus, accommodata. ieiuna tamen erunt et infirma, nisi maiore quodam oratoris spiritu implentur.

[56] Such are the elements of the methods of proof and refutation, but they require to be embellished and supported by the powers of the speaker. For although our arguments may be admirably adapted to express what we desire, they will none the less be slight and weak unless the orator makes a special effort to give them life.

[57] Quare et illi communes loci de testibus, de tabulis, de argumentis aliisque similibus magnam vim animis iudicum adferunt, et hi proprii, quibus factum quodque laudamus aut contra, iustum vel iniustum docemus, maius aut minus, asperius aut mitius. Ex iis autem alii ad comparationem singulorum argumentorum faciunt, alii ad plurimum, alii ad totius causae inclinationem.

[57] Consequently the commonplaces on the subject of witnesses, documentary evidence, arguments and the like make a great impression on the minds of the judges, as also do those topics which are peculiar to the case, those I mean in which we praise or blame any action or show that it is just or unjust, or make it seem more or less important or more or less harsh than it really is. Of these topics some are adapted to the comparison of individual arguments, others to the comparison of a number, while others may serve to influence the success or failure of the whole case.

[58] Ex quibus sunt qui praeparent animum iudicis, sunt qui confirment. Sed

praeparatio quoque aut confirmatio aliquando totius causae est, aliquando partium, et proinde, ut cuique conveniunt, subiicienda.

[58] Some again prepare the mind of the judge, while others confirm it in opinions already formed. But such preparation or confirmation will sometimes apply to the whole case, sometimes only to particular portions, and must therefore be employed with due regard to circumstances.

[59] ideoque miror inter duos diversarum sectarum velut duces non mediocri contentione quaesitum, singulisne quaestionibus subiiciendi essent loci, ut Theodoro placet, an prius docendus iudex quam movendus, ut praecipit Apollodorus, tanquam perierit haec ratio media, et nihil cum ipsius causae utilitate sit deliberandum. haec praecipunt, qui ipsi non dicunt in foro, ut artes a securis otiosisque compositae ipsa pugnae necessitate turbentur.

[59] I am consequently surprised that there should be a violent dispute between the leaders of two opposite schools as to whether such commonplaces should be applied to individual questions (which is the view of Theodorus), or whether the judge should be instructed in the facts before any appeal is made to his feelings (the latter being the view of Apollodorus), as though no middle course were possible and no regard were to be had to the exigencies of the case itself. Those who lay down such rules have no experience of speaking in the actual courts, the result being that text-books composed in the calm leisure of the study are sadly upset by the necessities of forensic strife.

[60] namque omnes fere, qui legem dicendi quasi quaedam mysteria tradiderunt, certis non inveniendorum modo argumentorum locis, sed concludendorum quoque nos praeceptis alligaverunt; de quibus brevissime praelocutus, quid ipse sentiam, id est quid clarissimos oratores fecisse videam, non tacebo.

[60] For practically all those who have set forth the law of speaking as though it were a profound mystery, have tied us down not merely to fixed topics for argument, but to definite rules as to how we should draw our conclusions.

14. igitur enthymema et argumentum ipsum, id est rem, quae probationi alterius adhibetur, appellant et argumenti elocutionem, eam vero, ut dixi, duplicem: ex consequentibus, quod habet propositionem coniunctamque ei protinus probationem, quale pro Ligario, causa tum dubia, quod erat aliquid in utraque parte, quod probari posset; nunc melior ea iudicanda est, quam etiam dii adiuverunt; habet enim rationem et propositionem, non habet conclusionem.

14. The term *enthymeme* is applied not merely to the actual argument, that is to say, the matter adduced to prove something else, but also to its expression, the nature of which, as I have already pointed out, is twofold. It may be drawn from denial of *consequents*, when it will consist of a proposition immediately

followed by a proof, as in the following passage from the *pro Ligario*; “At that point the justice of the cause was doubtful, since there was something to be said on both sides. But now we can only regard that cause as superior, which even the gods supported.” Here we have a proposition and a reason, but no formal conclusion: it is therefore the incomplete syllogism known as an *enthymeme*.

[2] ita est ille imperfectus syllogismus. Ex pugnantibus vero, quod etiam solum enthymema quidam vocant, fortior multo probatio est. tale est Ciceronis pro Milone: eius igitur mortis sedetis ultores, cuius vitam si pletis per vos restitui posse, nolitis.

[2] It may on the other hand be drawn from *incompatibles*, in which case the proof will be much stronger; indeed some restrict the title of *enthymeme* to this form of argument. The following passage from the *pro Milone* of Cicero will provide a parallel: “You are then sitting there to avenge the death of a man whom you would refuse to restore to life, even if you thought it within your power to do so.”

[3] quod quidem etiam aliquando multiplicari solet, ut est ab eodem et pro eodem reo factum: quem igitur cum omnium gratia noluit, hunc voluit cum aliquorum querela? quem iure, quem loco, quem tempore, quem impune non est ausus, hunc iniuria, iniquo loco, alieno tempore, cum periculo capitis non dubitavit occidere?

[3] This form of argument may even at times consist of a number of clauses, as in the following passage from the same speech: “Was he resolved then to kill to the dissatisfaction of some a man whom he refused to kill to the satisfaction of all? Are we to believe that he did not hesitate, in defiance of the law and despite the unfavourable circumstances both of time and place and the risk involved to his own life, to kill one whom he did not venture to kill when he might have done so legally, at his own time and place and without the least danger to himself?”

[4] optimum autem videtur enthymematis genus, cum propositio dissimili vel contraria ratio subiungitur, quale est Demosthenis: Non enim, si quid unquam contra leges actum est, idque tu es imitatus, idcirco te convenit poena liberari; quin e contrario damnari multo magis. nam ut, si quis eorum damnatus esse, tu haec non scripsisses, ita, damnatus tu si fueris, non scribet alius.

[4] The most effective kind of *enthymeme* seems however to be that in which a reason is subjoined to a dissimilar or contrary proposition as in the following passage from Demosthenes: “For if at any time an act has been committed contrary to law and you have imitated it, it does not therefore follow that you should go scot free; on the contrary it is an additional reason why you should be condemned. For if any of those who transgressed the law had been condemned, you would not have proposed this, and further, if you are

condemned, no one else will propose anything of the kind.”

[5] *epichirematos* et quattuor et quinque et sex etiam factae sunt partes a quibusdam. Cicero maxime quinque defendit, ut sit propositio, deinde ratio eius, tum adsumptio et eius probatio, quinta complexio; quia vero interim et propositio non egeat rationis et adsumptio probationis, nonnunquam etiam complexione opus non sit, et quadripartitam et tripartitam et bipartitam quoque fieri posse ratiocinationem.

[5] As regards the *epicheieme*, some authorities hold that it consists of four, five, and even six parts. Cicero urges that there are not more than five at most, i.e. the major premise and its reason, the minor premise and its proof, and fifthly the conclusion. But since at times the major premise does not require a reason nor the minor a proof, while occasionally even the conclusion is not necessary, he holds that the *epicheireme* may consist of only four, three, or even two parts.

[6] mihi et pluribus nihilominus auctoribus tres summum videntur. nam ita se habet ipsa natura, ut sit, de quo quaeratur et per quod probetur; tertium adiici potest velut ex consensu duorum antecedentium. ita erit prima intentio, secunda adsumptio, tertia connexio. nam confirmatio primae ac secundae partis et exornatio eisdem cedere possunt,

[6] Personally however follow the majority of authorities in holding that there are not more than three parts. For it follows from the very nature of reasoning that there must be something to form the subject of enquiry and something else to provide the proof, while the third element which has to be added may be regarded as resulting from the agreement of the two previous elements. Thus the first part will be the major, the second the minor premise and the third the conclusion. For the confirmation and development of both premises may reasonably be included in the parts to which they belong.

[7] quibus subiiciuntur. sumamus enim ex Cicerone quinque partium exemplum: melius gubernantur ea, quae consilio reguntur quam quae sine consilio administrantur. hanc primam partem numerant; eam deinceps rationibus variis et quam copiosissimis verbis approbari putant oportere. hoc ego totum cum sua ratione unum puto; alioqui si ratio pars est, est autem varia ratio, plures partes esse dicantur.

[7] Let us then take an example from Cicero of the *epicheireme* consisting of five parts. “Those things which are controlled by reason are better governed than those which are not.” This they call the first part and consider that it requires to be established by various reasons and a copious display of eloquence. Personally I hold that the whole of this together with its reason forms but one part. Otherwise, if the *reason* is to be treated as a separate part and if there are a variety of *reasons*, this will involve an addition to the number of parts. Next he produces the *minor premise*:

[8] adsumptionem deinde ponit: nihil autem omnium rerum melius quam omnis mundus administratur. huius adsumptionis quarto in loco iam porro inducunt approbationem; de quo idem quod supra dico.

[8] “But there is nothing better administered than the universe.” The proof of this minor premise is treated as the fourth part of the *epicheireme*. My criticism of this statement is identical with my criticism of the preceding.

[9] quinto inducunt loco complexionem, quae aut id infert solum quod ex omnibus partibus cogitur, hoc modo, consilio igitur mundus administratur; aut, unum in locum cum conduxit breviter propositionem et adsumptionem, adiungit quid ex his conficiatur, ad hunc inodum: quodsi melius geruntur, quae consilio quam quae sine consilio administrantur, nihil autem omnium rerum melius quam omnis mundus administratur, consilio igitur mundus administratur. cui parti consentio.

[9] The fifth place they assign to the conclusion which either merely makes the necessary inference from the preceding parts (*i.e.* “Therefore the universe is governed by reason”) or after briefly bringing major and minor premise together adds what is deduced from them with the following result: “But if on the one hand things that are controlled by reason are better governed than things which are not and on the other nothing is better administered than the universe, then it follows that the universe is governed by reason.” As regards this part of the *epicheireme* I agree.

[10] In tribus autem, quas fecimus, partibus non est forma semper eadem, sed una, in qua idem concluditur quod intenditur: anima immortalis est. nam quidquid ex se ipso movetur, immortale est; anima autem ex se ipsa movetur, immortalis igitur est anima. hoc fit non solum in singulis argumentis sed in totis causis, quae sunt simplices, et in quaestionibus.

[10] I have said that the *epicheireme* consists of three parts: its form is not however invariable. There is firstly the form in which the *conclusion* is identical with what has already been stated in the *major premise*. “The soul is immortal, since whatever derives its motion from itself is immortal. But the soul derives its motion from itself. Therefore the soul is immortal.” This process occurs not merely in individual arguments, but in whole *cases*, provided they are of a simple character, and also in *questions*.

[11] nam et hae primam habent propositionem: sacrilegium commisisti; Non, quisquis hominem occidit, caedis tenetur, deinde rationem; (sed haec est in causis et quaestione longior quam in singulis argumentis) et plerumque summa complexione, vel per enumerationem vel per brevem conclusionem, testantur, quid effecerint. In hoc genere propositio dubia est, de hac enim quaeritur.

[11] For cases and questions always have first a *major premise*, such as “You

have committed sacrilege,” or “Not everyone who has killed a man is guilty of murder.” Second comes a *reason*, which is stated at greater length in cases and questions than in separate arguments, while finally comes the *conclusion* in which as a rule they set forth the point they have proved either by enumeration of particulars or in the form of a hasty conclusion. In this type of *epicheireme* the *major premise* is doubtful, since it is still under investigation.

[12] altera est complexio non par intentioni sed vim habens parem: mors nihil ad nos, nam quod est dissolutum, sensu caret; quod autem sensu caret, nihil ad nos. In alio genere non eadem propositio est quae connexio: omnia animalia meliora sunt quam inanima, nihil autem melius est mundo, mundus igitur animal. hic potest videri deesse intentio. Potuit enim sic constitui ratiocinatio: animal est mundus, omnia enim animalia meliora sunt quam inanima et cetera.

[12] There is another form of *conclusion* which is not actually identical with the *major premise*, but has the same force “Death is nothing to us, for that which is dissolved into its elements is devoid of” feeling, and that which is devoid of feeling is nothing to us.” There is a third form in which the *major premise* and the *conclusion* are different. “All animate things are better than inanimate, but there is nothing better than the universe, wherefore the universe is animate.” It may be thought that in this case there is no real *major premise*, since it would be possible to state the reasoning in the following form: “The universe is animate, for all things animate are better than inanimate,” etcetera.

[13] haec propositio aut confessa est ut proxima, aut probanda ut, qui beatam vitam vivere volet, philosophetur oportet, non enim conceditur; cetera sequi nisi confirmata prima parte non possunt. item adsumptio interim confessa est ut, omnes autem volunt beatam vitam vivere; interim probanda ut illa, quod est dissolutum, sensu caret; cum, soluta corpore anima an sit immortalis vel ad tempus certe maneat, sit in dubio. quam adsumptionem alii, rationem alii vocant.

[13] This *major premise* is either an admitted fact as in the last example or requires to be proved as in the following: “He who wishes to live a happy life, must be a philosopher”: for this is not an acknowledged truth, and the premises must be established before we can arrive at the conclusion. Sometimes again the *minor premise* is an admitted fact, as for instance, “But all men wish to live a happy life,” while sometimes it requires to be proved, as for example the statement quoted above, “That which is dissolved into its elements is devoid of feeling,” since it is doubtful whether the soul is immortal after its release from the body or only continues to exist for a time. Some call this a *minor premise*, some a *reason*.

[14] epichirema autem nullo differt a syllogismis, nisi quod illi et plures habent species et vera colligunt veris, epichirematis frequentior circa credibilia est

usus. nam si contingeret semper controversa confessis probare, vix esset in hoc genere usus oratoris. nam quo ingenio est opus, ut dicas:

[14] There is no difference between the *epicheireme* and the *sylogism*, except that the latter has a number of forms and infers truth from truth, whereas the *epicheireme* is frequently concerned with statements that are no more than credible. For if it were always possible to prove controversial points from admitted premises, the orator would have little to do in this connexion.

[15] bona ad me pertinent, solus enim sum filius defuncti, vel solus heres, cum iure bonorum possessio testati secundum tabulas testamenti detur,

[15] For what skill does it require to say, “The property is mine, for I am the only son of the deceased,” or “I am the sole heir, since possession of the testator’s estate is given by the law of property in accordance with the terms of his will: the property therefore belongs to me”?

[16] ad me igitur pertinet. Sed cum ipsa ratio in quaestionem venit, efficiendum est certum id quo probaturi sumus quod incertum est: ut si ipsa forte intentione dicatur aut filius non es aut non es legitimus aut non es solus, itemque aut non es heres, aut non iustum testamentum est, aut capere non potes, aut habes coheredes, efficiendum est iustum, propter quod nobis bona adiudicari debeant.

[16] But when the reason given is itself disputable, we must establish the certainty of the premises by which we are proposing to prove what is uncertain. For example, if our opponent says “You are not his son” or “You are illegitimate” or “You are not his only son”; or, again, “You are not his heir” or “The will is invalid” or “You are not entitled to inherit” or “You have co-heirs,” we must prove the validity of the reason on which we base our claim that the property should be adjudicated to us.

[17] Sed tum est necessaria illa summa connexio, cum intervenit ratio longior; alioqui sufficient intentio ac ratio: silent enim leges inter arma nec se expectari iubent, cum ei, qui exspectare velit, ante iniusta poena luenda sit quam iusta repetenda. ideoque id enthymema, quod est ex consequentibus, rationi simile dixerunt. Sed et singula, interimque recte, ponuntur, ut ipsum illud silent leges inter arma;

[17] But when *a reason* of unusual length intervenes, it is necessary to state the final conclusion, otherwise the *major premise* and the *reason* would suffice. “Laws are silent in the midst of arms, and do not require us to await their sanction when the circumstances are such that he who would await their sanction is certain to be the victim of an unjust penalty before ever the just penalty can be claimed.” Hence it has been asserted that the form of *enthymeme* which is based on denial of consequents resembles a *reason*. But sometimes, again, it is sufficient to state a single proposition as in the example

just quoted, “The laws are silent in the midst of arms.”

[18] et a ratione incipere fas est, deinde concludere, ut ibidem: quodsi duodecim tabulae nocturnum furem quoquo modo, diurnum autem, si se telo defenderet, interfici impune voluerunt, quis est qui, quoquo modo quis interfectus sit, puniendum putet? variavit hic adhuc et rursus rationem tertio loco posuit, cum videat aliquando gladium nobis ab ipsis porrigi legibus.

[18] We may also begin with the *reason* and then proceed to the conclusion as in another passage from the same speech: “But if the Twelve Tables permitted the killing of a thief by night under any circumstances, and by day if he used a weapon to defend himself, who is there who will contend that the slayer must be punished under whatever circumstances a man has been killed?” “The process is still further varied by Cicero, and the *reason* placed third, as in the phrase, “When he sees that the sword is sometimes placed in our hands by the laws themselves.”

[19] Per constantem partis duxit ordinem: insidiatori vero et latroni quae potest inferri iniusta nex? hoc intentio; quid comitatus nostri, quid gladii volunt? hoc ratio; quos habere certe non liceret, si uti illis nullo pacto liceret, hoc ex ratione et intentione connexio.

[19] On the other hand, he places the various parts in the regular order in the following instance: “How can it be unjust to kill a robber who lies in wait for his victim?” Next comes the *reason*: “What is the object of our escorts and our swords?” Last comes the conclusion resulting from the *major premise* and the *reason*: “Which we certainly should not be permitted to have, if we were absolutely forbidden to use them.”

[20] huic generi probationis tribus occurritur modis, id est per omnes partes. aut enim expugnatur intentio aut adsumptio aut conclusio, nonnunquam omnia. intentio expugnatur: iure occidi eum, qui insidiatus sit. nam prima statim quaestio pro Milone est, an ei fas sit lucem intueri qui a se hominem necatum esse fateatur.

[20] This form of proof may be countered in three ways, that is to say it may be attacked in all its parts. For either the *major premise* or the *minor* or the *conclusion* or occasionally all three are refuted. The *major premise* is refuted in the following case: “I was justified in killing him, as he lay in wait for me.” For the very first question in the defence of Milo is “whether it is right that he who confesses that he has killed a man should look upon the light of day.”

[21] expugnatur adsumptio omnibus iis quae de refutatione diximus. et ratio quidem nonnunquam est vera, cum eius propositio vera non sit; interim verae propositionis falsa ratio est. virtus bonum est, verum est; si quis rationem subiiciat, quod ea locupletes faciat, verae intentionis falsa sit ratio. conclusio autem aut vera negatur,

[21] The *minor premise* is refuted by all the methods which we mentioned in dealing with refutation. As to the *reason* it must be pointed out that it is sometimes true when the *proposition* to which it is attached is not true, but may on the other hand sometimes be false although the proposition is true. For example, "Virtue is a good thing" is true, but if the reason, "Because it brings us wealth," be added, we shall have an instance of a true *major premise* and a false *reason*.

[22] cum aliud colligit quam id quod ex prioribus efficitur, aut nihil ad quaestionem dicitur pertinere. Non est vera sic: insidiator iure occiditur; nam cum vitae vim adferat ut hostis, debet etiam repelli ut hostis; recte igitur Clodius ut hostis occiditur est; non utique, nondum enim Clodium insidiatorem ostendimus. Sed fit vera connexio, recte igitur insidiator ut hostis occiditur; nihil ad nos, nondum enim Clodius insidiator apparet.

[22] With regard to the *conclusion*, we may either deny its truth when it infers something which does not logically result from the premises, or we may treat it as irrelevant. The truth is denied in the following case: "We are justified in killing one who lies in wait for us; for since, like an enemy, he threatens us with violence, we ought to repulse his attack as though he were an enemy: therefore Milo was justified in killing Clodius as an enemy." The conclusion is not valid, since we have not yet proved that Clodius lay in wait for him But the conclusion that we are therefore justified in killing one who lies in wait for us is perfectly true, though irrelevant to the case, for it is not yet clear that Clodius lay in wait for Milo.

[23] Sed ut potest vera esse intentio et ratio et tamen falsa connexio, ita, si illa falsa sunt, nunquam est vera connexio.

[23] But while the *major premise* and the *reason* may both be true and the conclusion false, yet if both are false, the conclusion can never be true.

[24] enthymema ab aliis oratorius syllogismus, ab aliis pars dicitur syllogismi, propterea quod syllogismus utique conclusionem et propositionem habet et per omnes partes efficit, quod proposuit, enthymema tantum intelligi contentum sit.

[24] Some call the *enthymeme* a *rhetorical syllogism*, while others regard it as a part of the *syllogism*, because whereas the latter always has its premises and conclusion and effects its proof by the employment of all its parts, the *enthymeme* is content to let its proof be understood without explicit statement.

[25] syllogismus talis: solum bonum virtus, nam id demum bonum est, quo nemo male uti potest; virtute nemo male uti potest, bonum est ergo virtus. enthymema ex consequentibus: bonum est virtus, qua nemo male uti potest. et contra, Non est bonum pecunia; non enim bonum, quo quis male uti potest; pecunia potest quis male uti, non igitur bonum est pecunia. enthymema ex

pugnantibus: An bonum est pecunia,

[25] The following is an example of a syllogism: “Virtue is the only thing that is good, for that alone is good which no one can put to a bad use: but no one can make a bad use of virtue; virtue therefore is good.” The *enthymeme* draws its conclusion from denial of consequents. “Virtue is a good thing because no one can put it to a bad use.” On the other hand take the following syllogism. “Money is not a good thing; for that is not good which can be put to a bad use: money may be put to a bad use; therefore money is not a good thing.” The *enthymeme* draws its conclusion from incompatibles. “Can money be a good thing when it is possible to put it to a bad use?”

[26] qua quis male uti potest? — Si pecunia, quae est in argento signato, argentum est, qui argentum omne legavit, et pecuniam, quae est in argento signato, legavit; argentum autem omne legavit, igitur et pecuniam, quae est in argento, legavit, habet formam syllogismi. oratori satis est dicere, cum argentum legaverit omne, pecuniam quoque legavit, quae est in argento.

[26] The following argument is couched in syllogistic form: “If money in the form of silver coin is silver, the man who bequeathed all his silver to a legatee, includes all money in the form of coined silver: but he bequeathed all his silver: therefore he included in the bequest all money in the form of coined silver.” But for the orator it will be sufficient to say, “Since he bequeathed all his silver, he included in his bequest all his silver money.”

[27] peregissem mihi videor sacra tradentium artes, sed consilio locus superest. namque ego, ut in oratione syllogismo quidem aliquando uti nefas non duco, ita constare totam aut certe confertam esse aggressionum et enthymematum stipatione minime velim. dialogis enim et dialecticis disputationibus erit similior quam nostri operis actionibus, quae quidem inter se plurimum differunt.

[27] I think I have now dealt with all the precepts of those who treat oratory as a mystery. But these rules still leave scope for free exercise of the judgment. For although I consider that there are occasions when the orator may lawfully employ the syllogism, I am far from desiring him to make his whole speech consist of or even be crowded with a mass of *epicheiremes* and *enthymemes*. For a speech of that character would resemble dialogues and dialectical controversies rather than pleadings of the kind with which we are concerned, and there is an enormous difference between the two.

[28] namque in illis homines docti et inter doctos verum quaerentes minutius et scrupulosius scrutantur omnia, et ad liquidum confessumque perducunt, ut qui sibi et inveniendi et iudicandi vindicent partes, quarum alteram *τοπικήν* alteram *κριτικήν* vocant.

[28] For in the former we are confronted with learned men seeking for truth

among men of learning; consequently they subject everything to a minute and scrupulous inquiry with a view to arriving at clear and convincing truths, and they claim for themselves the tasks of invention and judgment, calling the former *τοπική* or the art of selecting the appropriate material for treatment, and the latter *κριτική* or the art of criticism.

[29] nobis ad aliorum iudicia componenda est oratio, et saepius apud omnino imperitos atque illarum certe ignaros litterarum loquendum est, quos nisi et delectatione allicimus et viribus trahimus et nonnunquam turbamus affectibus, ipsa, quae iusta ac vera sunt, tenere non possumus.

[29] We on the other hand have to compose our speeches for others to judge, and have frequently to speak before an audience of men who, if not thoroughly ill-educated, are certainly ignorant of such arts as dialectic: and unless we attract them by the charm of our discourse or drag them by its force, and occasionally throw them off their balance by an appeal to their emotions, we shall be unable to vindicate the claims of truth and justice.

[30] locuples et speciosa et imperiosa vult esse eloquentia; quorum nihil consequetur, si conclusionibus certis et in unam prope formam cadentibus concisa et contemptum ex humilitate et odium ex quadam severitate et ex copia satietatem et ex similitudine fastidium attulerit.

[30] Eloquence aims at being rich, beautiful and commanding, and will attain to none of these qualities if it be broken up into conclusive inferences which are generally expressed in the same monotonous form: on the contrary its meanness will excite contempt, its severity dislike, its elaboration satiety, and its sameness boredom.

[31] feratur ergo non semitis sed campis, non uti fontes angustis fistulis colliguntur sed ut beatissimi amnes totis vallibus fluunt, ac sibi viam, si quando non acceperit, faciat. nam quid illa miserius lege velut praeformatas infantibus litteras persequentium et, ut Graeci dicere solent, quem mater amictum dedit, sollicite custodientium: propositio ac conclusio ex consequentibus et repugnantibus?

[31] Eloquence therefore must not restrict itself to narrow tracks, but range at large over the open fields. Its streams must not be conveyed through narrow pipes like the water of fountains, but flow as mighty rivers flow, filling whole valleys; and if it cannot find a channel it must make one for itself. For what can be more distressing than to be fettered by petty rules, like children who trace the letters of the alphabet which others have first written for them, or, as the Greeks say, insist on keeping the coat their mother gave them. Are we to have nothing but premises and conclusions from consequents and incompatibles? Must not the orator breathe life into the argument and develop it?

[32] Non inspirēt? non augeat? non mille figuris variet ac verset? ut ea nasci et ipsa provenire natura, non manu facta et arte suspecta magistrum fateri ubique videantur? quis unquam sic dixit orator? nonne apud ipsum Demosthenen paucissima huius generis reperiuntur? quae apprehensa Graeci magis (nam hoc solum peius faciunt) in catenas ligant et inexplicabili serie connectunt, et indubitata colligunt et probant confessa et se antiquis per hoc similes vocant, deinde interrogati nunquam respondebunt, quem imitentur. Sed de figuris alio loco.

[32] Must lie not vary and diversify it by a thousand figures, and do all this in such a way that it seems to come into being as the very child of nature, not to reveal an artificial manufacture and a suspect art nor at every moment to show traces of an instructor's hand? What orator ever spoke thus? Even in Demosthenes we find but few traces of such a mechanism. And yet the Greeks of to-day are even more prone than we are (though this is the only point in which their practice is worse than ours) to bind their thoughts in fetters and to connect them by an inexorable chain of argument, making inferences where there was never any doubt, proving admitted facts and asserting that in so doing they are following the orators of old, although they always refuse to answer the question who it is that they are imitating. However of figures I shall speak elsewhere.

[33] nunc illud adiiciendum, ne iis quidem consentire me, qui semper argumenta sermone puro et dilucido et distincto ceterum minime elato ornatoque putant esse dicenda. namque ea distincta quidem ac perspicua debere esse confiteor, in rebus vero minoribus etiam sermone ac verbis quam maxime propriis et ex usu;

[33] For the present I must add that I do not even agree with those who hold that arguments should always be expressed in language which is not only pure, lucid and distinct, but also as free as possible from all elevation and ornateness. I readily admit that arguments should be distinct and clear, and further that in arguments of a minor character the language and words should be as appropriate and as familiar as possible.

[34] at si maior erit materia, nullum iis ornatum, qui modo non obscurēt, subtrahendum puto. nam et saepe plurimum lucis adfert ipsa translatio, cum etiam iuris consulti, quorum summus circa verborum proprietatem labor est, litus esse audeant dicere, qua fluctus eludit.

[34] But if the subject be one of real importance every kind of ornament should be employed, so long as it does nothing to obscure our meaning. For metaphor will frequently throw a flood of light upon a subject: even lawyers, who spend so much trouble over the appropriateness of words, venture to assert that the word *litus* is derived from *eludere*, because the shore is a place where the waves break in play.

[35] quoque quid est natura magis asperum, hoc pluribus condiendum est voluptatibus; et minus suspecta argumentatio dissimulatione, et multum ad fidem adiuvat audientis voluptas. nisi forte existimamus Ciceronem haec ipsa mala in argumentatione dixisse, silere leges inter arma, et gladium nobis interim ab ipsis porrigi legibus. hic tamen habendus istis modus, ut sint ornamento non impedimento.

[35] Further, the more unattractive the natural appearance of anything, the more does it require to be seasoned by charm of style: moreover, an argument is often less suspect when thus disguised, and the charm with which it is expressed makes it all the more convincing to our audience. Unless indeed we think that Cicero was in error when he introduced phrases such as the following into an argumentative passage: "The laws are silent in the midst of arms," and "A sword is sometimes placed in our hands by the laws themselves." However, we must be careful to observe a happy mean in the employment of such embellishments, so that they may prove a real ornament and not a hindrance.

LIBER VI — BOOK VI

pr. haec, Marcelle Victori, ex tua voluntate maxime ingressus, tum si qua ex nobis ad iuvenes bonos pervenire posset utilitas, novissime paene etiam necessitate quadam officii delegati mihi sedulo laborabam; respiciens tamen illam curam meae voluptatis, quod filio, cuius eminens ingenium sollicitam quoque parentis diligentiam merebatur, hanc optimam partem relicturus hereditatis videbar ut, si me, quod aequum et optabile fuit, fita interceptissent, praeceptore tamen patre uteretur.

[1] I undertook my present task, Marcellus Victorius, mainly to gratify your request, but also with a view to assist the more earnest of our young men as far as lay in my power, while latterly the energy with which I have devoted myself to my labours has been inspired by the almost imperative necessity imposed by the office conferred on me, though all the while I have had an eye to my own personal pleasure. For I thought that this work would be the most precious part of the inheritance that would fall to my son, whose ability was so remarkable that it called for the most anxious cultivation on the part of his father. Thus if, as would have been but just and devoutly to be wished, the fates had torn me from his side, he would still have been able to enjoy the benefit of his father's instruction.

[2] At me fortuna id agentem diebus ac noctibus festinantemque metu meae mortalitatis ita subito prostravit, ut laboris mei fructus ad neminem minus quam ad me pertineret. illum enim, de quo summa conceperam et in quo spem unicam senectutis reponebam, repetito vulnere orbitatis amisi.

[2] Night and day I pursued this design, and strove to hasten its completion in the fear that death might cut me off with my task unfinished, when misfortune overwhelmed me with such suddenness, that the success of my labours now interests no one less than myself. A second bereavement has fallen upon me, and I have lost him of whom I had formed the highest expectations, and in whom I reposed all the hopes that should solace my old age. What is there left for me to do?

[3] quid nunc again? aut quem ultra esse usum mei, diis repugnantibus, credam? nam ita forte accidit, ut eum quoque librum, quem de causis corruptae eloquentiae emisi, iam scribere aggressus ictu simili ferirer. nonne igitur optimum fruit, infaustum opus et quidquid hoc est in me infeliciū litterarum super immaturum funus consumpturis viscera mea flammis iniicere neque hanc impiam vivacitatem novis insuper curis fatigare?

[3] Or what further use can I hope to be on earth, when heaven thus frowns upon me? For it so chances that just at the moment when I began my book on the causes of the decline of eloquence, I was stricken by a like affliction.

Better had I thrown that illomened work and all my ill-starred learning upon the flames of that untimely pyre that was to consume the darling of my heart, and had not sought to burden my unnatural persistence in this wicked world with the fatigue of fresh labours!

[4] quis enim mihi bonus parens ignoscat, si studere amplius possum, ac non oderit hanc animi mei firmitatem, si quis in me alius usus vocis, quam ut incusem deos superstes omnium meorum, nullam in terras despicere providentiam tester, si non meo casu, cui tamen nihil obiici, nisi quod vivam, potest, at illorum certe, quos utique immeritos mors acerba damnavit, erepta prius mihi matre eorundem, quae nondum expleto aetatis undevicesimo anno duos enixa filios, quamvis acerbissimis rapta fatis, non infelix decessit?

[4] For what father with a spark of proper feeling would pardon me for having the heart to pursue my researches further, and would not hate me for my insensibility, had I other use for my voice than to rail against high heaven for having suffered me to outlive all my nearest and dearest, and to testify that providence deigns not at all to watch over this earth of ours? If this is not proved by my own misfortune (and yet my only fault is that I still live), it is most surely manifest in theirs, who were cut off thus untimely; their mother was taken from me earlier still, she had borne me two sons ere the completion of her nineteenth year; but for her, though she too died most untimely, death was a blessing.

[5] ego vel hoc uno malo sic eram adffictus, ut me iam nulla fortuna posset efficere felicem. nam cum omni virtute, quae in feminas cadit, functa insanabilem attulit marito dolorem, tum aetate tam puellari, praesertim meae comparata, potest et ipsa numerari inter vulnera orbitatis.

[5] Yet for me her death alone was such a blow that thereafter no good fortune could bring me true happiness. For she had every virtue that is given to woman to possess, and left her husband a prey to irremediable grief; nay, so young was she when death took her, that if her age be compared with mine, her decease was like the loss not merely of a wife, but of a daughter. Still her children survived her, and I, too,

[6] liberis tamen superstitibus et, quod nefas erat, sed optabat ipsa, me salvo maximos cruciatus praecipiti via effugit. mihi filius minor quintum egressus annum prior alterum ex duobus eruit lumen.

[6] lived on by some unnatural ordinance of fate, which for all its perversity was what she herself desired; and thus by her swift departure from this life she escaped the worst of tortures. My youngest boy was barely five, when he was the first to leave me, robbing me as it were of one of my two eyes.

[7] Non sum ambitiosus in malis nec augere lacrimarum causas volo, utinamque esset ratio minuendi. Sed dissimulare qui possum, quid ille gratiae

in vultu, quid iucunditatis in sermone, quos ingenii igniculos, quam substantiam placidae et (quod scio vix posse credi) iam tum altae mentis ostenderit; qualis amorem quicumque aliens infans mereretur.

[7] I have no desire to flaunt my woes in the public gaze, nor to exaggerate the cause I have for tears; would that I had some means to make it less! But how can I forget the charm of his face, the sweetness of his speech, his first flashes of promise, and his actual possession of a calm and, incredible though it may seem, a powerful mind. Such a child would have captivated my affections, even had he been another's.

[8] illud vero insidiantis, quo me validius cruciaret, fortunae fuit, ut ille mihi blandissimus me suis nutricibus, me aviae educanti, me omnibus, qui sollicitare illas aetates solent,

[8] Nor was this all; to enhance my agony the malignity of designing fortune had willed that he should devote all his love to me, preferring me to his nurses, to his grandmother who brought him up, and all those who, as a rule, win the special affection of infancy.

[9] anteferet. quapropter illi dolori, quem ex matre optima atque omanem lauded supergressa paucos ante menses ceperam, gratulor. minus enim est, quod flendum meo nomine quam quod illius gaudendum est.

[9] I am, therefore, grateful to the grief that came to me some few months before his loss in the death of his mother, the best of women, whose virtues were beyond all praise. For I have less reason to weep my own fate than to rejoice at hers.

After these calamities all my hopes, all my delight were centred on my little Quintilian, and he might have sufficed to console me.

[10] una post haec Quintiliani mei spe ac voluptate nitebar, et poterat sufficere solacio. Non enim flosculos, sicut prior, sed iam decimum aetatis ingressus annum, certos ac deformatos fructus ostenderat. iuro per mala mea, per infelicem conscientiam, per illos manes, numina mei doloris, eas me in illo vidisse virtutes ingenii, non modo ad percipiendas disciplinas, quo nihil praestantius cognovi plurima expertus, studii que iam tum non coacti (sciunt praeceptores), sed probitatis, pietatis, humanitatis, liberalitatis, ut prorsus posset hinc esse tanti fulminis metus, quod observatum fere est celerius occidere festinatam maturitatem et esse nescio quam, quae spes tantas decerpit, invidiam, ne videlicet ultra quam homini datum est nostra provehantur.

[10] For his gifts were not merely in the bud like those of his brother: as early as his ninth birthday he had put forth sure and well-formed fruit. By my own sorrows, by the testimony of my own sad heart, by his departed spirit, the deity at whose shrine my grief does worship, I swear that I discerned in him

such talent, not merely in receiving instruction, although in all my wide experience I have never seen his like, nor in his power of spontaneous application, to which his teachers can bear witness, but such upright, pious, humane and generous feelings, as alone might have sufficed to fill me with the dread of the fearful thunder-stroke that has smitten me down: for it is a matter of common observation that those who ripen early die young, and that there is some malign influence that delights in cutting short the greatest promise and refusing to permit our joys to pass beyond the bound allotted to mortal man.

[11] *etiam illa fortuita aderant omnia, vocis iucunditas claritasque, oris suavitas et in utracunque lingua, tanquam ad ear demum natus esset, expressa proprietas omnium litterarum. Sed hae spes adhuc; illa maiora, constantia, gravitas, contra dolores etiam ac metus robur. nam quo ille animo, qua medicorum admiratione mensium octo valetudinem tulit! ut me in supremis consolatus est! quam etiam deficiens iamque non noster ipsum ilium alienatae mentis errorem circa scholas ac litteras habuit!*

[11] He possessed every incidental advantage as well, a pleasing and resonant voice, a sweetness of speech, and a perfect correctness in pronouncing every letter both in Greek and Latin, as though either were his native tongue. But all these were but the promise of greater things. He had finer qualities, courage and dignity, and the strength to resist both fear and pain. What fortitude he showed during an illness of eight months, till all his physicians marvelled at him! How he consoled me during his last moments. How even in the wanderings of delirium did his thoughts recur to his lessons and his literary studies, even when his strength was sinking and he was no longer ours to claim!

[12] *tuosne ego, o meae spes inanes, labentes oculos, tuum fugientem spiritum vidi? tuum corpus frigidum exsanguis complexus animam recipere auramque commulnere haurire amplius potui, dignus his cruciatibus, quos fero,*

[12] Child of my vain hopes, did I see your eyes fading in death and your breath take its last flight? Had I the heart to receive your fleeting spirit, as I embraced your cold pale body, and to live on breathing the common air. Justly do I endure the agony that now is mine, and the thoughts that torment me.

[13] *dignus his cogitationibus? tene consulari nuper adoptione ad omnium spes honorum prius admotum, te avunculo praetori generum destinatum, te omnium spes avitae eloquentiae candidatum, superstes parens tantum ad poenas, amisi? Et si non cupido lucis, certe patientia vindicet te reliqua mea aetate. nam frustra mala omnia ad crimen fortunate relegamus.*

[13] Have I lost you at the moment when adoption by a consular had given hope that you would rise to all the high offices of state, when you were destined to be the son-in-law of your uncle the praetor, and gave promise of

rivalling the eloquence of your grandsire? and do I your father survive only to weep? May my endurance (not my will to live, for that is gone from me) prove me worthy of you through all my remaining years. For it is in vain that we impute all our ills to fortune. No man grieves long save through his own fault.

[14] *nemo nisi sua culpa diu dolet. Sed vivimus, et aliqua vivendi ratio quaerenda est, credendumque doctissimis hominibus, qui unicum adversorum solacium litteras putaverunt. si quando tamen ita resederit praesens impetus, ut aliqua tot luctibus alia cogitatio inseri possit, non iniuste petierim morae veniam. quis enim dilata studia miretur, quae potius non abrupta esse mirandum est? tum, si qua fuerint minus effecta iis,*

[14] But I still live, and must find something to make life tolerable, and must needs put faith in the verdict of the wise, who held that literature alone can provide true solace in adversity. Yet, if ever the violence of my present grief subside and admit the intrusion of some other thought on so many sorrowful reflexions, I may with good cause ask pardon for the delay in bringing my work to completion. Who can wonder that my studies have been interrupted, when the real marvel is that they have not been broken off altogether?

[15] *quae levius adhuc adflicti coeperamus, imperitanti fortunae remittantur, quae, si quid mediocrium alioqui in nostro ingenio virium fuit, ut non exstinxerit, debilitavit tamen. Sed vel propter hoc nos contumacius erigamus, quod illam ut perferre nobis difficile est, ita facile contemnere. nihil enim sibi adversus me reliquit et infelicem quidem, sed certissimam tamen attulit mihi ex his malis securitatem.*

[15] Should certain portions therefore betray a lack of finish compared with what was begun in the days when my affliction was less profound, I would ask that the imperfections should be regarded with indulgence, as being due to the cruel tyranny of fortune, which, if it has not utterly extinguished, has at any rate weakened such poor powers of intellect as I once possessed. But for this very reason I must rouse myself to face my task with greater spirit, since it is easy to despise fortune, though it may be hard to bear her blows. For there is nothing left that she can do to me, since out of my calamities she has wrought for me a security which, full of sorrow though it be, is such that nothing can shake it.

[16] *boni autem consulere nostrum laborem vel propter hoc aequum est, quod in nullum iam proprium usum perseveramus, sed omnis haec cura aliens utilitates (si modo quid utile scribimus) spectat. nos miseri sicut facultates patrimonii nostri, ita hoc opus aliis praeparabamus, aliis relinquemus.*

[16] And the very fact that I have no personal interest in persevering with my present work, but am moved solely by the desire to serve others, if indeed anything that I write can be of such service, is a reason for regarding my

labours with an indulgent eye. Alas! I shall bequeath it, like my patrimony, for others than those to whom it was my design to leave it.

1. peroratio sequebatur, quam cumulum quidam, conclusionem alii vocant. eius duplex ratio est posita aut ira rebus aut ira adfectibus. rerum repetitio et congregatio, quae Graece dicitur ἀνακεφαλαίωσις a quibusdam Latinorum enumeratio, et memoriam iudicis reficit et totam simul causam ponit ante oculos et, etiamsi per singula minus moverat, turba valet.

1. The next subject which I was going to discuss was the peroration which some call the completion and others the conclusion. There are two kinds of peroration, for it may deal either with facts or with the emotional aspect of the case. The repetition and grouping of the facts, which the Greeks call ἀνακεφαλαίωσις and some of our own writers call the enumeration, serves both to refresh the memory of the judge and to place the whole of the case before his eyes, and, even although the facts may have made little impression on him in detail, their cumulative effect is considerable.

[2] In hac, quae repetemus, quam brevissime dicenda sunt et, quod Graeco verbo patet, decurrendum per capita. nam, si morabimur, non iam enumeratio sed quasi altera fiet oratio. quae autem enumeranda videntur, cum pondere aliquo dicenda sunt et aptis excitanda sentiis et figuris utique varianda; alioqui nihil est odiosius recta illa repetitione velut memoriae iudicum diffidentis.

[2] This final recapitulation must be as brief as possible and, as the Greek term indicates, we must summarise the facts under the appropriate heads. For if we devote too much time thereto, the peroration will cease to be an enumeration and will constitute something very like a second speech. On the other hand the points selected for enumeration must be treated with weight and dignity, enlivened by apt reflexions and diversified by suitable figures; for there is nothing more tiresome than a dry repetition of facts, which merely suggests a lack of confidence in the judges' memory.

[3] sunt autem innumerabiles species, optimeque ira Verrem Cicero: si pater ipse iudicaret, quid diceret, cum haec probarentur? et deinde subiecit enumerationem; aut cum idem ira eundem per invocationem deorum spoliata a praetore templa dinumerat. licet et dubitare, num quid nos fugerit, et quid responsurus sit adversarius his et his, aut quam spem accusator habeat omnibus ita defensis.

[3] There are however innumerable ways in which this may be done. The finest example is provided by Cicero's prosecution of Verres. "If your own father were among your judges, what would he say when these facts were proved against you?" Then follows the enumeration. Another admirable example may be found in the same speech where the enumeration of the temples which the praetor had despoiled takes the form of invoking the various deities

concerned. We may also at times pretend to be in doubt whether we have not omitted something and to wonder what the accused will say in reply to certain points or what hope tile accuser can have after the manner in which we have refuted all the charges brought against us.

[4] illa vero iucundissima, si contingat aliquod ex adversario ducere argumentum, ut si dicas: reliquit hanc partem causae, aut invidia premere maluit, aut ad preces confugit merito, cum sciret haec et haec.

[4] But the most attractive form of peroration is that which we may use when we have an opportunity of drawing some argument from our opponent's speech, as for instance when we say "He omitted to deal with this portion of tile case," or "He preferred to crush us by exciting odium against us," or "He had good reason for resorting to entreaty, since lie knew certain facts."

[5] Sed non sunt singulae species persequendae, ne sola videantur, quae forte nunc dixero, cum occasiones et ex causis et ex dictis adversariorum et ex quibusdam fortuitis quoque oriantur. nec referenda modo nostra, sed postulandum etiam ab adversariis, ut ad quaedam respondeant.

[5] But I must refrain from dealing with the various methods individually, for fear that the instances that I produce should be regarded as exhaustive, whereas our opportunities spring from the nature of the particular case, from the statements of our opponents and also from fortuitous circumstances. Nor must we restrict ourselves to recapitulating the points of our own speech, but must call upon our opponent to reply to certain questions.

[6] id autem, si et actioni supererit locus et ea proposuerimus, quae refelli non possint. nam provocare quae inde sint fortia, non argumentis est,

[6] This however is only possible if there is time for him to do so and if the arguments which we have put forward are such as not to admit of refutation. For to challenge points which tell in our opponent's favour is not to argue against him, but to play the part of prompter to him.

[7] sed monentis. id unum epilogi genus visum est plerisque Atticorum et philosophis fere omnibus, qui de arte oratoria scriptum aliquid reliquerunt. id sensisse Atticos credo, quia Athenis adfectus movere etiam per praeconem prohibebatur orator. philosophos minus miror, apud quos vitii loco est adfici; nec bono moris videntur, sic a vero iudicem averti, nec convenire bono viro vitiis uti. necessarios tamen adfectus fatebuntur, si aliter obtineri vera et iusta et ira commune profutura non possint.

[7] The majority of Athenians and almost all philosophers who have left anything in writing on the art of oratory have held that the recapitulation is the sole form of peroration. I imagine that the reason why the Athenians did so was that appeals to the emotions were forbidden to Athenian orators, a proclamation to this effect being actually made by the court-usher. I am less

surprised at the philosophers taking this view, for they regard susceptibility to emotion as a vice, and think it immoral that the judge should be distracted from the truth by an appeal to his emotions and that it is unbecoming for a good man to make use of vicious procedure to serve his ends. None the less they must admit that appeals to emotion are necessary if there are no other means for securing the victory of truth, justice and the public interest.

[8] *ceterum illud constitit inter omnes, etiam ira aliis partibus actionis, si multiplex causa sit et pluribus argumentis defensa, utiliter ἀνακεφαλαιῶσιν fieri solere, sicut nemo dubitaverit multas esse causas, ira quibus nullo loco sit necessaria, si breves et simplices fuerint. haec pars perorationis accusatori patronoque ex aequo communis est. adfectibus quoque iisdem fere utuntur,*

[8] It is however admitted by all that recapitulation may be profitably employed in other portions of the speech as well, if the case is complicated and a number of different arguments have been employed in the defence; though no one will doubt but that there are many cases, in which no recapitulation at all is necessary at any point, assuming, that is, that the cases are both brief and simple. This part of the peroration is common both to the prosecution and the defence.

[9] *sed aliis hic, aliis ille saepius ac magis, nam huic concitare iudices, illi flectere convenit. verum et accusator habet interim lacrimas ex miseratione eius rei quam ulciscitur; et reus de indignitate calumniae aut conspirationis vehementius interim queritur. dividere igitur haec officia commodissimum, quae plerumque sunt, ut dixi, ira prooemio similia, sed hic liberiora plenioraque.*

[9] Both parties as a general rule may likewise employ the appeal to the emotions, but they will appeal to different emotions and the defender will employ such appeals with greater frequency and fulness. For the accuser has to rouse the judge, while the defender has to soften him. Still even the accuser will sometimes make his audience weep by the pity excited for the man whose wrongs he seeks to avenge, while the defendant will at times develop no small vehemence when he complains of the injustice of the calumny or conspiracy of which he is the victim. It will therefore be best to treat these duties separately: as I have already said, they are much the same in the peroration as in the exordium, but are freer and wider in scope in the former.

[10] *inclinatio enim iudicum ad nos petitur initio parcius, cum admitti satis est et oratio tota superest; ira epilogus vero est, qualem animum iudex ira consilium ferat, et iam nihil amplius dicturi sumus nec restat quo reservemus.*

[10] For our attempts to sway the judges are made more sparingly at the commencement of the speech, when it is enough that such an attempt should gain admittance and we have the whole speech before us. On the other hand in the peroration we have to consider what the feelings of the judge will be when

he retires to consider his verdict, for we shall have no further opportunity to say anything and cannot any longer reserve arguments to be produced later.

[11] est igitur utrisque commune, conciliare sibi, avertere ab adversario iudicem, concitare adfectus et componere. et brevissimum quidem hoc praeceptum dari utrique parti potest, ut totas causae suae vires orator ponat ante oculos; et cum viderit, quid invidiosum, favorabile, invisum, miserabile aut sit ira rebus aut videri possit, ea dicat, quibus, si iudex esset, ipse maxime moveretur. Sed certius est ire per singula.

[11] It is therefore the duty of both parties to seek to win the judge's goodwill and to divert it from their opponent, as also to excite or assuage his emotions. And the following brief rule may be laid down for the observation of both parties, that the orator should display the full strength of his case before the eyes of the judge, and, when he has made up his mind what points in his case actually deserve or may seem to deserve to excite envy, goodwill, dislike or pity, should dwell on those points by which he himself would be most moved were he trying the case.

[12]

et quae concilient quidem accusatorem, ira praeceptis exordii iam diximus. quaedam tamen, quae illic ostendere sat est, ira peroratione implenda sunt magis, si contra impotentem, invisum, perniciosum suscepta causa est, si iudicibus ipsis aut gloriae damnatio rei aut deformitati futura absolutio.

[12] But it will be safer to discuss these considerations in detail.

The points likely to commend the accuser to the judge have already been stated in my remarks on the exordium. There are however certain things which require fuller treatment in the peroration than in the exordium, where it is sufficient merely to outline them. This fuller treatment is specially required if the accused be a man of violent, unpopular or dangerous character or if the condemnation of the accused is likely to cover the judges with glory or his acquittal with disgrace.

[13] nam egregie ira Vatinius Calvus, factum, inquit, ambitum scitis omnes et hoc vos scire omnes sciunt. Cicero quidem ira Verrem etiam emendari posse infamiam iudiciorum damnato reo dicit; quod est unum ex supra dictis. metus etiam, si est adhibendus, ut faciat idem, hunc habet locum fortiolem quam ira prooemio. qua de re quid sentirem, alio iam libro exposui.

[13] Calvus for example in his speech against Vatinius makes an admirable remark: "You know, gentlemen, that bribery has been committed and everybody knows that you know it." Cicero again in the *Verrines* says that the ill-name acquired by the courts may be effaced by the condemnation of Verres, a statement that comes under the head of the conciliatory methods mentioned above. The appeal to fear also, if it is necessary to employ it to

produce a like effect, occupies a more prominent place in the peroration than in the exordium, but I have expressed my views on this subject in an earlier book.

[14] *concitare quoque invidiam, odium, iram, liberius ira peroratione contingit; quorum invidiam gratia, odium turpitudine, iram offensio iudici facit, si contumax, arrogans, securus sit, quae non ex facto modo dictove aliquo sed vultu, habitu, aspectu moveri solet. egregieque nobis adolescentibus dixisse accusator Cossutiani Capitonis videbatur, Graece quidem, sed ira hunc sensum, erubescis Caesarem timere.*

[14] The peroration also provides freer opportunities for exciting the passions of jealousy, hatred or anger. As regards the circumstances likely to excite such feelings in the judge, jealousy will be produced by the influence of the accused, hatred by the disgraceful nature of his conduct, and anger by his disrespectful attitude to the court, if, for instance, he be contumacious, arrogant or studiously indifferent: such anger may be aroused not merely by specific acts or words, but by his looks, bearing and manner. In this connexion the remark made by the accuser of Cossutianus Capito in my young days was regarded with great approval: the words used were Greek, but may be translated thus:—“You blush to fear even Caesar.”

[15] *summa tamen concitandi adfectus accusatori ira hoc est, ut id, quod obiecit, aut quam atrocissimum aut etiam, si fieri potest, quam maxime miserabile esse videatur. atrocitas crescit ex his, quid factum sit, a quo, ira quem, quo animo, quo tempore, quo loco, quo modo; quae omnia infinitos tractatus habent.*

[15] The best way however for the accuser to excite the feelings of the judge is to make the charge which he brings against the accused seem as atrocious or, if feasible, as deplorable as possible. Its atrocity may be enhanced by considerations of the nature of the act, the position of its author or the victim, the purpose, time, place and manner of the act: all of which may be treated with infinite variety.

[16] *pulsatum querimur: de re primum ipsa dicendum; tum si senex, si puer, si magistratus, si probus, si bene de re publica meritus; etiam si percussus sit a vili aliquo contemptoque vel ex contrario a potente nimium vel ab eo, quo minime oportuit, et si die forte sollemni aut iis temporibus, cum indicia eius rei maxime exercerentur, aut ira sollicito civitatis statu; item ira theatro, ira templo, ira contione,*

[16] Suppose that we are complaining that our client has been beaten. We must first speak of the act itself; we shall then proceed to point out that the victim was an old man, a child, a magistrate, an honest man or a benefactor to the state; we shall also point out that the assailant was a worthless and contemptible fellow, or (to take the opposite case) was in a position of

excessive power or was the last man who should have given the blow, or again that the occasion was a solemn festival, or that the act was committed at a time when such crimes were punished with special severity by the courts or when public order was at a dangerously low ebb. Again the hatred excited by the act will be enhanced if it was committed in the theatre, in a temple, or at a public assembly,

[17] *crescit invidia; et si non errore nec ira vel etiam, si forte ira, sed iniqua, quod patri adfuisset, quod respondisset, quod honores contra peteret, et si plus etiam videri potest voluisse quam fecit. plurimum tamen adfert atrocitatis modus, si graviter, si contumeliose: ut Demosthenes ex parte percussi corporis, ex vultu ferientis, ex habitu invidiam Midiae quaerit.*

[17] and if the blow was given not in mistake or in a moment of passion or, if it was the result of passion which was quite unjustifiable, being due to the fact that the victim had gone to the assistance of his father or had made some reply or was a candidate for the same office as his assailant; or finally we may hint that he wished to inflict more serious injury than he succeeded in inflicting. But it is the manner of the act that contributes most to the impression of its atrocity, if, for example, the blow was violent or insulting: thus Demosthenes seeks to excite hatred against Midias by emphasising the position of the blow, the attitude of the assailant and the expression of his face.

[18] *occisus utrum ferro an igne an veneno, uno vulnere an pluribus, subito an exspectatione tortus, ad hanc partem maxime pertinet. utitur frequenter accusator et miseratione, cum aut eius casum, quem ulciscitur, aut liberorum ac parentium solitudinem conqueritur.*

[18] It is in this connexion that we shall have to consider whether a man was killed by sword or fire or poison, by one wound or several, and whether he was slain on the spot or tortured by being kept in suspense. The accuser will also frequently attempt to excite pity by complaining of the fate of the man whom he is seeking to avenge or of the desolation which has fallen upon his children or parents.

[19] *etiam futuri temporis imagine iudices movet, quae maneant eos, qui de vi et iniuria questi sunt, nisi vindicentur; fugiendum de civitate, cedendum bonis aut omnia, quaecunque inimicus fecerit, perterenda.*

[19] The judges may also be moved by drawing a picture of the future, of the fate which awaits those who have complained of violence and wrong, if they fail to secure justice. They must go into exile, give up their property or endure to the end whatever their enemy may choose to inflict upon them.

[20] *Sed saepius id est accusatoris, avertere iudicem a miseratione, qua reus sit usurus, atque ad fortiter iudicandum concitare. cuius loci est etiam occupare, quae dicturum facturumve adversarium putes. nam et cautiores ad custodiam*

suae religionis iudices facit et gratiam responsuris aufert, cum ea quae dicta sunt ab accusatore iam, si pro reo repetentur, non sint nova: ut Servium Sulpicium Messala contra Aufidiam, ne signatorum, ne ipsius discrimen obiciatur sibi, praemonet. nec non ab Aeschine, quali sit usus Demosthenes actione, praedictum est. docendi quoque interim iudices, quid rogantibus respondere debeant; quod est unum repetitionis genus.

[20] But it will more frequently be the duty of the accuser to divert the judge from all the temptations to pity which the accused will place before him, and to incite him to give a strong and dispassionate verdict. It will also be his duty in this connexion to forestall the arguments and actions to which his opponent seems likely to have recourse. For it makes the judge more cautious in observing the sanctity of his oath and destroys the influence of those who are going to reply to us when the arguments used by the defence have already been dealt with by the prosecution, since they lose their novelty. An instance of this will be found in the speech of Messala against Aufidia, where he warns Servius Sulpicius not to talk about the peril which threatens the signatories to the document and the defendant herself. Again Aeschines foretells the line of defence which Demosthenes will pursue. There are also occasions when the judges should be told what answer they should make to requests on behalf of the accused, a proceeding which is a form of recapitulation.

[21] periclitantem vero commendat dignitas et studia fortia et susceptae bello cicatrices et nobilitas et merita maiorum. hoc, quod proxime dixi, Cicero atque Asinius certatim sunt usi, pro Scauro patre hic ille pro filio.

[21] If we turn to the defendant, we must note that his worth, his manly pursuits, the scars from wounds received in battle, his rank and the services rendered by his ancestors, will all commend him to the goodwill of the judges. Cicero, as I have already pointed out, and Asinius both make use of this form of appeal: indeed they may almost be regarded as rivals in this respect, since Cicero employed it when defending the elder Scaurus, Asinius when defending the son. Again,

[22] commendat et causa periculi, si suscepisse inimicitias ob aliquod factum honestum videtur; praecipue bonitas, humanitas, misericordia. iustius enim tum petere ea quisque videtur a iudice, quae aliis ipse praestiterit. referenda pars haec quoque ad utilitatem rei publicae, ad iudicum gloriam, ad exemplum,

[22] the cause which has brought the accused into peril may serve to produce the same effect, if, for example, it appears that he has incurred enmity on account of some honourable action: above all his goodness, humanity or pity may be emphasised with this end in view. For it adds to the apparent justice of his claim, if all that he asks of the judge is that he should grant to him what he himself has granted to others. We may also in this connexion lay stress on the

interests of the state, the glory which will accrue to the judges, the importance of the precedent which their verdict will set and the place it will hold in the memory of after generations.

[23] ad memoriam posteritatis. plurimum tamen valet miseratio, quae iudicem non flecti tantum cogit, sed motum quoque animi sui lacrimis confiteri. haec petentur aut ex iis, quae passus est reus, aut iis quae cum maxime patitur, aut iis quae damnatum manent; quae et ipsa duplicantur, cum dicimus ex qua illi fortuna et ira quam recidendum sit.

[23] But the appeal which will carry most weight is the appeal to pity, which not merely forces the judge to change his views, but even to betray his emotion by tears. Such appeals to pity will be based either on the previous or present sufferings of the accused, or on those which await him if condemned. And the force of our appeal will be doubled if we contrast the fortune which he now enjoys with that to which he will be reduced, if he fail.

[24] adfert ira his momentum et aetas et sexus et pignora; liberi, dico, et parentes et propinqui. quae omnia tractari varie solent. nonnunquam etiam ipse patronus has partes subit, ut Cicero pro Milone, O me miserum! o te infelicem! reuocare me tu ira patriam, Milo, potuisti per hos, ego te ira patria per eosdem retinere non potero? maximeque, si, ut tum accidit, non conveniunt ei qui accusatur preces.

[24] In this connexion great play may be made by reference to the age and sex of the accused, or to his nearest and dearest, that is, his children, parents and kindred, all of which topics are treated in different ways. Sometimes the advocate himself may even assume the role of close intimacy with his client, as Cicero does in the *pro Milone*, where he cries: "Alas, unhappy that I am! Alas, my unfortunate friend! You succeeded by the agency of those who are now your judges in recalling me to my native land, and cannot I through the same agency retain you in yours?" Such a method is especially serviceable when, as was the case with Milo, entreaty is not in keeping with the character of the accused.

[25] nam quis ferret Milonem pro capite suo supplicantem, qui a se virum nobilem interfectum, quia id fieri oportuisset, fateretur? ergo et illi captavit ex ipsa praestantia animi favorem et ira locum lacrimarum eius ipse successit. his praecipue locis utiles sunt prosopopoeiae, id est fictae alienarum personarum orationes, quales litigatorum ore dicit patronus. nuda res movent; at cum ipsos loqui fingimus,

[25] Who would have endured to hear Milo pleading for his life, when he admitted that he had killed a man of noble birth because it was his duty to do so? Consequently Cicero sought to win the judges' goodwill for Milo by emphasising the staunchness of his character, and himself assumed the role of suppliant.

Impersonation may also be employed with profit in such passages, and by impersonations I mean fictitious speeches supposed to be uttered, such as an advocate puts into the mouth of his client. The bare facts are no doubt moving in themselves; but when we pretend that the persons concerned themselves are speaking, the personal note adds to the emotional effect.

[26] *ex personis quoque trahitur adfectus Non enim audire iudex videtur aliena mala deflentis, sed sensum ac vocem auribus accipere miserorum, quorum etiam mutus aspectus lacrimas movet; quantoque essent miserabiliora, si ea dicerent ipsi, tanto sunt quadam portione ad adficiendum potentiora, cum velut ipsorum ore dicuntur, ut scenicis actoribus eadem vox eademque pronuntiatio plus ad movendos adfectus sub persona valet.*

[26] For then the judge seems no longer to be listening to a voice bewailing another's ills, but to hear the voice and feelings of the unhappy victims, men whose appearance alone would call forth his tears even though they uttered never a word. And as their plea would awaken yet greater pity if they urged it with their own lips, so it is rendered to some extent all the more effective when it is, as it were, put into their mouth by their advocate: we may draw a parallel from the stage, where the actor's voice and delivery produce greater emotional effect when he is speaking in an assumed role than when he speaks in his own character. Consequently Cicero, to quote him once again,

[27] *itaque idem Cicero, quanquam preces non dat Miloni, eumque potius animi praestantia commendat, accommodavit tamen ei verba, convenientes etiam forti viro conquestiones: frustra, inquit, mei suscepti labores! O spes fallaces! O cogitationes inanes meas!*

nunquam tamen debet esse longa miseratio, nec sine causa dictum est, nihil facilius quam lacrimas inarescere.

[27] although he will not put entreaties into Milo's mouth, and prefers to commend him by his staunchness of character, still lends him words in the form of such complaint as may become a brave man. "Alas!" he says, "*my labours have been in vain! Alas for my blighted hopes! Alas for my baffled purpose!*"

Appeals to pity should, however, always be brief, and there is good reason for the saying that nothing dries so quickly as tears.

[28] *nam cum etiam veros dolores mitiget tempus, citius evanescat necesse est illa, quam dicendo effinximus, imago; ira qua si moramur, lacrimis fatigatur auditor et requiescit et ab illo, quem ceperat,*

[28] Time assuages even genuine grief, and it is therefore inevitable that the semblance of grief portrayed in our speech should vanish yet more rapidly. And if we spend too much time over such portrayal our hearer grows weary of his tears, takes a breathing space, and returns once more to the rational

attitude from which lie has been distracted by the impulse of the moment.

[29] impetu ad rationem redit. Non patiamur igitur frigescere hoc opus, et adfectum, cum ad summum perduxerimus, relinquamus nec speremus fore ut aliena quisquam diu ploret. ideoque cum ira aliis tum maxime ira hac parte debet crescere oratio, quia, quidquid non adiicit prioribus, etiam detrahere videtur, et facile deficit adfectus qui descendit.

[29] We must not, therefore, allow the effect which we have produced to fall flat, and must consequently abandon our appeal to the emotion just when that emotion is at its height, nor must we expect anyone to weep for long over another's ills. For this reason our eloquence ought to be pitched higher in this portion of our speech than in any other, since, wherever it fails to add something to what has preceded, it seems even to diminish its previous effect, while a *diminuendo* is merely a step towards the rapid disappearance of the emotion.

[30] Non solum autem dicendo sed etiam faciendo quaedam lacrimas mouemus, unde et producere ipsos, qui periclitentur, squalidos atque deformes et liberos eorum ac parentes institutum, et ab accusatoribus cruentum gladium ostendi et lecta e vulneribus ossa et vestes sanguine perfusas videmus, et vulnera resolvi,

[30] Actions as well as words may be employed to move the court to tears. Hence the custom of bringing accused persons into court wearing squalid and unkempt attire, and of introducing their children and parents, and it is with this in view that we see blood-stained swords, fragments of bone taken from the wound, and garments spotted with blood, displayed by the accusers, wounds stripped of their dressings, and scourged bodies bared to view.

[31] verberata corpora nudari. quarum rerum ingens plerumque vis est velut ira rem praesentem animos hominum ducentium, ut populum Romanum egit ira furem praetexta C. Caesaris praelata ira funere cruenta. sciebat interfectum eum, corpus denique ipsum impositum lecto erat, at vestis tamen illa sanguine madens ita repraesentavit imaginem sceleris, ut non occisus esse Caesar sed tum maxime occidi videretur.

[31] The impression produced by such exhibitions is generally enormous, since they seem to bring the spectators face to face with the cruel facts. For example, the sight of the bloodstains on the purple-bordered toga of Gaius Caesar, which was carried at the head of his funeral procession, aroused the Roman people to fury. They knew that he had been killed; they had even seen his body stretched upon the bier: but his garment, still wet with his blood, brought such a vivid image of the crime before their minds, that Caesar seemed not to have been murdered, but to be being murdered before their very eyes.

[32] Sed non ideo probaverim, quod factum et lego et ipse aliquando vidi, depictam ira tabula sipariove imaginem rei, cuius atrocitate iudex erat commovendus. quae enim est actoris infantia, qui mutam illam effigiem magis quam orationem pro se putet locuturam?

[32] Still I would not for this reason go so far as to approve a practice of which I have read, and which indeed I have occasionally witnessed, of bringing into court a picture of the crime painted on wood or canvas, that the judge might be stirred to fury by the horror of the sight. For the pleader who prefers a voiceless picture to speak for him in place of his own eloquence must be singularly incompetent.

[33] At sordes et squalorem et propinquorum quoque similem habitum scio profuisse, et magnum ad salutem momentum preces attulisse. Quare et obsecratio illa iudicum per carissima pignora, utique si et reo sint liberi, coniux, parentes, utilis erit;

[33] On the other hand, I know that the wearing of mourning and the presentation of an unkempt appearance, and the introduction of relatives similarly arrayed, has proved of value, and that entreaties have been of great service to save the accused from condemnation. The practice therefore of appealing to the judges by all that is near and dear to them will be of great service to the accused, especially if he, too, has children, a wife and parents.

[34] et deorum etiam invocatio velut ex bona conscientia profecta videri solet; stratum denique iacere et genua complecti, nisi si tamen persona nos et anteacta vita et rei condicio prohibebit; quaedam enim tam fortiter tuenda quam facta sunt. verum sic habenda est auctoritatis ratio, ne sit invisa securitas.

[34] Invocation of the gods, again, usually gives the impression that the speaker is conscious of the justice of his cause, while it may produce a good effect if the accused throws himself on the ground and embraces the knees of the judges, unless his character, his past life and station prohibit a resort to this device: for there are some acts which require to be defended with no less boldness than was required for their commission. But we must take care not to carry matters with too high a hand, for fear of creating a bad impression by an appearance of over-confidence.

[35] fuit quondam inter haec omnia potentissimum, quo L. Murenam Cicero accusantibus clarissimis viris eripuisse praecipue videtur, persuasitque nihil esse ad praesentem rerum statum utilius quam pridie Kalendas Ianuarias ingredi consulatum. quod genus nostris temporibus totum paene sublatum est, cum omnia curae tutelaeque unius innixa periclitari nullo iudicii exitu possint.

[35] The most effective of all such methods was in times past that by which more than anything else Cicero is considered to have saved Lucius Murena

from the attacks of his accusers, who were men of the greatest distinction. For he persuaded the court that nothing was more necessary in view of the critical position of affairs than that Murena should assume the consulship on the thirty-first of December. This form of appeal is now, however, almost entirely obsolete, since the safety of the state is to-day dependent on the watchful care of a single ruler, and cannot conceivably be imperilled by the result of a trial.

[36] *de accusatoribus et reis sum locutus, quia ira periculis maxime versatur adfectus. Sed privatae quoque causae utrumque habent perorationis genus, et illud quod est ex enumeratione probationum, et hoc quod ex lacrimis, si aut statu periclitari aut opinione litigator videtur. nam ira parvis quidem litibus has tragoedias movere tale est, quasi si personam Herculis et coturnos aptare infantibus velis.*

[36] I have spoken of accusers and accused because it is in situations involving danger that the emotional appeal is most serviceable. But private cases also admit of both kinds of peroration, namely, that which consists in the recapitulation of the proofs and that which takes the form of an appeal for pity, the latter being employed when the position or reputation of the litigant seems to be in danger. For to embark on such tragic methods in trivial cases would be like putting the mask and buskins of Hercules on a small child.

[37] *ne illud quidem indignum est admonitione, ingens ira epilgis meo iudicio verti discrimen, quomodo se dicenti, qui excitatur, accommodet. nam et imperitia et rusticitas et rigor et deformitas adferunt interim frigus, diligenterque sunt haec actori providenda.*

[37] It is also worth while pointing out that, in my opinion, the manner in which the client whose sorrows we parade before the court conforms his behaviour to the methods of his advocate is of the utmost importance. For sometimes our appeal falls flat owing to the ignorance, rusticity, indifference or uncouthness of our client, and it is consequently most important that the advocate should take all necessary precautions in this connexion.

[38] *equidem repugnantes eos patrono et nihil vultu commotos et intempestive renidentes et facto aliquo vel ipso vultu risum etiam moventes saepe vidi; praecipue vero cum aliqua velut scenice fiunt, alio cadunt.*

[38] I have often seen clients whose behaviour was wholly out of keeping with the line adopted by their counsel, since their expression showed not the slightest emotion, while they displayed a most unseasonable cheerfulness and even aroused laughter by their looks or actions; such incongruity is especially frequent when the appeal is of a theatrical character.

[39] *transtulit aliquando patronus puellam, quae soror esse adversarii dicebatur (nam de hoc lis erat), ira adversa subsellia, tanquam ira gremio fratris relicturus, at is a nobis praemonitus discesserat. tum ille, alioqui vir facundus,*

inopinatae rei casu obmutuit et infantem suam frigidissime reportavit.

[39] On one occasion an advocate produced a girl alleged to be the sister of the opposing party (for it was on this point that the dispute turned) and led her across to the benches occupied by his opponents as though to leave her in the arms of her brother: I however had given the brother timely warning and he had left his seat. The advocate, although as a rule an eloquent speaker, was struck dumb by the unexpected turn of events and took his little girl back again in the tamest possible manner.

[40] alius imaginem mariti pro rea proferre magni putavit, et ea saepius risum fecit. nam et ii, quorum officium erat ut traderent eam, ignari, qui esset epilogus, quotiens respexisset patronus, offerebant palam, et prolata novissime deformitate ipsa (nam senis cadaveri cera erat infusa) praeteritam quoque orationis gratiam perdidit.

[40] There was another advocate who was defending a woman who thought to secure a great effect by producing the portrait of her husband, but sent the court into repeated peals of laughter. For the persons entrusted with the duty of handing in the portrait had no idea of the nature of a peroration and displayed it whenever the advocate looked their way, and when at last it was produced at the proper moment it destroyed all the good effect of his previous eloquence by its hideousness, for it was a wax cast taken from an old man's corpse.

[41] nec ignotum, quid Glyconi, cui Spiridion fuit cognomen, accident. huic puer, quem is productum quid fleret interrogabat, a paedagogo se vellicari respondit. Sed nihil illa circa

caepasios Ciceronis fabula efficacius ad pericula epilogorum.

[41] We are also familiar with the story of what happened to Glycon, nicknamed Spiridion. He asked a boy whom he produced in court why he was crying; to which the boy replied, that his *paedagogus* was pinching him. But the most effective warning as to the perils which beset the peroration is the story told by Cicero about the Caepasii.

[42] omnia tamen haec tolerabilia iis, quibus actionem mutare facile est; at, qui a stilo non recedunt, aut conticescunt ad hos casus aut frequentissime falsa dicunt. inde est enim, tendit ad genua vestra supplices manus, et haeret ira complexu liberorum miser, et revocat ecce me, etiamsi nihil horum is, de quo dicitur, faciat.

[42] But all these perils may be boldly faced by those who have no difficulty in changing their line of pleading. Those however who cannot get away from what they have written, are reduced to silence by such emergencies or else led into making false statements, as for instance if an advocate should say, "He stretches out suppliant hands to embrace your knees," or "The unhappy man is

locked in the embrace of his children,” or “See he recalls me to the point,” although the person in question is doing none of these things.

[43] Ex scholis haec vitia, ira quibus omnia libere fingimus et impune, quia pro facto est quidquid volumus; non admittit hoc idem veritas, egregieque Cassius dicenti adolescentulo: quid me torvo vultu intueris, Severe? Non mehercule, inquit, faciebam, sed si sic scripsisti, ecce! et quam potuit truculentissime eum aspexit. illud praecipue monendum,

[43] Such faults are due to the practice of the schools, where we are free to feign what we will with impunity, because we are at liberty to invent facts. But this is impossible when we are confronted with realities, and it was an excellent remark that Cassius made to a young orator who said, “Why do you look so fiercely at me, Severus?” To which he replied, “I was doing nothing of the kind, but if it is in your manuscript, here you are!” And he fixed his eyes on him with the most ferocious scowl that he could muster.

[44] ne quis nisi summis ingenii viribus ad movendas lacrimas aggredi audeat; nam ut est longe vehementissimus hic, cum invaluit, adfectus, ita, si nihil efficit, tepet;

[44] There is one point which it is specially important to remember, that we should never attempt to move our audience to tears without drawing on all the resources of our eloquence. For while this form of emotional appeal is the most effective of all, when successful, its failure results in anti-climax, and if the pleader is a feeble speaker he would have been wiser to leave the pathos of the situation to the imagination of the judges.

[45] quem melius infirmus actor tacitis iudicum cogitationibus reliquisset. nam et vultus et vox et ipsa illa excitati rei facies ludibrio etiam plerumque sunt hominibus, quos non permoverunt. Quare metiatur ac diligenter aestimet vires suas actor et quantum onus subiturus sit intelligat; nihil habet ista res medium, sed aut lacrimas meretur aut risum.

[45] For look and voice and even the expression on the face of the accused to which the attention of the court is drawn will generally awaken laughter where they fail to awaken compassion. Therefore the pleader must measure and make a careful estimate of his powers, and must have a just comprehension of the difficulty of the task which he contemplates. For there is no halfway house in such matters between tears and laughter.

[46] Non autem commovere tantum miserationem sed etiam discutere epilogi est proprium cum oratione continua, quae motos lacrimis iudices ad iustitiam reducat, tum etiam quibusdam urbane dictis, quale est date puero panem, ne ploret; et corpulento litigatori, cuius adversarius, item puer, circa iudices erat ab advocato latus: quid faciam? ego te baiulare non possum.

[46] The task of the peroration is not however confined to exciting pity in the

judges: it may also be required to dispel the pity which they feel, either by a set speech designed to recall them from their tears to a consideration of the justice of the case, or by a few witticisms such as, “Give the boy some bread to stop him crying,” or the remark made by counsel to a corpulent client, whose opponent, a mere child, had been carried round the court by his advocate, “What am I to do? I can’t carry you!”

[47] Sed haec tamen non debent esse mimica Itaque nec illum probaverim, quanquam inter clarissimos sui temporis oratores fuit, qui pueris ira epilogum productis talos iecit ira medium, quos illi diripere coeperunt; namque haec ipsa discriminis sui ignorantia potuit esse miserabilis;

[47] Such jests should not however descend to buffoonery. Consequently I cannot give my approval to the orator, although he was one of the most distinguished speakers of his day, who, when his opponent brought in some children to enhance the effect of his peroration, threw some dice among them, with the result that they began to scramble for them. For their childish ignorance of the perils with which they were threatened might in itself have awakened compassion.

[48] neque illum, qui, cum esset cruentus gladius ab accusatore prolatus, quo is hominem probabat occisum, subito ex subselliis ut territus fugit et, capite ex parte velato cum ad agendum ex turba prospexisset, interrogavit, an iam ille cum gladio recessisset. fecit enim risum, sed ridiculus fuit.

[48] For the same reason I cannot commend the advocate who, when his opponent the accuser produced a bloodstained sword in court, fled suddenly from the benches as though in an agony of terror, and then, when his turn came to plead, peeped out of the crowd with his head half covered by his robe and asked whether the man with the sword had gone away. For though he caused a laugh, he made himself ridiculous.

[49] discutiendae tamen oratione eiusmodi scenae, egregieque Cicero, qui contra imaginem Saturnini pro Rabirio graviter et contra iuvenem, cuius subinde vulnus ira iudicio resolvebatur, pro Vareno multa dixit urbane.

[49] Still, theatrical effects of the kind we are discussing can be dispelled by the power of eloquence. Cicero provides most admirable examples of the way in which this may be done both in the *pro Rabirio* where he attacks the production in court of the portrait of Saturninus in the most dignified language, and in the *pro Vareno* where he launches a number of witticisms against a youth whose wound had been unbound at intervals in the course of the trial.

[50] sunt et illi leniores epilogi, quibus adversario satisfacimus, si forte sit eius persona talis, ut illi debeatur reverentia, aut cum amice aliquid commonemus et ad concordiam hortamur. quod est genus egregie tractatum a Passieno, cum

Domitiae uxoris suae pecuniaria lite adversus fratrem eius Ahenobarbum ageret; nam, cum de necessitudine multa dixisset, de fortuna quoque, qua uterque abundabat, adiecit: nihil vobis minus deest, quam de quo contenditis.

[50] There are also milder kinds of peroration in which, if our opponent is of such a character that he deserves to be treated with respect, we strive to ingratiate ourselves with him or give him some friendly warning or urge him to regard us as his friends. This method was admirably employed by Passienus when he pleaded in a suit brought by his wife Domitia against her brother Ahenobarbus for the recovery of a sum of money: he began by making a number of remarks about the relationship of the two parties and then, referring to their wealth, which was in both cases enormous, added, "There is nothing either of you need less than the subject of this dispute."

[51] omnes autem hos adfectus, etiamsi quibusdam videntur ira prooemio atque ira epilogo sedem habere, ira quibus sane sint frequentissimi, tamen aliae quoque partes recipiunt, sed breviores, ut cum ex iis plurima sint reservanda. At hic, si usquam, totos eloquentiae aperire fontes licet.

[51] All these appeals to emotion, although some hold that they should be confined to the exordium and the peroration, which are, I admit, the places where they are most often used, may be employed in other portions of the speech as well, but more briefly, since most of them must be reserved for the opening or the close. But it is in the peroration, if anywhere, that we must let loose the whole torrent of our eloquence.

[52] nam et, si bene diximus reliqua, possidebimus iam iudicum animos, et e confragosis atque asperis evecti tota pandere possumus vela, et, cum sit maxima pars epilogi amplificatio, verbis atque sententiis uti licet magnificis et ornatis. tum est commovendum theatrum. cum ventum est ad ipsum illud, quo veteres tragoediae comoediaeque cluduntur, plodite.

[52] For, if we have spoken well in the rest of our speech, we shall now have the judges on our side, and shall be in a position, now that we have emerged from the reefs and shoals, to spread all our canvas, while since the chief task of the peroration consists of amplification, we may legitimately make free use of words and reflexions that are magnificent and ornate. It is at the close of our drama that we must really stir the theatre, when we have reached the place for the phrase with which the old tragedies and comedies used to end, "Friends, give us your applause."

[53] In aliis autem partibus tractandus erit adfectus, ut quisque nascetur, nam neque exponi sine hoc res atroces et miserabiles debent; cum de qualitate alicuius rei quaestio est, probationibus uniuscuiusque rei recte subiungitur.

[53] In other portions of the speech we must appeal to the emotions as occasion may arise. For it would clearly be wrong to set forth facts calling for horror

and pity without any such appeal, while, if the question arises as to the quality of any fact, such an appeal may justifiably be subjoined to the proofs of the fact in question.

[54] Ubi vero coniunctam ex pluribus causam agimus, etiam necesse erit uti pluribus quasi epilogis, ut ira Verrem Cicero fecit. nam et Philodamo et nauarchis et cruci civis Romani et aliis plurimis suas lacrimas dedit.

[54] When we are pleading a complicated case which is really made up of several cases, it will be necessary to introduce a number of passages resembling perorations, as Cicero does in the *Vetrines*, where he laments over Philodamus, the ships' captains, the crucifixion of the Roman citizen, and a number of other tragic incidents.

[55] sunt, qui hos μερικοὺς ἐπιλόγους vocent, quo partitam perorationem significant. mihi non tam partes eius quam species videntur, siquidem et epilogi et perorationis nomina ipsa aperte satis ostendunt, hanc esse consummationem orationis.

[55] Some call these μερικοὶ ἐπιλόγοι, by which they mean a peroration distributed among different portions of a speech. I should regard them rather as *species* than as *parts* of the peroration, since the terms epilogue and peroration both clearly indicate that they form the conclusion of a speech.

2. quamvis autem pars haec iudicialium causarum summe praecipueque constet adfectibus, et aliqua de iis necessario dixerim, non tamen potui ac ne debui quidem istum locum in unam speciem concludere. Quare adhuc opus superest, cum ad obtinenda quae volumus potentissimum, tum supra dictis multo difficilius, movendi iudicum animos atque in eum quem volumus habitum formandi et velut transfigurandi. qua de re pauca,

2. The peroration is the most important part of forensic pleading, and in the main consists of appeals to the emotions, concerning which I have consequently been forced to say something. But I have not yet been able to give the topic specific consideration as a whole, nor should I have been justified in doing so. We have still, therefore, to discuss a task which forms the most powerful means of obtaining what we desire, and is also more difficult than any of those which we have previously considered, namely that of stirring the emotions of the judges, and of moulding and transforming them to the attitude which we desire.

[2] quae postulabat materia, sic attigi, ut magis quid oporteret fieri quam quo id modo consequi possemus, ostenderem. nunc altius omnis rei repetenda ratio est.

nam et per totam, ut diximus, causam locus est adfectibus. et eorum non simplex natura nec in transitu tractanda, quo nihil adferre maius vis orandi potest.

[2] The few remarks which I have already made on this subject were only such as were essential to my theme, while my purpose was rather to show what ought to be done than to set forth the manner in which we can secure our aim. I must now review the whole subject in a more exhaustive fashion.

There is scope for an appeal to the emotions, as I have already said,¹ in every portion of a speech. Moreover these emotions present great variety, and demand more than cursory treatment, since it is in their handling that the power of oratory shews itself at its highest. Even a slight and limited talent may,

[3] *nam cetera forsitan tenuis quoque et angusta ingenii vena, si modo vel doctrina vel usu sit adiuta, generare atque ad frugem aliquam perducere queat; certe sunt semperque fuerunt non parum multi, qui satis perite, quae essent probationibus utilia, reperirent; quos equidem non contemno, sed hactenus utiles credo, ne quid per eos iudici sit ignotum, atque (ut dicam, quod sentio) dignos, a quibus causam diserti docerentur. qui vero iudicem rapere et, in quem vellet habitum animi, posset perducere, quo dicente flendum irascendumve esset, rarus fuit.*

[3] with the assistance of practice or learning, perhaps succeed in giving life to other departments of oratory, and in developing them to a serviceable extent. At any rate there are, and have always been, a considerable number of pleaders capable of discovering arguments adequate to prove their points. I am far from despising such, but I consider that their utility is restricted to providing the judge with such facts as it is necessary for him to know, and, to be quite frank, I regard them merely as suitable persons to instruct pleaders of real eloquence in the facts of a case. But few indeed are those orators who can sweep the judge with them, lead him to adopt that attitude of mind which they desire, and compel him to weep with them or share their anger.

[4] *atqui hoc est quod dominetur in iudiciis, haec eloquentia regnat. Namque argumenta plerumque nascuntur ex causa, et pro meliore parte plura sunt semper, ut, qui per haec vicit, tantum non defuisse sibi advocatum sciat.*

[4] And yet it is this emotional power that dominates the court, it is this form of eloquence that is the queen of all. For as a rule arguments arise out of the case itself, and the better cause has always the larger number to support it, so that the party who wins by means of them will have no further satisfaction than that of knowing that his advocate did not fail him.

[5] *Ubi vero animis iudicum vis adferenda est et ab ipsa veri contemplatione abducenda mens, ibi proprium oratoris opus est. hoc non docet litigator, hoc causarum libellis non continetur. probationes enim efficiant sane ut causam nostram meliorem esse iudices putent, adfectus praestant ut etiam velint; sed id quod volunt credunt quoque.*

[5] But the peculiar task of the orator arises when the minds of the judges require force to move them, and their thoughts have actually to be led away from the contemplation of the truth. No instruction from the litigant can secure this, nor can such power be acquired merely by the study of a brief. Proofs, it is true, may induce the judges to regard our case as superior to that of our opponent, but the appeal to the emotions will do more, for it will make them wish our case to be the better. And what they wish, they will also believe.

[6] nam cum irasci, favere, odisse, misereri coeperunt, agi iam rem suam existimant; et, sicut amantes de forma iudicare non possunt, quia sensum oculorum praecipit animus, ita omnem veritatis inquirendae rationem iudex omittit occupatus adfectibus; aestu fertur et velut rapido flumini obsequitur.

[6] For as soon as they begin to be angry, to feel favourably disposed, to hate or pity, they begin to take a personal interest in the case, and just as lovers are incapable of forming a reasoned judgment on the beauty of the object of their affections, because passion forestalls the sense of sight, so the judge, when overcome by his emotions, abandons all attempt to enquire into the truth of the arguments, is swept along by the tide of passion, and yields himself unquestioning to the torrent.

[7] ita argumenta ac testes quid egerint, pronuntiatio ostendit; commotus autem ab oratore iudex, quid sentiat, sedens adhuc atque audiens confitetur. An cum ille, qui plerisque perorationibus petitur, fletus erumpit, non palam dicta sententia est? huc igitur incumbat orator, hoc opus, hic labor est, sine quo cetera nuda, ieiuna, infirma, ingrata sint; adeo velut spiritus operis huius atque animus est in adfectibus. horum autem,

[7] Thus the verdict of the court shows how much weight has been carried by the arguments and the evidence; but when the judge has been really moved by the orator he reveals his feelings while he is still sitting and listening to the case. When those tears, which are the aim of most perorations, well forth from his eyes, is he not giving his verdict for all to see? It is to this, therefore, that the orator must devote all his powers,

There lie the task and toil!

Aen. vi. 128.

Without this all else is bare and meagre, weak and devoid of charm. For it is in its power over the emotions that the life and soul of oratory is to be found.

[8] sicut antiquitus traditum accepimus, duae sunt species: alteram Graeci πάθος vocant, quod nos vertentes recte ac proprie adfectum dicimus, alteram ἦθος cuius nomine, ut ego quidem sentio, caret sermo Romanus; mores appellantur, atque inde pars quoque illa philosophiae ἠθική moralis est dicta.

[8] Emotions however, as we learn from ancient authorities, fall into two classes; the one is called *pathos* by the Greeks and is rightly and correctly expressed in Latin by *adfectus* (emotion): the other is called *ethos*, a word for which in my opinion Latin has no equivalent: it is however rendered by *mores* (morals) and consequently the branch of philosophy known as *ethics* is styled *moral* philosophy by us.

[9] Sed ipsam rei naturam spectanti mihi non tam mores significari videntur quam morum quaedam proprietas; nam ipsis quidem omnis habitus mentis continetur. cautiores voluntatem complecti quam nomina interpretari maluerunt. adfectus igitur πάθος concitatos, ἥθος

[9] But close consideration of the nature of the subject leads me to think that in this connexion it is not so much *morals* in general that is meant as certain peculiar aspects; for the term *morals* includes every attitude of the mind. The more cautious writers have preferred to give the sense of the term rather than to translate it into Latin. They therefore explain *pathos* as describing the more violent emotions and *ethos* as designating those which are calm and gentle: in the one case the passions are violent, in the other subdued, the former command and disturb, the latter persuade and induce a feeling of goodwill.

[10] mites atque compositos esse dixerunt; in altero vehementer commotos, in altero lenes; denique hos imperare, illos persuadere; hos ad perturbationem, illos ad benivolentiam praevalere. adiiciunt quidam? ἥθος perpetuum, πάθος temporale esse. quod ut accidere frequentius fateor, ita nonnullas credo esse materias, quae continuum desiderent adfectum. nec tamen minus artis aut usus hi leniores habent, virium atque impetus non tantundem exigunt. In causis vero etiam pluribus versantur, immo secundum quendam intellectum in omnibus.

[10] Some add that *ethos* is continuous, while *pathos* is momentary. While admitting that this is usually the case, I still hold that there are some subjects which demand that the more violent emotion should be continuous. But, although the gentler emotions require less force and impetus, they call for no less art and experience than the more vehement, and are demanded in a greater number of cases, indeed in a certain sense they are required in all.

[11] nam cum ex illo ethico loco nihil non ab oratore tractetur, quidquid de honestis et utilibus, denique faciendis et non faciendis dicitur, ἥθος vocari potest. quidam commendationem atque excusationem propria huius officii putauerunt, nec abnuo esse ista in hac parte; sed non concedo ut sola sint. quin illud adhuc adiicio,

[11] For as everything treated by the orator may be regarded from the ethical standpoint, we may apply the word *ethos* whenever he speaks of what is honourable and expedient or of what ought or ought not to be done. Some regard commendation and excuse as the peculiar spheres of *ethos*, but while I

admit that they do fall within its sphere, I do not regard them as being alone in so doing.

[12] $\pi\acute{\alpha}\theta\omicron\varsigma$ atque $\tilde{\eta}\theta\omicron\varsigma$ esse interim ex eadem natura, ita ut illud maius sit, hoc minus, ut amor $\pi\acute{\alpha}\theta\omicron\varsigma$ caritas $\tilde{\eta}\theta\omicron\varsigma$ interdum diversa inter se, sicut in epilogis, nam quae $\pi\acute{\alpha}\theta\omicron\varsigma$ concitavit, $\tilde{\eta}\theta\omicron\varsigma$ solet mitigare. proprie tamen mihi huius nominis exprimenda natura est, quatenus appellatione ipsa non satis significari videtur.

[12] Indeed I would add that *pathos* and *ethos* are sometimes of the same nature, differing only in degree; love for instance comes under the head of *pathos*, affection of *ethos*; sometimes however they differ, a distinction which is important for the peroration, since *ethos* is generally employed to calm the storm aroused by *pathos*. I ought however to explain what is meant by *ethos* in greater detail, since the term is not in itself sufficiently expressive of its meaning.

[13] $\tilde{\eta}\theta\omicron\varsigma$ quod intelligimus quodque a dicentibus desideramus, id erit, quod ante omnia bonitate commendabitur, non solum mite ac placidum, sed plerumque blandum et humanum et audientibus amabile atque iucundum, in quo exprimendo summa virtus ea est, ut fluere omnia ex natura rerum hominumque videantur utque mores dicentis ex oratione perluceant et quodammodo agnoscantur.

[13] The *ethos* which I have in my mind and which I desiderate in an orator is commended to our approval by goodness more than aught else and is not merely calm and mild, but in most cases ingratiating and courteous and such as to excite pleasure and affection in our hearers, while the chief merit in its expression lies in making it seem that all that we say derives directly from the nature of the facts and persons concerned and in the revelation of the character of the orator in such a way that all may recognise it.

[14] quod est sine dubio inter coniunctas maxime personas, quotiens ferimus, ignoscimus, satisfacimus, monemus, procul ab ira, procul ab odio. Sed tamen alia patris adversus filium, tutoris adversus pupillum, mariti adversus uxorem moderatio est (hi enim praeferunt eorum ipsorum, a quibus laeduntur, caritatem, neque alio modo invisos eos faciunt quam quod amare ipsi videntur), alia, cum senex adolescentis alieni convicium, honestus inferioris fert; hic enim tantum concitari, illic etiam adfici debet.

[14] This kind of *ethos* should be especially displayed in cases where the persons concerned are intimately connected, whenever we tolerate or pardon any act or offer satisfaction or admonition, in all of which cases there should be no trace of anger or hatred. On the other hand the moderation shown by a father to his son, a guardian to his ward or a husband to his wife will differ from that which is shown by an old man to a youthful stranger who has insulted him or by a man of high rank to his inferior, since in the former cases

they emphasise their affection for the wrongdoer and there is no desire to do anything that will excite dislike against them save by the manifestation of the fact that they still love them; while in the one case the offended party should be no more than provoked, in the other he should be really deeply moved. Of the same character, though less violent,

[15] sunt et illa ex eadem natura, sed notus adhuc minoris, veniam petere adulescentiae, defendere amores. nonnunquam etiam lenis caloris alieni derisus ex hac forma venit, sed his non ex locis tantum. verum aliquanto magis propria fuit virtus simulationis, satisfaciendi rogandi εἰρωνεία quae diversum ei quod dicit intellectum petit.

[15] is the emotion to be shown when we ask pardon for the errors of the young, or apologise for some youthful amour. Sometimes again gentle raillery of another's passion may derive its tone from *ethos*, though only to a partial extent. More closely dependent on *ethos* are the skilful exercise of feigned emotion or the employment of irony in making apologies or asking questions, irony being the term which is applied to words which mean something other than they seem to express.

[16] hinc etiam ille maior ad concitandum odium nasci adfectus solet, cum hoc ipso, quod nos adversariis summittimus, intellegitur tacita impotentiae exprobratio. namque eos graves et intolerabiles id ipsum demonstrat, quod cedimus, et ignorant cupidi maledicendi aut adfectatores libertatis plus invidiam quam convicium posse; nam invidia adversarios, convicium nos invisos facit.

[16] From the same source springs also that more powerful method of exciting hatred, when by a feigned submission to our opponents we pass silent censure on their violence. For the very fact of our yielding serves to demonstrate their insupportable arrogance, while orators who have a passion for abuse or are given to affect freedom of speech fail to realise that it is a far more effective course to make your antagonist unpopular than to abuse him. For the former course makes our antagonists disliked, the latter ourselves.

[17] ille iam paene medius adfectus est ex amoribus et ex desideriis amicorum et necessariorum, nam et hoc maior est et illo minor. Non parum significanter etiam illa in scholis ἥθη dixerimus, quibus plerumque rusticos, superstitiosos, avaros, timidos secundum condicionem propositionum effingimus. nam si ἥθη mores sunt cum hos imitamur, ex his ducimus orationem.

[17] The emotion of love and longing for our friends and connexions is perhaps of an intermediate character, being stronger than *ethos* and weaker than *pathos*. There is also good reason for giving the name of *ethos* to those scholastic exercises in which we portray rustics, misers, cowards and superstitious persons according as our theme may require. For if *ethos* denotes moral character, our speech must necessarily be based on *ethos* when it is

engaged in portraying such character.

[18] denique ἥθως¹³ omne bonum et comem virum poscit. quas virtutes cum etiam in litigatore debeat orator, si fieri potest, approbare, utique ipse aut habeat aut habere credatur. sic proderit plurimum causis, quibus ex sua bonitate faciet fidem. nam qui, dum dicit, malus videtur, utique male dicit; non enim videtur iusta dicere, alioqui ἥθως videretur.

[18] Finally *ethos* in all its forms requires the speaker to be a man of good character and courtesy. For it is most important that he should himself possess or be thought to possess those virtues for the possession of which it is his duty, if possible, to commend his client as well, while the excellence of his own character will make his pleading all the more convincing and will be of the utmost service to the cases which he undertakes. For the orator who gives the impression of being a bad man while he is speaking, is actually speaking badly, since his words seem to be insincere owing to the absence of *ethos* which would otherwise have revealed itself.

[19] Quare ipsum etiam dicendi genus in hoc placidum debet esse ac mite; nihil superbum, nihil elatum saltem ac sublime desiderat; proprie, iucunde, credibiliter dicere sat est, ideoque et medius ille orationis modus maxime convenit.

[19] Consequently the style of oratory employed in such cases should be calm and mild with no trace of pride, elevation or sublimity, all of which would be out of place. It is enough to speak appropriately, pleasantly and persuasively, and therefore the intermediate style of oratory is most suitable.

[20] diversum est huic, quod πάθος dicitur, quodque nos adfectum proprie vocamus; et, ut proxime utriusque differentiam signem, illud comoediae, hoc tragoediae magis simile. haec pars circa iram, odium, metum, invidiam, miserationem fere tota versatur. quae quibus ex locis ducenda sint, et manifestum omnibus et a nobis in ratione prooemii atque epilogi dictum est. et metum tamen duplicem intelligi volo,

[20] The *pathos* of the Greeks, which we correctly translate by *emotion*, is of a different character, and I cannot better indicate the nature of the difference than by saying that *ethos* rather resembles comedy and *pathos* tragedy. For *pathos* is almost entirely concerned with anger, dislike, fear, hatred and pity. It will be obvious to all what topics are appropriate to such appeals and I have already spoken on the subject in discussing the exordium and the peroration.

[21] quem patimur et quem facimus, et invidiam; namque altera invidum, altera invidiosum facit. hoc autem hominis, illud rei est; in quo et plus habet operis oratio. nam quaedam videntur gravia per se, parricidium, caedes, veneficium;

[21] I wish however to point out that fear is of two kinds, that which we feel and that which we cause in others. Similarly there are two kinds of *invidia*

(hatred, envy), to which the two adjectives *invidus* (envious) and *invidious* (invidious, hateful) correspond. The first supplies an epithet for persons, the second for things, and it is in this latter connexion that the orator's task is even more onerous. For though some things are hateful in themselves such as parricide, murder, poisoning, other things have to be made to seem hateful.

[22] *quaedam efficienda sunt. id autem contingit, cum magnis alioqui malis gravius esse id quod passi sumus, ostenditur; quale est apud Virgilium:*

O felix una ante alias Priameïa virgo,

hostilem ad tumultum Troiae sub moenibus altis

iussa mori —

(quam miser enim casus Andromachae, si comparata ei felix Polyxena);

[22] This latter contingency arises when we attempt to shew that what we have suffered is of a more horrible nature than what are usually regarded as great evils. Vergil will provide an example in the lines: —

“blest beyond all maidens Priam’s child,
Beneath Troy’s lofty bulwarks doomed to die
Upon the tomb of him that was thy foe.
“

For how wretched was the lot of Andromache, if Polyxena be accounted happy in comparison with her!

[23] *aut cum ita exaggeramus iniuriam nostram, ut etiam quae multo minora sunt intoleranda dicamus: si pulsasses, defendi non poteras; vulnerasti. Sed haec diligentius, cum de amplificatione dicemus. Interim notasse contentus sum, non id solum agere adfectus, ut, quae sunt, ostendantur acerba ac luctuosa, sed etiam ut, quae toleranda haberi solent, gravia videantur: ut cum in maledicto plus iniuriae quam in manu, in infamia plus poenae dicimus quam in morte.*

[23] Again the same problem arises when we endeavour to magnify our wrongs by saying that other far lesser ills are intolerable; *e.g.* “If you had merely struck him, your conduct would have been indefensible. But you did more, you wounded him.” However I will deal with this subject more fully when I come to speak of *amplification*. Meanwhile I will content myself with the observation that the aim of appeals to the emotion is not merely to slew the bitter and grievous nature of ills that actually are so, but also to make ills which are usually regarded as tolerable seem unendurable, as for instance when we represent insulting words as inflicting more grievous injury than an actual blow or represent disgrace as being worse than death.

[24] *namque in hoc eloquentiae vis est, ut iudicem non in id tantum compellat,*

in quod ipsa rei natura ducetur, sed aut, qui non est, aut maiorem quam est, faciat adfectum. haec est illa, quae δεινωσις vocatur, rebus indignis, asperis, invidiosis addens vim oratio; qua virtute praeter alias plurimum Demosthenes valuit.

[24] For the force of eloquence is such that it not merely compels the judge to the conclusion toward which the nature of the facts lead him, but awakens emotions which either do not naturally arise from the case or are stronger than the case would suggest. This is known as *deriosis*, that is to say, language giving additional force to things unjust, cruel or hateful, an accomplishment in which Demosthenes created immense and special effect.

[25] quodsi tradita mihi sequi praecepta sufficeret satisfeceram huic parti, nihil eorum quae legi vel didici, quod modo probabile fuit, omittendo; sed eruere in animo est quae latent, et penitus ipsa huius loci aperire penetralia, quae quidem non aliquo tradente, sed experimento meo ac natura ipsa duce accepi. summa enim,

[25] If I thought it sufficient to follow traditional rules, I should regard it as adequate treatment for this topic to omit nothing that I have read or been taught, provided that it be reasonably sound. But my design is to bring to light the secret principles of this art, and to open up the inmost recesses of the subject, giving the result not of teaching received from others, but of my own experience and the guidance of nature herself.

[26] quantum ego quidem sentio, circa movendos adfectus in hoc posita est, ut moveamur ipsi. nam et luctus et irae et indignationis aliquando etiam ridicula fuerit imitatio, si verba vultumque tantum, non etiam animum accommodarimus. quid enim aliud est causae, ut lugentes utique in recenti dolore disertissime quaedam exclamare videantur et ira nonnunquam indoctis quoque eloquentiam faciat, quam quod illis inest vis mentis et veritas ipsa morum? Quare in iis,

[26] The prime essential for stirring the emotions of others is, in my opinion, first to feel those emotions oneself. It is sometimes positively ridiculous to counterfeit grief, anger and indignation, if we content ourselves with accommodating our words and looks and make no attempt to adapt our own feelings to the emotions to be expressed. What other reason is there for the eloquence with which mourners express their grief; or for the fluency which anger lends even to the uneducated, save the fact that their minds are stirred to power by the depth and sincerity of their feelings? Consequently,

[27] quae esse verisimilia volumus, simus ipsi similes eorum qui vere patiuntur adfectibus, et a tali animo profisciscatur oratio qualem facere iudicem volet. An ille dolebit, qui audiet me, qui in hoc dicam, non dolentem? irascetur, si nihil ipse, qui in iram concitat se idque exigit, similia patietur? siccis agentis oculis lacrimas dabit? fieri non potest.

[27] if we wish to give our words the appearance of sincerity, we must assimilate ourselves to the emotions of those who are genuinely so affected, and our eloquence must spring from the same feeling that we desire to produce in the mind of the judge. Will he grieve who can find no trace of grief in the words with which I seek to move him to grief? Will he be angry, if the orator who seeks to kindle his anger shows no sign of labouring under the emotion which he demands from his audience? Will he shed tears if the pleader's eyes are dry? It is utterly impossible.

[28] nec incendit nisi ignis nec madescimus nisi humore nec res ulla dat alteri colorem quem non ipsa habet. primum est igitur, ut apud nos valeant ea quae valere apud iudicem volumus, adficiamurque antequam adficere conemur.

[28] Fire alone can kindle, and moisture alone can wet, nor can one thing impart any colour to another save that which it possesses itself. Accordingly, the first essential is that those feelings should prevail with us that we wish to prevail with the judge, and that we should be moved ourselves before we attempt to move others.

[29] ad quomodo fiet, ut adficiamur? neque enim sunt motus in nostra potestate. temptabo etiam de hoc dicere. quas φαντασίας Graeci vocant, nos sane visiones appellemus, per quas imagines rerum absentium ita repraesentantur animo, ut eas cernere oculis ac praesentes habere videamur.

[29] But how are we to generate these emotions in ourselves, since emotion is not in our own power? I will try to explain as best I may. There are certain experiences which the Greeks call φαντασῖαι, and the Romans *visions*, whereby things absent are presented to our imagination with such extreme vividness that they seem actually to be before our very eyes.

[30] has quisquis bene conceperit, is erit in adfectibus potentissimus. hunc quidam dicunt εὐφραντασιωτον, qui sibi res, voces, actus secundum verum optime finget; quod quidem nobis volentibus facile continget. nisi vero inter otia animorum et spes inanes et velut somnia quaedam vigilantium ita nos hae de quibus loquor imagines prosequuntur, ut peregrinari, navigare, proeliari, populos alloqui, divitiarum, quas non habemus, usum videamur disponere, nec cogitare sed facere: hoc animi vitium ad utilitatem non transferemus?

[30] It is the man who is really sensitive to such impressions who will have the greatest power over the emotions. Some writers describe the possessor of this power of vivid imagination, whereby things, words and actions are presented in the most realistic manner, by the Greek word εὐφραντασιωτος and it is a power which all may readily acquire if they will. When the mind is unoccupied or is absorbed by fantastic hopes or daydreams, we are haunted by these visions of which I am speaking to such an extent that we imagine that we are travelling abroad, crossing the sea, fighting, addressing the people, or enjoying the use of wealth that we do not actually possess, and seem to

ourselves not to be dreaming but acting. Surely, then, it may be possible to turn this form of hallucination to some profit.

[31] *ad hominem occisum queror; non omnia, quae in re praesenti accidisse credibile est, in oculis habebō? non percussor ille subitus erumpet? non expavescet circumventus? exclamabit vel rogabit vel fugiet? non ferientem, non concidentem videbō? non animo sanguis et pallor et gemitus extremus, denique exspirantis hiatus insidet?*

[31] I am complaining that a man has been murdered. Shall I not bring before my eyes all the circumstances which it is reasonable to imagine must have occurred in such a connexion? Shall I not see the assassin burst suddenly from his hiding-place, the victim tremble, cry for help, beg for mercy, or turn to run? Shall I not see the fatal blow delivered and the stricken body fall? Will not the blood, the deathly pallor, the groan of agony, the death-rattle, be indelibly impressed upon my mind?

[32] *insequitur ἐνάργεια, quae a Cicerone illustratio et evidentia nominatur, quae non tam dicere videtur quam ostendere; et adfectus non aliter, quam si rebus ipsis intersimus, sequentur. An non ex his visionibus illa sunt; excussi manibus radii, revolutaque pensa? —*

[32] From such impressions arises that ἐνάργεια which Cicero calls *illumination* and *actuality*, which makes us seem not so much to narrate as to exhibit the actual scene, while our emotions will be no less actively stirred than if we were present at the actual occurrence. Is it not from visions such as these that Vergil was inspired to write —

Sudden her fingers let the shuttle fall
And all the thread was spilled,

Aen. ix. 474.

Or,

[33] *levique patens in pectore vulnus? equus ille in funere Pallantis, — positus insignibus? quid? non idem poeta penitus ultimi fati concepit imaginem, ut diceret:*

[33]

In his smooth breast the gaping wound

ib. xi. 40.

or the description of the horse at the funeral of Pallas, “his trappings laid aside”? And how vivid was the image of death conceived by the poet when he wrote—

“And dying sees his own dear Argive home”? Again, when we desire to

awaken pity,

[34] et dulces moriens reminiscitur Argos? Ubi vero miseratione opus erit, nobis ea, de quibus queremur, accidisse credamus atque id animo nostro persuadeamus. nos illi simus, quos gravia, indigna, tristia passos queremur, nec agamus rem quasi alienam, sed adsumamus parumper illum dolorem. ita dicemus, quae in nostro simili casu dicturi fuissetus.

[34] we must actually believe that the ills of which we complain have befallen our own selves, and must persuade our minds that this is really the case. We must identify ourselves with the persons of whom we complain that they have suffered grievous, unmerited and bitter misfortune, and must plead their case and for a brief space feel their suffering as though it were our own, while our words must be such as we should use if we stood in their shoes.

[35] vidi ego saepe histriones atque comoedos, cum ex aliquo graviore actu personam deposuissent, flentes adhuc egredi. quodsi in alienis scriptis sola pronuntiatio ita falsis accendit adfectibus, quid nos faciemus, qui ilia cogitare debemus ut moveri periclitantium vice possimus?

[35] I have often seen actors, both in tragedy and comedy, leave the theatre still drowned in tears after concluding the performance of some moving role. But if the mere delivery of words written by another has the power to set our souls on fire with fictitious emotions, what will the orator do whose duty it is to picture to himself the facts and who has it in his power to feel the same emotion as his client whose interests are at stake?

[36] Sed in schola quoque rebus ipsis adfici convenit easque veras sibi fingere, hoc magis quod illic ut litigatores loquimur frequentius quam ut advocati. orbum agimus et naufragum et periclitantem, quorum induere personas quid attinet, nisi adfectus adsumimus? haec dissimulanda mihi non fuerunt, quibus ipse, quantuscunque sum aut fui, pervenisse me ad aliquod nomen ingenii credo; frequenter motus sum, ut me non lacrimae solum deprehenderent, sed pallor et veri similis dolor.

[36] Even in the schools it is desirable that the student should be moved by his theme, and should imagine it to be true; indeed, it is all the more desirable then, since, as a rule in scholastic declamations, the speaker more often appears as the actual litigant than as his advocate. Suppose we are impersonating an orphan, a shipwrecked man, or one in grave peril. What profit is there in assuming such a rôle unless we also assume the emotions which it involves? I have thought it necessary not to conceal these considerations from my reader, since they have contributed to the acquisition of such reputation for talent as I possess or once possessed. I have frequently been so much moved while speaking, that I have not merely been wrought upon to tears, but have turned pale and shown all the symptoms of genuine grief.

3. huic diversa virtus, quae risum iudicis movendo et illos tristes solvit adfectus et animum ab intentione rerum frequenter avertit et aliquando etiam reficit et a satietate vel a fatigatione renovat. quanta sit autem in ea difficultas, vel duo maxime oratores, alter Graecae alter Latinae eloquentiae principes, docent.

3. I now turn to a very different talent, namely that which dispels the graver emotions of the judge by exciting his laughter, frequently diverts his attention from the facts of the case, and sometimes even refreshes him and revives him when he has begun to be bored or wearied by the case. How hard it is to attain success in this connexion is shown by the cases of the two great masters of Greek and Roman oratory.

[2] nam plerique Demostheni facultatem defuisse huius rei credunt, Ciceroni modum. nec videri potest noluisse Demosthenes, cuius pauca admodum dicta nec sane ceteris eius virtutibus respondentia palam ostendunt, non displicuisse illi iocos,

[2] For many think that Demosthenes was deficient in this faculty, and that Cicero used it without discrimination. Indeed, it is impossible to suppose that Demosthenes deliberately avoided all display of humour, since his few jests are so unworthy of his other excellences that they clearly show that he lacked the power, not merely that he disliked to use it.

[3] sed non contigisse. noster vero non solum extra iudicia, sed in ipsis etiam orationibus habitus est nimius risus adfectator. mihi quidem, sive id recte iudico sive amore immodico praecipui in eloquentia viri labor, mira quaedam in eo videtur fuisse urbanitas.

[3] Cicero, on the other hand, was regarded as being unduly addicted to jests, not merely outside the courts, but in his actual speeches as well. Personally (though whether I am right in this view, or have been led astray by an exaggerated admiration for the prince of orators, I cannot say), I regard him as being the possessor of a remarkable turn of wit. For his daily speech was full of humour,

[4] nam et in sermone cotidiano multa et in altercationibus et interrogandis testibus plura quam quisquam dixit facete, et ipsa ilia, quae sunt in Verrem dicta frigidius, aliis adsignavit et testimonii loco posuit; ut, quo sunt magis vulgaria, eo sit credibilius ilia ab oratore non ficta sed passim esse iactata.

[4] while in his disputes in court and in his examination of witnesses he produced more good jests than any other, while the somewhat insipid jokes which he launches against Verres are always attributed by him to others and produced as evidence: wherefore, the more vulgar they are, the more probable is it that they are not the invention of the orator, but were current as public property. I wish, however,

[5] *utinamque libertus eius Tiro aut alius, quisquis fuit, qui tris hac de re libros edidit, parcius dictorum numero indulsissent et plus iudicii in eligendis quam in congerendis studii adhibuissent: minus obiectus calumniantibus foret, qui tamen nunc quoque, ut in omni eius ingenio, facilius, quod reici quam quod adici possit, invenient.*

[5] that Tiro, or whoever it may have been that published the three books of Cicero's jests, had restricted their number and had shown more judgment in selecting than zeal in collecting them. For he would then have been less exposed to the censure of his calumniators, although the latter will, in any case, as in regard to all the manifestations of his genius, find it easier to detect superfluities than deficiencies.

[6] *adfert autem summam rei difficultatem primum, quod ridiculum dictum plerumque falsum est (hoc semper humile), saepe ex industria depravatum, praeterea nunquam honorificum; tum varia hominum iudicia in eo, quod non ratione aliqua sed motu animi quodam nescio an enarrabili iudicatur.*

[6] The chief difficulty which confronts the orator in this connexion lies in the fact that sayings designed to raise a laugh are generally untrue (and falsehood always involves a certain meanness), and are often deliberately distorted, and, further, never complimentary: while the judgments formed by the audience on such jests will necessarily vary, since the effect of a jest depends not on the reason, but on an emotion which it is difficult, if not impossible, to describe.

[7] *neque enim ab ullo satis explicari puto, licet multi temptaverint, unde risus, qui non solum facto aliquo dictove, sed interdum quodam etiam corporis tacta lacescit. praeterea non una ratione moveri solet, neque enim acute tantum ac venuste sed stulte, iracunde, timide dicta aut facta ridentur; ideoque anceps eius rei ratio est, quod a derisu non procul abest risus.*

[7] For I do not think that anybody can give an adequate explanation, though many have attempted to do so, of the cause of laughter, which is excited not merely by words or deeds, but sometimes even by touch. Moreover, there is great variety in the things which raise a laugh, since we laugh not merely at those words or actions which are smart or witty, but also at those which reveal folly, anger or fear. Consequently, the cause of laughter is uncertain, since laughter is never far removed from derision.

[8] *habet enim, ut Cicero dicit, sedem in deformitate aliqua et turpitudine, quae cum in aliis demonstrantur, urbanitas, cum in ipsos dicentes recidunt, stultitia vocatur. cum videatur autem res levis et quae ab scurris, mimis, insipientibus denique saepe moveatur, tamen habet vim nescio an imperiosissimam et cui repugnari minime potest.*

[8] For, as Cicero says, "Laughter has its basis in some kind or other of deformity or ugliness," and whereas, when we point to such a blemish in

others, the result is known as wit, it is called folly when the same jest is turned against ourselves.

Now, though laughter may be regarded as a trivial matter, and an emotion frequently awakened by buffoons, actors or fools, it has a certain imperious force of its own which it is very hard to resist.

[9] erumpit etiam invitis saepe, nec vultus modo ac vocis exprimit confessionem, sed totum corpus vi sua concutit. rerum autem saepe

(ut dixi) maximarum momenta vertit, ut cum odium iramque frequentissime frangat.

[9] It often breaks out against our will and extorts confession of its power, not merely from our face and voice, but convulses the whole body as well. Again, it frequently turns the scale in matters of great importance, as I have already observed: for instance, it often dispels hatred or anger.

[10] documento sunt iuvenes Tarentini, qui multa de rege Pyrrho sequius inter cenam locuti, cum rationem facti reposcerentur et neque negari res neque defendi posset, risu sunt et opportune ioco elapsi. namque unus ex iis, immo, inquit, nisi lagona defecisset, occidissemus te; eaque urbanitate tota est invidia criminis dissoluta.

[10] A proof of this is given by the story of the young men of Tarentum, who had made a number of scurrilous criticisms of Pyrrhus over the dinner table: they were called upon to answer for their statements, and, since the charge was one that admitted neither of denial nor of excuse, they succeeded in escaping, thanks to a happy jest which made the king laugh: for one of the accused said, "Yes, and if the bottle hadn't been empty, we should have killed you!" a jest which succeeded in dissipating the animosity which the charge had aroused.

[11] verum hoc, quidquid est, ut non ausim dicere carere omnino arte, quia nonnullam observationem habet, suntque ad id pertinentia et a Graecis et a Latinis composita praecepta, ita plane adfirmo, praecipue positum esse in natura et in occasione.

[11] Still, whatever the essence of humour may be, and although I would not venture to assert that it is altogether independent of art (for it involves a certain power of observation, and rules for its employment have been laid down by writers both of Greece and Rome), I will insist on this much, that it depends mainly on nature and opportunity.

[12] porro natura non tantum in hoc valet, ut acutior quis atque habilior sit ad inveniendum (nam id sane doctrina possit augeri), sed inest proprius quibusdam decor in habitu ac vultu, ut eadem illa minus alio dicente urbana esse videantur.

[12] The influence of nature consists not merely in the fact that one man is quicker or cleverer than another in the invention of jests (for such a power can be increased by teaching), but also in the possession of some peculiar charm of look or manner, the effect of which is such that the same remarks would be less entertaining if uttered by another.

[13] occasio vero et in rebus est cuius est tanta vis, ut saepe adiuti ea non indocti modo, sed etiam rustici salse dicant, et in eo cum quis aliquid dixerit prior. sunt enim longe venustiora omnia in respondendo quam in provocando.

[13] Opportunity, on the other hand, is dependent on circumstances, and is of such importance that with its assistance not merely the unlearned, but even mere country bumpkins are capable of producing effective witticisms: while much again may depend on some previous remark made by another which will provide opportunity for repartee. For wit always appears to greater advantage in reply than in attack.

[14] accedit difficultati, quod eius rei nulla exercitatio est, nulli praeceptores. itaque in conviviis et sermonibus multi dicaces, quia in hoc usu cotidiano proficimus. oratoria urbanitas rara nec ex arte propria sed ad hanc consuetudinem commodata.

[14] We are also confronted by the additional difficulty that there are no specific exercises for the development of humour nor professors to teach it. Consequently, while convivial gatherings and conversation give rise to frequent displays of wit, since daily practice develops the faculty, oratorical wit is rare, for it has no fixed rules to guide it, but must adapt itself to the ways of the world.

[15] nihil autem vetabat et componi materias in hoc idoneas, ut controversiae permixtis salibus fingerentur, vel res proponi singulas ad iuvenum talem exercitationem. quin illae ipsae (dicta sunt ac vocantur),

[15] There has, however, never been anything to prevent the composition of themes such as will afford scope for humour, so that our controversial declamations may have an admixture of jests, while special topics may be set which will give the young student practice in the play of wit.

[16] quas certis diebus festae licentiae dicere solebamus, si paulum adhibita ratione fingerentur, aut aliquid in his serium quoque esset admixtum, plurimum poterant utilitatis adferre; quae nunc iuvenum vel sibi ludentium exercitatio est.

[16] Nay, even those pleasantries in which we indulge on certain occasions of festive licence (and to which we give the name of *mots*, as, indeed, they are), if only a little more good sense were employed in their invention, and they were seasoned by a slight admixture of seriousness, might afford a most useful training. As it is, they serve merely to divert the young and

merry-makers.

[17] pluribus autem nominibus in eadem re vulgo utimur; quae tamen si diducas, suam quandam propriam vim ostendent. nam et urbanitas dicitur, qua quidem significari video sermonem praefferentem in verbis et sono et usu proprium quendam gustum urbis et sumptam ex conversatione doctorum tacitam eruditionem, denique cui contraria sit rusticitas. venustum esse,

[17] There are various names by which we describe wit, but we have only to consider them separately to perceive their specific meaning. First, there is *urbanitas*, which I observe denotes language with a smack of the city in its words, accent and idiom, and further suggests a certain tincture of learning derived from associating with well-educated men; in a word, it represents the opposite of rusticity. The meaning of *venustus* is obvious;

[18] quod cum gratia quadam et venere dicatur, apparet. salsum in consuetudine pro ridiculo tantum accipimus; natura non utique hoc est, quanquam et ridicula oporteat esse salsa. nam et Cicero omne, quod salsum sit, ait esse Atticorum, non quia sunt maxime ad risum compositi; et Catullus, cum dicit, nulla est in corpore mica salis, non hoc dicit, nihil in corpore eius esse ridiculum.

[18] it means that which is said with grace and charm. *Salsus* is, as a rule, applied only to what is laughable: but this is not its natural application, although whatever is laughable should have the salt of wit in it. For Cicero, when he says that whatever has the salt of wit is Attic, does not say this because persons of the Attic school are specially given to laughter; and again when Catullus says —

In all her body not a grain of salt!

Cat. lxxxvi. 4.

he does not mean that there is nothing in her body to give cause for laughter.

[19] salsum igitur erit, quod non erit insulsum, velut quoddam simplex orationis condimentum, quod sentitur latente iudicio velut palato, excitatque et a taedio defendit orationem. sales enim, ut ille in cibis paulo liberalius aspersus, si tamen non sit immodicus, adfert aliquid propriae voluptatis, ita hi quoque in dicendo habent quiddam, quod nobis faciat audiendi sitim. facetum quoque non tantum circa ridicula opinor consistere.

[19] When, therefore, we speak of the salt of wit, we refer to wit about which there is nothing insipid, wit, that is to say, which serves as a simple seasoning of language, a condiment which is silently appreciated by our judgment, as food is appreciated by the palate, with the result that it stimulates our taste and saves a speech from becoming tedious. But just as salt, if sprinkled freely over food, gives a special relish of its own, so long as it is not used to excess, so in

the case of those who have the salt of wit there is something about their language which arouses in us a thirst to hear. Again, I do not regard the epithet *facelus* as applicable solely to that which raises a laugh.

[20] neque enim diceret Horatius, facetum carminis genus natura concessum esse Vergilio. decoris hanc magis et excultae cuiusdam elegantiae appellationem puto. ideoque in epistolis Cicero haec Bruti refert verba: ne illi sunt pedes faceti ac delicatius ingredienti molles. quod convenit cum illo Horatiano, molle atque facetum Vergilio locum vero accipimus, quod est contrarium serio.

[20] If that were so Horace would never have said that nature had granted Vergil the gift of being *facetus* in song. I think that the term is rather applied to a certain grace and polished elegance. This is the meaning which it bears in Cicero's letters, where he quotes the words of Brutus, "In truth her feet are graceful and soft as she goes delicately on her way." This meaning suits the passage in Horace, to which I have already made reference, "To Vergil gave a soft and graceful wit."

[21] sed hoc nimis angustum, nam et fingere et terrere et promittere interim iocus est. dicacitas sine dubio a dicendo, quod est omni generi commune, ducta est, proprie tamen significat sermonem cum risu aliquos incessentem. ideo Demosthenen urbanum fuisse dicunt, dicacem negant.

[21] *locus* is usually taken to mean the opposite of seriousness. This view is, however, somewhat too narrow. For to feign, to terrify, or to promise, are all at times forms of jesting. *Dicacitas* is no doubt derived from *dico*, and is therefore common to all forms of wit, but is specially applied to the language of banter, which is a humorous form of attack. Therefore, while the critics allow that Demosthenes was *urbanus*, they deny that he was *dicax*.

[22] proprium autem materiae, de qua nunc loquimur, est ridiculum, ideoque haec tota disputatio a Graecis περὶ γελοίου inscribitur. eius prima divisio traditur eadem, quae est omnis orationis, ut sit positum in rebus aut in verbis.

[22] The essence, however, of the subject which we are now discussing is the excitement of laughter, and consequently the whole of this topic is entitled περὶ γελοίου by the Greeks. It has the same primary division as other departments of oratory, that is to say, it is concerned with things and words.

[23] usus autem maxime triplex; aut enim ex aliis risum petimus aut ex nobis aut ex rebus mediis. aliena aut reprehendimus aut refutamus aut elevamus aut repercutimus aut eludimus. Nostra ridicule indicamus et, ut verbo Ciceronis utar, dicimus aliqua subabsurda. namque quaedam, quae, si imprudentibus excident, stulta sunt, si simulamus,

[23] The application of humour to oratory may be divided into three heads: for there are three things out of which we may seek to raise a laugh, to wit,

others, ourselves, or things intermediate. In the first case we either reprove or refute or make light of or retort or deride the arguments of others. In the second we speak of things which concern ourselves in a humorous manner and, to quote the words of Cicero, say things which have a suggestion of absurdity. For there are certain sayings which are regarded as folly if they slip from us unawares, but as witty if uttered ironically.

[24] *venusta creduntur. tertium est genus, ut idem dicit, in decipiendis expectationibus, dictis aliter accipiendis ceterisque, quae neutram personam contingunt ideoque a me media dicuntur.*

[24] The third kind consists, as Cicero also tells us, in cheating expectations, in taking words in a different sense from what was intended, and in other things which affect neither party to the suit, and which I have, therefore, styled intermediate.

[25] *item ridicula aut facimus aut dicimus. facto risus conciliatur interim admixta gravitate: ut M. Caelius praetor, cum sellam eius curulem consul Isauricus fregisset, alteram posuit loris intentam; dicebatur autem consul a patre flagris aliquando caesus; interim sine respectu pudoris, ut in illa pyxide Caeliana, quod neque oratori neque ulli viro gravi conveniat.*

[25] Further, things designed to raise a laugh may either be said or done. In the latter case laughter is sometimes caused by an act possessing a certain element of seriousness as well, as in the case of Marcus Caelius the praetor, who, when the consul Isauricus broke his curule chair, had another put in its place, the seat of which was made of leather thongs, by way of allusion to the story that the consul had once been scourged by his father: sometimes, again, it is aroused by an act which passes the grounds of decency, as in the case of Caelius' box, a jest which was not fit for an orator or any respectable man to make.

[26] *idem autem de vultu gestuque ridiculo dictum sit; in quibus est quidem summa gratia, sed maior, cum captare risum non videntur; nihil enim est iis, quae sicut salsa dicuntur, insulsius. quanquam autem gratiae plurimum dicentis severitas adfert, fitque ridiculum id ipsum, quod qui dicit illa non ridet, est tamen interim et aspectus et habitus oris et gestus non inurbanus,*

[26] On the other hand the joke may lie in some remark about a ridiculous look or gesture; such jests are very attractive, more especially when delivered with every appearance of seriousness; for there are no jests so insipid as those which parade the fact that they are intended to be witty.

[27] *cum iis modus contingit. id porro, quod dicitur, aut est lascivum et hilare, qualia A. Galbae pleraque, aut contumeliosum, qualia nuper iuni Bassi, aut asperum, qualia Cassii Severi, aut lene, qualia Domitii Afri.*

[27] Still, although the gravity with which a jest is uttered increases its

attraction, and the mere fact that the speaker does not laugh himself makes his words laughable, there is also such a thing as a humorous look, manner or gesture, provided always that they observe the happy mean. Further, a jest will either be free and lively, like the majority of those uttered by Aulus Galba, or abusive, like those with which Junius Bassus recently made us familiar, or bitter, like those of Cassius Severus, or gentle, like those of Domitius Afer.

[28] refert, his ubi quis utatur. nam in convictibus et cotidiano sermone lasciva humilibus, hilaria omnibus convenient. laedere nunquam velimus, longeque absit propositum illud potius amicum quam dictum perdendi. In hac quidem pugna forensi malim mihi lenibus uti licere; quanquam et contumeliose et aspere dicere in adversarios permissum est, cum accusare etiam palam et caput alterius iuste petere concessum sit. Sed hic quoque tamen inhumana videri solet fortunae insectatio, vel quod culpa caret vel quod recidere etiam in ipsos, qui obiecerunt, potest. primum itaque considerandum est, et quis et in qua causa et apud quem et in quem et quid dicat.

[28] Much depends on the occasion on which a jest is uttered. For in social gatherings and the intercourse of every day a certain freedom is not unseemly in persons of humble rank, while liveliness is becoming to all. Our jests should never be designed to wound, and we should never make it our ideal to lose a friend sooner than lose a jest. Where the battles of the courts are concerned I am always better pleased when it is possible to indulge in gentle raillery, although it is, of course, permissible to be abusive or bitter in the words we use against our opponents, just as it is permissible to accuse them openly of crime, and to demand the last penalty of the law. But in the courts as elsewhere it is regarded as inhuman to hit a man when he is down, either because he is the innocent victim of misfortune or because such attacks may recoil on those who make them. Consequently, the first points to be taken into consideration are who the speaker is, what is the nature of the case, who is the judge, who is the victim, and what is the character of the remarks that are made.

[29] oratori minime convenit distortus vultus gestusque, quae in mimis rideri solent. dicacitas etiam scurrilis et scenica huic personae alienissima est. obscenitas vero non a verbis tantum abesse debet, sed etiam a significatione. nam si quando obiici potest, non in ioco exprobranda est.

[29] It is most unbecoming for an orator to distort his features or use uncouth gestures, tricks that arouse such merriment in farce. No less unbecoming are ribald jests, and such as are employed upon the stage. As for obscenity, it should not merely be banished from his language, but should not even be suggested. For even if our opponent has rendered himself liable to such a charge, our denunciation should not take the form of a jest.

[30] oratorem praeterea ut dicere urbane volo, ita videri adfectare id plane nolo. quapropter ne dicet quidem salse, quotiens poterit, et dictum potius aliquando perdet quam minuet auctoritatem.

[30] Further, although I want my orator to speak with wit, he must not give the impression of striving after it. Consequently he must not display his wit on every possible occasion, but must sacrifice a jest sooner than sacrifice his dignity.

[31] nec accusatorem autem atroci in causa nec patronum in miserabili iocantem feret quisquam. sunt etiam iudices quidam tristiores quam ut risum libenter patiantur.

[31] Again, no one will endure an accuser who employs jests to season a really horrible case, nor an advocate for the defence who makes merry over one that calls for pity. Moreover, there is a type of judge whose temperament is too serious to allow him to tolerate laughter.

[32] solet interim accidere, ut id quod in adversarium dicimus aut in iudicem conveniat aut in nostrum quoque litigatorem; quanquam aliqui reperiuntur, qui ne id quidem, quod in ipsos recidere possit, evitent. quod fecit Longus Sulpicius, qui, cum ipse foedissimus esset, ait eum, contra quem iudicio liberali aderat, ne faciem quidem habere liberi hominis; cui respondens Domitius Afer, Ex tui, inquit, animi sententia, Longe,

[32] It may also happen that a jest directed against an opponent may apply to the judge or to our own client, although there are some orators who do not refrain even from jests that may recoil upon themselves. This was the case with Sulpicius Longus, who, despite the fact that he was himself surpassingly hideous, asserted of a man against whom he was appearing in a case involving his status as a free man, that even his face was the face of a slave. To this Domitius Afer replied, "Is it your profound conviction, Longus, that an ugly man must be a slave?"

[33] qui malam faciem habet, liber non est? vitandum etiam, ne petulans, ne superbum, ne loco, ne tempore alienum, ne praeparatum et domo adlatum videatur quod dicimus. nam adversus miseros, sicut supra dixeram, inhumanus est iocus. Sed quidam ita sunt receptae auctoritatis ac notae verecundiae, ut nocitura sit in eos dicendi petulantia. nam de amicis iam praeceptum est.

[33] Insolence and arrogance are likewise to be avoided, nor must our jests seem unsuitable to the time or place, or give the appearance of studied premeditation, or smell of the lamp, while those directed against the unfortunate are, as I have already said, inhuman. Again, some advocates are men of such established authority and such known respectability, that any insolence shown them would only hurt the assailant. As regards the way in

which we should deal with friends I have already given instructions.

[34] illud non ad oratoris consilium sed ad hominis pertinet; lacessat hoc modo quem laedere sit periculosum, ne aut inimicitiae graves insequantur aut turpis satisfactio. male etiam dicitur, quod in plures conuenit, si aut nationes totae incessantur aut ordines aut condicio aut studia multorum.

[34] It is the duty not merely of an orator, but of any reasonable human being, when attacking one whom it is dangerous to offend to take care that his remarks do not end in exciting serious enmity, or the necessity for a grovelling apology. Sarcasm that applies to a number of persons is injudicious: I refer to cases where it is directed against whole nations or classes of society, or against rank and pursuits which are common to many.

[35] ea quae dicet vir bonus omnia salva dignitate ac verecundia dicet. nimium enim risus pretium est, si probitatis impendio constat.

unde autem concilietur risus et quibus ex locis peti soleat, difficillimum dicere. nam si species omnes persequi velimus, nec modum reperiemus et frustra laborabimus.

[35] A good man will see that everything he says is consistent with his dignity and the respectability of his character; for we pay too dear for the laugh we raise if it is at the cost of our own integrity.

It is, however, a difficult task to indicate the sources from which laughter may be legitimately derived or the topics where it may be naturally employed. To attempt to deal exhaustively with the subject would be an interminable task and a waste of labour.

[36] neque enim minus numerosi sunt loci, ex quibus haec dicta, quam illi, ex quibus eae, quas sententias vocamus, ducuntur, neque alii. nam hic quoque est inventio et elocutio, atque ipsius elocutionis vis alia in verbis, alia in figuris.

[36] For the topics suitable to jests are no less numerous than those from which we may derive *reflexions*, as they are called, and are, moreover, identical with the latter. The powers of invention and expression come into play no less where jests are concerned, while as regards expression its force will depend in part on the choice of words, in part on the figures employed.

[37] risus igitur oriuntur aut ex corpore eius, in quem dicimus, aut ex animo, qui factis ab eo dictisque colligitur, aut ex iis, quae sunt extra posita. intra haec enim est omnis vituperatio; quae si gravius posita sit, severa est, si levius, ridicula. haec aut ostenduntur aut narrantur aut dicto notantur.

[37] Laughter then will be derived either from the physical appearance of our opponent or from his character as revealed in his words and actions, or from external sources; for all forms of raillery come under one or other of these heads; if the raillery is serious, we style it as severe; if, on the other hand, it is

of a lighter character, we regard it as humorous. These themes for jest may be pointed out to the eye or described in words or indicated by some *mot*.

[38] *rarum est, ut oculis subiicere contingat, ut fecit C. Iulius; qui, cum Helvio Manciae saepius obstrepenti sibi diceret, etiam ostendam, qualis sis. isque plane instaret interrogatione, qualem se ostensurus esset, digito demonstravit imaginem Galli in scuto Cimbrico pictam, cui Mancia tum simillimus est visus. tabernae autem erant circa forum, ac scutum illud signi gratia positum. narrare,*

[38] It is only on rare occasions that it is possible to make them visible to the eye, as Gaius Julius did when Helvius Manciae kept clamouring against him. "I will show you what you're like!" he cried, and then, as Manciae persisted in asking him to do so, pointed with his finger at the picture of a Gaul painted on a Cimbric shield, a figure to which Manciae bore a striking resemblance. There were shops round the forum and the shield had been hung up over one of them by way of a sign.

[39] *quae salsa sint, inprimis est subtile et oratorium, ut Cicero pro Cluentio narrat de Caepasio atque Fabricio aut M. Caelius de illa D. Laelii collegaeque eius in provinciam festinantium contentione. Sed in his omnibus cum elegans et venusta exigitur tota expositio, tum id festivissimum est quod adiicit orator. nam et a Cicerone sic est Fabricii fuga illa condita:*

[39] The narration of a humorous story may often be used with clever effect and is a device eminently becoming to an orator. Good examples are the story told of Caepasius and Fabricius, which Cicero tells in the *pro Cluentio*, or the story told by Caelius of the dispute between Decimus Laelius and his colleague when they were both in a hurry to reach their province first. But in all such cases the whole narrative must possess elegance and charm, while the orator's own contribution to the story should be the most humorous element. Take for instance the way in which Cicero gives a special relish to the flight of Fabricius.

[40] *itaque cum callidissime se putaret direre, et cum illa vera gravissima ex intimo artificio deprompsisset, Respicite, iudices, hominum fortunas, respicite C. Fabricii senectutem, cum hoc, Respicite, ornandae orationis causa saepe dixisset, respexit ipse; at Fabricius a subselliis demisso capite discesserat, et cetera, quae adiecit (nam est notus locus), cum in re hoc solum esset,*

[40] "And so, just at the moment when he thought his speech was showing him at his best and he had uttered the following solemn words, words designed to prove a master-stroke of art, 'Look at the fortunes of mankind, gentlemen, look at the aged form of Gaius Fabricius,' just at that very moment, I say, when he had repeated the word 'look' several times by way of making his words all the more impressive, he looked himself, and found that Fabricius had slunk out of court with his head hanging down." I will not quote the rest

of the passage, for it is well known. But he develops the theme still further although the plain facts amount simply to this, that Fabricius had left the court.

[41] fabricium a iudicio recessisse. et Caelius cum omnia venustissime finxit, tum illud ultimum, hic subsecutus quomodo transient, utrum rate an piscatorio navigio, nemo sciebat, Siculi quidem, ut sunt lascivi et dicaces, aiebant in delphino sedisse et sic tanquam Ariona transvectum.

[41] The whole of the story told by Caelius is full of wit and invention, but the gem of the passage is its conclusion. "He followed him, but how he crossed the straits, whether it was in a ship or a fisherman's boat, no one knew; but the Sicilians, being of a lively turn of wit, said that he rode on a dolphin and effected his crossing like a second Arion." Cicero

[42] In narrando autem Cicero consistere facetias putat, dicacitatem in iaciendo. mire fuit in hoc genere venustus Afer Domitius, cuius orationibus complures huiusmodi narrationes insertae reperiuntur, sed dictorum quoque ab eodem urbane sunt editi libri.

[42] thinks that humour belongs to narrative and wit to sallies against the speaker's antagonist. Domitius Afer showed remarkable finish in this department; for, while narratives of the kind I have described are frequent in his speeches, several books have been published of his witticisms as well.

[43] illud quoque genus est positum non in hac veluti iaculatione dictorum et inclusa breviter urbanitate sed in quodam longiore actu, quod de L. Crasso contra Brutum Cicero in secundo de Oratore libro et allis quibusdam locis narrat.

[43] This latter form of wit lies not merely in sallies and brief displays of wit, but may be developed at greater length, witness the story told by Cicero in the second book of his *de Oratore*, in which Lucius Crassus dealt with Brutus, against whom he was appearing in court.

[44] nam, cum Brutus in accusatione C. Planci ex duobus lectoribus ostendisset, contraria L. Crassum patronum eius in oratione, quam de Colonia Narbonensi habuerat, suasisse iis, quae de lege Servilia dixerat, tris excitavit et ipse lectores, hisque patris eius dialogos dedit legendos; quorum cum in Privernati unus, alter in Albano, tertius in Tiburti sermonem habitum complecteretur, requirebat, ubi essent eae possessiones. omnes autem illas Brutus vendiderat; et tum paterna emancupare praedia turpius habebatur. similis in apologis quoque et quibusdam interim etiam historiis exponendi gratia consequi solet.

[44] Brutus was prosecuting Cnaeus Plancus and had produced two readers to show that Lucius Crassus, who was counsel for the defence, in the speech which he delivered on the subject of the colony of Narbo had advocated measures contrary to those which he recommended in speaking of the

Servilian law. Crassus, in reply, called for three readers and gave them the dialogues of Brutus' father to read out. One of these dialogues was represented as taking place on his estate at Privernum, the second on his estate at Alba, and the third on his estate at Tibur. Crassus then asked where these estates were. Now Brutus had sold them all, and in those days it was considered somewhat discreditable to sell one's paternal acres. Similar attractive effects of narrative may be produced by the narration of fables or at times even of historical anecdotes.

[45] Sed acutior est illa atque velocior in urbanitate brevitās. cuius quidem duplex forma est dicendi ac respondendi, sed ratio communis in partem; nihil enim quod in lacescendo dici potest, non etiam in reperiendo.

[45] On the other hand brevity in wit gives greater point and speed. It may be employed in two ways, according as we are the aggressors, or are replying to our opponents; the method, however, in both cases is to some extent the same. For there is nothing that can be said in attack that cannot be used in riposte.

[46] At quaedam propria sunt respondentium; illa etiam atque etiam cogitata adferri solent, haec plerumque in altercatione aut in rogandis testibus reperiuntur. Cum sint autem loci plures, ex quibus dicta ridicula ducantur, repetendum est mihi non omnes eos oratoribus convenire; in primis ex amphibolia neque illa obscena,

[46] But there are certain points which are peculiar to reply. For remarks designed for attack are usually brought ready-made into court, after long thought at home, whereas those made in reply are usually improvised during a dispute or the cross-examination of witnesses. But though there are many topics on which we may draw for our jests, I must repeat that not all these topics are becoming to orators:

[47] quae Atellani e more captant, nec qualia vulgo iactantur a vilissimo quoque, conversa in maledictum fere ambiguitate; ne illa quidem, quae Ciceroni aliquando sed non in agendo exciderunt, ut dixit, cum is candidatus, qui coqui filius habebatur, coram eo suffragium ab alio peteret: ego quoque tibi favebo.

[47] above all *doubles entendres* and obscenity, such as is dear to the Atellan farce, are to be avoided, as also are those coarse jibes so common on the lips of the rabble, where the ambiguity of words is turned to the service of abuse. I cannot even approve of a similar form of jest, that sometimes slipped out even from Cicero, though not when he was pleading in the courts: for example, once when a candidate, alleged to be the son of a cook, solicited someone else's vote in his presence, he said, *Ego quoque tibi favebo*.

[48] Non quia excludenda sint omnino verba duos sensus significantia, sed quia raro belle respondeant, nisi cum prorsus rebus ipsis adiuvantur. Quare non hoc

modo paene et ipsum scurille Ciceronis est in eundem, de quo supra dixi, sauricum: miror, quid sit, quod pater tuus, homo constantissimus, te nobis varium reliquit.

[48] I say this not because I object absolutely to all play on words capable of two different meanings, but because such jests are rarely effective, unless they are helped out by actual facts as well as similarity of sound. For example, I regard the jest which Cicero levelled against that same Isauricus, whom I mentioned above, as being little less than sheer buffoonery. "I wonder," he said, "why your father, the steadiest of men, left behind him such a stripy gentleman as yourself."

[49] Sed illud ex eodem genere praeclarum; cum obiiceret Miloni accusator in argumentum factarum Clodio insidiarum, quod Bovillas ante horam nonam devertisset, ut exspectaret, dum Clodius a villa sua exiret, et identidem interrogaret, quo tempore Clodius occisus esset, respondit, sero; quod vel solum sufficit, ut hoc genus non totum repudietur.

[49] On the other hand, the following instance of the same type of wit is quite admirable: when Milo's accuser, by way of proving that he had lain in wait for Clodius, alleged that he had put up at Bovillae before the ninth hour in order to wait until Clodius left his villa, and kept repeating the question, "When was Clodius killed?", Cicero replied, "Late!" a retort which in itself justifies us in refusing to exclude this type of wit altogether. Sometimes,

[50] nec plura modo significari solent, sed etiam diversa, ut Nero de servo pessimo dixit nulli plus apud se fidei haberi, nihil ei neque occlusum neque signatum esse.

[50] too, the same word may be used not merely in several senses, but in absolutely opposite senses. For example, Nero said of a dishonest slave, "No one was more trusted in my house: there was nothing closed or sealed to him."

[51] pervenit res usque ad aenigma, quale est Ciceronis in Plaetorium Fonteii accusatorem, cuius matrem, dixit, dum vixisset, ludum, postquam mortua esset, magistros habuisse. dicebantur autem, dum vixit, infames feminae convenire ad eam solitae; post mortem bona eius venierant. quanquam hic ludus per translationem dictus est, magistri per ambiguitatem.

[51] Such ambiguity may even go so far as to present all the appearance of a riddle, witness the jest that Cicero made at the expense of Pletorius, the accuser of Fonteius: "His mother," he said, "kept a school while she lived and masters after she was dead." The explanation is that in her lifetime women of infamous character used to frequent her house, while after her death her property was sold. (I may note however that *ludus*, is used metaphorically in the sense of school, while *magisiri* is used ambiguously.)

[52] In metalempsin quoque cadit eadem ratio dictorum, ut Fabius Maximus, incusans Augusti congiariorum, quae amicis dabantur, exiguitatem, heminaria esse dixit; nam congiarium commune liberalitatis atque mensurae, a mensura ducta imminutio rerum.

[52] A similar form of jest may be made by use of the figure known as *metalepsis*, as when Fabius Maximus complained of the meagreness of the gifts made by Augustus to his friends, and said that his *congiaria* were *heminaria*: for *congiarium* implies at once liberality and a particular measure, and Fabius put a slight on the liberality of Augustus by a reference to the measure.

[53] haec tam frigida quam est nominum fictio adiectis, detractis, mutatis litteris, ut Acisculum, quia esset pactus, pacisculum, et Placidum nomine, quod is acerbus natura esset, acidum, et Tullium,

[53] This form of jest is as poor as is the invention of punning names by the addition, subtraction or change of letters: I find, for instance, a case where a certain Acisculus was called Pacisculus because of some “compact” which he had made, while one Placidus was nicknamed Acidus because of his “sour” temper, and one Tullius was dubbed Tollius because he was a thief.

[54] cum fur esset, tollium dictos invenio. Sed haec eadem genera commodius in rebus quam in nominibus respondent. Afer enim venuste Manlium Suram, multum in agendo discursantem, salientem, manus iactantem, togam deiicientem et reponentem, non agere, dixit, sed satagere. est enim dictum per se urbanum satagere etiamsi nulla subsit alterius verbi similitudo.

[54] Such puns are more successful with things than names. It was, for example, a neat hit of Afer’s when he said that Manlius Sura, who kept rushing to and fro while he was pleading, waving his hands, letting his toga fall and replacing it, was not merely pleading, but giving himself a lot of needless trouble. For there is a spice of wit about the word *satagere* in itself, even if there were no resemblance to any other word.

[55] fiunt et adiecta et detracta aspiratione et divisis coniunctisque verbis similiter saepius frigida, aliquando tamen recipienda. eademque condicio est in iis, quae a nominibus trahuntur. multa ex hoc Cicero in Verrem, sed ut ab aliis dicta, modo futurum, ut omnia verreret, cum diceretur Verres, modo Herculi, quem expilaverat, molestiorem apro Erymanthio fuisse, modo malum sacerdotem, qui tam nequam verrem reliquisset, quia Sacerdoti Verres successerat.

[55] Similar jests may be produced by the addition or removal of the aspirate, or by splitting up a word or joining it to another: the effect is generally poor, but the practice is occasionally permissible. Jests drawn from names are of the same type. Cicero introduces a number of such jests against Verres, but

always as quotations from others. On one occasion he says that he would sweep everything away, for his name was Verres; on another, that he had given more trouble to Hercules, whose temple he had pillaged, than was given by the Erymanthine “boar”; on another, that he was a bad “priest” who had left so worthless a pig behind him. For Verres’ predecessor was named Sacerdos.

[56] praebet tamen aliquando occasionem quaedam felicitas hoc quoque bene utendi: ut pro Caecina Cicero in testem Sex. Clodium Phormionem, nec minus niger, inquit, nec minus confidens quam est ille Terentianus Phormio.

[56] Sometimes, however, a lucky chance may give us an opportunity of employing such jests with effect, as for instance when Cicero in the *pro Caecina* says of the witness Sextus Clodius Phormio, “He was not less black or less bold than the Phormio of Terence.”

[57] acriora igitur sunt et elegantiora, quae trahuntur ex vi rerum. In his maxime valet similitudo, si tamen ad aliquid inferius leviusque referatur; quae iam veteres illi iocabantur, qui Lentulum Spinttherem et Scipionem Serapionem esse dixerunt. Sed ea non ab hominibus modo petitur verum etiam ab animalibus, ut nobis pueris iunius Bassus, homo inprimis primis, asinus allus vocabatur;

[57] We may note therefore that jests which turn on the meaning of things are at once more pointed and more elegant. In such cases resemblances between things produce the best effects, more especially if we refer to something of an inferior or more trivial nature, as in the jests of which our forefathers were so fond, when they called Lentulus Spintther and Scipio Serapio. But such jests may be drawn not merely from the names of men, but from animals as well; for example when I was a boy, Junius Bassus, one of the wittiest of men, was nicknamed the white ass.

[58] et Sarmentus Messium Cicirrum equo fero comparavit. ducitur et ab inanimis sicut P. Blessius Iulium, hominem nigrum et macrum et pandum, fibulam ferream dixit. quod nunc risus petendi genus frequentissimum est.

[58] And Sarmentus compared Messius Cicirrus to a wild horse. The comparison may also be drawn from inanimate objects: for example Publius Blessius called a certain Julius, who was dark, lean and bent, the iron buckle. This method of raising a laugh is much in vogue to-day.

[59] Adhibetur autem similitudo interim palam, interim inseri solet parabola; cuius est generis illud Augusti, qui militi libellum timide porrigenti, noli, inquit, tanquam assem elephanto des.

[59] Such resemblances may be put to the service of wit either openly or allusively. Of the latter type is the remark of Augustus, made to a soldier who showed signs of timidity in presenting a petition, “Don’t hold it out as if you

were giving a penny to an elephant.”

[60] sunt quaedam vi similia; unde Vatinius dixit hoc dictum, cum reus, agente in eum Calvo, frontem candido sudario tergeret, idque ipsum accusator in invidiam vocaret, quamvis reus sum, inquit, et panem item candidum edo.

[60] Some of these jests turn on similarity of meaning. Of this kind was the witticism uttered by Vatinius when he was prosecuted by Calvus. Vatinius was wiping his forehead with a white handkerchief, and his accuser called attention to the unseemliness of the act. Whereupon Vatinius replied, “Though I am on my trial, I go on eating white bread all the same.”

[61] adhuc est subtilior illa ex simili translatio, cum, quod in alia re fieri solet, in aliam mutamur. ea dicatur sane fictio: ut Chrysippus, cum in triumpho Caesaris eborea oppida essent translata, et post dies paucos Fabii Maximi lignea, thecas esse oppidorum Caesaris dixit. et Pedo de mirmillone, qui retiarium consequebatur nec feriebat, vivum, inquit, capere vult.

[61] Still more ingenious is the application of one thing to another on the ground of some resemblance, that is to say the adaptation to one thing of a circumstance which usually applies to something else, a type of jest which we may regard as being an ingenious form of fiction. For example, when ivory models of captured towns were carried in Caesar’s triumphal procession, and a few days later wooden models of the same kind were carried at the triumph of Fabius Maximus, Chrysippus remarked that the latter were the cases for Caesar’s ivory towns. And Pedo said of a heavy-armed gladiator who was pursuing another armed with a net and failed to strike him, “He wants to catch him alive.”

[62] iungitur amphiboliae similitudo, ut a Galba, qui pilam negligenter petenti, sic, inquit, petis, tamquam Caesaris candidatus. Nam illud petis ambiguum est, securitas similis Quod hactenus ostendisse satis est.

[62] Resemblance and ambiguity may be used in conjunction: Galba for example said to a man who stood very much at his ease when playing ball, “You stand as if you were one of Caesar’s candidates.” The ambiguity lies in the word *stand*, while the indifference shewn by the player supplies the resemblance.

[63] ceterum frequentissima aliorum generum cum aliis mixtura est, eaque optima, quae ex pluribus constat. eadem dissimilium ratio est. hinc eques Romanus, ad quem in spectaculis bibentem cum misisset Augustus, qui ei diceret, ego si prandere volo, domum eo: Tu enim, inquit, non times, ne locum perdas.

[63] I need say no more on this form of humour. But the practice of combining different types of jest is very common, and those are best which are of this composite character. A like use may be made of dissimilarity. Thus a Roman

knight was once drinking at tile games, and Augustus sent him the following message, “If I want to dine, I go home.” To which the other replied, “Yes,

[64] *Ex contrario non una species. neque enim eodem modo dixit Augustus praefecto, quem cum ignominia mittebat, subinde interponenti precibus, quid respondebo patri meo? dic, me tibi displicuisse; quo Galba penulam roganti: Non possum commodare, domi maneo, cum cenaculum eius perplueret. tertium adhuc illud: (nisi quod, ut ne auctorem ponam, verecundia ipsius facit) libidinosior es quam ullus spado; quo sine dubio et opinio decipitur sed ex contrario. et hoc ex eodem loco est sed nulli priorum simile, quod dixit M. Vestinus, cum ei nuntiatum esset ... necatum esse, aliquando desinet putere.*

[64] but you are not afraid of losing your seat” Contraries give rise to more than one kind of jest. For instance the following jests made by Augustus and Galba differ in form. Augustus was engaged in dismissing an officer with dishonour from his service: the officer kept interrupting him with entreaties and said, “What shall I say to my father?” Augustus replied, “Tell him that I fell under your displeasure.” Galba, when a friend asked him for the loan of a cloak, said, “I cannot lend it you, as I am going to stay at home,” the point being that the rain was pouring through the roof of his garret at the time. I will add a third example, although out of respect to its author I withhold his name: “You are more lustful than a eunuch,” where we are surprised by the appearance of a word which is the very opposite of what we should have expected. Under the same heading, although it is quite different from any of the preceding, we must place the remark made by Marcus Vestinus when it was reported to him that a certain man was dead. “Some day then he will cease to stink,” was his reply.

[65] *onerabo librum exemplis similemque iis, qui risus gratia componuntur, efficiam, si persequi voluero singula veterum.*

Ex omnibus argumentorum locis eadem occasio est. nam et finitione usus est Augustus de pantomimis duobus, qui alternis gestibus contendebant, cum eorum alterum saltatorem dixit alterum interpellatorem;

[65] But I shall overload this book with illustrations and turn it into a common jest-book, if I continue to quote each jest that was made by our forefathers.

All forms of argument afford equal opportunity for jests. Augustus for example employed *definition* when he said of two ballet-dancers who were engaged in a contest, turn and turn about, as to who could make tile most exquisite gestures, that one was a dancer and the other merely interrupted the dancing.

[66] *et partitione Galba, cum paenulam roganti respondit, Non pluit, non opus est tibi; si pluit, ipse utar. proinde genere, specie, propriis, differentibus, iugatis, adiunctis, consequentibus, antecedentibus, repugnantibus, causis,*

effectis, comparatione parium, maiorum, minorum similis materia praebetur; sicut in tropis quoque omnes cadit.

[66] Galba on the other hand made use of *partition* when he replied to a friend who asked him for a cloak, “It is not raining and you don’t need it; if it does rain, I shall wear it myself.” Similar material for jests is supplied by genus, species, property, difference, conjugates, adjuncts, antecedents, consequents, contraries, causes, effects, and comparisons of things greater, equal, or less, as it is also by all forms of trope.

[67] An non plurima per hyperbolen dicuntur? quale refert Cicero de homine praelongo, caput eum ad fornicem Fabium offendisse; et quod P. Oppius dixit de genere Lentulorum, cum assidue minores parentibus liberi essent, nascendo interitum.

[67] Are not a large number of jests made by means of *hyperbole*? Take for instance Cicero’s remark about a man who was remarkable for his height, “He bumped his head against the Fabian arch,” or the remark made by Publius Oppius about the family of the Lentuli to the effect, that since the children were always smaller than their parents, the race would “perish by propagation.” Again, what of *irony*?

[68] quid ironia? nonne etiam quae severissime fit, ioci prope genus est? qua urbane usus est Afer, cum Didio Gallo, qui provinciam ambitiosissime petierat, deinde, impetrata ea, tanquam coactus querebatur, age, inquit, aliquid et rei publicae causa. metaphora quoque Cicero lusit, cum, Vatinii morte nuntiata, cuius parum certus dicebatur auctor, interim, inquit, usura fruar.

[68] Is not even the most severe form of irony a kind of jest? Afer made a witty use of it when he replied to Didius Callus, who, after making the utmost efforts to secure a provincial government, complained on receiving the appointment that he had been forced into accepting, “Well, then, do something for your country’s sake.” Cicero also employed *metaphor* to serve his jest, when on receiving a report of uncertain authorship to the effect that Vatinius was dead, he remarked, “Well, for the meantime I shall make use of the interest.”

[69] idem per allegorian M. Caelium, melius obiiicientem crimina quam defendentem, bonam dextram, malam sinistram habere dicebat. emphasi A. Villius dixit, ferrum in Tuccium incidisse.

[69] He also employed *allegory* in the witticism that he was fond of making about Marcus Caelius, who was better at bringing charges than at defending his client against them, to the effect that he had a good right hand, but a weak left. As an example of the use of *emphasis* I may quote the jest of Aulus Villius, that Tuccius was killed by his sword falling upon him.

[70] figuras quoque mentis, quae σχήματα διανοίας dicuntur, res eadem recipit

omnes, in quas nonnulli diviserunt species dictorum. nam et interrogamus et dubitamus et adfirmamus et minamur et optamus, quaedam ut miserantes, quaedam ut irascentes dicimus. ridiculum est autem omne, quod aperte fingitur.

[70] Figures of thought, which the Greeks call σχήματα διανοίας, may be similarly employed, and some writers have classified jests under their various headings. For we ask questions, express doubts, make assertions, threaten, wish and speak in pity or in anger. And everything is laughable that is obviously a pretence.

[71] stulta reprehendere facillimum est, nam per se sunt ridicula; sed rem urbanam facit aliqua ex nobis adiectio. stulte interrogaverat exeuntem de theatro Campatium Titius Maximus, an spectasset? fecit Campatius dubitationem eius stultiorem dicendo, Non, sed in orchestra pila lusi.

[71] It is easy to make fun of folly, for folly is laughable in itself; but we may improve such jests by adding something of our own. Titius Maximus put a foolish question to Campatius, who was leaving the theatre, when he asked him if he had been watching the play. "No," replied Campatius, "I was playing ball in the stalls," whereby he made the question seem even more foolish than it actually was.

[72] refutatio cum sit in negando, redarguendo, defendendo, elevando, ridicule negavit Manius Curius; nam, cum eius accusator in sipario omnibus locis aut nudum eum in nervo aut ab amicis redemptum ex alea pinxisset:

[72] Refutation consists in denying, rebutting, defending or making light of a charge, and each of these affords scope for humour. Manius Curius, for example, showed humour in the way in which he denied a charge that had been brought against him. His accuser had produced a canvas, in every scene of which he was depicted either as naked and in prison or as being restored to freedom by his friends paying off his gambling debts. His only comment was, "Did I never win, then?"

[73] ergo ego, inquit, nunquam vici? Redarguimus interim aperte, ut Cicero Vibium Curium multum de annis aetatis suae mentientem, tum ergo, cum una declamabamus, non eras natus; interim et simulata assensione, ut idem Fabia Dolabellae dicente triginta se annos habere, verum est, inquit; nam hoc illam iam viginti annis audio.

[73] Sometimes we rebut a charge openly, as Cicero did when he refuted the extravagant lies of Vibius Curius about his age: "Well, then," he remarked, "in the days when you and I used to practise declamation together, you were not even born." At other times we may rebut it by pretending to agree. Cicero, for example, when Fabia the wife of Dolabella asserted that her age was thirty, remarked, "That is true, for I have heard it for the last twenty years."

[74] belle interim subiicitur pro eo, quod neges, aliud mordacius: ut Iunius Bassus, querente Domitia Passieni, quod incusans eius sordes calceos eam veteres diceret vendere solere, Non mehercules, inquit, hoc unquam dixi; sed dixi emere te solere. defensionem imitatus est eques Romanus, qui obiicienti Augusto, quod patrimonium comedisset, meum, inquit, putavi.

[74] Sometimes too it is effective to add something more biting in place of the charge which is denied, as was done by Junius Bassus when Domitia the wife of Passienus complained that by way of accusing her of meanness he had alleged that she even sold old shoes. “No,” he replied, “I never said anything of the sort. I said you bought them.” A witty travesty of defence was once produced by a Roman knight who was charged by Augustus with having squandered his patrimony. “I thought it was my own,” he answered.

[75] elevandi ratio est duplex, ut aut nimiam quis iactantiam minuat: quemadmodum C. Caesar Pomponio ostendenti vulnus ore exceptum in seditione Sulpicianae, quod is se passum pro Caesare pugnans gloriabatur, nunquam fugiens respexeris, inquit; aut crimen obiectum, ut Cicero obiurgantibus, quod sexagenarius Publiliam virginem duxisset, cras mulier erit, inquit.

[75] As regards making light of a charge, there are two ways in which this may be done. We may throw cold water on the excessive boasted of our opponent, as was done by Gaius Caesar, when Pomponius displayed a wound in his face which he had received in the rebellion of Sulpicius and which he boasted he had received while fighting for Caesar: “You should never look round,” he retorted, “when you are running away.” Or we may do the same with some charge that is brought against us, as was done by Cicero when he remarked to those who reproached him for marrying Publilia, a young unwedded girl, when he was already over sixty, “Well, she will be a woman to-morrow.”

[76] hoc genus dicti consequens vocant quidam, atque illi simile, quod Cicero Curionem, semper ab excusatione aetatis incipientem, facilius cotidie prooemium habere dixit, quia ista natura sequi et cohaerere videantur.

[76] Some style this type of jest *consequent* and, on the ground that both jests seem to follow so naturally and inevitably, class it with the jest which Cicero levelled against Curio, who always began his speeches by asking indulgence for his youth: “You will find your exordium easier every day,” he said.

[77] Sed elevandi genus est etiam causarum relatio, qua Cicero est usus in Vatinius. qui pedibus aeger, cum vellet videri commodioris valetudinis factus et diceret, se iam bina milia passuum ambulare, dies enim, inquit, longiores sunt. et Augustus nuntiantibus Tarraconensibus palmam in ara eius enatam, apparet, inquit, quam saepe accendatis.

[77] Another method of making light of a statement is to suggest a reason.

Cicero employed this method against Vatinius. The latter was lame and, wishing to make it seem that his health was improved, said that he could now walk as much as two miles. “Yes,” said Cicero, “for the days are longer.” Again Augustus, when the inhabitants of Tarraco reported that a palm had sprung up on the altar dedicated to him, replied, “That shows how often you kindle fire upon it.”

[78] *transtulit crimen Cassius Severus. nam cum obiurgaretur a praetore, quod advocati eius L. Varo Epicureo, Caesaris amico, convicium fecissent, nescio, inquit. qui conviciati sint, et puto Stoicos fuisse.*

repercutiendi multa sunt genera, venustissimum, quod etiam similitudine aliqua verbi adiuvatur: ut Trachalus dicenti Suelio, “si hoc ita est, is in exilium,” “sic non est ita, redis,” inquit.

[78] Cassius Severus showed his wit by transferring a charge made against himself to a different quarter. For when he was reproached by the praetor on the ground that his advocates had insulted Lucius Varus, an Epicurean and a friend of Caesar, he replied, “I do not know who they were who insulted him, I suppose they were Stoics.”

Of retorts there are a number of forms, the wittiest being that which is helped out by a certain verbal similarity, as in the retort made by Trachalus to Suelius. The latter had said, “If that is the case, you go into exile”: to which Trachalus replied, “And if it is not the case, you go back into exile.”

[79] *eludit Cassius Severus obiiciente quodam, quod ei domo sua Proculeius interdixisset, respondendo, numquid ergo illuc accedo? sic eluditur et ridiculum ridiculo: ut divus Augustus, cum ei Galli torque aureum centum pondo dedissent, et Dolabella per iocum, temptans tamen ioci sui eventum, dixisset, “imperator, torque me dona,” “malo, inquit, te civica donare:”*

[79] Cassius Severus baffled an opponent who reproached him with the fact that Proculeius had forbidden him to enter his house by replying, “Do I ever go there?” But one jest may also be defeated by another: for example, Augustus of blessed memory, when the Gauls gave him a golden necklet weighing a hundred pounds, and Dolabella, speaking in jest but with an eye to the success of his jest, said, “General, give me your necklet,” replied, “I had rather give you the crown of oak leaves.”

[80] *mendacium quoque mendacio, ut Galba, dicente quodam, victoriato se uno in Sicilia quinque pedes longam murenam emisit: nihil, inquit, mirum; nam ibi tam longae nascuntur, ut iis piscatores pro restibus cingantur.*

[80] So, too, one lie may be defeated by another: Galba, for instance, when someone told him that he once bought a lamprey five feet long for half a denarius in Sicily, replied, “There is nothing extraordinary in that: for they grow to such a length in those seas that the fishermen tie them round their

waists in lieu of ropes!” Then there is the opposite of denial,

[81] *contraria est neganti confessionis simulatio, sed ipsa quoque multum habet urbanitatis. sic Afer, cum ageret contra libertum Claudii Caesaris, et ex diverso quidam condicionis eiusdem, cuius erat litigator, exclamasset, “praeterea tu semper in liberos Caesaris dicis,” “nec mehercule, inquit, quicquam proficio.” cui vicinum est non negare quod obiicitur, cum et id palam falsum est et inde materia bene respondendi datur: ut Catulus dicenti Philippo, “quid latras?” “furem video,” inquit.*

[81] namely a feigned confession, which likewise may show no small wit. Thus Afer, when pleading against a freedman of Claudius Caesar and when another freedman called out from the opposite side of the court, “You are always speaking against Caesar’s freedmen,” replied, “Yes, but I make precious little headway.” A similar trick is not to deny a charge, though it is obviously false and affords good opportunity for an excellent reply. For example, when Philippus said to Catulus, “Why do you bark so?” the latter replied, “I see a thief.”

[82] *In se dicere non fere est nisi scurrarum et in oratore utique minime probabile, quod fieri totidem modis quot in alios potest. ideoque hoc, quamvis frequens sit, transeo.*

[82] To make jokes against oneself is scarcely fit for any save professed buffoons and is strongly to be disapproved in an orator. This form of jest has precisely the same varieties as those which we make against others and therefore I pass it by, although it is not infrequently employed.

[83] *illud vero, etiamsi ridiculum est, indignum tamen est homine liberali, quod aut turpiter aut potenter dicitur; quod fecisse quendam scio, qui humiliori libere adversus se loquenti, colaphum, inquit, tibi ducam et formulam scribam, quod caput durum habeas. hic enim dubium est, utrum ridere audientes an indignari debuerint.*

[83] On the other hand scurrilous or brutal jests, although they may raise a laugh, are quite unworthy of a gentleman. I remember a jest of this kind being made by a certain man against an inferior who had spoken with some freedom against him: “I will smack your head, and bring an action against you for having such a hard skull!” In such cases it is difficult to say whether the audience should laugh or be angry.

[84] *superest genus decipiendi opinionem aut dicta aliter intellegendi, quae sunt in omni hac materia vel venustissima. inopinatum et a lacescente poni solet, quale est, quod refert Cicero, quid huic abest nisi res et virus? aut illud Afri, homo in agendis causis optime vestitus; et in occurrendo, ut Cicero, audita falsa Vatinii morte, cum obvium libertum eius interrogasset, “rectene omnia?” dicenti, “recte,” “mortuus est?”*

[84] There remains the prettiest of all forms of humour, namely the jest which depends for success on deceiving anticipations or taking another's words in a sense other than he intended. The unexpected element may be employed by the attacking party, as in the example cited by Cicero, "What does this man lack save wealth and — virtue?" or in the remark of Afer, "For pleading causes he is most admirably — dressed." Or it may be employed to meet a statement made by another, as it was by Cicero on hearing a false report of Vatinius' death: he had met one of the latter's freedmen and asked him, "Is all well?" The freedman answered, "All is well." To which Cicero replied, "Is he dead, then?"

[85] *inquit. plurimus autem circa simulationem et dissimulationem risus est, quae sunt vicina et prope eadem; sed simulatio est certam opinionem animi sui imitantis, dissimulatio aliena se parum intelligere fingentis. simulavit Afer, cum in causa subinde dicentibus Celsinam de re cognovisse, quae erat potens femina: quis est, inquit, iste? Celsinam enim videri sibi virum finxit.*

[85] But the loudest laughter of all is produced by simulation and dissimulation, proceedings which differ but little and are almost identical; but whereas simulation implies the pretence of having a certain opinion of one's own, dissimulation consists in feigning that one does not understand someone else's meaning. Afer employed simulation, when his opponents in a certain case kept saying that Celsina (who was an influential lady) knew all about the facts, and he, pretending to believe that she was a man, said, "Who is he?"

[86] *dissimulavit Cicero, cum Sex. Annalis testis reum laesisset, et instaret identidem accusator ei, dic, M. Tulli, numquid quid de Sex. annali? versus enim dicere coepit de libro Ennii annali sex to:*

quis potis ingentis causas evolvere belli?

[86] Cicero on the other hand employed dissimulation when Sextus Annalis gave evidence damaging to the client whom he was defending, and the accuser kept pressing him with the question, "Tell me, Marcus Tullius, what have you to say about Sextus Annalis?" To which he replied by beginning to recite the Sixth book of the Annals of Ennius, which commences with the line,

Who may the causes vast of war unfold?

Enn. 174

This kind of jest finds its most frequent opportunity in ambiguity,

[87] *cui sine dubio frequentissimam dat occasionem ambiguitas: ut Cascellio, qui consultatori dicenti, "navem lividere volo," "perdes," inquit. Sed averti intellectus et aliter solet, cum ab asperioribus ad leniora deflectitur: ut qui interrogatus, quid sentiret de eo, qui in adulterio deprehensus esset, tardum*

fuisse respondit.

[87] as for example, when Cascellius, on being consulted by a client who said, "I wish to divide my ship," replied, "You will lose it then." But there are also other ways of distorting the meaning; we may for instance give a serious statement a comparatively trivial sense, like the man who, when asked what he thought of a man who had been caught in the act of adultery, replied that he had been too slow in his movements.

[88] ei confine est, quod dicitur per suspicionem: quale illud apud Ciceronem querenti, quod uxor sua ex fico sese suspendisset, rogo, des mihi surculum ex illa arbore, ut inseram; intelligitur enim quod non dicitur.

[88] Of a similar nature are jests whose point lies in insinuation. Such was the reply which Cicero quotes as given to the man who complained that his wife had hung herself on a fig-tree. "I wish," said someone, "you would give me a slip of that tree to plant." For there the meaning is obvious, though it is not expressed in so many words.

[89] et hercule omnis salse dicendi ratio in eo est, ut aliter quam est rectum verumque dicatur: quod fit totum fingendis aut nostris aut alienis persuasionibus aut dicendo quod fieri non potest.

[89] Indeed the essence of all wit lies in the distortion of the true and natural meaning of words: a perfect instance of this is when we misrepresent our own or another's opinions or assert some impossibility.

[90] alienam finxit Iuba, qui querenti, quod ab equo suo esset aspersus, quid? Tu, inquit, me Hippocentaurum putas? suam C. Cassius, qui militi sine gladio decurrenti, Heus, commilito, pugno bene uteris, inquit. et Galba de piscibus, qui cum pridie ex parte adesi et versati postera die appositi essent, festinemus, alii subcenant, inquit. tertium illud Cicero, ut dixi, adversus Curium; fieri enim certe non poterat ut, cum declamaret, natus non esset.

[90] Juba misrepresented another man's opinion, when he replied to one who complained of being bespattered by his horse, "What, do you think I am a Centaur?" Gaius Cassius misrepresented his own, when he said to a soldier whom he saw hurrying into battle without his sword, "Shew yourself a handy man with your fists, comrade." So too did Galba, when served with some fish that had been partially eaten the day before and had been placed on the table with the uneaten sides turned uppermost: "We must lose no time," he said, "for there are people under the table at work on the other side." Lastly there is the jibe that Cicero made against Curius, which I have already cited; for it was clearly impossible that he should be still unborn at a time when he was already declaiming.

[91] est et illa ex ironia fictio, qua usus est C. Caesar. nam cum testis diceret a reo femina sua ferro petita, et esset facilis reprehensio, cur illam potissimum

partem corporis vulnerare voluisset: quid enim faceret, inquit,

[91] There is also a form of misrepresentation which has its basis in irony, of which a saying of Gaius Caesar will provide an example. A witness asserted that the accused attempted to wound him in the thighs, and although it would have been easy to ask him why he attacked that portion of his body above all others, he merely remarked, "What else could he have done, when you had a helmet and breastplate?"

[92] cum tu galeam et loricam haberes? vel optima est simulatio contra simulantem, qualis illa Domitii Afri fuit: vetus habebat testamentum, et unus ex amicis recentioribus, sperans aliquid ex mutatione tabularum, falsam fabulam intulerat, consulens eum, an primipilari seni iam testato rursus suaderet ordinare suprema iudicia. noli, inquit, facere; offendis illum.

[92] Best of all is it when pretence is met by pretence, as was done in the following instance by Domitius Afer. He had made his will long ago, and one of his more recent friends, in the hopes of securing a legacy if he could persuade him to change it, produced a fictitious story and asked him whether he should advise a senior centurion who, being an old man, had already made his will to revise it; to which Afer replied, "Don't do it: you will offend him."

[93] iucundissima sunt autem ex his omnibus lenia et, ut sic dixerim, boni stomach: ut Afer idem ingrato litigatori conspectum eius in foro vitanti per nomenclatorem missum ad eum, amas me, inquit, quod te non vidi? et dispensatori, qui, cum reliqua non responderent, dicebat subinde, "Non comedi; pane et aqua vivo,"⁴⁰ "passer, redde quod debes." quae ὑπὸ τὸ ἥθος vocant.

[93] But the most agreeable of all jests are those which are good humoured and easily digested. Take another example from Afer. Noting that an ungrateful client avoided him in the forum, he sent his servant to him to say, "I hope you are obliged to me for not having seen you." Again when his steward, being unable to account for certain sums of money, kept saying, "I have not eaten it: I live on bread and water," he replied, "Master sparrow, pay what you owe." Such jests the Greeks style ὑπὸ τὸ ἥθος or adapted to character.

[94] est gratus iocus, qui minus exprobrat quam potest, ut idem dicenti candidate, semper domum tuam colui, cum posset palam negare, credo, inquit, et verum est. interim de se dicere ridiculum et quod in alium si absentem diceretur urbanum non erat, quoniam ipsi palam exprobratur,

[94] It is a pleasant form of jest to reproach a person with less than would be possible, as Afer did when, in answer to a candidate who said, "I have always shown my respect for your family," he replied, although he might easily have denied the statement, "You are right, it is quite true." Sometimes it may be a good joke to speak of oneself, while one may often raise a laugh by

reproaching a person to his face with things that it would have been merely bad-mannered to bring up against him behind his back.

[95] movet risum: quale Augusti est, cum ab eo miles nescio quid improbe peteret et veniret contra Marcianus, quem suspicabatur et ipsum aliquid iniuste rogaturum: Non magis, inquit, faciam, commilito, quod petis, quam quod Marcianus a me petiturus est.

[95] Of this kind was the remark made by Augustus, when a soldier was making some unreasonable request and Marcianus, whom he suspected of intending to make some no less unfair request, turned up at the same moment: "I will no more grant your request, comrade, than I will that which Marcianus is just going to make."

[96] adjuvant urbanitatem et versus commode positi, seu toti ut sunt (quod adeo facile est, ut Ovidius ex tetrastichon Macri carmine librum in malos poetas composuerit), quod fit gratius, si qua etiam ambiguitate conditur: ut Cicero in Lartium, hominem callidum et versutum, cum is in quadam causa suspectus esset,

[96] Apt quotation of verse may add to the effect of wit. The lines may be quoted in their entirety without alteration, which is so easy a task that Ovid composed an entire book against bad poets out of lines taken from the quatrains of Macer. Such a procedure is rendered specially attractive if it be seasoned by a spice of ambiguity, as in the line which Cicero quoted against Lartius, a shrewd and cunning fellow who was suspected of unfair dealing in a certain case,

Had not Ulysses Lartius intervened.

The author, presumably a tragic poet, is unknown. Lartis= Luertius, son of Laertes.

Or the words may be slightly altered, as in the line quoted against the senator who,

[97] nisi si qua Ulixes interrasit Lartius; seu verbis ex parte mutatis, ut in eum qui, cum antea stultissimus esset habitus, post acceptam hereditatem primus sententiam rogabatur, hereditas est, queam vocant sapientiam, pro illo, felicitas est; seu ficti notis versibus similes, quae παρωδία dicitur.

[97] although he had always in previous times been regarded as an utter fool, was, after inheriting an estate, asked to speak first on a motion —

What men call wisdom is a legacy,

Probably from a lost comedy.

where *legacy* is substituted for the original *faculty*. Or again we may invent

verses resembling well known lines, a trick styled parody by the Greeks. A neat application of proverbs may also be effective,

[98] et proverbia opportune aptata: ut homini nequam lapso et, ut allevaretur, roganti, tollat te qui non novit. Ex historia etiam ducere urbanitatem eruditum est: ut Cicero fecit, cum ei testem in iudicio Verris roganti dixisset Hortensius, “Non intelligo haec aenigmata.” “atqui debes, inquit, cum Sphingem domi habeas;” acceperat autem ille a Verre Sphingem aeneam magnae pecuniae.

[98] as when one man replied to another, a worthless fellow, who had fallen down and asked to be helped to his feet, “Let someone pick you up who does not know you.” Or we may shew our culture by drawing on legend for a jest, as Cicero did in the trial of Verres, when Hortensius said to him as he was examining a witness, “I do not understand these riddles.” “You ought to, then,” said Cicero, “as you have got the Sphinx at home.” Hortensius had received a bronze Sphinx of great value as a present from Verres.

[99] subabsurda illa constant stulti simulatione; quae, nisi fingantur, stulta sunt: ut, qui mirantibus, quod humile candelabrum emisset, pransorium erit, inquit. Sed illa similia absurdis sunt acria, quae tanquam sine ratione dicta feruntur: ut servus Dolabellae, cum interrogaretur an dominus eius auctionem proposuisset, domum, inquit, vendidit. Deprehensi interim pudorem suum ridiculo aliquo explicant:

[99] Effects of mild absurdity are produced by the simulation of folly and would, indeed, themselves, be foolish were they not fictitious. Take as an example the remark of the man who, when people wondered why he had bought a stumpy candlestick, said, “It will do for lunch.” There are also sayings closely resembling absurdities which derive great point from their sheer irrelevance, like the reply of Dolabella’s slave, who, on being asked whether his master had advertised a sale of his property, answered, “He has sold his house.” Sometimes you may get out of a tight corner by giving a humorous explanation of your embarrassment,

[100] ut, qui testem dicentem se a reo vulneratum interrogaverat an cicatricem haberet, cum ille ingentem in femine ostendisset, latus, inquit, oportuit. contumeliis quoque uti belle datur: ut Hispo obiicienti atrociora crimina accusatori, me ex te metiris, inquit. et Fulvius Propinquus legato interroganti an in tabulis, quas proferebat, chirographus esset, et verus, inquit, domine.

[100] as the man did who asked a witness, who alleged that lie had been wounded by the accused, whether he had any scar to show for it. The witness proceeded to show a huge scar on his thigh, on which lie remarked, “I wish he had wounded you in the side.” A happy use may also be made of insult. Hispo, for example, when the accuser charged him with scandalous crimes, replied, “You judge my character by your own”; while Fulvius Propinquus, when asked by the representative of the emperor whether the documents

which he produced were autographs, replied, “Yes, Sir, and the handwriting is genuine, too!”

[101] has aut accepi species aut inveni frequentissimas, ex quibus ridicula ducerentur; sed repetam necesse est, infinitas esse tam salse dicendi quam severe, quas praestat persona, locus, tempus, casus denique, qui est maxime varius.

[101] Such I have either learned from others or discovered from my own experience to be the commonest sources of humour. But I must repeat that the number of ways in which one may speak wittily are of no less infinite variety than those in which one may speak seriously, for they depend on persons, place, time and chances, which are numberless.

[102] itaque haec, ne omisisse viderer, attigi; illa autem, quae de usu ipso et modo iocandi complexus sum, audeo confirmare esse plane necessaria.

his adiicit Domitius Marsus, qui de urbanitate diligentissime scripsit, quaedam non ridicula, sed cuilibet severissimae orationi convenientia eleganter dicta et proprio quodam lepore iucunda; quae sunt quidem urbana sed risum tamen non habent.

[102] I have, therefore, touched on the topics of humour that I may not be taxed with having omitted them; but with regard to my remarks on the actual practice and manner of jesting, I venture to assert that they are absolutely indispensable.

To these Domitius Marsus, who wrote an elaborate treatise on *Urbanity*, adds several types of saying, which are not laughable, but rather elegant sayings with a certain charm and attraction of their own, which are suitable even to speeches of the most serious kind: they are characterized by a certain urbane wit, but not of a kind to raise a laugh.

[103] neque enim ei de risu sed de urbanitate est opus institutum, quam propriam esse nostrae civitatis et sero sic intelligi coeptam, postquam Urbis appellatione, etiamsi nomen proprium non adiiceretur, Romam tamen accipi sit receptum.

[103] And as a matter of fact his work was not designed to deal with humour, but with *urbane wit*, a quality which he regards as peculiar to this city, though it was not till a late period that it was understood in this sense, after the word *Urbs* had come to be accepted as indicating Rome without the addition of any proper noun. He defines it as follows:

[104] eamque sic finit: urbanitas est virtus quaedam in breve dictum coacta et apta ad delectandos mouendosque homines in omnem adfectum animi, maxime idonea ad resistendum vel lacessendum, prout quaeque res aut persona desiderat. cui si brevitatis exceptionem detraxeris, omnes orationis

virtutes complexa sit. nam si constat rebus et personis, quod in utrisque oporteat dicere perfectae eloquentiae est. cur autem brevem esse eam voluerit, nescio, cum idem atque

[104] “Urbanity is a certain quality of language compressed into the limits of a brief saying and adapted to delight and move men to every kind of emotion, but specially suitable to resistance or attack according as the person or circumstances concerned may demand.” But this definition, if we except the quality of brevity, includes all the virtues of oratory. For it is entirely concerned with persons and things to deal with which in appropriate language is nothing more nor less than the task of perfect eloquence. Why he insisted on brevity being essential I do not know,

[105] in eodem libro dicat fuisse in multis narrandi urbanitatem. paulo post ita finit, Catonis (ut ait) opinionem secutus, urbanus homo erit, cuius multa bene dicta responsaque erunt, et qui in sermonibus, circulis, conviviis, item in contionibus, omni denique loco ridicule commodeque dicet. risus erunt, quicunque haec faciet orator.

[105] since in the same book he asserts that many speakers have revealed their *urbanity* in narrative. And a little later he gives the following definition, which is, as he says, based on the views expressed by Cato: “Urbanity is the characteristic of a man who has produced many good sayings and replies, and who, whether in conversation, in social or convivial gatherings, in public speeches, or under any other circumstances, will speak with humour and appropriateness. If any orator do this, he will undoubtedly succeed in making his audience laugh.”

[106] quas si recipimus finitiones, quidquid bene dicetur, et urbane dicti nomen accipiet. ceterum illi, qui hoc proposuerat, consentanea fuit illa divisio, ut dictorum urbanorum alia seria, alia iocosa, alia media faceret. nam est eadem omnium bene dictorum. verum mihi etiam iocosa quaedam videntur posse in non satis urbana referri.

[106] But if we accept these definitions, we shall have to allow the title of *urbane* to anything that is well said. It was natural therefore that the author of this definition should classify such sayings under three heads, serious, humorous and intermediate, since all good sayings may be thus classified. But, in my opinion, there are certain forms of humorous saying that may be regarded as not possessing sufficient *urbanity*.

[107] nam meo quidem indicio illa est urbanitas, in qua nihil absonum, nihil agreste, nihil inconditum, nihil peregrinum neque sensu neque verbis neque ore gestuve possit deprehendi; ut non tam sit in singulis dictis quam in toto colore dicendi, qualis apud Graecos ἄττικισμὸς ille reddens Athenarum proprium saporem.

[107] For to my thinking *urbanity* involves the total absence of all that is incongruous, coarse, unpolished and exotic whether in thought, language, voice or gesture, and resides not so much in isolated sayings as in the whole complexion of our language, just as for the Greeks *Atticism* means that elegance of taste which was peculiar to Athens.

[108] ne tamen iudicium Marsi, hominis eruditissimi, subtraham, seria partitur in tria genera, honorificum, contumeliosum, medium. et honorifici ponit exemplum Ciceronis pro Ligario apud Caesarem, qui nihil soles oblivisci nisi iniurias;

[108] However, out of respect to the judgment of Marsus, who was a man of the greatest learning, I will add that he divides serious utterances into three classes, the honorific, the derogatory and the intermediate. As an example of the honorific he quotes the words uttered by Cicero in the *pro Ligario* with reference to Caesar, “You who forget nothing save injuries.”

[109] et contumeliosi, quod Attico scripsit de Pompeio et Caesare, habeo, quem fugiam; quem sequar, non habeo; et medii, quod ἀποφθεγματικόν vocat et est ita, cum dixerit, nec grave mortem accidere viro forti posse nec in maturam consulari neque miseram sapienti. quae omnia sunt optime dicta; sed cur proprie nomen urbanitatis accipiant, non video.

[109] The derogatory he illustrates by the words used by Cicero of Pompey and Caesar in a letter to Atticus: “I know whom to avoid, but whom to follow I know not.” Finally, he illustrates the intermediate, which he calls apophthegmatic (as it is), by the passage from Cicero’s speech against Catiline where he says, “Death can never be grievous to the brave nor premature for one who has been consul nor a calamity to one that is truly wise.” All these are admirable sayings, but what special title they have to be called *urbane* I do not see.

[110] quod si non totius, ut mihi videtur, orationis color meretur, sed etiam singulis dictis tribuendum est, illa potius urbana dixerim, quae sunt generis eiusdem, quo ridicula dicuntur et tamen ridicula non sunt, ut de Pollione Asinio seriis iocisque pariter accommodato dictum est esse eum omnium horarum;

[110] If it is not merely, as I think, the whole complexion of our oratory that deserves this title, but if it is to be claimed for individual sayings as well, I should give the name only to those sayings that are of the same general character as humorous sayings, without actually being humorous. I will give an illustration of what I mean. It was said of Asinius Pollio, who had equal gifts for being grave or gay, that he was “a man for all hours,”

[111] et de actore facile dicente ex tempore, ingenium eum in numerato habere; etiam Pompeii, quod refert Marsus, in Ciceronem diffidentem partibus, transi

ad Caesarem, me timebis. erat enim, si de re minore aut alio animo aut denique non ab ipso dictum fuisset, quod posset inter ridicula numerari.

[111] and of a pleader who was a fluent speaker extempore, that “his ability was all in ready money.” Of the same kind, too, was the remark recorded by Marsus as having been made by Pompey to Cicero when the latter expressed distrust of his party: “Go over to Caesar and you will be afraid of me.” Had this last remark been uttered on a less serious subject and with less serious purpose, or had it not been uttered by Pompey himself, we might have counted it among examples of humour.

[112] etiam illud, quod Cicero Caerelliae scripsit reddens rationem, cur illa C. Caesaris tempora tam patienter toleraret, haec aut animo Catonis ferenda sunt aut Ciceronis stomacho; stomachus enim ille habet aliquid ioco simile. haec, quae movebant, dissimulanda mihi non fuerunt; in quibus ut erraverim, legentes tamen non decepi, indicata et diverse opinione, quam sequi magis probantibus liberum est.

[112] I may also add the words used by Cicero in a letter to Caerellia to explain why he endured the supremacy of Caesar so patiently: “These ills must either be endured with the courage of Cato or the stomach of Cicero,” for here again the word “stomach” has a spice of humour in it. I felt that I ought not to conceal my feelings on this point. If I am wrong in my views, I shall not, at any rate, lead my readers astray, since I have stated the opposite view as well, which they are at liberty to adopt if they prefer it.

4. altercationis praecepta poterant videri tunc inchoanda, cum omnia, quae ad continuam orationem pertinent, peregissem, nam est usus eius ordine ultimus; sed, cum sit posita in sola inventione neque habere dispositionem possit nec elocutionis ornamenta magnopere desideret aut circa memoriam et pronuntiationem laboret, prius quam secundam quinque partium, hanc quae tota ex prima pendet tractaturus non alieno loco videor; quam scriptores alii fortasse ideo reliquerunt, quia satis ceteris praeceptis in hanc quoque videbatur esse prospectum.

4. With regard to the principles to be observed in forensic debate, it might seem that I should delay such instructions until I had finished dealing with all the details of continuous speaking, since such debates come after the set speeches are done. But since the art of debate turns on invention alone, does not admit of arrangement, has little need for the embellishments of style, and makes no large demand on memory or delivery, I think that it will not be out of place to deal with it here before I proceed to the second of the five parts, since it is entirely dependent on the first. Other writers have omitted to deal with it on the ground perhaps that they thought the subject had been sufficiently covered by their precepts on other topics.

[2] constat enim ex intentione ac depulsione, de quibus satis traditum est; quia,

quidquid in actione perpetua circa probationes utile est, idem in hac brevi atque concisa prosit necesse est. neque alia dicuntur in altercatione, sed aliter, aut interrogando aut respondendo. cuius rei fere omnis observatio in illo testium loco excussa nobis est.

[2] For debate consists in attack and defence, on which enough has already been said, since whatever is useful in a continuous speech for the purpose of proof must necessarily be of service in this brief and discontinuous form of oratory. For we say the same things in debate, though we say them in a different manner, since debate consists of questions and replies, a topic with which we have dealt fairly exhaustively in connexion with the examination of witnesses.

[3] tamen quia latius hoc opus aggressi sumus neque perfectus orator sine hac virtute dici potest, paululum impendamus huic quoque peculiaris operae, quae quidem in quibusdam causis ad victoriam vel plurimum valet.

[3] But since this work is designed on an ample scale and since no one can be called a perfect orator unless he be an expert debater, we must devote a little special attention to this accomplishment as well, which as a matter of fact is not seldom the deciding factor in a forensic victory.

[4] nam ut in qualitate generali, in qua rectene factum quid an contra sit quaeritur, perpetua dominatur oratio, et quaestionem finitionis actiones plerumque satis explicant et omnia paene, in quibus de facto constat aut coniectura artificiali ratione colligitur, ita in iis causis, quae sunt frequentissimae, quae vel solis extra artem probationibus vel mixtis continentur, asperissima in hac parte dimicatio est, nec alibi dixeris magis mucrone pugnari.

[4] For just as the continuous speech is the predominant weapon in general questions of quality (where the inquiry is as to whether an act was right or wrong), and as a rule is adequate to clear up questions of definition and almost all those in which the facts are ascertained or inferred by conjecture from artificial proof, so on the other hand those cases, which are the most frequent of all and depend on proofs which are either entirely inartificial or of a composite character, give rise to the most violent debates; in fact I should say that there is no occasion when the advocate has to come to closer grips with his adversary.

[5] nam et firmissima quaeque memoriae iudicis inculcanda sunt et praestandum quidquid in actione promissimus et refellenda mendacia. nusquam est denique qui cognoscit intentior. nec immerito quidam quanquam in dicendo mediocres hac tamen altercandi praestantia meruerunt nomen patronorum.

[5] For all the strongest points of the argument have to be sharply impressed on

the memory of the judge, while we have also to make good all the promises we may have made in the course of our speech and to refute the lies of our opponents. There is no point of a trial where the judge's attention is keener. And even mediocre speakers have not without some reason acquired the reputation of being good advocates simply by their excellence in debate.

[6] At quidam litigatoribus suis illum modo ambitiosum declamandi sudorem praestitisse contenti cum turba laudantium destituunt subsellia pugnamque illam decretoriam imperitis ac saepe pullatae turbae relinquunt.

[6] Some on the other hand think they have done their duty to their clients by an ostentatious and fatiguing display of elaborate declamation and straightway march out of court attended by an applauding crowd and leave the desperate battle of debate to uneducated performers who often are of but humble origin.

[7] itaque videas alios plerumque iudiciis privatis ad actiones advocari alios ad probationem. quae si dividenda sunt officia, hoc certe magis necessarium est, pudendumque dictu, si plus litigantibus prosunt minores. In publicis certe iudiciis vox illa praeconis praeter patronos ipsum, qui egerit, citat.

[7] As a result in private suits you will generally find that different counsel are employed to plead and to prove the case. If the duties of advocacy are to be thus divided, the latter duty must surely be accounted the more important of the two, and it is a disgrace to oratory that inferior advocates should be regarded as adequate to render the greater service to the litigants. In public cases at any rate the actual pleader is cited by the usher as well as the other advocates.

[8] opus est igitur inprimis ingenio veloci ac mobili, animo praesenti et acri. Non enim cogitandum, sed dicendum statim est et prope sub conatu adversarii manus exigenda. Quare cum in omni parte huiusce officii plurimum facit, totas non diligenter modo sed etiam familiariter nosse causas, tum in altercatione maxime necessarium est, omnium personarum, instrumentorum, temporum, locorum habere notitiam; alioqui et tacendum erit saepe et aliis subicientibus (plerumque autem studio loquendi fatue modo) accedendum; quo nonnunquam accidit, ut nostra credulitate aliena stultitia erubescamus.

[8] For debate the chief requisites are a quick and nimble understanding and a shrewd and ready judgment. For there is no time to think; the advocate must speak at once and return the blow almost before it has been dealt by his opponent. Consequently while it is most important for every portion of the case that the advocate should not merely have given a careful study to the whole case, but that he should have it at his fingers' ends, when he comes to the debate it is absolutely necessary that he should possess a thorough acquaintance with all the persons, instruments and circumstances of time and place involved: otherwise he will often be reduced to silence and forced to give a hurried assent to those who prompt him as to what he should say,

suggestions which are often perfectly fatuous owing to excess of zeal on the part of the prompter. As a result it sometimes happens that we are put to the blush by too ready acceptance of the foolish suggestions of another.

[9] neque tantum cum his ipsis monitoribus clam res erit; quidam faciunt aperte ut quoque rixentur. Videas enim plerosque ira percitos exclamantes, ut iudex audiat contrarium id esse, quod admoneatur, sciatque ille, qui pronuntiaturus est in causa,

[9] Moreover, we have to deal with others beside these prompters who speak for our ear alone. Some go so far as to turn the debate into an open brawl. For you may sometimes see several persons shouting angrily at the judge and telling him that the arguments thus suggested are contrary to the truth, and calling his attention to the fact that some point which is prejudicial to the case has been deliberately passed over in silence.

[10] malum quod tacetur. Quare bonus altercator vitio iracundiae careat; nullus enim rationi magis obstat adfectus et fert extra causam plerumque et deformia convicia facere ac mereri cogit et in ipsos nonnunquam iudices incitat. melior moderatio ac nonnunquam etiam patientia. neque enim refutanda tantum quae ex contrario dicuntur, sed contemnenda, elevanda, ridenda sunt; nec usquam plus loci recipit urbanitas. hoc, dum ordo est et pudor; contra turbantes audendum et impudentiae fortiter resistendum.

[10] Consequently the skilled debater must be able to control his tendency to anger; there is no passion that is a greater enemy to reason, while it often leads an advocate right away from the point and forces him both to use gross and insulting language and to receive it in return; occasionally it will even excite him to such an extent as to attack the judges. Moderation, and sometimes even longsuffering, is the better policy, for the statements of our opponents have not merely to be refuted: they are often best treated with contempt, made light of or held up to ridicule, methods which afford unique opportunity for the display of wit. This injunction, however, applies only so long as the case is conducted with order and decency: if, on the other hand, our opponents adopt turbulent methods we must put on a bold front and resist their impudence with courage.

[11] sunt enim quidam praeduri in hoc oris, ut obstrepant ingenti clamore et medios sermones intercipient et omnia tumultu confundant, quos ut non imitari sic acriter propulsare oportebit, et ipsorum improbitatem retundendo, et iudices vel praesidentes magistratus appellando frequentius, ut loquendi vices serventur. Non est res animi iacentis et mollis supra modum frontis, fallitque plerumque, quod probitas vocatur, quae est imbecillitas.

[11] For there are some advocates so brazen-faced that they bluster and bellow at us, interrupt us in the middle of a sentence and try to throw everything into confusion. While, then, it would be wrong to pay them the compliment of

imitation, we must none the less repel their onslaughts with vigour by crushing their insolence and making frequent appeals to the judges or presiding magistrates to insist on the observance of the proper order of speaking. The debater's task is not one that suits a meek temper or excessive modesty, and we are apt to be misled because that which is really weakness is dignified by the name of honesty.

[12] *valet autem in altercatione plurimum acumen, quod sine dubio ex arte non venit (natura enim non docetur), arte tamen adiuvatur.*

[12] But the quality which is the most serviceable in debate is acumen, which while it is not the result of art (for natural gifts cannot be taught), may none the less be improved by art.

[13] *In qua praecipuum est, semper id in oculis habere, de quo quaeritur et quod volumus efficere; quod propositum tenentes nec in rixam ibimus nec causae debita tempora conviciando conteremus gaudebimusque, si hoc adversarius facit.*

[13] In this connexion the chief essential is never for a moment to lose sight either of the question at issue or the end which we have in view. If we bear this in mind, we shall never descend to mere brawling nor waste the time allotted to the case by indulging in abuse, while we shall rejoice if our adversary does so.

[14] *omni tempore fere parata sunt meditatis diligenter, quae aut ex adverse dici aut responderi a nobis possunt. nonnunquam tamen solet hoc quoque esse artis genus, ut quaedam in actione dissimulata subito in altercando proferantur; est inopinatis eruptionibus aut incursioni ex insidiis factae simillimum. id autem tum faciendum, cum est aliquid, cui responderi non statim possit, potuerit autem, si tempus ad disponendum fuisset. nam quod fideliter firmum est a primis statim actionibus arripere optimum est, quo saepius diutiusque dicatur.*

[14] Those who have given a careful study to the arguments that are likely to be produced by their opponents or the replies which may be made by themselves are almost always ready for the fray. There is, however, a further device available which consists in suddenly introducing into the debate arguments which were deliberately concealed in our set speech: it is a procedure which resembles a surprise attack or a sally from an ambush. The occasion for its employment arises when there is some point to which it is difficult to improvise an answer, though it would not be difficult to meet if time were allowed for consideration. For solid and irrefutable arguments are best produced at once in the actual pleading in order that they may be repeated and treated at greater length.

[15] *illud vix saltem praeciendum videtur, ne turbidus et clamosus tantum sit altercator, et quales faceti sunt, qui litteras nesciunt. nam improbitas, licet*

adversario molesta sit, iudici invisae est. nocet etiam diu pugnare in iis quae obtinere non possis.

[15] I think I need hardly insist on the necessity for the avoidance in debate of mere violence and noise and such forms of pleasantries as are dear to the uneducated. For unscrupulous violence, although annoying to one's antagonist, makes an unpleasant impression on the judge. It is also bad policy to light hard for points which you cannot prove.

[16] nam, ubi vinci necesse est, expedit cedere; quia, sive plura sunt de quibus quaeritur, facilius erit in ceteris fides, sive unum, mitior solet poena irrogari verecundiae. nam culpam praesertim deprehensam pertinaciter tueri culpa altera est.

[16] For where defeat is inevitable, it is wisest to yield, since, if there are a number of other points in dispute, we shall find it easier to prove what remains, while if there is only one point at issue, surrender with a good grace will generally secure some mitigation of punishment. For obstinacy in the defence of a fault, more especially after detection, is simply the commission of a fresh fault.

[17] dum stat acies, multi res consilii atque artis est, ut errantem adversarium trahas et ire quam longissime cogas, ut vana interim spe exaltet. ideo quaedam bene dissimulantur instrumenta. instant enim et saepe discrimen omne committunt, quod deesse nobis putant, et faciunt probationibus nostris auctoritatem postulando.

[17] While the battle still rages, the task of luring on our adversary when he has once committed himself to error, and of forcing him to commit himself as deeply as possible, even to the extent at times of being puffed up with extravagant hopes of success, requires great prudence and skill. It is, therefore, wise to conceal some of our weapons: for our opponents will often press their attack and stake everything on some imagined weakness of our own, and will give fresh weight to our proofs by the instance with which they demand us to produce them.

[18] expedit etiam dare aliquid adversario quod pro se putet, quod apprehendens maius aliquid cogatur dimittere; duas interim res proponere quarum utramlibet male sit electurus; quod in altercatione fit potentius quam in actione, quia in illa nobis ipsi respondemus, in hac adversarium quasi confessum tenemus.

[18] It may even be expedient to yield ground which the enemy thinks advantageous to himself: for in grasping at the fancied advantage he may be forced to surrender some greater advantage: at times, too, it may serve our purpose to give him a choice between two alternatives, neither of which he can select without damage to his cause. Such a course is more effective in

debate than in a set speech, for the reason that in the latter we reply to ourselves, while in the former our opponent replies, and thereby delivers himself into our hands. It is, above all,

[19] *est inprimis acuti videre, quo iudex dicto moveatur, quid respuat; quod et vultu saepissime et aliquando etiam dicto aliquo factove eius deprehenditur. et instare proficientibus et ab iis, quae non adiuvent, quam mollissime pedem oportet referre. faciunt hoc medici quoque, ut remedia proinde perseverent adhibere vel desinant, ut illa recipi vel respui vident.*

[19] the mark of a shrewd debater to perceive what remarks impress the judge and what he rejects: this may often be detected from his looks, and sometimes from some action or utterance. Arguments which help us must be pressed home, while it will be wise to withdraw as gently as possible from such as are of no service. We may take a lesson from doctors who continue or cease to administer remedies according as they note that they are received or rejected by the stomach. Sometimes,

[20] *nonnunquam, si rem evolvere propositam facile non sit, inferenda est alia quaestio, atque in eam iudex, si fieri potest, avocandus. quid enim, cum respondere non possis, agendum est, nisi ut aliud invenias, cui adversarius respondere non possit?*

[20] if we find difficulty in developing our point, it is desirable to raise another question and to divert the attention of the judge to it if this be feasible. For what can you do, if you are unable to answer an argument, save invent another to which your opponent can give no answer?

[21] *In plerisque idem est, ut dixi, qui circa testes locus et personis modo distat, quod hic patronorum inter se certamen, illic pugna inter testem et patronum.*

exercitatio vero huius rei longe facilior. nam est utilissimum, frequenter cum aliquo, qui sit studiorum eorundem, sumere materiam vel verae vel etiam fictae controversiae, et diversas partes altercationis modo tueri; quod idem etiam in simplici genere quaestionum fieri potest.

[21] In most respects the rules to be observed in debate are, as I have said, identical with those for the cross examination of witnesses, the only difference lying in the fact that the debate is a battle between advocates, whereas cross-examination is a fight between advocate and witness.

To practise the art of debate is, however, far easier. For it is most profitable to agree with a fellow-student on some subject, real or fictitious, and to take different sides, debating it as would be done in the courts. The same may also be done with the simpler class of questions.

[22] *ne illud quidem ignorare advocatum volo, quo quaeque ordine probatio sit apud iudicem proferenda; cuius rei eadem quae in argumentis ratio est, ut*

potentissima prima et summa ponantur. illa enim ad credendum praeparant iudicem, haec ad pronuntiandum.

[22] I would further have an advocate realise the order in which his proofs should be presented to the judge: the method to be followed is the same as in arguments: the strongest should be placed first and last. For those which are presented first dispose the judge to believe us, and those which come last to decide in our favour.

5. his pro nostra facultate tractatis non dubitassem transire protinus ad dispositionem, quae ordine ipso sequitur, nisi vererer ne, quoniam fuerunt qui iudicium inventioni subiungerent, praeterisse hunc locum quibusdam viderer, qui mea quidem opinione adeo partibus operis huius omnibus connexus ac mixtus est, ut ne a sententiis quidem aut verbis saltem singulis possit separari, nec magis arte traditur quam gustus aut odor.

5. Having dealt with these points to the best of my ability, I should have had no hesitation in proceeding to discuss arrangement, which is logically the next consideration, did I not fear that, since there are some who include judgment under the head of invention, they might think that I had deliberately omitted all discussion of judgment, although personally I regard it as so inextricably blent with and involved in every portion of this work, that its influence extends even to single sentences or words, and it is no more possible to teach it than it is to instruct the powers of taste and smell.

[2] ideoque nos, quid in quaque re sequendum cavendumque sit, docemus ac deinceps docebimus, ut ad ea iudicium dirigatur. praecipiam igitur, ne, quod effici non potest, aggrediamur, ut contraria vitemus et communia, ne quid in eloquendo corruptum, obscurum sit? referatur oportet ad sensus, qui non docentur.

[2] Consequently, all I can do is now and hereafter to show what should be done or avoided in each particular case, with a view thereby to guide the judgment. What use then is it for me to lay down general rules to the effect that we should not attempt impossibilities, that we should avoid whatever contradicts our case or is common to both, and shun all incorrectness or obscurity of style? In all these cases it is common sense that must decide, and common sense cannot be taught.

[3] nec multum a iudicio credo distare consilium, nisi quod illud ostendentibus se rebus adhibetur, hoc latentibus et aut omnino nondum repertis aut dubiis. et iudicium frequentissime certum est, consilium vero est ratio quaedam alte petita et plerumque plura perpendens et comparans habensque in se et inventionem et iudicationem.

[3] There is no great difference, in my opinion, between judgment and sagacity, except that the former deals with evident facts, while the latter is concerned

with hidden facts or such as have not yet been discovered or still remain in doubt. Again judgment is more often than not a matter of certainty, while sagacity is a form of reasoning from deep-lying premises, which generally weighs and compares a number of arguments and in itself involves both invention and judgment.

[4] Sed ne de hoc quidem praecepta in universum expectanda sunt. nam ex re sumitur cuius locus ante actionem est frequenter; nam Cicero summo consilio videtur in Verrem vel contrahere tempora dicendi maluisse quam in eum annum, quo erat Q. Hortensius consul futurus, incidere.

[4] But here again you must not expect me to lay down any general rules. For sagacity depends on circumstances and will often find its scope in something preceding the pleading of the cause. For instance in the prosecution of Verres Cicero seems to have shown the highest sagacity in preferring to cut down the time available for his speech rather than allow the trial to be postponed to the following year when Quintus Hortensius was to be consul.

[5] et in ipsis actionibus primum ac potentissimum obtinet locum; nam, quid dicendum, quid tacendum, quid differendum sit, exigere consilii est; negare sit satis an defendere, ubi prooemio utendum et quali, narrandumne et quomodo, iure prius pugnandum an aequo, qui sit ordo utilissimus, tum omnes colores, aspere an leniter an etiam summis loqui expedit.

[5] And again in the actual pleading sagacity holds the first and most important place. For it is the duty of sagacity to decide what we should say and what we should pass by in silence or postpone; whether it is better to deny an act or to defend it, when we should employ an exordium and on what lines it should be designed, whether we should make a statement of facts and if so, how, whether we should base our plea on law or equity and what is the best order to adopt, while it must also decide on all the nuances of style, and settle whether it is expedient to speak harshly, gently or even with humility.

[6] Sed haec quoque, ut quisque passus est locus, monuimus, idemque in reliqua parte faciemus; pauca tamen exempli gratia ponam, quibus manifestius appareat quid sit, quod demonstrari posse praeceptis non arbitror.

[6] But I have already given advice on all these points as far as each occasion permitted, and I shall continue to do the same in the subsequent portions of this work. In the meantime, however, I will give a few instances to make my meaning clearer, since it is not possible, in my opinion, to do so by laying down general rules.

[7] laudatur consilium Demosthenis, quod, cum suaderet bellum Atheniensibus parum id prospere expertis, nihil adhuc factum esse ratione monstrat. poterat enim emendari negligentia; at, si nihil esset erratum, melioris in posterum spei non erat ratio.

[7] We praise Demosthenes for his sagacity because when he urged a policy of war upon the Athenians after they had met with a series of reverses, he pointed out that so far their action had been entirely irrational. For they might still make amends for their negligence, whereas, if they had made no mistakes, they would have had no ground for hopes of better success in the future. Again,

[8] idem, cum offensam vereretur, si obiurgaret populi segnitiam in asserenda libertate rei publicae, maiorum laude uti maluit, qui rem publicam fortissime administrassent. nam et faciles habuit aures, et natura sequebatur, ut meliora probantes peiorum paeniteret.

[8] since he feared to give offence if he taxed the people with lack of energy in defending the liberties of their country, he preferred to praise their ancestors for their courageous policy. Thus lie gained a ready hearing, with the natural result that the pride which they felt in the heroic past made them repent of their own degenerate behaviour.

[9] Ciceronis quidem vel una pro Cluentio quamlibet multis exemplis sufficiet oratio. nam quod in eo consilium maxime mirer? primamne expositionem, qua matri, cuius filium premebat auctoritas, abstulit fidem? an quod iudicii corrupti crimen transferre in adversarium maluit quam negare propter inveteratam, ut ipse dicit, infamiam? an quod in re invidiosa legis auxilio novissime est usus, quo genere defensionis etiam offendisset nondum praemollitas iudicum mentes? an quod se ipsum invito Cluentio facere testatus est?

[9] If we turn to Cicero, we shall find that one speech alone, the *pro Cluentio*, will suffice to provide a number of examples. The difficulty is to know what special exhibition of sagacity to admire most in this speech. His opening statement of the case, by which he discredited the mother whose authority pressed so hardly on her son? The fact that he preferred to throw the charge of having bribed the jury back upon his opponents rather than deny it on account of what he calls the notorious infamy of the verdict? Or his recourse, last of all, to the support of the law in spite of the odious nature of the affair, a method by which lie would have set the judges against him but for the fact that he had already softened their feelings towards him? Or the skill which lie shows in stating that he has adopted this course in spite of the protests of his client?

[10] quid pro Milone? quod non ante narravit, quam praeiudiciis omnibus reum liberaret? quod insidiarum invidiam in Clodium vertit, quanquam revera fuerat pugna fortuita? quod factum et laudavit et tamen voluntate Milonis removit? quod illi preces non dedit et in earum locum ipse successit? infinitum est enumerare, ut Cottae detraxerit auctoritatem, ut pro Ligario se opposuerit, Cornelium ipsa confessionis fiducia eripuerit.

[10] What again am I to select as an outstanding instance of his sagacity in the *pro Milone*? The fact that he refrains from proceeding to his statement of facts until he has cleared the ground by disposing of the previous verdicts against the accused? The manner in which he turns the odium of the attempted ambush against Clodius, although as a matter of fact the encounter was a pure chance? The way in which he at one and the same time praised the actual deed

and showed that it was forced upon his client? Or the skill with which he avoided making Milo plead for consideration and undertook the role of suppliant himself? It would be an endless task to quote all the instances of his sagacity, how he discredited Cotta, how he put forward his own case in defence of Ligarius and saved Cornelius by his bold admission of the facts. It is enough, I think,

[11] *illud dicere satis habeo, nihil esse non modo in orando, sed in omni vita prius consilio, frustra sine eo tradi ceteras artes, plusque vel sine doctrina prudentiam quam sine prudentia facere doctrinam. aptare etiam orationem locis, temporibus, personis est eiusdem virtutis. Sed hic quia latius fusus est locus mixtusque cum elocutione, tractabitur cum praecipere de apte dicendo coeperimus.*

[11] to say that there is nothing not merely in oratory, but in all the tasks of life that is more important than sagacity and that without it all formal instruction is given in vain, while prudence unsupported by learning will accomplish more than learning unsupported by prudence. It is sagacity again that teaches us to adapt our speech to circumstances of time and place and to the persons with whom we are concerned. But since this topic covers a wide field and is intimately connected with eloquence itself, I shall reserve my treatment of it till I come to give instructions on the subject of appropriateness in speaking.

LIBER VII — BOOK VII

pr. de inventione, ut arbitror, satis dictum est. neque enim ea demum, quae ad docendum pertinent, exsecuti sumus, verum etiam motus animorum tractavimus. sed ut opera exstruentibus satis non est saxa atque materiam et cetera aedificanti utilia congerere, nisi disponendis eis collocandisque artificium manus adhibeatur, sic in dicendo quamlibet abundans rerum copia cumulum tantum habeat atque congestum, nisi illas eadem dispositio in ordinem digestas atque inter se commissas devinxerit.

[1] I think that enough has been said on the subject of invention. For I have dealt not merely with the methods by which we may instruct the judge, but also with the means of appealing to his emotions. But just as it is not sufficient for those who are erecting a building merely to collect stone and timber and other building materials, but skilled masons are required to arrange and place them, so in speaking, however abundant the matter may be, it will merely form a confused heap unless arrangement be employed to reduce it to order and to give it connexion and firmness of structure.

[2] nec immerito secunda quinque partium posita est, cum sine ea prior nihil valeat. neque enim quanquam fuis omnibus membris statua sit, nisi collocetur, et si quam in corporibus nostris aliorumve animalium partem permutes et transferas, licet haheat eadem omnia, prodigium sit tamen. Et artus etiam leviter loco moti perdunt quo viguerunt usum, et turbati exercitus sibi ipsi sunt impedimento.

[2] Nor is it without good reason that arrangement is treated as the second of the five departments of oratory, since without it the first is useless. For the fact that all the limbs of a statue have been cast does not make it a statue: they must be put together; and if you were to interchange some one portion of our bodies or of those of other animals with another, although the body would be in possession of all the same members as before, you would none the less have produced a monster. Again even a slight dislocation will deprive a limb of its previous use and vigour, and disorder in the ranks will impede the movements of an army.

[3] nec mihi videntur errare qui ipsam rerum naturam stare ordine putant, quo confuso peritura sint omnia. sic oratio carens hac virtute tumultuetur necesse est et sine rectore fluitet nec cohaereat sibi, multa repetat, multa transeat, velut nocte in ignotis locis errans, nec initio nec fine proposito casum potius quam consilium sequatur. quapropter totus hic liber serviat dispositioni,

[3] Nor can I regard as an error the assertion that order is essential to the existence of nature itself, for without order everything would go to wrack and ruin. Similarly if oratory lack this virtue, it cannot fail to be confused, but will

be like a ship drifting without a helmsman, will lack cohesion, will fall into countless repetitions and omissions, and, like a traveller who has lost his way in unfamiliar country, will be guided solely by chance without fixed purpose or the least idea either of starting-point or goal.

[4] quae quidem, si certa aliqua via tradi in omnes materias ullo modo posset, non tam paucis contigisset. sed cum infinitae litium formae fuerint futuraeque sint et tot saeculis nulla reperta sit causa, quae esset tota alteri similis, sapiat oportet actor et vigilet et inveniat et iudicet et consilium a se ipso petat. neque infitias eo quaedam esse quae demonstrari possint, eaque non omittam.

[4] The whole of this book, therefore, will be devoted to arrangement, an art the acquisition of which would never have been such a rarity, had it been possible to lay down general rules which would suit all subjects. But since cases in the courts have always presented an infinite variety, and will continue to do so, and since through all the centuries there has never been found one single case which was exactly like any other, the pleader must rely upon his sagacity, keep his eyes open, exercise his powers of invention and judgment and look to himself for advice. On the other hand, I do not deny that there are some points which are capable of demonstration and which accordingly I shall be careful not to pass by.

1. sit igitur, ut supra significavi, divisio rerum plurium ex singulas, partitio singularum ex partes discretio, ordo recta quaedam collocatio prioribus sequentia adnectens, dispositio utilis rerum ac partium ex locos distributio.

1. *Division*, as I have already stated, means the division of a group of things into its component parts, *partition* is the separation of an individual whole into its elements, *order* the correct disposition of things in such a way that what follows coheres with what precedes, while *arrangement* is the distribution of things and parts to the places which it is expedient that they should occupy.

[2] sed meminerimus ipsam dispositionem plerumque utilitate mutari nec eandem semper primam quaestionem ex utraque parte tractandam. cuius rei, ut cetera exempla praeteream, Demosthenes quoque atque Aeschines possunt esse documento ex iudicio Ctesiphontis diversum secuti ordinem, cum accusator a iure, quo videbatur potentior, coeperit, patronus omnia paene ante ius posuerit, quibus iudicem quaestioni legum praepareret.

[2] But we must remember that *arrangement* is generally dependent on expediency, and that the same question will not always be discussed first by both parties. An example of what I mean, to quote no others, is provided by Demosthenes and Aeschines, who adopt a different order in the trial of Ctesiphon, since the accuser begins by dealing with the legal question involved, in which he thought he had the advantage, whereas the advocate for the defence treats practically every other topic before coming to the question

of law, with a view to preparing the judges for a consideration of the legal aspect of the case.

[3] aliud enim alii docere prius expedit, alioqui semper petitoris arbitrio diceretur; denique ex accusatione mutua, cum se uterque defendat, priusquam adversarium arguat, omnium rerum necesse est ordinem esse diversum. igitur, quid ipse sim secutus, quod partim praeceptis partim usurpatum ratione cognoveram, promam nec unquam dissimulavi.

[3] For it will often be expedient for the parties to place different points first; otherwise the pleading would always be determined by the good pleasure of the prosecution. Finally, in a case of mutual accusation, where both parties have to defend themselves before accusing their antagonist, the order of everything must necessarily be different. I shall therefore set forth the method adopted by myself, about which I have never made any mystery: it is the result in part of instruction received from others, in part of my own reasoning.

[4] erat mihi curae ex controversiis forensibus nosse omnia, quae ex causa versarentur. nam ex schola certa sunt et pauca et ante declamationem exponuntur, quae themata Graeci vocant, Cicero proposita. cum haec ex conspectu quodammodo collocaveram, non minus pro adversa parte quam promea cogitabam.

[4] When engaged in forensic disputes I made it a point to make myself familiar with every circumstance connected with the case. (In the schools, of course, the facts of the case are definite and limited in number and are moreover set out before we begin to declaim: the Greeks call them *themes*, which Cicero translates by *propositions*.) When I had formed a general idea of these circumstances, I proceeded to consider them quite as much from my opponent's point of view as from my own.

[5] Et primum (quod non difficile dictu est sed tamen ante omnia intuendum) constituebam, quid utraque pars vellet efficere, tum per quid, hoc modo. cogitabam, quid primum petitor diceret. id aut confessum erat aut controversum.

[5] The first point which I set myself to determine (it is easy enough to state, but is still all-important) was what each party desired to establish and then what means he was likely to adopt to that end. My method was as follows. I considered what the prosecutor would say first: his point must either be admitted or controversial: if admitted, no question could arise in this connexion.

[6] Si confessum, non poterat ibi esse quaestio. transibam ergo ad responsum partis alterius, idem intuebar; nonnunquam etiam quod inde obtinebatur confessum erat. ubi primum coeperat non convenire, quaestio oriebatur. id tale est: occidisti hominem; Occidi.

[6] I therefore passed to the answer of the defence and considered it from the same standpoint: even there the point was sometimes one that was admitted. It was not until the parties ceased to agree that any question arose. 'fake for example the following case. "You killed a man." "Yes, I killed him." Agreed, I pass to the defence,

[7] *convenit; transeo. rationem reddere debet reus, quare occiderit. adulterum, inquit, cum adultera occidere licet. legem esse certum est. tertium iam aliquid videndum est, ex quo pugna consistat. non fuerunt adulleri; Fuerunt: quaestio;*

[7] which has to produce the motive for the homicide. "It is lawful," lie urges, "to kill an adulterer with his paramour." Another admitted point, for there is no doubt about the law. We must look for a third point where the two parties are at variance. "They were not adulterers," say the prosecution; "They were," say the defence. Here then is the question at issue: there is a doubt as to the facts, and it is therefore a question of *conjecture*. Sometimes even the third point may be admitted;

[8] *de facto ambigitur, coniectura est. interim et hoc tertium confessum est adulteros fuisse sed tibi, inquit accusator, illos non licuit occidere; exul enim eras, aut ignominiosus. De iure quaeritur. at si protinus dicenti occidisti respondeatur non occidi, statim pugna est.*

Si explorandum est, ubi controversia incipiat, et considerari debet, quid primam quaestionem faciat. Intentio simplex, occidit Saturninum Rabirius;

[8] it is granted that they were adulterers. "But," says the accuser, "you had no right to kill them, for you were an exile" or "had forfeited your civil rights." The question is now one of law. On the other hand, if when the prosecution says, "You killed them," the defence at once replies, "I did not," the issue is raised without more delay.

If it requires some search to discover where the dispute really begins, we must consider what constitutes the first question. The charge may be simple,

[9] *coniuncta, lege de sicariis commisit L. Varenus. nam C. Varenus occidendum et Cn. Varenus vulnerandum et Salarium item occidendum curavit. Nam sic diuersae propositiones erunt; quod idem de petitionibus dictum sit. verum ex coniuncta propositione plures esse quaestiones ac status possunt, si aliud negat reus, aliud defendit, aliud a iure actionis excludit. In quo genere agenti est dispiciendum, quid quoque loco diluat.*

[9] as for example "Rabirius killed Saturninus," or complex like the following: "The offence committed by Lucius Varenus falls under the law of assassination for he procured the murder of Gaius Varenus, the wounding of Gnaeus Varenus and also the murder of Salarinus." In the latter case there will be a number of propositions, a statement which also applies to civil suits as well. But in a complex case there may be a number of *questions* and *bases*: for

instance the accused may deny one fact, justify another and plead technical grounds to show that a third fact is not actionable. In such cases the pleader will have to consider what requires refutation and where that refutation should be placed.

[10] *quod pertinet ad actorem, non plane dissentio a Celso, qui sine dubio Ciceronem secutus instat tamen huic parti vehementius, ut putet primo firmum aliquid esse ponendum, summo firmissimum, imbecilliora medio, quia et initio movendus sit iudex et summo impellendus.*

[10] As regards the prosecutor, I do not altogether disagree with Celsus, who, though no doubt in so doing he is following the practice of Cicero, insists with some vehemence on the view that the first place should be given to some strong argument, but that the strongest should be reserved to the end, while the weaker arguments should be placed in the middle, since the judge has to be moved at the beginning and forcibly impelled to a decision at the end. But with the defence it is different:

[11] *at pro reo plerumque gravissimum quidque primum movendum est, ne illud spectans iudex reliquorum defensionis sit aversior. interim tamen et hoc mutabitur, si leviora illa palam falsa erunt, gravissimi defensio difficilior, ut detracta prius accusatoribus fide aggrediamur ultimum, iam iudicibus omnia vana esse credentibus. opus erit tamen praefatione, qua et ratio reddatur dilati criminis et promittatur defensio, ne id quod non statim diluamus timere videamur.*

[11] the strongest arguments as a rule require to be disposed of first, for fear that the judge through having his thoughts fixed on those arguments should regard the defence of other points with disfavour. Sometimes, however, this order is subject to alteration; for example if the minor arguments are obviously false and the refutation of the most serious argument a matter of some difficulty, we should attack it last of all, after discrediting the prosecution by demonstrating the falsity of the former, thereby disposing the judges to believe that all their arguments are equally unreliable. We shall, however, require to preface our remarks by explaining why we postpone dealing with the most serious charge, and by promising that we will deal with it at a later stage: otherwise the fact that we do not dispose of it at once may give the impression that we are afraid of it.

[12] *anteactae vitae crimina plerumque prima purganda sunt, ut id, de quo laturus est sententiam iudex, audire propitius incipiat. sed hoc quoque pro Vareno Cicero ex ultimum distulit, non quid frequentissime sed quid tum expediret intuitus.*

[12] Charges brought against the past life of the accused should generally be dealt with first in order that the judge may be well disposed to listen to our defence on that point on which he has to give his verdict. But Cicero in the

pro Vareno postpones his treatment of such charges to the conclusion, being guided not by the general rule, but by the special circumstances of the case.

[13] *cum simplex intentio erit, videndum est, unum aliquid respondeamus an plura. Si unum, ex re quaestionem instituamus an ex scripto; si ex re, negandum sit quod obiicitur an tuendum; si ex scripto, ex qua specie iuris pugna sit, et ex ea, de verbis an de voluntate quaeratur.*

[13] When the accusation is simple, we must consider whether to give a single answer to the charge or several. In the former case, we must decide whether the question is one of fact or of law: if it is one of fact, we must deny the fact or justify it: if, on the other hand, it is a question of law, we must decide on what special point the dispute arises and whether the question turns on the letter or the intention of the law.

[14] *id ita consequemur, si intuiti fuerimus, quae sit lex quae litem faciat, hoc est, qua iudicium sit constitutum. nam quaedam ex scholasticis ponuntur ad coniungendam modo actae rei seriem, ut puta: expositum qui agnouerit, solutis alimentis recipiat. minus dicto audientem filium liceat abdicare. qui expositum recepit, imperat ei nuptias locupletis propinquae; ille deducere vult filiam pauperis educatoris.*

[14] We shall do this by considering what the law is which gives rise to the dispute, that is to say under what law the court has been constituted. In scholastic themes, for example, the laws are sometimes stated merely with a view to connecting the arguments of the cases. Take the following case: “A father who recognises a son whom he has exposed in infancy, shall only take him back after paying for his keep. A disobedient son may be disinherited. A man who took back a son whom he had exposed orders him to marry a wealthy neighbour. The son desires to marry the daughter of the poor man who brought him up.”

[15] *lex de expositis ad adfectum pertinet; iudicium pendet ex lege abdicationis. nec tamen semper ex una lege quaestio est, ut ex antinomia. his spectatis apparebit circa quod pugna sit.*

[15] The law about children who have been exposed affords scope for emotional treatment, while the decision of the court turns on the law of disinheritance. On the other hand, a question may turn on more laws than one, as in cases of ἀντινομία or contradictory laws. It is by consideration of such points as these that we shall be able to determine the point of law out of which the dispute arises.

[16] *coniuncta defensio est, qualis pro Rabirio: Si occidisset, recte fecisset; sed non occidit. ubi vero multa contra unam propositionem dicimus, cogitandum est primum quidquid dici potest, tum ex his quo quidque loco dici expediat aestimandum. In quo non idem sentio, quod de propositionibus paulo ante,*

quodque de argumentis probationum loco concessi, posse aliquando nos incipere a firmioribus.

[16] As an example of complex defence I may quote the *pro Rabirio*: "If he had killed him, he would have been justified in so doing: but he did not kill him." But when we advance a number of points in answer to a single proposition, we must first of all consider everything that can be said on the subject, and then decide which out of these points it is expedient to select and where to put them forward. My views on this subject are not identical with those which I admitted a little while ago on the subject of *propositions* and on that of *arguments* in the section which I devoted to *proofs*, to the effect that we may sometimes begin with the strongest.

[17] nam vis quaestionum semper crescere debet et ad potentissima ab infirmissimis pervenire, sive sunt eiusdem generis sive diversi.

[17] For when we are defending, there should always be an increase of force in the treatment of questions and we should proceed from the weaker to the stronger, whether the points we raise are of the same or of a different character.

[18] iuris autem quaestiones solent esse nonnunquam ex alis atque allis confictionibus, facti semper idem spectant; ex utroque genere similis ordo est. sed prius de dissimilibus, ex quibus infirmissimum quidque primum tractari oportet, ideo quod quasdam quaestiones exsecuti donate solemus et concedere; neque enim transire ad alias possumus nisi omissis prioribus. quod ipsum ita fieri oportet,

[18] Questions of law will often arise from one ground of dispute after another, whereas questions of fact are always concerned with one point; but the order to be followed is the same in both cases. We must, however, deal first with points that differ in character. In such cases the weakest should always be handled first, for the reason that there are occasions when after discussing a question we make a concession or present of it to our opponents: for we cannot pass on to others without dropping those which come first.

[19] non ut damnasse eas videamur, sed omisisse, quia possumus etiam sine eis vincere. procurator alicuius pecuniam petit ex fenore hereditario: potest incidere quaestio, an huic esse procuratori liceat.

[19] This should be done in such a way as to give the impression not that we regard the points as desperate, but that we have deliberately dropped them because we can prove our case without them. Suppose that the agent for a certain person claims the interest on a loan as due under an inheritance. The question may here arise whether such a claim can be made by an agent. Assume that, after discussing the question,

[20] finge nos, postquam tractavimus eam, remittere vel etiam convinci:

quaeretur, an ei, cuius nomine litigatur, procuratorem habendi sit ius. discedamus hinc quoque: recipit materia quaestionem, an ille, cuius nomine agitur, heres sit feneratoris an ex asse heres. haec quoque concessa sint:

[20] we drop it or that the argument is refuted. We then raise the question whether the person in whose name the action is brought has the right to employ an agent. Let us yield this point also. The case will still admit of our raising the question whether the person in whose name the suit is brought is heir to the person to whom the interest was due and again whether he is sole heir.

[21] quaeretur an debeatur. contra nemo tam demens fuerit, ut cum id quod firmissimum duxerit se habere protulerit, remittat illud et ad leviora transcendat. huic ex schola simile est: non abdicabis adoptatum; ut hunc quoque, non virum. fortem; ut et fortem, non qui cuicunque voluntati tuae non paruerit; ut ex alia omnia subiectus sit, non propter optionem; ut propter optionem, non propter talem optionem. Haec iuris quaestionum differentia est.

[21] Grant these points also and we can still raise the question whether the sum is due at all? On the other hand, no one will be so insane as to drop what he considers his strongest point and pass to others of minor importance. The following case from a scholastic theme is of a similar character. "You may not disinherit your adopted son. And if you may disinherit him *quâ* adopted son, you may not disinherit one who is so brave. And if you may disinherit one who is so brave, you may not disinherit him because he has not obeyed your every command; and if he was bound to obey you in all else, you may not disinherit him on the ground of his choice of a reward; and even if the choice of a reward may give just ground for disinheriting, that is not true of such a choice as he actually made.

[22] In factis autem ad idem tendentia sunt plura, ex quibus aliqua citra summam quaestionem remitti solent; ut si is, cum quo furti agitur, dicat: proba te habuisse, proba perdidisse, proba furto perdidisse, proba mea fraude. priora enim remitti possunt, ultimum non potest.

[22] "Such is the nature of dissimilarity where points of law are concerned. Where, however, the question is one of fact, there may be several points all tending to the same result, of which some may be dropped as not essential to the main issue, as for instance if a man accused of theft should say to his accuser, "Prove that you had the property, prove that you lost it, prove that it was stolen, prove that it was stolen by me." The first three can be dropped, but not the last.

I used also to employ the following method.

[23] solebam et hoc facere, ut vel ab ultima specie (nam ea fere est, quae continue causam) retrorsum quaererem usque ad primam generalem

quaestionem, vel a genere ad extremam speciem descenderem, etiam ex suasoriis.

[23] I went back from the ultimate *species* (which generally contains the vital point of the case) to the first general question or descended from the *genus* to the ultimate *species*, applying this method even to deliberative themes.

[24] Vt deliberat Numa, an regnum offerentibus Romanis recipiat. primum, id est genus, an regnandum, tum an ex civitate aliena, an Romae, an laturi sint Romani talem regem. similiter ex controversiis. optet enim vir fortis alienam uxorem. ultima species est, an optare possit alienam uxorem. generale est, an quidquid optarit, accipere debeat. inde, an ex privato, an nuptias, an maritum habentis.

[24] For example, Numa is deliberating whether to accept the crown offered him by the Romans. First he considers the general question, "Ought I to be a king?" Then, "Ought I to be king in a foreign state? Ought I to be king at Rome? Are the Romans likely to put up with such a king as myself?" So too in controversial themes. Suppose a brave man to choose another man's wife as his reward. The ultimate *species* is found in the question whether he is allowed to choose another man's wife. The *general* question is whether he should be given whatever he chooses. Next come questions such as whether he can choose his reward from the property of private individuals, whether he can choose a bride as his reward, and if so, whether he can choose one who is already married.

[25] sed hoc non, quemadmodum dicitur, ita et quaeritur. primum enim occurrit fere, quod est ultimum dicendum, ut hoc, non debes alienam uxorem optare, ideoque divisionem perdit festinatio. non oportet igitur offerentibus se contentum esse, sed quaerere aliquid quod ultra est, ne uiduam quidem. adhuc plus est, nihil ex privato. ultimum retrorsum, quod idem a capite primum est, nihil iniquum. itaque propositione visa,

[25] But in our search for such questions we follow an order quite different from that which we employ in actual speaking. For that which as a rule occurs to us first, is just that which ought to come last in our speech: as for instance the conclusion, "You have no right to choose another man's wife." Consequently undue haste will spoil our division of the subject. We must not therefore be content with the thoughts that first offer themselves, but should press our inquiry further till we reach conclusions such as that he ought not even to choose a widow: a further advance is made when we reach the conclusion that he should choose nothing that is private property, or last of all we may go back to the question next in order to the general question, and conclude that he should choose nothing inequitable.

[26] quod est facillimum, cogitemus, si fieri potest, quid naturale sit primum responderi. id si, tanquam res agatur et nobis ipsis respondendi necessitas sit,

intueri voluerimus, occurret.

[26] Consequently after surveying our opponent's proposition, an easy task, we should consider, if possible, what it is most natural to answer first. And, if we imagine the case as being actually pleaded and ourselves as under the necessity of making a reply, that answer will probably suggest itself. On the other hand,

[27] Si id non contigerit, seponamus id quod primum se obtulerit, et ipsi nobiscum sic loquamur: quid si hoc non esset? id iterum et tertium et dum nihil sit reliqui. itaque inferiora quoque scrutabimur, quae tractata faciliorem nobis iudicem ex summa quaestione facient.

[27] if this is impossible, we should put aside whatever first *occurs* to us and reason with ourselves as follows: "What if this were not the case?" We must then repeat the process a second and a third time and so on, until nothing is left for consideration. Thus we shall examine even minor points, by our treatment of which we may perhaps make the judge all the better disposed to us when we come to the main issue.

[28] non dissimile huic est et illud praeceptum, ut a communibus ad propria veniamus. fere enim communia generalia sunt. commune est, tyrannum occidit; proprium, patrem tyrannum occidit; mulier occidit, uxor occidit.

[28] The rule that we should descend from the *common* to the *particular* is much the same, since what is *common* is usually *general*. For example, "He killed a tyrant" is *common*, while "A tyrant was killed by his son, by a woman or by his wife" are all *particular*.

[29] solebam et excerpere, quid mihi cum adversario conveniret, si modo id pro me erat, nec solum premere confessionem, sed partiendo multiplicare, ut ex illa controversia, dux., qui competitorem patrem ex suffragiis vicerat, captus est; euntes ad redemptionem eius legati obvium habuerunt patrem revertentem ab hostibus.

[29] I used also to note down separately whatever was admitted both by my opponent and myself, provided it suited my purpose, and not merely to press any admissions that he might make, but to multiply them by partition, as for example in the following controversial theme:— "A general, who had stood against his father as a candidate and defeated him, was captured: the envoys who went to ransom him met his father returning from the enemy. He said to the envoys, 'You are too late.'

[30] is legatis dixit: Sero itis. excusserunt illi patrem et aurum ex sinu eius invenerunt; ipsi perseverarunt ire quo intenderant; invenerunt ducem crucifixum, cuius uox fuit: caute proditorem. reus est pater. quid convenit? proditio nobis praedicta est et praedicta a duce; quaerimus proditorem. te isse ad hostes fateris et isse clam et ab his incolumem redisse, aurum retulisse et

aurum occultum habuisse. nam,

[30] They searched the father and found gold in his pockets. They pursued their journey and found the general crucified. He cried to them, ‘ Beware of the traitor.’ The father is accused.” What points are admitted by both parties? “We were told that there had been treason and told it by the general.” We try to find the traitor. “You admit that you went to the enemy, that you did so by stealth, that you returned unscathed, that you brought back gold and had it concealed about your person.”

[31] quod fecit, id nonnunquam potentius fit propositione; quae si animos occupavit, prope aures ipsae defensionis praeccluduntur. In totum autem congregatio criminum accusantem adiuvat, separatio defendentem.

solebam id, quod fieri et ex argumentis dixi, ex tota facere materia, ut propositis extra quae nihil esset omnibus, deinde ceteris remotis, solum id superesset quod credi volebam,

[31] For an act of the accused may sometimes be stated in such a way as to tell heavily against him, and if our statement makes a real impression on the mind of the judge, it may serve to close his ears to all that is urged by the defence. For as a general rule it is of advantage to the accuser to mass his facts together and to the defence to separate them.

I used also, with reference to the whole material of the case, to do what I have already mentioned as being done with arguments, namely, after first setting forth all the facts without exception, I then disposed of all of them with the one exception of the fact which I wished to be believed. For example, in charges of collusion it may be argued as follows.

[32] ut ex praevaricationum criminibus: Vt absolvatur reus, aut innocentia ipsius fit aut interveniente aliqua potestate aut vi aut corrupto iudicio aut difficultate probationis aut praevaricatione. nocentem fuisse confiteris, nulla potestas obstitit, nulla vis, corruptum iudicium non quereris, nulla probandi difficultas fuit: quid superest, nisi ut praevaricatio fuerit?

[32] “The means for securing the acquittal of an accused person are strictly limited. His innocence may be established, some superior authority may intervene, force or bribery may be employed, his guilt may be difficult to prove, or there may be collusion between the advocates. You admit that he was guilty; no superior authority intervened, no violence was used and you make no complaint that the jury was bribed, while there was no difficulty about proving his guilt. What conclusion is left to us save that there was collusion?”

[33] Si omnia amoliri non poteram, plura amoliebar. hominem occisum esse constant, non ex solitudine, ut a latronibus suspicer; non praedae gratia, quia inspoliatus est; non hereditatis spe, quia pauper fuit: odium igitur ex causa,

cum sis inimicus.

[33] If I could not dispose of all the points against me, I disposed of the majority. "It is acknowledged that a man was killed: but he was not killed in a solitary place, such as might lead me to suspect that he was the victim of robbers; he was not killed for the sake of plunder, for nothing was taken from him; he was not killed in the hope of inheriting his property, for he was poor: the motive must therefore have been hatred, since you are his enemy."

[34] quae res autem faciliorem divisioni viam praestat, eadem inventioni quoque, excutere quidquid dici potest, et velut reiectione facta ad optimum pervenire. accusatur Milo, quod Clodium occiderit. aut fecit aut non. optimum erat negare; sed non potest: occidit ergo aut iure aut iniuria utique. iure: aut voluntate aut necessitate, nam ignorantia praetendi non potest.

[34] The task not merely of division, but of invention as well, is rendered materially easier by this method of examining all possible arguments and arriving at the best by a process of elimination. Milo is accused of killing Clodius. Either he did or did not do the deed. The best policy would be to deny the fact, but that is impossible. It is admitted then that he killed him. The act must then have been either right or wrong. We urge that it was right. If so, the act must have either been deliberate or under compulsion of necessity, for it is impossible to plead ignorance.

[35] voluntas anceps est, sed, quia ita homines putant, attingenda defensio, ut id pro re publica fuerit. necessitate? subita igitur pugna, non praeparata; alter igitur insidiatus est. uter? Profecto Clodius. videsne, ut ipsa rerum necessitas deducat ad defensionem? adhuc,

[35] The intention is doubtful, but as it is generally supposed to have existed, some attempt must be made to defend it and to show that it was for the good of the state. On the other hand, if we plead necessity, we shall argue that the fight was accidental and unpremeditated. One of the two parties then must have lain in wait for the other. Which was it? Clodius without doubt. Do you see how inevitably we are led to the right method of defence by the logical necessity of the facts?

[36] aut utique voluit occidere insidiatorem Clodium aut non. tutius, si noluit. fecerunt ergo servi Milonis neque iubente neque sciente Milone. at haec tam timida defensio detrahit auctoritatem illi, qua recte dicebamus occisum. adiicietur:

[36] We may carry the process further: either he wished to kill Clodius, who lay in wait for him, or he did not. The safer course is to argue that he did not wish to kill him. It was then the slaves of Milo who did the deed without Milo's orders or knowledge. But this line of defence shows a lack of courage and lessens the weight of our argument that Clodius was rightly killed.

[37] quod suos quisque servos ex tali re facere voluisset. hoc eo est utilius, quod saepe nihil placet et aliquid dicendum est. intueamur ergo omnia: ita apparebit aut id quod optimum est aut id quod minime malum. propositione aliquando adversarii utendum et esse nonnunquam commune eam, suo loco dictum est.

multis milibus versuum scio apud quosdam esse quaesitum, quomodo inveniremus, utra pars deberet prior dicere; quod ex foro vel atrocitate formularum vel modo petitionum vel novissime sorte diiudicatur. In schola quaeri nihil attinet,

[37] We shall therefore add the words, "As every man would have wished his slaves to do under similar circumstances." This method is all the more useful from the fact that often we can find nothing to say that really pleases us and yet have got to say something. Let us therefore consider every possible point; for thus we shall discover what is the best line for us to pursue, or at any rate what is least bad. Sometimes, as I have already said in the appropriate context, we may make good use of the statement of our opponent, since occasionally it is equally to the purpose of both parties.

I am aware that some authors have written thousands of lines to show how we may discover which party ought to speak first. But in the actual practice of the courts this is decided either by some brutally rigid formula, or by the character of the suit, or finally by lot.

[38] cum ex declamationibus iisdem narrare et contradictiones solvere tam ab actore quam a possessore concessum sit. sed ex plurimis controversiis ne inveniri quidem potest: ut ex illa, Qui tres liberos habebat, oratorem, philosophum, medicum, testamento quattuor partes fecit et singulas singulis dedit, unam eius esse voluit, qui esset utilissimus civitati.

[38] In the schools, on the other hand, such an enquiry is mere waste of time, since the prosecution and the defence are indifferently permitted to state a case and refute it in the same declamation. But in the majority of controversial themes it is not even possible to discover who should speak first, as for instance in the following: "A certain man had three sons, an orator, a philosopher and a physician. In his will he divided his property into four portions, three of which he distributed equally among his sons, while the fourth was to go to the son who rendered the greatest service to his country."

[39] contendunt; quis primus dicat, incertum est, propositio tamen certa; ab eo enim, cuius personam tuebimur, incipiendum erit. Et haec quidem de dividendo ex universum praecipi possunt.

[39] The sons dispute the point. It is uncertain who should speak first, but our course is clear enough. For we shall begin with the son whose role we assume. So much for the general rules by which we should be guided in making our

division.

[40] at quomodo inveniēmus enīam illas occultiores quaestiones? scilicet, quomodo sententias, verba, figuras, colores: ingenio, cura, exercitatione. non tamen fere unquam nisi imprudentem fugerint, si, ut dixi, naturam sequi ducem velit.

[40] But how shall we discover those *questions* which present abnormal difficulty? Just as we discover reflexions, words, figures or the appropriate *nuances* of style, namely by native wit, by study and by practice. None the less it will be rare for anyone who is not a fool to fail to discover them, so long as he is content, as I have said, to accept nature for a guide.

[41] sed plerique eloquentiae famam adfectantes contenti sunt locis speciosis modo vel nihil ad probationem conferentibus. alii nihil ultra ea quae ex oculis incurrunt exquirendum putant.

quod quo facilius appareat, unam de schola controversiam, non ita sane difficillimam aut novam, proponam ex exemplum.

[41] Many, however, in their passionate desire to win a reputation for eloquence are content to produce showy passages which contribute nothing to the proof of their case, while others think that their enquiry need not proceed further than that which meets the eye.

To make my meaning clearer, I will cite a solitary example from the controversial themes of the schools; it is neither novel nor complicated.

[42] qui reo proditiōis patri non adfuerit, exheres sit. proditiōis damnatus cum advocato exulet. reo proditiōis patri disertus filius adfuit, rusticus non adfuit: damnatus abiit cum advocato ex exilium. rusticus cum fortiter fecisset, praemii nomine impetravit restitutionem patris et fratris. pater reversus intestatus decessit: petit rusticus partem bonorum, orator totum vindicat sibi.

[42] “The man who refuses to appear in defence of his father when accused of treason shall be disinherited: the man who is condemned for treason shall be banished together with his advocate. A father accused of treason was defended by one son who was a fluent speaker, while another son, who was uneducated, refused to appear for him. The father was condemned and banished with his advocate. The uneducated son performed some heroic act and demanded as a reward the restoration of his father and brother. The father returned and died intestate. The uneducated son claims a portion of his estate, the orator claims the whole for himself.”

[43] hic illi eloquentes quibusque nos circa lites raras sollicitiores ridiculi videmur, invadent personas favorabiles. actio pro rustico contra disertum, pro viro forti contra imbellem, pro restituto contra ingratum, pro eo, qui parte contentus sit, contra eum, qui fratri nihil dare ex paternis velit. quae omnia

sunt ex materia et multum iuvant,

[43] In this case those paragons of eloquence, who laugh at us because we trouble our heads about cases that rarely occur, will always assume the popular rôle. They will defend the uneducated against the eloquent son, the brave against the coward, the son who secured the recall of his kin against the ungrateful son, the son who is content with a portion of the inheritance against the son who would refuse his brother a share in their patrimony.

[44] victoria tamen non trahunt. In hac quaerentur sententiae, si fieri poterit, praecipites vel obscurae (nam ea nunc virtus est), et pulchre fuerit cum materia tumultu et clamore transactum. illi vero, quibus propositum quidem melius, sed cura ex proximo est, haec velut innatantia videbunt:

[44] All these points are actually to be found in the case and are of considerable importance, but they are not such as to render victory a certainty. In such a case they will, as far as possible, search for daring or obscure reflexions (for to-day obscurity is accounted a virtue), and they will think they have given the theme a brilliant treatment by ranting and raving over it. Those, on the other hand, whose ideals are higher, but who restrict themselves merely to the obvious, will note the following points, which are, however, purely superficial.

[45] excusatum esse rusticum, quod non interfuerit iudicio nihil collaturus patri; sed ne disertum quidem habere, quod imputet reo, cum is damnatus sit; dignum esse hereditate restitutorem; avarum, impium, ingratum, qui dividere nolit cum fratre eoque sic merito; quaestionem quoque illam primam scripti et voluntatis, qua non expugnata non sit sequentibus locus.

[45] The uneducated son may be excused for not appearing at the trial on the ground that he could contribute nothing to his father's defence: but even the orator has no claim on the gratitude of the accused, since the latter was condemned: the man who secured the recall of his kin deserves to receive the inheritance, while the man who refuses to divide it with his brother, more especially with a brother who has deserved so well of him, is avaricious, unnatural and ungrateful: they will further note that the first and essential question is that which turns on the letter and intention of the law; unless this is first disposed of, all subsequent arguments must fall to the ground.

[46] at qui naturam sequetur illa cogitabit profecto, primo hoc dicturum rusticum: pater intestatus duos nos filios reliquit, partem iure gentium peto. quis tam imperitus, quis tam procul a litteris, quin sic incipiat, etiamsi nescierit, quid sit propositio?

[46] He, however, who follows the guidance of nature will assuredly reflect as follows: the first argument of the uneducated son will be, "My father died intestate and left two sons, my brother and myself; I claim a share in his estate

by the law of nations.” Who is so ignorant or so lacking in education as not to make this his opening, even though he does not know what is meant by a proposition?

[47] hanc communem omnium legem leviter adornabit ut iustam. nempe sequetur, ut quaeramus, quid huic tam aequae postulationi respondeatur? at id manifestum est. lex est, quae iubet exheredem esse eum qui patri prodicionis reo non adfuerit; tu autem non adfuisti. hanc propositionem necessaria sequitur legis laudatio et eius, qui non adfuerit, vituperatio.

[47] He will then proceed to extol, though with due moderation, the justice of this common law of nations. The next point for our consideration is what reply can be made to so equitable a demand? The answer is clear:— “There is a law which disinherits the man who fails to appear in his father’s defence when the latter is accused of treason, and you failed to appear.” This statement will be followed by the necessary praise of the law and denunciation of the man who failed to appear.

[48] adhuc versamur ex confessis; redeat animus ad petitem; numquid non hoc cogitet necesse est, nisi qui sit plane hebes? Si lex obstat, nulla lis est, inane iudicium est. atqui et legem esse et hoc, quod ea puniat, a rustico factum extra dubitationem est. quid ergo dicimus? rusticus eram.

[48] So far we have been dealing entirely with admitted facts. Let us now return to the claimant. Unless he is hopelessly unintelligent, surely the following argument will suggest itself:— “If the law bars the way, there is no ground for action and the trial becomes a farce. But it is beyond question that the law exists and that the uneducated son did commit the offence for which it enacts a punishment.” What then shall we say? “I had no education.”

[49] Si lex omnes complectitur, nihil proderit. quaeramus ergo num infirmari ex aliquam partem lex possit. quid aliud (saepius dicam) natura permittit quam ut, cum verba contra sint, de voluntate quaeratur? generalis igitur quaestio, verbis an voluntate sit standum. sed hoc ex commune de iure omni disputandum semper nec unquam satis iudicatum est. quaerendum igitur ex hac ipsa, qua consistimus, an aliquid inveniri possit quod scripto adversetur.

[49] But if the law applies to all men, it will be of no avail to plead lack of education. We must therefore try to discover whether there be not some point on which the law can be invalidated. We turn for guidance to nature (a point on which I cannot insist too often); what does she suggest save that when the letter of the law is against us, we should discuss its intention? This introduces the general question whether we are to stand by the letter or the spirit. But if we argue this question on general grounds with reference to law in the abstract, we shall go on for ever; it is a question that has never been decided. We must therefore restrict our enquiry to the particular law on which our case turns and try to find some argument against adhesion to the strict letter.

[50] ergo, quisquis non adfuerit, exheres erit? quisquis sine exceptione? iam se illa vel ultro offerent argumenta: Et infans? filius enim est et non adfuit; et qui aberat et qui militabat et qui ex legatione erat? iam multum acti est: potest aliquis non adfuisse et heres esse. transeat nunc idem ille,

[50] Well, then, is everyone who fails to appear in defence of his father to be disinherited? Are there no exceptions to the rule? At this point the following arguments will spontaneously suggest themselves. "Is an infant liable to the law?" For we may imagine a case where the son is an infant and has failed to appear in his father's support. Again "does the law apply to a man who was away from home or absent on military service or on an embassy?" We have gained a considerable amount of ground; for we have established the fact that a man may fail to appear for his father and still inherit.

[51] qui hoc cogitavit, ut ait Cicero, tibicinis Latini modo ad disertum. Vt ista concedam, tu nec infans es nec abfuisti nec militasti. Num aliud occurrit quam illud, sed rusticus sum? contra, quod palam est dici:

[51] Our declaimer, who has thought out this line of argument, must now pass over like a Latin flute-player, as Cicero says, to the side of the eloquent son and reply, "Granted, but you are not an infant, you were not away from home nor absent on military service." Is there any answer to this except the previous reply, "I am an uneducated man"?

[52] Vt agere non potueris, adsidere potuisti; et verum est. quare redeundum rustico ad animum legumlatoris: impietatem punire voluit, ego autem impius non sum.

[52] But to this there is the obvious retort, "Even if you could not actually plead, you might have supported him by your presence," which is no more than the simple truth. The uneducated son must therefore return to the intention of the legislator. "He wished to punish unfilial conduct, but I am not unfilial."

[53] contra quod disertus, tu impie fecisti, inquit, cum exheredationem meruisti, licet te postea vel paenitentia vel ambitus ad hoc genus optionis adduxerit. praeterea propter te damnatus est pater, videbaris enim de causa pronuntiassse. ad haec rusticus: tu vero ex causa damnationis fuisti, multos offenderas, inimicitias domui contraxeras. haec coniecturalia; illud quoque, quod coloris loco rusticus dicit, patris fuisse tale consilium, ne universam domum periculo subiiceret. haec prima quaestione scripti et voluntatis continentur.

[53] To this the eloquent son will reply, "The action whereby you deserved disinheritance was unfilial, although penitence or desire for display may have subsequently led you to choose this as your reward. Further, it was owing to you that our father was condemned, since by absenting yourself you appeared to imply that you thought him guilty." The uneducated son replies, "Nay, you

contributed to his condemnation, for you had given offence to many and made our family unpopular.” These arguments are based on conjecture, as also will be the excuse put forward by the uneducated son to the effect that his father advised his absence, as he did not wish to imperil his whole family. All these arguments are involved in the preliminary question as to the letter and the intention of the law.

[54] *intendamus ultra animum videamusque, an aliquid inveniri praeterea possit. quo id modo fiet? sedulo imitor quaerentem, ut quaerere doceam, et omisso speciosiore stili genere ad utilitatem me summitto discentium.*

omnes adhuc quaestiones ex persona petitoris ipsius duximus; cur non aliquid circa patrem quaerimus? dictum non est, quisquis non adfuerit, exheres erit.

[54] Let us pursue the matter further and see if we can discover any additional arguments. How is that to be done? I am deliberately imitating the actual train of thought of one who is engaged in such an enquiry with a view to showing how such enquiry should be conducted. I shall therefore put aside the more showy kind of composition, and concern myself solely with such as may be of real profit to the student.

So far we have derived all our questions from the character of the claimant. But why should we not make some enquiries into the character of the father? Does not the law say that whoever fails to appear for his father is to be disinherited?

[55] *cur non conamur et sic quaerere, Num, cuicumque quis non adfuerit? facimus hoc saepe ex iis controversiis, ex quibus petuntur ex vincula qui parentes suos non alunt, ut eam quae testimonium ex filium peregrinitatis reum dixit, eum, qui filium lenoni vendidit. In hoc, de quo loquimur, patre quid apprehendi potest? damnatus est.*

[55] Why should we not try asking whether this means that he is to be disinherited, whatever the character of the father for whom he failed to appear? Such a course is often adopted in those controversial themes in which we demand that sons who fail to maintain their parents should be cast into prison: take for example the case of the mother who gave evidence against her son when accused of being an alien, or of the father who sold his son to a procurer. What, then, is there in the present case that we lay hold of as regards the character of the father?

[56] *numquid igitur lex ad absolutos tantum patres pertinet? dura prima fronte quaestio. non desperemus; credibile est hoc voluisse legumlatorem, ne auxilia liberorum innocentibus deessent. sed hoc dicere rustico verecundum est, quia innocentem fuisse patrem fatetur.*

[56] He was condemned. But does the law apply only to those cases where the father is acquitted? At first sight the question is difficult. But let us not

despair. It is probable that the intention of the legislator was that innocent parents should secure the support of their children. But the uneducated son will be ashamed to produce this argument, since he acknowledges that his father was innocent.

[57] dat aliud argumentum controversiae damnatus proditiōis cum advocato exulet. vix videtur posse fieri, ut poena filio ex eodem patre, et si adfuerit et si non adfuerit, constituta sit. praeterea lex ad exules nulla pertinet. non ergo credibile est de advocato damnati scriptum; an possunt enim bona esse ulla exulis?

[57] There is, however, another line of argument which may be drawn from the enactment that the person condemned for treason should be banished together with his advocate. It seems almost impossible that in one and the same case a son should incur a penalty, both if he appeared in his father's defence and if he did not appear. Further, exiles are outlaws. Therefore the letter of the law cannot conceivably apply to the advocate of the condemned man.

[58] rusticus ex utramque partem dubium facit; disertus et verbis inhaerebit, ex quibus nulla exceptio est, et propter hoc ipsum poenam esse constitutam eis qui non adfuerint, ne periculo exilii deterreantur advocacy, et rusticum innocenti non adfuisse dicet. illud protinus non indignum quod adnotetur, posse ex uno statu duas generales fieri quaestiones, an quisquis? an cuicumque?

[58] For how can an exile hold any property? The uneducated son raises a doubt as to the interpretation both of the letter and the spirit of the law. The eloquent son will cling to the strict letter of the law, which makes no exception, and will argue that the reason for enacting a penalty against those who fail to appear for their fathers was to prevent their being deterred from the defence of their fathers by the risk of banishment, and he will assert that his brother failed to appear in defence of his innocent father. It may therefore be worth while pointing out that two *general questions* may arise out of one *basis* — for we may ask, “Is everyone who fails to appear liable to disinheritance?” or “Is he bound to appear irrespective of the character of his father?”

[59] haec ex duabus personis quaesita sunt. ex tertia autem, quae est adversarii, nulla oriri quaestio potest, quia nulla fit ei de sua parte controversia. nondum tamen cura deficiat. ista enim omnia dici possent etiam non restituto patre. nec statim eo tendamus, quod occurrit ultro, a rustico restitutum. qui subtiliter quaeret, aliquid spectabit ultra; nam, ut genus species sequitur, ita species genus praecedit. fingamus ergo ab alio restitutum:

[59] So far all our questions have been derived from two of the persons involved. With regard to the third, this can give rise to no question, as there is no dispute about his portion of the inheritance. Still the time is not yet come to

relax our efforts: for so far all the arguments might have been used even if the father had not been recalled from exile. But we must not betake ourselves at once to the obvious point that he was recalled by the agency of the uneducated son. A little ingenuity will lead us to look further a field: for as *species* comes after *genus*, so *genus* precedes

[60] *rationativa seu collectiva quaestio orietur, an restitutio pro sublatione iudicii sit et proinde valeat, ac si iudicium non fuisset. ubi temptabit rusticus dicere ne impetrare quidem aliter potuisse suorum restitutionem uno praemio nisi patre proinde ac si accusatus non esset revocato, quae res advocati quoque poenam, tanquam is non adfuisset, remiserit.*

[60] *species.* Let us therefore assume that the father was recalled by someone else. This will give rise to a question of the ratiocinative or syllogistic type, namely whether recall from exile cancels the sentence of the court and is tantamount to the trial never having taken place at all. The uneducated son will therefore attempt to argue that, being entitled to not more than one reward, there was no means by which he could have secured the recall of his kin save by the restoration of his father on the same terms as if he had never been accused, and that this fact carries with it the cancellation of the penalty incurred by his advocate, as though he had never defended his father at all.

[61] *tum venimus ad id, quod primum occurrebat, a rustico esse restitutum patrem. ubi rursus ratiocinamur, an restitutor accipi debeat pro advocate, quando id praestiterit quod advocatus petiit, nec improbum sit pro simili accipi quod plus est.*

[61] Our next point will be that which first occurred to us, namely the plea that he was recalled by the agency of the uneducated son. At this point we are confronted by the question whether the son who secured his father's restoration is thereby to be regarded in the light of an advocate, since he secured for him precisely what his original advocate demanded for him, and it is not an unreasonable claim to ask that an action should be regarded as equivalent when it is really more than equivalent.

[62] *reliqua iam aequitatis, utrius iustius sit desiderium. id ipsum adhuc dividitur; etiamsi uterque sibi totum vindicaret, nunc utique, cum alter semissem, alter universa fratre excluso. sed his tractatis etiam habet magnum momentum apud iudices patris memoria, cum praesertim de bonis eius quaeratur. erit ergo coniectura, qua mente pater intestatus decesserit. sed ea pertinet ad qualitatem; alterius status instrumentum est.*

[62] The remaining points turn on questions of equity, for we ask which of the two sons makes the juster claim. This question admits of still further division. The claim of the uneducated son would have been the juster even if both had claimed the whole property. How much more so when one claims only a half and the other the whole to the exclusion of his brother. And then, even after

we have dealt with all these points, an appeal to the memory of his father will carry great weight with the judges, more especially as the dispute is about the father's estate. This will give rise to conjecture as to what the intentions of the father were at the time of his dying intestate. This conjecture, however, involves a question of *quality*, and is employed in the service of a different *basis*.

[63] plerumque autem ex fine causarum de aequitate tractabitur, quia nihil libentius iudices audiunt. aliquando tamen hunc ordinem mutabit utilitas, ut, si ex iure minus fiducia erit, aequitate iudicem praeparemus.

[63] As a rule questions of equity are best introduced at the conclusion of a case, since there is nothing to which the judges give more ready hearing. Sometimes, however, the interests of the case demand a change in this order; for example if we regard our case as weak in point of law, it will be well to secure the good-will of the judge by dealing with the question of equity first.

[64] nihil habui amplius quod ex universum praeciperem. nunc eamus per singulas causarum iudicialium partes, quas ut persequi ad ultimam speciem, id est ad singulas lites controversiasque, non possum, ita de generalibus scribere licet, ut, quae ex quemque statum frequentissime incident, tradam. Et, quia natura prima quaestio est, factumne sit, ab hoc ordiar.

[64] This concludes my general rules on this subject. We will now proceed to consider the several parts of forensic cases, and although I cannot follow them to the *ultimate species*, that is to say, I cannot deal with individual suits and controversies, I shall be able to discuss them on general lines in such a way as to show what *bases* most of them involve. And since the first question naturally is whether an alleged fact has taken place, I will begin with this.

2. coniectura omnis aut de re aut de animo est. utriusque tria tempora, praeteritum, praesens, futurum. De re et generales quaestiones sunt et definitae, id est, et quae non continentur personis et quae continentur.

2. All conjecture is concerned either with facts or intention. Each of these may occur in one of three times, past, present or future. Questions concerning facts are either general or definite, that is to say, those which involve consideration of persons and those which do not.

[2] De animo quaeri non potest, nisi ubi persona est et de facto constat. ergo cum de re agitur, aut quid factum sit in dubium venit aut quid fiat aut quid sit futurum, ut in generalibus, an atomorum concursu mundus sit effectus, an providentia regatur, an sit aliquando casurus; in definitis: an parricidium commiserit Roscius, an regnum adfectet Manlius, an recte Verrem sit accusaturus Q. Caecilius.

[2] Concerning intentions there can be no questions which do not involve some person and where the facts of the case are not admitted. Therefore when the

question turns on some fact, the point on which doubt arises is either what has been done, or what is being done, or what is likely to be done. For example, in general questions we discuss whether the universe *has been* formed of a concourse of atoms, or *is* governed by providence, or *is likely* some day to come to an end. In definite questions, on the other hand, we discuss whether Roscius *has* murdered his father, whether Manlius *is* aiming at making himself king, or Quintus Caecilius *will be* justified in appearing as the accuser of Verres.

[3] In iudiciis praeteritum tempus maxime valet; nemo enim accusat, nisi quae facta sunt. nam quae fiant et quae futura sint ex praeteritis colliguntur. quaeritur et unde quid ortum? ut pestilentia ira deum an intemperie caeli an corruptis aquis an noxio terrae halitu. Et quae causa facti? ut, quare ad Troiam quinquaginta reges navigaverint iure iurando adacti an exemplo moti an gratificantes Atridis. quae duo genera non multum inter se distant.

[3] In the law courts past time is of most importance, since all accusations are concerned with what has actually been done, while what is being done or is likely to be done is inferred from the past. We also enquire into origins. For instance, we enquire whether a pestilence be due to the anger of heaven, the inclement weather, the pollution of the water-supply, or the noxious vapours emitted by the earth. Again, we seek for the motives of an act. For example, we enquire whether the fifty kings who sailed against Troy did so because they were bound by their oath, or were moved to do so by righteous indignation, or merely desired to gratify the sons of Atreus. There is no very great difference between these two classes of question.

[4] ea vero, quae sunt praesentis temporis, si non argumentis, quae necesse est praecessisse, sed oculis deprehendenda sunt, non egent coniectura, ut si apud Lacedaemonios quaeratur, an Athenis muri fiant. sed et illud, quod potest videri extra haec positum, coniecturae genus, cum de aliquo homine quaeritur, qui sit; ut est quaesitum contra Vrbinae heredes, is qui tanquam filius petebat bona,

[4] As regards facts falling within the present, if they can be detected by the eye without any reference to their logical antecedents being required, there will be no need of conjecture: let us suppose, for instance, that the Lacedaemonians are enquiring whether the Athenians are erecting fortifications. But although conjecture may seem entirely foreign to this class of question, there are cases in which it is necessary, as in questions of personal identity, which may be illustrated by the action brought against the heirs of Urbinia, where the question was whether the man who claimed the property as being the son of the deceased, was Figulus or Sosipater.

[5] Figulus esset an Sosipater. nam et substantia eius sub oculos venit, ut non possit quaeri, an sit, quomodo an ultra oceanum; nec quid sit nec quale sit, sed

quis sit? verum hoc quoque genus litis ex praeterito pendet, an hic sit ex Urbinia natus Clusinius Figulus. fuerunt autem tales nostris etiam temporibus controversiae, atque aliquae in meum quoque patrocinium inciderunt.

[5] In this case the actual person was before the eyes of the court, so that there could be no question whether he existed (as there is, for instance, when we ask whether there exists any land beyond the Ocean) nor what he was nor of what kind. The question was simply, who he was. But this kind of dispute also depends on past time. The problem is whether this man Clusinius Figulus *was* born of Urbinia. Such disputes have arisen even in our own day, indeed I myself have pleaded in such. On the other hand,

[6] animi coniectura non dubie in omnia tempora cadit, qua mente Ligarius in Africa fuerit, qua mente Pyrrhus foedus petat, quomodo laturus sit Caesar, si Ptolemaeus Pompeium occiderit.

quaeritur per coniecturam et qualitas circa modum, speciem, numerum, an sol maior quam terra, luna globosa an plana an acuta, unus mundus an plures. itemque extra naturales quaestiones,

[6] conjecture as to intention is obviously concerned with all three times. We ask with what purpose Ligarius *went* to Africa, with what purpose Pyrrhus is asking for a treaty, and how Caesar *will* take it if Ptolemy kills Pompey.

We may also employ conjecture to enquire into quality in questions dealing with size, species and number, such as whether the sun is greater than the earth, whether the moon is spherical, flat or conical, whether there is one universe or several, or,

[7] maius bellum Troianum an Peloponnesium, qualis clipeus Achillis, an unus Hercules.

In iis autem, quae accusatione ac defensione constant, unum est genus, in quo quaeritur et de facto et de auctore; quod interim coniunctam quaestionem habet, cum utrumque pariter negatur, interim separatam, cum et factum sit necne, et si de facto constet, a quo factum sit ambigitur.

[7] to go outside these physical speculations, whether the Trojan or the Peloponnesian war was the greatest, what was the nature of the shield of Achilles, or whether there was more than one Hercules.

In forensic cases, however, which consist of accusation and defence, there is one kind of conjecture by which we enquire both about an act and about its author. This sometimes treats the two questions together, as, for example, when both the act and the identity of the author are denied, and sometimes separately, as when the first enquiry, whether the act was committed, is followed by a second, where, the act being admitted, the question is by whom it was committed.

[8] ipsum quoque factum aliquando simplicem quaestionem habet, an homo perierit, aliquando duplicem, veneno an cruditate perierit. alterum est genus de facto tantum, cum, si id certum sit, non potest de auctore dubitari; tertium de auctore tantum, cum factum constat, sed a quo sit factum in controversiam venit. Et hoc, quod tertio loco posui, non est simplex.

[8] The act itself again sometimes involves a single question, as, for example, whether a man is dead, and sometimes two, as, for instance, whether he died of poison or of some internal disease. Another form of conjecture is concerned with the act alone, it being admitted that if the act was really committed, there can be no doubt as to its author. A third form is concerned solely with the author, the act being admitted and the dispute turning on the question as to who committed it. This third form is complex.

[9] aut enim reus fecisse tantummodo se negat aut alium fecisse dicit. sed ne in alterum quidem transferendi criminis una forma est. Interdum enim substituitur mutua accusatio, quam Graeci ἀντικατηγορίαν vocant, nostrorum quidam concertativam. Interdum in aliquam personam, quae extra discrimen iudicii est, transfertur, et alias certam, alias incertam;

[9] For the accused either confines himself to denying that he did it or accuses another of having done it. Further, there is more than one way of transferring the charge to another. At times this results in *mutual accusation*, which the Greeks call ἀντικατηγορία, and some of our own authors *concertative accusation*. At times, on the other hand, the charge is transferred to some person who cannot be brought to trial, and may be either known or unknown: again, if the person is known, he may be someone outside the case or the victim himself, who may be alleged to have committed suicide.

[10] et, cum certam, aut in extrariam aut in ipsius qui periit voluntatem. In quibus similis atque in ἀντικατηγορίᾳ personarum, causarum, ceterorum comparatio est, ut Cicero pro Vareno in familiam Ancharianam, pro Scauro circa mortem Bostaris in matrem avertens crimen facit.

[10] In such cases we compare characters, motives and other circumstances in the same way as in cases of mutual accusation. Cicero, for instance, in the *pro Vareno* diverts the charge from the accused to the slaves of Ancharius and in the *pro Scauro* throws the suspicion of Bostar's murder upon his mother.

[11] est etiam illud huic contrarium comparationis genus, in quo uterque a se factum esse dicit; et illud in quo non personae inter se sed res ipsae colliduntur, id est, non uter fecerit, sed utrum factum sit. cum de facto et de auctore constat, de animo quaeri potest.

nunc de singulis. cum pariter negatur, hoc modo: adulterium non commisi; tyrannidem non adfectavi. In caedis ac veneficii causis frequens est illa divisio: non est factum; et si est factum, ego non feci.

[11] There is also a different form of comparison, which comes into play when both parties claim the credit of some act, and yet another kind, when the question is not as between two persons, but as between two acts; that is to say, the question is not which of the two committed an act, but which of two acts was committed. Finally, if the act and the identity of the author are both admitted, we may still raise the question of his intention.

I shall now proceed to detail. As an example of joint denial covering both the act and the identity of the author we may take the following statements, "I have not committed adultery," "I have not sought to establish myself as tyrant." In cases of murder or poisoning the denial is often divided as follows:

[12] *sed, cum dicimus, proba hominem occisum, accusatoris tantum partes sunt; a reo nihil dici contra praeter aliquas fortasse suspiciones potest, quas spargere quam maxime varie oportebit, quia, si unum aliquid adfirmaris, probandum est aut causa periclitandum. nam cum inter id quod ab adversario et id quod a nobis propositum est quaeritur, videtur utique alterum verum; ita everso quo defendimur, reliquum est quo premimur,*

[12] "The act was not committed, and, if it was committed, it was not by me." But if the defence say, "Prove that the man was killed," the burden falls solely on the accuser, for the accused can say nothing more against the charge except perhaps in the way of casting certain suspicions, which he should throw out in the vaguest terms, since if you make one definite assertion, you will have to prove it or run the risk of losing your case. For when the question lies between our statement and that of our opponent, one or other will be regarded as true. Thus when the point on which we relied for our defence is overthrown, there is nothing left but the points that tell against us.

[13] *ut cum quaerimus de ambiguis signis cruditatis et veneni, nihil tertium est ideoque utraque pars, quod proposuit, tuetur. interim autem ex re quaeritur, veneficium fuerit an cruditas; cum aliqua ex ipsa citra personam quoque argumenta ducuntur.*

[13] For example, when the question turns on symptoms, which may point either to poisoning or internal disease, there is no third course left open and consequently each party sticks to his statement. At times the question turns on the nature of the fact, whether, for instance, death was due to poisoning or internal disease, and arguments are introduced which are drawn from the circumstances alone without any reference to the person concerned.

[14] *refert enim, convivium praecesserit laetitia an tristitia, labor an otium, vigilia an quies. Aetas quoque eius, qui periit, discrimen facit; interest, subito defecerit an longiore valetudine consumptus sit. liberior adhuc in utramque partem disputatio, si tantum subita mors in quaestionem venit.*

[14] For example, it makes a difference whether the deceased was cheerful or

depressed, had been working or taking his ease, had been awake or sleeping previous to the festive gathering that was followed by his death. The age of the deceased is also an important factor, and it is desirable to know whether he died suddenly or after a long period of ill health. If the question turns only on his sudden death, both parties will have still freer scope for discussion.

[15] *interim ex persona probatio rei petitur, ut propterea credibile sit venenum fuisse, quia credibile est ab hoc factum veneficium, vel contra. cum vero de reo et de facto quaeritur, naturalis ordo est, ut prius factum esse accusator probet, deinde a reo factum. Si tamen plures in persona probationes habuerit, conuertit hunc ordinem.*

[15] At times the character of the accused may be adduced to prove the fact, and to make it likely that it was or was not a case of poisoning because the accused is or is not a likely person to have committed such an act.

When, on the other hand, the enquiry concerns both the accused and the act, the natural order for the accuser to pursue is to commence by proving that the act has been committed and then to go on to show that it was committed by the accused. If, however, proofs of the authorship of the crime are more in number than the proofs of the commission, this order may be reversed.

[16] *defensor autem semper prius negabit esse factum, quia, si in hac parte vicerit, reliqua non necesse habet dicere; victo superest, ut tueri se possit.*

illic quoque, ubi de facto tantum controversia est, quod si probetur non possit de auctore dubitari, similiter argumenta et ex persona et ex re ducuntur, sed in unam facti quaestionem,

[16] On the other hand, the accused will always begin by denying the act, since if this can be successfully proved, there is no need to say anything more, while if it is not proved, there remain other means of defence.

Similarly, when the dispute turns solely on the act and, the act being proved, there can be no doubt as to the author, arguments may be drawn in like manner both from the person and the facts, although with reference to the question of fact alone.

[17] *sicut in illa controversia: (utendum est enim et his exemplis, quae sunt discentibus magis familiaria) abdicatus medicinae studuit. cum pater eius aegrotaret, desperantibus de eo ceteris medicis, adhibitus sanaturum se dixit, si is potionem a se datam bibisset. paler, acceptae potionis epota parte, dixit uenenum sibi datum; filius quod reliquum erat exhausit: pater decessit, ille parricidii reus est.*

[17] Take the following controversial theme as an example, for it is best to employ scholastic themes as illustrations since they are more familiar to the student. "A man who had been disinherited by his father took to the study of

medicine. His father fell sick and, his life being despaired of by the other doctors, the son was called in, and said he would cure him if he would take a draught prescribed by himself. The father after drinking part of the draught said that he had been poisoned: the son drank the remainder of the draught. The father died and the son is accused of parricide.”

[18] manifestum, quis potionem dederit, quae si veneni fuit, nulla quaestio de auctore; tamen, an venenum fuerit, ex argumentis a persona ductis colligetur.

superest tertium, in quo factum esse constat aliquid, a quo sit factum, quaeritur. cuius rei supervacuum est ponere exemplum, cum plurima sint huiusmodi iudicia, ut hominem occisum esse manifestum sit vel sacrilegium commissum, is autem, qui arguitur fecisse, neget. ex hoc nascitur ἀντικατηγορία; utique enim factum esse convenit, quod duo invicem obiiciunt.

[18] There is no doubt who administered the draught, and, if it was poison, there is no question as to the author: but the problem as to whether the draught was poison can only be decided by arguments drawn from the character of the accused.

There remains a third type of conjectural case where the fact is admitted, and the only question is as to the author. It is unnecessary for me to quote examples, since such cases are of frequent occurrence. For example, it may be clear that a man has been killed or that sacrilege has been committed, but the person accused of the crime may deny his guilt. It is from such circumstances that cases of mutual accusation arise, where it is admitted that the crime has been committed, but each party charges the other with being the author.

[19] In quo quidem genere causarum admonet Celsus fieri id in foro non posse; quod neminem ignorare arbitror. De uno reo consilium cogitur, et etiam si qui sunt, qui invicem accusent, alterum iudicium praeferre necesse est.

[19] With regard to this class of case Celsus points out that they cannot actually occur in the courts, a fact which I imagine is familiar to all: for the jury is empanelled to try one accused person only, and even though the defence and the prosecution may accuse each other of the crime, the first case must be tried before the second.

[20] Apollodorus quoque ἀντικατηγορίαν duas esse controversias dixit, et sunt revera secundum forense ius duae lites. potest tamen hoc genus in cognitionem venire senatus aut principis. sed in iudicio quoque nihil interest actionum,

[20] Apollodorus again stated that mutual accusation involved two separate disputes, and this is of course in conformity with the practice of the courts, which insists on two separate trials. On the other hand, mutual accusation is possible in cases tried before the senate or the emperor, and even in the courts

the fact of mutual accusation will involve no difference in the pleadings, since the same methods will be required whether the verdict is given on both charges simultaneously or only on one.

[21] *utrum simul de utroque pronuntietur an sententia de uno feratur. Quo in genere semper prior debet esse defensio, primum quia natura potior est salus nostra quam adversarii perniciēs, deinde quod plus habebimus in accusatione auctoritatis, si prius de innocentia nostra constiterit, postremum, quod ita demum duplex causa erit. nam qui dicit, ego non occidi, habet reliquam partem, ut dicat, tu occidisti; at qui dicit, tu occidisti, supervacuum habet postea dicere, ego non occidi.*

[21] In such cases the defence must always come first for three reasons. In the first place, we naturally prefer to secure our own safety than to injure our opponent, while secondly, our accusation will carry greater weight if we have first proved our own innocence, and thirdly, we shall thus secure a double line of defence. For the man who says, "I did not kill him," is then free to go on to say, "You killed him," whereas it is superfluous for the man who says, "You killed him," to go on to say, "I did not kill him."

[22] *hae porro actiones constant comparatione; ipsa comparatio non una via ducitur. aut enim totam causam nostram cum tota adversarii causa componimus aut singula argumenta cum singulis. quorum utrum sit faciendum, non potest nisi ex ipsius litis utilitate cognosci: ut Cicero singula pro Vareno comparat in primo crimine; etenim in posteriore crimine persona alieni cum persona matris temere compararetur. quare optimum est, si fieri poterit, ut singula vincantur a singulis; sed si quando in partibus laborabimus, universitate pugnandum est. Et sive invicem accusant,*

[22] Further, such cases consist of comparison, which may be effected in different ways. For we may either compare our case in its entirety with that of our adversary, or we may compare individual arguments. The choice between these two methods can only be determined by the requirements of the case. For example, in the *pro Vareno*, Cicero, in dealing with the first charge, compares the individual arguments: for it would have been rash in connexion with the second charge to compare the position of a stranger with that of a mother. It is therefore best, if possible, to refute argument by individual argument: if, however, our individual arguments are weak, we shall try to secure success by comparison of case with case as a whole.

[23] *sive crimen reus citra accusationem in adversarium vertit (ut Roscius in accusatores suos, quamvis reos non fecisset), sive in ipsos, quos sua manu periisse dicemus, factum deflectitur, lion aliter quam in iis quae mutuum accusationem habent utriusque partis argumenta inter se comparantur.*

[23] But whether the case is one of mutual accusation, or the accused throws the guilt upon his opponent without making any formal accusation (as Roscius

did without indicting his accusers), or the responsibility for the deed be placed on the victims themselves, whom we allege to have perished by their own hand, the arguments for both sides of the case will be compared in exactly the same way as in cases of mutual accusation.

[24] id autem genus de quo novissime dixi non solum in scholis saepe tractatur, sed etiam in foro. nam id est in causa Naevii Arpiniani solum quaesitum, praecipitata esset ab eo uxor an se ipsa sua sponte iecisset. cuius actionem et quidem solam in hoc tempus emiseram, quod ipsum me fecisse ductum iuvenali cupiditate gloriae fateor. nam ceterae, quae sub nomine meo feruntur, negligentia excipientium in quaestum notariorum corruptae minimam partem mei habent.

[24] The class of case last mentioned by me is, however, not merely of frequent occurrence in the schools, but sometimes actually occurs in the courts. For example, the sole question in the case of Naevius of Arpinum was whether he threw his wife out of the window or she threw herself. My speech in this case is the only one of all my pleadings that I have so far published, and I admit that I was led to do so merely by a youthful desire for glory. For the other speeches which circulate as mine have little in them that actually fell from my lips, having been corrupted by the carelessness of the shorthand-writers who took them down with a view to making money out of them.

[25] est et alia duplex coniectura huic ἀντικατηγορίᾳ diversa, de praemiis, ut in illa controversia, tyrannus suspicatus a medico suo datum sibi venenum torsit eum et, cum is dedisse se pernegaret, arcessit alterum medicum; ille datum ei venenum dixit, sed se antidotum daturum, et dedit ei potionem, qua epota tyrannus decessit. De praemio duo medici contendunt. nam ut illic factum in adversarium transferentium, ita hic sibi vindicantium personae, causae, facultates, tempora, instrumenta,

[25] There is also another type of conjectural case which, though it involves two questions, is different from cases of mutual accusation; such cases are concerned with rewards and may be illustrated by the following controversial theme. "A tyrant, suspecting that his physician had given him poison, tortured him and, since he persisted in denying that he had done so, sent for a second physician. The latter asserted that poison had been administered, but that he would provide an antidote; he gave him a draught: the tyrant drank it and died. Both physicians claim a reward for slaying the tyrant." Now just as in cases of mutual accusation where each party shifts the guilt to his opponent, so in this case we compare the characters, motives, means, opportunities, instruments and evidence of the persons who claim the reward.

[26] testimonia comparantur. illud quoque, etiamsi non est ἀντικατηγορία, simili tamen ratione tractatur, in quo citra accusationem quaeritur, utrum factum sit. utraque enim pars suam expositionem habet atque eam tuetur, ut in

lite Vrbiniāna petitor dicit, Clusinium Figulum filium Vrbiniāe acie victa, in qua steterat, fugisse, iactatumque casibus variis, retentum etiam a rege, tandem in Italiam ac patriam suam Marrucinos venisse atque ibi agnosci; Pollio contra, servisse eum Pisauri dominis duobus, medicinam factitasse, manumissum alienae se familiae venali immiscuisse, a se rogantem, ut ei serviret, emptum.

[26] There is yet another type of case which, though not one of mutual accusation, is treated in the same way: I mean a case in which we enquire, without accusing anyone, which of two acts has taken place. For both parties make and defend their own statement of the case. Thus in the suit concerning the estate of Urbinia the claimant says that Clusinius Figulus, the son of Urbinia, on the defeat of the army in which he was serving, fled and after various misfortunes, being even kept in captivity by the king, at length returned to Italy and his own home in the Marrucine district, where he was recognised. To this Pollio replies that he had been a slave to two masters at Pisaurum, that he had practised medicine, and finally, after receiving his freedom, inserted himself into a gang of slaves who were for sale and was at his own request purchased by himself.

[27] nonne tota lis constat duarum causarum comparatione et coniectura duplici atque diversa? quae autem accusantium ac defendentium, eadem petentium et infitiantium ratio est. ducitur coniectura primum a praeteritis. In his sunt personae, causae, consilia. nam is ordo est, ut facere voluerit, potuerit, fecerit. ideoque intuendum ante omnia, qualis sit de quo agitur.

[27] Does not the whole suit consist of comparison between the two cases and of two different and opposite sets of conjecture? But the method to be followed is identical whether the case be one of accusation and defence or of claim and denial of the claim.

Conjecture is, in the first place, based on what is past, under which I include persons, causes and intent. For in dealing with a case we first ask what the accused intended to do, next what he was in a position to do, and lastly what he actually did. Consequently the first point on which we must fix our attention is the character of the accused.

[28] accusatoris autem est efficere ut, si quid obiecerit non solum turpe sit, sed etiam crimini, de quo est iudicium, quam maxime conveniat. nam si reum caedis impudicum vel adulterum vocet, laedat quidem infamia, minus tamen hoc ad fidem valeat quam si audacem, petulantem, crudelem, temerarium ostenderit.

[28] It is the business of the accuser to make any charge that he may bring against the accused not merely discreditable, but as consistent as possible with the crime for which he is arraigned. For example, if he calls a man accused of murder a debauchee or an adulterer, the discredit attaching to such charges

will no doubt tell against the accused, but will, on the other hand, do less to prove the case than if he shows him to be bold, insolent, cruel or reckless.

[29] patrono, si fieri poterit, id agendum est ut obiecta vel neget vel defendat vel minuat; proximum est ut a praesenti quaestione separet. sunt enim pleraque non solum dissimilia, sed etiam aliquando contraria: ut si reus furti prodigus dicatur aut negligens. neque enim videtur in eundem et contemptus pecuniae et cupiditas cadere.

[29] On the other hand, counsel for the defence must, as far as possible, aim at denying, excusing or extenuating such charges, or, if that be impossible, show that they are not relevant to the case. For there are many charges which not only have no mutual resemblance, but may even at times contradict each other, as for instance if a man accused of theft is called prodigal or careless. For it is not likely that one and the same man should at once despise money and covet it.

[30] Si deerunt haec remedia, ad illa declinandum est, non de hoc quaeri nec eum, qui aliquando peccaverit, utique commisisse omnia, et hanc fiduciam fuisse accusatoribus falsa obiiciendi, quod laesum et vulneratum reum speraverint hac invidia opprimi posse.

[30] If such means of defence are not available, we must take refuge with the plea that the charges made are not relevant to the case, that because a man has committed certain sins, it does not follow that he has committed all, and that the accusers ventured to make such false charges merely because they hoped by injuring and insulting the accused to be able to overwhelm him with the unpopularity thus created.

[31] alii a propositione accusatoris contraque eam loci oriuntur. saepe a persona prior ducit argumenta defensor et interim generaliter, incredibile esse a filio patrem occisum, ab imperatore proditam hostibus patriam.

[31] There are also other topics which arise from and against the statement of the case by the prosecution. The defence may begin by drawing arguments from the person involved, and will at times urge on general grounds that it is incredible that a father has been killed by his son or that a commander has betrayed his country to the enemy. The answer to such arguments is easy, for we may urge that bad men are capable of every crime, as is shown by everyday occurrences, or that the atrocious nature of a crime is but a poor argument against its having been committed.

[32] facile respondetur vel quod omnia scelera in malos cadant ideoque saepe deprehensa sint, vel quod indignum sit crimina ipsa atrocitate defendi. interim proprie, quod est varium. nam dignitas et tuetur reum et nonnunquam ipsa in argumentum facti convertitur, tanquam inde fuerit spes impunitatis; proinde paupertas, humilitas, opes, ut cuique ingenio vis est, in diversum trahuntur.

[32] At times we may base our arguments on the special circumstances of the person involved. This may be done in various ways: rank, for example, may be pleaded in defence of the accused, or at times, on the other hand, may be employed to prove his guilt on the ground that he trusted to his rank to secure impunity. Similarly poverty, humble rank, wealth may be used as arguments for or against the accused according to the talent of the advocate.

[33] *probi vero mores et anteaetate vite integritas nunquam non plurimum profuerint. Si nihil obiiciatur, patronus quidem in hoc vehementer incumbet, accusator autem ad praesentem quaestionem, de qua sola iudicium sit, cognitionem adligabit dicens neminem non aliquando coepisse peccare, nec per encaenia ducendum scelus primum.*

[33] Upright character, however, and the blamelessness of his past life are always of the utmost assistance to the accused. If no charge is made against his character, counsel for the defence will lay great stress on this fact, while the accuser will attempt to restrict the judge to the sole consideration of the actual issue which the court has to decide, and will say that there must always be a first step in crime and that a first offence is not to be regarded as the occasion for celebrating a feast in honour of the defendant's character.

[34] *haec in respondendo. sic autem praeparabit actione prima iudicium animos, ut noluisse potius obiicere quam non potuisse credatur. eoque satius est omni se anteaetate vite abstinere convicio quam levibus aut frivolis aut manifesto falsis reum incessere, quia fides ceteris detrahitur; et qui nihil obiicit, omisisse credi potest maledicta tanquam supervacua; qui vana congerit, confitetur unum in anteaetate argumentum, in quibus vinci quam tacere maluerit.*

[34] So much for the methods of reply which will be employed by the prosecution. But he will also in his opening speech endeavour to dispose the judges to believe that it is not so much that he is unable, as that he is unwilling to bring any charge against the character of the accused. Consequently it is better to abstain from casting any slur on the past life of the accused than to attack him with slight or frivolous charges which are manifestly false, since such a proceeding discredits the rest of our argument. Further, the advocate who brings no charges against the accused may be believed to have omitted all reference to past offences on the ground that such reference was not necessary, while the advocate who heaps up baseless charges thereby admits that his only argument is to be found in the past life of the accused, and that he has deliberately preferred to risk defeat on this point rather than say nothing at all about it.

[35] *cetera, quae a personis duci solent, in argumentorum locis exposuimus.*

proxima est ex causis probatio, in quibus haec maxime spectantur, ira, odium, metus, cupiditas, spes; nam reliqua in horum species cadunt. quorum si quid in reum conveniet, accusatoris est efficere ut ad quidquid faciendum causae

valere videantur, easque quas in argumentum sumet augere; si minus, illuc conferenda est oratio,

[35] As regards the other arguments derived from character, I have already discussed them in connexion with “places” of argument.

The next type of proof is derived from causes or motives, such as anger, hatred, fear, greed or hope, since all motives can be classified as species of one or other of these. If any of these motives can be plausibly alleged against the accused, it is the duty of the accuser to make it appear that such motives may lead a man to commit any crime, and to exaggerate the particular motives which he selects for the purpose of his argument.

[36] aut aliquas fortasse latentes fuisse aut nihil ad rem pertinere cur fecerit, si fecit, aut etiam dignius esse odio scelus, quod non habuerit causam. patronus vero, quotiens poterit, instabit huic loco, ut nihil credibile sit factum esse sine causa. quod Cicero vehementissime multis orationibus tractat, praecipue tamen pro Vareno, qui omnibus aliis premebatur; nam et damnatus est. at,

[36] If no such motive can be alleged, he must take refuge in suggesting that there must have been some hidden motive, or in asserting that, if he committed the act, all enquiry into motive is irrelevant or that a motiveless crime is even more abominable than one which has a motive. Counsel for the defence, on the other hand, will, wherever it be possible, emphasise the point that it is incredible that any act should be committed without a motive. Cicero develops this point with great energy in a number of his speeches, but more especially in his defence of Varenus, who had everything else against him and was as a matter of fact condemned.

[37] si proponitur, cur factum sit, aut falsam causam aut levem aut ignotam reo dicet. possunt autem esse aliquae interim ignotae, an heredem habuerit, an accusaturus fuerit eum, a quo dicitur occisus. Si alia defecerint, non utique spectandas esse causas; nam quem posse reperiri, qui non metuat, oderit, speret?

[37] But if the prosecution do allege some motive, he will either say that the motive alleged is false or inadequate or unknown to the accused. For it is possible that a man may be quite ignorant of motives imputed to him. He may not, for example, have known whether the man whom he is accused of having killed had appointed him his heir or intended to prosecute him. All else failing, we may urge that motives are not necessarily of importance. For what man is there who is not liable to the emotions of fear, hatred or hope, and yet numbers of persons act on these motives without committing crime?

[38] plurimos tamen haec salva innocentia facere. neque illud est omittendum, non omnes causas in omnibus personis valere. nam ut alicui sit furandi causa paupertas, non erit idem in Curio Fabricioque momentum.

[38] Nor should we neglect the point that all motives do not apply to all persons. For example, although poverty may in certain cases be a motive for theft, it will not have the same force with men such as Curius or Fabricius.

[39] De causa prius an de persona dicendum sit, quaeritur, varietque est ab oratoribus factum, a Cicerone etiam praelatae frequenter causae. mihi, si neutro litis condicio praeponderet, secundum naturam videtur incipere a persona. nam hoc magis generale est rectorque divisio, an ullum crimen credibile, an hoc.

[39] The question has been raised as to whether we should deal first with persons or motives, and different orators have given different answers: Cicero as a rule prefers to treat motives first. For my own part, if the circumstances of the case do not point strongly in either direction, I consider that the most natural course is to begin by dealing with persons. For the enquiry whether any crime can credibly be imputed to such a man as the accused is of a more general character than the question whether some one particular crime can be imputed, and in addition involves a greater correctness in division.

[40] potest tamen id ipsum, sicut pleraque, vertere utilitas. nec tantum causae voluntatis sunt quaerendae, sed interim et erroris, ut ebrietas, ignorantia. nam ut haec in qualitate crimen elevat, ita in coniectura premunt.

[40] Still, in many cases expediency may make it desirable to reverse the order. Further, we have to seek not merely motives affecting the will, but also causes leading to error, such as drunkenness or ignorance. For just as such considerations lessen the guilt of a crime when regarded from the point of view of its quality, so they tell heavily against the criminal as far as the question of fact is concerned.

[41] Et persona quidem nescio an unquam, utique in vero actu rei, possit incidere, de qua neutra pars dicat; de causis frequenter quaeri nihil attinet, ut in adulteriis, ut in furtis, quia illas per se ipsa crimina secum habent.

[41] I should imagine that there could never be a case, or at any rate an actual case in the courts, in which neither side said anything about the character of the persons involved; but this is not true of causes and motives, for it is often wholly unnecessary to trouble ourselves about them, as, for example, in cases of theft or adultery, crimes which carry their motives on the face of them.

[42] Post haec intuenda videntur et consilia, quae late patent; an credibile sit, reum sperasse id a se scelus effici posse, an ignorari, cum fecisset, an, etiamsi ignoratum non esset, absolvi vel poena levi transigi vel tardiore vel ex qua minus incommodi consecuturus quam ex facto gaudii videretur, an etiam tanti putaverit poenam subire;

[42] Next we must consider the intention, a term which involves a number of questions, such as whether it is probable that the accused hoped that he would

be able to carry such a crime into effect, or that it would escape detection when committed, or that, even if detected, it would be pardoned or punished but lightly or after considerable lapse of time, or that the inconvenience involved by the penalty would be outweighed by the pleasure resulting from the crime: or again, whether it was worth while incurring the penalty;

[43] post haec, an alio tempore et aliter facere vel facilius vel securius potuerit, ut dicit Cicero pro Milone enumerans plurimas occasiones, quibus ab eo Clodius impune occidi potuerit; praeterea, cur potissimum illo loco, illo tempore, illo modo sit aggressus, (qui et ipse diligentissime tractatur pro eodem locus) an,

[43] and further, whether he could have done the deed at some other time and in some other way, or with greater ease or security, as Cicero says in the *pro Milone*, where he mentions the numerous occasions when his client could have killed Clodius with impunity. There is also the question why the accused should have chosen that particular place or time or means for the commission of the crime, a topic to which Cicero gives a thorough treatment in the same passage;

[44] etiamsi nulla ratione ductus est, impetu raptus sit et absque sententia, (nam vulgo dicitur scelera non habere consilium) an etiam consuetudine peccandi sit ablatas.

excussa prima parte, an voluerit, sequitur, an potuerit. hic tractatur locus, tempus, ut furtum in loco cluso, frequenti, tempore vel diurno, cum testes plures, vel nocturno, cum maior difficultas.

[44] or whether, without having the least reason for the deed, he was carried away by the impulse of the moment and acted without deliberate purpose (for it is a common saying that crimes are irrational), or finally, whether he was led astray by the fact that crime had become a habit with him.

Having dealt with the question whether he intended to commit the crime, we proceed to the question whether he was in a position to commit it. Under this head we discuss the place and occasion of the offence. For instance, in a case of theft we ask whether it was committed in a secluded or frequented spot, in the daytime, when witnesses are more numerous, or by night, when success is more difficult.

[45] inspiciuntur itaque difficultates occasionesque, quae sunt plurimae ideoque exemplis non egent. hic sequens locus talis est, ut, si fieri non potuit, sublata sit lis; si potuit, sequatur quaestio an fecerit. sed haec etiam ad animi coniecturam pertinent, nam et ex his colligitur an speraverit. ideo spectari debent et instrumenta, ut Clodii ac Milonis comitatus. quaestio,

[45] Consequently we shall consider all the circumstances rendering the act difficult or easy of accomplishment; these require no illustration, being

numerous and familiar. This second topic is of such importance that, if it is impossible to give it satisfactory treatment, the case falls to the ground; if, however, we succeed in dealing with it adequately, we must proceed to consider whether the accused actually committed the act. But this topic involves conjecture as to intention, for it is from these facts that we infer whether he hoped for success or not. Therefore we must also consider the question of the means at his disposal, such, for example, as the retinues of Clodius and Milo.

[46] *an fecerit, incipit a secundo tempore, id est praesenti, deinde coniuncto, quorum sunt sonus, clamor, gemitus; insequentis latitatio, metus, similia. his accedunt signa, de quibus tractatum est, verba etiam et facta, quaeque antecesserunt quaeque insecuta sunt.*

[46] The question whether he actually did the deed belongs, in the first place, to the second division of time, namely the present, and secondly to time that is almost, though not actually contemporary: under this latter head come circumstances such as noise, cries or groans, while concealment, fear and the like belong to subsequent time. To these must be added indications, which we have already discussed elsewhere, and words and acts antecedent or subsequent to the crime.

[47] *haec aut nostra sunt aut aliena. sed verba nobis magis nocent et minus prosunt nostra quam aliena; magis prosunt et minus nocent aliena quam nostra. facta autem interim magis prosunt nostra, interim aliena, ut si quid, quod pro nobis sit, adversarius fecit; semper vero magis nocent nostra quam aliena.*

[47] These words and acts are either our own or those of others. With regard to words, our own do us greater harm and bring us less profit than do those of others, while those of others bring us greater profit and do us less harm than our own. On the other hand, with regard to deeds, it is sometimes from our own and sometimes from those of others that we derive the greatest advantage, as, for example, when our opponent has done something which tells in our favour: but our own acts are always more injurious to our case than are those of others.

[48] *est et illa in verbis differentia, quod aut aperta sunt aut dubia. seu nostra seu aliena sunt, infirmiora in utrumque sint necesse dubia; tamen nostra saepe nobis nocent, ut in illa controversia: interrogatus filius, ubi esset pater, dixit, Ubicumque est, vivit; at ille in puteo mortuus est inventus. aliena,*

[48] Again, with regard to words, we must distinguish between those whose meaning is clear and those whose significance is doubtful. The latter will necessarily give less assistance to either side, be they our own words or another's. On the other hand, any ambiguity in our own words will always tell against us, as, for example, in the following controversial theme. "A son, on

being asked where his father was, replied: 'Wherever he is, he is alive.' But the father was found dead at the bottom of a well."

[49] quae sunt dubia, nunquam possunt nocere nisi aut incerto auctore aut mortuo. nocte audita vox est, caute tyrannidem; et, interrogatus, cuius veneno moreretur respondit, Non expedit tibi scire. nam si est, qui possit interrogari, solvet ambiguitatem.

[49] When the ambiguity lies in words used by others, they can never do us any harm, unless he who uttered them be unknown or dead; I will give two illustrations of my meaning: "A cry was heard at night, 'Be on your guard against the establishment of a tyranny';" and, "on being asked who had poisoned him, he replied: 'It is not fit that you should know.'" For if the speaker is available for examination, he will clear up the ambiguity.

[50] cum autem dicta factaque nostra defendi solo animo possint, aliena varie refutantur.

De uno quidem maximo genere coniecturalium controversiarum locuti videmur, sed in omnes aliquid ex his cadit. nam furti, depositi, creditae pecuniae et a facultatibus argumenta veniunt, an fuerit, quod deponeretur, et a personis, an ullum deposuisse apud hunc, vel huic credidisse credibile sit, an petito rem calumniari, an reum infitiatorem esse vel furem.

[50] Finally, whereas our own words and deeds can only be justified by their intention, the deeds and words of others can be disposed of in a number of different ways.

My remarks on this subject have, I think, been confined to one very important class of conjectural cases, but something of what I have said will apply to all cases. For example, in cases concerned with theft, deposits and loans, arguments are derived both from possibilities (as when we enquire whether there was any money to deposit), and from persons, as when we raise the question whether it is credible that anyone deposited money with this man or trusted him with a loan, or that the claimant is bringing a false accusation, or that the accused repudiates his debt or is a thief.

[51] sed etiam in furti reo sicut in caedis quaeritur de facto et de auctore. crediti et depositi duae quaestiones, sed nunquam iunctae, an datum sit, an redditum. habent aliquid proprii adulterii causae, quod plerumque duorum discrimen est et de utriusque vita dicendum, quanquam et id quaeritur, an utrumque pariter defendi oporteat. cuius rei consilium nascetur ex causa; nam si adiuvabit pars altera, coniungam; si nocebit, separabo. Ne quis autem mihi putet temere excidisse,

[51] But even in the case of an accusation of theft, just as in an accusation of murder, we enquire both into the act and the author, while in cases concerned with loans and deposits there are also two questions (though these are always

distinct from one another), namely, whether the money was delivered and whether it has been repaid. Cases of adultery are marked by the following peculiarity, that, as a rule, the safety of two persons is involved, and it is necessary to say something of the past life of both, although some have raised the question whether both parties should be defended together. The line to be taken must depend on the circumstances of the individual case: if the defence of one party lends support to the defence of the other, I should defend them conjointly; if the reverse is the case, I should treat the two cases separately.

[52] quod plerumque duorum crimen esse adulterium, non semper dixerim: potest accusari sola mulier incerti adulterii: munera domi inventa sunt; pecunia, cuius auctor non exstat; codicilli, dubium ad quem scripti In falso quoque ratio similis;

[52] However, that no one may think me somewhat hasty in saying that two persons are as a rule involved in charges of adultery, I would point out that I would not assert that this is always the case. The woman alone may be accused of adultery with a person unknown: we may say, "Gifts were found in the house, and money from some unknown source, and love-letters whose destination cannot be ascertained."

[53] aut enim plures in culpam vocantur aut unus. Et scriptor quidem semper tueri signatorem necesse habet, signator scriptorem non semper, nam et decipi potuit. is autem, qui hos adhibuisse et cui id factum dicitur, et scriptorem et signatores defendet. iidem argumentorum loci in causis proditiōis et adfectatae tyrannidis.

[53] The case is similar in accusations of forgery: for either there are several accused or only one. The writer of a document always regards it as necessary to support the signatory, but the signatory does not always support the writer of the document, for it is always possible that he has been deceived on the matter. On the other hand, the man who is said to have called in their services, and for whom the document is alleged to have been written, will always defend both writer and signatories. The arguments employed in cases of treason or attempted tyranny will be drawn from the same sources.

[54] verum illa scholarum consuetudo ituris in forum potest nocere, quod omnia, quae in themate non sunt, pro nobis ducimus. adulterium obiicis; quis testis? quis index? proditiōem, quod pretium? quis conscius? venenum; ubi emi? a quo? quando? quanti? per quem dedi? pro reo tyrannidis adfectatae; ubi sunt arma?

[54] But the custom prevalent in the schools of regarding everything not definitely stated in the theme as being in the speaker's favour, is likely to prove harmful to students destined for practice in the courts. You bring a charge of adultery. "Who is your witness? who is your informer?" You charge me with treason. "What was my reward? who was my accomplice?" You

charge me with poisoning. "Where did I buy the poison, and from whom? When did I buy it, what was the price, and whom did I employ to administer it?" Or in defence of one charged with attempting to establish himself as tyrant, the declaimer will cry, "Where are my weapons, and what bodyguards have I ever collected?"

[55] quos contraxi satellites? neque haec nego esse dicenda, et ipsis utendum pro parte suscepta. nam et in foro aliqua, quando adversarius probare non poterit, desiderabo. sed in foro tantam illam facilitatem olim desiderauimus, ubi non fere causa agitur, ut non aliquid ex his aut plura ponantur.

[55] I do not deny that these questions should be asked, or that we should use them as far as is permitted by the rôle which we have assumed; for even in the courts I feel that it will be desirable to put such questions, if my opponent is not in a position to reply effectively; but we have often felt the lack of such freedom in the courts, whereas in the schools there is scarcely a case where one or more examples of this method are not to be found.

[56] huic simile est, quod in epilogis quidam, quibus volunt, liberos, parentes, nutrices accommodant, nisi quod magis concesseris ea, quae non sint posita, desiderare quam adiicere.

De animo quomodo quaeratur, satis dictum est, cum ita diviserimus, an voluerit, an potuerit, an fecerit. nam qua via tractatur, an voluerit, eadem, quo animo fecerit; id enim est, an male facere voluerit.

[56] Similar to this is the practice which some declaimers allow themselves in their perorations of assigning children, parents and nurses to their characters at will, though it is more reasonable to call for evidence which is not explicitly mentioned in the statement of the theme than to introduce it ourselves.

With regard to the method to be followed when we enquire into intention, I have said enough in dividing the subject into three questions, namely, whether the accused intended to do the deed, whether he was in a position to do it and whether he actually did it. For the method of enquiring into the purpose with which an act was committed is identical with that employed in enquiring whether the deed was intended, since it amounts to asking whether a criminal act was intended.

[57] ordo quoque rerum aut adfert aut detrahit fidem; multo scilicet magis res, prout ponuntur, congruunt aut repugnant. sed haec nisi in ipso complexu causarum non deprehenduntur. quaerendum tamen semper, quid cuique connectatur et quid consentiat.

[57] Further, the order in which the facts are stated may either contribute to or detract from the credibility of our case; for consistency and the reverse depend to a very great extent on the way the circumstances are arranged. But we shall

be unable to detect these qualities unless we consider the circumstances in connexion with the case as a whole. None the less, it will always be necessary to consider what are best suited to be placed together.

3. sequitur coniecturam finitio. nam, qui non potest dicere nihil fecisse, proximum habebit, ut dicat, non id fecisse, quod obiiciatur. itaque pluribus legibus rei iisdem quibus coniectura versatur, defensionis tantum genere mutato, ut rei furtis, depositis, adulteriis. nam, quemadmodum dicimus, non feci furtum, non accepi depositum, non commisi adulterium, ita, non est hoc furtum, non est hoc depositum, non est hoc adulterium.

3. *Conjecture* is followed by *definition*. For the man who cannot assert that he has done nothing, must needs take refuge in the assertion that he has not committed the act which is alleged against him. Consequently the laws which govern *definition* are for the most part the same as those which govern *conjecture*, the only difference lying in the method to be employed in defence in cases such as those concerned with theft, deposits or adultery. For just as we say, "I have not committed theft, I never received a deposit, I am not guilty of adultery," so we say, "This is not theft, this is not a deposit, this is not adultery."

[2] interim a qualitate ad finitionem descenditur, ut rei actionibus dementiae, malae tractationis, rei publicae laesae; rei quibus si recte facta esse, quae obiiciuntur, dici non potest, illud succurrit, non est male tractare uxorem verbis laedere. finitio igitur est rei propositae propria et dilucida et breviter comprehensa verbis enuntiatio. constat maxime,

[2] Sometimes we may pass from *quality* to *definition*, as in actions concerned with lunacy, cruelty and offences against the State. In such cases if it is impossible to assert that the acts alleged were right, we are left with such pleas as, "To use bad language to one's wife does not amount to cruelty." Definition is the statement of the fact called in question in appropriate, clear and concise language.

[3] sicut est dictum, genere, specie, differentibus, propriis: ut si finias equum, (noto enim maxime utar exemplo) genus est animal, species mortale, differentia irrationale, (nam et homo mortale erat) proprium hinnians. haec adhibetur orationi pluribus causis.

[3] As I have already said, it consists mainly in the statement of *genus*, *species*, *difference* and *property*. For example, if you wish to define a horse (for I will take a familiar example), the *genus* is animal, the *species* mortal, the *difference* irrational (since man also is mortal) and the *property* neighing. Definition is employed by the orator for a number of different reasons.

[4] nam tum est certum de nomine, sed quaeritur quae res ei subiicienda sit, tum res est manifesta, sed de nomine non constat. cum de nomine constat, de

re dubium est, interim coniectura est: ut si quaeratur, quid sit deus.

[4] For sometimes, though there may be no doubt as to a term, there is a question as to what it includes, or, on the other hand, there may be no doubt about the thing, but no agreement as to the term to be applied to it. When the term is agreed, but the thing doubtful, conjecture may sometimes come into play, as, for instance, in the question, “What is god?”

[5] nam qui neget deum esse spiritum omnibus partibus immixtum, non hoc dicat falsam esse divinae illius naturae appellationem, sicut Epicurus, qui humanam ei formam locumque inter mundos dedit? nomine uterque uno utitur;

[5] For the man who denies that god is a spirit permeating all things, assuredly asserts that the epithet “divine” is falsely applied to his nature, like Epicurus, who gives him a human form and makes him reside in the intermundane space. While both use the same term *god*, both have to employ conjecture to decide which of the two meanings is consistent with fact.

[6] utrum sit rei re, coniectat. interim qualitas tractatur, ut quid sit rhetorice, vis persuadendi an bene dicendi scientia. quod genus est rei iudiciis frequentissimum. sic enim quaeritur, an deprehensus rei lupanari cum aliena uxore adulter sit: quia non de appellatione, sed de vi facti eius ambigitur, an omnino peccaverit. nam si peccavit, non potest esse aliud quam adulter.

[6] Sometimes again we have recourse to quality, as in the question, “What is rhetoric? Is it the power to persuade or the science of speaking well?” This form of question is of frequent occurrence in the courts. For instance, the question may arise whether a man caught in a brothel with another man’s wife is an adulterer. Here there is no doubt about the name; it is the significance of the act which is in doubt, since the question is whether he has committed any sin at all. For if he has sinned, his sin can only be adultery.

[7] diversum est genus, cum controversia consistit rei nomine, quod pendet ex scripto, nec versatur rei iudiciis nisi propter verba quae litem faciunt: an, qui se interficit, homicida sit; an, qui tyrannum rei mortem compulit, tyrannicida; an carmina magorum veneficium. res enim manifesta est, sciturque non idem esse occidere se quod alium, non idem occidere tyrannum quod compellere ad mortem, non idem carmina ac mortiferam potionem; quaeritur tamen, an eodem nomine appellanda sint.

[7] There is a different type of question where the dispute is concerned with the term to be applied, which depends on the letter of the law: it is a form of question which can only arise in the courts from the actual words on which the dispute turns. Take as examples the questions, whether suicide is a form of homicide, or whether the man who forces a tyrant to kill himself can be considered a tyrannicide, or whether magical incantations are equivalent to

the crime of poisoning. In all these cases there is no doubt about the facts, for it is well known that there is a difference between killing oneself and killing another, between slaying a tyrant and forcing him to suicide, between employing incantations and administering a deadly draught, but we enquire whether we are justified in calling them by the same name.

[8] quanquam autem dissentire vix audeo a Cicerone, qui multos secutus auctores dicit, finitionem esse de eodem et de altero, semper enim neganti aliquod esse nomen dicendum quod sit potius: tamen equidem tris habeo velut species.

[8] Though I hardly like to differ from Cicero, who follows many authorities in saying that definition is concerned with identity and difference (since he who denies the applicability of one term must always produce another term which he regards as preferable), for my own part I consider that definition falls into three types, which I may perhaps call *species*.

[9] nam interim convenit solum quaerere, an hoc sit, ut an adulterium rei lupanari. cum hoc negamus, non necesse est dicere quid id vocetur, quia totum crimen infitiamur. interim quaeritur, hoc an hoc; furtum an sacrilegium. non quin sufficiat non esse sacrilegium, sed quia necesse sit dicere quid sit aliud; quo rei loco utrumque finiendum est.

[9] For at times it is convenient merely to enquire whether one particular term is applicable to a given thing, as in the question whether an act committed in a brothel is adultery. If we deny that it is adultery, there is no need to state what it should be called, since we have given a total denial to the charge. Secondly, there are occasions when the question is which of two terms is to be applied to a thing, as in the question whether an act is theft or sacrilege. It may be sufficient for the defence that it is not sacrilege, but it is still necessary to show what else it is, and therefore we must define both.

[10] interim quaeritur rei rebus specie diversis, an et hoc et hoc eodem modo sit appellandum, cum res utraque habet suum nomen, ut amatorium, venenum. In omnibus autem huius generis litibus quaeritur, an etiam hoc, quia nomen de quo ambigitur utique rei alia re certum est. sacrilegium est rem sacram de templo surripere: an et privatam? adulterium cum aliena uxore domi coire: an et rei lupanari? tyrannicidium occidere tyrannum: an et rei mortem compellere?

[10] Thirdly, there are times when the question concerns things which are different in species, and we ask whether two different things are to be called by the same name, in spite of the fact that each has a special name of its own: for example, is the same name applicable both to a love-potion and a poison? But in all disputes of this kind the question is whether one thing is another thing as well, since the name in doubt does without question apply to something else. It is sacrilege to steal a sacred object from a temple; is it also

sacrilege to steal private property from a temple? It is adultery to lie with another man's wife in one's own house; is it adultery to do so in a brothel? It is tyrannicide to slay a tyrant; is it tyrannicide to force him to slay himself?

[11] *ideoque συλλογισμός de quo postea dicam, velut infirmior est finitio, quia rei hac quaeritur, an idem sit huius rei nomen quod alterius, illo, an proinde habenda sit haec atque illa. est et talis finitionum diversitas,*

[11] Consequently the syllogism, to which I shall return later, is virtually a weaker form of definition, since while definition seeks to determine whether one thing has the same name as another, syllogism seeks to determine whether one thing is to be regarded as identical with another.

[12] *ut qui idem sentiant, non iisdem verbis comprehendant: ut rhetorice bene dicendi scientia, et eadem bene inveniendi et bene enuntiandi et dicendi secundum virtutem orationis et dicendi quod sit officii. atque providendum ut, si sensu non pugnant, comprehensione dissentiant. sed de his disputatur, non litigatur.*

[12] There is moreover great variety in definitions. For instance, persons will give different verbal expression to things about which they are really in agreement: thus rhetoric is defined as the science of *speaking well*, as the science of *correct conception* or *correct expression* of what we have to say, as the science of *speaking in accordance with the excellence of an orator* and again of *speaking to the purpose*. And we must take care to discover how it is that definitions, identical in meaning, differ in the form in which they are expressed. However, this is a subject for discussion and not for a quarrel.

[13] *opus est aliquando finitione obscurioribus et ignotioribus verbis ut, quid sit clarigatio, erctum citum: interim notis nomine verbis, quid sit penus, quid litus.*

quae varietas efficit, ut eam quidam coniecturae, quidam qualitati, quidam legitimis quaestionibus subiecerint.

[13] Definition is sometimes required to explain rare or obscure words such as *clarigatio* or *erctum citum*, or again to explain familiar words such as *penus* or *litus*.

This variety in definition has caused some writers to include it under conjecture, others under quality and others again under legal questions.

[14] *quibusdam ne placuit quidem omnino subtilis haec et ad morem dialecticorum formata conclusio, ut rei disputationibus potius arguta verborum cavillatrix quam rei oratoris officio multum adlatura momenti. licet enim valeat rei sermone tantum, ut constrictum vinculis suis eum qui responsurus est vel tacere vel etiam invitum id quod sit contra cogat fateri, non eadem est tamen eius rei causis utilitas.*

[14] Some, on the other hand, entirely reject the elaborate and formal methods of reasoning employed by dialectic, regarding such ingenuity as suited rather to quibbles over words in philosophical discussions than as likely to carry much weight in the performance of the duties of an orator. For though in dialogue definition may serve to fetter the person who has got to reply in chains of his own making, or may force him to silence, or even to reluctant confession of a point which tells against himself, it is of less use in forensic cases.

[15] *persuadendum enim iudici est, qui etiamsi verbis devinctus est, tamen, nisi ipsi rei accesserit, tacitus dissentiet. agenti vero quae tanta est huius praecisae comprehensionis necessitas? An, si non dixerō, homo est animal mortale rationale, non potero, expositis tot corporis animique proprietatibus, latius oratione ducta, vel a dis eum vel a mutis discernere?*

[15] For there we have to persuade the judge, who, even though he may be tied and bound with our words, will still dissent in silence, unless he is brought really into touch with the actual facts. And what need has a pleader for such precision of definition? Even if I do not say that man is an animal, mortal and rational, surely I shall still be able, by setting forth the numerous properties of his body and mind in more general terms, to distinguish him from gods or dumb beasts.

[16] *quid quod nec uno modo definitur res eadem (ut facit Cicero: quid est enim vulgo? universos) et latiore varioque tractatu, ut omnes oratores plerumque fecerunt? rarissima enim apud eos reperitur illa ex consuetudine philosophorum ducta servitus est certa servitus ad certa se verba adstringendi, idque faciendum rei libris Ciceronis de Oratore vetat M. Antonius.*

[16] Again, may not the same thing be defined in more than one way, as Cicero does when he says, “What do we mean when we say ‘commonly’: surely we mean ‘by all men’?” May it not be given a wide and varied treatment such as is frequently employed by all orators? For it is rare to find orators falling victims to that form of slavery introduced from the practice of the philosophers and tying themselves down to certain definite words; indeed it is absolutely forbidden by Marcus Antonius in the *de Oratore* of Cicero. For it is a most dangerous practice, since,

[17] *nam est etiam periculosum, cum, si uno verbo sit erratum, tota causa cecidisse videamur; optimaque est media illa via, qua utitur Cicero pro Caecina, ut res proponatur, verba non periclitentur. etenim, recipiatores, non ea sola vis est quae ad corpus nostrum vitamque pervenit, sed etiam multo maior ea quae periculo mortis iniecto formidine animum perterritum loco saepe et certo statu demovet.*

[17] if we make a mistake in a single word, we are like to lose our whole case, and consequently the compromise adopted by Cicero in the *pro Caecina* is the

safest course to follow; this consists in setting forth the facts without running any risks over the exactness of our terminology. These are his words: “Judges, the violence which threatens our lives and persons is not the only kind of violence: there is a much more serious form which by the threat of death fills our minds with panic and often turns them from their natural condition of stability.”

[18] aut, cum finitionem praecedit probatio, ut rei Philippicis Cicero Servium Sulpicium occisum ab Antonio colligit et rei clausula demum ita finit: is enim profecto mortem attulit qui causa mortis fuit. non negaverim tamen haec quoque, ut expediet causae, esse facienda, et si quando firme comprehendi poterit brevi complexu verborum finitio, esse id tum elegans tum etiam fortissimum, si modo erit illa inexpugnabilis.

[18] Or again, we may prove before we define, as Cicero does in the *Philippics*, where he proves that Servius Sulpicius was killed by Antony and introduces his definition at the conclusion in the following terms:— “For assuredly the murderer was he who was the cause of his death.” I would not, however, deny that such rules should be employed, if it will help our case, and that, if we can produce a definition which is at once strong and concise, it will be not merely an ornament to our speech, but will also produce the strongest impression, provided always that it cannot be overthrown.

[19] eius certus ordo est, quid sit, an hoc sit. Et rei hoc fere labor maior est, ut finitionem confirmes, quam ut rei rein finitionem applices. In eo, quid sit, duplex opus est. nam et nostra confirmanda est et adversae partis destruenda finitio.

[19] The order to be followed in definition is invariable. We first ask *what* a thing is, and then, whether it is *this*. And there is generally more difficulty in the establishment than in the application of a definition. In determining what a thing is, there are two things which require to be done: we must establish our own definition and destroy that of our opponent. Consequently in the schools,

[20] ideoque rei schola, ubi nobis ipsi fingimus contradictionem, duos ponere debemus fines, quales utrinque esse optimi poterunt. at rei foro providendum, num forte supervacua et nihil ad causam pertinens an ambigua an contraria an communis sit finitio; quorum nihil accidere nisi agentis culpa potest.

[20] where we ourselves imagine our opponent’s reply, we have to introduce two definitions, which should suit the respective sides of the case as well as it is in our power to make them. But in the courts we must give careful consideration to the question whether our definition may not be superfluous and irrelevant or ambiguous or inconsistent or even of no less service to our opponents than to ourselves, since it will be the fault of the pleader if any of these errors occur. On the other hand, we shall ensure the right definition,

[21] Vt recte autem finiamus, ita fiet, si prius rei animo constituerimus quid velimus efficere. sic enim accommodari ad voluntatem verba poterunt. atque ut a notissimo exemplo, quo sit res lucidior, non recedamus: qui privatam pecuniam de templo surripuit, sacrilegii reus est.

[21] if we first make up our minds what it is precisely that we desire to effect: for, this done, we shall be able to suit our words to serve our purpose. To make my meaning clearer, I will follow my usual practice and quote a familiar example. "A man who has stolen private money from a temple is accused of sacrilege."

[22] culpa manifesta est; quaestio est an huic crimini nomen quod est rei lege conveniat. ergo ambigitur an hoc sacrilegium sit? accusator, quia de templo surrepta sit pecunia, utitur hoc nomine. reus, quia privatam surripuerit, negat esse sacrilegium sed furtum fatetur. actor ergo ita finiet, sacrilegium est surripere aliquid de sacro; Reus, sacrilegium est surripere aliquid sacri. uterque finitionem alterius impugnat.

[22] There is no doubt about his guilt; the question is whether the name given by the law applies to the charge. It is therefore debated whether the act constitutes sacrilege. The accuser employs this term on the ground that the money was stolen from a temple: the accused denies that the act is sacrilege, on the ground that the money stolen was private property, but admits that it is theft. The prosecutor will therefore give the following definitions, "It is sacrilege to steal anything from a sacred place." The accused will reply with another definition, "It is sacrilege to steal something sacred." Each impugns the other's definition.

[23] ea duobus generibus evertitur, si aut falsa est aut parum plena. nam illud tertium nisi stultis non accidit, ut nihil ad quaestionem pertineat.

[23] A definition may be overthrown on two grounds: it may be false or it may be too narrow. There is indeed a possible third ground, namely irrelevance, but this is a fault which no one save a fool will commit.

[24] Falsa est, si dicas, equus animal rationale; nam est equus animal sed irrationale. quod autem commune cum alio est, desinet esse proprium. Hic reus falsam dicit esse finitionem accusatoris, accusator autem non potest dicere falsam rei; nam est sacrilegium surripere aliquid sacri; sed dicit parum plenam, adiiciendum enim aut ex sacro.

[24] [It is a false definition if you say, "A horse is a rational animal," for though the horse is an animal, it is irrational. Again, a thing which is common to something else cannot be a property of the thing defined.] In the case under discussion, then, the accused alleges that the definition given by the accuser is false, whereas the accuser cannot do the same by his opponent's definition, since to steal a sacred object is undoubtedly sacrilege. He therefore alleges

that the definition is too narrow and requires the addition of the words “or from a sacred place.”

[25] *maximus autem usus rei approbando refellendoque fine propriorum ac differentium, nonnunquam etiam etymologiae. quae tamen omnia, sicut rei ceteris, confirmat aequitas, nonnunquam et coniectura mentis. etymologia maxime rare est: quid enim est aliud tumultus, nisi perturbatio tanta, ut maior timor oriatur? unde etiam nomen ductum est tumultus.*

[25] But the most effective method of establishing and refuting definitions is derived from the examination of properties and differences, and sometimes even from considerations of etymology, while all these considerations will, like others, find further support in equity and occasionally in conjecture. Etymology is rarely of assistance, but the following will provide an example of its use. “For what else is a ‘tumult’ but a disturbance of such violence as to give rise to abnormal alarm? And the name itself is derived from this fact.”

[26] *circa propria ac differentia magna subtilitas, ut cum quaeritur an addictus, quem lex servire, donec solverit, iubet, servus sit. altera pars finit ita, servus est, qui est iure rei servitute; altera, qui rei servitute est eo iure, quo servus, aut, ut antiqui dixerunt, qui servitutem servit. quae finitio, etiamsi distat aliquo, nisi tamen propriis et differentibus adiuvatur, inanis est.*

[26] Great ingenuity may be exercised with regard to properties and differences, as for instance in the question whether a person assigned to his creditor for debt, who is condemned by the law to remain in a state of servitude until he has paid his debt, is actually a slave. One party will advance the following definition, “A slave is one who is legally in a state of servitude.” The other will produce the definition, “A slave is one who is in a state of servitude on the same terms as a slave (or, to use the older phrase, ‘who serves as a slave’).” This definition, though it differs considerably from the other, will be quite useless unless it is supported by properties and differences.

[27] *dicet enim adversarius, servire eum servitutem aut eo iure quo servum. videamus ergo propria et differentia, quae libro quinto leviter rei transitu attigeram. servus, cum manumittitur, fit libertinus, addictus recepta libertate ingenuus; servus invito domino libertatem non consequetur, addictus soluendo citra voluntatem domini consequetur: ad servum nulla lex pertinet, addictus legem habet. propria liberi, quod nemo habet nisi liber, praenomen, nomen, cognomen, tribum; habet haec addictus.*

[27] For the opponent will say that the person in question is actually serving as a slave or is legally in a state of servitude. We must therefore look for properties and differences, to which in passing I devoted a brief discussion in my fifth book. A slave when manumitted becomes a freedman: a man who is assigned for debt becomes a free man on the restoration of his liberty. A slave cannot acquire his freedom without the consent of his master: a man assigned

for debt can acquire it by paying his debt without the consent of his master being necessary. A slave is outside the law; a man assigned for debt is under the law. Turning to properties, we may note the following which are possessed by none save the free, the three names (praenomen, nomen and cognomen) and membership of a tribe, all of which are possessed by the man assigned for debt.

[28] excusso quid sit, prope peracta est quaestio, an hoc sit. id enim agimus ut sit causae nostrae conveniens finitio. potentissima est autem rei ea qualitas, an amor insaniam. huc pertinebunt probationes, quas Cicero dicit proprias esse finitionis, ex antecedentibus, consequentibus, adiunctis, repugnantibus, causis, effectis, similibus; de quorum argumentorum natura dictum est.

[28] By settling what a thing is we have come near to determining its identity, for our purpose is to produce a definition that is applicable to our case. Now the most important element in a definition is provided by quality, as, for example, in the question whether love be a form of madness. To this point in our procedure belong those proofs which according to Cicero are peculiar to definition, that is, proofs drawn from antecedents, consequents, adjuncts, contraries, causes, effects and similarities, with the nature of which I have already dealt.

[29] breviter autem pro Caecina Cicero initia, causas, effecta, antecedentia, consequentia complexus est: quid igitur fugiebant? propter metum Quid metuebant? vim videlicet. potestis igitur principia negare, cum extrema concedatis? sed similitudine quoque usus est, quae vis rei bello appellatur, ea rei otio non appellabitur?

[29] I will, however, quote a passage from the *pro Caecina* in which Cicero includes brief proofs drawn from origins, causes, effects, antecedents and consequents: “Why then did they fly? Because they were afraid. What were they afraid of? Obviously of violence. Can you then deny the beginning, when you have admitted the end?”

[30] sed etiam ex contrario argumenta ducuntur, ut si quaeratur, amatorium venenum sit necne; quia venenum amatorium non sit.

illud alterum genus quo sit manifestius adolescentibus meis (meos enim semper adolescentes putabo), hic quoque fictae controversiae utar exemplo.

[30] But he also argued from similarity: “Shall not that which is called violence in war be called violence in peace as well” Arguments may also be drawn from contraries, as for instance in the question whether a love-potion can be a poison, in view of the fact that a poison is not a love-potion.

In order that my young students (and I call them mine, because the young student is always dear to me) may form a clearer conception of this second kind of definition, I will once more quote a fictitious controversial theme.

[31] iuvenes, qui convivere solebant, constituerunt, ut rei litore cenarent. unius, qui cenae defuerat, nomen tumulo, quem extruxerant, inscripserunt. pater eius, a transmarina peregrinatione cum ad litus idem appulisset, lecto nomine suspendit se.

[31] “Some young men who were in the habit of making merry together decided to dine on the sea-shore. One of their party failed to put in an appearance, and they raised a tomb to him and inscribed his name thereon. His father on his return from overseas chanced to land at this point of the shore, read the name and hung himself. It is alleged that the youths were the cause of his death.”

[32] dicuntur ii causa mortis fuisse. hic finitio est accusatoris, per quem factum est, ut quis perierit, causa mortis est; rei est, qui fecit quid sciens, per quod perire homini necesse est. remota finitione accusatori sat est dicere, causa mortis fuistis; per vos enim factum est, ut homo periret; quia, nisi vos illud fecissetis, viveret.

[32] The definition produced by the accuser will run as follows: “The man whose act leads to another’s death is the cause of his death.” The definition given by the accused will be, “He who wittingly commits an act which must necessarily lead to another’s death, is the cause of his death.” Without any formal definition it would be sufficient for the accuser to argue as follows: “You were the cause of his death, for it was your act that led to his death: but for your act he would still be alive.”

[33] contra, Non statim, per quem factum est, ut quis periret, is damnari debet, ut accusator, testis, iudex rei capitalis. nec undecunque causa fluxit, ibi culpa est: ut si quis profectionem suaserit aut amicum arcessierit trans mare et is naufragio perierit, ad cenam invitaret et is cruditate illic contracta decesserit.

[33] To which the accused might answer, “It does not necessarily follow that the man whose act leads to another’s death should be condemned forthwith. Were this so, the accuser, witnesses and judges in a capital case would all be liable to condemnation. Nor is the cause of death always a guilty cause. Take for instance the case of a man who persuades another to go on a journey or sends for his friend from overseas, with the result that the latter perishes in a shipwreck, or again the case of a man who invites another to dine, with the result that the guest dies of indigestion.

[34] nec fuerit rei causa mortis solum adolescentium factum sed credulitas senis, rei dolore ferundo infirmitas; denique, si fortior fuisset aut prudentior, uiueret. nec mala mente fecerunt; et ille potuit vel ex loco tumuli vel ex opere tumultuario suspicari non esse monumentum. qui ergo puniri debent, rei quibus omnia absunt homicidae praeter manum?

[34] Nor is the act of the young men to be regarded as the sole cause of death.

The credulity of the old man and his inability to bear the shock of grief were contributory causes. Finally, had he been wiser or made of sterner stuff, he would still be alive. Moreover the young men acted without the least thought of doing harm, and the father might have suspected from the position of the tomb and the traces of haste in its construction that it was not a genuine tomb. What ground then is there for condemning them, for everything else that constitutes homicide is lacking save only the contributory act?"

[35] est interim certa finitio, de qua inter utramque partem convenit: ut Cicero dicit, maiestas est rei imperii atque rei nominis populi Romani dignitate. quaeritur tamen, an maiestas minuta sit, ut rei causa Cornelii quaesitum est. sed hic etiamsi videri potest finitiva, tamen quia de finitione non ambigitur, iudicatio est qualitatis atque ad eum potius status reducenda, ad cuius forte quidem venimus mentionem, sed erat ordine proximus locus.

[35] Sometimes we have a settled definition on which both parties are agreed, as in the following example from Cicero: "Majesty resides in the dignity of the Roman power and the Roman people." The question however, is, whether that majesty has been impaired, as for example in the case of Cornelius. But even although the case may seem to turn on definition, the point for decision is one of quality, since there is no doubt about the definition, and must be assigned to the *qualitative basis*. It is a mere accident that I have come to mention quality at this moment, but in point of fact quality is the matter that comes next in order for discussion.

4. est autem qualitas alia de summo genere atque ea quidem non simplex. nam et qualis sit cuiusque rei natura et quae forma quaeritur: an immortalis anima, an humana specie deus; et de magnitudine ac numero, quantus sol, an unus mundus. quae omnia coniectura quidem colliguntur, quaestionem tamen habent in eo, qualia sint? haec et in suasoriis aliquando tractari solent,

4. In speaking of quality we sometimes use the word in its most general sense, which covers a number of different questions. For we enquire sometimes into the nature and form of things: as for instance whether the soul is immortal or whether god is to be conceived of in human form. Sometimes, on the other hand, the question turns on size and number, as, for instance, what is the size of the sun or whether there are more worlds than one. In all these cases we arrive at our conclusions by conjecture, yet each involves a question of quality.

[2] ut, si Caesar deliberet, an Britanniam impugnet, quae sit Oceani natura, an Britanniam insula (nam tum ignorabatur), quanta in ea terra, quo numero militum aggredienda, in consilium ferendum sit. eidem qualitati succedunt facienda ac non facienda, appetenda, vitanda; quae in suasorias quidem maxime cadunt, sed in controversiis quoque sunt frequentia, hac sola differentia, quod illic de futuris hic de factis agitur.

[2] Such questions are sometimes treated in deliberative themes: for example, if Caesar is deliberating whether to attack Britain, he must enquire into the nature of the Ocean, consider whether Britain is an island (a fact not then ascertained), and estimate its size and the number of troops which lie will require for the invasion. Under the same head of quality fall questions whether certain things should be done or not and certain objects sought or avoided: such topics are specially adapted for deliberative themes, but occur with some frequency in controversial themes as well, the only difference being that in the latter we deal with what is past and in the former with the future.

[3] item demonstratiuae partis omnia sunt in hoc statu: factum esse constat, quale sit factum quaeritur. lis est omnis aut de praemio aut de poena aut de quantitate. igitur genus causae aut simplex aut comparativum. illic, quid aequum, hic, quid aequius aut quid aequissimum sit, excutitur. cum de poena iudicium est, a parte eius, qui causam dicit, aut defensio est criminis aut imminutio aut excusatio aut, ut quidam putant, deprecatio.

[3] Similarly all the topics of demonstrative oratory involve a *qualitative basis*. The facts are admitted, and the question turns on their quality, the dispute being entirely concerned with rewards or penalties or their quantity. The case is therefore of two kinds, simple or comparative, the former dealing with what is just, the latter with what is juster, or most just. When the point for decision is the penalty to be inflicted, the duty of the pleader will be to defend, extenuate or excuse the act on which the charge is based, or even, according to some, to plead for mercy.

[4] defensio longe potentissima est, qua ipsum factum, quod obiicitur, dicimus honestum esse. abdicatur aliquis, quod invito patre militavit, honores petierit, uxorem duxerit: tuemur, quod fecimus. hanc partem vocant Hermagorei κατ' ἀντιληψιν, ad intellectum id nomen referentes. Latine ad verbum translata non invenio; absoluta appellatur. sed enim de re sola quaestio, iusta sit ea necne.

[4] By far the strongest line that can be taken in defence is to assert that the act which forms the subject of the charge is actually honourable. A man is disinherited because he went on military service, stood for office or married without his father's consent. We defend this act. This form of defence is called κατ' ἀντιληψιν by the followers of Hermagoras, that is, defence by objection, the term being used with reference to the purport of the defendant's plea. I can find no exact Latin translation of the term; we call it an absolute defence. But in such cases the question is concerned with the justice or injustice of the act alone.

[5] iustum omne continetur natura vel constitutione; natura, quod fit secundum cuiusque rei dignitatem.

[5] Justice is either natural or conventional. Natural justice is found in actions of inherent worth.

[6] hinc sunt pietas, fides, continentia et talia. adiiciunt et id, quod sit par. verum id non temere intuendum est: nam et vis contra vim et talio nihil habent adversum eum, qui prior fecit, iniusti; et non, quoniam res pares sunt, etiam id est iustum, quod antecessit. illa utrinque iusta, eadem lex, eadem condicio; ac forsitan ne sint quidem paria, quae ulla parte sunt dissimilia. constitutio est in lege, more, iudicato, pacto.

[6] Under this head come the virtues of piety, loyalty, self-control and the like. To these some add the rendering of like for like. But this view must not be adopted without consideration: for to retaliate, or meet violence with violence on the one hand, does not imply injustice on the part of the aggressor, while on the other hand it does not follow that the first act was just merely because the two acts were alike. In cases where there is justice on both sides, the two parties must both come under the same law and the same conditions, and it would not perhaps be untrue to say that things can never be spoken of as like if there is any point in which they are dissimilar. Convention, on the other hand, is to be found in laws, customs, legal precedents and agreements.

[7] alterum est defensionis genus, in quo factum per se improbabile adsumptis extrinsecus auxiliis tuemur; id vocant $\kappa\alpha\tau' \acute{\alpha}\nu\tau\iota\theta\epsilon\sigma\iota\nu$ Latine hoc quoque non ad verbum transferunt, adsumptiva enim dicitur causa. In quo genere fortissimum est,

[7] There is another form of defence by which we defend an act in itself indefensible by arguments drawn from without. This the Greeks call $\kappa\alpha\tau' \acute{\alpha}\nu\tau\iota\theta\epsilon\sigma\iota\nu$ by opposition. Here again there is no Latin equivalent, since we call it defence by assumption.

[8] si crimen causa facti tuemur, qualis est defensio Orestis, Horatii, Milonis. $\acute{\Lambda}\nu\tau\acute{\epsilon}\gamma\kappa\lambda\eta\mu\alpha$ dicitur, quia omnis nostra defensio constat eius accusatione, qui vindicatur: occisus est, sed latro; excaecatus, sed raptor.

[8] The strongest line to take in this form of defence is to defend the act forming the subject of the charge by appealing to its motive. An example of this is provided by the defence put forward on behalf of Orestes, Horatius or Milo. The term $\acute{\Lambda}\nu\tau\acute{\epsilon}\gamma\kappa\lambda\eta\mu\alpha$, or counter-accusation, is employed when our defence consists entirely in accusing the person whom our opponents are seeking to vindicate. "He was killed, but he was a robber; he was blinded, but he was a ravisher."

[9] est et illa ex causis facti ducta defensio priori contraria, in qua neque factum ipsum per se, ut in absoluta quaestione, defenditur neque ex contrario facto, sed ex aliqua utilitate aut rei publicae aut hominum multorum aut etiam ipsius adversarii, nonnunquam et nostra, si modo id erit, quod facere nostra

causa fas sit; quod sub extrario accusatore et legibus agente prodesse nunquam potest, in domesticis disceptationibus potest.

[9] There is another form of defence based on an appeal to the motives of the act which is the opposite of that which I have just described. It consists not in defending the act *per se*, as we do when we employ the absolute defence, nor in opposing another act to it, but in appealing to the interests of the State, of a number of persons, of our opponent himself or finally at times of ourselves, provided always that the act in question is such as we might lawfully do in our own interests. If, however, the accuser is a stranger and insists on the letter of the law, this form of defence will invariably be useless, though it may serve our turn if the dispute is of a domestic character.

[10] nam et filiis pater in iudicio abdicationis et maritus uxori, si malae tractationis accusabitur, et patri filius, si dementiae causa erit, non inverecunde dicet multum sua interfuisse. In quo tamen incommoda vitantis melior quam commoda petentis est causa.

[10] For example, in a suit concerned with the question of disinheritance a father may, without reflecting on himself, say to his sons that his act was of importance to his own interests, and the same plea may be urged by a husband accused of cruelty by his wife or a son who alleges that his father is insane. But in such cases the position of the man who seeks to avoid loss is stronger than that of him who aims at positive advantage.

[11] quibus similia etiam in vera rerum quaestione tractantur. nam quae in scholis abdicatorum, haec in foro exheredatorum a parentibus et bona apud centumviros repetentium ratio est; quae illic malae tractationis, hic rei uxoriae, cum quaeritur utrius culpa divortium factum sit; quae illic dementiae, hic petendi curatoris.

[11] Precisely similar methods are also employed in questions that occur in real life. For the scholastic themes concerned with the disowning of children are on exactly the same footing as the cases of sons disinherited by their parents which are tried in the public courts, or of those claims for the recovery of property which are tried in the centum viral court: themes dealing with cruelty find an actual parallel in those cases in which the wife claims the restoration of her dowry, and the question is whose fault it was that led to the divorce: and again the theme where the son accuses his father of madness has its analogy in cases where a suit is brought for the appointment of a guardian.

[12] subiacet utilitati etiam illa defensio, si peius aliquid futurum fuit. nam in comparatione malorum boni locum obtinet levius: ut si Mancinus foedus Numantinum sic defendat, quod periturus, nisi id factum esset, fuerit exercitus. hoc genus ἀντιστάσις Graece nominatur, comparativum nostri vocant.

[12] Under the same heading as the appeal to public or personal interest comes the plea that the act in question prevented the occurrence of something worse. For in a comparison of evils the lesser evil must be regarded as a positive good: for example, Mancinus may defend the treaty made with the Numantines on the ground that it saved the army from annihilation. This form of defence is called ἀντιστάσις by the Greeks, while we style it defence by comparison.

[13] haec circa defensionem facti; quae si neque per se ipsa nec adhibitis auxiliis dabitur, proximum est in alium transferre crimen, si possumus. ideoque etiam in hos, qui citra scriptum sunt, status visa est cadere translatio Interdum ergo culpa in hominem relegatur, ut si Gracchus reus foederis Numantini, cuius metu leges populares tulisse in tribunatu videretur, missum se ab imperatore suo diceret.

[13] Such are the methods by which we may defend an act. If it is impossible to defend an act either on its merits or with the assistance of arguments from without, the next best course will be to shift the charge, if possible, to another. It is for this reason that the *basis of competence* has been held to apply even to those who cannot plead the letter of the law in this connexion. In some cases, then, the blame will be thrown on a person: for example, Gracchus, when accused of making the treaty with the Numantines (and it was fear of this accusation that seems to have led him to bring forward the democratic laws of his tribuneship) may plead that he made it as the representative of his commander-in-chief.

[14] interim derivatur in rem, ut si is, qui testamento quid iussus non fecerit, dicat per leges id fieri non potuisse. hoc μετὰστασιν dicunt.

hinc quoque exclusis excusatio superest. ea est aut ignorantiae, ut si quis fugitivo stigmata scripserit eoque ingenuo iudicato neget se liberum esse scisse; aut necessitatis, ut cum miles ad commeatus diem non adfuit et dicit se fluminibus interclusum aut valetudine.

[14] At times, on the other hand, the blame may be shifted to some thing: for instance, a person who has failed to comply with some testamentary injunction may plead that the laws forbade such compliance. The Greek term for such shifting is μετὰστασις.

If these methods of defence are out of the question, we must take refuge in making excuses. We may plead ignorance. For example, if a man has branded a runaway slave and the latter is subsequently adjudged to be a free man, he may deny that he was cognisant of the truth. Or we may plead necessity; for instance, if a soldier overstays his leave, he may plead that his return was delayed by floods or ill health.

[15] fortuna quoque saepe substituitur culpaе. nonnunquam male fecisse nos

sed bono animo dicimus. utriusque rei multa et manifesta exempla sunt; idcirco non est eorum necessaria expositio.

Si omnia, quae supra scripta sunt, deerunt, videndum, an imminui culpa possit. hic est ille, qui a quibusdam fieri solet, status quantitatis.

[15] Again, the blame is often cast upon fortune, while sometimes we assert that, although we undoubtedly did wrong, we did so with the best intentions. Instances of these two latter forms of excuse are, however, so numerous and obvious that there is no need for me to cite them here.

If all the above-mentioned resources prove unavailable, we must see whether it may not be possible to extenuate the offence. It is here that what some call the *quantitative basis* comes into play.

[16] sed ea cum sit aut poenae aut honoris, ex qualitate facti constituitur, eoque nobis sub hoc esse statu videtur sicut eius quoque, quae ad numerum refertur a Graecis. nam et $\pi\eta\lambda\iota\kappa\acute{o}\tau\eta\tau\alpha$ et $\pi\omicron\sigma\acute{o}\tau\eta\tau\alpha$ dicunt, nos utrumque appellatione una complectimur.

[16] But when quantity is considered in reference to punishment or reward, it is determined by the quality of the act, and therefore in my opinion comes under the *qualitative basis*, as also does quantity which is used with reference to number by the Greeks, who distinguish between $\pi\omicron\sigma\acute{o}\tau\eta\varsigma$ and $\pi\eta\lambda\iota\kappa\acute{o}\tau\eta\varsigma$: we, however, have only one name for the two.

[17] ultima est deprecatio, quod genus causae plerique negarunt in iudicium unquam venire. quin Cicero quoque pro Q. Ligario idem testari videtur, cum dicit, causas, Caesar, egi multas equidem tecum, dum te in foro tenuit ratio honorum tuorum, certe nunquam hoc modo: Ignoscite, indices, erravit, lapsus est, non putavit, si unquam posthac, et cetera.

[17] In the last resort we may plead for mercy, a though most writers deny that this is ever admissible in the courts. Indeed Cicero himself seems to support this view in his defence of Quintus Ligarius where he says, "I have pleaded many causes, Caesar, some of them even in association with yourself, so long as your political ambitions prevented you from abandoning the bar, but never have I pleaded in words such as these, 'Forgive him, gentlemen, he erred, he made a slip, he did not think that it mattered, he will never do it again,'" and so on.

[18] In senatu vero et apud populum et apud principem et ubicunque iuris dementia est, habet locum deprecatio. In qua plurimum valent ex ipso, qui reus est, haec tria; vita praecedens, si innocens, si bene meritus, si spes in futurum innocenter victuri et in aliquo usu futuri; praeterea si vel aliis incommodis vel praesenti periculo vel paenitentia videatur satis poenarum dedisse; extra nobilitas, dignitas, propinqui, amici.

[18] On the other hand, in addressing the senate, the people, the emperor or any other authority who is in a position to show clemency, such pleas for mercy have a legitimate place. In such cases there are three points based on the circumstances of the accused which are most effective. The first is drawn from his previous life, if he has been blameless in his conduct and deserved well of the state, or if there is good hope that his conduct will be blameless for the future and likely to be of some use to his fellow men; the second is operative if it appears that he has been sufficiently punished already on the ground that he has suffered other misfortunes, or that his present peril is extreme, or that he has repented of his sin; while thirdly we may base his appeal on his external circumstances, his birth, his rank, his connexions, his friendships.

[19] *In eo tamen qui cognoscit plurimum ponendum, si laus eum misericordis potius quam reprehensio dissoluti consecutura est. verum et in iudiciis, etiamsi non toto genere causae, tamen ex parte magna hic locus saepe tractatur. nam et divisio frequens est, etiamsi fecisset, ignoscendum fuisse idque in causis dubiis saepe praevaluit, et epilogi omnes in eadem fere materia versari solent.*

[19] It is, however, on the judge that we shall pin our highest hopes, if the circumstances be such that acquittal will result in giving him a reputation for clemency rather than for regrettable weakness. But even in the ordinary courts appeals for mercy are frequently employed to a large extent, although they will not colour the whole of our pleading. For the following form of division is common:— “Even if he had committed the offence, he would have deserved forgiveness,” a plea which has often turned the balance in doubtful cases, while practically all perorations contain such appeals.

[20] *sed nonnunquam etiam rei totius hic summa constituta. An vero si exheredatum a se filium pater testatus fuerit elogio, propterea quod is meretricem amaverit, non omnis hic erit quaestio, an huic delicto pater debuerit ignoscere et centumviri tribuere debeant veniam? sed etiam in formulis, cum poenariae sunt actiones, ita causam partimur, an commissa sit poena, an exigi debeat. id autem, quod illi viderunt, verum est, reum a iudicibus hoc defensionis modo liberari non posse.*

[20] Sometimes indeed the whole case may rest on such considerations. For example, if a father has made an express declaration that he has disinherited his son because he was in love with a woman of the town, will not the whole question turn on the point whether it was the father's duty to pardon such an offence and whether it is the duty of the centumviral court to overlook it? Nay, even in penal prosecutions governed by strict forms of law we raise two separate questions: first whether the penalty has been incurred, and secondly whether, if so, it ought to be inflicted. Still the view of the authorities to whom I have referred that an accused person cannot be saved from the clutches of the law by this method of defence is perfectly correct.

[21] De praemiis autem quaeruntur duo: an ullo sit dignus, qui petit, an tanto; ex duobus, uter dignior; ex pluribus, quis dignissimus. quorum tractatus ex ipso meritorum genere ducuntur. Et intuebimur non rem tantum, sive adleganda sive comparanda erit, sed personam quoque; nam et multum interest, tyrannum iuvenis occiderit an senex, vir an femina, alienus an coniunctus;

[21] With regard to rewards, there are two questions which confront us: namely, whether the claimant is deserving of any reward, and, if so, whether he deserves so great a reward. If there are two claimants, we have to decide which is the more worthy of the two; if there are a number, who is the most worthy. The treatment of these questions turns on the kind of merit possessed by the claimants. And we must consider not merely the act (whether it has merely to be stated or has to be compared with the acts of others), but the person of the claimant as well. For it makes a great difference whether a tyrannicide be young or old, man or woman, a stranger or a connexion.

[22] et locum multipliciter, in civitate tyrannis assueta an libera semper, in arce an domi; et quomodo factum sit, ferro an veneno; et quo tempore, bello an pace, cum depositurus esset eam potestatem an cum aliquid novi sceleris ausurus. habent in meritis gratiam periculum quoque et difficultas.

[22] The place may also be discussed in a number of ways: was the city in which the tyrant was killed one inured to tyranny or one which had always been free? was he killed in the citadel or in his own house? The means, too, and the time call for consideration: was he killed by poison or the sword? was he killed in time of peace or war, when he was intending to lay aside his power or to venture on some fresh crime?

[23] similiter liberalitas a quo profecta sit, refert. nam in paupere gratior quam in divite, dante beneficium quam reddente, patre quam orbo. item in quam rem dederit et quo tempore et quo animo, id est, num in aliquam spem suam; similiter alia. Et ideo qualitas maxime oratoris recipit operam, quia in utramque partem plurimum est ingenio loci, nec usquam tantum adfectus valent.

[23] Further, in considering the question of merit, the danger and difficulty of the act will carry great weight, while with regard to liberality it will similarly be of importance to consider the character of the person from whom it proceeds. For liberality is more pleasing in a poor man than in a rich, in one who confers than in one who returns a benefit, in a father than in a childless man. Again, we must consider the immediate object of the gift, the occasion and the intention, that is to say, whether it was given in the hope of subsequent profit; and so on with a number of similar considerations. The question of *quality* therefore makes the highest demands on the resources of oratory, since it affords the utmost scope for a display of talent on either side,

while there is no topic in which the emotional appeal is so *effective*.

[24] nam coniectura extrinsecus quoque adductas frequenter probationes habet et argumenta ex materia sumit; quale quidque videatur eloquentiae est opus; hic regnat, hic imperat, hic sola vincit.

huic parti subiungit Verginius causas abdicationis, dementiae, malae tractationis, orbarum nuptias indicentium. nam et fere sic accidit, inventique sunt, qui has materias officiorum vocarent.

[24] For conjecture has often to introduce proofs from without and uses arguments drawn from the actual subject matter, whereas the real task of eloquence is to demonstrate *quality*: there lies its kingdom, there its power, and there its unique victory.

Verginius includes under *quality* cases concerned with disinheritance, lunacy, cruelty to a wife, and claims of female orphans to marry relatives. The questions thus involved are, it is true, frequently questions of *quality*, while some writers style them questions of *moral obligation*.

[25] sed alios quoque nonnunquam leges hae recipiunt status. nam et coniectura est aliquando in plerisque horum, cum se vel non fecisse vel bona mente fecisse contendunt Cuius generis exempla sunt multa. Et quid sit dementia ac mala tractatio, finitur. nam leges iuris plerumque quaestiones praecurrere solent, sed ex quibus causae non fiat status.

[25] But the laws governing these cases sometimes admit of other *bases*. For example, *conjecture* is involved in quite a number of such cases, as when the accused urges either that he did not commit the act or, if he did, acted with the best intentions. I could quote many examples of this kind. Again, it is definition which tells us what precisely is meant by lunacy or cruelty to a wife. For as a rule the laws cited in such themes involve certain legal questions, though not to such an extent as to determine the *basis* of the case.

[26] quod tamen facto defendi non poterit, iure nitetur: et quot et quibus causis abdicare non liceat, et in quae crimina malae tractationis actio non detur, et cui accusare dementiae non permittatur.

[26] But this notwithstanding, if the actual fact cannot be defended, we may in the last resort base our defence on legal grounds, in which case we shall consider how many and what cases there are in which a father may not disinherit his son, what charges fail to justify an action for cruelty, and under what circumstances a son is not allowed to accuse his father of lunacy.

[27] abdicationum formae sunt duae, altera criminis perfecti, ut si abdicetur raptor, adulter, altera velut pendentis et adhuc in condicione positi, quales sunt, in quibus abdicatur filius, quia non pareat patri. illa semper asperam abdicantis actionem habet; immutabile est enim, quod factum est; haec ex

parte blandam et suadenti similem; mavult enim pater non abdicare; at pro filiis in utroque genere summissam et ad satisfaciendum compositam.

[27] Disinheritance may be of two kinds. In the first case it is for a completed crime: for example, the son who is disinherited may be a ravisher or an adulterer: in the second case it is for a crime which is still incomplete and terminable; an instance of this will be the case where the son is disinherited because of disobedience to his father. The first form of disinheritance always demands a certain harshness when the father pleads his case, since the act is irrevocable, whereas in the latter his pleading will be of a kindly and almost persuasive nature, since he would prefer not to disinherit him. On the other hand, the pleading of the sons should in both cases be of a subdued character and couched in a conciliatory tone.

[28] A quo dissensuros scio, qui libenter patres figura laedunt; quod non ausim dicere nunquam esse faciendum, potest enim materia incidere, quae hoc exigat; certe vitandum est, quotiens aliter agi potest. sed de figuris alio libro tractabimus.

[28] I know that those who delight in making covert attacks upon the father under the disguise of some figure of speech will disagree with me: and I would not deny that their procedure may sometimes be justifiable, since the theme may conceivably be such as to demand it; but it is certainly to be avoided wherever possible. However, I shall deal with the whole question of figures in a later book.

[29] non dissimiles autem abdicationum actionibus sunt malae tractationis actiones; nam et ipsae habent eandem in accusationibus moderationem. dementiae quoque iudicia aut propter id, quod factum est, aut propter id quod adhuc fieri vel non fieri potest instituuntur.

[29] The treatment of the theme of cruelty to a wife is not unlike that of the theme of disinheritance; for both demand a certain moderation on the part of the accuser. Cases concerned with lunacy arise either out of what has been done or out of something which may or may not be done in the future.

[30] Et actor in eo, quod factum est, liberum habet impetum, sic tamen ut factum accuset, ipsius patris tanquam valetudine lapsi misereatur; in eo vero, cuius libera mutatio est, diu roget et suadeat et novissime dementia ration queratur obstare, non mores: quos quanto magis in praeteritum laudaverit, tanto facilius probabit morbo esse mutatos.

[30] In the former case the pleader is free to attack as he will, but must none the less do so in such a manner that, while denouncing the act, he will yet express pity for the father on the ground that he has erred by reason of his infirmity. On the other hand, in the latter case, where the act has not yet taken place and there is nothing to prevent the father changing his purpose, he must begin by a

prolonged attempt to induce him to change his mind, and then, and only then, complain that it is madness and not depravity of character that prevents him from listening to the voice of reason; and the more he praises his past character, the easier will it be to prove the change which it has undergone owing to the inroads of the disease.

[31] reus, quotiens causa patietur, debebit esse in defensione moderatus, quia fere ira et concitatio furori sunt similia. omnibus is commune est, quod rei non semper defensione facti, sed excusatione ac vena frequenter utuntur. est enim domestica disceptatio, in qua et semel peccasse et per errorem et levius, quam obiiiciatur, absolutioni nonnunquam sufficit.

[31] The accused, wherever possible, must assume a temperate tone in his defence, for the reason that as a rule anger and excitement are near akin to madness. All these cases have this much in common, that the accused does not always defend his act, but often pleads excuse and asks for pardon. For these are domestic quarrels, in which the fact that the offence is an isolated case, due to error and of a less serious character than alleged, will sometimes suffice to secure an acquittal.

[32] sed alia quoque multa controversiarum genera in qualitatem cadunt. iniuriarum; quanquam enim reus aliquando fecisse negat, plerumque tamen haec actio facto atque animo continetur.

[32] There are, however, a number of other controversial themes involving *quality*, as, for example, cases of *assault*. In these, although at times the accused denies that he committed the assault, the pleading as a rule is concerned with fact and intention.

[33] De accusatore constituendo, quae iudicia divinationes vocantur; in quo genere Cicero quidem, qui mandantibus sociis Verrem deferebat, hac usus est divisione, spectandum a quo maxime agi velint ii quorum de ultione quaeritur, a quo minime velit is qui accusatur. frequentissimae tamen hae sunt quaestiones,

[33] Then there are cases concerned with the *appointment of a prosecutor*, which are known as *divinations*. In this connexion Cicero, who was indicting Verres on the instruction of our Sicilian allies, adopts the following division—to the effect that the main point for consideration is, by whom those the redress of whose wrongs forms the subject of the trial would prefer to be represented, and by whom the accused would least desire them to be represented.

[34] uter maiores causas habeat, uter plus industriae aut virium sit adlaturus ad accusandum, uter id fide meliore facturus.

[34] But in the great majority of cases the questions raised are, which claimant has the strongest motives for undertaking the role of accuser, which is likely

to bring the greatest energy or talent to the task, and which is likely to press the charge with the greatest sincerity.

[35] *tutelae praeterea; in quo iudicio solet quaeri, an alia de re quam de calculis cognosci oporteat, an fidem praestare debeat tantum, non etiam consilium et eventum. cui simile est male gestae procurationis, quae in foro negotiorum gestorum; nam et mandati actio est.*

[35] Next we may take cases concerned with *guardianship*, in which it is usual to enquire whether it is necessary to investigate anything save the accounts, and whether anything can be demanded of the guardian except the honest execution of his trust; his sagacity and the success of his administration being beside the mark. Cases of *fraud on the part of an agent*, which are styled cases of *conduct of business* when they occur in the actual courts, are of a similar nature, since they also are concerned with the administration of a trust.

[36] *praeter haec finguntur in scholis et inscripti maleficii, in quibus aut hoc quaeritur, an inscriptum sit aut hoc, an maleficiū sit, raro utrumque. male gestae legationis apud Graecos et veris causis frequens, ubi iuris loco quaeri solet, an omnino aliter agere quam mandatum sit liceat, et quo usque sit legatus, quoniam aliae in nuntiando, aliae in renuntiando sunt, ut in Heio, qui testimonium in Verrem dixerat post perlatam legationem.*

[36] In addition to these we have the fictitious cases of the schools which deal with *crimes not covered by the law*, where the question is as a rule either whether the crime is really not covered by the law or whether it is a crime, though on rare occasions both questions are raised. Cases of *misconduct on the part of an ambassador* are of frequent occurrence among the Greeks, even in actual life: in these the legal question is raised whether it is lawful to deviate at all from one's instructions and for how long the accused was technically an ambassador, since in some cases the ambassador's duty is to convey a communication to a foreign power and in others to bring one back. Take for example the case of Heius, who gave evidence against Verres after performing his duties as ambassador. But in such cases the most important question turns on the nature of the deed complained

[37] *plurimum tamen est in eo, quale sit factum. rei publicae laesae: hinc moventur quidem illae iuris cavillationes, quid sit rem publicam laedere, et, laeserit an non profuerit, et, ab ipso an propter ipsum laesa sit: in facto tamen plurimum est. ingrati quoque, in quo genere quaeritur, an is cum quo agitur acceperit beneficium. quod raro negandum est; ingratus est enim qui negat.*

[37] of Next come cases of *action contrary to the interests of the state*. In these we meet with legal quibbles as to what is the meaning of "action contrary to the interests of the state," and whether the action of the accused was injurious or profitable, or whether the interests of the state suffered at his hands or merely on his account: but the most important question is that of fact. There

are also cases of *ingratitude*; in these we raise the question whether the accused has really received any kindness. It is only rarely that the fact can be denied, as denial is in itself a sign of ingratitude. But there are the further questions as to the extent of the kindness and whether it has been repaid.

[38] quantum acceperit, an reddiderit, an protinus qui non reddidit ingratus sit, an potuerit reddere, an id, quod exigebatur, debuerit, quo animo sit. simpliciores illae iniusti repudii, sub qua lege controversiae illud proprium habent, quod a parte accusantis defensio est, a defendentis accusatio.

[38] If it has not been repaid, does this necessarily involve ingratitude? Was it in his power to repay? Did he really owe the return which was demanded of him? What is his intention? Somewhat simpler are cases of *unjust divorce*, a form of controversy which has this peculiarity, that the accuser defends and the defendant accuses.

[39] praeterea, cum quis rationem mortis in senatu reddit, ubi una quaestio est iuris, an is demum prohibendus sit, qui mori vult ut se legum actionibus subtrahat; cetera qualitatis. finguntur et testamenta, in quibus de sola qualitate quaeratur, ut in controversia, quam supra exposui, in qua de parte patrimonii quarta, quam pater dignissimo ex filiis reliquerat, contendunt philosophus, medicus, orator. quod idem accidit, si orbae nuptias indicant pares gradu, et si inter propinquos de idoneo quaeratur.

[39] Further there are cases where a senator sets forth to the senate the *reasons which determine him to commit suicide*, in which there is one *legal* question, namely, whether a man who desires to kill himself in order to escape the clutches of the law ought to be prevented from so doing, while the remaining questions are all concerned with *quality*. There are also fictitious cases concerned with *wills*, in which the only question raised is one of *quality*, as, for instance, in the controversial theme quoted above, where the philosopher, physician and orator all claim the fourth share which their father had left to the most worthy of his sons. The same is true of cases where suitors of equal rank claim the hand of an orphan and the question confronting her relatives is which is the most suitable.

[40] sed mihi nec omnes persequi materias in animo est, fingi enim adhuc possunt; nec omnes earum quaestiones, quia positionibus mutantur. hoc tantum admiror Flavum, cuius apud me summa est auctoritas, cum artem scholae tantum componeret, tam anguste materiam qualitatis terminasse.

[40] I do not, however, intend to discuss every possible theme, since fresh ones can always be invented, nor yet to deal with all the questions to which they give rise, since these vary with circumstances. But I cannot help expressing my astonishment that Flavius, for whose authority I have the highest respect, restricted the range of *quality* to such an extent in the text-book which he composed for the special guidance of the schools.

[41] *quantitas quoque, ut dixi, etiamsi non semper, plerumque tamen eidem subiacet, seu modi est seu numeri. sed modus aliquando constat aestimatione facti, quanta sit culpa, quantumve beneficium, aliquando iure, cum id in controversiam venit, qua quis lege puniendus vel honorandus sit:*

[41] *Quantity* also, as I have already stated, falls as a rule, though not always, under the head of *quality*, whether it is concerned with measure or number. Measure, however, sometimes consists in the valuation of a deed with a view to determining the amount of guilt or the amount of benefit involved, while, on the other hand, it sometimes turns on a point of law, when the dispute is under what law a man is to be punished or rewarded.

[42] *stuprator decem milia dare debeat, quae poena huic crimini constituta est, an, quia se stupratus suspendit, capite puniri tanquam causa mortis. quo in genere falluntur, qui ita dicunt, tanquam inter duas leges quaeratur: nam de decem milibus nulla controversia est, quae non petuntur.*

[42] For example is a ravisher to pay 10,000 sesterces because that is the penalty appointed by law, or is he liable to capital punishment as a murderer because his victim hanged himself? In such cases those who plead as if there were a question between two laws, are wrong: for there is no dispute about the fine of 10,000, since it is not claimed by the prosecution.

[43] *iudicium redditur, an reus causa sit mortis. In coniecturam quoque eadem species cadit, cum, perpetuo an quinquennali sit exilio multandus, in controversiam venerit; nam an prudens caedem commiserit quaeritur.*

[43] The point on which judgment has to be delivered is whether the accused is guilty of causing his victim's death. The same type of case will also bring *conjecture* into play, when, for example, the question in dispute is whether the accused shall be punished with banishment for life or for five years. For the question then is whether he caused his death willingly or not.

[44] *illa quoque, quae ex numero ducitur, pendet ex iure, an Thrasybulo triginta praemia debeantur, et, cum duo fures pecuniam abstulerint, separatim quadruplum quisque an duplum debeat. sed hic quoque factum aestimatur et, tamen ius ipsum pendet ex qualitate.*

[44] Again, there are questions concerned with numerical quantity which turn on a point of law, such as the questions whether thirty rewards are due to Thrasybulus, or whether, when two thieves have stolen a sum of money, they are each to be required to refund fourfold or twofold. But in these cases, too, valuation of the act is necessary, and yet the point of law also turns on *quality*.

5. *qui neque fecisse se negabit neque aliud esse quod fecerit dicet neque factum defendet, necesse est in suo iure consistat, in quo plerumque actionis est quaestio.*

5. He who neither denies nor defends his act nor asserts that it was of a different nature from that alleged, must take his stand on some point of law that tells in his favour, a form of defence which generally turns on the legality of the action brought against him.

[2] *ea non semper, ut quidam putaverunt, iudicium antecedit, qualia sunt praetorum curiosa consilia, cum de iure accusatoris ambigitur; sed in ipsis iudiciis frequentissime versatur. est autem duplex eius disceptationis condicio, quod aut intentio aut praescriptio habet controversiam. ac fuerunt, qui praescriptionis statum facerent, tanquam ea non iisdem omnibus quibus ceterae leges quaestionibus contineretur.*

[2] This question is not, however, as some have held, always raised before the commencement of the trial, like the elaborate deliberations of the praetor when there is a doubt as to whether the prosecutor has any legal standing, but frequently comes up during the course of the actual trial. Such discussions fall into two classes, according as the point in dispute arises from an argument advanced by the prosecution or from some *prescription* (or demurrer) put forward by the defence. There have indeed been some writers who have held that there is a special *prescriptive basis*; but *prescription* is covered by precisely the same questions that cover all other laws.

[3] *cum ex praescriptione lis pendet, de ipsa re quaeri non est necesse. ignominioso filius praescribit: de eo solo iudicatio est, an liceat. quotiens tamen poterimus, efficiendum est, ut de re quoque iudex bene sentiat; sic enim iuri nostro libentius indulgebit, ut in sponsionibus, quae ex interdictis fiunt, etiamsi non proprietatis est quaestio sed tantum possessionis, tamen non solum possedissee nos, sed etiam nostrum possedissee docere oportebit. sed frequentius etiam quaeritur de intentione.*

[3] When the dispute turns on *prescription*, there is no need to enquire into the facts of the case itself. For example, a son puts forward a demurrer against his father on the ground that his father has forfeited his civil rights. The only point which has to be decided is whether the demurrer can stand. Still, wherever possible, we should attempt to create a favourable impression in the judge as to the facts of the case as well, since, if this be done, he will be all the more disposed to give an indulgent hearing to our point of law: for example, in actions taking the form of a wager and arising out of interdicts, even though the question is concerned solely with actual possession, the question as to tile right to possession not being raised, it will be desirable to prove not merely that the property was actually in our possession, but that it was ours to possess.

[4] *vir fortis optet, quod volet. nego illi dandum, quicquid optaverit: non habeo praescriptionem, sed tamen voluntate contra verba praescriptionis nodo utor. In utroque autem genere status iidem sunt.*

[4] On the other hand, the question more frequently turns on intention. Take the law “Let a hero choose what reward he will.” I deny that he is entitled to receive whatever he chooses. I cannot put forward any formal demurrer, but none the less I use the intention as against the letter of the law just as I should use a demurrer. In both cases the *basis* is the same.

[5] porro lex omnis aut tribuit aut adimit aut punit aut iubet aut vetat aut permittit. litem habet aut propter se ipsam aut propter alteram, quaestionem aut in scripto aut in voluntate.

[5] Moreover every law either gives or takes away punishes or commands, forbids or permits, and involves a dispute either on its own account or on account of another law, while the question which it involves will turn either on the letter or the intention. The letter is either clear or obscure or ambiguous.

[6] scriptum aut apertum est aut obscurum aut ambiguum. quod de legibus dico, idem accipi volo de testamentis, pactis, stipulationibus, omni denique scripto, idem de voce. Et quoniam quattuor eius generis quaestiones vel status facimus, singulos percurram.

[6] And what I say with reference to laws will apply equally to wills, agreements, contracts and every form of document; nay, it will apply even to verbal agreements. And since I have classified such cases under four *questions* or *bases*, I will deal with each in turn.

6. scripti et voluntatis frequentissima inter consultos quaestio est, et pars magna controversi iuris hinc pendet; quo minus id accidere in scholis mirum est, ubi etiam ex industria fingitur. eius genus unum est, in quo et de scripto et de voluntate quaeritur.

6. Lawyers frequently raise the question of the letter and the intention of the law, in fact a large proportion of legal disputes turn on these points. We need not therefore be surprised that such questions occur in the schools as well, where they are often invented with this special purpose. One form of this kind of question is found in cases where the enquiry turns both on the letter and the spirit of a law.

[2] id tum accidit, cum est in lege aliqua obscuritas. In ea aut uterque suam interpretationem confirmat, adversarii subvertit: ut hic, fur quadruplum solvat. duo surriperunt pariter decem milia; petuntur ab utroque quadragena; illi postulant, ut vicena conferant; nam et actor dicit hoc esse quadruplum quod petat, et rei hoc quod offerant; voluntas quoque utrinque defenditur.

[2] Such questions arise when the law presents some obscurity. Under these circumstances both parties will seek to establish their own interpretation of the passage and to overthrow that advanced by their opponent. Take for example the following case. “A thief shall refund four times the amount of his

theft. Two thieves have jointly stolen 10,000 sesterces. 40,000 are claimed from each. They claim that they are liable only to pay 20,000 each.” The accuser will urge that the sum which he claims is fourfold the amount stolen; the accused will urge that the sum which they offer to pay is fourfold. The intention of the law will be pleaded by both parties.

[3] aut, cum de altero intellectu certum est, de altero dubium: ex meretrice natus ne contionetur. quae filium habebat, prostare coepit: prohibetur adolescens contione. nam de eius filio, quae ante partum meretrix fuit, certum est: an eadem huius causa sit, dubium est, quia ex hac natus est, antequam meretrix esset.

[3] On the other hand, the dispute may turn on a passage of the law which is clear in one sense and doubtful in another. “The son of a harlot shall not address the people. A woman who had a son became a prostitute. The youth is forbidden to address the people.” Here there is no doubt about the son of one who was a prostitute before his birth, but it is doubtful whether the law applies to the case of one born before his mother became a prostitute.

[4] solet et illud quaeri, quo referatur, quod scriptum est, bis de eadem re ne sit actio; id est, hoc bis ad actorem an ad actionem? haec ex iure obscuro.

alterum genus est ex manifesto; quod qui solum viderunt, hunc statum plani et voluntatis appellarunt. In hoc altera pars scripto nititur, altera voluntate. Sed contra scriptum tribus generibus occurritur.

[4] Another question which is not infrequently raised is as to the interpretation of the law forbidding an action to be brought twice on the same dispute, the problem being whether the word *twice* refers to the prosecutor or the prosecution. Such are the points arising out of the obscurity of the law.

A second form of question turns on some passage where the meaning is clear. Those who have given exclusive attention to this class of question call it the *basis concerned with the obvious expression of the law and its intention*. In such circumstances one party will rest their case on the letter, the other on the intention of the law.

[5] unum est, in quo ipso patet, semper id servari non posse: liberi parentis alant ad vinciantur; non enim adligabitur infans. hic erit ad alia transitus, et divisio, num quisquis non aluerit, num hic propter hoc.

[5] There are three different methods in which we may combat the letter. The first comes into play where it is clear that it is impossible always to observe the letter of the law. “Children shall support their parents under penalty of imprisonment.” It is clear, in the first place, that this cannot apply to an infant. At this point we shall turn to other possible exceptions and distinguish as follows. “Does this apply to everyone who refuses to support his parent? Has this particular individual incurred the penalty by this particular act?”

[6] secundum tale genus controversiarum, in quo nullum argumentum est, quod ex lege ipsa peti possit, sed de eo tantum, de quo lis est, quaerendum est. Peregrinus, si murum ascenderit, capite puniatur. cum hostes murum ascendissent, peregrinus eos depulit; petitur ad supplicium.

[6] The second arises in scholastic themes where no argument can be drawn from the particular law, but the question is concerned solely with the subject of the dispute. “A foreigner who goes up on to the wall shall be liable to capital punishment. The enemy had scaled the wall and were driven back by a foreigner. His punishment is demanded.”

[7] non erunt hic separatae quaestiones, an quisquis, an hic, quia nullum potest adferri argumentum contra scriptum vehementius eo quod in lite est; sed hoc tantum, an ne servandae quidem civitatis causa. ergo aequitate et voluntate pugnandum. fieri tamen potest, ut ex aliis legibus exempla ducamus, per quae appareat semper stari scripto non posse, ut Cicero pro Caecina fecit. tertium,

[7] In this case we shall not have two separate questions, namely, whether every foreigner who goes up on the wall is liable to the penalty, and whether this particular foreigner is liable, since no more forcible argument can be brought against the application of the letter of the law than the fact in dispute, but the only question to be raised will be whether a foreigner may not go on to the wall even for the purpose of saving the city. Therefore we shall rest our case on equity and the intention of the law. It is, however, sometimes possible to draw examples from other laws to show that we cannot always stand by the letter, as Cicero did in his defence of Caecina.

[8] cum in ipsis verbis legis reperimus aliquid, per quod probemus aliud legumlatorem voluisse, ut in hac controversia: qui nocte cum ferro deprehensus fuerit, adligetur. cum anulo ferreo inuentum a gistratus adligavit. hic quia est verbum in lege deprehensus, satis etiam significatum videtur, non contineri lege nisi noxium ferrum.

[8] The third method becomes operative when we find something in the actual words of the law which enables us to prove that the intention of the legislator was different. The following theme will provide an example. “Anyone who is caught at night with steel in his hands shall be thrown into prison. A man is found wearing a steel ring, and is imprisoned by the magistrate.” In this case the use of the word *caught* is sufficient proof that the word steel was only intended by the law in the sense of a weapon of offence.

[9] sed ut qui voluntate nitetur scriptum, quotiens poterit, infirmare debebit, ita, qui scriptum tuebitur, adiuvere se etiam voluntate temptabit. In testamentis et illa accidunt, ut voluntas manifesta sit, scriptum nihil sit: ut in iudicio Curiano, in quo nota L. Crassi et Scaevolae fuit contentio.

[9] But just as the advocate who rests his case on the intention of the law must

wherever possible impugn the letter of the law, so he who defends the letter of the law must also seek to gain support from the intention. Again, in cases concerned with wills it sometimes happens that the intention of the testator is clear, though it has not been expressed in writing: an example of this occurs in the trial of Curius, which gave rise to the well-known argument between Lucius Crassus and Scaevola.

[10] *substitutus heres erat, si postumus ante tutelae annos decessisset. non est natus. propinqui bona sibi vindicabant. quis dubitaret, quin ea voluntas fuisset testantis, ut is non nato filio heres esset, qui mortuo? sed hoc non scripserat.*

[10] A second heir had been appointed in the event of a posthumous son dying while a minor. No posthumous son was born. The next of kin claimed the property. Who could doubt that the intention of the testator was that the same man should inherit in the event of the son not being born who would have inherited in the event of his death? But he had not written this in his will.

[11] *id quoque, quod huic contrarium est, accidit nuper, ut esset scriptum, quod appareret scriptorem noluisse. qui sestertium nummum quinque milia legaverat, cum emendaret testamentum, sublatis sestertiis nummis, argentipondo posuit, quinque milia manserunt. apparuit tamen, quinque pondo dari voluisse, quia ille in argento legati modus et inauditus erat et incredibilis.*

[11] Again, the opposite case, that is to say, when what is written is obviously contrary to the intention of the writer, occurred quite recently. A man who had made a bequest of 5000 sesterces, on altering his will erased the word *sesterces* and inserted *pounds of silver*. But it was clear that he had meant not 5000 but 5 pounds of silver, because the weight of silver mentioned in the bequest was unparalleled and incredible.

[12] *sub hoc statu generales sunt quaestiones, scripto an voluntate standum sit, quae fuerit scribentis voluntas; tractatus omnes qualitatis aut coniecturae, de quibus satis dictum arbitror.*

[12] The same *basis* includes such general questions as to whether we should stand by the letter or the intention of the document, and what was the purpose of the writer, while for the treatment of such questions we must have recourse to *quality* or *conjecture*, with which I think I have dealt in sufficient detail.

7. *proximum est de legibus contrariis dicere, quia inter omnes artium scriptores constitit, in antinomia duos esse scripti et voluntatis status; neque immerito; quia, cum lex legi obstat, et utrinque contra scriptum dicitur et quaestio est de voluntate; in utraque id ambigitur, an utique illa lege sit utendum.*

7. The next subject which comes up for discussion is that of contrary laws. For all writers of text-books are agreed that in such cases there are two *bases* involving the letter and the intention of the law respectively. This view is

justified by the fact that, when one law contradicts another, both parties attack the letter and raise the question of intention, while the point in dispute, as regards each law, is whether we should be guided by it at all.

[2] omnibus autem manifestum est nunquam esse legem legi contrariam iure ipso, quia, si diversum ius esset, alterum altero abrogaretur, sed eas casu collidi et eventu.

[2] But it is clear to everybody that one law cannot contradict another in principle (since if there were two different principles, one law would cancel the other), and that the laws in question are brought into collision purely by the accidents of chance.

When two laws clash, they may be of a similar nature, as for instance if we have to compare two cases in which a tyrannicide and a brave man are given the choice of their reward, both being granted the privilege of choosing whatever they desire. In such a case we compare the deserts of the claimants, the occasions of the respective acts and the nature of the rewards claimed.

[3] colliduntur autem aut pares inter se, ut si optio tyrannicidae et viri fortis comparentur, utrique data quod velit petendi potestate; hic meritorum, temporis, praemii collatio est; aut secum ipsae, ut duorum fortium, duorum tyrannicidarum, duorum raptarum, in quibus non potest esse alia quaestio, quam temporis, utra prior sit, aut qualitatis, utra iustior sit petitio. diversae quoque leges confligunt aut similes aut impares.

[3] Or the same law may be in conflict with itself, as in the case where we have two brave men, two tyrannicides or two ravished women, when the question must turn either on *time* (that is, whose claim has priority) or on *quality* (that is, whose claim is the more just). Again, we may have a conflict between diverse, similar or dissimilar laws.

[4] diversae, quibus etiam citra adversam legem contradici possit, ut in hac controversia: magistratus ab arce ne discedat; vir fortis optet quod volet: impunitatem magistratus petit. Vel alia nulla obstante quaeri potest, vir fortis an, quidquid optarit, accipere debeat. Et in legem magistratus multa dicuntur, quibus scriptum expugnatur; si incendium in arce fuerit, si in hostes decurrendum.

[4] *Diverse* laws are those against which arguments may be brought without reference to any contradictory law. The following theme will provide an example. "A magistrate shall not quit the citadel. One who has rendered heroic service to his country may choose what reward he pleases. A magistrate who left his post and saved his country, demands an amnesty for his conduct." In this case, even though there be no other law covering the case, we may raise the question whether a hero ought to be granted anything he chooses to claim. Again, many conclusive arguments may be brought

against the letter of the law restricting the movements of the magistrate: for example, a fire may have broken out in the citadel, or a sally against the enemy may have been necessary.

[5] *similes*, contra quas nihil opponi potest nisi lex altera: tyrannicidae imago in gymnasium ponatur; contra, mulieris imago in gymnasium ne ponatur. mulier tyrannum occidit. nam neque mulieris imago ullo alio casu poni potest nec tyrannicidae ullo alio casu summoverti.

[5] Laws are styled *similar* when nothing can be opposed to one except the other. "Tyrannicides shall have their statues set up in the gymnasium. A statue of a woman shall not be set up in the gymnasium. A woman killed a tyrant." Here are two conflicting laws: for a woman's statue cannot under any other circumstances be erected in the gymnasium, while there is no other circumstance which can bar the erection of the statue of a tyrannicide in the gymnasium.

[6] *impares sunt*, cum alteri multa opponi possunt, alteri nihil nisi quod in lite est: ut cum vir fortis impunitatem desertoris petit. nam contra legem viri fortis, ut supra ostendi, multa dicuntur; adversus desertores scripta non potest nisi optione subverti.

[6] Laws are styled *dissimilar* when many arguments can be urged against one, while the only point which can be urged against the other is the actual subject of dispute. An example is provided by the case in which a brave man demands the pardon of a deserter as his reward. For there are many arguments, as I have shown above, which can be urged against the law permitting a hero to choose whatever reward he will, but the letter of the law dealing with the crime of desertion cannot be overthrown under any circumstances save the choice of rewards to which I have just referred.

[7] *item aut confessum ex utraque parte ius est aut dubium*. Si confessum est, haec fere quaeruntur, utra lex potentior; ad deos pertineat an ad homines, rem publicam an privatos, de honore an de poena, de magnis rebus an de parvis; permittat an vetet an imperet.

[7] Again, the point of law is either admitted by both parties or disputed. If it be admitted, the questions which are raised will as a rule be such as the following. Which of the two laws is the most stringent? Does it concern gods or men, the state or private individuals, reward or punishment, great things or small? Does it permit, forbid or command?

[8] *solet tractari et, utra sit antiquior, sed velut potentissimum, utra minus perdat; ut in desertore et viro forti, quod illo non occiso lex tota tollatur, occiso, sit reliqua viro forti alia optio. plurimum tamen est in hoc, utrum fieri sit melius atque aequius; de quo nihil praecipit nisi proposita materia potest.*

[8] Another common question is which of the two laws is the oldest; but the

most important question is which of the two laws will suffer less by its contravention, as for example in the case of the hero and the deserter just mentioned, in which case, if the deserter is not put to death, the whole law is ignored, whereas, if he be put to death, the hero will still have another choice left open to him. It is, however, of the utmost importance to consider which course is best from the point of view of morality and justice, a problem for the solution of which no general rules can be laid down, as it will depend on the special circumstances of the case.

[9] Si dubium, aut alteri aut invicem utrique de iure fit controversia, ut in retali: patri in filium, patrono in libertum manus iniectio sit; liberti heredem sequantur. liberti filium quidam fecit heredem: invicem petitur manus iniectio; et pater dicit sibi ius in filium esse, et patronus negat ius patris illi fuisse, quia ipse in manu patroni fuerit.

[9] If, on the other hand, the point of law is disputed, either one party or both in turn will argue the point. Take the following case as an example. "A father shall be empowered to arrest his son, and a patron to arrest his freedman. Freedmen shall be transferred to their patron's heir. A certain man appointed the son of a freedman as his heir. The son of the freedman and the freedman himself both claim the right to arrest the other." Here the father claims his right over the son, while the son, in virtue of his new position as patron, denies that his father possessed the rights of a father, because he was in the power of his patron.

[10] duplices leges sicut duae colliduntur: ut nothus ante legitimum natus, legitimus sit; post legitimum, tantum civis. quod de legibus, idem de senatus consultis dictum; quae si aut inter se pugnent aut obstent legibus, non tamen aliud sit eius status nomen.

[10] Laws containing two provisions may conflict with themselves in exactly the same way as two laws may conflict. The following will serve as an illustration. "The bastard born before a legitimate son shall rank as legitimate, the bastard born after the legitimate son shall only rank as a citizen." All that I have said about laws will also apply to decrees of the senate. If decrees of the senate conflict with one another or with the laws, the *basis* will be the same as if laws only were concerned.

8. syllogismus habet aliquid simile scripto et voluntati, quia semper pars in eo altera scripto nititur, sed hoc interest, quod illic dicitur contra scriptum, hic supra scriptum; illic qui verba defendit, hoc agit ut fiat utique quod scriptum est; hic, ne aliud quam scriptum est. ei nonnulla etiam cum finitione coniunctio: nam saepe, si finitio infirma est, in syllogismum delabitur.

8. The *syllogistic basis* has some resemblance to the *basis* concerned with the *letter and intention of the law*, since whenever it comes into play, one party rests his case on the letter: there is, however, this difference between the two

bases, that in the latter we argue against the letter, in the present beyond the letter, while in the latter the party defending the letter aims at securing that in any case the letter may be carried into effect, whereas in the present his aim will be to prevent anything except the letter being carried into effect. The *sylogism* is sometimes employed in conjunction with *definition*: for often if the definition be weak it takes refuge in the syllogism. Assume a law to run as follows: "A woman who is

[2] *sit enim lex: venefica capite puniatur. saepe se verberanti marito uxor amatorium dedit; eundem repudiavit; per propinquos rogata ut rediret non est reversa; suspendit se maritus. mulier veneficii rea est. fortissima est actio dicentis amatorium venenum esse. id erit finitio; quod si parum valebit, fiet syllogismus, ad quem, velut remissa priore contentione, veniemus, an proinde puniri debeat, ac si virum veneno necasset?*

[2] a poisoner shall be liable to capital punishment. A wife gave her husband a love-potion to cure him of his habit of beating her. She also divorced him. On being asked by her relatives to return to him, she refused. The husband hung himself. The woman is accused of poisoning." The strongest line for the accuser to take will be to assert that the love-potion was a poison. This involves definition. If it proves weak, we shall have recourse to the syllogism, to which we shall proceed after virtually dropping our previous argument, and which we shall employ to decide the question whether she does not deserve to be punished for administering the lovepotion no less than if she had caused her husband's death by poison.

[3] ergo hic status ducit ex eo quod scriptum est id quod incertum est; quod quoniam ratione colligitur, ratiocinativus dicitur. In has autem fere species venit an, quod semel ius est, idem et saepius. incesti damnata et praecipitata de saxo vixit; repetitur. An, quod in uno, et in pluribus. qui duos uno tempore tyrannos occidit, duo praemia petit. An quod ante, et postea.

[3] The *sylogistic basis*, then, deduces from the letter of the law that which is uncertain; and since this conclusion is arrived at by reason, the *basis* is called *ratiocinative*. It may be subdivided into the following *species* of question. If it is right to do a thing once, is it right to do it often? Example: "A priestess found guilty of unchastity is thrown from the Tarpeian rock and survives. It is demanded that she shall be thrown down again." If the law grants a privilege with reference to one thing, does it grant it with reference to a number? Example: "A man kills two tyrants together and claims two rewards."

[4] raptor profugit, rapta nupsit, reverso illo petit optionem. An, quod in toto, idem in parte. aratrum accipere pignori non licet, vomerem accepit. An, quod in parte, idem in toto. lanas evehere Tarento non licet, oves evexit.

[4] If a thing is legal before a certain occurrence, is it legal after it? Example: "The ravisher took refuge in flight. His victim married. The ravisher returned and the woman demands to be allowed her choice." Is that which is lawful with regard to the whole, lawful with regard to a part? Example: "It is forbidden to accept a plough as security. He accepted a ploughshare." Is that which is lawful with regard to a part, lawful with regard to the whole? Example: "It is forbidden to export wool from Tarentum: he exported sheep."

[5] In his syllogismus et scripto nititur; nam satis cautum esse dicit. postulo, ut praecipitetur incesta; lex est; et rapta optionem petit, et in ore lanae sunt, similiter alia. sed quia responderi potest,

[5] In all these cases the syllogism rests on the letter of the law as well: for the accuser urges that the provisions of the law are precise. He will say, "I demand that the priestess who has broken her vows be cast down: it is the law," or "The ravished woman demands the exercise of the choice permitted her by law," or "Wool grows on sheep," and so on.

[6] non est scriptum, ut bis praecipitetur damnata, ut quandoque rapta optet, ut tyrannicida duo praemia accipiat, nihil de vomere cautum, nihil de ovibus: ex eo, quod manifestum est, colligitur quod dubium est. maioris pugnae est ex scripto ducere quod scriptum non est; an, quia hoc, et hoc. qui patrem occiderit, culleo insuatur: matrem occidit. ex domo in ius educere ne liceat: ex tabernaculo eduxit. In hoc genere haec quaeruntur,

[6] But to this we may reply, "The law does not prescribe that the condemned woman should be thrown down twice, that the ravished woman should exercise her choice under all circumstances, that the tyrannicide should

receive two rewards, while it makes no mention of ploughshares or of sheep.” Thus we infer what is doubtful from what is certain. It is a more difficult task to deduce from the letter of the law that which is not actually prescribed by the letter, and to argue because that is the case, so also is this. Take the following problems. “The man who kills his father shall be sewn up in a sack. He killed his mother,” or “It is illegal to drag a man from his own house into the court. He dragged him from his tent.”

[7] an, quotiens propria lex non est, simili sit utendum, an id de quo agitur ei de quo scriptum est simile sit. simile autem et maius est et par et minus. In illo priore, an satis lege cautum sit, an, etsi parum cautum est, et hoc sit utendum. In utroque de voluntate legumlatoris. sed de aequo tractatus potentissimi.

[7] Under this heading come questions such as the following: if there is not a special law applicable to the case, ought we to have recourse to an analogous law? is the point in question similar to what is contained in the letter of the law? Now it should be noted that what is similar may be greater, equal or less. In the first case we enquire whether the provisions of the law are sufficient, or, if they are insufficient, whether we should have recourse to this other law. In both cases it is a question of the intention of the legislator. But the most effective form of treatment in such cases will be to appeal to equity.

9. amphiboliae species sunt innumerabiles, adeo ut philosophorum quibusdam nullum videatur esse verbum quod non plura significet; genera admodum pauca; aut enim vocibus accidit singulis aut coniunctis.

9. I turn to the discussion of *ambiguity*, which will be found to have countless species: indeed, in the opinion of certain philosophers, there is not a single word which has not a diversity of meanings. There are, however, very few *genera*, since ambiguity must occur either in a single word or in a group of words.

[2] singula adferunt errorem, cum pluribus rebus aut hominibus eadem appellatio est (ὁμωνυμία dicitur), ut gallus, avem an gentem an nomen an fortunam corporis significet, incertum est; et Ajax, Telamonius an Oilei filius. verba quoque quaedam diversos intellectus habent, ut cerno.

[2] Single words give rise to error, when the same noun applies to a number of things or persons (the Greeks call this *homonymy*): for example, it is uncertain with regard to the word *gallus* whether it means a cock or a Gaul or a proper name or an emasculated priest of tybele; while Ajax may refer either to the son of Telamon or the son of Oileus. Again, verbs likewise may have different meanings, as, for example, cerno.

[3] quae ambiguitas plurimis modis accidit. unde fere lites, praecipue ex testamentis, cum de libertate aut etiam de hereditate contendunt ii quibus idem nomen est, aut quid sit legatum quaeritur.

[3] This ambiguity crops up in many ways, and gives rise to disputes, more especially in connexion with wills, when two men of the same name claim their freedom or, it may be, an inheritance, or again, when the enquiry turns on the precise nature of the bequest.

[4] alterum est, in quo alia integro verbo significatio est, alia diviso, ut ingenua et armamentum et Corvinum, ineptae sane cavillationis, ex qua tamen Graeci controversias ducunt: inde enim αὐλητρὶς illa vulgata, cum quaeritur, utrum aula, quae ter ceciderit, an tibia, si ceciderit, debeat publicari.

[4] There is another form of ambiguity where a word has one meaning when entire and another when divided, as, for example, *ingenua*, *armamentum* or *Corvinum*. The disputes arising from such ambiguities are no more than childish quibbles, but nevertheless the Greeks are in the habit of making them the subject for controversial themes, as, for example, in the notorious case of the αὐλητρὶς, when the question is whether it is a hall which has fallen down three times (αὐλὴ τρις) or a flute-player who fell down that is to be sold.

[5] tertia est ex compositis, ut si quis corpus suum in culto loco poni iubeat, circaque monumentum multum agri ab heredibus in tutelam cinerum, ut solent, leget, sit litis occasio cultum locum dixerit an incultum.

[5] A third form of ambiguity is caused by the use of compound words; for example, if a man orders his body to be buried in a cultivated spot, and should direct, as is often done, a considerable space of land surrounding his tomb to be taken from the land left to his heirs with a view to preserving his ashes from outrage, an occasion for dispute may be afforded by the question whether the words mean “in a cultivated place” (*in culto loco*) or “in an uncultivated place” (*inculto loco*).

[6] sic apud Graecos contendunt Λέων et Πανταλέων, cum scriptura dubia est, bona omnia Λέοντι an bona Πανταλέοντι relicta sint.

In coniunctis plus ambiguitatis est. fit autem per casus, ut
aio te, Aeacida, Romanos sincere posse.

[6] Thus arises the Greek theme about Leon and Pantaleon, who go to law because the handwriting of a will makes it uncertain whether the testator has left all his property to Leon or his property to Pantaleon.

Groups of words give rise to more serious ambiguity. Such ambiguity may arise from doubt as to a case, as in the following passage: —

“I say that you, O prince of Aeacus’ line,
Rome can o’erthrow.
“

Or it may arise from the arrangement of the words,

[7] Per collocationem, ubi dubium est, quid quo referri oporteat, ac frequentissime, cum quidem medium est, cum utrinque possit trahi, ut de Troilo Vergilius, lora tenens tamen. hic, utrum teneat tamen lora an, quamvis teneat, tamen trahatur, quaeri potest. unde controversia illa,

[7] which makes it doubtful what the exact reference of some word or words may be, more especially when there is a word in the middle of the sentence which may be referred either to what precedes or what follows, as in the line of Virgil which describes Troilus as

lora tenens tamen,

where it may be disputed whether the poet means that he is still holding the reins, or that, although he holds the reins, he is still dragged along.

[8] testamento quidam iussit poni statuam auream hastam tenentem. quaeritur, statua hastam tenens aurea esse debeat an hasta esse aurea in statua alterius materiae? fit per flexum idem magis:

quinquaginta ubi erant centum inde occidit Achilles. saepe,

[8] The controversial theme, "A certain man in his will ordered his heirs to erect *statuam auream hastam tenentem*," turns on a similar ambiguity; for it raises the question whether it is the statue holding the spear which is to be of gold, or whether the spear should be of gold and the statue of some other material. The same result is even more frequently produced by a mistaken inflexion of the voice, as in the line:

quinquaginta ubi erant centum inde occidit Achilles.

[9] utri duorum antecedentium sermo subiunctus sit, in dubio est: unde et controversia, heres meus uxori meae dare damnas esto argenti quod elegerit pondo centum. uter eligat, quaeritur.

verum id, quod ex his primum est, mutatione casuum, sequens divisione verborum aut translatione emendatur, tertium adiectione.

[9] It is also often doubtful to which of two antecedents a phrase is to be referred. Hence we get such controversial themes as, "My heir shall be bound to give my wife a hundred pounds of silver according to choice," where it is left uncertain which of the two is to make the choice.

But in these examples of ambiguity, the first may be remedied by a change of case, the second by separating 1 the words or altering their position, the third by some addition.

[10] accusativi geminatione facta amphibolia solvitur ablativo, ut illud, lachetem audivi percussisse Demean fiat a Lachete percussum Demean. sed ablativo ipsi, ut in primo diximus, inest naturalis amphibolia. caelo decurrit

aperto: utrum per apertum caelum, an cum apertum esset.

[10] Ambiguity resulting from the use of two accusatives may be removed by the substitution of the ablative: for example, *Lachetem audiui percussisse Demeam* (I heard that Demea struck Laches, or that L. struck D.) may be rendered clear by writing *a Lachete percussum Demeam* (that D. was struck by L.). There is, however, a natural ambiguity in the ablative case itself, as I pointed out in the first book. For example, *caelo decurrit aperto* leaves it doubtful whether the poet means he hastened down “through the open sky,” or “when the sky was opened for him to pass.”

[11] *divisio respiratione et mora constat: statuam, deinde auream hastam; vel statuam auream, deinde hastam. adiectio talis est, argentum, quod elegerit ipse, ut heres intelligatur, vel ipsa, ut uxor. adiectione facta amphibolia, qualis sit, Nos flentes illos deprehendimus, detractioe solvetur.*

[11] Words may be separated by a breathing space or pause. We may, for instance, say *statuam*, and then, after a slight pause, add *auream hastam*, or the pause may come between *statuam auream* and *hastam*. The addition referred to above would take the form *quod elegerit ipse*, where *ipse* will show that the reference to the heir, or *quod elegerit ipsa*, making the reference to the wife. In cases where ambiguity is caused by the addition of a word, the difficulty may be eliminated by the removal of a word, as in the sentence *nos flentes illos deprehendimus*.

[12] *pluribus verbis emendandum, ubi est id, quod quo referatur dubium est, et ipsum est ambiguum. heres meus dare illi damnas esto omnia sua. In quod genus incidit Cicero loquens de C. Fannio; is soceri instituto, quem, quia cooptatus in augurum collegium non erat, non admodum diligebat, praesertim cum ille Q. Scaevolam sibi minorem natu generum praetulisset. nam sibi et ad socerum referri et ad Fannium potest.*

[12] Where it is doubtful to what a word or phrase refers, and the word or phrase itself is ambiguous, we shall have to alter several words, as, for example, in the sentence, “My heir shall be bound to give him all his own property,” where “his own” is ambiguous. Cicero commits the same fault when he says of Gaius Fannius, “He following the instructions of his father-in-law, for whom, because he had not been elected to the college of augurs, he had no great affection, especially as he had given Quintus Scaevola, the younger of his sons-in-law, the preference over himself. .” For *over himself* may refer either to his father-in-law or to Fannius.

[13] *productio quoque in scripto et correptio in dubio relictā causa est ambiguitatis, ut in hoc, Cato. aliud enim ostendit brevis secunda syllaba casu nominativo, aliud eadem syllaba producta casu dativo aut ablativo. Plurimae praeterea sunt aliae species, quas persequi nihil necesse est.*

[13] Again, another source of ambiguity arises from leaving it doubtful in a written document whether a syllable is long or short. *Cato*, for example, means one thing in the nominative when its second syllable is short, and another in the dative or ablative when the same syllable is long. There are also a number of other forms of ambiguity which it is unnecessary for me to describe at length.

[14] *nec refert, quo modo sit facta amphibolia aut quo resolvatur. duas enim res significari manifestum est et, quod ad scriptum vocemve pertinet, in utramque partem par est. ideoque frustra praecipitur, ut in hoc statu vocem ipsam ad nostram partem conemur vertere. nam, si id fieri potest, amphibolia non est. amphiboliae autem omnis erit in his quaestio;*

[14] Further, it is quite unimportant how ambiguity arises or how it is remedied. For it is clear in all cases that two interpretations are possible, and as far as the written or spoken word is concerned, it is equally important for both parties. It is therefore a perfectly futile rule which directs us to endeavour, in connexion with this *basis*, to turn the word in question to suit our own purpose, since, if this is feasible, there is no ambiguity.

[15] *aliquando, uter sit secundum naturam magis sermo, semper, utrum sit aequius, utrum is, qui scripsit ac dixit, voluerit. quarum in utramque partem satis ex his, quae de coniectura et qualitate diximus, praeceptum est.*

[15] In cases of ambiguity the only questions which confront us will be, sometimes which of the two interpretations is most natural, and always which interpretation is most equitable, and what was the intention of the person who wrote or uttered the words. I have, however, given sufficient instructions in the course of my remarks on *conjecture* and *quality*, as to the method of treating such questions, whether by the prosecution or the defence.

10. *est autem quaedam inter hos status cognatio. nam et in finitione, quae sit voluntas nominis, quaeritur, et in syllogismo, qui secundus a finitione status est, spectatur quid voluerit scriptor; et contrarias leges duos esse scripti et voluntatis status apparet. rursus et finitio quodammodo est amphibolia, cum in duas partes diducatur intellectus nominis.*

10. There is, however, a certain affinity between all these *bases*. For in *definition* we enquire into the meaning of a term, and in the *syllogism*, which is closely connected with *definition*, we consider what was the meaning of the writer, while it is obvious that in the case of contrary laws there are two *bases*, one concerned with the *letter*, and the other with the *intention*. Again, *definition* is in itself a kind of *ambiguity*, since it brings out two meanings in the same term.

[2] *scriptum et voluntas habet in verbis iuris quaestionem, quod idem antinomia petitur. ideoque omnia haec quidam scriptum et voluntatem esse*

dixerunt, alii in scripto et voluntate amphiboliam esse, quae facit quaestionem. sed distincta sunt; aliud est enim obscurum ius, aliud ambiguum.

[2] The *basis* concerned with the *letter* and the *intention* of the law involves a legal question as regards the interpretation of the words, which is identical with the question arising out of *contrary laws*. Consequently some writers have asserted that all these *bases* may be resolved into those concerned with the *letter* and *intention*, while others hold that in all cases where the *letter* and the *intention* of a document have to be considered, it is *ambiguity* that gives rise to the question at issue. But all these *bases* are really distinct, for an obscure point of law is not the same as an ambiguous point of law. *Definition*, then,

[3] igitur finitio in natura ipsa nominis quaestionem habet generalem, et quae esse etiam citra complexum causae possit; scriptum et voluntas de eo disputat iure quod est in lege, syllogismus de eo quod non est. amphiboliae lis in diversum trahit, legum contrariarum ex diverso pugna est.

[3] involves a general question as to the actual nature of a term, a question which may conceivably have no connexion whatsoever with the content of the case in point. In investigations as to the *letter* and the *intention*, the dispute turns on the provisions contained in the law, whereas the *syllogism* deals with that which is not contained in the law. In disputes arising out of *ambiguity* we are led from the ambiguous phrase to its conflicting meanings, whereas in the case of *contrary laws* the fight starts from the conflict of their provisions.

[4] neque immerito et recepta est a doctissimis haec differentia et apud plurimos ac prudentissimos durat.

Et de hoc quidem genere dispositionis, etiamsi non omnia, tradi tamen aliqua potuerunt.

[4] The distinction between these *bases* has therefore been rightly accepted by the most learned of rhetoricians, and is still adopted by the majority and the wisest of the teachers of to-day.

It has not been possible in this connexion to give instructions which will cover the arrangement to be adopted in every case, though I have been able to give some.

[5] sunt alia quae, nisi proposita de qua dicendum est materia, viam docendi non praebeant. non enim causa tantum universa in quaestiones ac locos diducenda est, sed hae ipsae partes habent rursus ordinem suum. nam et in prooemio primum est aliquid et secundum ac deinceps, et quaestio omnis ac locus habet suam dispositionem ut theses etiam simplices. nisi forte satis erit dividendi peritus,

[5] There are other details concerning which I can give no instructions without a statement of the particular case on which the orator has to speak. For not only must the whole case be analysed into its component topics and questions, but these subdivisions themselves require to be arranged in the order which is appropriate to them. For example, in the *exordium* each part has its own special place, first, second and third, etc., while each question and topic requires to be suitably arranged, and the same is true even of isolated *general questions*.

[6] qui controversiam in haec diduxerit, an omne praemium viro forti dandum sit, an ex privato, an nuptiae, an eius quae nupta sit, an hae; deinde, cum fuerit de prima quaestione dicendum, passim et ut quidque in mentem veniet miscuerit, non primum in ea scierit esse tractandum,

[6] For it will not, I imagine, be represented that sufficient skill in division is possessed by the man who, after resolving a controversial theme into questions such as the following, whether a hero is to be granted any reward that he may claim, whether he is allowed to claim private property, whether he may demand any woman in marriage, whether he may claim to marry a woman who already possesses a husband, or this particular woman, *then*, although it is his duty to deal with the first question first, proceeds to deal with them indiscriminately as each may happen to occur to him, and ignores the fact that the first point which should be discussed is whether we should stand by the letter or the intention of the law, and fails to follow the natural order,

[7] verbis legis standum sit an voluntate, huius ipsius particulae aliquod initium fecerit, deinde proxima subnectens struxerit orationem, ut pars hominis est manus, eius digiti, illorum quoque articuli. hoc est quod scriptor demonstrare non possit, nisi certa definitaque materia.

[7] which demands that after beginning with this question he should then proceed to introduce the subsidiary questions, thereby making the structure of his speech as regular as that of the human body, of which, for example, the hand is a part, while the fingers are parts of the hand, and the joints of the fingers. It is precisely this method of arrangement which it is impossible to demonstrate except with reference to some definite and specific case.

[8] sed quid una faciet aut altera, quin immo centum ac mille in re infinita? Praeceptoris est, in alio atque alio genere cotidie ostendere, quis ordo sit rerum et quae copulatio, ut paulatim fiat usus et ad similia transitus. tradi enim omnia, quae ars efficit, non possunt. nam quis pictor omnia,

[8] But it is clearly useless to take one or two cases, or even a hundred or a thousand, since their number is infinite. It is the duty of the teacher to demonstrate daily in one kind of case after another what is the natural order and connexion of the parts, so that little by little his pupils may gain the experience which will enable them to deal with other cases of the same

character. For it is quite impossible to teach everything that can be accomplished by art.

[9] quae in rerum natura sunt, adumbrare didicit? sed percepta semel imitandi ratione adsimulabit quidquid acceperit. quis non faber vasculum aliquod, quale nunquam viderat, fecit?

[9] For example, what painter has ever been taught to reproduce everything in nature? But once he has acquired the general principles of imitation, he will be able to copy whatever is given him. What vase-maker is there who has not succeeded in producing a vase of a type which he had never previously seen?

[10] quaedam vero non docentium sunt, sed discentium. nam medicus, quid in quoque valetudinis genere faciendum sit, quid quibusque signis providendum, docebit; vim sentiendi pulsus venarum, coloris modos, spiritus meatum, caloris distantiam, quae sui cuiusque sunt ingenii, non dabit. quare plurima petamus a nobis et cum causis deliberemus cogite musque homines ante invenisse artem quam docuisse. illa enim potentissima est,

[10] There are, however, some things which depend not on the teacher, but on the learner. For example, a physician will teach what treatment should be adopted for different diseases, what the dangers are against which he must be on his guard, and what the symptoms by which they may be recognised. But he will not be able to communicate to his pupil the gift of feeling the pulse, or appreciating the variations of colour, breathing and temperature: this will depend on the talent of the individual. Therefore, in most instances, we must rely on ourselves, and must study cases with the utmost care, never forgetting that men discovered our art before ever they proceeded to teach it.

[11] quaeque vere dicitur oeconomica totius causae dispositio, quae nullo modo constitui nisi velut in re praesente potest: ubi adsumendum prooemium, ubi omittendum, ubi utendum expositione continua, ubi partita, ubi ab initiis incipiendum, ubi more Homérico e mediis vel ultimis, ubi omnino non exponendum,

[11] For the most effective, and what is justly styled most *economical* arrangement of a case as a whole, is that which cannot be determined except when we have the specific facts before us. It consists in the power to determine when the *exordium* is necessary and when it should be omitted; when we should make our statement of facts continuous, and when we should subdivide it; when we should begin at the very beginning, when, like Homer, start at the middle or the end;

[12] quando a nostris, quando ab adversariorum propositionibus incipiamus, quando a firmissimis probationibus, quando a levioribus; qua in causa praepoenndae prooemiis quaectiones, qua praeparatione praemuniendae, quid iudicis animus accipere possit statim dictum, quo paulatim deducendus,

singulis an universis opponenda refutatio, reservandi perorationi an per totam actionem diffundendi adfectus, de iure prius an de aequitate dicendum; anteacta crimina an de quibus iudicium est prius obiicere vel diluere conveniat;

[12] when we should omit the statement of facts altogether; when we should begin by dealing with the arguments advanced by our opponents, and when with our own; when we should place the strongest proofs first and when the weakest; in what cases we should prefix *questions* to the *exordium*, and what preparation is necessary to pave the way for these questions; what arguments the judge will accept at once, and to what he requires to be led by degrees; whether we should refute our opponent's arguments as a whole or in detail; whether we should reserve emotional appeals for the peroration or distribute them throughout the whole speech; whether we should speak first of law or of equity; whether we should first advance (or refute) charges as to past offences or the charges connected with the actual trial;

[13] si multiplices causae erunt, quis ordo faciendus, quae testimonia tabulaeve cuiusque generis in actione recitandae, quae reservandae. haec est velut imperatoria virtus copias suas partientis ad casus proeliorum, retinentis partes per castella tuenda custodiendasve urbes, petendos commeatus, obsidenda itinera, mari denique ac terra dividendis. sed haec in oratione praestabit,

[13] or, again, if the case is complicated, what order we should adopt, what evidence or documents of any kind should be read out in the course of our speech, and what reserved for a later stage. This gift of arrangement is to oratory what generalship is to war. The skilled commander will know how to distribute his forces for battle, what troops he should keep back to garrison forts or guard cities, to secure supplies, or guard communications, and what dispositions to make by land and by sea.

[14] cui omnia adfuerint, natura, doctrina, studium. quare nemo exspectet, ut alieno tantum labore sit disertus. vigilandum, durandum, enitendum, pallendum est, facienda sua cuique vis, suus usus, sua ratio, non respiciendum ad haec, sed in promptu habenda, nec tanquam tradita sed tanquam innata.

[14] But to possess this gift, our orator will require all the resources of nature, learning and industrious study. Therefore let no man hope that he can acquire eloquence merely by the labour of others. He must burn the midnight oil, persevere to the end and grow pale with study: he must form his own powers, his own experience, his own methods: he must not require to hunt for his weapons, but must have them ready for immediate use, as though they were born with him and not derived from the instruction of others.

[15] nam via demonstrari potest, velocitas sua cuique est; verum ars satis praestat, si copias eloquentiae ponit in medio; nostrum est uti eis scire.

[15] The road may be pointed out, but our speed must be our own. Art has done enough in publishing the resources of eloquence, it is for us to know how to use them.

[16] *neque enim partium est demum dispositio, sed in his ipsis primus aliquis sensus et secundus et tertius; qui non modo ut sint ordine collocati, laborandum est, sed ut inter se vincti atque ita cohaerentes, ne commissura perluceat; corpus sit, non membra.*

[16] And it is not enough merely to arrange the various parts: each several part has its own internal economy, according to which one thought will come first, another second, another third, while we must struggle not merely to place these thoughts in their proper order, but to link them together and give them such cohesion that there will be no trace of any suture: they must form a body, not a congeries of limbs.

[17] *quod ita continget, si et quid cuique conveniat viderimus et verba verbis applicarimus non pugnantia, sed quae invicem complectantur. ita res non diversae distantibus ex locis quasi invicem ignotae collidentur, sed aliqua societate cum prioribus ac sequentibus copulatae tenebuntur, ac videbitur non solum composita oratio, sed etiam continua. verum longius fortasse progredior fallente transitu et a dispositione ad elocutionis praecepta labor, quae proximus liber inchoabit.*

[17] This end will be attained if we note what best suits each position, and take care that the words which we place together are such as will not clash, but will mutually harmonise. Thus different facts will not seem like perfect strangers thrust into uncongenial company from distant places, but will be united with what precedes and follows by an intimate bond of union, with the result that our speech will give the impression not merely of having been put together, but of natural continuity. I fear, however, that I have been lured on from one thing to another and have advanced somewhat too far, since I find myself gliding from the subject of arrangement to the discussion of the general rules of style, which will form the opening theme of the next book.

LIBER VIII — BOOK VIII

pr. his fere, quae in proximos quinque libros collata sunt, ratio inveniendi atque inventa disponendi continetur, quam ut per omnes numeros penitus cognoscere ad summam scientiae necessarium est, ita incipientibus brevius ac simplicius tradi magis convenit.

[1] THE observations contained in the preceding five books approximately cover the method of invention and the arrangement of the material thus provided. It is absolutely necessary to acquire a thorough knowledge of this method in all its details, if we desire to become accomplished orators, but a simpler and briefer course of instruction is more suitable for beginners.

[2] aut enim difficultate institutionis tam numerosae atque perplexae deterreri solent, aut eo tempore, quo praecipue alenda ingenia atque indulgentia quadam enutrienda sunt, asperiorum tractatu rerum atteruntur, aut, si haec sola didicerunt, satis se ad eloquentiam instructos arbitrantur, aut quasi ad certas quasdam dicendi leges adligati conatum omnem reformidant.

[2] For they tend either to be deterred from study by the difficulties of so detailed and complicated a course, or lose heart at having to attempt tasks of such difficulty just at the very period when their minds need special nourishment and a more attractive form of diet, or think that when they have learned this much and no more, they are fully equipped for the tasks of eloquence, or finally, regarding themselves as fettered by certain fixed laws of oratory, shrink from making any effort on their own initiative.

[3] unde existimant accidisse ut, qui diligentissimi artium scriptores exstiterint, ab eloquentia longissime fuerint. via tamen opus est incipientibus, sed ea plana et cum ad ingrediendum tum ad demonstrandum expedita. eligat itaque peritus ille praeceptor ex omnibus optima et tradat ea demum in praesentia quae placet, remota refutandi cetera mora. sequentur enim discipuli, quo duxeris.

[3] Consequently, it has been held that those who have exercised the greatest care in writing text-books of rhetoric have been the furthest removed from genuine eloquence. Still, it is absolutely necessary to point out to beginners the road which they should follow, though this road must be smooth and easy not merely to enter, but to indicate. Consequently, our skilful instructor should select all that is best in the various writers on the subject and content himself for the moment with imparting those precepts of which he approves, without wasting time over the refutation of those which he does not approve. For thus your pupils will follow where you lead.

[4] mox cum robore dicendi crescet etiam eruditio. iidem primo solum iter credant esse in quod inducentur, mox illud cognituri etiam optimum. sunt

autem neque obscura neque ad percipiendum difficilia quae scriptores diversis opinionibus pertinaciter tuendis involverunt.

[4] Later, as they acquire strength in speaking, their learning will grow in proportion. To begin with, they may be allowed to think that there is no other road than that on which we have set their feet, and it may be left to time to teach them what is actually the best. It is true that writers on rhetoric have, by the pertinacity with which they have defended their opinions, made the principles of the science which they profess somewhat complicated; but these principles are in reality neither obscure nor hard to understand.

[5] itaque in toto artis huiusce tractatu difficilior est iudicare quid doceas quam, cum iudicaris, docere, praecipueque in duabus his partibus perquam sunt pauca, circa quae si is qui instituitur non repugnaverit, primum ad cetera habiturus est cursum.

[5] Consequently, if we regard the treatment of the art as a whole, it is harder to decide what we should teach than to teach it, once the decision has been made. Above all, in the two departments which I have mentioned, the necessary rules are but few in number, and if the pupil gives them ready acceptance, he will find that the path to further accomplishment presents no difficulty.

[6] nempe enim plurimum in hoc laboris exhausimus, ut ostenderemus rhetoricen bene dicendi scientiam et utilem et artem et virtutem esse; materiam eius res omnes de quibus dicendum esset; eas in tribus fere generibus, demonstrativo, deliberativo, iudicialique reperiri; orationem porro omnem constare rebus et verbis; in rebus intuendam inventionem, in verbis elocutionem, in utroque collocationem, quae memoria complecteretur, actio commendaret. oratoris officium docendi,

[6] I have, it is true, already expended much labour on this portion of my task; for I desired to make it clear that rhetoric is the science of speaking well, that it is useful, and further, that it is an art and a virtue. I wished also to show that its subject matter consists of everything on which an orator may be called to speak, and is, as a rule, to be found in three classes of oratory, demonstrative, deliberative, and forensic; that every speech is composed of matter and words, and that as regards matter we must study invention, as regards words, style, and as regards both, arrangement, all of which it is the task of memory to retain and delivery to render attractive.

[7] movendi, delectandi partibus contineri, ex quibus ad docendum expositio et argumentatio, ad movendum adfectus pertinerent, quos per omnem quidem causam sed maxime tamen in ingressu ac fine dominari. nam delectationem, quamvis in utroque sit eorum, magis tamen proprias in elocutione partes habere.

[7] I attempted to show that the duty of the orator is composed of instructing, moving and delighting his hearers, statement of facts and argument falling under the head of instruction, while emotional appeals are concerned with moving the audience and, although they may be employed throughout the case, are most effective at the beginning and end. As to the element of charm, I pointed out that, though it may reside both in facts and words, its special sphere is that of style.

[8] quaestiones alias infinitas, alias finitas quae personis, temporibus, locis continerentur. In omni porro materia tria esse quaerenda, an sit, quid sit, quale sit. his adiciebamus demonstrativam laude ac vituperatione constare. In ea quae ab ipso de quo diceremus, quae post eum acta essent, intuendum. hoc opus tractatu honestorum utiliumque constare.

[8] I observed that there are two kinds of questions, the one indefinite, the other definite, and involving the consideration of persons and circumstances of time and place; further, that whatever our subject matter, there are three questions which we must ask, *is it? what is it?* and *of what kind is it?* To this I added that demonstrative oratory consists of praise and denunciation, and that in this connexion we must consider not merely the acts actually performed by the person of whom we were speaking, but what happened after his death. This task I showed to be concerned solely with what is honourable or expedient.

[9] suasoriis accedere tertiam partem ex coniectura, possetne fieri et an esset futurum de quo deliberaretur. hic praecipue diximus spectandum, quis, apud quem, quid diceret. iudicialium causarum alias in singulis, alias in pluribus controversiis consistere, et in quibusdam intentionem modo stature facere, modo depulsionem; depulsionem porro omnem infitiatione duplici, factumne et an hoc factum esset, praeterea defensione ac translatione constare.

[9] I remarked that in deliberative oratory there is a third department as well which depends on conjecture, for we have to consider whether the subject of deliberation is possible or likely to happen. At this point I emphasised the importance of considering who it is that is speaking, before whom he is speaking, and what he says. As regards forensic cases, I demonstrated that some turn on one point of dispute, others on several, and that whereas in some cases it is the attack, in others it is the defence that determines the *basis*; that every defence rests on denial, which is of two kinds, since we may either deny that the act was committed or that its nature was that alleged, while it further consists of justification and technical pleas to show that the action cannot stand.

[10] quaestionem aut ex scripto esse aut ex facto; facto, de rerum fide, proprietate, qualitate; scripto, de verborum vi aut voluntate, in quibus vis tum causarum tum actionum inspicere soleat, quae aut scripti et voluntatis aut ratiocinativa aut ambiguitatis aut legum contrariarum specie continentur.

[10] I proceeded to show that questions must turn either on something written or something done: in the latter case we have to consider the truth of the facts together with their special character and quality; in the former we consider the meaning or the intention of the words, with reference to which we usually examine the nature of all cases, criminal or civil, which fall under the heads of the *letter* and *intention*, the *syllogism*, *ambiguity* or *contrary lairs*.

[11] In omni porro causa iudiciali quinque esse partes, quarum exordium conciliari audientem, narratione doceri, probatione proposita confirmari, refutatione contra dicta dissolvi, peroratione aut memoriam refici aut animos moveri.

[11] I went on to point out that in all forensic cases the speech consists of five parts, the *exordium* designed to conciliate the audience, the *statement of facts* designed to instruct him, the *proof* which confirms our own propositions, the *refutation* which overthrows the arguments of our opponents, and the *peroration* which either refreshes the memory of our hearers or plays upon their emotions.

[12] his argumentandi et adficiendi locos et quibus generibus concitari, placari, resolvi iudices oporteret, adiecimus. accessit ratio divisionis. credere modo qui discet velit materiam quandam variam esse, et in qua multa etiam sine doctrina praestare debeat per se ipsa natura, ut haec de quibus dixi non tarn inventa a praeceptoribus quam cum fierent observata esse vidcantur.

[12] I then dealt with the sources of arguments and emotion, and indicated the means by which the judges should be excited, placated, or amused. Finally I demonstrated the method of division. But I would ask that the student who is really desirous of learning should believe that there are also a variety of subjects with regard to which nature itself should provide much of the requisite knowledge without any assistance from formal teaching, so that the precepts of which I have spoken may be regarded not so much as having been discovered by the professors of rhetoric as having been noted by them when they presented themselves.

[13] Plus exigunt laboris et curae quae sequuntur. hinc enim iam elocutionis rationem tractabimus, partem operis, ut inter omnes oratores convenit, difficillimam. nam et M. Antonius, cuius supra mentionem habuimus, cum a se disertos visos esse multos ait, eloquentem neminem: diserto satis putat dicere quae oporteat, ornate autem dicere proprium esse eloquentissimi.

[13] The points which follow require greater care and industry. For I have now to discuss the theory of style, a subject which, as all orators agree, presents the greatest difficulty. For Marcus Antonius, whom I mentioned above, states that he has seen many good, but no really eloquent speakers, and holds that, while to be a good speaker it is sufficient to say what is necessary, only the really eloquent speaker can do this in ornate and appropriate language.

[14] quae virtus si usque ad eum in nullo reperta est, ac ne in ipso quidem aut L. Crasso, certum est et in his et in prioribus earn desideratam, quia difficillima fuit. Et Marcus Tullius inventionem quidem ac dispositionem prudentis hominis putat,

[14] And if this excellence was to be found in no orator up to his own day, and not even in himself or Lucius Crassus, we may regard it as certain that the reason why they and their predecessors lacked this gift was its extreme difficulty of acquisition. Again, Cicero holds that, while invention and arrangement are within the reach of any man of good sense, eloquence belongs to the orator alone, and consequently it was on the rules for the cultivation of eloquence that he expended the greatest care.

[15] eloquentiam oratoris, ideoque praecipue circa praecepta partis huius laboravit. quod eum merito fecisse etiam ipso rei, de qua loquimur, nomine palam declaratur. eloqui enim est omnia, quae mente conceperis, promere atque ad audientes perferre; sine quo supervacua sunt priora et similia gladio condito atque intra vaginam suam haerenti.

[15] That he was justified in so doing is shown clearly by the actual name of the art of which I am speaking. For the verb *eloqui* means the production and communication to the audience of all that the speaker has conceived in his mind, and without this power all the preliminary accomplishments of oratory are as useless as a sword that is kept permanently concealed within its sheath.

[16] hoc itaque maxime docetur, hoc nullus nisi arte adsequi potest, hic studium plurimum adhibendum, hoc exercitatio petit, hoc imitatio, hic omnis aetas consumitur, hoc maxime orator oratore praestantior, hoc genera ipsa dicendi alia alia potiora.

[16] Therefore it is on this that teachers of rhetoric concentrate their attention, since it cannot possibly be acquired without the assistance of the rules of art it is this which is the chief object of our study, the goal of all our exercises and all our efforts at imitation, and it is to this that we devote the energies of a lifetime; it is this that makes one orator surpass his rivals, this that makes one style of speaking preferable to another.

[17] neque enim Asiani aut quocunque alio genere corrupti res non viderunt aut eas non collocaverunt neque, quos aridos vocamus, stulti aut in causis caeci fuerunt; sed his iudicium in eloquendo ac modus, illis vires defuerunt, ut appareat in hoc et vitium et virtutem esse dicendi.

[17] The failure of the orators of the Asiatic and other decadent schools did not lie in their inability to grasp or arrange the facts on which they had to speak, nor, on the other hand, were those who professed what we call the dry style of oratory either fools or incapable of understanding the cases in which they were engaged. No, the fault of the former was that they lacked taste and

restraint in speaking, while the latter lacked power, whence it is clear that it is here that the real faults and virtues of oratory are to be found.

[18] non ideo tamen sola est agenda cura verborum. occurram enim necesse est et, velut in vestibulo protinus apprehensuris hanc confessionem meam, resistam iis qui, omissa rerum (qui nervi sunt in causis) diligentia, quodam inani circa voces studio senescunt, idque faciunt gratia decoris, qui est in dicendo mea quidem opinione pulcherrimus, sed cum sequitur non cum adfectatur.

[18] This does not, however, mean that we should devote ourselves to the study of words alone. For I am compelled to offer the most prompt and determined resistance to those who would at the very portals of this enquiry lay hold of the admissions I have just made and, disregarding the subject matter which, after all, is the backbone of any speech, devote themselves to the futile and crippling study of words in a vain desire to acquire the gift of elegance, a gift which I myself regard as the fairest of all the glories of oratory, but only when it is natural and unaffected.

[19] corpora sana et integri sanguinis et exercitatione firmata ex iisdem his speciem accipiunt ex quibus vires, namque et colorata et adstricta et lacertis expressa sunt; at eadem si quis volsa atque fucata muliebriter comat, foedissima sint ipso formae labore.

[19] Healthy bodies, enjoying a good circulation and strengthened by exercise, acquire grace from the same source that gives them strength, for they have a healthy complexion, firm flesh and shapely thews. But, on the other hand, the man who attempts to enhance these physical graces by the effeminate use of depilatories and cosmetics, succeeds merely in defacing them by the very care which he bestows on them.

[20] Et cultus concessus atque magnificus addit hominibus, ut Graeco versu testatum est, auctoritatem; at muliebris et luxuriosus non corpus exornat, sed detegit mentem. similiter illa translucida et versicolor quorundam elocutio res ipsas effeminat, quae illo verborum habitu vestiantur. curam ergo verborum, rerum volo esse sollicitudinem.

[20] Again, a tasteful and magnificent dress, as the Greek poet tells us, lends added dignity to its wearer: but effeminate and luxurious apparel fails to adorn the body and merely reveals the foulness of the mind. Similarly, a translucent and iridescent style merely serves to emasculate the subject which it arrays with such pomp of words. Therefore I would have the orator, while careful in his choice of words, be even more concerned about his subject matter.

[21] nam plerumque optima rebus cohaerent et cernuntur suo lumine; at nos quaerimus illa, tanquam lateant semper seque subducant. ita nunquam putamus circa id esse de quo dicendum est, sed ex aliis locis petimus et

inventis vim adferimus.

[21] For, as a rule, the best words are essentially suggested by the subject matter and are discovered by their own intrinsic light. But to-day we hunt for these words as though they were always hiding themselves and striving to elude our grasp. And thus we fail to realise that they are to be found in the subject of our speech, and seek them elsewhere, and, when we have found them, force them to suit their context.

[22] *maiore animo aggredienda eloquentia est, quae si toto corpore valet, ungues polire et capillum reponere non existimabit ad curam suam pertinere.*

sed evenit plerumque ut in hac diligentia deterior etiam fiat oratio, primum,

[22] It is with a more virile spirit that we should pursue eloquence, who, if only her whole body be sound, will never think it her duty to polish her nails and tire her hair.

The usual result of over-attention to the niceties of style is the deterioration of our eloquence.

[23] *quia sunt optima minime arcessita et simplicibus atque ab ipsa veritate profectis similia. nam illa, quae curam fatentur et ficta atque composita videri etiam volunt, nec gratiam consequuntur et fidem amittunt propter id quod sensus obumbrantur et velunt, aeto gramine sata strangulantur.*

[23] The main reason for this is that those words are best which are least far-fetched and give the impression of simplicity and reality. For those words which are obviously the result of careful search and even seem to parade their self-conscious art, fail to attain the grace at which they aim and lose all appearance of sincerity because they darken the sense and choke the good seed by their own luxuriant overgrowth.

[24] *nam et quod recte dici potest circumimus amore verborum et quod satis dictum est repetimus et quod uno verbo patet pluribus oneramus et pleraque significare melius putamus quam dicere. quid quod nihil iam proprium placet, dum parum creditur disertum quod et alius dixisset?*

[24] For in our passion for words we paraphrase what might be said in plain language, repeat what we have already said at sufficient length, pile up a number of words where one would suffice, and regard allusion as better than directness of speech. So, too, all directness of speech is at a discount, and we think no phrase eloquent that another could conceivably have used.

[25] *A corruptissimo quoque poetarum figuras seu translationes mutuamus, tum demum ingeniosi scilicet, si ad intelligendos nos opus sit ingenio. atqui satis aperte Cicero praeceperat, in dicendo vitium vel maximum esse a vulgari genere orationis atque a consuetudine communis sensus abhorrere.*

[25] We borrow figures and metaphors from the most decadent poets, and regard it as a real sign of genius that it should require a genius to understand our meaning. And yet Cicero long since laid down this rule in the clearest of language, that the worst fault in speaking is to adopt a style inconsistent with the idiom of ordinary speech and contrary to the common feeling of mankind.

[26] *sed ille est durus atque ineruditus; nos melius, quibus sordet omne quod natura dictavit, qui non ornamenta quaerimus sed lenocinia, quasi vero sit ulla verborum nisi rei cohaerentium virtus; quae ut propria sint et dilucida et ornata et apte collocentur, si tota vita laborandum est, omnis studiorum fructus amissus est.*

[26] But nowadays our rhetoricians regard Cicero as lacking both polish and learning; we are far superior, for we look upon everything that is dictated by nature as beneath our notice, and seek not for the true ornaments of speech, but for meretricious finery, as though there were any real virtue in words save in their power to represent facts. And if we have to spend all our life in the laborious effort to discover words which will at once be brilliant, appropriate and lucid, and to arrange them with exact precision, we lose all the fruit of our studies.

[27] *atqui plerosque videas haerentes circa singula et dum inveniunt et dum inventa ponderant ac dimetiuntur. quod si ideirco fieret ut semper optimis uterentur, abominanda tamen haec infelicitas erat, quae et cursum dicendi refrenat et calorem cogitationis extinguit mora et diffidentia.*

[27] And yet we see the majority of modern speakers wasting their time over the discovery of single words and over the elaborate weighing and measurement of such words when once discovered. Even if the special aim of such a practice were always to secure the best words, such an ill-starred form of industry would be much to be deprecated, since it checks the natural current of our speech and extinguishes the warmth of imagination by the delay and loss of self-confidence which it occasions.

[28] *miser enim et, ut sic dicam, pauper orator est qui nullum verbum aequo animo perdere potest. sed ne perdet quidem, qui rationem loquendi primum cognoverit, tum lectione multa et idonea copiosam sibi verborum supellectilem compararit et huic adhibuerit artem collocandi, deinde haec omnia exercitatione plurima roborarit, ut semper in promptu sint et ante oculos.*

[28] For the orator who cannot endure to lose a single word is like a man plunged in griping poverty. On the other hand, if he will only first form a true conception of the principles of eloquence, accumulate a copious supply of words by wide and suitable reading, apply the art of arrangement to the words thus acquired, and finally, by continual exercise, develop strength to use his acquisitions so that every word is ready at hand and lies under his very eyes,

he will never lose a single word.

[29] namque ei qui id fecerit simul res cum suis nominibus occurrent. sed opus est studio praecedente et acquisita facultate et quasi reposita. namque ista quaerendi, iudicandi, comparandi anxietas, dum discimus, adhibenda est, non dum dicimus. alioqui sicut, qui patrimonium non pararunt, sub diem quaerunt, ita in oratione, qui non satis laboravit.

[29] For the man who follows these instructions will find that facts and words appropriate to their expression will present themselves spontaneously. But it must be remembered that a long course of preliminary study is necessary and that the requisite ability must not merely be acquired, but carefully stored for use; for the anxiety devoted to the search for words, to the exercise of the critical faculty and the power of comparison is in its place while we are learning, but not when we are speaking. Otherwise, the orator who has not given sufficient attention to preliminary study will be like a man who, having no fortune, lives from hand to mouth.

[30] sin praeparata dicendi vis fuerit, erunt in officio, non ut requisita respondere, sed ut semper sensibus inhaerere videantur atque eos ut umbra corpus sequi.

[30] If, on the other hand, the powers of speech have been carefully cultivated beforehand, words will yield us ready service, not merely turning up when we search for them, but dwelling in our thoughts and following them as the shadow follows the body.

[31] sed in hac ipsa cura est aliquid satis. nam cum Latina, significantia, ornata, cum apte sunt collocata, quid amplius laboremus? quibusdam tamen nullus est finis calumniandi se et cum singulis paene syllabis commoriendi, qui etiam, cum optima sunt reperta, quaerunt aliquid quod sit magis antiquum, remotum, inopinatum, nec intelligunt iacere sensus in oratione, in qua verba laudantur.

[31] There are, however, limits even to this form of study; for when our words are good Latin, full of meaning, elegant and aptly arranged, why should we labour further? And yet there are some who are never weary of morbid self-criticism, who throw themselves into an agony of mind almost over separate syllables, and even when they have discovered the best words for their purpose look for some word that is older, less familiar, and less obvious, since they cannot bring themselves to realise that when a speech is praised for its words, it implies that its sense is inadequate.

[32] sit igitur cura elocutionis quam maxima, dum sciamus tamen nihil verborum causa esse faciendum, cum verba ipsa rerum gratia sint reperta; quorum ea sunt maxime probabilia, quae sensum animi nostri optime promunt atque in animis iudicium quod nos volumus efficiunt.

[32] While, then, style calls for the utmost attention, we must always bear in mind that nothing should be done for the sake of words only, since words were invented merely to give expression to things: and those words are the most satisfactory which give the best expression to the thoughts of our mind and produce the effect which we desire upon the minds of the judges.

[33] ea debent praestare sine dubio et admirabilem et iucundam orationem, verum admirabilem non sic, quomodo prodigia miramur, et iucundam non deformi voluptate sed cum laude ac dignitate coniuncta.

[33] Such words will assuredly be productive of a style that will both give pleasure and awaken admiration; and the admiration will be of a kind far other than that which we bestow on portents, while the pleasure evoked by the charm will have nothing morbid about it, but will be praiseworthy and dignified.

1. igitur, quam Graeci φράσιν vocant, Latine dicimus elocutionem. ea spectatur verbis aut singulis aut coniunctis. In singulis intuendum est ut sint Latina, perspicua, ornata, ad id quod efficere volumus accommodata, in coniunctis, ut emendata, ut collocata, ut figurata.

1. What the Greeks call φράσιν we in Latin call *elocutio* or style. Style is revealed both in individual words and in groups of words. As regards the former, we must see that they are Latin, clear, elegant and well-adapted to produce the desired effect. As regards the latter, they must be correct, aptly placed and adorned with suitable figures.

[2] sed ea, quae de ratione Latine atque emendate loquendi fuerunt dicenda, in libro primo, cum de grammaticae loqueremur, exsecuti sumus. verum illic tantum ne vitiosa essent praecepimus; hic non alienum est admonere ut sint quam minime peregrina et externa. multos enim, quibus loquendi ratio non desit, invenias quos curiose potius loqui dixeris quam Latine, quomodo et illa Attica anus Theophrastum, hominem alioqui disertissimum, adnotata unius adfectione verbi, hospitem dixit nec alio se id deprehendisse interrogata respondit, quam quod nimium Attice loqueretur.

[2] I have already, in the portions of the first book dealing with the subject of grammar, said all that is necessary on the way to acquire idiomatic and correct speech. But there my remarks were restricted to the prevention of positive faults, and it is well that I should now point out that our words should have nothing provincial or foreign about them. For you will find that there are a number of writers by no means deficient in style whose language is precious rather than idiomatic. As an illustration of my meaning I would remind you of the story of the old woman at Athens, who, when Theophrastus, a man of no mean eloquence, used one solitary word in an affected way, immediately said that he was a foreigner, and on being asked how she detected it, replied that his language was too Attic for Athens. Again Asinius Pollio held that Livy,

[3] Et in Tito Livio, mirae facundiae viro, putat inesse Pollio Asinius quandam Patavinitem. quare, si fieri potest et verba omnia et vox huius aluminum urbis oleant, ut oratio Romana plane videatur, non civitate donata.

[3] for all his astounding eloquence, showed traces of the idiom of Padua. Therefore, if possible, our voice and all our words should be such as to reveal the native of this city, so that our speech may seem to be of genuine Roman origin, and not merely to have been presented with Roman citizenship.

2. perspicuitas in verbis praecipuam habet proprietatem, sed proprietas ipsa non simpliciter accipitur. primus enim intellectus est sua cuiusque rei appellatio, qua non semper utemur; nam et obscena vitabimus et sordida et humilia.

2. Clearness results above all from *propriety* in the use of words. But *propriety* is capable of more than one interpretation. In its primary sense it means calling things by their right names, and is consequently sometimes to be avoided, for our language must not be obscene, unseemly or mean.

[2] sunt autem humilia infra dignitatem rerum aut ordinis. In quo vitio cavendo non mediocriter errare quidam solent, qui omnia quae sunt in usu, etiamsi causae necessitas postulet, reformidant; ut ille, qui in actione hibericas herbas, se solo nequiquam intelligente, dicebat, nisi irridens hanc vanitatem Cassius Severus spartum dicere eum velle indicasset.

[2] Language may be described as mean when it is beneath the dignity of the subject or the rank of the speaker. Some orators fall into serious error in their eagerness to avoid this fault, and are afraid of all words that are in ordinary use, even although they may be absolutely necessary for their purpose. There was, for example, the man who in the course of a speech spoke of “Iberian grass,” a meaningless phrase intelligible only to himself. Cassius Severus, however, by way of deriding his affectation, explained that he meant Spanish broom.

[3] nec video quare clarus orator duratos muria pisces nitidius esse crediderit quam ipsum id quod vitabat. In hac autem proprietatis specie, quae nominibus ipsis cuiusque rei utitur, nulla virtus est, at quod ei contrarium est, vitium. id apud nos improprium, ἄκρυν apud Graecos vocatur, quale est,

[3] Nor do I see why a certain distinguished orator thought “fishes conserved in brine” a more elegant phrase than the word which he avoided. But while there is no special merit in the form of *propriety* which consists in calling things by their real names, it is a fault to fly to the opposite extreme. This fault we call *impropriety*,

[4] tantum sperare dolorem, aut, quod in oratione Dolabellae emendatum a Cicerone adnotavi, mortem ferre, aut, qualia nunc laudantur a quibusdam, quorum est, de cruce verba ceciderunt. non tamen quidquid non erit proprium,

protinus et improprii vitio laborabit, quia primum omnium multa sunt et Graece et Latine non denominata.

[4] while the Greeks call it ἄκρπον As examples I may cite the Virgilian, “Never could I have hoped for such great woe,” or the phrase, which I noted had been corrected by Cicero in a speech of Dolabella’s, “To bring death,” or again, phrases of a kind that win praise from some of our contemporaries, such as, “His words fell from the cross.” On the other hand, everything that lacks appropriateness will not necessarily suffer from the fault of positive *impropriety*, because there are, in the first place, many things which have no proper term either in Greek or Latin.

[5] nam et, qui iaculum emittit, iaculari dicitur, qui pilam aut sudem, appellatione privatim sibi adsignata caret; et ut, lapidare quid sit, manifestum est, ita glebarum testarumque iactus non habet nomen.

[5] For example, the verb *iaculari* is specially used in the sense of “to throw a javelin,” whereas there is no special verb appropriated to the throwing of a ball or a stake. So, too, while *lapidare* has the obvious meaning of “to stone,” there is no special word to describe the throwing of clods or potsherds.

[6] unde abusio, quae κατάχρησις dicitur, necessaria. translatio quoque, in qua vel maximus est orationis ornatus, verba non suis rebus accommodat. quare proprietas non ad nomen, sed ad vim significandi refertur nec auditu, sed intellectu perpendenda est.

[6] Hence abuse or *catachresis* of words becomes necessary, while metaphor, also, which is the supreme ornament of oratory, applies words to things with which they have strictly no connexion. Consequently *propriety* turns not on the actual term, but on the meaning of the term, and must be tested by the touchstone of the understanding, not of the ear.

[7] secundo modo dicitur proprium inter plura, quae sunt eiusdem nominis, id unde cetera ducta sunt; ut vertex est contorta in se aqua vel quidquid aliud similiter vertitur, inde propter flexum capillorum pars summa capitis, ex hoc id quod in montibus eminentissimum. recte dixeris haec omnia vertices, proprie tamen unde initium est.

[7] The second sense in which the word *propriety* is used occurs when there are a number of things all called by the same name: in this case the original term from which the others are derived is styled the *proper* term. For example, the word *vertex* means a whirl of water, or of anything else that is whirled in a like manner: then, owing to the fashion of coiling the hair, it comes to mean the top of the head, while finally, from this sense it derives the meaning of the highest point of a mountain. All these things may correctly be called *vertices*, but the *proper* use of the term is the first. So, too, *solea* and *tuidus*

[8] sic soleae et turdi pisces et cetera. tertius est huic diversus modus, cum res communis pluribus in uno aliquo habet nomen eximium, ut carmen funebre proprie *nenia* et tabernaculum ducis *augurale*. item, quod commune et aliis nomen intellectu alicui rei peculiariter tribuitur, ut urbem Romam accipimus et *venales* novicios et *Corinthia* aera, cum sint urbes aliae quoque et *venalia* multa et tam aurum et argentum quam aes *Corinthium*. sed ne in his quidem virtus oratoris inspicitur.

[8] are employed as names of fish, to mention no other cases. The third kind of *propriety* is found in the case where a thing which serves a number of purposes has a special name in some one particular context; for example, the proper term for a funeral *song* is *naenia*, and for the general's *tent augurale*. Again, a term which is common to a number of things may be applied in a *proper* or special sense to some one of them. Thus we use *urbs* in the special sense of Rome, *venales* in the special sense of newly-purchased slaves, and *Corinthia* in the special sense of bronzes, although there are other cities besides Rome, and many other things which may be styled *venales* besides slaves, and gold and silver are found at Corinth as well as bronze. But the use of such terms implies no special excellence in an orator.

[9] at illud iam non mediocriter probandum, quod hoc etiam laudari modo solet, ut proprie dictum, id est, quo nihil inveniri possit significantius: ut Cato dixit, C. Caesarem ad evertendam rem publicam sobrium accessisse; ut Virgilius deductum carmen, et Horatius acrem tibiam Hannibalemque dirum.

[9] There is, however, a form of *propriety* of speech which deserves the highest praise, that is to say, the employment of words with the maximum of significance, as, for instance, when Cato said that "Caesar was thoroughly sober when he undertook the task of overthrowing the constitution," or as Virgil spoke of a "thin-drawn strain," and Horace of the "shrill pipe," and "dread Hannibal."

[10] In quo modo illud quoque est a quibusdam traditum proprii genus ex appositis (epitheta dicuntur): ut dulcis musti et cum dentibus albis. De quo genere alio loco dicendum est.

[10] Some also include under this head that form of *propriety* which is derived from characteristic epithets, such as in the Virgilian phrases, "sweet unfermented wine," or "with white teeth." But of this sort of propriety I shall have to speak elsewhere.

[11] etiam quae bene translata sunt propria dici solent. interim autem quae sunt in quoque praecipua proprii locum accipiunt, ut Fabius inter plures imperatorias virtutes cunctator est appellatus. possunt videri verba, quae plus significant quam eloquuntur, in parte ponenda perspicuitatis; intellectum enim adiuvant. ego tamen libentius emphasim retulerim ad ornatum orationis, quia non ut intelligatur efficit, sed ut plus intelligatur.

[11] *Propriety* is also made to include the appropriate use of words in metaphor, while at times the salient characteristic of an individual comes to be attached to him as a *proper* name: thus Fabius was called “Cunctator,” the Delayer, on account of the most remarkable of his many military virtues. Some, perhaps, may think that words which mean more than they actually say deserve mention in connexion with clearness, since they assist the understanding. I, however, prefer to place *emphasis* among the ornaments of oratory, since it does not make a thing intelligible, but merely more intelligible.

[12] at obscuritas fit verbis iam ab usu remotis: ut si commentarios quis pontificum et vetustissima foedera et exoletos scrutatus auctores id ipsum petat ex his quae inde contraxerit, quod non intelliguntur. hinc enim aliqui famam eruditionis adfectant, ut quaedam soli scire videantur.

[12] Obscurity, on the other hand, results from the employment of obsolete words, as, for instance, if an author should search the records of the priests, the earliest treaties and the works of long-forgotten writers with the deliberate design of collecting words that no man living understands. For there are persons who seek to gain a reputation for erudition by such means as this, in order that they may be regarded as the sole depositories of certain forms of knowledge.

[13] fallunt etiam verba vel regionibus quibusdam magis familiaria vel artium propria, ut atabulus ventus et navis saccaria et in malo cosanum. Quae vel vitanda apud iudicem ignarum significationum earum vel interpretanda sunt, sicut in his, quae homonyma vocantur: ut, taurus animal sit an mons an signum in coelo an nomen hominis an radix arboris, nisi distinctum non intelligitur.

[13] Obscurity may also be produced by the use of words which are more familiar in certain districts than in others, or which are of a technical character, such as the wind called “Atabulus,” or a “sack-ship,” or *in malo cosanum*. Such expressions should be avoided if we are pleading before a judge who is ignorant of their meaning, or, if used, should be explained, as may have to be done in the case of what are called homonyms. For example, the word *taurus* may be unintelligible unless we make it clear whether we are speaking of a bull, or a mountain, or a constellation, or the name of a man, or the root of a tree.

[14] plus tamen est obscuritatis in contextu et continuatione sermonis et plures modi. quare nec sit tam longus, ut eum prosequi non possit intentio, nec traiectione vel ultra modum hyperbato finis eius differatur. quibus adhuc peior est mixtura verborum, qualis in illo versu.

saxa vacant Itali, mediis quae in fluctibus, aras.

[14] A greater source of obscurity is, however, to be found in the construction and combination of words, and the ways in which this may occur are still more numerous. Therefore, a sentence should never be so long that it is impossible to follow its drift, nor should its conclusion be unduly postponed by transposition or an excessive use of *hyperbaton*. Still worse is the result when the order of the words is confused as in the line

“In the midmost sea
Rocks are there by Italians altars called.
“

Again,

[15] etiam interiectione (qua et oratores et historici frequenter utuntur, ut medio sermone aliquem inserant sensum) impediri solet intellectus, nisi quod interponitur breve est. nam Vergilius illo loco, quo pullum equinum describit, cum dixisset,

nec vanos horret strepitus,
compluribus insertis alia figura quinto demum versu redit,
tum, si qua sonum procul arma dedere,
stare loco nescit.

Vitanda in primis ambiguitas,

[15] parenthesis, so often employed by orators and historians, and consisting in the insertion of one sentence in the midst of another, may seriously hinder the understanding of a passage, unless the insertion is short. For example, in the passage where Vergil describes a colt, the words

“Nor fears he empty noises,
“

are followed by a number of remarks of a totally different form, and it is only four lines later that the poet returns to the point and says,

“Then, if the sound of arms be heard afar,
How to stand still he knows not.
“

Above all, ambiguity must be avoided,

[16] non haec solum, de cuius genere supra dictum est, quae incertum intellectum facit, ut Chremetem audivi percussisse Demean, sed illa quoque, quae, etiamsi turbare non potest sensum, in idem tamen verborum vitium incidit, ut si quis dicat, visum a se hominem libram scribentem. nam etiamsi librum ab homine scribi patet, male tamen composuerit feceritque ambiguum,

quantum in ipso fuit.

[16] and by ambiguity I mean not merely the kind of which I have already spoken, where the sense is uncertain, as in the clause *Chremetem audivi percussisse Demean*, but also that form of ambiguity which, although it does not actually result in obscuring the sense, falls into the same verbal error as if a man should say *visum a se hominem librum scribentem* (that he had seen a man writing a book). For although it is clear that the book was being written by the man, the sentence is badly put together, and its author has made it as ambiguous as he could.

[17] est etiam in quibusdam turba inanium verborum, qui, dum communem loquendi more reformidant, ducti specie nitoris circumeunt omnia copiosa loquacitate, eo quod dicere nolunt ipsa; deinde illam seriem cum alia simili iungentes miscentesque, ultra quam ullus spiritus durare possit, extendunt.

[17] Again, some writers introduce a whole host of useless words; for, in their eagerness to avoid ordinary methods of expression, and allured by false ideals of beauty they wrap up everything in a multitude of words simply and solely because they are unwilling to make a direct and simple statement of the facts: and then they link up and involve one of those long-winded clauses with others like it, and extend their periods to a length beyond the compass of mortal breath.

[18] In hoc malum a quibusdam etiam laboratur; neque id novum vitium est, cum iam apud Titum Livium inveniam fuisse praeceptorem aliquem, qui discipulos obscurare quae dicerent iuberet, Graeco verbo utens σκοτίσθω. unde illa scilicet egregia laudatio: tanto melior;

[18] Some even expend an infinity of toil to acquire this vice, which, by the way, is nothing new: for I learn from the pages of Livy that there was one, a teacher, who instructed his pupils to make all they said obscure, using the Greek word σκοτίσθω (“darken it.”) It was this same habit that gave rise to the famous words of praise, “So much the better: even I could not understand you.”

[19] ne ego quidem intellexi. alii brevitatem aemulati necessaria quoque orationi subtrahunt verba et, velut satis sit scire ipsos quid dicere velint, quantum ad alios pertineat, nihil putant. at ego otiosum sermonem dixerim, quem auditor suo ingenio intelligit. quidam, emutatis in perversum dicendi figuris, idem vitium consequuntur.

[19] Others are consumed with a passion for brevity and omit words which are actually necessary to the sense, regarding it as a matter of complete indifference whether their meaning is intelligible to others, so long as they know what they mean themselves. For my own part, I regard as useless words which make such a demand upon the ingenuity of the hearer. Others, again,

succeed in committing the same fault by a perverse misuse of figures.

[20] *pessima vero sunt ἄδιανόντα*, hoc est, quae verbis aperta occultos sensus habent, ut cum dictus est caecus secundum viam stare, et, qui suos artus morsu lacerasset, fingitur in scholis supra se cubasse.

[20] Worst of all are the phrases which the Greeks call ἄδιανόντα, that is to say, expressions which, though their meaning is obvious enough on the surface, have a secret meaning, as for example in the phrase *cum ductus est caecus secundam viam stare*, or where the man, who is supposed in the scholastic theme to have torn his own limbs with his teeth, is said to have *lain upon himself*

[21] *ingeniosa haec et fortia et ex ancipiti diserta creduntur*, pervasitque iam multos ista persuasio, ut id iam demum eleganter atque exquisite dictum putent, quod interpretandum sit. sed auditoribus etiam nonnullis grata sunt haec, quae cum intellexerunt acumine suo delectantur et gaudent, non quasi audierint sed quasi invenerint.

[21] Such expressions are regarded as ingenious, daring and eloquent, simply because of their ambiguity, and quite a number of persons have become infected by the belief that a passage which requires a commentator must for that very reason be a masterpiece of elegance. Nay, there is even a class of hearer who find a special pleasure in such passages; for the fact that they can provide an answer to the riddle fills them with an ecstasy of self-congratulation, as if they had not merely heard the phrase, but invented it.

[22] *nobis prima sit virtus perspicuitas, propria verba, rectus ordo, non in longum dilata conclusio, nihil neque desit neque superfluat: ita sermo et doctis probabilis et planus imperitis erit. haec eloquendi observatio. nam rerum perspicuitas quo modo praestanda sit, diximus in praeceptis narrationis.*

[22] For my own part, I regard clearness as the first essential of a good style: there must be propriety in our words, their order must be straightforward, the conclusion of the period must not be long postponed, there must be nothing lacking and nothing superfluous. Thus our language will be approved by the learned and clear to the uneducated. I am speaking solely of clearness in style, as I have already dealt with clearness in the presentation of facts in the rules I laid down for the *statement of the case*.

[23] *similis autem ratio est in omnibus. nam si neque pauciora quam oportet neque plura neque inordinata aut indistincta dixerimus, erunt dilucida et negliger quoque audientibus aperta; quod et ipsum in consilio est habendum, non semper tam esse acrem iudicis intentionem, ut obscuritatem apud se ipse discutiat et tenebris orationis inferat quoddam intelligentiae suae lumen, sed multis eum frequenter cogitationibus avocari, nisi tam clara fuerint, quae dicemus, ut in animum eius oratio, ut sol in oculos, etiamsi in*

eam non intendatur, incurrat.

[23] But the general method is the same in both. For if what we say is not less nor more than is required, and is clear and systematically arranged, the whole matter will be plain and obvious even to a not too attentive audience. For we must never forget that the attention of the judge is not always so keen that he will dispel obscurities without assistance, and bring the light of his intelligence to bear on the dark places of our speech. On the contrary, he will have many other thoughts to distract him unless what we say is so clear that our words will thrust themselves into his mind even when he is not giving us his attention, just as the sunlight forces itself upon the eyes.

[24] quare non, ut intelligere possit, sed, ne omnino possit non intelligere, curandum. propter quod etiam repetimus saepe, quae non satis percepisse eos qui cognoscunt putamus: quae causa utique nostra culpa dicta obscurius est: ad planiora et communia magis verba descendimus; cum id ipsum optime fiat, quod nos aliquid non optime fecisse simulamus.

[24] Therefore our aim must be not to put him in a position to understand our argument, but to force him to understand it. Consequently we shall frequently repeat anything which we think the judge has failed to take in as he should. We shall say, for example, "I fear that this portion of our case has been somewhat obscurely stated: the fault is mine, and I will therefore re-state it in plainer and simpler language"; for the pretended admission of a fault on our part creates an excellent impression.

3. venio nunc ad ornatum, in quo sine dubio plus quam in ceteris dicendi partibus sibi indulget orator. nam emendate quidem ac lucide dicentium tenue praemium est, magisque ut vitiis carere quam ut aliquam magnam virtutem adeptus esse videaris. inventio cum imperitis saepe communis,

3. I now come to the subject of ornament, in which, more than in any other department, the orator undoubtedly allows himself the greatest indulgence. For a speaker wins but trifling praise if he does no more than speak with correctness and lucidity; in fact his speech seems rather to be free from blemish than to have any positive merit.

[2] dispositio modicae doctrinae credi potest; si quae sunt artes altiores, plerumque occultantur, ut artes sint; denique omnia haec ad utilitatem causarum solam referenda sunt. cultu vero atque ornatu se quoque commendat ipse qui dicit et in ceteris iudicium doctorum, in hoc vero etiam popularem laudem petit, nec fortibus modo, sed etiam fulgentibus armis proeliat.

[2] Even the untrained often possess the gift of invention, and no great learning need be assumed for the satisfactory arrangement of our matter, while if any more recondite art is required, it is generally concealed, since unconcealed it would cease to be an art, while all these qualities are employed solely to serve

the interests of the actual case. On the other hand, by the employment of skilful ornament the orator commends himself at the same time, and whereas his other accomplishments appeal to the considered judgment of the learned, this gift appeals to the enthusiastic approval of the world at large, and the speaker who possesses it fights not merely with effective, but with flashing weapons.

[3] An in causa Cicero Cornelii consecutus esset docendo iudicem tantum et utiliter demum ac Latine perspicueque dicendo, ut populus Romanus admirationem suam non acclamatione tantum, sed etiam plausu confiteretur? sublimitas profecto et magnificentia et nitor et auctoritas expressit illum fragorem.

[3] If in his defence of Cornelius Cicero had confined himself merely to instructing the judge and speaking in clear and idiomatic Latin without a thought beyond the interests of his case, would he ever have compelled the Roman people to proclaim their admiration not merely by acclamation, but by thunders of applause? No, it was the sublimity and splendour, the brilliance and the weight of his eloquence that evoked such clamorous enthusiasm.

[4] nec tam insolita laus esset prosecuta dicentem, si usitata et ceteris similis fuisset oratio. atque ego illos credo, qui aderant, nec sensisse quid facerent nec sponte iudicioque plausisse, sed velut mente captos et quo essent in loco ignaros erupisse in hunc voluptatis adfectum.

[4] Nor, again, would his words have been greeted with such extraordinary approbation if his speech had been like the ordinary speeches of every day. In my opinion the audience did not know what they were doing, their applause sprang neither from their judgment nor their will; they were seized with a kind of frenzy and, unconscious of the place in which they stood, burst forth spontaneously into a perfect ecstasy of delight.

[5] sed ne causae quidem parum confert idem hic orationis ornatus. nam, qui libenter audiunt, et magis attendunt et facilius credunt, plerumque ipsa delectatione capiuntur, nonnunquam admiratione auferuntur. nam et ferrum ipsum adfert oculis terroris aliquid, et fulmina ipsa non tam nos confunderent, si vis eorum tantum, non etiam ipse fulgor timeretur.

[5] But rhetorical ornament contributes not a little to the furtherance of our case as well. For when our audience find it a pleasure to listen, their attention and their readiness to believe what they hear are both alike increased, while they are generally filled with delight, and sometimes even transported by admiration. The flash of the sword in itself strikes something of terror to the eye, and we should be less alarmed by the thunderbolt if we feared its violence alone, and not its flash as well.

[6] recteque Cicero his ipsis ad Brutum 22 verbis quadam in epistola scribit,

nam eloquentiam, quae admirationem non habet, nullam iudico. eandem Aristoteles quoque petendam maxime putat. sed hic ornatus (repetam enim) virilis et fortis et sanctus sit nec effeminatam levitatem et fuco ementitum colorem amet, sanguine et viribus niteat.

[6] Cicero was right when, in one of his letters to Brutus, he wrote, “Eloquence which evokes no admiration is, in my opinion, unworthy of the name.” Aristotle likewise thinks that the excitement of admiration should be one of our first aims.

But such ornament must, as I have already said, be bold, manly and chaste, free from all effeminate smoothness and the false hues derived from artificial dyes, and must glow with health and vigour.

[7] hoc autem adeo verum est ut, cum in hac maxime parte sint vicina virtutibus vitia, etiam, qui vitiis utuntur, virtutum tamen iis nomen imponant. quare nemo ex corruptis dicat me inimicum esse culte dicentibus. non hanc esse virtutem nego, sed illis eam non tribuo.

[7] So true is this, that although, where ornament is concerned, vice and virtue are never far apart, those who employ a vicious style of embellishment disguise their vices with the name of virtue. Therefore let none of our decadents accuse me of being an enemy to those who speak with grace and finish. I do not deny the existence of such a virtue, I merely deny that they possess it.

[8] An ego fundum cultiorem putem, in quo mihi quis ostenderit lilia et violas et anemonas, fontes surgentes, quam ubi plena messis aut graves fructu vites erunt? sterilem platanum tonsasque myrtos quam maritam ulmum et uberes oleas praeoptaverim? habeant illa divites licet, quid essent, si aliud nihil haberent?

[8] Shall I regard a farm as a model of good cultivation because its owner shows me lilies and violets and anemones and fountains of living water in place of rich crops and vines bowed beneath their clusters? Shall I prefer the barren plane and myrtles trimly clipped, to the fruitful olive and the elm that weds the vine? No, let such luxuries delight the rich: but where would their wealth be if they had nought save these?

[9] nullusne ergo etiam frugiferis adhibendus est decor? quis negat? nam et in ordinem certaque intervalla redigam meas arbores. quid illo quincunce speciosius qui, in quamcunque partem spectaveris, rectus est? sed protinus in id quoque prodest, ut terrae sucum aequaliter trahat. surgentia in altum cacumina oleae ferro coercebo;

[9] Again, is beauty an object of no consideration in the planting of fruit trees? Certainly not! For my trees must be planted in due order and at fixed intervals. What fairer sight is there than rows of trees planted in échelon which present

straight lines to the eye from whatever angle they be viewed? But it has an additional advantage, since this form of plantation enables every tree to derive an equal share of moisture from the soil.

[10] in orbem se formosius fundet et protinus fructum ramis pluribus feret. decentior equus, cuius adstricta ilia, sed idem velocior. Pulcher aspectu est athleta, cuius lacertos exercitatio expressit, idem certamini paratior.

[10] When the tops of my olive trees rise too high, I lop them away, with the result that their growth expands laterally in a manner that is at once more pleasing to the eye and enables them to bear more fruit owing to the increase in the number of branches. A horse whose flanks are compact is not only better to look upon, but swifter in speed. The athlete whose muscles have been formed by exercise is a joy to the eye, but he is also better fitted for the contests in which he must engage.

[11] nunquam vera species ab utilitate dividitur.

sed hoc quidem discernere modici iudicii est. illud observatione dignius, quod hic ipse honestus ornatus materiae genere esse debet variatus. atque, ut a prima divisione ordiar, non idem demonstrativis et deliberativis et iudicialibus causis conveniet. namque illud genus ostentationi compositum solam petit audientium voluptatem, ideoque omnes dicendi artes aperit ornatumque orationis exponit, ut quod non insidietur nec ad victoriam sed ad solum finem laudis et gloriae tendat.

[11] In fact true beauty and usefulness always go hand in hand.

It does not, however, require any special ability to discern the truth of this. It is more important to note that such seemly ornament must be varied to suit the nature of the material to which it is applied. To begin with the primary classification of oratory, the same form of ornament will not suit demonstrative, deliberative and forensic speeches. For the oratory of display aims solely at delighting the audience, and therefore develops all the resources of eloquence and deploys all its ornament, since it seeks not to steal its way into the mind nor to wrest the victory from its opponent, but aims solely at honour and glory.

[12] quare, quidquid erit sententiis popolare, verbis nitidum, figuris iucundum, translationibus magnificum, compositione elaboratum, velut institor quidam eloquentiae intuendum et paene pertractandum dabit. nam eventus ad ipsum, non ad causam refertur.

[12] Consequently the orator, like the hawker who displays his wares, will set forth before his audience for their inspection, nay, almost for their handling, all his most attractive reflexions, all the brilliance that language and the charm that figures can supply, together with all the magnificence of metaphor and the elaborate art of composition that is at his disposal. For his success concerns

himself, and not his cause.

[13] at ubi res agitur et vera dimicatio est, ultimus sit famae locus. praeterea ne decet quidem, ubi maxima rerum momenta versantur, de verbis esse sollicitum. Neque hoc eo pertinet, ut in his nullus sit ornatus, sed uti pressior et severior et minus confessus, praecipue materiae accommodatus.

[13] But when it is a question of facts, and he is confronted by the hard realities of battle, his last thought will be for his personal glory. Nay, it is even unseemly to trouble overmuch about words when the greatest interests are at stake. I would not assert that such themes afford no scope for ornament, but such ornament as is employed must be of a more severe, restrained and less obvious character; above all, it must be adapted to the matter in hand.

[14] nam et in suadendo sublimius aliquid senatus, concitatus populus, et in iudiciis publicae capitalesque causae poscunt accuratius dicendi genus. at privatum consilium causasque paucorum, ut frequenter accidit, calculorum purus sermo et dissimilis curae magis decuerit. An non pudeat certam creditam periodis postulare aut circa stillicidia adfici aut in mancipii redhibitione sudare?

[14] For whereas in deliberative oratory the senate demand a certain loftiness and the people a certain impetuosity of eloquence, the public cases of the courts and those involving capital punishment demand a more exact style. On the other hand, in private deliberations and lawsuits about trifling sums of money (and there are not a few of these) it is more appropriate to employ simple and apparently unstudied language. For we should be ashamed to demand the repayment of a loan in rolling periods, or to display poignant emotion in a case concerned with water-droppings, or to work ourselves into a perspiration over the return of a slave to the vendor. But I am wandering from the point.

[15] sed ad propositum. Et quoniam orationis tam ornatus quam perspicuitas aut in singulis verbis est aut in pluribus positus, quid separata, quid iuncta exigant, consideremus. quanquam enim rectissime traditum est, perspicuitatem propriis, ornatum translatis verbis magis egere, sciamus nihil ornatum esse quod sit improprium.

[15] Since rhetorical ornament, like clearness, may reside either in individual words or groups of words, we must consider the requirements of both cases. For although the canon, that clearness mainly requires propriety of language and ornament the skilful use of metaphor, is perfectly sound, it is desirable that we should realise that without propriety ornament is impossible.

[16] sed cum idem frequentissime plura significant (quod συνωνυμία vocatur), iam sunt aliis alia honestiora, sublimiora, nitidiora, iucundiora, vocaliora. nam ut syllabae e litteris melius sonantibus clariores sunt, ita verba e syllabis

magis vocalia et, quo plus quodque spiritus habet, auditu pulchrius. Et quod facit syllabarum, idem verborum quoque inter se copulatio, ut aliud alii iunctum melius sonet. diversus tamen usus.

[16] But as several words may often have the same meaning (they are called synonyms), some will be more distinguished, sublime, brilliant, attractive or euphonious than others. For as those syllables are the most pleasing to the ear which are composed of the more euphonious letters, thus words composed of such syllables will sound better than others, and the more vowel sounds they contain the more attractive they will be to hear. The same principle governs the linking of word with word; some arrangements will sound better than others.

[17] nam rebus atrocibus verba etiam ipso auditu aspera magis convenient. At universum quidem optima simplicium creduntur, quae aut maxime exclamant aut sono sunt iucundissima. Et honesta quidem turpibus potiora semper nec sordidis unquam in oratione erudita locus.

[17] But words require to be used in different ways. For example, horrible things are best described by words that are actually harsh to the ear. But as a general rule it may be laid down that the best words, considered individually, are those which are fullest or most agreeable in sound. Again, elegant words are always to be preferred to those which are coarse, and there is no room for low words in the speech of a cultivated man.

[18] clara illa atque sublimia plerumque materiae modo discernenda sunt. quod alibi magnificum, tumidum alibi, et quae humilia circa res magnas, apta circa minores videntur. Vt autem in oratione nitida notabile humiliter verbum et velut macula, ita a sermone tenui sublime nitidumque discordat fitque corruptum, quia in plano tumet.

[18] The choice of striking or sublime words will be determined by the matter in hand; for a word that in one context is magnificent may be turgid in another, and words which are all too mean to describe great things may be suitable enough when applied to subjects of less importance. And just as a mean word embedded in a brilliant passage attracts special attention, like a spot on a bright surface, so if our style be of a plain character, sublime and brilliant words will seem incongruous and tasteless excrescences on a flat surface.

[19] quaedam non tam ratione quam sensu iudicantur, ut illud,

caesa iungebant foedera porca,

fecit elegans fictio nominis, quod si fuisset porco, vile erat. At quibusdam ratio manifesta est. risimus, et merito nuper poetam, qui dixerat

praetextam in cista mures rosere camilli.

At Vergilii miramur illud,

[19] In some cases instinct, and not reason, must supply the touchstone, as, for example, in the line:

“A sow was slain to ratify their pacts.

“

Here the poet, by inventing the word *porca*, succeeded in producing an elegant impression, whereas if he had used the masculine *porcu*, the very reverse would have been the case. In some cases, however, the incongruity is obvious enough. It was only the other day that we laughed with good reason at the poet who wrote:

“The youngling mice had gnawed
Within its chest the purple-bordered gown.

“

[20]

saepe exiguus mus.

Nam epitheton proprium effecit, ne plus exspectaremus, et casus singularis magis decuit, et clausula ipsa unius syllabae non usitata addidit gratiam. imitatus est itaque utrumque Horatius,

nascetur ridiculus mus.

[20] On the other hand, we admire Virgil when he says:

“Oft hath the tiny mouse,” etc.

For here the epithet is appropriate and prevents our expecting too much, while the use of the singular instead of the plural, and the unusual monosyllabic conclusion of the line, both add to the pleasing effect. Horace accordingly imitated Virgil in both these points, when he wrote,

“The fruit shall be a paltry mouse.

“

[21] nec augenda semper oratio sed summittenda nonnunquam est. vim rebus aliquando verborum ipsa humilitas adfert. An, cum dicet in Pisonem Cicero, cum tibi tota cognatio serraco advehatur, incidisse videtur in sordidum nomen, non eo contemptum hominis, quem destructum volebat, auxisse? Et alibi, caput opponis, cum eo coruscans. Vnde interim gratus fit iocis decor, qualis est ille apud M. Tullium pusio, qui cum maiore sorore cubitabat, et, Flavius, qui cornicum oculos confixit, et pro Milone illud Heus tu Rufio, et Erucius Antonianaster. id tamen in declamatoribus est notabilius laudarique me puero solebat, da patri panem; et in eodem, etiam canem pascis.

[21] Again, our style need not always dwell on the heights: at times it is

desirable that it should sink. For there are occasions when the very meanness of the words employed adds force to what we say. When Cicero, in his denunciation of Piso, says, “When your whole family rolls up in a dray,” do you think that his use of the word *dray* was accidental, and was not designedly used to increase his audience’s contempt for the man he wished to bring to ruin? The same is true when he says elsewhere, “You put down your head and butt him.”

[22] Vnde interim gratus fit iocis decor, qualis est ille apud M. Tullium pusio, qui cum maiore sorore cubitabat, et, Flavius, qui cornicum oculos confixit, et pro Milone illud Heus tu Rufio, et Erucius Antoniaſter. id tamen in declamatoribus est notabilius laudariſque me puero ſolebat, da patri panem; et in eodem, etiam canem pascis.

[22] This device may also ſerve to carry off a jeſt, as in the paſſage of Cicero where he talks of the “little ſprat of a boy who ſlept with his elder ſiſter,” or where he ſpeaks of “Flavius, who put out the eyes of crows,” or, again, in the *pro Milone*, cries, “Hi, there! Rufio!” and talks of “Erucius Antoniaſter.” On the other hand, this practice becomes more obtruiſive when employed in the ſchools, like the phraſe that was ſo much praiſed in my boyhood, “Give your father bread,” or in the ſame declamation, “You feed even your dog.” But ſuch tricks do not always come off,

[23] res quidem praecipue in ſcholis anceps et frequenter cauſa riſus, nunc utique, cum haec exercitatio procul a veritate ſeiuncta laboreſt incredibili verborum faſtidio ac ſibi magnam partem ſermonis abſciderit.

[23] eſpecially in the ſchools, and often turn the laugh againſt the ſpeaker, particularly in the preſent day, when declamation has become ſo far removed from reality and labours under ſuch an extravagant faſtidiousneſs in the choice of words that it has excluded a good half of the language from its vocabulary.

[24] cum ſint autem verba propria, ficta, translata, propriis dignitatem dat antiquitas. namque et ſanctiorem et magis admirabilem faciunt orationem, quibus non quilibet fuerit uſurus, eoſque ornamento acerrimi iudicii P. Vergilius unice eſt uſus.

[24] Words are *proper, newly-coined or metaphorical*. In the caſe of *proper* words there is a ſpecial dignity conferred by antiquity, ſince old words, which not everyone would think of uſing, give our ſtyle a venerable and maſteſtic air: this is a form of ornament of which Virgil, with his perfect taſte, has made unique uſe.

[25] olli enim et quianam et moerus et pone et pellacia aſpergunt illam, quae etiam in picturis eſt gratiſſima, vetuſtatis inimitabilem arti auctoritatem. ſed utendum modo, nec ex ultimis teneris repetenda. ſatis eſt vetus quaero; quid

necesse est quaiso dicere? oppido quidem usi sunt paulum tempore nostro superiores, vereor, ut iam nos ferat quisquam; certe antegerio, cuius eadem significatio est, nemo nisi ambitiosus utetur.

[25] For his employment of words such as *olli*, *quianam*, *moerus*, *pone* and *pellacia* gives his work that impressive air of antiquity which is so attractive in pictures, but which no art of man can counterfeit. But we must not overdo it, and such words must not be dragged out from the deepest darkness of the past. *Quaesio* is old enough: what need for us to say *quaiso*? *Oppido* was still used by my older contemporaries, but I fear that no one would tolerate it now. At any rate, *antegerio*, which means the same, would certainly never be used by anyone who was not possessed with a passion for notoriety.

[26] *aerumnosum* quid opus est? tanquam parum sit, si dicatur quid horridum. *reor* tolerabile, *autumo* tragicum, *prolem* dicere inusitatum est, *prosapiam* insulsum. quid multa? totus prope mutatus est sermo.

[26] What need have we of *acrumnosum*? It is surely enough to call a thing *horridum*. *Reor* may be tolerated, *autumo* smacks of tragedy, *proles* has become a rarity, while *prosapia* stamps the man who uses it as lacking taste. Need I say more Almost the whole language has changed.

[27] quaedam tamen adhuc vetera vetustate ipsa gratius nitent, quaedam et necessario interim sumuntur, ut nuncupare et fari; multa alia etiam audentius inseri possunt sed ita demum, si non appareat adfectatio, in quam mirifice Vergilius:

corinthiorum amator iste verborum,

[27] But there are still some old words that are endeared to us by their antique sheen, while there are others that we cannot avoid using occasionally, such, for example, as *nuncupare* and *fari*: there are yet others which it requires some daring to use, but which may still be employed so long as we avoid all appearance of that affectation which Virgil has derided so cleverly:

“Britain’s Thucydides,

[28] Thucydides Britannus, Atticae febris,

tau Gallicum, al, min, et sil ut male elisit;

ita omnia ista verba miscuit fratri.

Cimber hic fuit,

[28] whose mad Attic brain

Loved word-amalgams like Corinthian bronze,

First made a horrid blend of words from Gaul,

Tau, al, min, sil and God knows how much else,

Then mixed them in a potion for his brother!

“

This was a certain Cimber who killed his brother,

[29] a quo fratrem necatum hoc Ciceronis dicto notatum est, germanum Cimber occidit. nec minus noto Sallustius epigrammate incessitur:

Et verba antiqui multum furate Catonis,

crispe, Iugurthinae conditor historiae.

Odiosa cura;

[29] a fact which Cicero recorded in the words, “Cimber has killed his brother German.”

The epigram against Sallust is scarcely less well known:

“Crispus, you, too, Jugurtha’s fall who told,
And filched such store of words from Cato old.

“

[30] nam et cuilibet facilis et hoc pessima, quod eius studiosus non verba rebus aptabit, sed res extrinsecus arcesset, quibus haec verba convenient.

ingere, ut primo libro dixi, Graecis magis concessum est, qui sonis etiam quibusdam et adfectibus non dubitaverunt nomina aptare, non alia libertate quam qua illi primi homines rebus appellationes dederunt.

[30] It is a tiresome kind of affectation; any one can practise it, and it is made all the worse by the fact that the man who catches the infection will not choose his words to suit his facts, but will drag in irrelevant facts to provide an opportunity for the use of such words.

The coining of new words is, as I stated in the first book, more permissible in Greek, for the Greeks did not hesitate to coin nouns to represent certain sounds and emotions, and in truth they were taking no greater liberty than was taken by the first men when they gave names to things.

[31] nostri autem in iungendo aut in derivando paulum aliquid ausi vix in hoc satis recipiuntur. nam memini iuvenis admodum inter Pomponium ac Senecam etiam praefationibus esse tractatum, an gradus eliminat in tragoedia dici oportuisset. at veteres ne expectorat quidem timuerunt; et sane eiusdem notae est exanimat.

[31] Our own writers have ventured on a few attempts at composition and derivation, but have not met with much success. I remember in my young days there was a dispute between Pomponius and Seneca which even found its way into the prefaces of their works, as to whether *gradus eliminate* was a

phrase which ought to have been allowed in tragedy. But the ancients had no hesitation about using even *expectorate* and, after all, it presents exactly the same formation as *exanimat*.

[32] At tractu et declinatione talia sunt, qualia apud Ciceronem beatitas et beatitudo; quae dura quidem sentit esse, verumtamen usu putat posse molliri. nec a verbis modo, sed a nominibus quoque derivata sunt quaedam, ut a Cicerone sullaturit ab Asinio fimbriatum et figulatum.

[32] Of the coining of words by expansion and inflexion we have examples, such as the Ciceronian *beatitas* and *beatitudo*, forms which he feels to be somewhat harsh, though he thinks they may be softened by use. Derivatives may even be fashioned from proper names, quite apart from ordinary words, witness *Sullaturit* in Cicero and *Fimbriatus* and *Figulatus* in Asinius.

[33] multa ex Graeco format nova ac plurima a Verginio Flavo, quorum dura quaedam admodum videntur, ut *queens* et *essentia*; quae cur tantopere aspernemur nihil video, nisi quod iniqui iudices adversus nos sumus ideoque paupertate sermonis laboramus. quaedam tamen perdurant.

[33] Many new words have been coined in imitation of the Greeks, more especially by Verginius Flavius, some of which, such as *queens* and *essentia*, are regarded as unduly harsh. But I see no reason why we should treat them with such contempt, except, perhaps, that we are highly self-critical and suffer in consequence from the poverty of our language. Some new formations do, however, succeed in establishing themselves.

[34] nam et quae vetera nunc sunt, fuerunt olim nova, et quaedam sunt in usu perquam recentia, ut Messala primus reatum, munerarium Augustus primus dixerunt. piraticam quoque ut musicam et fabricam dici adhuc vetabant mei praeceptores. favorem et urbanum Cicero nova credit. nam et in epistola ad Brutum eum, inquit, amorem et eum, ut hoc verbo utar, fauorem in consilium advocabo.

[34] For words which now are old, once were new, and there are some words in use which are of quite recent origin, such as *reatus*, invented by Messala, and *munerarius*, invented by Augustus. So, too, my own teachers still persisted in banning the use of words, such as *piratica*, *musica* and *fabrica*, while Cicero regards *favor* and *urbanus* as but newly introduced into the language. For in a letter to Brutus he says, *eum amorem et eum, ut hoc verbo utar, favored in consilium advocabo*,

[35] Et ad Appium Pulchrum, te, hominem non solum sapientem verum etiam, ut nunc loquimur, urbanum. idem putat a Terentio primum dictum esse obsequium, Caecilius a Sisenna albente caelo. cervicem videtur Hortensius primus dixisse, nam veteres pluraliter appellabant. audendum itaque; neque enim accedo Celso, qui ab oratore verba fingi vetat. nam,

[35] while to Appius Pulcher he writes, *le hominem non solum sapientem, verum etiam, ut nunc loquimur, urbanum*. He also thinks that Terence was the first to use the word *obsequium*, while Caecilius asserts that Sisenna was the first to use the phrase *albente caelo*. Hortensius seems to have been the first to use *cervix* in the singular, since the ancients confined themselves to the plural. We must not then be cowards, for I cannot agree with Celsus when he forbids orators to coin new words.

[36] cum sint eorum alia (ut dicit Cicero) nativa, id est, quae significata sunt primo sensu, alia reperta, quae ex his facta sunt, ut iam nobis ponere alia, quam quae illi rudes homines primique fecerunt, fas non sit, at derivare, flectere, coniungere, quod natis postea concessum est,

[36] For some words, as Cicero says, are native, that is to say, are used in their original meaning, while others are derivative, that is to say, formed from the native. Granted then that we are not justified in coining entirely new words having no resemblance to the words invented by primitive man, I must still ask at what date we were first forbidden to form derivatives and to modify and compound words, processes which were undoubtedly permitted to later generations of mankind. If, however,

[37] quando desiit licere? sed, si quid periculosius finxisse videbimur, quibusdam remediis praemuniendum O. est: Vt ita dicam, Si licet dicere, Quodam modo, Permittite mihi sic uti. quod idem etiam in iis, quae licentius translata erunt, proderit, nihilque non tuto dici potest, in quo non falli iudicium nostrum sollicitudine ipsa manifestum erit. qua de re Graecum illud elegantissimum est, quo praecipitur προεπιπλήσσειν τῇ ὑπερβολῇ.

[37] one of our inventions seems a little risky, we must take certain measures in advance to save it from censure, prefacing it by phrases such as “so to speak,” “if I may say so,” “in a certain sense,” or “if you will allow me to make use of such a word.” The same practice may be followed in the case of bold metaphors, and it is not too much to say that almost anything can be said with safety provided we show by the very fact of our anxiety that the word or phrase in question is not due to an error of judgment. The Greeks have a neat saying on this subject, advising us to be the first to blame our own hyperbole.

[38] translata probari nisi in contextu sermonis non possunt. itaque de singulis verbis satis dictum, quae, ut alio loco ostendi, per se nullam virtutem habent. sed ne inornata sunt quidem, nisi cum sunt infra rei, de qua loquendum est, dignitatem, excepto si obscena nudis nominibus enuntientur.

[38] The metaphorical use of words cannot be recommended except in connected discourse. Enough has now been said on the subject of single words, which, as I have pointed out elsewhere, have no intrinsic value of their own. On the other hand, there is no word which is intrinsically ugly unless it be beneath the dignity of the subject on which we have to speak, excepting

always such words as are nakedly obscene.

[39] quod viderint, qui non putant esse vitanda, quia nec sit vox ulla natura turpis et, si qua est rei deformitas, alia quoque appellatione quacunque ad intellectum eundem nihilominus perveniat. ego Romani pudoris more contentus, ut iam respondi talibus, verecundiam silentio vindicabo.

[39] I would commend this remark to those who do not think it necessary to avoid obscenity on the ground that no word is indecent in itself and that, if a thing *is* revolting, its unpleasantness will be realised clearly enough by whatever name it is called. Accordingly, I shall content myself with following the good old rules of Roman modesty and, as I have already replied to such persons, shall vindicate the cause of decency by saying no more on this unpleasant subject.

[40] iam hinc igitur ad rationem sermonis coniuncti transeamus. cuius ornatus in haec duo prima dividitur, quam concipiamus elocutionem, quo modo efferamus. nam primum est, ut liqueat, augere quid velimus an minuere, concitate dicere an moderate, laete an severe, abundanter an presse, aspere an leniter, magnifice an subtiliter, graviter an urbane. tum,

[40] Let us now pass to consider connected discourse. Its adornment may be effected, primarily, in two ways; that is to say, we must consider first our ideal of style, and secondly how we shall express this ideal in actual words. The first essential is to realise clearly what we wish to enhance or attenuate, to express with vigour or calm, in luxuriant or austere language, at length or with conciseness, with gentleness or asperity, magnificence or subtlety, gravity or wit.

[41] quo translationum genere, quibus figuris, qualibus sententiis, quo modo, qua postremo collocatione id, quod intendimus, efficere possimus. ceterum dicturus, quibus ornetur oratio, prius ea, quae sunt huic contraria laudi, attingam; nam prima virtus est vitio carere.

[41] The next essential is to decide by what kind of metaphor, figures, reflexions, methods and arrangement we may best produce the effect which we desire.

But, before I discuss ornament, I must first touch upon its opposite, since the first of all virtues is the avoidance of faults.

[42] igitur ante omnia ne speremus ornatam orationem fore, quae probabilis non erit. Probabile autem Cicero id genus dicit, quod non nimis est comptum. Non quia comi expolirique non debeat (nam et haec ornatus pars est) sed quia vitium est ubique quod nimium est.

[42] Therefore we must not expect any speech to be ornate that is not, in the first place, acceptable. An acceptable style is defined by Cicero as one which

is not over-elegant: not that our style does not require elegance and polish, which are essential parts of ornament, but that excess is always a vice.

[43] itaque vult esse auctoritatem in verbis, sententias vel graves vel aptas opinionibus hominum ac moribus. his enim salvis, licet assumere ea quibus illustrem fieri orationem putat, delecta, translata, superlata, ad nomen adiuncta, duplicata et idem significantia atque ab ipsa actione atque ab imitatione rerum non abhorrentia.

[43] He desires, therefore, that our words should have a certain weight about them, and that our thoughts should be of a serious cast or, at any rate, adapted to the opinions and character of mankind. These points once secured, we may proceed to employ those expressions which he regards as conferring distinction on style, that is to say, specially selected words and phrases, metaphor, hyperbole, appropriate epithets, repetitions, synonyms and all such language as may suit our case and provide an adequate representation of the facts.

[44] sed quoniam vitia prius demonstrare aggressi sumus, ab hoc initium sit, quod κακέμφορον vocatur, sive mala consuetudine in obscenum intellectum sermo detortus est (ut ductare exercitus et patrare bella, apud Sallustium dicta sancte et antique ridentibus, si dis placet; quam culpam non scribentium quidem iudico sed legentium,

[44] But since my first task is to point out the faults to be avoided, I will begin by calling attention to the fault known as κακέμφορον, a term applied to the employment of language to which perverted usage has given an obscene meaning: take, for example, phrases such as *ductare exercitus and patrare bellum*, which were employed by Sallust in their old and irreproachable sense, but, I regret to say, cause amusement in certain quarters to-day. This, however, is not, in my opinion, the fault of the writer, but of his readers;

[45] tamen vitandam, quatenus verba honesta moribus perdidimus, et vincentibus iam vitiis cedendum est) sive iunctura deformiter sonat, ut, si cum hominibus notis loqui nos dicimus, nisi hoc ipsum hominibus medium sit, in praefanda videmur incidere, quia ultima prioris syllabae littera, quae exprimi nisi labris coeuntibus non potest, aut intersistere nos indecentissime cogit aut continuata cum insequente in naturam eius corrumpitur.

[45] still it is one to be avoided, for we have perverted the purity of language by our own corruption, and there is no course left to us but to give ground before the victorious advance of vice. The same term is also applied in the cases where an unfortunate collocation of words produces an obscene suggestion. For example, in the phrase *cum hominibus notis loqui*, unless *hominibus* is placed between *cum* and *notis*, we shall commit ourselves to a phrase which will require some apology, since the final letter of the first syllable, which cannot be pronounced without closing the lips, will force us either to pause in

a most unbecoming manner, or by assimilation to the *n* which follows will produce a most objectionable suggestion.

[46] aliaque coniunctiones aliquid simile faciunt, quas persequi libenter est in eo vitio, quod vitandum dicimus, commorantis. sed divisio quoque adfert eandem iniuriam pudori, ut si intercapedinis nominativo casu quis utatur.

[46] I might quote other collocations of words which are liable to the same objection, but to discuss them in detail would be to fall into that very fault which I have just said should be avoided. A similar offence against modesty may be caused by the division of words, as, for example, by the use of the nominative of *intercapedinis*.

[47] nec scripto modo id accidit, sed etiam sensu plerique obscene intelligere, nisi caveris, cupiunt (ut apud Ovidium quaeque latent meliora putat) et ex verbis, quae longissime ab obscenitate absunt, occasionem turpitudinis rapere. siquidem Celsus κακέμφοτον apud Vergilium putat:

incipiunt agitata tumescere.

Quod si recipias, nihil loqui tutum est.

[47] And it is not merely in writing that this may occur, but you will find, unless you exercise the greatest care, that there are a number of persons who take pleasure in putting an indecent interpretation on words, thinking, as Ovid says:

“that whatsoe’er is hid is best of all.
“

Nay, an obscene meaning may be extracted even from words which are as far removed from indecency as possible. Celsus, for example, detects an instance of κακέμφοτον in the Virgilian phrase:

incipiunt agitata tumescere;

but if this point of view be accepted, it will be risky to say anything at all.

[48] deformitati proximum est humilitatis vitium, ταπεινώσιν vocant, qua rei magnitudo vel dignitas minuitur: ut saxea est verruca in summo montis vertice. cui natura contrarium, sed errore par est, parvis dare excedentia modum nomina, nisi cum ex industria risus inde captatur. itaque nec parricidam nequam dixeris hominem nec deditum forte meretrici nefarium; quia alterum parum, alterum nimium est. proinde quaedam hebes,

[48] Next to indecency of expression comes meanness, styled ταπεινώσις, when the grandeur or dignity of anything is diminished by the words used, as in the line:

“There is a rocky wart upon the mountain’s brow.”

The opposite fault, which is no less serious, consists in calling small things by extravagant names, though such a practice is permissible when deliberately designed to raise a laugh. Consequently we must not call a parricide a scamp, nor a man who keeps a harlot a villain, since the first epithet is too weak and the second too strong.

[49] sordida, ieiuna, tristis, ingrata, vilis oratio est; quae vitia facillime fient manifesta contrariis virtutibus. nam primum acuto, secundum nitido, tertium copioso, deinceps hilari, iucundo, accurato diversum est.

[49] This fault will result in making our language dull, or coarse, jejune, heavy, unpleasing or slovenly, all of which faults are best realised by reference to the virtues which are their opposites, that is, point, polish, richness, liveliness, charm, and finish.

[50] vitari debet et μείωσις, cum sermoni deest aliquid, quo minus plenus sit; quanquam id obscurae potius quam inornatae orationis est vitium. sed hoc quoque, cum a prudentibus fit, schema dici solet, sicut ταυτολογία id est eiusdem verbi aut sermonis iteratio. haec enim,

[50] We must also avoid μείωσις a term applied to meagreness and inadequacy of expression, although it is a fault which characterises an obscure style rather than one which lacks ornament. But *meiosis* may be deliberately employed, and is then called a figure, as also is *tautology*, which means the repetition of a word or phrase.

[51] quanquam non magnopere a summis auctoribus vitata, interim vitium videri potest, in quod saepe incidit etiam Cicero securus tam parvae observationis, sicut hoc loco, non solum igitur illud iudicium iudicii simile, iudices, non fuit. interim mutato nomine ἐπανάληψις dicitur, atque est et ipsum inter schemata; quorum exempla illo loco quaerenda, quo virtutes erunt.

[51] The latter, though not avoided with special care even by the best authors, may sometimes be regarded as a fault: it is, in fact, a blemish into which Cicero not infrequently falls through indifference to such minor details: take, for example, the following passage, “Judges, this judgment was not merely unlike a judgment.” It is sometimes given another name, ἐπανάληψις, under which appellation it is ranked among figures, of which I shall give examples when I come to the discussion of stylistic virtues.

[52] peior hac ὁμοειδεια, quae nulla varietatis gratia levat taedium atque est tota coloris unius, qua maxime deprehenditur carens arte oratio; eaque et in sentiis et in figuris et in compositione longe non animis solum sed etiam auribus est ingrattissima. vitanda etiam μακρολογία,

[52] A worse fault is ὁμοειδεια, or sameness, a term applied to a style which has no variety to relieve its tedium, and which presents a uniform monotony

of hue. This is one of the surest signs of lack of art, and produces a uniquely unpleasing effect, not merely on the mind, but on the ear, on account of its sameness of thought, the uniformity of its figures, and the monotony of its structure.

[53] id est longior quam oportet sermo: ut apud T. Livium, legati non impetrata pace retro domum, unde venerant, abierunt. sed huic vicina periphrasis virtus habetur. est et πλεονασμὸς vitium, cum supervacuis verbis oratio oneratur: ego oculis meis vidi; sat est enim vidi.

[53] We must also avoid *macrology*, that is, the employment of more words than are necessary, as, for instance, in the sentence of Livy, “The ambassadors, having failed to obtain peace, went back home, whence they had come.” On the other hand, *periphrasis*, which is akin to this blemish, is regarded as a virtue. Another fault is *pleonasm*, when we overload our style with a superfluity of words, as in the phrase, “I saw it with my eyes,” where “I saw it” would have been sufficient.

[54] emendavit hoc etiam urbane in Hirtio Cicero, cui sapasim cum declamans filium a matre decem mensibus in utero latum esse dixisset, quid? aliae, inquit, in perula solent ferre? nonnunquam tamen illud genus, cuius exemplum priore loco posui, adfirmationis gratia adhibetur:

vocemque his auribus hausi.

[54] Cicero passed a witty comment on a fault of this kind in a declamation of Hirtius when he said that a child had been carried for ten months in his mother’s womb. “Oh,” he said, “I suppose other women carry them in their bags.” Sometimes, however, the form of pleonasm, of which I have just given an example, may have a pleasing effect when employed for the sake of emphasis, as in the Virgilian phrase:

“With mine own ears his voice I heard.

“

But whenever the addition is not deliberate,

[55] at vitium erit, quotiens otiosum fuerit et supererit, non cum adiicietur. est etiam, quae περιεργία vocatur, supervacua, ut sic dixerim, operositas, ut a diligenti curiosus et a religion superstition distat. atque, ut semel finiam, verbum omne, quod neque intellectum adiuvat neque ornatum, vitiosum dici potest.

[55] but merely tame and redundant, it must be regarded as a fault. There is also a fault entitled περιεργία, which I may perhaps translate by superfluous elaboration, which differs from its corresponding virtue much as fussiness differs from industry, and superstition from religion. Finally, every word which neither helps the sense nor the style may be regarded as faulty.

[56] κακόζηλον id est mala adfectatio, per omne dicendi genus peccat. nam et tumida et pusilla et praedulcia et abundantia et arcessita et exultantia sub idem nomen cadunt. denique κακόζηλον vocatur, quidquid est ultra virtutem, quotiens ingenium iudicio caret et specie boni fallitur, omnium in eloquentia vitiorum pessimum. nam cetera parum vitantur, hoc petitur.

[56] *Cacozelia*, or perverse affectation, is a fault in every kind of style: for it includes all that is turgid, trivial, luscious, redundant, far-fetched or extravagant, while the same name is also applied to virtues carried to excess, when the mind loses its critical sense and is misled by the false appearance of beauty, the worst of all offences against style, since other faults are due to carelessness, but this is deliberate.

[57] est autem totum in elocutione. nam rerum vitia sunt stultum, commune, contrarium, supervacuum; corrupta oratio in verbis maxime impropriis, redundantibus, comprehensione obscura compositione fracta, vocum similium aut ambiguarum puerili captatione consistit.

[57] This form of affectation, however, affects style alone. For the employment of arguments which might equally well be advanced by the other side, or are foolish, inconsistent or superfluous, are all faults of matter, whereas corruption of style is revealed in the employment of improper or redundant words, in obscurity of meaning, effeminacy of rhythm, or in the childish search for similar or ambiguous expressions.

[58] est autem omne κακόζηλον utique falsum, etiamsi non omne falsum κακόζηλον est enim quod dicitur aliter, quam se natura habet et quam oportet et quam sat est. totidem autem generibus corrumpitur oratio quot ornatur. sed de hac parte et in alio nobis opere plenius dictum est et in hoc saepe tractatur et adhuc spargetur omnibus locis. loquentes enim de ornatu subinde, quae sint vitanda similia virtutibus vitia, dicemus.

[58] Further, it always involves insincerity, even though all insincerity does not imply affectation. For it consists in saying something in an unnatural or unbecoming or superfluous manner. Style may, however, be corrupted in precisely the same number of ways that it may be adorned. But I have discussed this subject at greater length in another work, and have frequently called attention to it in this, while I shall have occasion to mention it continually in the remaining books. For in dealing with ornament, I shall occasionally speak of faults which have to be avoided, but which are hard to distinguish from virtues.

[59] sunt inornata et haec: quod male dispositum est, id ἀνοικονόμητον, quod male figuratum, id ἀσχημάτιστον quod male collocatum, id κακοσύνθετον vocant. sed de dispositione diximus; de figuris et compositione dicemus. Σαρδισμός quoque appellatur quaedam mixta ex varia ratione linguarum oratio, ut si Atticis Dorica, Ionica, Aeolica etiam dicta confundas. Cui simile

vitium est apud nos,

[59] To these blemishes may be added faulty arrangement or ἄνοικονόμητον, the faulty use of figures or ἄσχημάτιστον, and the faulty collocation of words or κακοσύνθετον. But, as I have already discussed arrangement, I will confine myself to the consideration of figures and structure. There is also a fault known as Σαρδισμὸς, which consists in the indiscriminate use of several different dialects, as, for instance, would result from mixing Doric, Ionic, and even Aeolic words with Attic.

[60] si quis sublimia humilibus, vetera novis, poetica vulgaribus misceat. id enim tale monstrum, quale Horatius in prima parte libri de arte poetica fingit:

humano capiti cervicem pictor equinam

iungere si velit,

et cetera ex diversis naturis subiiciat.

[60] A similar fault is found amongst ourselves, consisting in the indiscriminate mixture of grand words with mean, old with new, and poetic with colloquial, the result being a monstrous medley like that described by Horace in the opening portion of his *Ars poetica*,

“If a painter choose

To place a man’s head on a horse’s neck,

“

and, he proceeds to say, should add other limbs from different animals.

[61] ornatum est, quod perspicuo ac probabili plus est. eius primi sunt gradus in eo quod velis concipiendo et exprimendo, tertius, qui haec nitidiora faciat, quod proprie dixeris cultum. itaque ἐνάργειαν cuius in praeceptis narrationis feci mentionem, quia plus est evidentia vel, ut alii dicunt, repraesentatio quam perspicuitas, et illud patet, hoc se quodam modo ostendit, inter ornamenta ponamus.

[61] The ornate is something that goes beyond what is merely lucid and acceptable. It consists firstly in forming a clear conception of what we wish to say, secondly in giving this adequate expression, and thirdly in lending it additional brilliance, a process which may correctly be termed embellishment. Consequently we must place among ornaments that ἐνάργεια which I mentioned in the rules which I laid down for the statement of facts, because vivid illustration, or, as some prefer to call it, representation, is something more than mere clearness, since the latter merely lets itself be seen, whereas the former thrusts itself upon our notice.

[62] magna virtus est res de quibus loquimur dare atque, ut cerni videantur, enuntiare. non enim satis efficit neque, ut debet, plene dominatur oratio, si

usque ad aures valet atque ea sibi iudex, de quibus cognoscit, narrari credit, non exprimi et oculis mentis ostendi.

[62] It is a great gift to be able to set forth the facts on which we are speaking clearly and vividly. For oratory fails of its full effect, and does not assert itself as it should, if its appeal is merely to the hearing, and if the judge merely feels that the facts on which he has to give his decision are being narrated to him, and not displayed in their living truth to the eyes of the mind.

[63] sed quoniam pluribus modis accipi solet non equidem in omnes eam particulas secabo, quarum ambitiose a quibusdam numerus augetur, sed maxime necessarias attingam. est igitur unum genus, quo tota rerum imago quodammodo verbis depingitur:

constitit in digitos extemplo arrectus uterque

et cetera, quae nobis illam pugilum congregantium faciem ita ostendunt, ut non clarior futura fuerit spectantibus.

[63] But since different views have been held with regard to this art of representation, I shall not attempt to divide it into all its different departments, whose number is ostentatiously multiplied by certain writers, but shall content myself with touching on those which appear to me to be absolutely necessary. There is, then, to begin with, one form of vividness which consists in giving an actual word-picture of a scene, as in the passage beginning,

“Forthwith each hero tiptoe stood erect.
“

Other details follow which give us such a picture of the two boxers confronting each other for the fight, that it could not have been clearer had we been actual spectators.

[64] plurimum in hoc genere sicut in ceteris eminet Cicero. An quisquam tam procul a concipiendis imaginibus rerum abest, ut non, cum illa in Verrem legit, stetit soleatus praetor populi Romani cum pallio purpureo tunicaque talari muliercula nixus in litore, non solum ipsos intueri videatur et locum et habitum, sed quaedam etiam ex iis, quae dicta non sunt, sibi ipse adstruat?

[64] Cicero is supreme in this department, as in others. Is there anybody so incapable of forming a mental picture of a scene that, when he reads the following passage from the Verrines, he does not seem not merely to see the actors in the scene, the place itself and their very dress, but even to imagine to himself other details that the orator does not describe? “There on the shore stood the praetor, the representative of the Roman people, with slippers on, robed in a purple cloak, a tunic streaming to his heels, and leaning on the arm of this worthless woman.”

[65] ego certe mihi cernere videor et vultum et oculos et deformes utriusque

blanditias et eorum qui aderant tacitam aversionem ac timidam verecundiam.

[65] For my own part, I seem to see before my eyes his face, his eyes, the unseemly blandishments of himself and his paramour, the silent loathing and frightened shame of those who viewed the scene.

[66] interim ex pluribus efficitur illa quam conamur exprimere facies, ut est apud eundem (namque ad omnium ornandi virtutum exemplum vel unus sufficit) in descriptione convivii luxuriosi: videbar videre alios intrantes, alios autem exeuntes, quosdam ex vino vacillantes, quosdam hesterna ex potatione oscitantes. humus erat immunda, lutulenta vino, coronis languidulis et spinis cooperta piscium.

[66] At times, again, the picture which we endeavour to present is fuller in detail, as, for example, in the following description of a luxurious banquet, which is also from Cicero, since he by himself is capable of supplying admirable examples of every kind of oratorical ornament: "I seemed to see some entering, some leaving the room, some reeling under the influence of the wine, others yawning with yesterday's potations. The floor was foul with wine-smears, covered with wreaths half-withered and littered with fishbones."

[67] quid plus videret qui intrasset? sic et urbium captarum crescit miseratio. sine dubio enim, qui dicit expugnatam esse civitatem, complectitur omnia quaecunque talis fortuna recipit, sed in adfectus minus penetrat brevis hic velut nuntius.

[67] What more would any man have seen who had actually entered the room? So, too, we may move our hearers to tears by the picture of a captured town. For the mere statement that the town was stormed, while no doubt it embraces all that such a calamity involves, has all the curtness of a dispatch, and fails to penetrate to the emotions of the hearer.

[68] at si aperiatis haec, quae verbo uno inclusa erant, apparebunt effusae per domus ac templa flammae et ruentium tectorum fragor et ex diversis clamoribus unus quidam sonus, aliorum fuga incerta, alii extremo complexu suorum cohaerentes et infantium feminarumque ploratus et male usque in illum diem servati fato senes;

[68] But if we expand all that the one word "stormed" includes, we shall see the flames pouring from house and temple, and hear the crash of falling roofs and one confused clamour blent of many cries: we shall behold some in doubt whither to fly, others clinging to their nearest and dearest in one last embrace, while the wailing of women and children and the laments of old men that the cruelty of fate should have spared them to see that day will strike upon our ears.

[69] tum illa profanorum sacrorumque direptio, efferentium praedas

repetentiumque discursus et acti ante suum quisque praedonem catenati et conata retinere infansem suum mater et, sicubi maius lucrum est, pugna inter victores. licet enim haec omnia,

[69] Then will come the pillage of treasure sacred and profane, the hurrying to and fro of the plunderers as they carry off their booty or return to seek for more, the prisoners driven each before his own inhuman captor, the mother struggling to keep her child, and the victors fighting over the richest of the spoil. For though, as I have already said, the sack of a city includes all these things, it is less effective to tell the whole news at once than to recount it detail by detail.

[70] ut dixi, complectatur eversio, minus est tamen totum dicere quam omnia. consequemur autem, ut manifesta sint, si fuerint versimilia; et licebit etiam falso adfingere quidquid fieri solet. continget eadem claritas etiam ex accidentibus:

mihi frigidus horror

membra quatit, gelidusque coit formidine sanguis.

Et

Et trepidae mares pressere ad pectora natos.

Atque huius summae, iudicio quidem meo,

[70] And we shall secure the vividness we seek, if only our descriptions give the impression of truth, nay, we may even add fictitious incidents of the type which commonly occur. The same vivid impression may be produced also by the mention of the *accidents* of each situation:

Chill shudderings shake my limbs
And all my blood is curdled cold with fear;

Aen. iii. 29

or

And trembling mothers clasped
Their children to their breast.

Aen. vii. 518.

Though the attainment of such effects is,

[71] virtutis facillima est via. naturam intueamur, hanc sequamur. omnis eloquentia circa opera vitae est, ad se refert quisque quae audit, et id facillime accipiunt animi, quod agnoscunt.

[71] in my opinion, the highest of all oratorical gifts, it is far from difficult of

attainment. Fix your eyes on nature and follow her. All eloquence is concerned with the activities of life, while every man applies to himself what he hears from others, and the mind is always readiest to accept what it recognises to be true to nature.

[72] *praeclare vero ad inferendam rebus lucem repertae sunt similitudines; quarum aliae sunt, quae probationis gratia inter argumenta ponuntur, aliae ad exprimendam rerum imaginem compositae, quod est huius loci proprium:*

inde lupi ceu

raptores atra in nebula.

Et

avi similis, quae circum litora, circum

piscosos scopulos humilis volat aequora iuxta.

Quo in genere id est praecipue custodiendum,

[72] The invention of *similes* has also provided an admirable means of illuminating our descriptions. Some of these are designed for insertion among our arguments to help our proof, while others are devised to make our pictures yet more vivid; it is with this latter class of simile that I am now specially concerned. The following are good examples: —

Thence like fierce wolves beneath the cloud of night,

Aen. ii. 355.

or

Like the bird that flies

Around the shore and the fish-haunted reef,

Skimming the deep.

Aen. iv. 254.

[73] *ne id, quod similitudinis gratia adscivimus, aut obscurum sit aut ignotum. debet enim, quod illustrandae alterius rei gratia assumitur, ipsum esse clarius eo quod illuminat. quare poetis quidem permittamus sane eiusmodi exempla:*

qualis ubi hibernam Lyciam Xanthique fluenta

deserit aut Delum maternam invisit Apollo.

Non idem oratorem decebit, ut occultis aperta demonstret.

[73] In employing this form of ornament we must be especially careful that the subject chosen for our simile is neither obscure nor unfamiliar: for anything that is selected for the purpose of illuminating something else must itself be

clearer than that which it is designed to illustrate. Therefore while we may permit poets to employ such similes as: —

As when Apollo wintry Lycia leaves,
And Xanthus' streams, or visits Delos' isle,
His mother's home,

Aen. iv. 143.

it would be quite unsuitable for an orator to illustrate something quite plain by such obscure allusions.

[74] *sed illud quoque, de quo in argumentis diximus, similitudinis genus ornat orationem facitque sublimem, floridam, iucundam, mirabilem. nam quo quaeque longius petita est, hoc plus adfert novitatis atque inexpectata magis est.*

[74] But even the type of simile which I discussed in connexion with arguments is an ornament to oratory, and serves to make it sublime, rich, attractive or striking, as the case may be. For the more remote the simile is from the subject to which it is applied, the greater will be the impression of novelty and the unexpected which it produces.

[75] *illa vulgaria videntur et utilia tantum ad conciliandam fidem: Vt terram cultu, sic animum disciplinis meliorem uberioremque fieri, et Vt medici abalienata morbis membra praecidant, ita turpes ac perniciosos, etiamsi nobis sanguine cohaereant, amputandos. iam sublimius illud pro Archia; saxa atque solitudines voci respondent, bestiae saepe immanes cantu flectuntur atque consistunt et cetera.*

[75] The following type may be regarded as commonplace and useful only as helping to create an impression of sincerity: "As the soil is improved and rendered more fertile by culture, so is the mind by education," or "As physicians amputate mortified limbs, so must we lop away foul and dangerous criminals, even though they be bound to us by ties of blood." Far finer is the following from Cicero's defence of Archias: "Rock and deserts reply to the voice of man, savage beasts are oft-times tamed by the power of music and stay their onslaught," and the rest.

[76] *quod quidem genus a quibusdam declamatoria maxime licentia corruptum est. nam et falsis utuntur nec illa iis, quibus similia videri volunt, applicant. quorum utrumque in his est, quae me iuvene ubique cantari solebant, magnorum fluminum navigabiles fontes sunt, et generosioris arboris statim planta cum fructu est.*

[76] This type of simile has, however, sadly degenerated in the hands of some of our declaimers owing to the license of the schools. For they adopt false comparisons, and even then do not apply them as they should to the subjects

to which they wish them to provide a parallel. Both these faults are exemplified in two similes which were on the lips of everyone when I was a young man, “Even the sources of mighty rivers are navigable,” and “The generous tree bears fruit while it is yet a sapling.”

[77] At omni autem parabole aut praecedit similitudo, res sequitur, aut praecedit res et similitudo sequitur. sed interim libera et separata est; interim, quod longe optimum est, cum re, cuius est imago, connectitur, collatione invicem respondente, quod facit redditio contraria, quae ἀνταπόδοσις dicitur.

[77] In every comparison the simile either precedes or follows the subject which it illustrates. But sometimes it is free and detached, and sometimes, a far better arrangement, is attached to the subject which it illustrates, the correspondence between the resemblances being exact, an effect produced by *reciprocal representation*, which the Greeks style ἀνταπόδοσις. For example, the simile already quoted,

[78] praecedit similitudo illa, cuius modo feci mentionem:

inde lupi ceu

raptores atra in nebula.

Sequitur in primo Georgicon post longam de bellis civilibus atque externis conquestionem:

Vt, cum carceribus sese effudere quadrigae,

addunt in spatia; et frustra retinacula tendens

fertur equis auriga, neque audit currus habenas.

Sed hae sunt sine antapodosi.

[78]

Thence like fierce wolves beneath the cloud of night,

Aen. ii. 355.

precedes its subject. On the other hand, an example of the simile following its subject is to be found in the first *Georgic*, where, after the long lamentation over the wars civil and foreign that have afflicted Rome, there come the lines:

As when, their barriers down, the chariots speed

Lap after lap; in vain the charioteer

Tightens the curb: his steeds ungovernable

Sweep him away nor heeds the car the rein.

Georg. i. 512.

There is, however, no *antapodosis* in these similes.

[79] *reditio* autem illa rem utramque, quam comparat, velut subiicit oculis et pariter ostendit. cuius praeclara apud Vergilium multa reperio exempla, sed oratoriis potius utendum est. dicit Cicero pro Murena, Vt aiunt in Graecis artificibus eos auloedos esse, qui citharoedi fieri non potuerint, sic apud nos videmus, qui oratores evadere non potuerint, eos ad iuris studium devenire.

[79] Such *reciprocal representation* places both subjects of comparison before our very eyes, displaying them side by side. Virgil provides many remarkable examples, but it will be better for me to quote from oratory. In the *pro Murena* Cicero says, “As among Greek musicians (for so they say), only those turn flute-players that cannot play the lyre, so here at Rome we see that those who cannot acquire the art of oratory betake themselves to the study of the law.”

[80] illud pro eodem iam paene poetico spiritu, sed tamen cum sua redditione, quod est ad ornatum accommodatius: nam ut tempestates saepe certo aliquo caeli signo commoventur, saepe improvisae nulla ex certa ratione obscura aliqua ex causa concitantur, sic in hac comitiorum tempestate populari saepe intelligas, quo signo commota sit, saepe ita obscura est, ut sine causa excitata videatur. sunt et illae breves,

[80] There is also another simile in the same speech, which is almost worthy of a poet, but in virtue of its *reciprocal representation* is better adapted for ornament: “For as tempests are generally preceded by some premonitory signs in the heaven, but often, on the other hand, break forth for some obscure reason without any warning whatsoever, so in the tempests which sway the people at our Roman elections we are not seldom in a position to discern their origin, and yet, on the other hand, it is frequently so obscure that the storm seems to have burst without any apparent cause.”

[81] vagi per siluas ritu ferarum, et illud Ciceronis in Clodium, quo ex iudicio velut ex incendio nudus effugit. quibus similia possunt cuicunque etiam ex cotidiano sermone succurrere.

huic subiacet virtus non solum aperte ponendi rem ante oculos, sed circumcise atque velociter.

[81] We find also shorter similes, such as “Wandering like wild beasts through the woods,” or the passage from Cicero’s speech against Clodius: “He fled from the court like a man escaping naked from a fire.” Similar examples from everyday speech will occur to everyone.

Such comparisons reveal the gift not merely of placing a thing vividly before the eye, but of doing so with rapidity and without waste of detail.

[82] ac merito laudatur brevis integras; sed ea minus praestat, quotiens nihil

dicit, nisi quod necesse est (βραχυλογίαν vocant, quae reddetur inter schemata), est vero pulcherrima, cum plura paucis complectimur, quale Sallustii est, Mithridates corpore ingenti, perinde armatus. hoc male imitantes sequitur obscuritas.

[82] The praise awarded to perfect brevity is well-deserved; but, on the other hand, *brachylogy*, which I shall deal with when I come to speak of figures, that is to say, the brevity that says nothing more than what is absolutely necessary, is less effective, although it may be employed with admirable results when it expresses a great deal in a very few words, as in Sallust's description of Mithridates as "huge of stature, and armed to match." But unsuccessful attempts to imitate this form of terseness result merely in obscurity.

[83] vicina praedictae sed amplior virtus est ἔμφασις, altiore praebens intellectum quam quem verba per se ipsa declarant. eius duae sunt species, altera, quae plus significat quam dicit, altera, quae etiam id quod non dicit.

[83] A virtue which closely resembles the last, but is on a grander scale, is *emphasis*, which succeeds in revealing a deeper meaning than is actually expressed by the words. There are two kinds of *emphasis*: the one means more than it says, the other often means something which it does not actually say.

[84] prior est et apud Homerum, cum Menelaus Graios in equum descendisse ait (nam verbo uno magnitudinem eius ostendit), et apud Vergilium, demissum lapsi per funem; nam sic quoque altitudo demonstrata est. idem, Cyclopa cum iacuisse dixit per antrum, prodigiosum illud corpus spatio loci mensus est.

[84] An example of the former is found in Homer, where he makes Menelaus say that the Greeks *descended* into the Wooden Horse, indicating its size by a single verb. Or again, there is the following example by Virgil:

"Descending by a rope let down,
"

a phrase which in a similar manner indicates the height of the horse. The same poet, when he says that the Cyclops lay stretched "throughout the cave," by taking the room occupied as the standard of measure, gives an impression of the giant's immense bulk.

[85] sequens positum in voce aut omnino suppressa aut etiam abscisa. supprimitur vox, ut fecit pro Ligario Cicero: quodsi in hac tanta fortuna bonitas tanta non esset, quam tu per te, per te inquam, obtines: intelligo, quid loquar. tacuit enim illud, quod nihilominus accipimus, non deesse homines, qui ad crudelitatem eum impellant. absciditur per ἀποσιώπησιν quae, quoniam est figura, reddetur suo loco.

[85] The second kind of *emphasis* consists either in the complete suppression of a word or in the deliberate omission to utter it. As an example of complete suppression I may quote the following passage from the *pro Ligario*, 4 where Cicero says: “But if your exalted position were not matched by your goodness of heart, a quality which is all your own, your very own — I know well enough what I am saying — —” Here he suppresses the fact, which is none the less clear enough to us, that he does not lack counsellors who would incite him to cruelty. The omission of a word is produced by *aposiopesis*, which, however, being a figure, shall be dealt with in its proper place.

[86] *est in vulgaribus quoque verbis emphasis: virum esse oportet, et homo est ille, et vivendum est. adeo similis est arti plerumque natura.*

non tamen satis eloquentiae est, ea, de quibus dicat, clare atque evidenter ostendere; sed sunt multi ac varii excolendae orationis modi.

[86] *Emphasis is also found in the phrases of every day, such as “Be a man!” or “He is but mortal,” or “We must live!” So like, as a rule, is nature to art.*

It is not, however, sufficient for eloquence to set forth its theme in brilliant and vivid language: there are many different ways of embellishing our style.

[87] *nam ipsa illa ἀφέλεια simplex et inadfectata habet quendam purum, qualis etiam in feminis amatur, ornatum, et sunt quaedam velut e tenui diligentia circa proprietatem significationemque munditiae. alia copia locuples, alia floribus laeta.*

[87] For even that absolute and unaffected simplicity which the Greeks call ἀφέλεια has in it a certain chaste ornateness such as we admire also in women, while a minute accuracy in securing propriety and precision in our words likewise produces an impression of neatness and delicacy. Again copiousness may consist either in wealth of thought or luxuriance of language.

[88] *virium non unum genus; nam, quidquid in suo genere satis effectum est, valet. praecipua tamen eius opera δεινωσις in exaggeranda indignitate et in ceteris altitudo quaedam, φαντασία in concipiendis visionibus, ε)εργασία in efficiendo velut opere proposito, cui adiicitur ἐπεξεργασία repetitio probationis eiusdem et cumulus ex abundanti,*

[88] Force, too, may be shown in different ways; for there will always be force in anything that is in its own way effective. Its most important exhibitions are to be found in the following: δεινωσις or a certain sublimity in the exaggerated denunciation of unworthy conduct, to mention no other topics; φαντασία or imagination, which assists us to form mental pictures of things; ἐξεργασία or finish, which produces completeness of effect; ἐπεξεργασία an intensified form of the preceding, which reasserts our proofs and clinches the argument by repetition;

[89] Ἐνέργεια confinis his (est enim ab agendo dicta) et cuius propria sit virtus non esse, quae dicuntur, otiosa. est et amarum quiddam, quod fere in contumelia est positum, quale Cassii: quid facies, cum in bona tua inuasero, hoc est, cum te docuero nescire maledicere? Et acre, ut illud Crassi, ego te consulem putem, cum tu me non putes senatorem? sed vis oratoris omnis in augendo minuendoque consistit. Vtrique parti totidem modi, ex quibus praecipuos attingemus; reliqui similes erunt; sunt autem positi in rebus et verbis.

[89] and Ἐνέργεια, or vigour, a near relative of all these qualities, which derives its name from action and finds its peculiar function in securing that nothing that we say is tame. Bitterness, which is generally employed in abuse, may be of service as in the following passage. from Cassius: "What will you do when I invade your special province, that is, when I show that, as far as abuse is concerned, you are a mere ignoramus?" Pungency also may be employed, as in the following remark of Crassus: "Shall I regard you as a consul, when you refuse to regard me as a senator?" But the real power of oratory lies in enhancing or attenuating the force of words. Each of these departments has the same number of methods; I shall touch on the more important; those omitted will be of a like character, while all are concerned either with words or things. I have, however,

[90] sed, quae sit rerum inventio ac ratio, tractavimus; nunc, quid elocutio attollat aut deprimat, dicendum.

[90] already dealt with the methods of invention and arrangement, and shall therefore now concern myself with the way in which style may elevate or depress the subject in hand.

4. prima est igitur amplificandi vel minuendi species in ipso rei nomine: ut cum eum, qui sit caesus, occisum, eum, qui sit improbus, latronem, contraque eum, qui pulsavit, attigisse, qui vulneravit, laesisse dicimus. utriusque pariter exemplum est pro M. Caelio: Si vidua libere, proterva petulanter, dives effuse, libidinosa meretricio more viveret, adulterum ego putarem, si qui hanc paulo liberius salutasset?

4. The first method of *amplification* or *attenuation* is to be found in the actual word employed to describe a thing. For example, we may say that a man who was *beaten* was *murdered*, or that a *dishonest* fellow is a *robber*, or, on the other hand, we may say that one who *struck* another merely *touched* him, and that one who *wounded* another merely *hurt* him. The following passage from the *pro Caelio*, provides examples of both: "If a widow lives *freely*, if being by nature bold she throws restraint to the winds, makes wealth an excuse for luxury, and strong passions for playing the harlot, would this be a reason for my regarding a man who was somewhat free in his method of saluting her to be an adulterer?"

[2] nam et impudicam meretricem vocavit, et eum, cui longus cum illa fuerat usus, liberius salutasset. hoc genus increscit ac fit manifestius, si ampliora verba cum ipsis nominibus, pro quibus ea posituri sumus, conferantur: ut Cicero in Verrem, non enim furem sed ereptorem, non adulterum sed expugnatorem pudicitiae, non sacrilegum sed hostem sacrorum religionumque, non sicarium sed crudelissimum carnificem civium sociorumque in vestrum iudicium adduximus.

[2] For here he calls an immodest woman a harlot, and says that one who had long been her lover saluted her with a certain freedom. This sort of *amplification* may be strengthened and made more striking by pointing the comparison between words of stronger meaning and those for which we propose to substitute them, as Cicero does in denouncing Verres: "I have brought before you, judges, not a thief, but a plunderer; not an adulterer, but a ravisher; not a mere committer of sacrilege, but the enemy of all religious observance and all holy things; not an assassin, but a bloodthirsty butcher who has slain our fellowcitizens and our allies."

[3] illo enim modo ut sit multum, hoc etiam plus ut sit efficitur. quattuor tamen maxime generibus video constare amplificationem, incremento, comparatione, ratiocinatione, congerie.

incrementum est potentissimum, cum magna videntur etiam quae inferiora sunt. id aut uno gradu fit aut pluribus et pervenit non modo ad summum sed interim quodammodo supra summum. omnibus his sufficit vel unum Ciceronis exemplum:

[3] In this passage the first epithets are bad enough, but are rendered still worse by those which follow. I consider, However, that there are four principal methods of *implication: augmentation, comparison, reasoning* and accumulation.

Of these, *augmentation* is most impressive when it ends grandeur even to comparative insignificance. This may be effected either by one step or by several, and may be carried not merely to the highest degree, but sometimes even beyond it.

[4] facinus est vincere civem Romanum, scelus verberare, prope parricidium necare: quid dicam in crucem tollere? nam et, si tantum verberatus esset, uno gradu increverat, ponendo etiam id esse facinus, quod erat inferius;

[4] A single example from Cicero will suffice to illustrate all these points. "It is a sin to bind a Roman citizen, a crime to scourge him, little short if the most unnatural murder to put him to death; what then shall I call his crucifixion?" If he had merely been scourged, we should have had but one step, indicated by the description even of the lesser offence as a *sin*, while if he had merely been killed,

[5] et, si tantum occisus esset, per plures gradus ascenderat; cum vero dixerit, prope parricidium necare, supra quod nihil est, adiecit quid dicam in crucem tollere? ita, cum id, quod maximum est, occupasset, necesse erat in eo, quod ultra est, verba deficere.

[5] we should have had several more steps; but after saying that it was “little short of the most unnatural murder to put him to death,” and mentioning the worst of crimes, he adds, “What then shall call his crucifixion?” Consequently, since he had ready exhausted his vocabulary of crime, words must necessarily fail him to describe something still orse.

[6] fit et aliter supra summum adiectio, ut apud Vergilium de Lauso:

quo pulchrior alter

non fuit, excepto Laurentis corpore Turni.

Summum est enim, quo pulchrior alter non fuit; huic deinde aliquid superpositum.

[6] There is a second method of passing beyond the highest degree, exemplified in Virgil’s description of Lausus:

“Than whom there was not one more fair

Saving Laurentian Turnus.

“

or here the words “than whom there was not one more fair” give us the superlative, on which the poet proceeds to superimpose a still higher degree.

[7] tertius quoque est modus, ad quem non per gradus itur et quod non est plus maximo, sed quo nihil maius est; matrem tuam cecidisti. quid dicam amplius? matrem tuam cecidisti. nam et hoc augendi genus est tantum aliquid efficere, ut non possit augeri.

[7] There is also a third sort, which is not attained by gradation, a height which is not a degree beyond the superlative, but such that nothing greater can be conceived. “You beat your mother. What more need I say? You beat your mother.” For to make a thing so great as to be incapable of augmentation is in itself a kind of augmentation.

[8] crescit orati minus aperte, sed nescio an hoc ipso efficacius, cum citra distinctionem in contextu et cursu semper aliquid priore maius insequitur: ut de vomitu in Antonium Cicero, In coetu vero populi Romani, negotium publicum gerens, magister equitum. singula incrementum habent. per se deforme vel non in coetu vomere, in coetu etiam non populi, populi etiam non Romani vel si nullum negotium ageret, vel si non publicum vel si non magister equitum.

[8] It is also possible to heighten our style less obviously, but perhaps yet more effectively, by introducing a continuous and unbroken series in which each word is stronger than the last, as Cicero does when he describes how Antony vomited “before an assembly of the Roman people, while performing a public duty, while Master of the Horse.” Each phrase is more forcible than that which went before. Vomiting is an ugly thing in itself, even when there is no assembly to witness it; it is ugly when there is such an assembly, even though it be not an assembly of the people; ugly even though it be an assembly of the people and not the Roman people; ugly even though he were engaged on no business at the time, even if his business were not public business, even if he were not Master of the Horse.

[9] sed alius divideret haec et circa singulos gradus moraretur; hic in sublime etiam cucurrit et ad summum non pervenit nisu, sed impetu.

verum ut haec amplificatio in superiora tendit, ita, quae fit per comparationem, incrementum ex minoribus petit. augendo enim, quod est infra necesse est extollat id quod supra positum est: ut idem atque in eodem loco,

[9] Another might have broken up the series and lingered over each step in the ascending scale, but Cicero hastens to his climax and reaches the height not by laborious effort, but by the impetus of his speed.

Just as this form of *amplification* rises to a climax, so, too, the form which depends on *comparison* seeks to rise from the less to the greater, since by raising what is below it must necessarily exalt that which is above, as, for example: in the following passage:

[10] Si hoc tibi inter cenam et in illis immanibus poculis tuis accidisset, quis non turpe duceret? In coetu vero populi Romani — . Et in Catilinam: servi mehercules mei si me isto pacto metuerent, ut te metuunt omnes cives tui, domum meam relinquendam putarem.

[10] “If this had befallen you at the dinner-table in the midst of your amazing potations, who would not have thought it unseemly? But it occurred at an assembly of the Roman people.” Or take this passage from the speech against Catiline: “In truth, if my slaves feared me as all your fellowcitizens fear you, I should think it wise to leave my house.”

[11] interim proposito velut simili exemplo efficiendum est, ut sit maius id quod a nobis exaggerandum est: ut idem pro Cluentio, cum exposuisset, Milesiam quandam a secundis heredibus pro abortu pecuniam accepisse, quanto est, inquit, Oppianicus in eadem iniuria maiore supplicio dignus? siquidem ilia, cum suo corpori vim attulisset, se ipsa cruciavit; hic autem idem illud effecit per alieni corporis vim atque cruciatum.

[11] At times, again, we may advance a parallel to make something which we

desire to exaggerate seem greater than ever, as Cicero does in the *pro Cluentio*, where, after telling a story of a woman of Miletus who took a bribe from the reversionary heirs to prevent the birth of her expected child, he cries, “How much greater is the punishment deserved by Oppianicus for the same offence! For that woman, by doing violence to her own body did but torture herself, whereas he procured the same result by applying violence and torture to the body of another.”

[12] nec putet quisquam hoc, quanquam est simile illi ex argumentis loco, quo maiora ex minoribus colliguntur, idem esse. illic enim probatio petitur, hic amplificatio; sicut in Oppianico non id agitur hac comparatione, ut ille male fecerit sed ut peius. est tamen quanquam diversarum rerum quaedam vicinia. repetam itaque hic quoque idem quo sum illic usus exemplum, sed non in eundem usum.

[12] I would not, however, have anyone think that this method is identical with that used in argument, where the greater is inferred from the less, although there is a certain resemblance between the two. For in the latter case we are aiming at proof, in the former at *amplification*; for example, in the passage just cited about Oppianicus, the object of the comparison is not to show that his action was a crime, but that it was even worse than another crime. There is, however, a certain affinity between the two methods, and I will therefore repeat a passage which I quoted there, although my present purpose is different.

[13] nam hoc mihi ostendendum est, augendi gratia non tota modo totis, sed etiam partes partibus comparari: sicut hoc loco, An vero vir amplissimus P. Scipio, pontifex maximus, Ti. Gracchum mediocriter labefactantem statum rei publicae privatus interfecit: Catilinam orbem terrae caede atque incendio vastare cupientem nos consules perferemus?

[13] For what I have now to demonstrate is that when amplification is our purpose we compare not merely whole with whole, but part with part, as in the following passage: “Did that illustrious citizen, the pontifex maximus, Publius Scipio, acting merely in his private capacity, kill Tiberius Gracchus when he introduced but slight changes for the worse that did not seriously impair the constitution of the state, and shall we as consuls suffer Catiline to live, whose aim was to lay waste the whole world with fire and sword?”

[14] hic et Catilina Graccho et status rei publicae orbi terrarum et mediocri labefactatio caedi et incendiis et vastationi et privatus consulibus comparatur; quae si quis dilatare velit, plenos singula locos habent.

[14] Here Catiline is compared to Gracchus, the constitution of the state to the whole world, a slight change for the worse to fire and sword and desolation, and a private citizen to the consuls, all comparisons affording ample opportunity for further individual expansion, if anyone should desire so to do.

[15] quas dixi per ratiocinationem fieri amplificationes, viderimus an satis proprio verbo significaverim. nec sum in hoc sollicitus, dum res ipsa volentibus discere appareat. hoc sum tamen secutus, quod haec amplificatio alibi posita est alibi valet; ut aliud crescat aliud augetur, inde ad id, quod extolli volumus, ratione ducitur.

[15] With regard to the *amplification* produced by *reasoning*, we must consider whether *reasoning* quite expresses my meaning. I am not a stickler for exact terminology, provided the sense is clear to any serious student. My motive in using this term was, however, this, that this form of amplification produces its effect at a point other than that where it is actually introduced. One thing is magnified in order to effect a corresponding augmentation elsewhere, and it is by reasoning that our hearers are then led on from the first point to the second which we desire to emphasise.

[16] obiecturus Antonio Cicero merum et vomitum, tu, inquit, istis faucibus, istis lateribus, ista gladiatoria totius corporis firmitate. quid fauces et latera ad ebrietatem? minime sunt otiosa; nam respicientes ad haec possumus aestimare, quantum ille vini in Hippiae nuptiis exhausit, quod ferre et concoquere non posset illa corporis gladiatoria firmitate. ergo, si ex alio colligitur aliud, nec improprium nec inusitatum nomen est ratiocinationis, ut quod ex eadem causa inter status quoque habeamus.

[16] Cicero, when he is about to reproach Antony with his drunkenness and vomiting, says, "You with such a throat, such flanks, such burly strength in every limb of your prize-fighter's body," etc. What have his throat and flanks to do with his drunkenness? The reference is far from pointless: for by looking at them we are enabled to estimate the quantity of the wine which he drank at Hippias' wedding, and was unable to carry or digest in spite of the fact that his bodily strength was worthy of a prizefighter. Accordingly if, in such a case, one thing is inferred from another, the term *reasoning* is neither improper nor extraordinary, since it has been applied on similar grounds to one of the *bases*. So, again,

[17] sic et ex insequentibus amplificatio ducitur, siquidem tanta vis fuit vini erumpentis, ut non casum adferret aut voluntatem sed necessitatem, ubi minime deceret, vomendi, et cibus non recens, ut accidere interim solet, redderetur, sed usque in posterum diem redundaret.

[17] amplification results from subsequent events, since the violence with which the wine burst from him was such that the vomiting was not accidental nor voluntary, but a matter of necessity, at a moment when it was specially unseemly, while the food was not recently swallowed, as is sometimes the case, but the residue of the revel of the preceding day.

[18] idem hoc praestant, quae antecesserunt. nam cum Aeolus a lunone rogatus

cavum conversa cuspidem montem

impulit in latus, ac venti velut agmine facto

... ruunt,

apparet, quanta sit futura tempestas.

[18] On the other hand, *amplification* may equally result from antecedent circumstances; for example, when Juno made her request to Aeolus, the latter

“Turned his spear and smote
The mountain’s caverned side, and forth the winds
Rushed in a throng,”

whereby the poet shows what a mighty tempest will ensue.

[19] quid? cum res atrocissimas quasque in summam ipsi extulimus invidiam elevamus consulto, quo graviora videantur quae secutura sunt, ut a Cicerone factum est, cum illa diceret, levia sunt haec in hoc reo. metum virgarum nauarchus nobilissimae ciuitatis pretio redemnit: humanum est. alias, ne securi feriretur, pecuniam dedi: usitatam est.

[19] Again, when we have depicted some horrible circumstance in such colours as to raise the detestation of our audience to its height, we then proceed to make light of them in order that what is to follow may seem still more horrible: consider the following passage from Cicero: “These are but trivial offences for so great a criminal. The captain of a warship from a famous city bought off” his threatened scourging for a price: a humane concession! Another paid down a sum of money to save his head from the axe:

[20] nonne usus est ratiocinatione, qua colligerent audientes, quantum illud esset quod inferebatur, cui comparata haec viderentur humana atque usitata? sic quoque solet ex alio aliud augeri: ut cum Hannibalis bellicis laudibus ampliatur virtus Scipionis, et fortitudinem Gallorum Germanorumque miramur, quo sit maior C. Caesaris gloria.

[20] a perfectly ordinary circumstance!” Does not the orator employ a process of reasoning to enable the audience to infer how great the implied crime must be when such actions were but humane and ordinary in comparison? So, again, one thing may be magnified by allusion to another: the valour of Scipio is magnified by extolling the fame of Hannibal as a general, and we are asked to marvel at the courage of the Germans and the Gauls in order to enhance the glory of Gaius Caesar.

[21] illud quoque est ex relatione ad aliquid, quod non eius rei gratia dictum videtur, amplificationis genus. non putant indignum Troiani principes, Graios Troianosque propter Helenae speciem tot mala tanto temporis spatio sustinere: quatenam igitur illa forma credenda est? non enim hoc dicit Paris, qui rapuit,

non aliquis iuvenis aut unus e vulgo, sed senes et prudentissimi et Priamo assidentes.

[21] There is a similar form of *amplification* which is effected by reference to something which appears to have been said with quite another purpose in view. The chiefs of Troy think it no discredit that Trojan and Greek should endure so many woes for so many years all for the sake of Helen's beauty. How wondrous, then, must her beauty have been! For it is not Paris, her ravisher, that says this; it is not some youth or one of the common herd; no, it is the elders, the wisest of their folk, the counsellors of Priam.

[22] verum et ipse rex decennii bello exhaustus, amissis tot liberis, imminente summo discrimine, cui faciem illam, ex qua tot lacrimarum origo fluxisset, invisam atque abominandam esse oportebat, et audit haec et eam filiam appellans iuxta se locat et excusat etiam atque sibi esse malorum causam negat.

[22] Nay, even the king himself, worn out by a ten years' war, which had cost him the loss of so many of his sons, and threatened to lay his kingdom in the dust, the man who, above all, should have loathed and detested her beauty, the source of all those tears, hears these words, calls her his daughter, and places her by his side, excuses her guilt, and denies that she is the cause of his sorrows.

[23] nec mihi videtur in Symposio Plato, cum Alcibiadem confitentem de se, quid a Socrate pati voluerit, narrat, ut illum culparet, haec tradidisse, sed ut Socratis invictam continentiam ostenderet, quae corrumpi speciosissimi hominis tam obvia voluntate non posset.

[23] Again, when Plato in the Symposium makes Alcibiades confess how he had wished Socrates to treat him, he does not, I think, record these facts with a view to blaming Alcibiades, but rather to show the unconquerable self-control of Socrates, which would not yield even to the charms which the greatest beauty of his day so frankly placed at his disposal.

[24] quin ex instrumento quoque heroum illorum magnitudo aestimanda nobis datur. huc pertinet clipeus Aiacis et Pelias Achillis. qua virtute egregie est usus in Cyclope Vergilius. nam quod illud corpus mente concipiam, cuius

trunca manum pinus regit?

Quid?

[24] We are even given the means of realising the extraordinary stature of the heroes of old by the description of their weapons, such as the shield of Ajax and the spear-shaft of Achilles hewn in the forests of Pelion. Virgil also has made admirable use of this device in his description of the Cyclops. For what an image it gives us of the bulk of that body

“Whose hand was propped by a branchless trunk of pine.
“

So, too, what a giant must Demoleos have been,

[25] cum vix loricam duo multiplicem connixi humeris ferunt, quantus Demoleos, qui indutus ea

cursu palantes Troas agebat?

Quid? M. Tullius de M. Antonii luxuria tantum fingere saltem potuisset, quantum ostendit dicendo, conchyliatis Cn. Pompeii peristromatis servorum in cellis stratos lectos videres? conchyliata peristromata et Cn. Pompeii terunt servi in cellis: nihil dici potest ultra, et necesse est tamen infinito plus in domino cogitare.

[25] Whose

“corselet manifold

Scarce two men on their shoulders could uphold

“

And yet the hero buckled it upon him and

“Drave the scattering Trojans at full speed.

“

And again, Cicero could hardly even have conceived of such luxury in Antony himself as he describes when he says, “You might see beds in the chambers of his slaves strewn with the purple coverlets that had once been Pompey’s own.” Slaves are using purple coverlets in their chambers, aye, and coverlets that had once been Pompey’s! No more, surely, can be said than this, and yet it leaves us to infer how infinitely greater was the luxury of their master.

[26] est hoc simile illi, quod ἔμφασις dicitur; sed illa ex verbo, hoc ex re coniecturam facit tantoque plus valet, quanto res ipsa verbis est firmior.

potest adscribi amplificationi congeries quoque verborum ac sententiarum idem significantium. nam, etiamsi non per gradus ascendant, tamen velut acervo quodam adlevantur:

[26] This form of *amplification* is near akin to *emphasis*: but emphasis derives its effect from the actual words, while in this case the effect is produced by inference from the facts, and is consequently far more impressive, inasmuch as facts are more impressive than words.

Accumulation of words and sentences identical in meaning may also be regarded under the head of *amplification*. For although the climax is not in

this case reached by a series of steps, it is none the less attained by the piling up of words. Take the following example:

[27] quid enim tuus ille, Tubero, dstrictus in acie Pharsalica gladius agebat? cuius latus ille mucro petebat? qui sensus erat armorum tuorum? quae tua mens, oculi, manus, ardor animi? quid cupiebas? quid optabas? Simile est hoc figurae, quam συναθροισμὸν vocant; sed illic plurium rerum est congeries, hic unius multiplicatio. haec etiam crescere solet verbis omnibus altius atque altius insurgentibus: aderat ianitor carceris, carnifex praetoris, mors terrorque sociorum et civim Romanorum, victor Sextius.

[27] “What was that sword of yours doing, Tubero, the sword you drew on the field of Pharsalus? Against whose body did you aim its point? What meant those arms you bore? Whither were your thoughts, your eyes, your hand, your fiery courage directed on that day? What passion, what desires were yours?” This passage recalls the figure styled συναθροισμός by the Greeks, but in that figure it is a number of different things that are accumulated, whereas in this passage all the accumulated details have but one reference. The heightening of effect may also be produced by making the words rise to a climax. “There stood the porter of the prison, the praetor’s executioner, the death and terror of the citizens and allies of Rome, the licitor Sextius.”

[28] Eadem fere est ratio minuendi. nam totidem sunt ascendentibus quot descendentibus gradus. ideoque uno ero exemplo contentus eius loci, quo Cicero de oratione Rulli haec dicit: pauci tamen qui proximi adstiterant, nescio quid illum de lege agraria voluisse dicere suspicabantur. quod si ad intellectum referas, minutio est, si ad obscuritatem, incrementum.

[28] *Attenuation* is effected by the same method, since there are as many degrees of descent as ascent. I shall therefore content myself with quoting but one example, namely, the words used by Cicero to describe the speech of Rullus: “A few, however, who stood nearest to him suspected that he had intended to say something about the agrarian law.” This passage may be regarded as providing an example of *attenuation* or of *augmentation*, according as we consider its literal meaning or fix our attention on the obscurity attributed to Rullus.

[29] scio posse videri quibusdam speciem amplificationis hyperbolen quoque, nam et haec in utramque partem valet; sed quia excedit hoc nomen in tropos, differenda est. quos continuo subiungerem, nisi esset a ceteris separata ratio dicendi, quae constat non propriis sed translatis. Demus ergo breviter hoc desiderio iam paene publico, ne omittamus eum, quem plerique praecipuum ac paene solum putant orationis ornatum.

[29] I know that some may perhaps regard *hyperbole* as a species of *amplification*, since *hyperbole* can be employed to create an effect in either direction. But as the name is also applied to one of the *tropes*, I must postpone

its consideration for the present. I would proceed to the immediate discussion of this subject but for the fact that others have given separate treatment to this form of artifice, [which employs words not in their literal, but in a metaphorical sense]. I shall therefore at this point indulge a desire now almost universal, and discuss a form of ornament which many regard as the chief, nay, almost the sole adornment of oratory.

5. *sententiam veteres, quod animo sensissent, vocaverunt. id cum est apud oratores frequentissimum, tum etiam in usu cotidiano quasdam reliquias habet; nam et iuraturi ex animo nostri sententia et gratulantes ex sententia dicimus. non raro tamen et sic locuti sunt, ut sensa sua dicerent; nam sensus corporis videbantur.*

5. When the ancients used the word *sententia*, they meant a feeling, or opinion. The word is frequently used in this sense by orators, and traces of this meaning are still found even in the speech of every day. For when we are going to take an oath we use the phrase *ex animi nostri sententia* (in accordance with what we hold is the solemn truth), and when we offer congratulations, we say that we do so *ex sententia* (with all our heart). The ancients, indeed, often expressed the same meaning by saying that they uttered their *sensa*; for they regarded *senses* as referring merely to the senses of the body.

[2] *sed consuetudo iam tenuit, ut mente concepta sensus vocaremus, lumina autem praecipueque in clausulis posita sententias; quae minus celebratae apud antiquos nostris temporibus modo carent. ideoque mihi et de generibus earum et de usu arbitror pauca dicenda. antiquissimae sunt,*

[2] But modern usage applies *sensus* to concepts of the mind, while *sententia* is applied to striking reflexions such as are more especially introduced at the close of our periods, a practice rare in earlier days, but carried even to excess in our own. Accordingly, I think that I ought to say something of the various forms which such reflexions may take and the manner in which they should be used.

[3] *quae proprie, quamvis omnibus idem nomen sit, sententiae vocantur, quas Graeci excedit, B: excidit, A. γνῶμας appellant; utrumque autem nomen ex eo acceperunt, quod similes sunt consiliis aut decretis. est autem haec vox universalis, quae etiam citra complexum causae possit esse laudabilis, interim ad rem tantum relata, ut nihil est tam popolare quam bonitas, interim ad personam, quale est Afri Domitii, princeps, qui vult omnia scire, necesse habet multa ignoscere.*

[3] Although all the different forms are included under the same name, the oldest type of *sententia*, and that in which the term is most correctly applied, is the aphorism, called γνῶμη by the Greeks. Both the Greek and the Latin names are derived from the fact that such utterances resemble the decrees or

resolutions of public bodies. The term, however, is of wide application (indeed, such reflexions may be deserving of praise even when they have no reference to any special context), and is used in various ways. Sometimes it refers merely to things, as in the sentence: "There is nothing that wins the affections of the people more than goodness of heart." Occasionally, again, they may have a personal reference, as in the following utterance of Domitius Afer: "The prince who would know all, must needs ignore much."

[4] hanc quidam partem enthymematis, quidam initium aut clausulam epichirematis esse dixerunt; et est aliquando, non tamen semper. illud verius esse eam aliquando simplicem, ut ea, quae supra dixi, aliquando ratione subiecta: nam in omni certamine, qui opulentior est, etiamsi accipit iniuriam, tamen, quia plus potest, facere videtur; nonnumquam dupliceim:

obsequium amicos, veritas odium parit.

Sunt etiam,

[4] Some have called this form of *reflexion* a part of the *enthymeme*, others the major premise or conclusion of the *epichireme*, as it sometimes, though not invariably, is. More correct is the statement that at times it is simple, as in the example just quoted, while at other times a reason for the statement may be added, such as the following: "For in every struggle, the stronger seems not to suffer wrong, even when this is actually the case, but to inflict it, simply in virtue of his superior power." Sometimes, again, it may be double, as in the statement that

Complaisance wins us friends, truth enmity.

Ter. Andr. I. i. 41.

[5] qui decem genera fecerint, sed eo modo, quo fieri vel plura possunt, per interrogationem, per comparisonem, infitiationem, similitudinem, admirationem, et cetera huiusmodi; per omnes enim figuras tractari potest. illud notabile ex diversis:

mors misera non est, aditus ad mortem est miser.

Ac rectae quidem sunt tales:

[5] There are some even who classify them under ten heads, though the principle on which they make this division is such that it would justify a still larger number: they class them as based on interrogation, comparison, denial, similarity, admiration, and the like, for they can be treated under every kind of figure. A striking type is that which is produced by opposition:

Death is not bitter, but the approach to death.

Author unknown.

Others are cast in a form of a direct statement,

[6]

tam deest avaro, quod habet, quam quod non habet.

Sed maiorem vim accipiunt et mutatione figurae, ut

usque adeone mori miserum est?

acrius hoc enim quam per se, mors misera non est. Et translatione a communi ad proprium; nam, cum sit rectum, nocere facile est, prodesse difficile, vehementius apud Ovidium Medea dicit,

servare potui; perdere an possim, rogas?

Vertit ad personam Cicero:

[6] such as

The miser lacks

That which he has no less than what he has
not.

Publil. Syr. Sent. 486.

But they acquire greater force by a change in the *figure* employed, as in the following:

Is it so bitter, then, to die?

Aen. xii. 646.

For this is more vigorous than the simple statement, "Death is not bitter." A similar effect may be produced by transference of the statement from the general to the particular. For example, although the direct statement would be, "To hurt is easy, but to do good is hard." Ovid gives this reflexion increased force when he makes Medea say,

"I had the power to save, and ask you then
If I have power to ruin?

“

[7] nihil habet, Caesar, nec fortuna tua maius quam ut possis, nec natura melius quam ut velis servare quam plurimos. ita, quae erant rerum, propria fecit hominis. In hoc genere custodiendum est et id, quod ubique, ne crebrae sint, ne palam falsae (quales frequenter ab iis dicuntur, qui haec καθολικά vocant, et, quidquid pro causa videtur, quasi indubitatum pronuntiant), et ne passim et a quocunque dicantur.

[7] Cicero again gives the general statement a personal turn when he says: "Caesar, the splendour of your present fortune confers on you nothing greater

than the power and nothing better than the will to save as many of your fellow-citizens as possible.” For here he attributes to Caesar what was really attributable to the circumstances of his power. In this class of *reflexion* we must be careful, as always, not to employ them too frequently, nor at random, nor place them in the mouth of every kind of person, while we must make certain that they are not untrue, as is so often the case with those speakers who style them *reflexions of universal application* and recklessly employ whatever seems to support their case as though its truth were beyond question.

[8] magis enim decet eos, in quibus est auctoritas, ut rei pondus etiam persona confirmet. quis enim ferat puerum aut adolescentulum aut etiam ignobilem, si iudicet in dicendo et quodammodo praecipiat?

[8] Such reflexions are best suited to those speakers whose authority is such that their character itself will lend weight to their words. For who would tolerate a boy, or a youth, or even a man of low birth who presumed to speak with all the authority of a judge and to thrust his precepts down our throats?

[9] enthymema quoque est omne quod mente concepimus; proprie tamen dicitur, quae est sententia ex contrariis, propterea quod eminere inter ceteras videtur, ut Homerus poeta, urbs Roma. De hoc in argumentis satis dictum est. non semper autem ad probationem adhibetur sed aliquando ad ornatum:

[9] The term *enthymeme* may be applied to any concept of the mind, but in its strict sense means a *reflexion* drawn from contraries. Consequently, it has a supremacy among *reflexions* which we may compare to that of Homer among poets and Rome among cities.

[10] quorum igitur impunitas, Caesar, tuae clementiae laus est, eorum te ipsorum ad crudelitatem acuet oratio? non quia sit ratio dissimilis, sed quia iam per alia, ut id iniustum appareret, effectum erat;

[10] I have already said enough on this topic in dealing with arguments. But the use of the enthymeme is not confined to proof, it may sometimes be employed for the purpose of ornament, as in the following instance: “Caesar, shall the language of those whom it is your glory to have spared goad you to imitate their own cruelty?” Cicero’s motive in saying this is not that it introduces any fresh reason for clemency, but because he has already demonstrated by other arguments how unjust such conduct would be,

[11] et addita in clausula est epiphonematis modo non tam probatio quam extrema quasi insultatio. est enim epiphonema rei narratae vel probatae summa acclamatio:

tantae molis erat Romanam condere gentem!

facere enim probus adolescens periculose quam perpeti turpiter maluit.

[11] while he adds it at the period’s close as an *epiphonema*, not by way of

proof, but as a crowning insult to his opponents. For an *epiphonema* is an exclamation attached to the close of a statement or a proof by way of climax. Here are two examples:

Such toil it was to found the Roman race!

Aen. i. 33.

and “The virtuous youth preferred to risk his life by slaying him to suffering such dishonour.”

[12] est et, quod appellatur a novis noema qua voce omnis intellectus accipi potest; sed hoc nomine donarunt ea quae non dicunt, uerum intelligi volunt: ut in eum, quem saepius a ludo redemerat soror, agentem cum ea talionis, quod ei pollicem dormienti recidisset, eras dignus, ut haberes integram manum, sic enim auditur ut depugnare.

[12] There is also what our modern rhetoricians call the *noema*, a term which may be taken to mean every kind of *conception*, but is employed by them in the special sense of things which they wish to be understood, though they are not actually said, as in the declamation where the sister defends herself against the brother whom she had often bought out from the gladiatorial school, when he brought an action against her demanding the infliction of a similar mutilation because she had cut off his thumb while he slept: “You deserved,” she cries, “to have all your fingers,” meaning thereby, “You deserved to be a gladiator all your days.”

[13] vocatur aliquid et clausula; quae, si est quod conclusionem dicimus, et recta et quibusdam in partibus necessaria est: quare prius de vestro facto fateamini necesse est, quam Ligarii culpam ullam reprehendatis. sed nunc aliud volunt, ut omnis locus, omnis sensus in fine sermonis feriat aurem.

[13] There is also what is called a *clausula*. If this merely means a *conclusion*, it is a perfectly correct and sometimes a necessary device, as in the following case: “You must, therefore, first confess your own offence before you accuse Ligarius of anything.” But to-day something more is meant, for our rhetoricians want every passage, every sentence to strike the ear by an impressive close.

[14] turpe autem ac prope nefas ducunt, respirare ullo loco, qui acclamationem non petierit. inde minuti corruptique sensiculi et extra rem petiti; neque enim possunt tam multae bonae sententiae esse, quam necesse est multae sint clausulae.

[14] In fact, they think it a disgrace, nay, almost a crime, to pause to breathe except at the end of a passage that is designed to call forth applause. The result is a number of tiny epigrams, affected, irrelevant and disjointed. For there are not enough striking reflexions in the world to provide a close to

every period.

[15] iam haec magis nova sententiarum genera. ex inopinato: ut dixit Vibius Crispus in eum, qui, cum loricatus in foro ambularet, praetendebat id se metu facere, quis tibi sic timere permisit? Et insigniter Africanus apud Neronem de morte matris, rogant te, Caesar, Galliae tuae, ut felicitatem tuam fortiter feras. sunt et alio relata:

[15] The following forms of reflexion are even more modern. There is the type which depends on surprise for its effect, as, for example, when Vibius Crispus, in denouncing the man who wore a breastplate when strolling in the forum and alleged that he did so because he feared for his life, cried, "Who gave you leave to be such a coward?" Another instance is the striking remark made by Africanus to Nero with reference to the death of Agrippina: "Caesar, your provinces of Gaul entreat you to bear your good fortune with courage."

[16] ut Afer Domitius, cum Cloatillam defenderet, cui obiectum crimen, quod virum qui inter rebellantes fuerat sepelisset, remiseraat Claudius, in epilogo filios eius adloquens, matrem tamen, inquit, pueri sepolitote.

[16] Others are of an allusive type: for example, Domitius Afer, in his defence of Cloatilla, whom Claudius had pardoned when she was accused of having buried her husband, who had been one of the rebels, addressed her sons in his peroration with the words: "Nonetheless, it is your duty, boys, to give your mother burial." Some, again,

[17] Et aliunde petita, id est in alium locum ex alio translata. pro Spatale Crispus, quam qui heredem amator instituerat decessit, cum haberet annos duodeviginti, hominem divinum, qui sibi indulsit.

[17] depend on the fact that they are transferred from one context to another Crispus, in his defence of Spatale, whose lover had made her his heir and then proceeded to die at the age of eighteen, remarked: "What a marvellous fellow to gratify his passion thus!"

[18] facit quasdam sententias sola geminatio, qualis est Senecae in eo scripto, quod Nero ad senatum misit occisa matre, cum se periclitatum videri vellet: saluum me esse adhuc nec credo nec gaudeo. melior, cum ex contrariis valet: habeo quem fugiam; quem sequar non habeo. quid, quod miser, cum loqui non posset, lacere non poterat?

[18] Another type of reflexion may be produced by the doubling of a phrase, as in the letter written by Seneca for Nero to be sent to the senate on the occasion of his mother's death, with a view to creating the impression that he had been in serious danger:—"As yet I cannot believe or rejoice that I am safe." Better, however, is the type which relies for its effect on contrast of opposites, as "I know from whom to fly, but whom to follow I know not;" or, "What of the fact that the poor wretch, though he could not speak,

[19] ea vero fit pulcherrima, cum aliqua comparatione clarescit. Trachalus contra Spatalen: placet hoc ergo, leges, diligentissimae pudoris custodes, decimas uxoribus dari, quartas meretricibus?

[19] could not keep silence?" But to produce the most striking effect this type should be given point by the introduction of a comparison, such as is made by Trachalus in his speech against Spatale, where he says: "Is it your pleasure, then, ye laws, the faithful guardians of chastity, that wives should receive a title and harlots a quarter?"

In these instances, however, the reflexion may equally well be good or bad.

[20] sed horum quidem generum et bonae dici possunt et malae. illae semper vitiosae ut a verbo: patres conscripti, sic enim incipiendum est mihi, ut memineritis patrum. peius adhuc, quo magis falsum est et longius petitum, contra eandem sororem gladiatoris, cuius modo feci mentionem, ad digitum pugnavi.

[20] On the other hand, there are some which will always be bad, such as those which turn on play upon words, as in the following case: "Conscript fathers, for I must address you thus that you may remember the duty owed to fathers." Worse still, as being more unreal and far-fetched, is the remark made by the gladiator mentioned above in his prosecution of his sister: "I have fought to the last finger."

[21] est etiam generis eiusdem, nescio an vitiosissimum, quotiens verborum ambiguitas cum rerum falsa quadam similitudine iungitur. clarum actorem iuvenis audiui, cum lecta in capite cuiusdam ossa sententiae gratia tenenda matri dedisset: infelicissima femina, nondum extulisti filium et iam ossa legisti.

[21] There is another similar type, which is perhaps the worst of all, where the play upon words is combined with a false comparison. When I was a young man I heard a distinguished pleader, after handing a mother some splinters of bone taken from the head of her son (which he did merely to provide an occasion for his epigram), cry: "Unhappiest of women, your son is not yet dead and yet you have gathered up his bones!"

[22] ad hoc plerique minimis etiam inventiunculis gaudent, quae excussae risum habent, inventae facie ingenii blandiuntur. De eo, qui naufragus et ante agrorum sterilitate vexatus in scholis fingitur se suspendisse: quem neque terra recipit nec mare, pendeat. huic simile in illo,

[22] Moreover, most of our orators delight in devices of the pettiest kind, which seriously considered are merely ludicrous, but at the moment of their production flatter their authors by a superficial semblance of wit. Take, for instance, the exclamation from the scholastic theme, where a man, after being ruined by the barrenness of his land, is shipwrecked and hangs himself: "Let

him whom neither earth nor sea receives, hang in mid air.”

[23] de quo supra dixi, cui pater sua membra laceranti venenum dedit: qui haec edit, debet hoc bibere. Et in luxuriosum, qui ἀποκατέρησιν simulasse dicitur: nocte laqueum, habes, quod faucibus tuis irascaris; sume venenum, decet luxuriosum bibendo mori.

[23] A similar absurdity is to be found in the declamation, to which I have already referred, in which a father poisons his son who insists on tearing his flesh with his teeth: “The man who eats such flesh, deserves such drink.” Or again, take this passage from the theme of the luxurious man who is alleged to have pretended to starve himself to death: “Tie a noose for yourself: you have good reason to be angry with your throat. ‘rake poison: it is fit that a luxurious man should die of drink!’”

[24] alia vana, ut suadentis purpuratis, ut Alexandrum Babylonis incendio sepeliant, Alexandrum sepelio; hoc quisquam spectabit a tecto? quasi vero id sit in re tota indignissimum. alia nimia ut de Germanis dicentem quendam audiui, caput nescio ubi impositum; et de viro forti, bella umbone propellit. sed finis non erit,

[24] Others are merely fatuous, such as the remark of the declaimer who urges the courtiers of Alexander to provide him with a tomb by burning down Babylon. “I am burying Alexander. Shall any man watch such a burial from his housetop?” As if this were the climax of indignities! Others fail from sheer extravagance. For example, I once heard a rhetorician who was declaiming about the Germans, say: “I know not where they carry their heads,” and again when belauding a hero, “He beats back whole wars with the boss of his shield.”

[25] si singulas corruptorum persequar formas. illud potius, quod est magis necessarium. duae sunt diversae opiniones, aliorum sententias solas paene spectantium, aliorum omnino damnantium; quorum mihi neutrum admodum placet. densitas earum obstat invicem;

[25] However, I shall never come to an end if I try to describe every possible form of this kind of absurdity. I will therefore turn to discuss a point of more importance.

Rhetoricians are divided in opinion on this subject: some devote practically all their efforts to the elaboration of *reflexions*, while others condemn their employment altogether. I cannot agree entirely with either view.

[26] ut in satis omnibus fructibusque arborum nihil ad iustam magnitudinem adolescere potest, quod loco in quem crescat caret, nec pictura, in qua nihil circumlitum est, eminet; — ideoque artifices etiam, cum plura in unam tabulam opera contulerunt, spatiis distinguunt, ne umbrae in corpora cadant.

[26] If they are crowded too thick together, such *reflexions* merely stand in each other's way, just as in the case of crops and the fruits of trees lack of room to grow results in a stunted development. Again in pictures a definite outline is required to throw objects into relief, and consequently artists who include a number of objects in the same design separate them by intervals sufficient to prevent one casting a shadow on the other. Further,

[27] facit res eadem concisam quoque orationem; subsistit enim omnis sententia, ideoque post eam utique aliud est initium. unde soluta fere oratio et e singulis non membris sed frustis collata structura caret, cum illa rotunda et undique circumcisa insistere invicem

[27] this form of display breaks up our speeches into a number of detached sentences; every *reflexion* is isolated, and consequently a fresh start is necessary after each. This produces a discontinuous style, since our language is composed not of a system of limbs, but of a series of fragments: for your nicely rounded and polished phrases are incapable of cohesion. Further, the colour,

[28] nequeant. praeter hoc etiam color ipse dicendi quamlibet claris, multis tamen ac variis velut maculis conspergitur. porro, ut adfert lumen clavus purpurae in loco insertus, ita certe neminem deceat intertexta pluribus notis vestis. quare,

[28] though bright enough, has no unity, but consists of a number of variegated splashes. A purple stripe appropriately applied lends brilliance to a dress, but a dress decorated with a quantity of patches can never be becoming to anybody.

[29] licet haec et nitere et aliquatenus exstare videantur, tamen et lumina illa non flammae, sed scintillis inter fumum emicantibus similia dixeris (quae ne apparent quidem, ubi tota lucet oratio, ut in sole sidera ipsa desinunt cerni); et, quae crebris parvisque conatibus se attollunt, inaequalia tantum et velut confragosa nec admirationem consequuntur eminentium et planorum gratiam perdunt.

[29] Wherefore, although these ornaments may seem to stand out with a certain glitter of their own, they are rather to be compared to sparks flashing through the smoke than to the actual brilliance of flame: they are, in fact, invisible when the language is of uniform splendour, just as the stars are invisible in the light of day. And where eloquence seeks to secure elevation by frequent small efforts, it merely produces an uneven and broken surface which fails to win the admiration due to outstanding objects and lacks the charm that may be found in a smooth surface.

[30] hoc quoque accedit quod solas captanti sententias multas dicere necesse est leves, frigidas, ineptas. non enim potest esse dilectus, ubi numero laboratur.

itaque videas et divisionem pro sententia poni et argumentum; sit tantum in clausula nec male pronuntietur. occidisti uxorem ipse adulter;

[30] To this must be added the fact that those who devote themselves solely to the production of *reflexions* cannot avoid giving utterance to many that are trivial, flat or foolish. For their mere number will so embarrass their author that selection will be impossible. Consequently you will often find that such persons will produce a *division* or an *argument* as if it were an epigram, the only qualification necessary being that it should come toward the close of the period and be impressively delivered.

[31] non ferrem te, etiamsi repudiasses, divisio est. vis scire, venenum esse amatorium? viveret homo, nisi illud bibisset, argumentum est. Nec multas plerique sententias dicunt, sed omnia tanquam sententias.

[31] “You killed your wife, though you were an adulterer yourself. I should loathe you even if you had only divorced her.” Here we have a division. “Do you wish me to prove that a love-philtre is a poison? The man would still be living, if he had not drunk it.” This is an argument. There are, moreover, a number of speakers who not merely deliver many such epigrams, but utter everything as if it were an epigram.

[32] huic quibusdam contrarium studium, qui fugiunt ac reformidant omnem hanc in dicendo voluptatem, nihil probantes nisi planum et humile et sine conatu. ita, dum timent, ne aliquando cadant, semper iacent. quod enim tantum in sententia bona crimen est? non causae prodest? non iudicem movet? non dicentem commendat?

[32] Against these persons, on the other hand, must be set those who shun and dread all ornament of this kind, approving nothing that is not plain, humble and effortless, with the result that by their reluctance to climb for fear of falling they succeed merely in maintaining a perpetual flatness. What sin is there in a good epigram? Does it not help our case, or move the judge, or commend the speaker to his audience? It may be urged, perhaps,

[33] est quoddam genus, quo veteres non utebantur. ad quam usque nos vocatis vetustatem? nam si illam extremam, multa Demosthenes, quae ante eum nemo. quomodo potest probare Ciceronem, qui nihil putet ex Catone Gracchisque mutandum? sed ante hos simplicior adhuc ratio loquendi fuit.

[33] that it is a form of ornament eschewed by the ancients. What do you mean by antiquity? If you go back to the earliest periods you will find that Demosthenes frequently employed methods that were known to none before him. How can we give our approval to Cicero, if we think that no change should be made from the methods of Cato and the Gracchi? And yet before the Gracchi and Cato the style of oratory was simpler still.

[34] ego vero haec lumina orationis velut oculos quosdam esse eloquentiae

credo. sed neque oculos esse toto corpore velim, ne cetera membra officium suum perdant; et, si necesse sit, veterem illum horrorem dicendi malim quam istam novam licentiam. sed patet media quaedam via, sicut in cultu victuque accessit aliquis citra reprehensionem nitor. quare, sicut possumus, adiciamus virtutibus; prius tamen sit vitiis carere, ne, dum volumus esse meliores veteribus, simus tantum dissimiles.

[34] For my own part I regard these particular ornaments of oratory to be, as it were, the eyes of eloquence. On the other hand, I should not like to see the whole body full of eyes, for fear that it might cripple the functions of the other members, and, if I had no alternative, I should prefer the rudeness of ancient eloquence to the license of the moderns. But a middle course is open to us here no less than in the refinements of dress and mode of life, where there is a certain tasteful elegance that offends no one. Therefore let us as far as possible seek to increase the number of our virtues, although our first care must always be to keep ourselves free from vices, lest in seeking to make ourselves better than the ancients we succeed merely in making ourselves unlike them.

[35] reddam nunc, quam proximam partem dixeram esse de tropis, quos modos clarissimi nostrorum auctores vocant. horum tradere praecepta et grammatici solent. sed a me, cum de illorum officio loquerer, dilata pars haec est, quia de ornatu orationis gravior videbatur locus et maiori operi reservandus.

[35] I will now proceed to the next subject for discussion, which is, as I have said, that of *tropes*, or *modes*, as the most distinguished Roman rhetoricians call them. Rules for their use are given by the teachers of literature as well. But I postponed the discussion of the subject when I was dealing with literary education, because it seemed to me that the theme would have greater importance if handled in connexion with the ornaments of oratory, and that it ought to be reserved for treatment on a larger scale.

6. tropus est verbi vel sermonis a propria significatione id aliam cum virtute mutatio. circa quem inexplicabilis et grammaticis inter ipsos et philosophis pugna est, quae sint genera, quae species, qui numerus, quis cuique subiiciatur.

6. By a *trope* is meant the artistic alteration of a word or phrase from its proper meaning to another. This is a subject which has given rise to interminable disputes among the teachers of literature, who have quarrelled no less violently with the philosophers than among themselves over the problem of the *genera* and *species* into which *tropes* may be divided, their number and their correct classification.

[2] nos omissis, quae nihil ad instruendum oratorem pertinent, cauillationibus, necessarios maxime atque id usum receptos exsequemur, haec modo id his adnotasse contenti, quosdam gratia significationis quosdam decoris assumi, et esse alios id verbis propriis alios id tralatis, vertique formas non verborum

modo sed et sensuum et compositionis.

[2] I propose to disregard such quibbles as in no wise concern the training of an orator, and to proceed to discuss those *tropes* which are most necessary and meet with most general acceptance, contenting myself merely with noting the fact that some *tropes* are employed to help out our meaning and others to adorn our style, that some arise from words used *properly* and others from words used *metaphorically*, and that the changes involved concern not merely individual words, but also our thoughts and the structure of our sentences.

[3] quare mihi videntur errasse, qui non alios crediderunt tropos, quam id quibus verbum pro verbo poneretur. neque illud ignoro, id iisdem fere, qui significandi gratia adhibentur, esse et ornatum; sed non idem accidet contra, eruntque quidam tantum ad speciem accommodati.

[3] In view of these facts I regard those writers as mistaken who have held that *tropes* necessarily involved the substitution of word for word. And I do not ignore the fact that as a rule the *tropes* employed to express our meaning involve ornament as well, though the converse is not the case, since there are some which are intended solely for the purpose of embellishment.

[4] incipiamus igitur ab eo, qui cum frequentissimus est tum longe pulcherrimus, translatione dico, quae μεταφορά Graece vocatur. quae quidem cum ita est ab ipsa nobis concessa natura, ut indocti quoque ac non sentientes ea frequenter utantur, tum ita iucunda atque nitida, ut id oratione quamlibet clara proprio tamen lumine eluceat.

[4] Let us begin, then, with the commonest and by far the most beautiful of *tropes*, namely, *metaphor*, the Greek term for our *translatio*. It is not merely so natural a turn of speech that it is often employed unconsciously or by uneducated persons, but it is in itself so attractive and elegant that however distinguished the language in which it is embedded it shines forth with a light that is all its own.

[5] neque enim vulgaris esse neque humilis nec insuavis apte ac recte modo adscita potest. copiam quoque sermonis auget permutando aut mutuando quae non habet, quodque est difficillimum, praestat ne ulli rei nomen deesse videatur. transfertur ergo nomen aut verbum ex eo loco id quo proprium est, id eum id quo aut proprium deest aut translatum proprio melius est. id facimus,

[5] For if it be correctly and appropriately applied, it is quite impossible for its effect to be commonplace, mean or unpleasing. It adds to the copiousness of language by the interchange of words and by borrowing, and finally succeeds in accomplishing the supremely difficult task of providing a name for everything. A noun or a verb is transferred from the place to which it properly belongs to another where there is either no *literal* term or the *transferred* is

better than the *literal*.

[6] aut quia necesse est aut quia significantius est aut (ut dixi) quia decentius. ubi nihil horum praestabit, quod transferetur, improprium erit. necessitate rustici gemmam id vitibus (quid enim dicerent aliud?), et sitire segetes et fructus laborare; necessitate nos durum hominem aut asperum; non enim proprium erat, quod daremus his adfectibus, nomen.

[6] We do this either because it is necessary or to make our meaning clearer or, as I have already said, to produce a decorative effect. When it secures none of these results, our metaphor will be out of place. As an example of a necessary metaphor I may quote the following usages in vogue with peasants when they call a vinebud *gemma*, a gem (what other term is there which they could use?), or speak of the *crops being thirsty* or the *fruit suffering*. For the same reason we speak of a *hard* or *rough* man, there being no *literal* term for these temperaments.

[7] iam incensum ira et inflammatum cupiditate et lapsum errore significandi gratia; nihil enim horum suis verbis quam his arcessitis magis proprium erit. illa ad ornatum, lumen orationis et generis claritatem et contionum procillas et eloquentiae fulmina, ut Cicero pro Milone Clodium fontem gloriae eius vocat et alio loco segetem ac materiem.

[7] On the other hand, when we say that a man is *kindled to anger* or *on fire with greed* or that he has *fallen into error*, we do so to enhance our meaning. For none of these things can be more literally described in its own words than in those which we import from elsewhere. But it is a purely ornamental metaphor when we speak of *brilliance of style*, *splendour of birth*, *tempestuous public assemblies*, *thunderbolts of eloquence*, to which I may add the phrase employed by Cicero in his defence of Milo where he speaks of Clodius as the *fountain*, and in another place as *the fertile field and material* of his client's *glory*.

[8] quaedam etiam parum speciosa dictu per hanc explicantur:

hoc faciunt, nimio ne luxu obtunsior usus

sit genitali arvo et sulcos oblimet inertes.

| totum autem metaphora brevior est similitudo, eoque distat, quod illa comparatur rei quam volumus exprimere, haec pro ipsa re dicitur.

[8] It is even possible to express facts of a somewhat unseemly character by a judicious use of metaphor, as in the following passage:

“This do they lest too much indulgence make
The field of generation slothful grow
And choke its idle furrows.
“

On the whole *metaphor* is a shorter form of *simile*, while there is this further difference, that in the latter we compare some object to the thing which we wish to describe, whereas in the former this object is actually substituted for the thing.

[9] comparatio est, cum dico fecisse quid hominem ut leonem; translatio, cum dico de homine, leo est. huius vis omnis quadruplex maxime videtur: cum id rebus animalibus aliud pro alio ponitur, ut de agitatore,

gubernator magna contorsit equum vi;

aut ut Livius Scipionem a Catone adlatrari solitum refert.

[9] It is a comparison when I say that a man did something *like a lion*, it is a metaphor when I say of him, *He is a lion*. Metaphors fall into four classes. In the first we substitute one living thing for another, as in the passage where the poet, speaking of a charioteer, says,

“The steersman then
With mighty effort wrenched his charger round.
“

or when Livy says that Scipio was continually *barked at* by Cato.

[10] inanima pro aliis generis eiusdem sumuntur, ut:

classique immittit habenas;

aut pro rebus animalibus inanima,

ferron an fato moerus Argivom occidit?

aut contra:

sedet inscius alto

accipiens sonitum saxi de uertice pastor.

Praecipueque ex his oritur mira sublimitas,

[10] Secondly, inanimate things may be substituted for inanimate, as in the Virgilian.

And gave his fleet the rein,

Aen. vi. 1.

or inanimate may be substituted for animate, as in

Did the Argive bulwark fall by sword or fate?

From an unknown tragedian.

or animate for inanimate, as in the following lines:

The shepherd sits unknowing on the height
Listening the roar from some far mountain
brow.

Aen. ii. 307.

[11] quae audaci et proxime periculum translatione tolluntur, cum rebus sensu carentibus actum quendam et animos damus, qualis est

pontem indignatus Araxes,

et illa Ciceronis,

[11] But, above all, effects of extraordinary sublimity are produced when the theme is exalted by a bold and almost hazardous metaphor and inanimate objects are given life and action, as in the phrase

Araxes' flood that scorns a bridge,

Aen. viii. 728.

or in the passage of Cicero, already quoted,

[12] quid enim tuus ille, Tubero, destructus id acie Pharsalica gladius agebat? cuius latus ille mucro petebat? qui sensus erat armorum tuorum? duplicatur interim haec virtus, ut apud Vergilium,

ferrumque armare veneno.

Nam et veneno armare et ferrum armare translatio est. secantur haec id plures species:

[12] where he cries, "What was that sword of yours doing, Tubero, the sword you drew on the field of Pharsalus? Against whose body did you aim its point? What meant those arms you bore?" Sometimes the effect is doubled, as in Virgil's.

And with venom arm the steel.

Aen. ix. 773.

For both "to arm the steel" and "to arm with venom" are metaphors.

[13] ut a rationali ad rationale et item de irrationalibus, et haec invicem, quibus similis ratio est, et a toto et a partibus. sed iam non pueris praecipimus, ut accepto genere species intelligere non possint.

[13] These four kinds of metaphor are further subdivided into a number of *species*, such as transference from rational beings to rational and from irrational to irrational and the reverse, in which the method is the same, and

finally from the whole to its parts and from the parts to the whole. But I am not now teaching boys: my readers are old enough to discover the *species* for themselves when once they have been given the *genus*.

[14] Vt modicus autem atque opportunus eius usus illustrat orationem, ita frequens et obscurat et taedio complet, continuus vero id allegorias et aenigmata exit. sunt etiam quaedam et humiles translationes, ut id de quo modo dixi, saxea est verruca, et sordidae.

[14] While a temperate and timely use of metaphor is a real adornment to style, on the other hand, its frequent use serves merely to obscure our language and weary our audience, while if we introduce them in one continuous series, our language will become allegorical and enigmatic. There are also certain metaphors which fail from meanness, such as that of which I spoke above:

“There is a rocky wart upon the mountain’s
brow.
“

or they may even be coarse. For it does not follow that because Cicero was perfectly justified in talking of “the sink of the state,” when he desired to indicate the foulness of certain men, we can approve the following passage from an ancient orator: “You have lanced the boils of the state.”

[15] non enim, si Cicero recte sentinam rei publicae dixit, foeditatem hominum significans, idcirco probem illud quoque veteris oratoris, persecuisti rei publicae vomicas. optimeque Cicero demonstrat cavendum, ne sit deformis translatio, (qualis est — nam ipsis eius utar exemplis — castratam morte Africani rem publicam, et stercus curiae Glauciam) ne nimio maior aut,

[15] Indeed Cicero himself has demonstrated in the most admirable manner how important it is to avoid grossness in metaphor, such as is revealed by the following examples, which he quotes:— “The state was gelded by the death of Africanus,” or “Glaucia, the excrement of the senate-house.”

[16] quod saepius accidit, minor, ne dissimilis. quorum exempla nimium frequenter deprehendet, qui scierit haec vitia esse. sed copia quoque modum egressa vitiosa est, praecipue id eadem specie.

[16] He also points out that a metaphor must not be too great for its subject or, as is more frequently the case, too little, and that it must not be inappropriate. Anyone who realises that these are faults, will be able to detect instances of them only too frequently. But excess in the use of metaphor is also a fault, more especially if they are of the same species.

[17] sunt et durae, id est a longinqua similitudine ductae, ut capitis nives et iuppiter hibernas cana nive conspuit Alpes.

| illo vero plurimum erroris, quod ea, quae poetis, qui et omnia ad voluptatem referunt et plurima vertere etiam ipsa metri necessitate coguntur, permissa sunt, convenire quidam etiam prosae putant.

[17] Metaphors may also be harsh, that is, far-fetched, as in phrases like “the snows of the head” or

Jove with white snow the wintry Alps bespewed.

From Furius, an old epic poet of the second century (not Furius Bibaculus), cp. Hor. S. ii. v. 11.

The worst errors of all, however, originate in the fact that some authors regard it as permissible to use even in prose any metaphors that are allowed to poets, in spite of the fact that the latter aim solely at pleasing their readers and are compelled in many cases to employ metaphor by sheer metrical necessity.

[18] at ego id agendo nec pastorem populi auctore Homero dixerim, nec volucres per aera nare, licet hoc Vergilius id apibus ac Daedalo speciosissime sit usus. metaphora enim aut vacantem occupare locum debet aut, si id alienum venit, plus valere eo quod expellet.

[18] For my own part I should not regard a phrase like “the shepherd of the people” as admissible in pleading, although it has the authority of Homer, nor would I venture to say that winged creatures “swim through the air,” despite the fact that this metaphor has been most effectively employed by Virgil to describe the flight of bees and of Daedalus.¹ For metaphor should always either occupy a place already vacant, or if it fills the room of something else, should be more impressive than that which it displaces.

[19] quod aliquanto etiam magis de synecdoche dicam. nam translatio permovendis animis plerumque et signandis rebus ac sub oculos subiiciendis reperta est. haec variare sermonem potest, ut ex uno plures intelligamus, parte totum, specie genus, praecedentibus sequentia, vel omnia haec contra; liberior poetis quam oratoribus.

[19] What I have said above applies perhaps with even greater force to *synecdoche*. For while *metaphor* is designed to move the feelings, give special distinction to things and place them vividly before the eye, *synecdoche* has the power to give variety to our language by making us realise many things from one, the whole from a part, the *genus* from a *species*, things which follow from things which have preceded; or, on the other hand, the whole procedure may be reversed. It may, however, be more freely employed by poets than by orators.

[20] nam prosa, ut mucronem pro gladio et lectum pro domo recipiet, ita non puppim pro navi nec abietem pro tabellis; et rursus, ut pro gladio ferrum, ita non pro equo quadrupedem. maxime autem id orando valebit numerorum illa

libertas. nam et Livius saepe sic dicit, Romanus proelio victor, cum Romanos vicisse significat; et contra Cicero ad Brutum, populo, inquit, imposuimus et oratores visi sumus, cum de se tantum loqueretur.

[20] For while in prose it is perfectly correct to use *macro*, the point, for the whole sword, and *tectum*, roof, for a whole house, we may not employ *puppis*, stern, to describe a ship, nor *abies*, fir, to describe planks; and again, though *ferrum*, the steel, may be used to indicate a sword, *quadripes* cannot be used in the sense of horse. It is where numbers are concerned that *synecdoche* can be most freely employed in prose. For example, Livy frequently says, "The Roman won the day," when he means that the *Romans* were victorious; on the other hand, Cicero in a letter to Brutus says, "We have imposed on the people and are regarded as orators," when he is speaking of himself alone.

[21] quod genus non orationis modo ornatus, sed etiam cotidiani sermonis usus recipit. quidam synecdochen vocant et cum id id contextu sermonis quod tacetur accipimus; verbum enim ex verbis intelligi, quod inter vitia ellipsis vocatur:

arcades ad portas ruere.

Mihi hanc figuram esse magis placet;

[21] This form of *trope* is not only a rhetorical ornament, but is frequently employed in everyday speech. Some also apply the term *synecdoche* when something is assumed which has not actually been expressed, since one word is then discovered from other words, as in the sentence,

The Arcadians to the gates began to rush;

Aen. xi. 142. A false explanation of the historic infinitive as involving the omission of some such word as coeperunt.

when such omission creates a blemish, it is called an *ellipse*.

[22] illic ergo reddetur. aliud etiam intelligitur ex alio:

aspice, aratra iugo referunt suspensa iuenci,

unde apparet noctem appropinquare. id nescio an oratori conveniat nisi id argumentando, cum rei signum est. sed hoc ab elocutionis ratione distat.

[22] For my own part, I prefer to regard this as a figure, and shall therefore discuss it under that head. Again, one thing may be suggested by another, as in the line,

Behold, the steers

Bring back the plough suspended from the
yoke,

from which we infer the approach of night. I am not sure whether this is permissible to an orator except in arguments, when it serves as an indication of some fact. However, this has nothing to do with the question of style.

[23] nec procul ab hoc genere discedit metonymia, quae est nominis pro nomine positio, sed, ut ait Cicero, hypallagen rhetores dicunt. haec inventas ab inventore et subiectas res ab obtinentibus significat: ut

cererem corruptam undis,

et

receptus

terra Neptunus classes Aquilonibus arcet.

Quod fit retrorsum durius.

[23] It is but a short step from *synecdoche* to *metonymy*, which consists in the substitution of one name for another, and, as Cicero tells us, is called *hypallage* by the rhetoricians. These devices are employed to indicate an invention by substituting the name of the inventor, or a possession by substituting the name of the possessor. Virgil, for example, writes:

“Ceres by water spoiled,
“

and Horace:

Neptune admitted to the land
Protects the fleets from blasts of Aquilo.

A. P. 63.

If, however, the process is reversed, the effect is harsh.

[24] refert autem id quantum hic tropus oratorem sequatur. nam ut Vulcanum pro igne vulgo audimus, et vario Marte pugnatum eruditus est sermo, et Venerem quam coitum dixisse magis decet, ita liberum et Cererem pro vino et pane licentius quam ut fori severitas ferat. sicut ex eo, quod continetur, usus recipit bene moratas urbes et poculum epotum et saeculum felix;

[24] But it is important to enquire to what extent *tropes* of this kind should be employed by the orator. For though we often hear “Vulcan” used for fire and to say *vario Marte pugnatum est* for “they fought with varying success” is elegant and idiomatic, while *Venus* is a more decent expression than *coitus*, it would be too bold for the severe style demanded in the courts to speak of *Liber* and *Ceres* when we mean bread and wine. Again, while usage permits us to substitute that which contains for that which is contained, as in phrases

such as “civilised cities,” or “a cup was drunk to the lees,” or “a happy age,”

[25] at id, quod contra est, raro audeat quis, nisi poeta:

iam proximus ardet Ucalegon.

Nisi forte hoc potius est, a possessore quod possidetur, ut hominem devorari, cuius patrimonium consumatur. quo modo fiunt innumerabiles species.

[25] the converse procedure would rarely be ventured on by any save a poet: take, for example, the phrase:

Ucalegon burns next.

Aen. ii. 311.

It is, however, perhaps more permissible to describe what is possessed by reference to its possessor, as, for example, to say of a man whose estate is being squandered, “the man is being eaten up.” Of this form there are innumerable species.

[26] huius enim sunt generis, cum ab Hannibale caesa apud Cannas sexaginta milia dicimus, et carmina Vergilii Vergilium; venisse commeatus, qui adferantur; sacrilegium deprehensum, non sacrilegum; armorum scientiam habere, non artis.

[26] For example, we say “sixty thousand men were slain by Hannibal at Cannae,” and speak of “Virgil” when we mean “Virgil’s poems”; again, we say that supplies have “come,” when they have been “brought,” that a “sacrilege,” and not a “sacrilegious man” has been detected, and that a man possesses a knowledge of “arms,” not of “the art of arms.”

[27] illud quoque et poetis et oratoribus frequens, quo id, quod efficit, ex eo, quod efficitur, ostendimus. nam et carminum auctores,

pallida mors aequo pulsat pede pauperum tabernas,

et

pallentesque habitant morbi tristicque senectus,

et orator praecipitem iram, hilarem adolescentiam, segne otium dicet.

[27] The type which indicates cause by effect is common both in poets and orators. As examples from poetry I may quote:

Pale death with equal foot knocks at the poor man’s door

Hor. Od. I. iv. 13.

and

There pale diseases dwell and sad old age;

while the orator will speak of “headlong anger”,
“cheerful youth” or “slothful ease”.

[28] est etiam huic tropo quaedam cum synecdoche vicinia. nam, cum dico vultus hominis pro vultu, dico pluraliter quod singulare est; sed non id ago, ut unum ex multis intelligatur (nam id est manifestum), sed nomen immuto; et cum aurata tecta aurea, pusillum a vero discedo, quia non est nisi pars auratura. quae singula persequi minutioris est curae etiam non oratorem instruentibus. antonomasia,

[28] The following type of *trope* has also some kinship with *synecdochè*. For when I speak of a man’s “looks” instead of his “look,” I use the plural for the singular, but my aim is not to enable one thing to be inferred from many (for the sense is clear enough), but I merely vary the form of the word. Again, when I call a “gilded roof” a “golden roof,” I diverge a little from the truth, because gilding forms only a part of the roof. But to follow out these points is a task involving too much minute detail even for a work whose aim is not the training of an orator.

[29] quae aliquid pro nomine ponit, poetis utroque modo frequentissima, et per epitheton, quod detracto eo, cui apponitur, valet pro nomine, Tydides, Pelides: et ex his, quae id quoque sunt praecipua,

divum pater atque hominum rex;

et ex factis, quibus persona signatur,

thalamo quae fixa reliquit

impius.

Oratoribus etiamsi rarus eius rei,

[20] *Antonomasia*, which substitutes something else for a proper name, is very common in poets: it may be done in two ways: by the substitution of an epithet as equivalent to the name which it replaces, such as “Tydides,” “Pelides,” or by indicating the most striking characteristics of an individual, as in the phrase

Father of gods and king of men,

Aen. i. 65.

or from acts clearly indicating the individual, as in the phrase,

The arms which he, the traitor, left
Fixed on the chamber wall.

Aen. iv. 495. This third example does not correspond with the twofold division

given by *utroque* and may be *spurious*.

This form of *trope* is rare in oratory,

[30] nonnullus tamen usus est. nam ut Tydiden et Peliden non dixerint, ita dixerint impios et parricidas; eversorem quoque Carthaginis et Numantiae pro Scipione et Romanae eloquentiae principem pro Cicerone posuisse non dubitem. ipse certe usus est hac libertate: non multa peccas, inquit ille fortissimo viro senior magister; neutrum enim nomen est positum et utrumque intelligitur.

onomatopoeia quidem,

[30] but is occasionally employed, For although an orator would not say “Tydides” or “Pelides,” he will speak of certain definite persons as “the impious parricides,” while I should have no hesitation in speaking of Scipio as “the destroyer of Carthage and Numantia,” or of Cicero as “the prince of Roman orators.” Cicero himself, at any rate, availed himself of this licence, as, for example, in the following case: “Your faults are not many, said the old praeceptor to the hero,” where neither name is given, though both are clearly understood.

[31] id est fictio nominis, Graecis inter maximas habita virtutes, nobis vix permittitur. Et sunt plurima ita posita ab iis, qui sermonem primi fecerunt aptantes affectibus vocem. nam *mugitus* et *sibilus* et *murmur* inde venerunt.

[31] On the other hand, *onomatopoea*, that is to say, the creation of a word, although regarded with the highest approbation by the Greeks, is scarcely permissible to a Roman. It is true that many words were created in this way by the original founders of the language, who adapted them to suit the sensation which they expressed. For instance, *mugitus*, lowing, *sibilus*, a hiss, and *murmur* owe their origin to this practice.

[32] deinde, tanquam consummata sint omnia, nihil generare audemus ipsi, cum multa cotidie ab antiquis ficta moriantur. vix illa, quae πεποιημένα vocant, quae ex vocibus id usum receptis quocunque modo declinantur, nobis permittimus, qualia sunt *sullaturit* et *proscripturit*; atque laureati postes pro illo lauru coronati, ex eadem fictione sunt.

[32] But to-day we consider that all has been done that can be done in this line, and do not venture on fresh creations, in spite of the fact that many of the words thus formed in antiquity are daily becoming obsolete. Indeed, we scarcely permit ourselves to use new derivatives, so they are called, which are formed in various ways from words in common use, such as *Sullaturit*, “he wishes to be a second Sulla,” or *proscripturit*, “he wishes to have a proscription,” while *laureati postes*, “laurelled door-posts,” for *lauru coronati*, “crowned with laurel,” are similar formations.

[33] sed hoc feliciter evaluit* adoinoia et uio eo ferimus id Graecis
ocoeludituinobono eo dure etiam iungere, arquitenentem et videre
septentriones videmur

[33] * * * * *

[34] eo magis necessaria catachresis, quam recte dicimus abusionem, quae non
habentibus nomen suum accommodat quod id proximo est: sic

equum divina Palladis arte

aedificant,

et apud Tragicos aegialeo parentat pater.

[34] These facts make *catachresis* (of which *abuse* is a correct translation) all
the more necessary. By this term is meant the practice of adapting the nearest
available term to describe something for which no actual term exists, as in the
line

A horse they build by Pallas' art divine,

*Aen. II. xv. It is an abuse to say aedflicant, which means literally "they make a
house.*

or as in the expression found in tragedy,

"To Aigialeus

His sire bears funeral offerings,

"

The following examples are of a similar character.

[35] similia sunt haec: acetabula quidquid habent, et pyxides cuiuscunque
materiae sunt, et parricida matris quoque aut fratris interfector.
discernendumque est hoc totum a translatione genus, quod abusio est, ubi
nomen defuit, translatio, ubi aliud fuit. nam poetae solent abusive etiam id his
rebus, quibus nomina sua sunt, vicinis potius uti; quod rarum id prosa est.

[35] Flasks are called *acetabula*, whatever they contain, and caskets *pyxides*, of
whatever material they are made, while *parricide* includes the murder of a
mother or a brother. We must be careful to distinguish between *abuse* and
metaphor, since the former is employed where there is no proper term
available, and the latter when there is another term available. As for poets,
they indulge in the abuse of words even in cases where proper terms do exist,
and substitute words of somewhat similar meaning. But this is rare in prose.

[36] illa quoque quidam catachresis volunt esse, cum pro temeritate virtus aut
pro luxuria liberalitas dicitur. A quibus ego quidem dissentio; namque id his
non verbum pro verbo ponitur, sed res pro re. neque enim quisquam putat

luxuriam et liberalitatem idem significare; verum id quod fit alius luxuriam esse dicit, alius liberalitatem, quamvis neutri dubium sit haec esse diversa.

[36] Some, indeed, would give the name of *catachresis* even to cases such as where we call temerity valour or prodigality liberality. I, however, cannot agree with them; for in these instances word is not substituted for word, but thing for thing, since no one regards prodigality and liberality as meaning the same, but one man calls certain actions liberal and another prodigal, although neither for a moment doubts the difference between the two qualities.

[37] superest ex his, quae aliter significant, metalepsis, id est transumptio, quae ex alio tropo id alium velut viam praestat; * nisi id comoediis et rarissimus et improbissimus, Graecis tamen frequentior, qui Centaurum qui Χείρων est Ἴησσονα et insulas Ὀξείας θοάς⁷² dicunt. nos quis ferat, si Verrem suum aut Aelium Catum doctum nominemus?

[37] There is but one of the *tropes* involving change of meaning which remains to be discussed, namely, *metalepsis* or *transumption*, which provides a transition from one *trope* to another. It is (if we except comedy) but rarely used in Latin, and is by no means to be commended, though it is not infrequently employed by the Greeks, who, for example, call Χείρων the centaur Ἴησσων and substitute the epithet θοαί (swift) for Ὀξείαι in referring to sharp-pointed islands. But who would endure a Roman if he called Verres *sus* or changed the name of Aelius Catus to Aelius *doctus*?

[38] est enim haec id metalepsi natura, ut inter id quod transfertur et id quod transfertur sit medius quidam gradus, nihil ipse significans sed praebens transitum; quem tropum magis adfectamus, ut habere videamur, quam ullo id loco desideramus. nam id eius frequentissimum exemplum est cano canto, canto dico; ita cano, dice.

[38] It is the nature of *metalepsis* to form a kind of intermediate step between the term transferred and the thing to which it is transferred, having no meaning in itself, but merely providing a transition. It is a *trope* with which to claim acquaintance, rather than one which we are ever likely to require to use. The commonest example is the following: *cano* is a synonym for *canto* and *canto* for *dico*, therefore *cano* is a synonym for *dico*, the intermediate step being provided by *canto*.

[39] interest medium illud canto. nec diutius id eo morandum; nihil enim usus admodum video nisi, ut dixi, id comoediis.

[39] We need not waste any more time over it. I can see no use in it except, as I have already said, in comedy.

[40] cetera iam non significandi gratia sed ad ornandam et aagendam orationem assumuntur. ornat enim epitheton, quod recte dicimus appositum, a nonnullis sequens dicitur. eo poetae et frequentius et liberius utuntur. namque illis satis

est convenire id verbo, cui apponitur, itaque et dentes albos et humida vina id iis non reprehendemus; apud oratorem, nisi aliquid efficitur, redundat. tum autem efficitur, si sine illo, quod dicitur, minus est:

[40] The remaining *tropes* are employed solely to adorn and enhance our style without any reference to the meaning. For the *epithet*, of which the correct translation is *appositum*, though some call it *sequens*, is clearly an ornament. Poets employ it with special frequency and freedom, since for them it is sufficient that the epithet should suit the word to which it is applied: consequently we shall not blame them when they speak of “white teeth” or “liquid wine.” But in oratory an epithet is redundant unless it has some point. Now it will only have point when it adds something to the meaning, as for instance in the following: “O abominable crime, O hideous lust!”

[41] qualia sunt O scelus abominandum, o deformem libidinem. exornatur autem res tota maxime translationibus, cupiditas effrenata et insanae substructiones. Et solet fieri aliis adiunctis epitheton tropus, ut apud Vergilium turpis egestas et tristis senectus. verum tamen talis est ratio huiusce virtutis, ut sine appositis nuda sit et velut incompta oratio, oneretur tamen multis.

[41] But its decorative effect is greatest when it is metaphorical, as in the phrases “unbridled greed” or “those mad piles of masonry.” The epithet is generally made into a *trope* by the addition of something to it, as when Virgil speaks of “disgraceful poverty” or “sad old age.” But the nature of this form of embellishment is such that, while style is bare and inelegant without any epithets at all, it is overloaded when a large number are employed.

[42] nam fit longa et impedita, ut id quaestionibus eam iudices similem agmini totidem lixas habenti quot milites, cui et numerus est duplex nec duplum virium; quanquam non singula modo sed etiam plura verba apponi solent: ut

coniugio Anchise Veneris dignate superbo.

Sed hoc quocunque modo:

[42] For then it becomes long-winded and cumbrous, in fact you might compare it to an army with as many camp-followers as soldiers, an army, that is to say, which has doubled its numbers without doubling its strength. None the less, not merely single epithets are employed, but we may find a number of them together, as in the following passage from Virgil:

“Anchises, worthy deigned
Of Venus’ glorious bed, [beloved of heaven,
Twice rescued from the wreck of Pergamum.]
“

[43] duo vero uni apposita ne uersum quidem decuerint. sunt autem, quibus non videatur hic omnino tropus, quia nihil vertat. nec est semper, sed id quod est appositum, si a proprio divideris, per se significat et facit antonomasiam. nam si dicas, ille qui Numantiam et Carthaginem evertit, antonomasia est; si adieceris Scipio, appositum. non potest ergo esse seiunctum.

[43] Be this as it may, two epithets directly attached to one noun are unbecoming even in verse. There are some writers who refuse to regard an *epithet* as a *trope*, on the ground that it involves no change. It is not always a *trope*, but if separated from the word to which it belongs, it has a significance of its own and forms an *antonomasia*. For if you say, "The man who destroyed Numantia and Carthage," it will be an *antonomasia*, whereas, if you add the word "Scipio," the phrase will be an *epithet*. An epithet therefore cannot stand by itself.

[44] allegoria, quam inversionem interpretantur, aut aliud verbis aliud sensu ostendit aut etiam interim contrarium. prius fit genus plerumque continuatis translationibus, ut

O navis, referent id mare te novi

fluctus; o quid agis? fortiter occupa

portum,

totusque ille Horatii locus, quo navem pro re publica, fluctus et tempestates pro bellis civilibus, portum pro pace atque concordia dicit.

[44] *Allegory*, which is translated in Latin by *inversio*, either presents one thing in words and another in meaning, or else something absolutely opposed to the meaning of the words. The first type is generally produced by a series of metaphors. Take as an example:

O ship, new waves will bear thee back to sea.

What dost thou? Make the haven, come what may,

Hor. Od. i. xiv. 1.

and the rest of the ode, in which Horace represents the state under the semblance of a ship, the civil wars as tempests, and peace and good-will as the haven.

[45] tale Lucretii

avia Pieridum peragro loca,

et Vergilii

sed nos immensum spatiis confecimus aequor,

Et iam tempus equum fumantia solvere colla.

[45] Such, again, is the claim of Lucretius:

“Pierian fields I range untrod by man,
“

and such again the passage where Virgil says,

But now

A mighty length of plain we have travelled o’er;
’Tis time to loose our horses’ steaming necks.

Georg. II. 541.

[46] sine translatione vero id Bucolicis

certe equidem audieram, qua se subducere colles

incipient mollique iugum demittere clivo

usque ad aquam et ueteris iam fracta cacumina fagi,

omnia carminibus vestrum servasse Menalcas.

[46] On the other hand, in the *Bucolics* he introduces an allegory without any metaphor:

“Truth, I had heard

Your loved Menalcas by his songs had saved

All those fair acres, where the hills begin

To sink and droop their ridge with easy slope

Down to the waterside and that old beech

With splintered crest.

“

[47] hoc enim loco praeter nomen cetera propriis decisa sunt verbis, verum non pastor Menalcas, sed Vergilius est intelligendus. habet usum talis allegoriae frequenter oratio, sed raro totius; plerumque apertis permixta est. tota apud Ciceronem talis est: hoc miror, hoc queror, quemquam hominem ita pessumdare alterum velle, ut etiam narem perforet, id qua ipse naviget. illud commixtum frequentissimum:

[47] For in this passage, with the exception of the proper name, the words bear no more than their literal meaning. But the name does not simply denote the shepherd Menalcas, but is a pseudonym for Virgil himself. Oratory makes frequent use of such allegory, but generally with this modification, that there is an admixture of plain speaking. We get allegory pure and unadulterated in the following passage of Cicero: “What I marvel at and complain of is this, that there should exist any man so set on destroying his enemy as to scuttle

the ship on which he himself is sailing.”

[48] equidem celeras tempestates et procellas id illis dumtaxat fluctibus contionum semper Miloni putavi esse subeundas. nisi adiecisset dumtaxat fluctibus contionum, esset allegoria; nunc eam miscuit. quo id genere et species ex arcessitis verbis venit et intellectus ex propriis.

[48] The following is an example of the commonest type, namely, the mixed allegory: “I always thought that Milo would have other storms and tempests to weather, at least in the troubled waters of political meetings.” Had he not added the words “at least in the troubled waters of political meetings,” we should have had pure allegory: their addition, however, converted it into a mixed allegory. In this type of allegory the ornamental element is provided by the metaphorical words and the meaning is indicated by those which are used literally.

[49] illud vero longe speciosissimum genus orationis, id quo trium permixta est gratia, similitudinis, allegoriae, translationis: quod fretum, quem Euripum, tot motus, tantas, tam varias habere creditis agitationes, commutationes, fluctus, quantas perturbationes et quantos aestus habet ratio comitiorum? dies intermissus unus aut nox interposita saepe et perturbat omnia et totam opinionem parva nonnunquam commutat aura rumoris. nam id quoque id primis est custodiendum ut,

[49] But far the most ornamental effect is produced by the artistic admixture of simile, metaphor and allegory, as in the following example: “What strait, what tide-race, think you, is full of so many conflicting motions or vexed by such a variety of eddies, waves and fluctuations, as confuse our popular elections with their wild ebb and flow? The passing of one day, or the interval of a single night, will often throw everything into confusion, and one little breath of rumour will sometimes turn the whole trend of opinion.

[60] quo ex genere coeperis translationis, hoc desinas. multi autem, cum initium a tempestate sumpserunt, incendio aut ruina finiunt; quae est inconsequentia rerum foedissima.

[50] “ For it is all-important to follow the principle illustrated by this passage and never to mix your metaphors. But there are many who, after beginning with a tempest, will end with a fire or a falling house, with the result that they produce a hideously incongruous effect.

[51] ceterum allegoria parvis quoque ingeniis et cotidiano sermoni frequentissime servit. nam illa id agendis causis iam detrita, pedem conferre et iugulum petere et sanguinem mittere, inde sunt, nec offendunt tamen. est enim grata id eloquendo novitas et emutatio, et magis inopinata delectant. ideoque iam id his amissimus modum et gratiam rei nimia captatione consumpsimus.

[51] For the rest, allegory is often used by men of little ability and in the

conversation of everyday life. For those hackneyed phrases of forensic pleading, “to fight hand to hand,” “to attack the throat,” or “to let blood” are all of them allegorical, although they do not strike the attention: for it is novelty and change that please in oratory, and what is unexpected always gives special delight. Consequently we have thrown all restraint to the wind in such matters, and have destroyed the charm of language by the extravagant efforts which we have made to attain it.

[52] est id exemplis allegoria, si non praedicta ratione ponantur. nam ut Dionysium Corinthi esse, quo Graeci omnes utuntur, ita plurima similia dici possunt. sed allegoria, quae est obscurior, aenigma dicitur; vitium meo quidem iudicio, si quidem dicere dilucide virtus; quo tamen et poetae utuntur:

dic, quibus id ferris, et eris mihi magnus Apollo,

tres pateat caeli spatium non amplius ulnas?

et oratores nonnunquam,

[52] Illustrative examples also involve allegory if not preceded by an explanation; for there are numbers of sayings available for use like the “Dionysius is at Corinth,” which is such a favourite with the Greeks. When, however, an allegory is too obscure, we call it a riddle: such riddles are, in my opinion, to be regarded as blemishes, in view of the fact that lucidity is a virtue; nevertheless they are used by poets, as, for example, by Virgil in the following lines:

“Say in what land, and if thou tell me true,
I’ll hold thee as Apollo’s oracle,
Three ells will measure all the arch of heaven.
“

Even orators sometimes use them,

[53] ut Caelius quadrantariam Clytaemnestram, et id triclinio coam, id cubiculo nolam. namque et nunc quidem solvuntur et tum erant notiora, cum dicerentur; aenigmata sunt tamen, nam et cetera si quis interpretetur, intelligas. | eo vero genere,

[53] as when Caelius speaks of the “Clytemnestra who sold her favours for a farthing, who was a Coan in the dining-room and a Nolan in her bedroom.” For although we know the answers, and although they were better known at the time when the words were uttered, they are riddles for all that; and other riddles are, after all, intelligible if you can get someone to explain them.

[54] quo contraria ostenduntur, ironia est; illusionem vocant. quae aut pronuntiatione intelligitur aut persona aut rei natura; nam, si qua earum verbis dissentit, apparet diversam esse orationi voluntatem.

[54] On the other hand, that class of allegory in which the meaning is contrary to that suggested by the words, involve an element of irony, or, as our rhetoricians call it, *illusio*. This is made evident to the understanding either by the delivery, the character of the speaker or the nature of the subject. For if any one of these three is out of keeping with the words, it at once becomes clear that the intention of the speaker is other than what he actually says. In the majority of *tropes* it is, however,

[55] *quanquam id plurimis id tropis accidit, ut intersit, quid de quoque dicatur, quia quod dicitur alibi verum est. Et laudis adsimulatione detrahare et vituperationis laudare concessum est: quod C. Verres, praetor urbanus, homo sanctus et diligens, subortitionem eius id codice non haberet. Et contra: oratores visi sumus et populo imposuimus.*

[55] important to bear in mind not merely what is said, but about whom it is said, since what is said may in another context be literally true. It is permissible to censure with counterfeited praise and praise under a pretence of blame. The following will serve as an example of the first. "Since Gaius Verres, the urban praetor, being a man of energy and blameless character, had no record in his register of this substitution of this man for another on the panel." As an example of the reverse process we may take the following: "We are regarded as orators and have imposed on the people."

[56] *aliquando cum id risu quodam contraria dicuntur iis quae intelligi volunt: quale est id Clodium, integritas tua te purgavit, mihi crede, pudor eripuit, vita antea servavit.*

[56] Sometimes, again, we may speak in mockery when we say the opposite of what we desire to be understood, as in Cicero's denunciation of Clodius: "Believe me, your well known integrity has cleared you of all blame, your modesty has saved you, your past life has been your salvation."

[67] *praeter haec usus est allegoriae, ut tristia dicamus mollioribus verbis urbanitatis gratia aut quaedam contrariis significemus aliud textum spectaco et enumeravimus. Haec si quis ignorat, quibus Graeci nominibus appellent, σαρκασμόν, ἄστεϊσμόν, ἀντιφράσιν, παροιμίαν dici sciat. sunt etiam,*

[57] Further, we may employ *allegory*, and disguise bitter taunts in gentle words by way of wit, or we may indicate our meaning by saying exactly the contrary or. . . If the Greek names for these methods are unfamiliar to any of my readers, I would remind him that they are *σαρκασμός*, *ἄστεϊσμός*, *ἀντιφράσις* and *παροιμία* (sarcasm, urbane wit, contradiction and proverbs).

[58] *qui haec non species allegoriae sed ipsa tropos dicant; acri quidem ratione, quod illa obscurior sit, id his omnibus aperte appareat quid velimus. cui accedit hoc quoque, quod genus, cum dividitur id species, nihil habet proprium, ut arbor pinus et olea et cupressus, et ipsius per se nulla proprietas;*

allegoria vero habet aliquid proprium. quod quo modo fieri potest, nisi ipsa species est? sed utentium nihil refert.

[58] There are, however, some writers who deny that these are species of *allegory*, and assert that they are actually *tropes* in themselves: for they argue shrewdly that allegory involves an element of obscurity, whereas in all these cases our meaning is perfectly obvious. To this may be added the fact that when a *genus* is divided into *species*, it ceases to have any peculiar properties of its own: for example, we may divide tree into its species, pine, olive, cypress, etc., leaving it no properties of its own, whereas allegory always has some property peculiar to itself. The only explanation of this fact is that it is itself a species. But this, of course, is a matter of indifference to those that use it.

[59] adiicitur his μυκτηρισμὸς dissimulatus quidam sed non latens derisus.

pluribus autem verbis cum id, quod uno aut paucioribus certe dici potest, explicatur, περιφρασίῳ vocant, circuitum quendam eloquendi, qui nonnunquam necessitatem habet, quotiens dictu deformia operit: ut Sallustius, ad requisita naturae.

[59] To these the Greeks add μυκτηρισμὸς or mockery under the thinnest of disguises.

When we use a number of words to describe something for which one, or at any rate only a few words of description would suffice, it is called *periphrasis*, that is, a circuitous mode of speech. It is sometimes necessary, being of special service when it conceals something which would be indecent, if expressed in so many words: compare the phrase “To meet the demands of nature” from Sallust.

[60] interim ornatum petit solum, qui est apud poetas frequentissimus:

tempus erat, quo prima quies mortalibus aegris

incipit et dono divum gratissima serpit.

Et apud oratores non rarus, semper tamen adstrictior.

[60] But at times it is employed solely for decorative effect, a practice most frequent among the poets:

Now was the time

When the first sleep to weary mortals comes

Stealing its way, the sweetest boon of heaven.

Aen. ii. 268.

[61] Quidquid enim significari brevius potest et cum ornatu latius ostenditur, περιφρασίς est, cui nomen Latine datum est non sane aptum orationis virtuti

circumlocutio. verum hoc ut, cum decorem habet, periphrasis, ita, cum id vitium incidit, περισσολογία dicitur. obstat enim quidquid non adiuvat.

[61] Still it is far from uncommon even in oratory, though in such cases it is always used with greater restraint. For whatever might have been expressed with greater brevity, but is expanded for purposes of ornament, is a *periphrasis*, to which we give the name *circumlocution*, though it is a term scarcely suitable to describe one of the virtues of oratory. But it is only called *periphrasis* so long as it produces a decorative effect: when it passes into excess, it is known as *perissology*: for whatever is not a help, is a positive hindrance.

[62] *hyperbaton* quoque, id est verbi transgressionem, quoniam frequenter ratio compositionis et decor poscit, non immerito inter virtutes habemus. fit enim frequentissime aspera et dura et dissoluta et hians oratio, si ad necessitatem ordinis sui verba redigantur et, ut quodque oritur, ita proximis, etiamsi vinciri non potest, adligetur.

[62] Again, *hyperbaton*, that is, the transposition of a word, is often demanded by the structure of the sentence and the claims of elegance, and is consequently counted among the ornaments of style. For our language would often be harsh, rough, limp or disjointed, if the words were always arranged in their natural order and attached each to each just as they occur, despite the fact that there is no real bond of union. Consequently some words require to be postponed, others to be anticipated, each being set in its appropriate place.

[63] differenda igitur quaedam et praesumenda, atque ut id structuris lapidum impolitorum loco, quo convenit, quodque ponendum. non enim recidere ea nec polire possumus, quo coagmentata se magis iungant, sed utendum iis, qualia sunt, eligendaeque sedes.

[63] For we are like those who build a wall of unhewn stone: we cannot hew or polish our words in order to make them fit more compactly, and so we must take them as they are and choose suitable positions for them.

[64] nec aliud potest sermonem facere numerosum quam opportuna ordinis permutatio; neque alio ceris Platonis inventa sunt quattuor illa verba, quibus id illo pulcherrimo operum id Piraeum se descendisse significat, plurimis modis scripta,

[64] Further, it is impossible to make our prose rhythmical except by artistic alterations in the order of words, and the reason why those four words in which Plato in the noblest of his works states that he had gone down to the Piraeus were found written in a number of different orders upon his wax tablets, was simply that he desired to make the rhythm as perfect as possible.

[65] quam quod eum quoque maxime numerosum facere experiretur. verum id cum id duobus verbis fit, ἀναστροφὴ dicitur, reversio quaedam: qualia sunt

vulgo, mecum, secum, apud oratores et historicos quibus de rebus. at cum decoris gratia traicitur longius verbum, proprie hyperbati tenet onem: animaduerti, iudices, omnem accusatoris orationem id duas diuisam esse partis. nam id duas partis diuisam esse rectum erat, sed durum et incomptum.

[65] When, however, the transposition is confined to two words only, it is called *anastrophe*, that is, a reversal of order. This occurs in everyday speech in *mecum* and *secure*, while in orators and historians we meet with it in the phrase *quibus de rebus*. It is the transposition of a word to some distance from its original place, in order to secure an ornamental effect, that is strictly called *hyperbaton*: the following passage will provide an example: animadverte, indices, omnem accusatoris orationem in duas *diuisam esse partes*. (“I noted, gentlemen, that the speech of the accuser was divided into two parts.”) In this case the strictly correct order would be *in duas partes diuisam esse*, but this would have been harsh and ugly.

[66] poetae quidem etiam verborum divisione faciunt transgressionem: Hyperboreo septem subiecta trioni, quod oratio nequaquam recipiet. atqui est propter quod dici tropus possit, quia componendus est e duobus intellectus.

[66] The poets even go so far as to secure this effect by the division of words, as in the line:

Hyperboreo septem subiecta trioni
(“Under the Hyperborean Wain”),

a licence wholly inadmissible in oratory. Still there is good reason for calling such a transposition a *trope*, since the meaning is not complete until the two words have been put together.

[67] alioqui, ubi nihil ex significatione mutatum est et structura sola variatur, figura potius verborum dici potest, sicut multi existimarunt. longis autem hyperbatis et confusis quae vitia accidunt, suo loco diximus.

hyperbolen audacioris ornatus summo loco posui. est haec decens veri superiectio; virtus eius ex diverso par augendi atque minuendi; fit pluribus modis.

[67] On the other hand, when the transposition makes no alteration in the sense, and merely produces a variation in the structure, it is rather to be called a *verbal figure*, as indeed many authorities have held. Of the faults resulting from long or confused *hyperbata* have spoken in the appropriate place.

I have kept *hyperbole* to the last, on the ground of its boldness. It means an elegant straining of the truth, and may be employed indifferently for exaggeration or attenuation. It can be used in various ways.

[68] aut enim plus facto dicimus, ut vomens frustis esculentis gremium suum et totum tribunal implevit, et

geminique minantur

| caelum scopuli;

aut res per similitudinem attollimus,

credas innare revulsas Cycladas;

[68] We may say more than the actual facts, as when Cicero says, “He vomited and filled his lap and the whole tribunal with fragments of food, or when Virgil speaks of

win rocks that threaten heaven.

Aen. i. 162.

Again, we may exalt our theme by the use of simile, as in the phrase:

Thou wouldst have deemed

That Cyclad isles uprooted swam the deep.

Aen. viii. 691.

[69] aut per comparationem, ut fulminis ocior alis; aut signis quasi quibusdam,

illa vel intactae segetis per summa volaret

gramina nec teneras cursu laeisset aristas;

vel translatione, ut ipsum illud volaret.

[69] Or we may produce the same result by introducing a comparison, as in the phrase:

Swifter than the levin’s wings;

Aen. v. 319.

or by the use of indications, as in the lines:

She would fly

Even o’er the tops of the unsickled corn,

Nor as she ran would bruise the tender ears.

Aen. vii. 808.

Or we may employ a metaphor, as the verb to *fly* is employed in the passage just quoted.

[70] crescit interim hyperbole alia insuper addita, ut Cicero id Antonium dicet, quae Charybdis tam vorax? charybdin dico? quae si fuit, fuit animal unum: Oceanus, medias fidiis, vix videtur tot res, tam dissipatas, tam distantibus id locis positas, tam cito absorbere potuisse.

[70] Sometimes, again, one *hyperbole* may be heightened by the addition of another, as when Cicero in denouncing Antony says: “What Charybdis was ever so voracious? Charybdis, do I say? Nay, if Charybdis ever existed, she was but a single monster. By heaven, even Ocean’s self, methinks, could scarce have engulfed so many things, so widely scattered in such distant places, in such a twinkling of the eye.”

[71] exquisitam vero figuram huius rei deprehendisse apud principem Lyricorum Pindarum videor id libro, quem inscripsit ὕμνων. is namque Herculis impetum adversus Meropas, qui id insula Coo dicuntur habitasse, non igni nec ventis nec mari, sed fulmini dicit similem fuisse, ut illa minora, hoc par esset.

[71] I think, too, that I am right in saying that I noted a brilliant example of the same kind in the Hymns of Pindar, the prince of lyric poets. For when he describes the onslaught made by Hercules upon the Meropes, the legendary inhabitants of the island of Cos, he speaks of the hero as like not to fire, winds or sea, but to the thunderbolt, making the latter the only true equivalent of his speed and power, the former being treated as quite inadequate.

[72] quod imitatus Cicero illa composuit id Verrem versabatur id Sicilia longo intervallo alter non Dionysius ille nec Phalaris (tulit enim illa quondam insula multos et crudeles tyrannos), sed quoddam novum monstrum ex vetere illa immanitate, quae id isdem versata locis dicitur. non enim Charybdis tam infestam neque Scyllam nauibus quam istum id eodem freto fuisse arbitror.

[72] Cicero has imitated his method in the following passage from the Verrines: “After long lapse of years the Sicilians saw dwelling in their midst, not a second Dionysius or Phalaris (for that island has produced many a cruel tyrant in years gone by), but a new monster with all the old ferocity once familiar to those regions. For, to my thinking, neither Scylla nor Charybdis were ever such foes as he to the ships that sailed those same narrow seas.”

[73] nec pauciora sunt genera minuendi:

vix ossibus haerent,

et quod Cicero id quodam ioculari libello,

fundum Vetto uocat, quem possit mittere funda;

ni tamen exciderit, qua cava funda patet.

Sed huius quoque rei servetur mensura quaedam. quamvis est enim omnis hyperbole ultra fidem, non tamen esse debet ultra modum, nec alia via magis id κακοζήλιαν itur.

[73] The methods of hyperbole by attenuation are the same in number. Compare the Virgilian

Scarce cling they to their bones,

or the lines from a humorous work of Cicero's,

"Fundum Vetto vocat quem possit mittere funda;

Ni tamen exciderit, qua cava funda patet.

"

"Vetto gives the name of farm to an estate which might easily be hurled from a sling, though it might well fall through the hole in the hollow sling, so small is it."

But even here a certain proportion must be observed. For although every *hyperbole* involves the incredible, it must not go too far in this direction, which provides the easiest road to extravagant affectation.

[74] piget referre plurima hinc orta vitia, cum praesertim minime sint ignota et obscura. monere satis est mentiri hyperbolen nec ita, ut mendacio fallere velit. quo magis intuendum est, quousque deceat extollere quod nobis non creditur. pervenit haec res frequentissime ad risum; qui si captatus est, urbanitatis, sin aliter, stultitiae nomen assequitur.

[74] I shrink from recording the faults to which the lack of this sense of proportion has given rise, more especially as they are so well known and obvious. It is enough to say that *hyperbole* lies, though without any intention to deceive. We must therefore be all the more careful to consider how far we may go in exaggerating facts which our audience may refuse to believe. Again, *hyperbole* will often cause a laugh. If that was what the orator desired, we may give him credit for wit; otherwise we can only call him a fool.

[75] est autem id usu vulgo quoque et inter ineruditos et apud rusticos, videlicet quia natura est omnibus augendi res vel minuendi cupiditas insita, nec quisquam vero contentus est. sed ignoscitur, quia non adfirmamus.

[75] *Hyperbole* is employed even by peasants and uneducated persons, for the good reason that everybody has an innate passion for exaggeration or attenuation of actual facts, and no one is ever contented with the simple truth. But such disregard of truth is pardonable, for it does not involve the definite assertion of the thing that is not. *Hyperbole* is, moreover, a virtue,

[76] tum est hyperbole virtus, cum res ipsa, de qua loquendum est, naturalem modum excessit. conceditur enim amplius dicere, quia dici, quantum est, non potest, meliusque ultra quam citra stat oratio. sed de hoc satis, quia eundem locum plenius id eo libro, quo causas corruptae eloquentiae reddebamus, tractavimus.

[76] when the subject on which we have to speak is abnormal. For we are allowed to amplify, when the magnitude of the facts passes all words, and in such circumstances our language will be more effective if it goes beyond the

truth than if it falls short of it. However, I have said enough on this topic, since I have already dealt with it in my work on the causes of the decline of oratory.

LIBER IX — BOOK IX

1. cum sit proximo libro de tropis dictum, sequitur pertinens ad figuras, quae σχήματα Graece vocantur, locus ipsa rei natura coniunctus superiori.

1. In my last book I spoke of *tropes*. I now come to *figures*, called σχήματα in Greek, a topic which is naturally and closely connected with the preceding.

[2] nam plerique has tropos esse existimauerunt, quia, sive ex hoc duxerint nomen, quod sint formati quodam modo, sive ex eo, quod vertant orationem, unde et motus dicuntur, fatendum erit esse utrumque eorum etiam in figuris, usus quoque est idem: nam et vim rebus adiiciunt et gratiam praestant. nec desunt qui tropis figurarum nomen imponant, quorum est C. Artorius Proculus.

[2] For many authors have considered *figures* identical with *tropes*, because whether it be that the latter derive their name from having a certain form or from the fact that they effect alterations in language (a view which has also led to their being styled *motions*), it must be admitted that both these features are found in *figures* as well. Their employment is also the same. For they add force and charm to our matter. There are some again who call *tropes figures*, Artorius Proculus among them.

[3] quin adeo similitudo manifesta est, ut ea discernere non sit in promptu. nam quo modo quaedam in his species plane distant, manente tamen generaliter illa societate, quod utraque res de recta et simplici ratione cum aliqua dicendi virtute deflectitur, ita quaedam perquam tenui limite dividuntur, ut cum ironia tam inter figuras sententiae quam inter tropos reperiatur, περιφρασίην autem et ὑπέρβατον et ὀνοματοποιίαν clari quoque auctores figuras verborum potius quam tropos dixerint. quo magis signanda est utriusque rei differentia.

[3] Further the resemblance between the two is so close that it is not easy to distinguish between them. For although certain kinds differ, while retaining a general resemblance (since both involve a departure from the simple and straightforward method of expression coupled with a certain rhetorical excellence), on the other hand some are distinguished by the narrowest possible dividing line: for example, while *irony* belongs to *figures of thought* just as much as to *tropes*, *periphrasis*, *hyperbaton* and *onomatopoea* have been ranked by distinguished authors as *figures of speech* rather than *tropes*.

[4]

est igitur tropos sermo a naturali et principali significatione translatus ad aliam ornandae orationis gratia, vel, ut plerique grammatici finiunt, dictio ab eo loco, in quo propria est, translata in eum, in quo propria non est; figura, sicut nomine ipso patet, conformatio quaedam orationis remota a communi et primum se offerente ratione.

[4] It is therefore all the more necessary to point out the distinction between the two. The name of *trope* is applied to the transference of expressions from their natural and principal signification to another, with a view to the embellishment of style or, as the majority of grammarians define it, the transference of words and phrases from the place which is strictly theirs to another to which they do not properly belong. A *figure*, on the other hand, as is clear from the name itself, is the term employed when we give our language a conformation other than the obvious and ordinary.

[5] quare in tropis ponuntur verba alia pro aliis, ut in μεταφορᾷ, μετωνυμίᾳ, ἄντονομασίᾳ, μεταλήμψει, συνεκδοχῇ, καταχρήσει, ἀλληγορίᾳ, plerumque ὑπερβολῇ; namque et rebus fit et verbis. Ὀνοματοποιία fictio est nominis; ergo hoc quoque pro aliis ponitur, quibus usuri fuimus, si illud non fingeremus. Περιφρασίς etiamsi frequenter et id ipsum,

[5] Therefore the substitution of one word for another is placed among *tropes*, as for example in the case of *metaphor*, *metonymy*, *antonomasia*, *metalepsis*, *synecdochè*, *catachresis*, *allegory* and, as a rule, *hyperbole*, which may, of course, be concerned either with words or things. *Onomatopoea* is the creation of a word and therefore involves substitution for the words which we should use but for such creation.

[6] in cuius locum adsumitur, nomen complecti solet, utitur tamen pluribus pro uno. Ἐπιθετον quoniam plerumque habet antonomasiae partem, coniunctione eius fit tropus. In hyperbato commutatio est ordinis, ideoque multi tropis hoc genus eximunt. transfert tamen verbum aut partem eius a suo loco in alienum. horum nihil in figuras cadit.

[6] Again although *periphrasis* often includes the actual word whose place it supplies, it still uses a number of words in place of one. The *epithet* as a rule involves an element of *antonomasia* and consequently becomes a *trope* on account of this affinity. *Hyperbaton* is a change of order and for this reason many exclude it from *tropes*. None the less it transfers a word or part of a word from its own place to another.

[7] nam et propriis verbis et ordine collocatis figura fieri potest. quomodo autem ironia alia sit tropi, alia schematos, suo loco reddam. nomen enim fateor esse commune et scio quam multiplicem habeant quamque scrupulosam disputationem; sed ea non pertinet ad praesens meum propositum. nihil enim refert, quomodo appelletur utrumlibet eorum, si quid orationi prosit apparet, nec mutatur vocabulis vis rerum.

[7] None of these can be called *figures*. For a *figure* does not necessarily involve any alteration either of the order or the strict sense of words. As regards *irony*, I shall show elsewhere how in some of its forms it is a *trope*, in others a *figure*. For I admit that the name is common to both and am aware of the complicated and minute discussions to which it has given rise. They,

however, have no bearing on my present task. For it makes no difference by which name either is called, so long as its stylistic value is apparent, since the meaning of things is not altered by a change of name. For just as men remain the same,

[8] Et sicut homines, si aliud acceperunt quam quod habuerant nomen, iidem sunt tamen, ita haec, de quibus loquimur, sive tropi sive figurae dicuntur, idem efficient; non enim nominibus prosunt, sed effectibus; ut statum coniecturalem an infitalem an facti an de substantia nominemus, nihil interest, dum idem quaeri sciamus.

[8] even though they adopt a new name, so these artifices will produce exactly the same effect, whether they are styled *tropes* or *figures*, since their values lie not in their names, but in their effect. Similarly it makes no difference whether we call a *basis* conjectural or negative, or concerned with fact or substance, provided always that we know that the subject of enquiry is the same.

[9] optimum ergo in his sequi maxime recepta et rem ipsam, quocunque appellabitur modo, intelligere. illud tamen notandum, coire frequenter in eadem sententia et tropon et figuram. tam enim translatis verbis quam propriis figuratur oratio.

[9] It is best therefore in dealing with these topics to adopt the generally accepted terms and to understand the actual thing, by whatever name it is called. But we must note the fact that *trope* and *figure* are often combined in the expression of the same thought, since figures are introduced just as much by the metaphorical as by the literal use of words.

[10] est autem non mediocris inter auctores dissensio, et quae vis nominis eius et quot genera et quae quamque multae sint species. quare primum intuendum est, quid accipere debeamus figuram. nam duobus modis dicitur: uno qualiscunque forma sententiae, sicut in corporibus, quibus, quoquo modo sunt composita, utique habitus est aliquis;

[10] There is, however, a considerable difference of opinion among authors as to the meaning of the name, the number of *genera* and the nature and number of the *species* into which figures may be divided. The first point for consideration is, therefore, what is meant by a *figure*. For the term is used in two senses. In the first it is applied to any form in which thought is expressed, just as it is to bodies which, whatever their composition, must have some shape.

[11] altero, quo proprie schema dicitur, in sensu vel sermone aliqua a vulgari et simplici specie cum ratione mutatio, sicut nos sedemus, incumbimus, respicimus. itaque cum in eosdem casus aut tempora aut numeros aut etiam pedes continuo quis aut certe nimium frequenter incurrit, praecipere solemus variandas figuras esse vitandae similitudinis gratia.

[11] In the second and special sense, in which it is called a *schema*, it means a rational change in meaning or language from the ordinary and simple form, that is to say, a change analogous to that involved by sitting, lying down on something or looking back. Consequently when a student tends to continuous or at any rate excessive use of the same cases, tenses, rhythms or even feet, we are in the habit of instructing him to vary his *figures* with a view to the avoidance of monotony.

[12] In quo ita loquimur, tanquam omnis sermo habeat figuram, itemque eadem figura dicitur cursitare qua lectitare, id est eadem ratione declinari. quare illo intellectu priore et communi nihil non figuratum est. quo si contenti sumus, non immerito Apollodorus, si tradenti Caecilio credimus, incomprehensibilia partis huius praecepta existimavit.

[12] In so doing we speak as if every kind of language possessed a *figure*: for example *cursitare* and *lectitare* are said to have the same figure, that is to say, they are identical in formation. Therefore in the first and common sense of the word everything is expressed by *figures*. If we are content with this view, there is good reason for the opinion expressed by Apollodorus (if we may trust the statement of Caecilius on this point) to the effect that he found the rules laid down in this connexion quite incomprehensible.

[13] sed si habitus quidam et quasi gestus sic appellandi sunt, id demum hoc loco accipi schema oportebit, quod sit a simplici atque in promptu posito dicendi modo poetice vel oratorie mutatum. sic enim verum erit, aliam esse orationem ὁσχημάτιστον id est carentem figuris, quod vitium non inter minima est, aliam ὁσχηματισμένην, id est figuratam.

[13] If, on the other hand, the name is to be applied to certain attitudes, or I might say gestures of language, we must interpret *schema* in the sense of that which is poetically or rhetorically altered from the simple and obvious method of expression. It will then be true to distinguish between the style which is devoid of figures (or ὁσχημάτιστος) and that which is adorned with figures (or ὁσχηματισμένη).

[14] verum id ipsum anguste Zoilus terminavit, qui id solum putaverit schema, quo aliud simulatur dici quam dicitur, quod sane vulgo quoque sic accipi scio; unde et figuratae controversiae quaedam, de quibus post paulo dicam, vocantur. ergo figura sit arte aliqua novata forma dicendi. genus eius unum quidam putaverunt,

[14] But Zoilus narrowed down the definition, since he restricted the term *schema* to cases when the speaker pretends to say something other than that which he actually does say. I know that this view meets with common acceptance: it is, in fact, for this reason that we speak of *figured* controversial themes, of which I shall shortly speak. We shall then take a *figure* to mean a form of expression to which a new aspect is given by art.

[15] in hoc ipso diversas opiniones secuti. nam hi, quia verborum mutatio sensus quoque verteret, omnes figuras in verbis esse dixerunt; illi, quia verba rebus accommodarentur, omnes in sensibus. quarum utraque manifesta cavillatio est.

[15] Some writers have held that there is only one kind of *figure*, although they differ as regards the reasons which lead them to adopt this view. For some of them, on the ground that a change of words causes a corresponding change in the sense, assert that all *figures* are concerned with words, while others hold that *figures* are concerned solely with the sense, on the ground that words are adapted to things. Both these views are obviously quibbling.

[16] nam ut eadem dici solent aliter, manetque sensus elocutione mutata, et figura sententiae plures habere verborum figuras potest. illa est enim posita in concipienda cogitatione haec in enuntianda; sed frequentissime coeunt, ut in hoc iam iam, Dolabella, neque me tui neque tuorum liberum. nam oratio a iudice aversa in sententia, iam iam et liberum in verbis sunt schemata. inter plurimos enim,

[16] For the same things are often put in different ways and the sense remains unaltered though the words are changed, while a *figure of thought* may include several *figures of speech*. For the former lies in the conception, the latter in the expression of our thought. The two are frequently combined, however, as in the following passage: “Now, Dolabella, [I have no pity] either for you or for your children”: for the device by which he turns from the judges to Dolabella is a *figure of thought*, while *iam iam* (“now”) and *liberum* (“your children”) are *figures of speech*.

[17] quod sciam, consensus est duas eius esse partes, διανοία, id est mentis vel sensus vel sententiarum, nam his omnibus modis dictum est, et λέξεως id est verborum vel dictionis vel elocutionis vel sermonis vel orationis; nam et variatur et nihil refert.

[17] It is, however, to the best of my knowledge, generally agreed by the majority of authors that there are two classes of *figure*, namely *figures of thought*, that is of the mind, feeling or conceptions, since all these terms are used, and *figures of speech*, that is of words, diction, expression, language or style: the name by which they are known varies, but mere terminology is a matter of indifference. Cornelius Celsus,

[18] Cornelius tamen Celsus adiicit verbis et sentiis figuras colorum, nimia profecto novitatis cupiditate ductus. nam quis ignorasse eruditum alioqui virum credat, colores et sententias sensus esse? quare sicut omnem orationem ita figuras quoque versari necesse est in sensu et in verbis.

[18] however, to *figures of thought* and *speech* would add those produced by “glosses”; but he has merely been led astray by an excessive passion for

novelty. For who can suppose that so learned a man was ignorant of the fact that “glosses” and “reflexions” both come under the heading of thought? We may therefore conclude that, like language itself, figures are necessarily concerned with thought and with words.

[19] Vt vero natura prius est concipere animo res quam enuntiare, ita de iis figuris ante est loquendum, quae ad mentem pertinent; quarum quidem utilitas cum magna, tum multiplex, in nullo non orationis opere vel clarissime lucet. nam etsi minime videtur pertinere ad probationem, qua figura quidque dicatur, facit tamen credibilia quae dicimus et in animos iudicum, qua non observatur, irrepit.

[19] As, however, in the natural course of things we conceive ideas before we express them, I must take *figures of thought* first. Their utility is at once great and manifold, and is revealed with the utmost clearness in every product of oratory. For although it may seem that proof is infinitesimally affected by *the figures* employed, none the less those same *figures* lend credibility to our arguments and steal their way secretly into the minds of the judges.

[20] namque ut in armorum certamine adversos ictus et rectas ac simplices manus cum videre, tum etiam cavere ac propulsare facile est, aversae tectaeque minus sunt observabiles, et aliud ostendisse quam petas artis est, sic oratio, quae astu caret, pondere modo et impulsu proeliatur; simulanti variantique conatus in latera atque in terga incurrere datur et arma avocare et velut nutu fallere.

[20] For just as in sword-play it is easy to see, parry, and ward off direct blows and simple and straightforward thrusts, while side-strokes and feints are less easy to observe and the task of the skilful swordsman is to give the impression that his design is quite other than it actually is, even so the oratory in which there is no guile fights by sheer weight and impetus alone; on the other hand, the fighter who feints and varies his assault is able to attack flank or back as he will, to lure his opponent's weapons from their guard and to outwit him by a slight inclination of the body. Further,

[21] iam vero adfectus nihil magis ducit. nam si frons, oculi, manus multum ad motum animorum valent, quanto plus orationis ipsius vultus ad id, quod efficere intendimus, compositus? plurimum tamen ad commendationem facit, sive in conciliandis agentis moribus sive ad promerendum actioni favorem sive ad levandum varietate fastidium sive ad quaedam vel decentius indicanda vel tutius.

[21] there is no more effective method of exciting the emotions than an apt use of figures. For if the expression of brow, eyes and hands has a powerful effect in stirring the passions, how much more effective must be the aspect of our style itself when composed to produce the result at which we aim? But, above all, *figures* serve to commend what we say to those that hear us, whether we

seek to win approval for our character as pleaders, or to win favour for the cause which we plead, to relieve monotony by variation of our language, or to indicate our meaning in the safest or most seemly way.

[22] sed antequam, quae cuique rei figura conveniat, ostendo, dicendum est nequaquam eas esse tam multas quam sint a quibusdam constitutae. neque enim me movent nomina illa, quae fingere utique Graecis promptissimum est.

[22] But before I proceed to demonstrate what *figures* best suit the different circumstances, I must point out that their number is far from being as great as some authorities make out. For I am not in the least disturbed by the various names which the Greeks more especially are so fond of inventing. First of all, then,

[23] ante omnia igitur illi, qui totidem figuras putant quot adfectus, repudiandi, non quia adfectus non sit quaedam qualitas mentis, sed quia figura, quam non communiter, sed proprie nominamus, non sit simplex rei cuiuscumque enuntiatio. quapropter in dicendo irasci, dolere, misereri, timere, confidere, contemnere non sunt figurae, non magis quam suadere, minari, rogare, excusare.

[23] I must repudiate the views of those who hold that there are as many types of *figure* as there are kinds of emotion, on the ground, not that emotions are not qualities of the mind, but that a figure, in its strict, not its general sense, is not simply the expression of anything you choose to select. Consequently the expression in words of anger, grief, pity, fear, confidence or contempt is not a *figure*, any more than persuasion, threats, entreaty or excuse.

[24] sed fallit parum diligenter intuentes, quod inveniunt in omnibus his locis figuras et earum exempla ex orationibus excerpunt. neque enim pars ulla dicendi est, quae non recipere eas possit. sed aliud est admittere figuram, aliud figuram esse. neque enim verebor explicandae rei gratia frequentiores eiusdem nominis repetitionem.

[24] But superficial observers are deceived by the fact that they find *figures* in all passages dealing with such themes, and select examples of them from speeches; whereas in reality there is no department of oratory which does not admit such *figures*. But it is one thing to admit *i>figure* and another to be a *figure*; I am not going to be frightened out of repeating the term with some frequency in my attempt to make the facts clear. My opponents will, I know,

[25] quare dabunt mihi aliquam in irascente, deprecante, miserante figuram, scio; sed non ideo irasci, misereri, deprecari figura erit. Cicero quidem omnia orationis lumina in hunc locum congerit, mediam quandam, ut arbitror, secutus viam: ut neque omnis sermo schema iudicaretur neque ea sola, quae haberent aliquam remotam ab usu communi fictionem, sed quae essent clarissima et ad movendum auditorem valerent plurimum; quem duobus ab eo

libris tractatum locum ad litteras subieci, ne fraudarem legentes iudicio maximi auctoris.

[25] direct my attention to special figures employed in expressing anger, in entreating for mercy, or appealing to pity, but it does not follow that expressions of anger, appeals to pity or entreaties for mercy are in themselves *figures*. Cicero, it is true, includes all ornaments of oratory under this head, and in so doing adopts, as it seems to me, a middle course. For he does not hold that all forms of expression are to be regarded as *figures*, nor, on the other hand, would he restrict the term merely to those expressions whose form varies from ordinary use. But he regards as figurative all those expressions which are especially striking and most effective in stirring the emotions of the audience. He sets forth this view in two of his works, and that my readers may have the opportunity of realising the judgment of so high an authority, I subjoin what he says *verbatim*.

[26] In tertio de Oratore ita scriptum est: In perpetua autem oratione, cum et coniunctionis levitatem et numerorum, quam dixi, rationem tenuerimus, tum est quasi luminibus distinguenda et frequentanda omnis oratio sententiarum atque verborum.

[26] In the third book of the *de Oratore* we find the following words: “As regards the composition of continuous speech, as soon as we have acquired the smoothness of structure and rhythm of which I have spoken, we must proceed to lend brilliance to our style by frequent embellishments both of thought and words.

[27] nam et commoratio una in re permultum movet et illustris explanation rerumque, quasi gerantur, sub aspectum paene subiectio, quae et in exponenda re plurimum valet et ad illustrandum id quod exponitur et ad amplificandum, ut iis qui audient illud quod augebimus, quantum efficere oratio poterit, tantum esse videatur;

[27] For great effect may be produced by dwelling on a single point, and by setting forth our facts in such a striking manner that they seem to be placed before the eyes as vividly as if they were taking place in our actual presence. This is especially effective in stating a case or for the purpose of illuminating and amplifying the facts in course of statement, with a view to making our audience regard the point which we amplify as being as important as speech can make it.

[28] et huic contraria saepe percursio est et plus ad intelligendum quam dixeris significatio et distincte concisa brevitās et extenuatio, et huic adiuncta illusio; a praeceptis Caesaris non abhorrens, et ab re digressio, in qua cum fuerit delectatio, tum reditas ad rem aptus et concinnus esse debet; propositioque, quid sis dicturus, et ab eo quod est dictum seiunctio, et reditus ad propositum et iteratio et rationis apta conclusio;

[28] On the other hand, as opposed to this procedure we may often give a rapid summary, suggest more than is actually said, may express ourselves tersely in short, clean-cut sentences and disparage, or, what is much the same, mock our opponent in a manner not inconsistent with the precepts given us by Caesar. Or we may employ digressions and then, after thus delighting our audience, make a neat and elegant return to our main theme. We may set forth in advance what we propose to say, mark off the topics already treated from those which are to follow, return to our point, repeat it and draw our formal conclusions.

[29] *tum augendi minuendive causa veritatis superlatio atque traiectio, et rogatio atque huic finitima quasi percontatio expositioque sententiae suae; tum illa, quae maxime quasi irrepit in hominum mentes, alia dicentis ac significantis dissimulatio, quae est periucunda, cum in oratione non contentione sed sermone tractatur;*

[29] Again, with a view to augmenting or attenuating the force of some point, we may exaggerate and overstate the truth: we may ask questions, or, what is much the same, enquire of others and set forth our own opinion. There is also available the device of dissimulation, when we say one thing and mean another, the most effective of all means of stealing into the minds of men and a most attractive device, so long as we adopt a conversational rather than a controversial tone.

[30] *deinde dubitatio, tum distributio, tum correctio, vel ante vel post quam dixeris vel cum aliquid a te ipso reicias. praemunitio etiam est ad id quod aggrediare, et reiectio in alium; communicatio, quae est quasi cum iis ipsis apud quos dicas deliberatio; morum ac vitae imitatio vel in personis vel sine illis, magnum quoddam ornamentum orationis et aptum ad animos conciliandos vel maxime, saepe autem etiam ad commovendos; personarum ficta inductio vel gravissimum lumen augendi;*

[30] Hesitation may be expressed between two alternatives, our statement may be distributed in groups or we may correct ourselves, either before or after we have said something or when we repel some allegation against ourselves. We may defend ourselves by anticipation to secure the success of some point which we propose to make or may transfer the blame for some action to another. We may confer with our audience, admitting them as it were into our deliberations, may describe the life and character of persons either with or without mention of their names, a device which is one of the greatest embellishments of oratory and specially adapted to conciliate the feelings, as also frequently to excite them.

[31] *descriptio, erroris inductio, ad hilaritatem impulsio, anteoccupatio; tum duo illa, quae maxime movent, similitudo et exemplum; digestio, interpellatio, contentio, reticentia, commendatio.*

[31] Again by the introduction of fictitious personages we may bring into play the most forcible form of exaggeration. We may describe the results likely to follow some action, introduce topics to lead our hearers astray, move them to mirth or anticipate the arguments of our opponent. Comparisons and examples may be introduced, both of them most effective methods; we may divide, interrupt, contrast, suppress, commend.

[32] vox quaedam libera atque etiam effrenatior augendi causa; iracundia, obiurgatio, promissio; deprecatio, obsecratio, declinatio brevis a proposito, non ut superior illa digressio, purgatio, conciliatio, laesio, optatio atque exsecratio.

[32] Our language may be free or even unbridled with a view to heighten our effects, while anger, reproach, promises that we shall prove our case, entreaty, supplication, slight deviations from our proposed course (which must be distinguished from the longer digressions mentioned above), exculpation, conciliation, personal attacks, wishes and execrations are all of value.

[33] his fere luminibus illustrant orationem sententiae. orationis autem ipsius tanquam armorum est vel ad usum comminatio et quasi petitio vel ad venustatem ipsa tractatio. nam et geminatio verborum habet interdum vim, leporem alias, et paululum immutatum verbum atque deflexum, et eiusdem verbi crebra tum a primo repetitio, tum in extremum conversio, et in eadem verba impetus et concursio et adiunctio et progressio, et eiusdem verbi crebrius positi quaedam distinctio et revocatio verbi, et illa quae similiter desinunt aut quae cadunt similiter aut quae paribus paria referuntur aut quae sunt inter se similia.

[33] The above include practically all the devices of thought which may be employed for the adornment of our speech. As regards diction, this may either be employed like weapons for menace and attack, or handled merely for the purpose of display. For example, sometimes the repetition of words will produce an impression of force, at other times of grace. Again, slight changes and alterations may be made in words, the same word may be repeated sometimes at the beginning of a sentence and sometimes at the end, or the sentence may be made to open and close with the same phrase. One verb may be made to serve the purpose of a number of clauses, our words may be worked up to a climax, the same word may be repeated with a different meaning or reiterated at the opening of one sentence from the close of the preceding, while we may introduce words with similar terminations or in the same cases or balancing or resembling each other.

[34] est etiam gradatio quaedam et conversio et verborum concinna transgressio, et contrarium et dissolutum, et declinatio et reprehensio, et exclamatio et imminutio; et quod in multis casibus ponitur et quod de singulis rebus propositis ductum refertur ad singula, et ad propositum subiecta ratio et

item in distributis supposita ratio;

[34] Other effects may be obtained by the graduation or contrast of clauses, by the elegant inversion of words, by arguments drawn from opposites, asyndeton, paraleipsis, correction, exclamation, meiosis, the employment of a word in different cases, moods and tenses, the correspondence of subsequent particulars with others previously mentioned, the addition of a reason for what is advanced, the assignment of a reason for each distinct statement;

[35] et permissio et rursus alia dubitatio et improvisum quiddam; et dinumeratio et alia correctio et dissipatio, et continuatam et interruptum, et imago et sibi ipsi responsio, et immutatio et diiunctio, et ordo et relatio, et digressio et circumscriptio.

[35] again we may employ concession and another form of hesitation, introduction of the unexpected, distinction by heads, another form of correction, local distribution, rapid succession of clauses, interruption of clauses, imagery, answering our own questions, immutation, the appropriate distinction of one proposition from another, effective arrangement, reference, digression and circumscription.

[36] haec enim sunt fere atque horum similia vel plura etiam esse possunt, quae sententiis orationem verborumque conformationibus illuminent.

eadem sunt in Oratore plurima non omnia tamen et paulo magis distincta, quia post orationis et sententiarum figuras tertium quendam subiecit locum ad alias, ut ipse ait, quasi virtutes dicendi pertinentem:

[36] These (and there may be yet more like them) are the various devices for the embellishment of our style, either by the cast of our thought or the conformation of our language.”

Most of these statements are repeated by Cicero in the *Orator*, but not all, while his language is somewhat more precise, since after dealing with figures of speech and of thought he adds a third section, concerned, as he himself says, with the other excellences of style.

[37] Et reliqua, ex conlocatione verborum quae sumuntur quasi lumina, magnum adferunt ornatum orationi. sunt enim similia illis quae in amplo ornatu scenae aut fori appellantur insignia, non quia sola ornent, sed quod excellent.

[37] “And those other embellishments which are derived from the arrangement of words contribute greatly to the adornment of our style. They may be compared to what we term the decorations of the forum or a richly-ornamented stage, since they not only adorn, but stand out conspicuously in the midst of other ornaments.

[38] eadem ratio est horum quae sunt orationis lumina et quodam modo

insignia, cum aut duplicantur iteranturque verba aut leviter commutata ponuntur, aut ab eodem verbo ducitur saepius oratio aut in idem coniicitur aut utrumque, aut adiungitur idem iteratum aut idem ad extremum refertur, aut continenter unum verbum non eadem sententia ponitur, aut cum similiter vel cadunt verba vel desinunt;

[38] The principle governing the use of embellishments and decorations of style is the same: words may be repeated and reiterated or reproduced with some slight change. Sentences may repeatedly commence or end with the same word or may begin and end with the same phrase. The same word may be reiterated either at the beginning or at the conclusion, or may be repeated, but in a different sense.

[39] aut multis modis contrariis relata contraria, aut cum gradatim sursum versus reditur, aut cum demptis coniunctionibus dissolute plura dicuntur, aut cum aliquid praetereuntes, cur id faciamus, ostendimus, aut cum corrigimus nosmet ipsos quasi reprehendentes, aut si est aliqua exclamatio vel admirationis vel conquestionis, aut cum eiusdem nominis casus saepius commutantur.

[39] Words may have the same inflexion or termination or be placed in various antitheses, our language may rise by gradations to a climax, or a number of words may be placed together in asyndeton without connecting particles. Or we may omit something, while making clear the reason for such omission, or correct ourselves with apparent censure of our carelessness, may utter exclamations of admiration or grief, or introduce the same word repeatedly in different cases.

[40] sententiarum ornamenta maiora sunt; quibus quia frequentissime Demosthenes utatur, sunt qui patent, idcirco eius eloquentiam maxime esse laudabilem. Et vere nullus fere ab eo locus sine quadam conformatione sententiae dicitur, nec quicquam est aliud dicere nisi omnes aut certe plerasque aliqua specie illuminare sententias.

[40] The ornaments of thought are, however, more important. They are so frequently employed by Demosthenes that some critics have held that it is in them that the chief beauty of his style resides. And in truth there is hardly a topic in his speeches which is not distinguished by some artificial treatment of the thought, and it must be admitted that speaking involves the embellishment of all, or at any rate most of our thoughts with some form of ornament.

[41] quas cum tu optime, Brute, teneas, quid attinet nominibus uti aut exemplis? tantummodo notetur locus. sic igitur dicet ille, quem expetimus, ut verset saepe nullis modis eadem et in una re haereat in eademque commoretur sententia.

[41] As you, Brutus, have such an admirable knowledge of all these methods, it

would be waste of time for me to cite all their names or to give illustrations. I shall therefore content myself merely with indicating this topic. Our ideal orator then will speak in such a manner that he will cast the same thought into a number of different forms, will dwell on one point and linger over the same idea.

[42] *saepe etiam ut extenuet aliquid; saepe ut irrideat; ut declinet a proposito deflectatque sententiam; ut proponat quid dicturus sit; ut, cum transegerit iam aliquid, definiat; ut se ipse revocet, ut quod dixerit iteret; ut argumentum ratione concludat; ut interrogando urgeat; ut rursus quasi ad interrogata sibi ipse respondeat;*

[42] he will often attenuate some one point or deride his opponent, will diverge from his theme and give a bias to his thought, will set forth what he intends to say, after completing his argument will give a brief summary, will recall himself to the point which he has left, repeat what he has said, complete his proof by a formal conclusion, embarrass his opponent by asking questions or answer himself in reply to imaginary questions;

[43] *ut contra ac dicat accipi et sentiri velit; ut addubitet quid potius aut quo modo dicat; ut dividat in partes; ut aliquid relinquat ac negligat; ut ante praemuniat; ut in eo ipso, in quo reprehendatur, culpam in adversarium conferat; ut saepe cum iis qui audiunt, nonnunquam etiam cum adversario quasi deliberet;*

[43] will desire his words to be taken in a different sense from their literal meaning, will hesitate what argument or form of statement to prefer, will classify and divide, will deliberately omit and ignore some point, and defend himself by anticipation; will transfer the blame of some charge brought against him to his opponent, will often take his audience, and sometimes even his opponent into consultation,

[44] *ut hominum mores sermonesque describat; ut muta quaedam loquentia inducat; ut ab eo quod agitur auertat animos; ut saepe in hilaritatem risumve convertat; ut ante occupet quod videat opponi; ut comparet similitudines; ut utatur exemplis; ut aliud alii tribuens dispertiat; ut interpellatorem coerceat; ut aliquid reticere se dicat; ut denuntiet quid caveant; ut liberius quid audeat; ut irascatur etiam, ut obiurget aliquando; ut de precetur, ut supplicet, ut medeatur; ut a proposito declinet aliquantum; ut optet, ut exsecretur, ut fiat iis apud quos dicet familiaris.*

[44] will describe the character and talk of particular persons, will put words into the mouths of inanimate objects, divert the minds of the audience from the point at issue, often move them to merriment or laughter, anticipate objections, introduce comparisons, cite precedents, assign and distribute different sentiments to different persons, silence interrupters, assert that there are certain things of which he prefers not to speak, warn his audience to be on

their guard against certain things, or venture on a certain licence of speech. Again, he will wax angry, sometimes indulge in rebuke, entreaty or supplication, will clear away unfavourable impressions, swerve a little from his point, utter wishes or execrations, or address his audience in terms of familiar intimacy.

[45] *atque alias etiam dicendi quasi virtutes sequetur, brevitatem, si res petet, saepe etiam rem dicendo subiiciet oculis, saepe supra feret quam fieri possit; significatio saepe erit maior quam oratio, saepe hilaritas, saepe vitae naturarumque imitatio. hoc in genere (nam quasi silvam vides) omnis eluceat oportet eloquentiae magnitudo.*

[45] There are also other virtues at which he should aim, such as brevity, if his theme demands it, while he will often set forth topics in such vivid language as almost to present them to the very eyes of his audience, or will exaggerate his subject beyond the bounds of possibility. His meaning will frequently be deeper than his words seem to indicate, his tone will often be cheerful, and he will often mimic life and character. In fact, as regards this department of oratory, of which I have given you the substance, he must display eloquence in all its grandest forms."

2. *ergo cui latius complecti conformationes verborum ac sententiarum placuerit, habet quod sequatur nec adfirmare ausim quicquam esse melius; sed haec ad propositi mei rationem legat. nam mihi de his sententiarum figuris dicere in animo est, quae ab illo simplici modo indicandi recedunt; quod item multis doctissimis viris video placuisse.*

2. The student who desires to give a wider consideration to figures of thought and speech will, therefore, have a guide to follow, and I would not venture to assert that he could have a better. But I would ask him to read these passages of Cicero with reference to my own views on this subject. For I intend to speak only of those figures of thought which depart from the direct method of statement, and I note that a similar procedure has been adopted by a number of learned scholars.

[2] *omnia tamen illa, etiam quae sunt alterius modi lumina, adeo sunt virtutes orationis ut sine iis nulla intelligi fere possit oratio. nam quomodo iudex doceri potest, si desit illustris explanatio, propositio, promissio, finitio, seiunctio, expositio sententiae suae, rationis apta conclusio, praemunitio, similitudo, exemplum, digestio, distributio, interpellatio, interpellantis coercitio, contentio, purgatio, laesio?*

[2] On the other hand, all those embellishments which differ in character from these are none the less virtues whose importance is such that without them all oratory will be little less than unintelligible. For how can the judge be adequately instructed unless lucidity characterise our performance of the following tasks: explanation, proposition, promise of proofs, definition,

distinction, exposition of our own opinion, logical conclusion, defence by anticipation, introduction of comparisons or precedents, disposition and distribution, interruption, repression of those who interrupt us, antithesis, exculpation and personal attack?

[3] quid vero agit omnino eloquentia detractis amplificandi minuendique rationibus? quarum prior desiderat illam plus quam dixeris significationem, id est ἔμφασιν, et supralationem veritatis et traiectionem; haec altera extenuationem deprecationemque. qui adfectus erunt vel concitati detracta voce libera et effrenatiore, iracundia, obiurgatione, optatione, execratione? vel illi mitiores, nisi adiuvantur commendatione, conciliatione, ad hilaritatem impulsione?

[3] Again, what would eloquence do if deprived of the artifices of amplification and its opposite? of which the first requires the gift of signifying more than we say, that is *emphasis*, together with exaggeration and overstatement of the truth, while the latter requires the power to diminish and palliate. What scope is there for the stronger emotions if the orator is not allowed to give free rein to his speech, to flame out in anger, to reproach, to wish or execrate? Or for the milder emotions without the assistance of commendation, conciliation and humour?

[4] quae delectatio aut quod mediocriter saltem docti hominis indicium, nisi alia repetitione, alia commoratione infigere, digredi a re et redire ad propositum suum scierit, remove a se, in alium traicere, quae relinquenda, quae contemnenda sint iudicare? motus est in his orationis atque actus, quibus detractis iacet et velut agitante corpus spiritu caret.

[4] What pleasure can an orator hope to produce, or what impression even of the most moderate learning, unless he knows how to fix one point in the minds of the audience by repetition, and another by dwelling on it, how to digress from and return to his theme, to divert the blame from himself and transfer it to another, or to decide what points to omit and what to ignore as negligible? It is qualities such as these that give life and vigour to oratory; without them it lies torpid like a body lacking the breath to stir its limbs.

[5] quae cum adesse debent, tum disponenda atque varianda sunt, ut auditorem, quod in fidibus fieri videmus, omni sono mulceant. verum ea plerumque recta sunt nec se fingunt, sed confitentur. admittunt autem, ut dixi, figuras, quod vel ex proxima doceri potest.

[5] But more than the mere possession of these qualities is required; they must be deployed, each in their proper place and with such variety that every sound may bewitch the hearer with all the charm of music. But these qualities are as a rule open and direct, manifesting themselves without disguise. They do, however, as I have said, admit of *figures*, as the instances to which I shall proceed will show.

[6] quid enim tam commune quam interrogare vel percontari? nam utroque utimur indifferenter, quanquam alterum noscendi, alterum arguendi gratia videtur adhiberi. at ea res, utrocunque dicitur modo, etiam multiplex habet schema. incipiamus enim ab iis, quibus acrior ac vehementior fit probatio, quod primo loco posuimus.

[6] What is more common than to *ask* or *enquire*? For both terms are used indifferently, although the one seems to imply a desire for knowledge, and the other a desire to prove something. But whichever term we use, the thing which they represent admits a variety of figures. We will begin with those which serve to increase the force and cogency of proof to which I assign the first place.

[7] simplex est sic rogare,

sed vos qui tandem? quibus aut venistis ab oris?

Figuratum autem, quotiens non sciscitandi gratia aen. i. 369. adsumitur, sed instandi, quid enim tuus ille, Tubero, destrictus in acie Pharsalica gladius agebat? et, quousque tandem abutere, Catilina, patientia nostra? et, patere tua consilia non sentis? et totus denique hic locus.

[7] A simple question may be illustrated by the line:

“But who are ye and from what shores are come?”
“

On the other hand, a question involves a figure, whenever it is employed not to get information, but to emphasise our point, as in the following examples: “What was that sword of yours doing, Tubero, that was drawn on the field of Pharsalus?” and “How long, Catiline, will you abuse our patience?” and “Do you not see that your plots are all laid bare?” with the whole passage that follows.

[8] quanto enim magis ardet quam si diceretur, diu abuteris patientia nostra, et patent tua consilia. interrogamus etiam quod negari non possit, dixitne tandem causam C. Fidiculanus Falcula? aut ubi respondendi difficilis est ratio, ut vulgo uti solemus, quo modo?

[8] How much greater is the fire of his words as they stand than if he had said, “You have abused our patience a long time,” and “Your plots are all laid bare.” We may also ask what cannot be denied, as “Was Gaius Fidiculanus Falcula, I ask you, brought to justice?” Or we may put a question to which it is difficult to reply, as in the common forms, “How is it possible?” “*How* can that be?”

[9] qui fieri potest? aut invidiae gratia, ut Medea apud Senecam, quas peti terras iubes? aut miserationis, ut Sinon apud Vergilium,

heu quae me tellus, inquit, quae me aequora possunt

accipere?

aut instandi et auferendae dissimulationis, ut Asinius, audisne? furiosum, inquam, non inofficiosum testamentum reprehendimus.

[9] Or we may ask a question with a view to throw odium on the person to whom it is addressed, as in the words placed by Seneca in the mouth of Medea:

“What lands dost bid me seek?
“

Or our aim may be to excite pity, as is the case with the question asked by Sinon in Virgil:

“Alas, what lands, lie cried,
What seas can now receive me?
“

Or to embarrass our opponent and to deprive him of the power to feign ignorance of our meaning, as Asinius does in the following sentence: “Do you hear? The will which we impugn is the work of a madman, not of one who lacked natural affection.” In fact questions admit of infinite variety.

[10] totum hoc plenum est varietatis; nam et indignationi convenit:

Et quisquam numen iunonis adoret?

et admirationi:

quid non mortalia pectora cogis,

auri sacra fames?

Est interim acrius imperandi genus:

[10] They may serve our indignation, as in the line:

Are any left
That still adore Juno's divinity?

Aen. i. 48.

Or they may still express wonder, as in:

To what dost thou not drive the hearts of men,
Accursed greed of gold?

Aen. iii. 56.

Again, at times they may express a sharp command,

[11]

non arma expedient totaque ex urbe sequentur?

Et ipsi nosmet rogamus, quale est illud Terentianum quid igitur faciam?

[11] as in:

Will they not rush to arms and follow forth
From all the city?

Aen. iv. 592.

Or we may ask ourselves, as in the phrase of Terence, “What, then, shall I do?”

[12] est aliqua etiam in respondendo figura, cum aliud interroganti ad aliud, quia sic utilius sit, occurritur, tum augendi criminis gratia, ut testis in reum rogatus, an ab reo fustibus vapulasset, Et innocens, inquit; tum declinandi, quod est frequentissimum: quaero, an occideris hominem; respondetur, latronem; An fundum occupaveris; respondetur, meum.

[12] A figure is also involved in a reply, when one question is asked and another is answered, because it suits the respondent’s purpose better to do so, or because it aggravates the charge brought against the accused. For example, a witness for the prosecution was asked whether he had been cudgelled by the plaintiff, and replied, “And what is more, I had done him no harm.” Or the purpose may be to elude a charge, a very common form of reply. The advocate says, “I ask if you killed the man?” The accused replies, “He was a robber.” The advocate asks, “Have you occupied the farm?” The accused replies, “It was my own.”

[13] Vt confessionem praecedat defensio, ut apud Vergilium in Bucolicis dicenti,

non ego te vidi Damonis, pessime, caprum

excipere insidiis?

occurritur:

An mihi cantando victus non redderet ille?

Cui est confinis dissimulatio,

[13] Again, the answer may be of such a kind as to make defence precede confession. For example, in the *Eclogues* of Virgil, when one shepherd asks:

“Did I not see you, villain, snare a goat
Of Damon’s?
“

the other replies:

“I vanquished him in song, and should he not
Pay me the prize, my due?
“

[14] non alibi quam in risu posita ideoque tractata suo loco. nam serio si fiat, pro confessione est. ceterum et interrogandi se ipsum et respondendi sibi solent esse non ingratae vices, ut Cicero pro Ligario, apud quem igitur hoc dico? nempe apud eum, qui, cum hoc sciret, tamen me, antequam videret, rei publicae reddidit.

[14] Akin to this kind of answer is the dissimulatory reply, which is employed solely with the purpose of raising a laugh, and has therefore been treated in its appropriate place. If it were meant seriously, it would be tantamount to a confession. Further, there is the practice of putting the question and answering it oneself, which may have quite a pleasing effect. Take as an example the following passage from the *pro Ligario*, where Cicero says, “Before whom do I say this? Before one who, although he was aware of these facts, yet restored me to my country even before he had seen me.”

[15] aliter pro Caelio ficta interrogatione: dicet aliquis, Haec igitur est tua disciplina? sic tu instituis adolescentis? et totus locus. deinde: ego, si quis, iudices, hoc robore animi atque hac indole virtutis ac continentiae fuit, et cetera. cui diversum est, cum alium rogaveris, non exspectare responsum sed statim subiicere: domus tibi deerat? at habebas; pecunia superabat? at egebas. quod schema quidam per suggestionem vocant.

[15] A different form of fictitious question is to be found in the *pro Caelio*. “Some one will say, ‘Is this your moral discipline? Is this the training you would give young men?’” with the whole passage that follows. Then comes his reply, “Gentlemen, if there were any man with such vigour of mind, with such innate virtue and self-control, etc.” A different method is to ask a question and not to wait for a reply, but to subjoin the reply at once yourself. For example, “Had you no house? Yes, you had one. Had you money and to spare? No, you were in actual want.” This is a figure which some call *suggestion*.

[16] fit et comparatione: uter igitur facilius suae sententiae rationem redderet? Et aliis modis tum brevius, tum latius, tum de una re, tum de pluribus.

mire vero in causis valet praesumptio, quae πρόληψις dicitur, cum id quod obiici potest occupamus. id neque in aliis partibus rarum est et praecipue prooemio convenit.

[16] Again, a question may involve *comparison*, as, for instance, “Which of the two then could more easily assign a reason for his opinion?” There are other forms of question as well, some concise, some developed at greater length,

some dealing with one thing only, others with several. *Anticipation*, or, as the Greeks call it, πρόληψις, whereby we forestall objections, is of extraordinary value in pleading; it is frequently employed in all parts of a speech, but is especially useful in the *exordium*.

[17] sed, quanquam generis unius, diversas species habet. est enim quaedam praemunitio, qualis Ciceronis contra Q. Caecilium, quod ad accusandum descendat qui semper defenderit; quaedam confessio, ut pro Rabirio Postumo, quem sua quoque sententia reprehendendum fatetur, quod pecuniam regi crediderit; quaedam praedictio, ut dicam enim non augendi criminis gratia; quaedam emendatio, ut rogo, ignoscatis mihi, si longius sum evectus; frequentissima praeparatio, cum pluribus verbis, vel quare facturi quid simus vel quare fecerimus, dici solet.

[17] However, it forms a genus in itself, and has several different species. One of these is the defence by anticipation, such as Cicero employs against Quintus Caecilius, where he points out that though previously he himself has always appeared for the defence, he is now undertaking a prosecution. Another is a form of *confession*, such as he introduces in his defence of Rabirius Postumus, where he admits that he himself regards his client as worthy of censure for lending money to the king. Another takes the form of *prediction*, as in the phrase, "For I will say without any intention of aggravating the charge." Again, there is a form of *self-correction*, such as, "I beg you to pardon me, if I have been carried too far." And, most frequent of all, there is *preparation*, whereby we state fully why we are going to do something or have done it.

[18] verborum quoque vis ac proprietas confirmatur vel praesumptione: quanquam illa non poena, sed prohibitio sceleris fuit; aut reprehensione: cives, inquam, si hoc eos nomine appellari fas est. adfert aliquam fidem veritatis et dubitatio,

[18] *Anticipation* may also be employed to establish the meaning or *propriety* of words, as in the following case, "Although that was not a punishment, but merely a prevention of crime," while the same effect may be produced by *qualification*, as in the following sentence, "Citizens, I say, if I may call them by that name."

[19] cum simulamus quaerere nos, unde incipiendum, ubi desinendum, quid potissimum dicendum, an omnino dicendum sit? cuiusmodi exemplis plena sunt omnia, sed unum interim sufficit: equidem, quod ad me attinet, quo me vertam nescio. negem fuisse infamiam iudicii corrupti? et cetera.

[19] Again, hesitation may lend an impression of truth to our statements, when, for example, we pretend to be at a loss, where to begin or end, or to decide what especially requires to be said or not to be said at all. All speeches are full of such instances, but for the present one will be enough. "As for myself, I

know not where to turn. Shall I deny that there was a scandalous rumour that the jury had been bribed, etc.?”

[20] hoc etiam in praeteritum valet; nam et dubitasse nos fingimus. A quo schemate non procul abest illa, quae dicitur communicatio, cum aut ipsos adversarios consulimus, ut Domitius Afer pro Cloatilla: nescit trepida, quid liceat feminae, quid coniugem deceat; forte vos in illa solitudine obvios casus miserae mulieri obtulit; tu, frater, vos, paterni amici, quod consilium datis?

[20] This device may also be employed to cover the past; for we may equally pretend that we *had* felt hesitation on the subject. This figure is akin to that known as *communication*, when we actually take our opponents into consultation, as Domitius Afer does in his defence of Cloatilla. “She is so agitated that she does not know what is permitted to a woman or what becomes a wife. It may be that chance has brought you into contact with the unhappy woman in her helpless plight. What counsel do you give her, you her brother, and you, her father’s friends?”

[21] aut cum iudicibus quasi deliberamus, quod est frequentissimum: quid suadetis? et vos interrogo, et quid tandem fieri oportuit? et Cato, cedo, si vos in eo loco essetis, quid aliud fecissetis? Et alibi: communem rem agi putatote ac vos huic rei praepositos esse.

[21] Or we may admit the judges to our deliberations, a device which is frequently called into play. We may say, “What do you advise?” or, “I ask you,” or, “What, then, should have been done?” Cato, for example, says, “Come now, if you had been in his place, what else would you have done?” And in another passage, “Imagine this to be a matter which concerns us all, and assume you have been placed in charge of the whole affair.”

[22] sed nonnunquam communicantes aliquid inexpectatum subiungimus, quod et per se schema est, ut in Verrem Cicero, quid deinde? quid censetis? furtum fortasse aut praedam aliquam? Deinde, cum diu suspendisset iudicum animos, subiecit, quod multo esset improbius. hoc Celsus sustentationem vocat.

[22] Sometimes, however, in such forms of communication we may add something unexpected, a device which is in itself a *figure*, as Cicero does in the *Verrines*: “What then? What think you? Perhaps you expect to hear of some theft or plunder.” Then, after keeping the minds of the judges in suspense for a considerable time, he adds something much worse. This figure is termed *suspension* by Celsus. It has two forms.

[23] est autem duplex; nam contra frequenter, cum expectationem gravissimorum fecimus, ad aliquid quod sit leve aut nullo modo criminum descendimus. sed quia non tantum per communicationem fieri solet, παράδοξον alii nominarunt, id est inopinatum.

[23] For we may adopt exactly the opposite procedure to that just mentioned, and after raising expectation of a sequel of the most serious nature, we may drop to something which is of a trivial character, and may even imply no offence at all. But since this does not necessarily involve any form of *communication*, some have given it the name of *paradox* or *surprise*.

[24] illis non accedo qui schema esse existimant etiam, si quid nobis ipsis dicamus inexpectatum accidisse, ut Pollio, nunquam fore credidi, iudices, ut, reo Scauro, ne quid in eius iudicio gratia valeret, precarer.

[24] I do not agree with those who extend the name of *figure* to a statement that something has happened unexpectedly to the speaker himself, like the following passage from Pollio: "Gentlemen, I never thought it would come to pass that, when Scaurus was the accused, I should have to entreat you not to allow influence to carry any weight on his behalf."

[25] paene idem fons est illius, quam permissionem vocant, qui communicationis, cum aliqua ipsis iudicibus relinquimus aestimanda, aliqua nonnunquam adversariis quoque, ut Calvus Vatinio, perfrica frontem et dic te digniorem, qui praetor fieres, quam Catonem.

[25] The figure known as *concession* springs from practically the same source as *communication*; it occurs when we leave some things to the judgment of the jury, or even in some cases of our opponents, as when Calvus says to Vatinus, "Summon all your assurance and assert that you have a better claim than Cato to be elected praetor."

[26] quae vero sunt augendis adfectibus accommodatae figurae, constant maxime simulatione. namque et irasci nos et gaudere et timere et admirari et dolere et indignari et optare, quaeque sunt similia his, fingimus. unde sunt illa, liberatus sum: respiravi; et bene habet; et quae amentia est haec? et O tempora, o mores! et Miserum me! consumptis enim lacrimis infixus tamen pectori haeret dolor; et

magnae nunc hiscite terrae.

[26] The *figures* best adapted for intensifying emotion consist chiefly in simulation. For we may feign that we are angry, glad, afraid, filled with wonder, grief or indignation, or that we wish something, and so on. Hence we get passages like the following: "I am free, I breathe again," or, "It is well," or, "What madness is this?" or, "Alas! for these degenerate days!" or, "Woe is me; for though all my tears are shed my grief still clings to me deep-rooted in my heart," or,

Gape now, wide earth.

Unknown.

To this some give the name of *exclamation*,

[27] quod exclamationem quidam vocant ponuntque inter figuras orationis. haec quotiens vera sunt, non sunt in ea forma, de qua nunc loquimur, at simulata et arte composita procul dubio schemata sunt existimanda. quod idem dictum sit de oratione libera, quam Cornificius licentiam vocat, Graeci παρρησίαν. Quid enim minus figuratum quam vera libertas? Sed frequenter sub hac facie latet adulatio.

[27] and include it among *figures of speech*. When, however, such exclamations are genuine, they do not come under the head of our present topic: it is only those which are simulated and artfully designed which can with any certainty be regarded as *figures*. The same is true of free speech, which Cornificius calls *licence*, and the Greeks παρρησία. For what has less of the *figure* about it than true freedom? On the other hand, freedom of speech may frequently be made a cloak for flattery.

[28] nam Cicero cum dicit pro Ligario, suscepto bello, Caesar, gesto iam etiam ex parte magna, nulla vi coactus consilio ac uoluntate mea ad ea arma profectus sum, quae erant sumpta contra te, non solum ad utilitatem Ligarii respicit, sed magis laudare victoris clementiam non potest.

[28] For when Cicero in his defence for Ligarius says, “After war had begun, Caesar, and was well on its way to a conclusion, I deliberately, of my own free will and under no compulsion, joined the forces of your opponents,” he has in his mind something more than a desire to serve the interests of Ligarius, for there is no better way of praising the clemency of the victor.

[29] In illa vero sententia, quid autem aliud egimus, Tubero, nisi ut, quod hic potest, nos possemus? admirabiliter utriusque partis facit bonam causam, sed hoc eum demeretur, cuius mala fuerat. illa adhuc audaciora et maiorum (ut Cicero existimat) laterum, fictiones personarum, quae προσωποποιΐαι dicuntur. mire namque cum variant orationem, tum excitant.

[29] On the other hand, in the sentence, “What else was our aim, Tubero, than that we might secure the power which he now holds?” he succeeds with admirable art in representing the cause of both parties as being good, and in so doing mollifies him whose cause was really bad. A bolder form of *figure*, which in Cicero’s opinion demands greater effort, is *impersonation*, or προσωποποιΐα. This is a device which lends wonderful variety and animation to oratory.

[30] his et adversariorum cogitationes velut secum loquentium protrahimus (qui tamen ita demum a fide non abhorrent, si ea locutos finxerimus, quae cogitasse eos non sit absurdum), et nostros cum aliis sermones et aliorum inter se credibiliter introducimus, et suadendo, obiurgando, querendo, laudando, miserando personas idoneas damus.

[30] By this means we display the inner thoughts of our adversaries as though

they were talking with themselves (but we shall only carry conviction if we represent them as uttering what they may reasonably be supposed to have had in their minds); or without sacrifice of credibility we may introduce conversations between ourselves and others, or of others among themselves, and put words of advice, reproach, complaint, praise or pity into the mouths of appropriate persons.

[31] *quin deducere deos in hoc genere dicendi et inferos excitare concessum est; urbes etiam populiue vocem accipiunt. ac sunt quidam, qui has demum προσωποποιίας dicant, in quibus et corpora et verba fingimus; sermones hominum adsimulatos dicere διαλόγουc malunt, quod Latinorum quidam dixerunt sermocinationem.*

[31] Nay, we are even allowed in this form of speech to bring down the gods from heaven and raise the dead, while cities also and peoples may find a voice. There are some authorities who restrict the term *imepersonation* to cases where both persons and words are fictitious, and prefer to call imaginary conversations between men by the Greek name of *dialogue*, which some translate by the Latin *sermocinatio*.

[32] *ego iam recepto more utrumque eodem modo appellavi. nam certe sermo fingi non potest, ut non personae sermo fingatur. sed in his, quae natura non permittit, hoc modo mollior fit figura: etenim si mecum patria, quae mihi vita mea multo est carior, si cuncta Italia, si omnis res publica sic loquatur, ‘M. Tulli, quid agis?’ Illud audacius genus: quae tecum, Catilina, sic agit et quodammodo tacita loquitur, ‘Nullum iam aliquot annis facinus exstitit nisi per te.’*

[32] For my own part, I have included both under the same generally accepted term, since we cannot imagine a speech without we also imagine a person to utter it. But when we lend a voice to things to which nature has denied it, we may soften down the *figure* in the way illustrated by the following passage: “For if my country, which is far dearer to me than life itself, if all Italy, if the whole commonwealth were to address me thus, ‘Marcus Tullius, what dost thou?’” A bolder figure of the same kind may be illustrated by the following: “Your country, Catiline, pleads with you thus, and though she utters never a word, cries to you, ‘For not a few years past no crime has come to pass save through your doing!’”

[33] *commode etiam aut nobis aliquas ante oculos esse rerum, personarum, vocum imagines fingimus, aut eadem adversariis aut iudicibus non accidere miramur: qualia sunt videtur mihi, et nonne videtur tibi? sed magna quaedam vis eloquentiae desideratur. falsa enim et incredibilia natura necesse est aut magis moveant, quia supra vera sunt, aut pro vanis accipiantur, quia vera non sunt.*

[33] It is also convenient at times to pretend that we have before our eyes the

images of things, persons or utterances, or to marvel that the same is not the case with our adversaries or the judges; it is with this design that we use phrases such as “It seems to me,” or “Does it not seem to you?” But such devices make a great demand on our powers of eloquence. For with things which are false and incredible by nature there are but two alternatives: either they will move our hearers with exceptional force because they are beyond the truth, or they will be regarded as empty nothings because they are not the truth.

[34] Vt dicta autem quaedam, ita scripta quoque fingi solent, quod facit Asinius pro Liburnia: mater mea, quae mihi cum carissima, tum dulcissima fuit, quaeque mihi vixit bisque eodem die vitam dedit et reliqua; deinde exheres esto. haec cum per se figura est, tum duplicatur, quotiens sicut in hac causa ad imitationem alterius scripturae componitur.

[34] But we may introduce not only imaginary sayings, but imaginary writings as well, as is done by Asinius in his defence of Liburnia: “Let my mother, who was the object of my love and my delight, who lived for me and gave me life twice in one day (and so on) inherit nought of my property.” This is in itself a figure, and is doubly so whenever, as in the present case, it imitates a document produced by the opposing party.

[35] nam contra recitabatur testamentum: P. Novanius Gallio, cui ego omnia meritissimo volo et debeo pro eius animi in me summa voluntate et adiectis deinceps aliis, heres esto. incipit esse quodammodo παρωδή, quod nomen ductum a canticis ad aliorum similitudinem modulatis abusive etiam in versificationis ac sermonum imitatione servatur.

[35] For a will had been read out by the prosecution, in the following form: “Let Publius Novanius Gallio, to whom as my benefactor I will and owe all that is good, as a testimony to the great affection which he has borne me (then follow other details) be my heir.” In this case the *figure* borders on *parody*, a name drawn from songs sung in imitation of others, but employed by an abuse of language to designate imitation in verse or prose.

[36] sed formas quoque fingimus saepe, ut Famam Vergilius, ut Voluptatem ac Virtutem (quemadmodum a Xenophonte traditur) Prodicus, ut Mortem ac Vitam, quas contententes in satura tradit Ennius. est et incertae personae ficta oratio, hic aliquis, et, Dicat aliquis.

[36] Again, we often personify the abstract, as Virgil does with Fame, or as Xenophon records that Prodicus did with Virtue and Pleasure, or as Ennius does when, in one of his satires, he represents Life and Death contending with one another. We may also introduce some imaginary person without identifying him, as we do in the phrases, “At this point some one will interpose,” or, “Some one will say.”

[37] est et iactus sine persona sermo:

hic Dolopum manus., hic saeuus tendebat Achilles.

Quod fit mixtura figurarum, cum προσωποποιῖα accedit illa, quae est orationis per detractionem; detractum est enim, quis diceret. vertitur interim προσωποποιῖα in speciem narrandi. unde apud historicos reperiuntur obliquae adlocutiones, ut in T. Livii primo statim, urbes quoque ut cetera ex infimo nasci; deinde, quas sua virtus ac dii iuvent, magnas opes sibi magnumque nomen facere.

[37] Or speech may be inserted without any mention of the speaker, as in the line:

“Here the Dolopian host

Camped, here the fierce Achilles pitched his tent.

“

This involves a mixture of *figures*, since to *impersonation* we add the *figure* known as *ellipse*, which in this case consists in the omission of any indication as to who is speaking. At times *impersonation* takes the form of narrative. Thus we find indirect speeches in the historians, as at the opening of Livy’s first book: “That cities, like other things, spring from the humblest origins, and that those who are helped by their own valour and the favour of heaven subsequently win great power and a great name for themselves.” *Apostrophe* also,

[38] aversus quoque a iudice sermo, qui dicitur ἀποστροφή mire movet, sive aduersarios invadimus: quid enim tuus ille, Tubero, in acie Pharsalica? sive ad invocationem aliquam convertimur: vos enim iam ego, Albani tumuli atque luci; sive ad invidiosam implorationem: O leges Porciae legesque Semproniae! sed illa quoque vocatur aversio,

[38] which consists in the diversion of our address from the judge, is wonderfully stirring, whether we attack our adversary as in the passage, “What was that sword of yours doing, Tubero, in the field of Pharsalus?” or turn to make some invocation such as, “For I appeal to you, hills and groves of Alba,” or to entreaty that will bring odium on our opponents, as in the cry, “O Porcian and Sempronian laws.”

[39] quae a proposita quaestione abducit audientem:

non ego cum Danais Troianam excindere gentem

aulide iuravi — .

Quod fit et multis et variis figuris, cum aut aliud expectasse nos aut maius aliquid timuisse simulamus aut plus videri posse ignorantibus, quale est prooemium pro Caelio.

[39] But the term *apostrophe* is also applied to utterances that divert the attention of the hearer from the question before them, as in the following passage:

I swore not with the Greeks
At Aulis to uproot the race of Troy.

Aen. iv. 425. Dido is urging Anna to approach Aeneas and induce Aeneas to postpone his departure. Dido is no enemy from whom he need fly.

There are a number of different figures by which this effect may be produced. We may, for instance, pretend that we expected something different or feared some greater disaster, or that the judges in their ignorance of the facts may regard some point as of more importance than it really is: an example of this latter device is to be found in the exordium to Cicero's defence of Caelius.

[40] *ilia vero, ut ait Cicero, sub oculos subiectio tum fieri solet, cum res non gesta indicatur, sed ut sit gesta ostenditur, nec universa, sed per partes; quem locum proximo libro subiecimus evidentiae, et Celsus hoc nomen isti figurae dedit. ab illis ὑποτύπωσις dicitur proposita quaedam forma rerum ita expressa verbis, ut cerni potius videatur quam audiri: ipse inflammatus scelere et furore in forum venit, ardebant oculi, toto ex ore crudelitas eminebat.*

[40] With regard to the figure which Cicero calls *ocular demonstration*, this comes into play when we do not restrict ourselves to mentioning that something was done, but proceed to show how it was done, and do so not merely on broad general lines, but in full detail. In the last book I classified this figure under the head of *vivid illustration*, while Celsus actually terms it by this name. Others give the name of ὑποτύπωσις to any representation of facts which is made in such vivid language that they appeal to the eye rather than the ear. The following will show what I mean: "He came into the forum on fire with criminal madness: his eyes blazed and cruelty was written in every feature of his countenance."

[41] *nec solum quae facta sint aut fiant, sed etiam quae futura sint aut futura fuerint imaginamur. mire tractat hoc Cicero pro Milone, quae facturus fuerit Clodius, si praeturam invasisset. sed haec quidem translatio temporum, quae proprie μετὰστασις dicitur, ἢ διατυπώσει3 verecundior apud priores fuit. praeponebant enim talia, credite vos intueri, ut Cicero, haec, quae non vidistis oculis, animis cernere potestis.*

[41] Nor is it only past or present actions which we may imagine: we may equally well present a picture of what is likely to happen or might have happened. This is done with extraordinary skill by Cicero in his defence of Milo, where he shows what Clodius would have done, had he succeeded in securing the praetorship. But this *transference of time*, which is technically called μετὰστασις was more modestly used in *vivid description* by the old

orators. For they would preface it by words such as “Imagine that you see”: take, for example, the words of Cicero: “Though you cannot see this with your bodily eyes, you can see it with the mind’s eye.”

[42] novi vero et praecipue declamatores audacius nec mehercule sine motu quodam imaginantur, ut et Seneca in controversia, cuius summa est, quod pater filium et novercam inducente altero filio in adulterio deprehensos occidit: duc, sequor; accipe hanc senilem manum et quocunque vis imprime.

[42] Modern authors, however, more especially the declaimers, are bolder, indeed they show the utmost animation in giving rein to their imagination; witness the following passages from Seneca’s treatment of the controversial theme in which a father, guided by one of his sons, finds another son in the act of adultery with his stepmother and kills both culprits. “Lead me, I follow, take this old hand of mine and direct it where you will.”

[43] Et post paulo, aspice, inquit, quod diu non credidisti. ego vero non video, nox oboritur et crassa caligo. habet haec figura manifestius aliquid; non enim narrari res, sed agi videtur.

[43] And a little later, “See, he says, what for so long you refused to believe. As for myself, I cannot see, night and thick darkness veil my eyes.” This figure is too dramatic: for the story seems to be acted, not narrated.

[44] locorum quoque dilucida et significans descriptio eidem virtuti adsignatur a quibusdam; alii τοπογραφίαν dicunt.

Εἰρωνείαν inveni qui dissimulationem vocaret; quo nomine quia parum totius huius figurae vires videntur ostendi, nimirum sicut in plerisque erimus Graeca appellatione contenti. igitur Εἰρωνεία quae est schema, ab illa, quae est tropos, genere ipso nihil admodum distat; (in utroque enim contrarium ei quod dicitur intelligendum est) species vero prudentius intuenti diversas esse facile est deprehendere. primum,

[44] Some include the clear and vivid description of places under the same heading, while others call it *topography*.

I have found some who speak of *irony* as *dissimulation*, but, in view of the fact that this latter name does not cover the whole range of this figure, I shall follow my general rule and rest content with the Greek term. *Irony* involving a *figure* does not differ from the *irony* which is a *trope*, as far as its *genus* is concerned, since in both cases we understand something which is the opposite of what is actually said; on the other hand, a careful consideration of the *species* of *irony* will soon reveal the fact that they differ.

[45] quod tropos apertior est et, quanquam aliud dicit ac sentit, non aliud tamen simulat. nam et omnia circa fere recta sunt: ut illud in Catilinam, A quo repudiatus ad sodalem tuum, virum optimum, Metellum demigrasti. In duobus

demum verbis est ironia, ergo etiam brevior est tropus.

[45] In the first place, the *trope* is franker in its meaning, and, despite the fact that it implies something other than it says, makes no pretence about it. For the context as a rule is perfectly clear, as, for example, in the following passage from the Catilinarian orations. “Rejected by him, you migrated to your boon-companion, that excellent gentleman Metellus.” In this case the irony lies in two words, and is therefore a specially concise form of *trope*.

[46] at in figura totius voluntatis fictio est apparens magis quam confessa, ut illic verba sint verbis diversa, hic sensus sermoni et voci et tota interim causae conformatio; cum etiam vita universa ironiam habere videatur, qualis est visa Socratis; nam ideo dictus εἰρων, agens imperitum et admiratorem aliorum tanquam sapientium; ut, quemadmodum ἀλληγορίαν facit continua ἀλληγορίαν sic hoc schema faciat tropus ille contextus.

[46] But in the *figurative* form of irony the speaker disguises his entire meaning, the disguise being apparent rather than confessed. For in the *trope* the conflict is purely verbal, while in the *figure* the meaning, and sometimes the whole aspect of our case, conflicts with the language and the tone of voice adopted; nay, a man’s whole life may be coloured with *irony*, as was the case with Socrates, who was called an *ironist* because he assumed the role of an ignorant man lost in wonder at the wisdom of others. Thus, as continued *metaphor* develops into *allegory*, so a sustained series of *tropes* develops into this *figure*.

[47] quaedam vero genera huius figurae nullam cum tropis habent societatem, ut illa statim prima, quae dicitur a negando, quam nonnulli ἀντιφράσις vocant: non agam tecum iure summo, non dicam, quod forsitan obtinerem; et quid ego istius decreta, quid rapinas, quid hereditatum possessiones datas, quid ereptas proferam? et Mitto illam primam libidinis iniuriam, et Ne illa quidem testimonia recito, quae dicta sunt de HS sescentis milibus, et possum dicere.

[47] There are, however, certain kinds of *this figure* which have no connexion with *tropes*. In the first place, there is the *figure* which derives its name from negation and is called by some ἀντιφράσις. Here is an example: “I will not plead against you according to the rigour of the law, I will not press the point which I should perhaps be able to make good”; or again, “Why should I mention his decrees, his acts of plunder, his acquisition, whether by cession or by force, of certain inheritances?” or “I say nothing of the first wrong inflicted by his lust”; or “I do not even propose to produce the evidence given concerning the 600,000 sesterces”;

[48] quibus generibus per totas interim quaestiones decurrimus: ut Cicero, hoc ego si sic agerem, tanquam mihi modi esset diluendum, haec pluribus dicerem. Εἰρωνεία est, et cum similes imperantibus vel permittentibus sumus:

I, sequere Italiam venti;

et cum ea,

[48] or “I might say, etc.” Such kinds of irony may even be sustained at times through whole sections of our argument, as, for instance, where Cicero says, “If I were to plead on this point as though there were some real charge to refute, I should speak at greater length.” It is also *irony* when we assume the tone of command or concession, as in Virgil’s

“Go!

Follow the winds to Italy;

“

[49] quae nolumus videri in adversariis esse, concedimus eis. id acrius fit, cum eadem in nobis sunt et in adversario non sunt:

meque timoris

argue tu, Drance, quando tot caedis acervos

teucrorum tua dextra dedit.

Quod idem contra valet, cum aut ea, quae a nobis absunt, aut etiam quae in aduersarios recidunt, quasi fatemur:

me duce Dardanius Spartam expugnauit adulter.

Nec in personis tantum,

[49] or when we concede to our opponents qualities which we are unwilling that they should seem to possess. This is specially effective when we possess these qualities and they do not, as in the following passage,

“Brand *me* as coward, Drances, since thy sword

Has slain such hosts of Trojans.

“

A like result is produced by reversing this method when we pretend to own to faults which are not ours or which even recoil upon the heads of our opponents, as for example,

’Twas I that led the Dardan gallant on
To storm the bridal bed of Sparta’s queen!

Aen. x. 92. Juno ironically pretends to have brought about the rape of Helen, which was in reality the work of Venus.

[50] sed et in rebus versatur haec contraria dicendi quam quae intelligi velis ratio, ut totum pro Quinto Ligario prooemium et illae elevationes: videlicet, O dii boni! —

scilicet is superis labor est.

— et ille pro Oppio locus:

[50] Further, this device of saying the opposite of what we desire to imply is not merely restricted to persons, but may be extended to things, witness the whole of the *exordium* of the *pro Ligario* and disparaging phrases such as “Forsooth,” “ye great gods!” or

Fit task, I ween, for gods!

Aen. iv., 379. Dido mocks the excuse of Aeneas that he had received the direct command of heaven to leave Carthage.

[51] O amorem mirum! O benivolentiam singularem! non procul absunt ab hac simulatione res inter se similes, confessio nihil nocitura, qualis est: habes igitur, Tubero, quod est accusatori maxime optandum, confitentem reum; et concessio, cum aliquid etiam iniquum videmur causae fiducia pati: metum virgarum nauarchus nobilissimae civitatis pretio redemit: humanum est; et pro Cluentio de invidia: dominetur in contionibus, iaceat in iudiciis; tertia consensio, ut pro eodem, iudicium esse corruptum.

[51] Another example is provided by the following passage from the *pro Oppio*, “What wondrous love! what extraordinary benevolence!” Akin to *irony* also are the following *figures*, which have a strong family resemblance: *confession* of a kind that can do our case no harm, such as the following: “You have now, Tubero, the advantage most desired by an accuser: the accused confesses his guilt”; secondly, *concession*, when we pretend to admit something actually unfavourable to ourselves by way of showing our confidence in our cause, as in the following passage: “The commander of a ship from a distinguished city paid down a sum of money to rid himself of the fear of a scourging which hung over his head; it shows Verres’ humanity”; or again, in the *pro Cluentio*, where Cicero is speaking of the prejudice aroused against his client, “Let it prevail in the public assembly, but be silent in the courts of law”; thirdly, *agreement*, as when Cicero, in the same speech, agrees that the jury was bribed.

[52] haec evidentior figura est, cum alicui rei assentimur, quae est futura pro nobis; verum id accidere sine adversarii vitio non potest. quaedam etiam velut laudamus, ut Cicero in Verrem circa aen. iv. 379. Dido mocks the excuse of Aeneas that he had received the direct command of heaven to leave Carthage. modi Apollonii Drepanitani: gaudeo etiam, si quid ab eo abstulisti, et abs te nihil rectius factum esse dico. interim augemus crimina,

[52] This last form of *figure* becomes more striking when we agree to something which is really likely to tell in our favour; but such an opportunity can only occur through weakness on the part of our opponent. Sometimes we may even praise some action of our opponent, as Cicero does in his prosecution of

Verres when dealing with the charge in connexion with Apollonius of Drepanum: “Nay, it is a real pleasure to me to think that you took something from him, and I say that you never did a juster action in your life.”

[53] quae ex facili aut diluere possimus aut negare, quod est frequentius quam ut exemplum desideret. interim hoc ipso fidem detrahimus illis, quod sint tam gravia, ut pro Roscio Cicero, cum immanitatem parricidii quanquam per se manifestam tamen etiam vi orationis exaggerat. Ἀποσιώπησις,

[53] At times we may exaggerate charges against ourselves which we can easily refute or deny; this device is too common to require any illustration. At other times we may by this same method make the charges brought against us seem incredible just because of their gravity: thus Cicero in his defence of Roscius, by the sheer force of his eloquence, exaggerates the horror of parricide, despite the fact that it requires no demonstration.

[54] quam idem Cicero reticentiam, Celsus obticentiam, nonnulli interruptionem appellant, et ipsa ostendit aliquid adfectus vel irae, ut,

quos ego — sed motos praestat componere fluctus;

vel sollicitudinis et quasi religionis: An huius ille legis, quam Clodius a se inventam gloriatur, mentionem facere ausus esset vivo Milone, non dicam console? de nostrum omnium — non audeo totum dicere; cui simile est in prooemio pro Ctesiphonte Demosthenis.

[54] *Aposiopesis*, which Cicero calls *reticentia*, Celsus *obticentia*, and some *interruptio*, is used to indicate passion or anger, as in the line:

“Whom I —

But better first these billows to assuage.

“

Or it may serve to give an impression of anxiety or scruple, as in the following: “Would he have dared to mention this law of which Clodius boasts he was the author, while Milo was alive, I will not say was consul? For as regards all of us — I do not dare to complete the sentence.” There is a similar instance in the exordium of Demosthenes’ speech in defence of Ctesiphon.

[55] vel alio transeundi gratia: Cominius autem — tametsi ignoscite mihi, iudices. In quo est et illa (si tamen inter schemata numerari debet, cum aliis etiam pars causae videatur) digressio; abit enim causa in laudes Cn. Pompeii, idque fieri etiam sine ἀποσιώπησει potuit.

[55] Again it may be employed as a means of transition, as, for example, “Cominius, however — nay, pardon me, gentlemen.” This last instance also involves *digression*, if indeed digression is to be counted among *figures*, since some authorities regard it as forming one of the parts of a speech. For at this point the orator diverges to sing the praises of Gnaeus Pompeius, which he

might have done without any recourse to *aposiopesis*.

[56] nam brevior illa, ut ait Cicero, a re digressio plurimis fit modis. sed haec exempli gratia sufficient: tum C. Varenus, is qui a familia Anchariana occisus est; hoc, quaeso, iudices, diligenter attendite; et pro Milone Et aspexit me illis quidem oculis, quibus tum solebat, cum omnibus omnia minabatur.

[56] For as Cicero says, the shorter form of *digression* may be effected in a number of different ways. The following passages will, however, suffice as examples: "Then Gaius Varenus, that is, the Varenus who was killed by the slaves of Ancharius: — I beg you, gentlemen, to give careful attention to what I am about to say;" the second is from the pro Milone: "Then he turned on me that glance, which it was his wont to assume, when he threatened all the world with every kind of violence."

[57] est alia non quidem reticentia, quae sit imperfecti sermonis, sed tamen praecisa velut ante legitimum finem oratio: ut illud nimis urgeo, commoveri videtur adolescens; et quid plura? ipsum adolescentem dicere audistis. imitatio morum alienorum,

[57] There is also another kind of figure, which is not *aposiopesis*, since that involves leaving a sentence unfinished, but consists in bringing our words to a close before the natural point for their conclusion. The following is an example: "I am pressing my point too far; the young man appears to be moved"; or "Why should I say more? you heard the young man tell the story himself." The imitation of other persons' characteristics,

[58] quae ἡθοποιία vel, ut alii malunt, μίμησις dicitur, iam inter leniores adfectus numerari potest; est enim posita fere in eludendo, sed versatur et in factis et in dictis. In factis, quod est ὑποτυπώσει vicinum; in dictis, quale est apud Terentium:

at ego nesciebam, quorsum tu ires. parvula

hinc est abrepta, eduxit mater pro sua,

soror dicta est: cupio abducere, ut reddam suis.

[58] which is styled ἡθοποιία or, as some prefer μίμησις may be counted among the devices which serve to excite the gentler emotions. For it consists mainly in banter, though it may be concerned either with words or deeds. If concerned with the latter, it closely resembles ὑποτύπωσις while the following passage from Terence will illustrate it as applied to words: "I didn't see your drift. 'A little girl was stolen from this place; my mother brought her up as her own daughter. She was known as my sister. I want to get her away to restore her to her relations.'"

[59] sed nostrorum quoque dictorum factorumque similis imitatio est per relationem, nisi quod frequentius asseverat quam eludit: dicebam habere eos

actorem Q. Caecilium. sunt et illa iucunda et ad commendationem cum varietate tum etiam ipsa natura plurimum prosunt, quae simplicem quandam et non praeeparatam ostendendo orationem minus nos suspectos iudici faciunt.

[59] We may, however, imitate our own words and deeds in a similar fashion by relating some act or statement, though in such cases the speaker more frequently does so to assert his point than for the sake of banter, as, for example, in the following, “I said that they had Quintus Caecilius to conduct the prosecution.” There are other devices also which are agreeable in themselves and serve not a little to commend our case both by the introduction of variety and by their intrinsic naturalness, since by giving our speech an appearance of simplicity and spontaneity they make the judges more ready to accept our statements without suspicion.

[60] Hinc est quasi paenitentia dicti, ut pro Caelio sed quid ego ita gravem personam introduxi? Et quibus utimur vulgo: imprudens incidi. vel cui quaerere nos, quid dicamus, fingimus: Quid reliquum est? et Num quid omisi et cum ibidem invenire, ut ait Cicero: unum etiam mihi relicum huiusmodi modi est; et aliud ex alio succurrit mihi.

[60] Thus we may feign repentance for what we have said, as in the *pro Caelio*, where Cicero says, “But why did I introduce so respectable a character?” Or we may use some common phrase, such as, “I didn’t mean to say that.” Or we may pretend that we are searching for what we should say, as in the phrases, “What else is there?” or “Have I left anything out?” Or we may pretend to discover something suggested by the context, as when Cicero says, “One more charge, too, of this sort still remains for me to deal with,” or “One thing suggests another.”

[61] unde etiam venusti transitus fiunt; non quia transitus ipse sit schema, ut Cicero, narrato Pisonis exemplo, qui anulum sibi cudi ab aurifice in tribunali suo iusserat, velut hoc in memoriam inductus adiecit: hic modo me commonuit Pisonis anulus, quod totum effluxerat. quam nullis istum putatis hominibus honestis de digitis anulos aureos abstulisse? Et cum aliqua velut ignoramus: sed earum rerum artifice, quem? quemnam? recte admones, Polyclitum esse dicebant.

[61] Such methods will also provide us with elegant transitions, although transition is not itself to be ranked among figures: for example, Cicero, after telling the story of Piso, who ordered a goldsmith to make a ring before him in court, adds, as though this story had suggested it to him, “This ring of Piso’s reminds me of something which had entirely slipped my memory. How many gold rings do you think Verres has stripped from the fingers of honourable men?” Or we may affect ignorance on certain points, as in the following passage: “But who was the sculptor who made those statues? Who was he? Thank you for prompting me, you are right; they said it was Polyclitus.”

[62] quod quidem non in hoc tantum valet. quibusdam enim, dum aliud agere videmur, aliud effcimus, sicut hic Cicero consequitur, ne, cum morbum in signis atque tabulis obiciat Verri, ipse quoque earum rerum studiosus esse credatur. Et Demosthenes iurando per interfectos in Marathone et Salamine id agit, ut minore invidia cladis apud Chaeroneam acceptae laboret.

[62] This device may serve for other purposes as well. For there are means of this kind whereby we may achieve an end quite other than that at which we appear to be aiming, as, for example, Cicero does in the passage just quoted. For while he taunts Verres with a morbid passion for acquiring statues and pictures, he succeeds in creating the impression that he personally has no interest in such subjects. So, too, when Demosthenes swears by those who fell at Marathon and Salamis, his object is to lessen the odium in which he was involved by the disaster at Chaeronea.

[63] faciunt illa quoque iucundam orationem, aliqua mentione habita differre et deponere apud memoriam iudicis et reposcere quae deposueris, et iterare quaedam schemate aliquo, (non enim est ipsa per se iteratio schema) et excipere aliqua et dare actioni varios velut vultus. gaudet enim res varietate, et sicut oculi diversarum aspectu rerum magis detinentur, ita semper animis praestat, in quod se velut novum intendant.

[63] We may further lend charm to our speech by deferring the discussion of some points after just mentioning them, thus depositing them in the safe keeping of the judge's memory and afterwards reclaiming our deposit; or we may employ some figure to enable us to repeat certain points (for repetition is not in itself a figure) or may make especial mention of certain things and vary the aspect of our pleading. For eloquence delights in variety, and just as the eye is more strongly attracted by the sight of a number of different things, so oratory supplies a continuous series of novelties to rivet the attention of the mind.

[64] est emphasis etiam inter figuras, cum ex aliquo dicto latens aliquid eruitur, ut apud Vergilium non licuit thalami expertem sine crimine vitam Degere more ferae? quamquam enim de matrimonio queritur Dido, tamen huc erumpit eius adfectus, ut sine thalamis vitam non hominum putet, sed ferarum. aliud apud Ovidium genus, apud quem Zmyrna nutrici amorem patris sic confitetur;

O, dixit, felicem coniuge matrem

Huic vel confinis vel eadem est,

[64] *Emphasis* may be numbered among figures also, when some hidden meaning is extracted from some phrase, as in the following passage from Virgil:

Might I not have lived,

From wedlock free, a life without a stain,
Happy as beasts are happy?

Aen. iv. 550.

For although Dido complains of marriage, yet her passionate outburst shows that she regards life without wedlock as no life for man, but for the beasts of the field. A different kind of emphasis is found in Ovid, where Zmyrna confesses to her nurse her passion for her father in the following words:

O mother, happy in thy spouse!

Met. x. 422.

[65] qua nunc utimur plurimum. iam enim ad id genus, quod et frequentissimum est et exspectari maxime credo, veniendum est, in quo per quandam suspicionem quod non dicimus accipi volumus, non utique contrarium, ut in Εἰρωεῖα, sed aliud latens et auditori quasi inveniendum. quod, ut supra ostendi, iam fere solum schema a nostris vocatur, et unde controversiae figuratae dicuntur.

[65] Similar, if not identical with this figure is another, which is much in vogue at the present time. For I must now proceed to the discussion of a class of figure which is of the commonest occurrence and on which I think I shall be expected to make some comment. It is one whereby we excite some suspicion to indicate that our meaning is other than our words would seem to imply; but our meaning is not in this case contrary to that which we express, as is the case in *irony*, but rather a hidden meaning which is left to the hearer to discover. As I have already pointed out, modern rhetoricians practically restrict the name of *figure* to this device, from the use of which *figured* controversial themes derive their name.

[66] eius triplex usus est: unus si dicere palam parum tutum est, alter si non decet, tertius qui venustatis modo gratia adhibetur et ipsa novitate ac varietate magis, quam si relatio sit recta, delectat.

[66] This class of figure may be employed under three conditions: first, if it is unsafe to speak openly; secondly, if it is unseemly to speak openly; and thirdly, when it is employed solely with a view to the elegance of what we say, and gives greater pleasure by reason of the novelty and variety thus introduced than if our meaning had been expressed in straightforward language.

[67] ex his, quod est primum, frequens in scholis est. nam et pactiones deponentium imperium tyrannorum et post bellum civile senatus consulta finguntur et capitale est obiicere anteacta, ut, quod in foro non expedit, illic nec liceat. sed schematum condicio non eadem est. quamlibet enim apertum, quod modo et aliter intelligi possit, in illos tyrannos bene dixeris, quia

periculum tantum, non etiam offensa vitatur. quod si ambiguitate sententiae possit eludi, nemo non illi furto favet.

[67] The first of the three is of common occurrence in the schools, where we imagine conditions laid down by tyrants on abdication and decrees passed by the senate after a civil war, and it is a capital offence to accuse a person with what is past, what is not expedient in the courts being actually prohibited in the schools. But the conditions governing the employment of figures differ in the two cases. For we may speak against the tyrants in question as openly as we please without loss of effect, provided always that what we say is susceptible of a different interpretation, since it is only danger to ourselves, and not offence to them, that we have to avoid.

[68] vera negotia nunquam adhuc habuerunt hanc silentii necessitatem; sed aliam huic similem, verum multo ad agendum difficiliorem, cum personae potentes obstant, sine quarum reprehensione teneri causa non possit.

[68] And if the danger can be avoided by any ambiguity of expression, the speaker's cunning will meet with universal approbation. On the other hand, the actual business of the courts has never yet involved such necessity for silence, though at times they require something not unlike it, which is much more embarrassing for the speaker, as, for example, when he is hampered by the existence of powerful personages, whom he must censure if he is to prove his case.

[69] ideoque hoc parcius et circumspectius faciendum est, quia nihil interest, quomodo offendas, et aperta figura perdit hoc ipsum quod figura est. ideoque a quibusdam tota res repudiatur, sive intelligatur sive non intelligatur. sed licet modum adhibere; in primis, ne sint manifestae. non erunt autem, si non ex verbis dubiis et quasi duplicibus petentur, quale est in suspecta nuru, duxi uxorem, quae patri placuit;

[69] Consequently he must proceed with greater wariness and circumspection; since the actual manner in which offence is given is a matter of indifference, and if a figure is perfectly obvious, it ceases to be a figure. Therefore such devices are absolutely repudiated by some authorities, whether the meaning of the figure be intelligible or not. But it is possible to employ such *figures* in moderation, the primary consideration being that they should not be too obvious. And this fault can be avoided, if the *figre* does not depend on the employment of words of doubtful or double meaning, such, for instance, as the words which occur in the theme of the suspected daughter-in-law: "I married the wife who pleased my father."

[70] aut, quod est multo ineptius, compositionibus ambiguis, ut in illa controversia, in qua infamis amore filiae virginis pater raptam eam interrogat, a quo vitata sit, quis te, inquit, rapuit? tu, pater, nescis?

[70] It is important, too, that the *figure* should not depend on ambiguous collocations of words (a trick which is far more foolish than the last); an example of this is to be found in the controversial theme, where a father, accused of a criminal passion for his unmarried daughter, asks her for the name of her ravisher. "Who dishonoured you?" he says. She replies: "My father, do you not know?"

[71] res ipsae perducant iudicem ad suspicionem, et amoliamur cetera, ut hoc solum supersit; in quo multum etiam adfectus iuvant et interrupta silentio dictio et cunctationes. sic enim fiet, ut iudex quaerat illud nescio quid ipse, quod fortasse non crederet, si audiret, et ei, quod a se inventum existimat, credat.

[71] The facts themselves must be allowed to excite the suspicions of the judge, and we must clear away all other points, leaving nothing save what will suggest the truth. In doing this we shall find emotional appeals, hesitation and words broken by silences most effective. For thus the judge will be led to seek out the secret which he would not perhaps believe if he heard it openly stated, and to believe in that which he thinks he has found out for himself. But however excellent our *figures*,

[72] sed ne si optimae quidem sint, esse debent frequentes. nam densitate ipsa figurae aperiuntur, nec offensae minus habent, sed auctoritatis; nec pudor videtur, quod non palam obiicias, sed diffidentia. In summa, sic maxime iudex credit figuris, si nos putat nolle dicere.

[72] they must not be too numerous. For overcrowding will make them obvious, and they will become ineffective without becoming inoffensive, while the fact that we make no open accusation will seem to be due not to modesty, but to lack of confidence in our own cause. In fact, we may sum up the position thus: our figures will have most effect upon the judge when he thinks that we use them with reluctance.

[73] equidem et in personas incidi tales et in rem quoque, quod est magis rarum, quae obtineri nisi hac arte non posset. ream tuebar, quae subiecisse dicebatur mariti testamentum, et dicebantur chirographum marito exspiranti heredes dedisse; et verum erat.

[73] I myself have come across persons whom it was impossible to convince by other means: I have even come across a much rarer thing, namely, a case which could only be proved by recourse to such devices. I was defending a woman who was alleged to have forged her husband's will, and the heirs were stated to have given a bond to the husband on his deathbed, which latter assertion was true.

[74] nam, quia per leges institui uxor non poterat heres, id fuerat actum, ut ad eam bona per hoc tacitum fideicommissum pervenirent. Et caput quidem tueri

facile erat, si hoc diceremus palam, sed peribat hereditas. ita ergo fuit nobis agendum, ut iudices illud intelligerent factum, delatores non possent apprehendere ut dictum; et contigit utrumque. quod non inseruissem, veritus opinionem iactantiae, nisi probare voluissem in foro quoque esse his figuris locum. quaedam etiam,

[74] For since the wife could not legally be appointed his heir, this procedure was adopted to enable the property to be transferred to her by a secret conveyance in trust. Now it was easy for me to secure the woman's acquittal, by openly mentioning the existence of the bond; but this would have involved her loss of the inheritance. I had, therefore, to plead in such a way that the judges should understand that the bond had actually been given, but that informers might be unable to avail themselves of any statement of mine to that effect. And I was successful in both my aims. The fear of seeming to boast my own skill would have deterred me from mentioning this case, but for the fact that I wished to demonstrate that there was room for the employment of these *figures* even in the courts.

[75] quae probare non possis, figura potius spargenda sunt. haeret enim nonnunquam telum illud occultum, et hoc ipso, quod non apparet, eximi non potest; at si idem dicas palam, et defenditur et probandum est.

[75] Some things, again, which cannot be proved, may, on the other hand, be suggested by the employment of some *figure*. For at times such hidden shafts will stick, and the fact that they are not noticed will prevent their being drawn out, whereas if the same point were stated openly, it would be denied by our opponents and would have to be proved.

[76] cum autem obstat nobis personae reverentia, (quod secundum posuimus genus) tanto cautius dicendum est, quanto validius bonos inhibet pudor quam metus. hic vero tegere nos iudex quod sciamus et verba vi quadam veritatis erumpentia credat coercere. nam quanto magis aut ipsi, in quos dicimus, aut iudices aut adsistentes oderint hanc maledicendi lasciviam, si velle nos credant? aut quid interest quomodo dicatur,

[76] When, however, it is respect for some person that hampers us (which I mentioned as the second condition under which such *figures* may be used), all the greater caution is required because the sense of shame is a stronger deterrent to all good men than fear. In such cases the judge must be impressed with the fact that we are hiding what we know and keeping back the words which our natural impulse to speak out the truth would cause to burst from our lips. For those against whom we are speaking, together with the judges and our audience, would assuredly be all the more incensed by such toying with detraction, if they thought that we were inspired by deliberate malice.

[77] cum et res et animus intelligitur? quid dicendo denique proficimus, nisi ut palam sit facere nos quod ipsi sciamus non esse faciendum? atqui praecipue

prima, quibus praecipere coeperam, tempora hoc vitio laborarunt. dicebant enim libenter tales controversias, quae difficultatis gratia placent, cum sint multo faciliores.

[77] And what difference does it make how we express ourselves, when both the facts and our feelings are clearly understood? And what good shall we do by expressing ourselves thus except to make it clear that we are doing what we ourselves know ought not to be done? And yet in the days when I first began to teach rhetoric, this failing was only too common. For declaimers selected by preference those themes which attracted them by their apparent difficulty, although as a matter of fact they were much easier than many others.

[78] nam rectum genius adprobari nisi maximis viribus non potest; haec deverticula et anfractus suffugia sunt infirmitatis, ut qui cursu parum valent, flexu eludant, cum haec, quae adfectatur, ratio sententiarum non procul a ratione iocandi abhorreat. adiuvat etiam, quod auditor gaudet intelligere, et favet ingenio suo et alio dicente se laudat.

[78] For straightforward eloquence requires the highest gifts to commend itself to the audience, while these circuitous and indirect methods are merely the refuge of weakness, for those who use them are like men who, being unable to escape from their pursuers by speed, do so by doubling, since this method of expression, which is so much affected, is really not far removed from jesting. Indeed it is positively assisted by the tact that the hearer takes pleasure in detecting the speaker's concealed meaning, applauds his own penetration and regards another man's eloquence as a compliment to himself.

[79] itaque non solum, si persona obstaret rectae orationi, (quo in genere saepius modo quam figuris opus est) decurrebant ad schemata, sed faciebant illis locum etiam, ubi inutiles ac nefariae essent, ut si pater, qui infamem in matrem filium secreto occidisset, reus malae tractationis iacularetur in uxorem obliquis sententiis. nam quid impurius, quam retinuisse talem?

[79] Consequently it was not merely in cases where respect for persons prevented direct speaking (a circumstance which as a rule calls for caution rather than *figures*) that they would have recourse to *figurative* methods, but they made room for them even under circumstances where they were useless or morally inadmissible, as for example in a case where a father, who had secretly slain his son whom he suspected of incest with his mother, and was accused of ill-treating his wife, was made to bring indirect insinuations against his wife.

[80] quid porro tam contrarium quam eum, qui accusetur, quia summum nefas suspicatus de uxore videatur, confirmare id ipsa defensione, quod diluendum est? at si iudicum sumerent animum, scirent, quam eiusmodi actionem laturi non fuissent, multoque etiam minus, cum in parentes abominanda crimina

spargerentur.

[80] But what could be more discreditable to the accused than that he should have kept such a wife? What could be more damaging than that he who is accused because he appears to have harboured the darkest suspicions against his wife, should by his defence confirm the charge which he is required to refute? If such speakers had only placed themselves in the position of the judges, they would have realised how little disposed they would have been to put up with pleading on such lines, more especially in cases where the most abominable crimes were insinuated against parents.

[81] Et quatenus huc incidimus, paulo plus scholis demus. nam et in his educatur orator, et in eo, quomodo declamatur, positum est etiam, quomodo agatur. dicendum ergo de iis quoque, in quibus non asperas figuras, sed palam contrarias causae plerique fecerunt: tyrannidis adfectatae damnatis torqueatur, ut consocios indicet; accusator eius optet, quod volet. patrem quidam damnavit, optat, ne is torqueatur; paler ei contra dicit.

[81] However, since we have lighted on this topic, let us devote a little more time to considering the practice of the schools. For it is in the schools that the orator is trained, and the methods adopted in pleading ultimately depend on the methods employed in declamation. I must therefore say something of those numerous cases in which *figures* have been employed which were not merely harsh, but actually contrary to the interests of the case. "A man condemned for attempting to establish himself as tyrant shall be tortured to make him reveal the names of his accomplices. The accuser shall choose what reward he pleases. A certain man has secured the condemnation of his father and demands as his reward that he should not be tortured. The father opposes his choice."

[82] nemo se tenuit agens pro patre, quin figuras in filium faceret, tanquam illum conscium in tormentis nominaturus. quo quid stultius? nam cum hoc iudices intellexerint, aut non torquebitur, cum ideo torqueri velit, aut torto non credetur.

[82] Everyone who pleaded for the father indulged in *figurative* insinuations against the son, on the assumption that the father would, when tortured, be likely to name him as one of his accomplices. But what could be more foolish? For as soon as the judges grasp their point, they will either refuse to put him to the torture in view of his motive for desiring to be tortured, or will refuse to believe any confession he may make under torture. But, it will be urged,

[83] at credibile est, hoc eum velle. fortasse; dissimulet ergo, ut efficiat. sed nobis (declamatoribus dico) quid proderit hoc intellexisse, nisi dixerimus? ergo, si vere ageretur, similiter consilium illud latens prodidissemus? quid? si neque utique verum est, et habere alias hic damnatus contradicendi causas

potest, vel quod legem conservandam putet, vel quod nolit accusatori debere beneficium, vel (quod ego maxime sequerer) ut innocentem se esse in tormentis pertendat?

[83] it is possible that this was his motive. May be. But he should then disguise his motive, in order that he may effect his purpose. But what will it profit us (and by *us* I mean the declaimers) to have realised this motive, unless we declare it as well? Well, then, if the case were being actually pleaded in the courts, should we have disclosed this secret motive in such a way? Again, if this is not the real motive, the condemned man may have other reasons for opposing his son; he may think that the law should be carried out or be unwilling to accept such a kindness from the hands of his accuser, or (and this is the line on which I personally should insist) he may intend to persist in declaring his innocence even under torture.

[84] quare ne illud quidem semper succurret sic dicentibus, patrociniū hoc voluit, qui controversiam finxit. fortasse enim noluit; sed esto, voluerit: continuone, si ille stulte cogitavit, nobis quoque stulte dicendum est? at ego in causis agendis frequenter non puto intuendum, quid litigator velit.

[84] Consequently the usual excuse advanced by such declaimers to the effect that the inventor of the theme meant the defence to proceed on these lines, will not always serve their purpose. It is possible that this was not the inventor's wish. However, let us assume that it was. Are we then to speak like fools merely because he thought like a fool? Personally I hold that, even in actual cases, we should often disregard the wishes of the litigant.

[85] est et ille in hoc genere frequens error, ut putent aliud quosdam dicere aliud velle, praecipue cum in themate est aliquem, ut sibi mori liceat, postulare, ut in illa controversia, qui aliquando fortiter fecerat et alio bello petierat, ut militia vacaret ex lege quod quinquagenarius esset, adversante filio ire in aciem coactus deseruit. filius, qui fortiter eodem proelio fecerat, incolumitatem eius optat; contra dicit pater. "non enim," inquit, "mori vult, sed invidiam filio facere."

[85] Further, in such cases speakers fall into the frequent error of assuming that certain persons say one thing and mean another: this is more especially the case where it is assumed that a man asks permission to die. Take, for example, the following controversial theme. "A man who had shown himself a heroic soldier in the past, on the occasion of a subsequent war demanded exemption from service in accordance with the law, on the ground that he was fifty years of age, but exemption being refused owing to the opposition of his son, he deserted on being compelled to go into the fight. The son, who had borne himself like a hero in the same battle, asks for his father's pardon as a reward. The father opposes his choice." "Yes," they say, "that is due not to his desire to die, but to bring odium on his son." For my part,

[86] equidem rideo, quod illi sic timent tanquam ipsi morituri et in consilium suos metus ferunt, obliti tot exemplorum circa voluntariam mortem, causarum quoque, quas habet factus ex viro forti desertor. sed de una controversia loqui supervacuum est.

[86] I laugh at the fears which they manifest on his behalf, as though they were in peril of death themselves, and at the way in which they allow their terror to influence their line of pleading; for they forget how many precedents there are for suicide and how many reasons there may be why a hero turned deserter should wish for death.

[87] ego in universum neque oratoris puto esse unquam praevaricari, neque litem intelligo, in qua pars utraque idem velit, neque tam stultum quemquam, qui, si vivere vult, mortem potius male petat quam omnino non petat.

[87] But it would be waste of time to expatiate on one controversial theme. I would lay it down as a general rule that an orator should never put forward a plea that is tantamount to collusion, and I cannot imagine a lawsuit arising in which both parties have the same design, nor conceive that any man who wishes to live could be such a fool as to put forward an absurd plea for death, when he might refrain from pleading for it at all. I do not, however,

[88] non tamen nego esse controversias huiusmodi figuratas, ut est illa, reus parricidii, quod fratrem occidisset, damnatum iri videbatur; pater pro testimonio dixit cum se iubente fecisse; absolutum abdicat. nam neque in totum filio parcat nec, quod priore iudicio adfirmavit, mutare palam potest et, ut non durat ultra poenam abdicationis, ita abdicat tamen; et alioqui figura in patrem plus facit, quam licet, in filium minus.

[88] deny that there are controversial themes of this kind where *figures* may legitimately be employed, as, for example, the following: "A man was accused of unnatural murder on the ground that he had killed his brother, and it seemed probable that he would be condemned. His father gave evidence in his defence, stating that the murder had been committed on his orders. The son was acquitted, but disinherited by the father." For in this case he does not pardon his son entirely, but cannot openly withdraw the evidence that he gave in the first trial, and while he does not inflict any worse penalty than disinheritance, he does not shrink from that. Further, the employment of the *figure* tells more heavily against the father than is fair and less against the son.

[89] Vt autem nemo contra id, quod vult, dicit, ita potest melius aliquid velle quam dicit, quo modo ille abdicatus, qui a patre, ut filium expositum et ab eo educatum solutis alimentis recipiat, postulat, revocari fortasse mavult, non tamen quod petit non vult.

[89] But, while no one ever speaks against the view which he wishes to prevail, he may wish something of greater importance than what he actually says.

Thus the disinherited son who asks his father to take back another son whom he had exposed, and who had been brought up by himself, on payment for his maintenance, while he may prefer that he himself should be reinstated, may all the same be perfectly sincere in his demand on behalf of his brother. Again, a kind of tacit hint may be employed, which,

[90] est latens et illa significatio qua, cum ius asperius petitur a iudice fit tamen spes aliqua clementiae, non palam, ne paciscamur, sed per quandam credibilem suspicionem, ut in multis controversiis, sed in hac quoque: raptor, nisi intra tricesimum diem et raptae patrem et suum exoraverit, pereat; qui exorato raptae patre suum non exorat, agit cum eo dementia.

[90] while demanding the utmost rigour of the law from the judges, suggests a loophole for clemency, not openly, for that would imply a pledge on our part, but by giving a plausible suspicion of our meaning. This device is employed in a number of controversial themes, among them the following. "A ravisher, unless within thirty days he secure pardon both from his own father and the father of the ravished girl, shall be put to death. A man who has succeeded in securing pardon from the father of the girl, but not from his own, accuses the latter of madness."

[91] nam si promittat hic pater, lis tollitur; si nullam spem faciat, ut non demens, crudelis certe videatur et a se iudicem avertat. latro igitur optime, occides ergo? — Si potero. remissius et pro suo ingenio pater Gallio, dura, anime, dura; here fortior fuisti.

[91] Here if the father pledges himself to pardon him, the dispute falls to the ground. If, on the other hand, he holds out no hope of pardon, though he will not necessarily be regarded as mad, he will certainly give the impression of cruelty and will prejudice the judge against him. Latro therefore showed admirable skill when he made the son say, "You will kill me then?" and the father reply, "Yes, if I can." The elder Gallio treats the theme with greater tenderness, as was natural to a man of his disposition. He makes the father say, "Be firm, my heart, be firm. Yesterday you were made of sterner stuff."

[92] confinia sunt his celebrata apud Graecos schemata, per quae res asperas mollius significant. nam Themistocles suasisse existimatur Atheniensibus, ut urbem apud deos deponerent, quia durum erat dicere, ut relinquerent. Et, qui Victorias aureas in usum belli conflari volebat, ita declinavit, victoriis utendum esse. totum autem allegoriae simile est aliud dicere aliud intelligi velle.

[92] Akin to this are those *figures* of which the Greeks are so fond, by means of which they give gentle expression to unpleasing facts. Themistocles, for example, is believed to have urged the Athenians to commit their city to the protection of heaven, because to urge them to abandon it would have been too brutal an expression. Again the statesman who advised that certain golden

images of Victory should be melted down as a contribution to the war funds, modified his words by saying that they should make a proper use of their victories. But all such devices which consist in saying one thing, while intending something else to be understood, have a strong resemblance to *allegory*.

[93] quaesitum etiam est, quomodo responderi contra figuras oporteret. Et quidam semper ex diverso aperiendas putaverunt, sicut latentia vitia rescinduntur. idque sane frequentissime faciendum est; aliter enim dilui obiecta non possunt, utique cum quaestio in eo consistit, quod figurae petunt. at cum maledicta sunt tantum, et non intelligere interim bonae conscientiae est.

[93] It has also been asked how *figures* may best be met. Some hold that they should always be exposed by the antagonist, just as hidden ulcers are laid open by the surgeon. It is true that this is often the right course, being the only means of refuting the charges which have been brought against us, and this is more especially the case when the question turns on the very point at which the *figures* are directed. But when the *figures* are merely employed as vehicles of abuse, it will sometimes even be wisest to show that we have a clear conscience by ignoring them.

[94] atque etiam si fuerint crebriores figurae quam ut dissimulari possint, postulandum est, ut nescio quid illud, quod adversarii obliquis sententiis significare voluerint, si fiducia sit, obiiciant palam, aut certe non exigant ut, quod ipsi non audent dicere, id iudices non modo intelligant, sed etiam credant.

[94] Nay, even if too many figures have been used to permit us to take such a course, we may ask our opponents, if they have any confidence in the righteousness of their cause, to give frank and open expression to the charges which they have attempted to suggest by indirect hints, or at any rate to refrain from asking the judges not merely to understand, but even to believe things which they themselves are afraid to state in so many words.

[95] utilis aliquando etiam dissimulatio est, ut in eo (nota enim fabula est), qui, cum esset contra eum dictum, iura per paris tui cineres, paratum se esse respondit, et iudex condicione usus est, clamante multum advocato schemata de rerum natura tolli, ut protinus etiam praeceptum sit, eiusmodi figuris utendum temere non esse.

[95] It may even at times be found useful to pretend to misunderstand them; for which we may compare the well known story of the man who, when his opponent cried, "Swear by the ashes of your father," replied that he was ready to do so, whereupon the judge accepted the proposal, much to the indignation of the advocate, who protested that this would make the use of *figures* absolutely impossible; we may therefore lay it down as a general rule that

such *figures* should only be used with the utmost caution.

[96] tertium est genus, in quo sola melius dicendi petitur occasio; ideoque id Cicero non putat esse positum in contentione. tale est illud, quo idem utitur in Clodium: quibus iste, qui omnia sacrificia nosset, facile ab se deos placari posse arbitrabatur.

[96] There remains the third class of figure designed merely to enhance the elegance of our style, for which reason Cicero expresses the opinion that such *figures* are independent of the subject in dispute. As an illustration I may quote the *figure* which he uses in his speech against Clodius: “By these means he, being familiar with all our holy rites, thought that he might easily succeed in appeasing the gods.”

[97] ironia quoque in hoc genere materiae frequentissima est. sed eruditissimum longe, si per aliam rem alia indicetur, ut adversus tyrannum, qui sub pacto abolitionis dominationem deposuerat, agit competitor, mihi in te dicere non licet, tu in me die et potes; nuper te volui occidere.

[97] *Irony* also is frequently employed in this connexion. But by far the most artistic device is to indicate one thing by allusion to another; take the case where a rival candidate speaks against an ex-tyrant who had abdicated on condition of his receiving an amnesty: “I am not permitted to speak against you. Do you speak against me, as you may. But a little while ago I wished to kill you.”

[98] frequens illud est nec magnopere captandum, quod petitur a iureiurando, ut pro exheredato, Illa mihi conlingat herede, filio mori. nam et in totum iurare, nisi ubi necesse est, gravi viro parum convenit, et est a Seneca dictum eleganter, non patronorum hoc esse, sed testium. nec meretur fidem qui sententiolae gratia iurat, nisi si potest tam bene quam Demosthenes, ut supra dixi.

[98] Another common device is to introduce an oath, like the speaker who, in defending a disinherited man, cried, “So may I die leaving a son to be my heir.” But this is not a *figure* which is much to be recommended, for as a rule the introduction of an oath, unless it is absolutely necessary, is scarcely becoming to a self-respecting man. Seneca made a neat comment to this effect when he said that oaths were for the witness and not for the advocate. Again, the advocate who drags in an oath merely for the sake of some trivial rhetorical effect, does not deserve much credit, unless he can do this with the masterly effect achieved by Demosthenes, which I mentioned above.

[99] levissimum autem longe genus ex verbo, etiamsi est apud Ciceronem in Clodium, praesertim quam omnes amicam omnium potius quam cuiusquam inimicam putaverunt.

[99] But by far the most trivial form of *figure* is that which turns on a single

word, although we find such a figure directed against Clodia by Cicero: “Especially when everybody thought her the friend of all men rather than the enemy of any.”

[100] *comparationem* equidem video figuram quoque esse, cum sit interim probationis, interim etiam causae genus, et sit talis eius forma, qualis est pro Murena, vigilas tu de nocte, ut tuis consultoribus respondeas, ille, ut eo, quo contendit, mature cum exercitu perveniat; te gallorum illum buccinarum cantus exsuscitat et cetera.

[100] I note that *comparison* is also regarded as a *figure*, although at times it is a form of proof, and at others the whole case may turn upon it, while its form may be illustrated by the following passage from the *pro Murena*: “You pass wakeful nights that you may be able to reply to your clients; he that he and his army may arrive betimes at their destination. You are roused by cockcrow, he by the bugle’s reveille,” and so on.

[101] nescio an orationis potius quam sententiae sit. id enim solum mutatur, quod non universa universis, sed singula singulis opponuntur. Et Celsus tamen et non negligens auctor Visellius in hac eam parte posuerunt, Rutilius quidem Lupus in utroque genere, idque ἀντίθετον vocat.

[101] I am not sure, however, whether it is so much a *figure of thought* as of *speech*. For the only difference lies in the fact that universals are not contrasted with universals, but particulars with particulars. Celsus, however, and that careful writer Visellius regard it as a *figure of thought*, while Rutilius Lupus regards it as belonging to both, and calls it *antithesis*.

[102] praeter illa vero, quae Cicero inter lumina posuit sententiarum, multa alia et idem Rutilius Gorgian secutus, non illum Leontinum, sed alium sui temporis, cuius quattuor libros in unum suum transtulit, et Celsus, videlicet Rutilio accedens, posuerunt schemata:

[102] To the *figures* placed by Cicero among the ornaments of thought Rutilius (following the views of Gorgias, a contemporary, whose four books he transferred to his own work, and who is not to be confused with Georgias of Leontini) and Celsus (who follows Rutilius) would add a number of others, such as:

[103] *consummationem*, quam Graecus διαλλαγήν vocat, cum plura argumenta ad unum effectum deducuntur; consequens, ille ἐπακολούθησιν, de quo nos in argumentis diximus; *collectionem*, qui apud illum est συλλογισμός minas, id est κατάληξις exhortationem, συλλογισμός Quorum nihil non rectum est, nisi cum aliquam ex iis, de quibus locuti sumus, figuram accipit.

[103] *concentration*, which the Greek calls διαλλαγή a term employed when a number of different arguments are used to establish one point: *consequence*, which Gorgias calls ἐπακολούθησις and which I have already discussed under

the head of argument: *inference*, which Gorgias terms συλλογισμός *threats*, that is, κατὰλληξις *exhortation*, or παραινετικόν But all of these are perfectly straightforward methods of speaking, unless combined with some one of the *figures* which I have discussed above.

[104] praeter haec Celsus excludere, asseverare, detrectare, excitare iudicem, proverbiis uti, et versibus et ioco et invidia et invocatione intendere crimen (quod est δεινωσις), adulari, ignoscere, fastidire, admonere, satisfacere, precari, corripere, figuras putat.

[104] Besides these, Celsus considers the following to be *figures*: exclusion, asseveration, refusal, excitement of the judge, the use of proverbs, the employment of quotations from poetry, jests, invidious remarks or invocation to intensify a charge (which is identical with δεινωσις) flattery, pardon, disdain, admonition, apology, entreaty and rebuke.

[105] partitionem quoque et propositionem et divisionem et rerum duarum cognationem, quod est, ut idem valeant quae videntur esse diversa, ut non is demum sit veneficus, qui vitam abstulit data potione, sed etiam qui mentem; quod est in parte finitionis.

[105] He even includes partition, proposition, division and affinity between two separate things, by which latter he means that two things apparently different signify the same: for example, not only the man who murders another by administering a deadly draught is to be regarded as a poisoner, but also the man who deprives another of his wits by giving him some drug, a point which depends on *definition*.

[106] Rutilius sive Gorgias, ἀναγκαῖον, ἀνάμνησιν, ἀνθυποφοράν, ἀνθυποφοράν, παραύξησιν, προέκθεσιν, quod est dicere quid fieri oportuerit, deinde quid factum sit; ἐναντιότητα unde sint enthymemata κατ' ἐναντίωσιν, μετάληψιν etiam, quo statu Hermagoras utitur. Visellius, quanquam paucissimas faciat figuras, ἐνθύμημα tamen, quod commentum vocat, et, rationem appellans, ἐπιχείρημα inter eas habet. quod quidem recipit quodammodo et Celsus; nam consequens an epichirema sit dubitat. Visellius adiicit et sententiam.

[106] To these Rutilius or Gorgias add ἀναγκαῖον that is, the representation of the necessity of a thing, ἀνάμνησις or reminding, ἀνθυποφορά that is, replying to anticipated objections, ἀντίρρησις or refutation, παραύησις or amplification, προέκθεσις which means pointing out what ought to have been done, and then what actually has been done, ἐναντιότης, or arguments from opposites (whence we get *enthymemes* styled κατ' ἐναντίωσιν), and even μετάληψις, which Hermagoras considers a *basis*. Visellius, although he makes the number of *figures* but small, includes among them the *enthymeme*, which he calls *commentum*, and the *epichireme*, which he calls *ratio*. This view is also partially accepted by Celsus, who is in doubt whether *consequence* is not

to be identified with the *epicheireme*.

[107] invenio, qui aggregent his διασκευάς, ἀπαγορεύσεις, παραδιηγήσεις. sed ut haec non sunt schemata, sic alia vel sint forsitan ac nos fugerint vel etiam nova fieri adhuc possint, eiusdem tamen naturae cuius sunt ea de quibus dictum est.

[107] Visellius also adds *general reflexions* to the list. I find others who would add to these διασκευή or enhancement, ἀπαγόρευσεις or prohibition, and παραδιήγησις or incidental narrative. But though these are not figures, there may be others which have slipped my notice, or are yet to be invented: still, they will be of the same nature as those of which I have spoken above.

3. verborum vero figurae et mutatae sunt semper et, utcunque valuit consuetudo, mutantur. itaque, si antiquum sermonem nostro comparemus, paene iam quidquid loquimur figura est, ut hac re invidere, non ut veteres et Cicero praecipue, hanc rem, et incumbere illi, non in illum, et plenum vino non vini, et huic non hunc adulari iam dicitur et mille alia; utinamque non peiora vincant.

3. *Figures of speech* have always been liable to change and are continually in process of change in accordance with the variations of usage. Consequently when we compare the language of our ancestors with our own, we find that practically everything we say nowadays is *figurative*. For example, we say *invidere hac re* for to “grudge a thing,” instead of *hanc rem*, which was the idiom of all the ancients, more especially Cicero, and *incumbere illi* (to lean upon him) for *incumbere in ilium*, *plenum vino* (full of wine) for *plenum vini*, and *huic adulari* (to flatter him) for *hunc adulari*. I might quote a thousand other examples, and only wish I could say that the changes were not often changes for the worse.

[2] verum schemata λέξεως duorum sunt generum: alterum loquendi rationem vocant, alterum maxime collocatione exquisitum est. quorum tametsi utrumque convenit orationi, tamen possis illud grammaticum hoc rhetoricum magis dicere.

prius fit iisdem generibus quibus vitia. esset enim orationis schema vitium, si non peteretur, sed accideret.

[2] But to proceed, *figures of speech* fall into two main classes. One is defined as the form of language, while the other is mainly to be sought in the arrangement of words. Both are equally applicable in oratory, but we may style the former rather more grammatical and the latter more rhetorical. The former originates from the same sources as errors of language. For every *figure* of this kind would be an error, if it were accidental and not deliberate.

[3] verum auctoritate, vetustate, consuetudine plerumque defenditur, saepe etiam ratione quadam. ideoque, cum sit a simplici rectoque loquendi genere

deflexa, virtus est, si habet probabile aliquid, quod sequatur. una tamen in re maxime utilis, ut cotidiani ac semper eodem modo formati sermonis fastidium levet et nos a vulgari dicendi genere defendat.

[3] But as a rule such *figures* are defended by authority, age and usage, and not infrequently by some reason as well. Consequently, although they involve a divergence from direct and simple language, they are to be regarded as excellences, provided always that they have some praiseworthy precedent to follow. They have one special merit, that they relieve the tedium of everyday stereotyped speech and save us from commonplace language.

[4] quodsi quis parce et, cum res poscet, utetur; velut asperso quodam condimento iucundior erit; at qui nimium adfectaverit, ipsam illam gratiam varietatis amittet. quanquam sunt quaedam figurae ita receptae, ut paene iam hoc ipsum nomen effugerint; quae etiamsi fuerint crebriores, consuetas aures minus ferient.

[4] If a speaker use them sparingly and only as occasion demands, they will serve as a seasoning to his style and increase its attractions. If, on the other hand, he strains after them overmuch, he will lose that very charm of variety which they confer. Some figures, however, are so generally accepted that they have almost ceased to be regarded as figures: consequently however frequently they may be used, they will make less impression on the ear, just because it has become habituated to them.

[5] nam secretae et extra vulgarem usum positae ideoque magis notabiles, ut novitate aurem excitant, ita copia satiant, et se non obvias fuisse dicenti sed conquisitas et ex omnibus latebris extractas congestasque declarant.

[5] For abnormal *figures* lying outside the range of common speech, while they are for that very reason more striking, and stimulate the ear by their novelty, prove cloying if used too lavishly, and make it quite clear that they did not present themselves naturally to the speaker, but were hunted out by him, dragged from obscure corners and artificially piled together. *Figures*, then,

[6] fiunt ergo et circa genus figurae in nominibus; nam et oculis capti talpae et timidi dammae dicuntur a Vergilio; sed subest ratio, quia sexus uterque altero significatur, tamque mares esse talpas dammasque quam feminas certum est; et in verbis, ut fabricatus est gladium et inimicum poenitus es.

[6] may be found in connexion with the gender of nouns; for we find *oculis capti talpae* (blind moles) and *timidi dammae* (timid deer) in Virgil; but there is good reason for this, since in these cases both sexes are covered by a word of one gender, and there is no doubt that there are male moles and deer as well as female. *Figures* may also affect verbs: for example, we find such phrases as *fabricatus est gladium* or *inimicum poenitus es*.

[7] quod mirum minus est, quia in natura verborum est et quae facimus

patiendi modo saepe dicere, ut arbitror, suspicor, et contra faciendi quae patimur, ut vapulo; ideoque frequens permutatio est et pleraque utroque modo efferuntur: luxuriatur, luxuriat; fluctuatur, fluctuat; adsentior, adsentio.

[7] This is the less surprising, since the nature of verbs is such that we often express the active by the passive form, as in the case of *arbitror* (think) and *suspikor* (suspect), and the passive by the active, as in the case of *vapulo* (am beaten). Consequently the interchange of the two forms is of common occurrence, and in many cases either form can be used: for example, we may say *luxuriatur* or *luxuriat* (luxuriate), *fluctuatur* or *fluctuat* (fluctuate), *adsentior* or *adsentio* (agree). *Figures* also occur in connexion with number,

[8] est figura et in numero, vel cum singulari pluralis subiungitur, gladio pugnacissima gens Romani (gens enim ex multis), vel ex diverso,

“qui non risere parentes,

nec deus hunc mensa dea nec dignata cubili est;

“

Ex illis enim, qui non risere, hic quem non dignata.

[8] as when the plural follows the singular, as in the phrase *gladio pugnacissima gens Romani* (the Romans are a nation that fight fiercely with the sword); for *gens* is a singular noun indicating multitude. Or the singular may follow the plural, as in the following instance,

qui non risere parentes

nec deus hunc mensa dea nec dignata cubili est,

Ecl. iv. 62.

where “he whom no goddess deems,” etc., is included among “those who have never smiled,” etc.

[9] * satura est

Sed nostrum istud vivere triste

aspexi,

cum infinito verbo sit usus pro appellatione; nostram enim vitam vult intelligi. utimur et verbo pro participio,

magnum dat ferre talentum,

tanquam ferendum, et participio pro verbo, volo datum.

[9] In a satire again we read,

nostrum istud vivere triste aspexi,

Pers. i. 9.

where the infinitive is used as a noun: for the poet by *nostrum vivere* means *nostram vitam*. We also at times use the verb for the participle, as in the phrase,

magnum dat ferre talentum,

Aen. v. 248.

where *ferre* is used for *ferendum*, or the participle may be used for the verb, as in the phrase *volo datum* (I wish to give).

[10] interim etiam dubitari potest, cui vitio simile sit schema: ut in hoc

virtus est vitium fugere:

aut enim partes orationis mutat ex illo virtus est fuga vitiorum, aut casus ex illo virtutis est vitium fugere; multo tamen hoc utroque excitatius. iunguntur interim schemata: Sthenelus sciens pugnae; est enim scitus Sthenelus pugnandi.

[10] At times, again, there may be some doubt as to the precise error which a figure resembles. Take, for example, the phrase

virtus est vitium fugere,

Hor. Ep. I. i. 41.

where the writer has either changed the parts of speech (making his phrase a variant for *virtus est fuga vitiorum*), or the cases (in which case it will be a variant for *virtutis est vitium fugere*); but whichever be the case, the *figure* is far more vigorous than either. At times *figures* are joined, as in *Sthenelus sciens pugnae*, which is substituted for *Sthenelus scilus pugnandi*. Tenses too are interchangeable.

[11] transferuntur et tempora: Timarchides negat esse ei periculum a securi, (praesens enim pro praeterito positum est) et status:

hoc Ithacus velit;

et, ne morer, per omnia genera per quae fit soloecismus.

[11] For example, *Timarchides negat esse ei periculum a securi* the present *negat* is substituted for the past. Or one mood may be used for another, as in the phrase, *hoc Ithacus velit*. In fact, to cut a long matter short, there is a *figure* corresponding to every form of solecism.

[12] haec quoque est, quam ἑτεροίωσιν vocant, cui non dissimilis ἐξάλλαγή dicitur, ut apud Sallustium neque ea res falsum me habuit et duci probare. ex quibus fere praeter novitatem brevitatis etiam peti solet. unde eo usque

processum est, ut non paenitutum pro non acturo paenitentiam et visuros ad videndum missos idem auctor dixerit.

[12] There is also a *figure* styled ἔτεροίωσις (i.e. alteration of the normal idiom), which bears a strong resemblance to ἑξάλλαγή. For example, we find in Sallust phrases such as *neque ea res failsum me habuit* and *duci probare*. Such *figures* as a rule aim not merely at novelty, but at conciseness as well. Hence we get further developments, such as *non paenitutum* for “not intending to repent,” and *visuros* for “sent to see,” both found in the same author.

[13] quae ille quidem fecerit schemata, an idem vocari possint, videndum, quia recepta sint. nam receptis etiam vulgo auctore contenti sumus: ut nunc evaluit rebus agentibus, quod Pollio in Labieno damnat, et contumeliam fecit, quod a Cicerone reprehendi notum est; ad fici enim contumelia dicebant.

[13] These may have been figures when Sallust made them; but it is a question whether they can now be so considered, since they have met with such general acceptance. For we are in the habit of accepting common parlance as sufficient authority where current phrases are concerned: for example, *rebus agentibus* in the sense of *while this was going on*, which Pollio rebukes Labienus for using, has become an accredited idiom, as has *contumeliam fecit*, which, as is well known, is stigmatised by Cicero: for in his day they said *ad fici contumelia*.

[14] alia commendatio vetustatis, cuius amator unice Vergilius fuit:

vel cum se pavidum contra mea iurgia iactat. —

22 progeniem sed enim Troiano a sanguine duci

audierat.

Quorum similia apud veteres tragicos comicosque sunt plurima.

[14] Figures may also be commended by their antiquity, for which Virgil had such a special passion. Compare his

vel cum se pavidum contra mea iurgia iactat

Aen. xi. 400.

or

progeniem sed enim Troiano a sanguine duci

audierat.

An. i. 19.

Numerous instances of the same kind might be cited from the old tragic and comic poets.

[15] illud et in consuetudine remansit enimvero. his amplius apud eundem:

nam quis te iuuenum confidentissime,

quo sermonis initium fit. Sed

tam magis illa tremens et tristibus effera flammis,

quam magis effuso crudescunt sanguine pugnae.

Quod est verum ex illo: quam magis aerumna urget, tam magis ad malefaciendum viget.

[15] One word of this type has remained in common use, namely *enimvero*. I might further quote from the same author

nam quis te iuuenum confidentissime,

Georg. iv. 445. The figure consists in the opening of a speech with nam, or perhaps rather in saying nam quis for quisnam.

words which form the beginning of a speech: or

tam magis illa tremens et tristibus etffra flammis,

quam magis effuso crudescunt sanguine pugnae.

Aen. vii. 787.

“The more the strife with bloodshed rages wild,
The more it quivers and with baleful fire
Glows fiercer.
“

There the sentence inverts the natural order which may be illustrated by *quam magis aerumna urgent, tam magis ad malefaciendumn viget*.

[16] pleni talibus antiqui sunt; initio Eunuchi Terentius quid igitur faciam? inquit. alius: ain tandem leno? catullus in Epithalamio,

dum innupta manet, dum cara suis est,

cum prius dum significet quoad, sequens usque eo.

[16] Old writers are full of such usages. At the beginning of the *Eunuchus* of Terence we have *quid igitur faciam*, while another comic poet says *ain tandem leno?* Catullus in his *Epithalamium* writes:

dum innupta manet, dum cara suis est,

Cat. lxii. 45.

where the first *dum* means *while*, and the second means *so long*.

[17] ex Graeco vero translata vel Sallustii plurima, quale est, vulgus amat fieri, vel Horatii, nam id maxime probat, nec ciceris, nec longae invidit avenae, vel Vergilii,

tyrrhenum navigat aequor.

Sed iam vulgatum actis quoque, saucius pectus.

[17] Sallust, on the other hand, borrows a number of idioms from the Greek, such as *vulgus amat fieri*: the same is true of Horace, who strongly approves of the practice. Compare his

nec ciceris net longae invidit avenae.

Sat. II. vi. 83. The gen. of respect is regarded as a Graecism.

Virgil does the same in phrases such as

Tyrrhenum navigat aequor

or *saucius pectus* ("wounded at heart"), an idiom which has now become familiar in the public gazette.

[18] ex eadem parte figurarum priore dicto et adiectio est, quae videri potest supervacua, sed non sine gratia est:

nam neque Parnasi vobis iuga, nam neque Pindi;

potest enim deesse alterum nam. Sed apud Horatium illud,

fabriciumque,

hunc et intonsis Curium capillis.

Sed detractioes, quae in complexu sermonis aut vitium habent aut figuram;

accede ad ignem, iam calesces plus satis.

plus enim quam satis est.

[18] Under the same class of figure falls that of addition, which, although the words added may be strictly superfluous, may still be far from inelegant. Take, for example,

nam neque Parnasi vobis iuga, nam neque Pindi,

Ecl. x. 11:

where the second *nam* might be omitted. And we find in Horace,

Fabriciumque,

hunc et intonsis Curium capillis.

Similarly, words are omitted, a device which may be either a blemish or a

figure, according to the context. The following is an example:

accede ad ignem, iam calesces plus satis;

Ter. Eun. I. ii. 5.

for the full phrase would be *plus quam satis*. There is, however, another form of omission which requires treatment at greater length.

[19] nam de altera quae detractio pluribus dicendum est.

utimur vulgo et comparativis pro absolutis, ut cum se quis infirmiores esse dicet; duo inter se comparativa committimus: Si te, Catilina, comprehendere, si interfici iussero, credo, erit verendum mihi, ne non potius hoc omnes boni serius a me quam quisquam crudelius factum esse dicat.

[19] We frequently use the comparative for the positive, as, for example, when a man speaks of himself as being *infirmior* (rather indisposed). Sometimes we join two comparatives, as in the following passage: *si te, Catilina, comprehendere, si interfici iussero, credo erit verendum mihi, ne non potius hoc omnes boni serius a me quam quisquam crudelius factum esse dicat.*

[20] sunt et illa non similia soloecismo quidem, sed tamen numerum mutantia, quae et tropis adsignari solent, ut de uno pluraliter dicamus:

sed nos immensum spatium confecimus aequor;

et de pluribus singulariter,

haud secus ac patrii acer Romanus in armis.

Specie diversa sed genere eadem et haec sunt,

[20] There are also *figures* like the following, which, though far from being solecisms, alter the number and are also usually included among *tropes*. We may speak of a single thing in the plural, as in the following instance:

“But we have travelled o’er a boundless space;
“

Or we may speak of the plural in the singular, as in the following case:

“Like the fierce Roman in his country’s arms.
“

[21]

neve tibi ad solem vergant vineae cadentem. —

Ne mihi tum molles sub divo carpere somnos,

neu dorso nemoris libeat iacuisse per herbas,

non enim nescio cui alii prius nec postea sibi uni, sed omnibus praecipit. Sed de nobis loquimur tanquam de aliis: dicit Seruius, negat Tullius.

[21] There are others which belong to a different species, but the same genus, such as

Nor let thy vineyards slope toward the west,

Georg. ii. 298.

or

In that hour

Be it not mine beneath the open sky

To court soft sleep nor on the forest ridge

Amid the grass to lie.

Georg. iii. 435.

For in the first of these passages he is not advising some other person, nor exhorting himself in the second, his advice in both passages being meant for all. Sometimes, again, we speak of ourselves as though we were referring to others, as in phrases like, “Servius asserts, Tullius denies it.”

[22] Sed nostra persona utimur pro aliena, et alios pro aliis fingimus. utriusque rei exemplum pro Caecina. Pisonem, adversae partis advocatum, adloquens Cicero dicit, restituisse te dixti; nego me ex edicto praetoris restitutum esse; verum enim est illud; restituisse se Aebutius dixit, Caecina nego me ex edicto praetoris restitutum esse; et ipsum dixti, excussa syllaba, figura in verbo.

[22] At other times we speak in the first person instead of in another, or substitute one person for another. Both devices are employed together in the *pro Caecina*, where Cicero, addressing Piso, the counsel for the prosecution, says, “You asserted that you reinstated me: I deny that you did so in accordance with the praetor’s edict.” The actual truth is that it was Aebutius who asserted that he had reinstated the defendant, and Caecina who denied that he had been restored in accordance with the praetor’s edict. We may note also a further *figure of speech* in the contracted *dixti*, which has dropped one of its syllables.

[23] illa quoque ex eodem genere possunt videri: unum quod interpositionem vel interclusionem dicimus, Graeci παρένθεσιν, παρέμπτωσιν vocant, dum continuationi sermonis medius aliqui sensus intervenit: ego cum te (mecum enim saepissime loquitur) patriae reddidissem; cui adiiciunt hyperbaton,

[23] The following also may be regarded as belonging to the same *genus*. The first is called *interpositio* or *interclusio* by us, and *parenthesis* or *paremptosis* by the Greeks, and consists in the interruption of the continuous flow of our language by the insertion of some remark. The following is an example: *ego*

cum te (mecum enim saepissime loquilor) patriae reddidissem.

[24] quod inter tropos esse noluerunt; alterum, quod est ei figurae sententiarum, quae ἀποστροφή dicitur, simile, sed non sensum mutat, verum formam eloquendi:

decios, Marios magnosque Camillos,

scipiadas duros bello et te, maxime Caesar.

Acutius adhuc in Polydoro,

[24] To this they add *hyperbaton*, which they refuse to include among *tropes*. A second *figure* of this kind is one closely resembling the *figure of thought* known as *apostrophe*, but differing in this respect, that it changes the form of the language and not the sense. The following will illustrate my meaning:

The Decii too,

The Marii and Camilli, names of might,

The Scipios, stubborn warriors, aye, and thee,

Great Caesar.

Georg. ii. 169. (Rhoades' translation).

[25]

fas omne abrumpit, Polydorum obtruncat et auro

fi potitur. quid non mortalia pectora cogis

auri sacra fames?

Hoc, qui tam parva momenta nominibus discreverunt, μετὰβασιν vocant, quam et aliter fieri putant:

quid loquor? aut ubi sum?

[25] There is a still more striking example in the passage describing the death of Polydorus:

“All faith he brake and Polydorus slew

Seizing his gold by force. Curst greed of gold,

To what wilt thou not drive the hearts of men?

“

‘Those terminologists who delight in subtle distinctions call the last figure μετὰβασις (transition), and hold that it may be employed in yet another way, as in Dido’s

What do I say? Where am I?

Aen. iv. 595.

[26] coniunxit autem παρένθεσιν et ἀποστροφὴν Vergilius illo loco,

haud procul inde citae Mettum in diversa quadrigae

distulerant, (at tu dictis Albane maneres!)

raptabatque viri mendacis viscera Tullus.

Haec schemata aut his similia,

[26] Virgil has combined *apostrophē* and *parenthesis* in the well-known passage:

“Next Mettus the swift cars asunder tore,

(Better, false Alban, hadst thou kept thy troth!)

And Tullus dragged the traitors’ mangled limbs. . .

“

These figures and the like, which consist in change,

[27] quae erunt per mutationem, adiectionem, detractiōnem, ordinem, et convertunt in se auditorem nec languere patiuntur subinde aliqua notabili figura excitatum, et habent quandam ex illa vitii similitudine gratiam, ut in cibis interim acor ipse iucundus est. quod continget, si neque supra modum multae fuerint nec eiusdem generis aut iunctae aut frequentes, quia satietatem ut varietas earum, ita raritas effugit.

[27] addition, omission, and the order of words, serve to attract the attention of the audience and do not allow it to flag, rousing it from time to time by some specially striking figure, while they derive something of their charm from their very resemblance to blemishes, just as a trace of bitterness in food will sometimes tickle the palate. But this result will only be obtained if figures are not excessive in number nor all of the same type or combined or closely packed, since economy in their use, no less than variety, will prevent the hearer being surfeited.

[28] illud est acrius genus, quod non tantum in ratione positum est loquendi, sed ipsis sensibus cum gratiam tum etiam vires accommodat. E quibus primum sit, quod fit adiectione. plura sunt genera; nam et verba geminantur, vel amplificandi gratia, ut occidi, occidi, non Sp. Maelium; alterum est enim quod indicat, alterum quod adfirmat; vel miserandi, ut

A Corydon, Corydon.

[28] There is a more striking class of figure, which does not merely depend on the form of the language for its effect, but lends both charm and force to the thought as well. The first figure of this class which calls for notice is that which is produced by *addition*. Of this there are various kinds. Words, for instance, may be doubled with a view to amplification, as in “I have slain, I

have slain, not Spurius Maelius” (where the first *I have slain* states what has been done, while the second emphasises it), or to excite pity, as in

Ah! Corydon, Corydon.

Ecl. ii. 69.

[29] quae eadem figura nonnunquam per ironiam ad elevandum convertitur. similis geminationis post aliquam interiectionem repetitio est, sed paulo etiam vehementior: Bona, miserum me! (consumptis enim lacrimis tamen infixus haeret animo dolor) bona, inquam, Cn. Pompeii acerbissimae voci subiecta praeconis. — vivis et vivis non ad deponendam dam, sed ad confirmandam audaciam.

[29] The same figure may also sometimes be employed ironically, with a view to disparagement. Similar to such doubling of words is repetition following a *parenthesis*, but the effect is stronger. “I have seen the property alas! (for though all my tears are shed, my grief still clings to me deep-rooted in my heart), the property, I say, of Gnaeus Pompeius put up for sale by the cruel voice of the public crier.” “You still live, and live not to abate your audacity, but to increase it.”

[30] Sed ab iisdem verbis plura acriter et instanter incipiunt: nihilne te nocturnum praesidium Palatii, nihil urbis vigiliae, nihil timor populi, nihil consensus bonorum omnium, nihil hic munitissimus habendi senatus locus, nihil horum ora uultusque mouverunt? et in iisdem desinunt: quis eos postulavit? Appius. Quis produxit? Appius.

[30] Again, a number of clauses may begin with the same word for the sake of force and emphasis. “Were you unmoved by the guard set each night upon the Palatine, unmoved by the patrolling of the city, unmoved by the terror of the people, unmoved by the unanimity of all good citizens, unmoved by the choice of so strongly fortified a spot for the assembly of the senate, unmoved by the looks and faces of those here present to-day?” Or they may end with the same words. “Who demanded them? Appius. Who produced them? Appius.”

[31] quanquam hoc exemplum ad aliud quoque schema pertinet, cuius et initia inter se et fines iidem sunt, quis et quis, Appius et Appius. quale est: qui sunt, qui foedera saepe ruperunt? carthaginienses. Qui sunt, qui crudelissime bellum gesserunt? carthaginienses. Qui sunt, qui Italiam deformarunt? carthaginienses. Qui sunt, qui sibi ignosci postulant? carthaginienses.

[31] This last instance, however, comes under the head of another figure as well, where both opening and concluding words are identical, since the sentences open with “who” and end with “Appius.” Here is another example. “Who are they who have so often broken treaties? The Carthaginians. Who are they who have waged war with such atrocious cruelty? The Carthaginians.

Who are they who have laid Italy waste? The Carthaginians. Who are they who pray for pardon? The Carthaginians.”

[32] etiam in contrapositionis vel comparationis solet respondere primorum verborum alterna repetitio, quod modo huius esse loci potius dixi: vigilas tu de node, ut tuis consultatoribus respondeas; ille, ut eo quo intendit mature cum exercitu perveniat. te gallorum, illum buccinarum cantus exsuscitat. tu actionem instituis; ille aciem instruit. tu caves, ne consultores tui, ille, ne urbes aut castra capiantur.

[32] Again, in antitheses and comparisons the first words of alternate phrases are frequently repeated to produce correspondence, which was my reason for saying a little while back that this device came under the present topic rather than that which I was then discussing. “You pass wakeful nights that you may be able to reply to your clients; he that he and his army may arrive betimes at their destination. You are roused by cockcrow, he by the bugle’s reveillé. You draw up your legal pleas, he sets the battle in array. You are on the watch that your clients be not taken at a disadvantage, he that cities or camps be not so taken.”

[33] sed hac gratia non fuit contentus orator, vertit in contrarium eandem figuram: ille tenet et scit, ut hostium copiae, tu, ut aquae pluviae arceantur. He exercitatus in propagandis finibus, tu in regendis.

[33] But the orator is not content with producing this effect, but proceeds to reverse the figure. “He knows and understands how to keep off the forces of the enemy, you how to keep off the rainwater; he is skilled to extend boundaries, you to delimit them.”

[34] possunt media quoque respondere vel primis, ut

te nemus Angitia, vitrea te Fucinus unda;

vel ultimis ut haec navis onusta praeda Siciliensi, cum et ipsa esset ex praeda. nec quisquam dubitabit. idem fieri posse iteratis utrinque mediis. respondent primis et ultima: multi et graves dolores inventi parentibus et propinquis multi.

[34] A similar correspondence may be produced between the middle and the opening of a sentence, as in the line:

te nemus Angitia, vitrea te Fucinus unda.

Aen. vii. 759

Or the middle may correspond to the end, as in the following sentence: “This ship, laden with the spoil of Sicily, while it was itself a portion of the spoil.” Nor will it be questioned that a like effect may be produced by the repetition of the middle of both clauses. Again, the end may correspond with the

beginning. “Many grievous afflictions were devised for parents and for kinsfolk many.”

[35] est et illud repetendi genus, quod simul proposita iterat et dividit:

Iphitus et Pelias mecum, quorum Iphitus aevo

iam gravior, Pelias et vulnere tardus Ulixi.

Ἐπάνοδοϛ dicitur Graece, nostri regressionem vocant. nec solum in eodem sensu,

[35] There is also another form of repetition which simultaneously reiterates things that have already been said, and draws distinctions between them.

Iphitus too with me and Pelias came,

Iphitus bowed with age and Pelias

Slow-limping with the wound Ulysses gave.

Aen. ii. 435.

This is styled Ἐπάνοδοϛ by the Greeks and *regression* by Roman writers.

[36] sed etiam in diverso eadem verba contra sumuntur: principum dignitas erat paene par, non par fortasse eorum qui sequebantur. interim variatur casibus haec et generibus retractatio: magnus est dicendi labor, magna res et cetera; et apud Rutilium longa περιόδω sed haec initia sententiarum sunt: pater hic tuus? patrem nunc appellas? patris tui filius es?

[38] Nor are words only repeated to reaffirm the same meaning, but the repetition may serve to mark a contrast, as in the following sentence. “The reputation of the leaders was approximately equal, but that of their followers perhaps not so equal.” At times the cases and genders of the words repeated may be varied, as in “Great is the toil of speaking, and great the task, etc.”; a similar instance is found in Rutilius, but in a long period. I therefore merely cite the beginnings of the clauses. *Pater hic tuus? patrem nunc appellas? patris tui filius es?*

[37] fit casibus modo hoc schema, quod πολύπτωτον vocant. constat aliis etiam modis, ut pro Cluentio: quod autem tempus veneni dandi? illo die? illa frequentia? per quem porro datum? unde sumptum? quae porro interceptio poculi?

[37] This figure may also be effected solely by change of cases, a proceeding which the Greeks call πολύπτωτον It may also be produced in other ways, as in the *pro Cluentio: Quod autem tempus veneni dandi? illo die? illa frequentia? per quem porro datum? unde sumptum? quae porro interceptio poculi? cur non de integro autem datum?*

[38] cur non de integro autem datum? hanc rerum, coniunctam diversitatem

Caecilius μεταβολὴν vocat, qualis est pro Cluentio locus in Oppianicum: illum tabulas publicas Larini censorias corrupisse decuriones universi iudicaverunt, cum illo nemo orationem, nemo rem ullam contrahebat, nemo illum ex tam multis cognatis et adfinibus tutorem unquam liberis suis scripsit, et deinceps adhuc multa.

[38] The combination of different details is called μεταβολὴν by Caecilius, and may be exemplified by the following passage directed against Oppianicus in the *pro Cluentio*: “The local senate were unanimously of opinion that he had falsified the public registers at Larinum; no one would have any business dealings or make any contract with him, no one out of all his numerous relations and kinsfolk ever appointed him as guardian to his children,” with much more to the same effect.

[39] Vt haec in unum congeruntur, ita contra ilia dispersa sunt, quae a Cicerone dissipata dici puto:

hic segetes, illic ueniunt felicius uvae,
arborei fetus alibi,
et deinceps.

[39] In this case the details are massed together, but they may equally be distributed or *dissipated*, as I think Cicero says. For example:

Here corn, there grapes, elsewhere the growth
of trees
More freely rises,

Georg. i. 54.

with the remainder of the passage.

[40] ilia vero apud Ciceronem mira figurarum mixtura deprehenditur, in qua et primum verbum longo post intervallo redditum est ultimum et media primis et mediis ultima congruunt: vestrum iam hic factum reprehenditur, patres conscripti, non meum; ac pulcherrimum quidem factum, verum, ut dixi, non meum, sed vestrum.

[40] A wonderful mixture of figures may be found in Cicero in the following passage, where the first word is repeated last after a long interval, while the middle corresponds with the beginning, and the concluding words with the middle. “Yours is the work which we find here, conscript fathers, not mine, a fine piece of work too, but, as I have said, not mine, but yours.” This frequent repetition, which,

[41] hanc frequentiorem repetitionem πλοκήν vocant, quae fit ex permixtis figuris, ut supra dixi, utque se habet epistola ad Brutum, ego cum in gratiam

redierim cum Appio Claudio, et redierim per Cn.

[41] as I have said, is produced by a mixture of figures, is called *πλοκή* by the Greeks: a letter of Cicero to Brutus will provide a further example. “When I had made my peace with Appius Claudius and made it through the agency of Gnaeus Pompeius, when then I had made my peace,” etc.

[42] Pompeium, ego ergo cum redierim. Sed in iisdem sentiis crebrioribus mutata declinationibus iteratione verborum: ut apud Persium,

usque adeone

scire tuum nihil est, nisi te scire hoc sciat alter?

Sed apud Ciceronem, neque enim poterant iudicio et hi damnari, qui iudicabant.

[42] The like effect may be produced in the same sentence by repeating the same words in different forms, as in Persius:

Is then to know in thee

Nothing unless another know thou knowest?

i. 26. The translation is Watson's.

and in Cicero, where he says, “For it was impossible for the judges as well to be condemned by their own judgement.”

[43] sed sensus quoque toti, quemadmodum coeperunt, desinunt: venit ex Asia. hoc ipsum quam novum! tribunus plebis venit ex Asia. * eadem tamen periodo et verbum primum ultimum refertur, tertium iam sermone, adiectum est enim Uerumtamen venit. interim sententia quidem repetitur, sed non eodem verborum ordine: quid Cleomenes facere potuit? non enim possum quemquam insimulare falso. quid, inquam, magno opere potuit Cleomenes facere?³²

[43] Whole sentences again end with the phrase with which they began. Take an example. “He came from Asia. What a strange thing. A tribune of the people came from Asia.” Nay, the first word of this same period is actually repeated at its close, thus making its third appearance: for to the words just quoted the orator adds, “Still for all that he came.” Sometimes a whole clause is repeated, although the order of the words is altered, as, for example, *Quid Cleomenes facere potuit non enim possum quemquam insimulare falso, quid, inquam, magno opere potuit Cleomenes facere?*

[44] prioris etiam sententiae verbum ultimum ac sequentis primum frequenter est idem, quo quidem schemate utuntur poetae saepius:

pierides, vos haec facietis maxima Gallo,

Gallo, cuius amor tantum mihi crescit in horas.

Sed ne oratores quidem raro: hic tamen vivit; vivit? immo vero etiam in senatum venit.

[44] The first word of one clause is also frequently the same as the last of the preceding, a figure common in poetry.

And ye,
Pierian Muses, shall enhance their worth
For Gallus; Gallus, he for whom each hour
My love burns stronger.

Cat. I. i. 2.

But it is not uncommon even in the orators. For example: "Yet this man lives. Lives? Why he even came into the senate house."

[45] aliquando, sicut in geminatione verborum diximus, initia quoque et clausulae sententiarum alis, sed non alio tendentibus verbis inter se consonant. initia hoc modo: dediderim periculis omnibus, obtulerim insidiis, obiecerim invidiae. rursus clausulae ibidem statim, vos enim statuistis, vos sententiam dixistis, vos iudicavistis. hoc alii συνωνυμίαν alii disiunctionem vocant, utrumque, etiamsi est diversum, recte; nam est nominum idem significantium separatio. congregantur quoque verba idem significantia. quae cum ita sint, Catilina, perge quo coepisti; egredere aliquando ex urbe, patent portae, proficiscere.

[45] Sometimes, as I remarked in connexion with the doubling of words, the beginnings and the conclusions of sentences are made to correspond by the use of other words with the same meaning. Here is an example of correspondence between the beginnings: "I would have faced every kind of danger; I would have exposed myself to treacherous attacks; I would have delivered myself over to public hatred." An example of the correspondence of conclusions is provided by another passage in the same speech which follows close on that just cited: "For you have decided; you have passed sentence; you have given judgment." Some call this synonymy, others disjunction: both terms, despite their difference, are correct. For the words are differentiated, but their meaning is identical. Sometimes, again, words of the same meaning are grouped together. For instance, "Since this is so, Catiline, proceed on the path which you have entered; depart from the city, it is high time. The gates are open, get you forth."

[46] Sed in eundem alio libro: abiit, excessit, erupit, euasit. hoc Caecilio πλεονασμός verr. v. xli. 107. "What could Cleomenes have done? for I cannot accuse any one falsely. What, I say, could Cleolmenes have done to any good effect!" videtur, id est, abundans super necessitatem oratio, sicut illa vidi oculos ante ipse meos. * illo enim vidi inest ipse. verum id, ut alio quoque

loco dixi, cum supervacua oneratur adiectione, vitium est, cum auget aut manifestat sententiam sicut hic, virtus. fidi, ipse, ante oculos, totidem sunt adfectus. cur tamen haec proprie nomine tali notarit,

[46] Or take this example from another book of the orations against Catiline, “He departed, he went hence; he burst forth, he was gone.” This is regarded as a case of *pleonasm* by Caecilius, that is to say, as language fuller than is absolutely required, like the phrase:

Myself before my very eyes I saw:

Aen. xii. 638.

for “myself” is already implied by “I saw.” But when such language is over weighted by some purely superfluous addition, it is, as I have also pointed out elsewhere, a fault; whereas when, as in this case, it serves to make the sense stronger and more obvious, it is a merit. “I saw,” “myself,” “before my very eyes,” are so many appeals to the emotion.

[47] non video. nam et geminatio et repetitio et qualiscunque adiectio πλεονασμός videri potest. nec verba modo, sed sensus quoque idem facientes acervantur: perturbatio istum mentis et quaedam scelerum offusa caligo et ardentis furiarum faces excitarunt.

[47] I cannot therefore see why Caecilius should have stigmatised these words by such a name, since the doubling and repetition of words and all forms of addition may likewise be regarded as *pleonasms*. And it is not merely words that are thus grouped together. The same device may be applied to thoughts of similar content. “The wild confusion of his thoughts, the thick darkness shed upon his soul by his crimes and the burning torches of the furies all drove him on.”

[48] congeruntur et diversa: mulier, tyranni saeva crudelitas, patris amor, ira praeceps, temeritatis dementia. Sed apud Ovidium:

sed grave Nereidum numen, sed corniger Ammon,

sed quae visceribus veniebat belua ponti

exsaturanda meis.

Inveni, qui et hoc πλοκήν³⁴ vocaret:

[48] Words of different meaning may likewise be grouped together, as for instance, “The woman, the savage cruelty of the tyrant, love for his father, anger beyond control, the madness of blind daring”; or again, as in the following passage from Ovid,

“But the dread Nereids’ power,
But horned Ammon, but that wild sea-beast

To feed upon my vitals that must come.

“

[49] cui non adsentior, cum sit unius figurae, mixta quoque et idem et diversum significantia, quod et ipsum διαλλαγήν vocant. quaero ab inimicis, sintne haec investigate, comperta, patefacta, sublata, deleta, extincta per me. investigata, comperta, patefacta aliud ostendunt; sublata, deleta, extincta sunt inter se similia, sed non etiam prioribus.

[49] I have found some who call this also by the name of *πλοκή*: but I do not agree, as only one figure is involved. We may also find a mixture of words, some identical and others different in meaning; of this figure, which the Greeks style *διαλλαγή*, the following will provide an example: “I ask my enemies whether these plots were investigated, discovered and laid bare, overthrown, crushed and destroyed by me.” In this sentence “investigated,” “discovered” and “laid bare” are different in meaning, while “overthrown,” “crushed” and “destroyed” are similar in meaning to each other, but different from the three previous.

[50] Sed hoc autem exemplum et superius aliam quoque efficiunt figuram, quae, quia coniunctionibus caret, dissolutio vocatur, apta, cum quid instantius dicimus; nam et singula inculcantur et quasi plura fiunt. ideoque utimur hac figura non in singulis modo verbis, sed sentiis etiam, ut Cicero dicit contra contionem Metelli: qui indicabantur, eos vocari, custodiri, ad senatum adduci iussi; in senatum sunt introducti, et totus hic locus talis est. hoc genus et *βραχυλογία* vocant, quae potest esse copulata dissolutio. contrarium illud est schema, quod coniunctionibus abundat. illud *ἀσύνδετον*, hoc *πολυσύνδετον* dicitur.

[50] But both the last example and the last but one involve a different *figure* as well, which, owing to the absence of connecting particles, is called *dissolution* (*asyndeton*), and is useful when we are speaking with special vigour: for it at once impresses the details on the mind and makes them seem more numerous than they really are. Consequently, we apply this *figure* not merely to single words, but to whole sentences, as, for instance, is done by Cicero in his reply to the speech which Metellus made to the public assembly: “I ordered those against whom information was laid, to be summoned, guarded, brought before the senate: they were led into the senate,” while the rest of the passage is constructed on similar lines. This kind of *figure* is also called *brachylogy*, which may be regarded as detachment without loss of connexion. The opposite of this figure of *asyndeton* is *polyxyndeton*, which is characterised by the number of connecting particles employed.

[51] sed hoc est vel iisdem saepius repetitis, ut

tectumque laremque

armaque Amyclaeumque canem Cressamque pharetram;

vel diversis:

[51] In this figure we may repeat the same connecting particle a number of times, as in the following instance:

His house and home and arms
And Amyclean hound and Cretan quiver;

Georg. iii. 344.

or they may be different,

[52] arma virumque — multum ille et terris — multa quoque.

[52] as in the case of *arma virumque* followed by *multum ille et terris* and *multa quoque*.

[53] adverbia quoque et pronomina variantur, hic illum vidi iuvenem, — bis senos cui nostra dies, — hic mihi responsum primus dedit ille petenti. sed utrumque horum acervatio est, tantum iuncta aut dissoluta.

[53] Adverbs and pronouns also may be varied, as in the following instance: *lic illum vidi iuvenem* followed by *bis senos cui nostra dies* and *hic mihi responsum primus dedit ille petenti*. But both these cases involve the massing together of words and phrases either in *asyndeton* or *polysyndeton*.

[54] omnibus scriptores sua nomina dederunt, sed varia et ut cuique fingenti placuit. fons quidem unus, quia acriora facit et instantiora quae dicimus et vim quandam prae se ferentia velut saepius erumpentis adfectus.

gradatio, quae dicitur κλιμαξ apertiore habet artem et magis adfectatam ideoque esse rarior debet.

[54] Writers have given special names to all the different forms, but the names vary with the caprice of the inventor. The origin of these *figures* is one and the same, namely that they make our utterances more vigorous and emphatic and produce an impression of vehemence such as might spring from repeated outbursts of emotion.

Gradation, which the Greeks call *climax*, necessitates a more obvious and less natural application of art and should therefore be more sparingly employed. Moreover, it involves *addition*,

[55] est autem ipsa quoque adiectionis; repetit enim quae dicta sunt et, priusquam ad aliud descendat, in prioribus resistit. eius exemplum ex Graeco notissimo transferatur: non enim dixi quidem sed non scripsi, nec scripsi quidem sed non obii legationem, nec obii quidem legationem sed non persuasi Thebanis.

[55] since it repeats what has already been said and, before passing to a new point, dwells on those which precede. I will translate a very famous instance from the Greek. “I did not say this, without making a formal proposal to that effect, I did not make that proposal without undertaking the embassy, nor undertake the embassy without persuading the Thebans.”

[56] sint tamen tradita et Latina: Africano virtutem industria, virtus gloriam, gloria aemulos comparavit. Sed Calvi: non ergo magis pecuniarum repetundarum quiri maiestatis, neque maiestatis magis quam Plautiae legis, neque Plautiae legis magis quam ambitus, neque ambitus magis quam omnium legum iudicia perierunt.

[56] There are, however, examples of the same thing in Latin authors. “It was the energy of Africanus that gave him his peculiar excellence, his excellence that gave him glory, his glory that gave him rivals.” Calvus again writes, “Consequently this means the abolition of trials for treason no less than for extortion, for offences covered by the Plautian law no less than for treason, for bribery no less than for those offences, and for all breaches of every law no less than for bribery,” etc.

[57] invenitur apud poetas quoque, ut apud Homerum de sceptro, quod a Iove ad Agamemnonem usque deducit, et apud nostrum etiam tragicum:

Iove propagatus est, ut perhibent, Tantalus,

ex Tantalo ortus Pelops, ex Pelope autem satus

Atreus, qui nostrum porro propagat genus.

[57] It is also to be found in poets, as in the passage in Homer describing the sceptre which he traces from the hands of Jupiter down to those of Agamemnon, and in the following from one of our own tragedians:

“From Jove, so runs the tale, was Tantalus sprung,

From Tantalus Pelops, and of Pelops’ seed

Sprang Atreus, who is sire of all our line.

“

[58] at quae per detractionem fiunt figurae, brevitatis novitatisque maxime gratiam petunt; quarum una est ea, quam libro proximo in figuras ex συνεκδοχῇ distuli, cum subtractum verbum aliquod satis ex ceteris intelligitur: ut Caelius in Antonium, stupere gaudio Graccus: simul enim auditur coepit. Cicero ad Brutum: sermo nullus scilicet nisi de te; quid enim potius? tum Flavius, Cras, inquit, tabellarii, et ego ibidem has inter cenam exaravi.

[58] As regards the figures produced by omission, they rely for their charm in the main on conciseness and novelty. There is one of these which I mentioned in the last book with reference to *synecdoche*, and postponed discussing until

such time as I came to deal with *figures*: it occurs when the word omitted may be clearly gathered from the context: an example may be found in Caelius' denunciation of Antony: *stupere gaudio Graecus*: for we must clearly supply *coepit*. Or take the following passage from a letter of Cicero to Brutus: *Serno nullus scilicet nisi de te: quid enim potius? turn Flavius, cras, inquit, tabellarii, et ego ibidem has inter cenam exaravi*.

[59] cui similia sunt illa meo quidem iudicio, in quibus verba decenter pudoris gratia subtrahuntur:

nouimus et qui te, transversa tuentibus hircis,

Sed quo, sed faciles Nymphae risere, sacello.

Hanc quidam aposiopesin putant, frustra.

[59] Of a similar kind, at any rate in my opinion, are those passages in which words are decently omitted to spare our modesty.

You — while the goats looked goatish—we know
who,
And in what chapel — (but the kind Nymphs
laughed).

Ecl. iii. 8.

Some regard this as an *aposiopesis*, but wrongly.

[60] nam illa quid taceat incertum est aut certe longiore sermone explicandum, hic unum verbum et manifestum quidem desideratur; quod si aposiopesis est, nihil non, in quo deest aliquid, idem appellabitur. ego ne illud quidem aposiopesin semper voco,

[60] For in *aposiopesis* it is either uncertain or at least requires an explanation of some length to show what is suppressed, whereas in the present case only one word, and that of an obvious character, is missing. If this, then, is an *aposiopesis*, all omissions will have a claim to the title.

[61] in quo res quaecunque relinquitur intelligenda, ut ea quae in epistolis Cicero: data Lupercalibus, quo die Antonius Caesari; non enim obticuit sed lusit, quia nihil aliud intelligi poterat quam hoc, diadema imposuit.

[61] I would not even allow the name of *aposiopesis* to all cases where what is omitted is left to be understood, as for example the following phrase from Cicero's letters, *Data Lupercalibus quo die Antonius Caesari*: for there, there is no real suppression: the omission is merely playful, for there is but one way of completing the sentence, namely with the words *diadema imposuit*.

[62] altera est per detractionem figura, de qua modo dictum, cui coniunctiones eximuntur. tertia, quae dicitur ἑπεξεργασμένον in qua unum ad verbum plures

sententiae referuntur, quarum unaquaeque desideraret illud, si sola poneretur. id accidit aut praeposito verbo, ad quod reliqua respiciant: vicit pudorem libido, timorem audacia, rationem amentia; aut illato, quo plura cluduntur: neque enim is es, Catilina, ut te aut pudor unquam a turpitudine aut metus a periculo aut ratio a furore revocaverit.

[62] Another figure produced by omission is that of which I have just spoken, when the connecting particles are omitted. A third is the figure known as ἐπεξευγμένον in which a number of clauses are all completed by the same verb, which would be required by each singly if they stood alone. In such cases the verb to which the rest of the sentence refers may come first, as in the following instance: *Vicit pudorem libido, timorem audacia, rationem amentia*. Or it may come last, closing a number of clauses, as in the following: *Neque enim is es, Catilina, ut te aut pudor unquam a turpitudine aut metus a periculo aut ratio a furore revocaverit*.

[63] medium quoque potest esse, quod et prioribus et sequentibus sufficiat. iungit autem et diversos sexus, ut cum marem feminamque filios dicimus, et singularia pluralibus miscet.

[63] The verb may even be placed in the middle so as to serve both what precedes and what follows. The same figure may join different sexes, as for example when we speak of a male and female child under the comprehensive term of “sons”; or it may interchange singular and plural.

[64] sed haec adeo sunt vulgaria, ut sibi artem figurarum adserere non possint. illud plane figura est, qua diversa sermonis forma coniungitur:

sociis tunc, arma capessant,

edico, et dira bellum cum genie gerendum.

Quamvis enim pars bello posterior participio insistat, utrique convenit illud edico. non utique detractionis gratia factam coniunctionem συνοικείωσιν vocant, quae duas res diversas colligat:

tam deest avaro, quod habet, quam quod non habet.

Huic diversam volunt esse distinctionem,

[64] But these devices are so common that they can scarcely lay claim to involve the art essential to *figures*. On the other hand it is quite obviously *figure*, when two different constructions are combined as in the following case:

Sociis tunc arma capessant

Edico et dira bellum cum gene gerendum.

Aen. iii. 234; participio = gerundive (gerendum).

(I bid my comrades straight to seize their arms And war be waged against a savage race.)

For although the portion of the sentence following *bellum* ends with a participle, both clauses of the sentence are correctly governed by *edico*. Another form of connexion, which does not necessarily involve omission, is called *συνοικειωσις*, because it connects two different things, for example:

The miser lacks

That which he has no less than what he has not.

Syrus 486 (Ribbeck).

[65] cui dant nomen παραδιαστολήν qua similia discernuntur: cum te pro astuto sapientem appelles, pro confidente, fortem, pro illiberali diligentem. quod totum pendet ex finitione, ideoque an figura sit dubito. cui contraria est ea, qua fit ex vicino transitus ad diversa ut silmilia: brevis esse laboro, Obscurus fio, et quae sequuntur.

[65] To this figure is opposed *distinction*, which they call παραδιαστολή, by which we distinguish between similar things, as in this sentence: “When you call yourself wise instead of astute, brave instead of rash, economical instead of mean.” But this is entirely dependent on definition, and therefore I have my doubts whether it can be called a figure. Its opposite occurs when we pass at a bound from one thing to something different, as though from like to like; for example:

I labour to be brief, I turn obscure,

Hor A.P. 25.

with what follows.

[66] tertium est genus figurarum, quod aut similitudine aliqua vocum aut paribus aut contrariis convertit in se aures et animos excitat. hinc est παρονομασία, quae dicitur adnominatio. ea non uno modo fieri solet: ex vicinia (quadam praedicti nominis ducta casibus declinat, ut Domitius Afer pro Cloatilla, mulier omnium rerum imperita, in omnibus rebus infelix;

[66] There is a third class of *figures* which attracts the ear of the audience and excites their attention by some resemblance, equality or contrast of words. To this class belongs *paronomasia*, which we call *adnominatio*. This may be effected in different ways. It may depend on the resemblance of one word to another which has preceded, although the words are in different cases. Take the following passage from Domitius Afer’s defence of Cloatilla: *Mulier omnium rerum imiperita, in omnibus rebus infelix.*

[67] et cum verbo idem verbum plus significans subiungitur: quando homo hostis, homo. quibus exemplis sum in aliud usus, sed in uno ἔμφασις est

geminatio. παρονομασίᾳ contrarium est, quod eodem verbo quasi falsum arguitur: Quae lex privatis hominibus esse lex non uidebatur.

[67] Or the same word may be repeated with greater meaning, as *quando homo, hostis homino*. But although I have used these examples to illustrate something quite different, one of them involves both *emphasis* and *reiteration*. The opposite of *parononasia* occurs when one word is proved to be false by repetition; for instance, “This law did not seem to be a law to private individuals.” Akin to this is that styled ἀντανάκλασις,

[68] cui confinis est ἀντανάκλασις eiusdem verbi contraria significatio. cum Proculeius> quereretur de filio, quod is mortem suam expectaret, et ille dixisset, se vero non exspectare: Immo, inquit, rogo exspectes. non ex eodem sed ex vicino diversum accipitur, cum supplicio adficiendum dicas, quem supplicatione dignum iudicaris.

[68] where the same word is used in two different meanings. When Proculeius reproached his son with waiting for his death, and the son replied that he was not waiting for it, the former retorted, *Well then, I ask you to wait for it*. Sometimes such difference in meaning is obtained not by using the same word, but one like it, as for example by saying that a man whom you think *dignus supplicatione* (worthy of supplication) is *supplicio adficiendus*.

[69] aliter quoque voces aut eadem diversa in significatione ponuntur aut productione tantum vel correptione mutatae; quod etiam in iocis frigidum equidem tradi inter praecepta miror, eorumque exempla vitandi potius quam imitandi gratia pono:

[69] There are also other ways in which the same words may be used in different senses or altered by the lengthening or shortening of a syllable: this is a poor trick even when employed in jest, and I am surprised that it should be included in the text-books: the instances which I quote are therefore given as examples for avoidance, not for imitation. Here they are:

[70] amari iucundum est, si curetur, ne quid insist amari. avium dulcedo ad avium ducit; et apud Ovidium ludentem:

cur ego non dicam, Furia, te furiam?

Cornificius hanc traductionem vocat,

[70] *Amari iucundum est, si curetur ne quid insit amari*, and *Avium dulcedo ad avium ducit*; and again this jest from Ovid,

Cur ego non dicam, Furia, te furiam?

Cornificius calls this *traductio*,

[71] videlicet alterius intellectus ad alterum. sed elegantius, quod est positum in

distinguenda rei proprietate: hanc rei publicae pestem paulisper reprimi, non in perpetuum comprimi posse. Sed quae praepositionibus in contrarium mutantur: non emissus ex urbe, sed immissus in urbem esse videatur. melius atque acrius, quod cum figura iucundum est tum etiam sensu valet: Emit morte immortalitatem.

[71] that is the transference of the meaning of one word to another. It has, however, greater elegance when it is employed to distinguish the exact meanings of things, as in the following example: "This curse to the state could be repressed for a time, but not suppressed for ever;" the same is true when the meaning of verbs is reversed by a change in the preposition with which they are compounded: for example, *Non emissus ex urbe, sed immissus in urbem esse videatur*. The effect is better still and more emphatic when our pleasure is derived both from the figurative form and the excellence of the sense, as in the following instance: *emit morte immortalitatem*.

[72] illa leviora: Non Pisonum sed pistorum et ex oratore arator. pessimum vero: Ne patres conscripti videantur circumscripti; — raro evenit sed vehementer venit. sed contingit, ut aliqui sensus vehemens et acer venustatem aliquam non eadem ex voce non dissona accipiat.

[72] A more trivial effect is produced by the following: *Non Pisonum, sed pistorum*, and *Ex oratore arator*, while phrases such as *Ne patres conscripti videantur circumscripti*, or *raro evenit, sed vehementer venit*, are the worst of all. It does, however, sometimes happen that a bold and vigorous conception may derive a certain charm from the contrast between two words not dissimilar in sound.

[73] Sed cur me prohibeat pudor uti domestico exemplo? pater meus contra eum, qui se legationi immoriturum dixerat, deinde vix paucis diebus insumptis re infecta redierat, non exigo, ut immoriaris legationi; immorare. nam et valet sensus ipse et in verbis tantum distantibus iucunde consonat vox, praesertim non captata, sed velut oblata, cum altero suo sit usus, alterum ab adversario acceperit.

[73] I do not know that there is any reason why modesty should prevent me from illustrating this point from my own family. My father, in the course of a declamation against a man who had said he would die on his embassy and then returned after a few days' absence without accomplishing anything, said, *non exigo ut immoriaris legationi: immorare*. For the sense is forcible and the sound of the two words, which are so very different in meaning, is pleasant, more especially since the assonance is not far fetched, but presents itself quite naturally, one word being of the speaker's own selection, while the other is supplied by his opponent.

[74] magnae veteribus curae fuit gratiam dicendi et paribus et contrariis acquirere. Gorgias in hoc immodicus, copiosus aetate utique prima Isocrates

fuit. delectatus est his etiam M. Tullius, verum et modum adhibuit non ingratae, nisi copia redundet, voluptati et rem alioqui leuem sententiarum pondere implevit. nam per se frigida et inanis adfectatio, cum in acres incidit sensus, innatam gratiam videtur habere non arcessitam.

[74] The old orators were at great pains to achieve elegance in the use of words similar or opposite in sound. Gorgias carried the practice to an extravagant pitch, while Isocrates, at any rate in his early days, was much addicted to it. Even Cicero delighted in it, but showed some restraint in the employment of a device which is not unattractive save when carried to excess, and, further, by the weight of his thought lent dignity to what would otherwise have been mere trivialities. For in itself this artifice is a flat and foolish affectation, but when it goes hand in hand with vigour of thought, it gives the impression of natural charm, which the speaker has not had to go far to find.

[75] *similium fere quadruplex ratio est. nam est primum, quotiens verbum verbo aut non dissimile valde quaeritur, ut*

puppesque tuae pubesque tuorum;

et sic in hac calamitosa fama quasi in aliqua perniciosissima flamma, et non enim tam spes laudanda quam res est, aut certe par et extremis syllabis consonans: non verbis, sed armis.

[75] There are some four different forms of play upon verbal resemblances. The first occurs when we select some word which is not very unlike another, as in the line of Virgil

vuppesque tuae pubesque tuorum,

Aen. i. 399.

or, sic in hac calamitosa fama quasi in aliqua perniciosissim flamma, and non enim tarn spes laudanda quam res est. Or at any rate the words selected will be of equal length and will have similar terminations, as in non verbis, sed armis.

[76] *Sed hoc quoque, quotiens in sententias acres incidit, pulchrum est: quantum possis, in eo semper experire, it prosis. hoc est παρίσων, ut plerisque placuit. theon Stoicus παρίσων existimat, quod sit e membris non dissimilibus.*

[76] A good effect may also be produced by an artifice such as the following, so long as the thought which it expresses be vigorous: *quantum possis, in eo semper experire ut prosis*. The name commonly applied to this is *παρίσων* though the Stoic Theon thinks that in cases of *παρίσων* the correspondence between the clauses must be exact.

[77] *secundum, ut clausula similiter cadat, syllabis iisdem in ultimam partem collatis: ὁμοιοτέλευτον vocant similem duarum sententiarum vel plurium*

finem: non modo ad salutem eius exstingecndam, sed etiam gloriam per tales viros infingendam. ex quibus fere fiunt, non tamen ut semper utique ultimis consonent, quae τρικῶλα dicuntur: vicit pudorem libido, timorem audacia, rationem amentia. sed in quaternas quoque ac plures haec ratio ire sententias potest. fit etiam singulis verbis: Hecuba hoc dolet, pudet, piget; et abiit, excessit, erupit, evasit.

[77] The second form occurs when clauses conclude alike, the same syllables being placed at the end of each; this correspondence in the ending of two or more sentences is called *homoeoteleuton*. Here is an example: *Non modo ad salutem eius exstinguendam sed etiam gloriam per tales viros infringendam*. This figure is usually, though not invariably, found in the groups of three clauses, styled τρικῶλα, of which the following may be cited as an illustration: *vicit pudorem libido, timorem audacia, rationed amentia*. But the device may be applied to four clauses or more. The effect may even be produced by single words; for example, *Hecuba hoc dolet, pudet, piget, or abiit, excessit, erupit, evasit*.

[78] tertium est, quod in eosdem casus cadit, ὁμοιόπτωτον dicitur. sed neque, quod finem habet similem, utique in eundem venit finem ὁμοιόπτωτον, quia ὁμοιόπτωτον est tantum casu simile, etiamsi dissimilia sint quae declinentur; nec tantum in fine deprehenditur, sed respondentibus vel primis inter se vel mediis vel extremis vel etiam permutatis his, ut media primis et summa mediis accommodentur, et quocunque modo accommodari potest.

[78] In the third form the correspondence is produced by the use of similar cases; it is known as ὁμοιόπτωτον But this name, though it implies a certain similarity, does not necessarily involve identity in termination, since it means no more than similarity of case, irrespective of the fact that words may be differently declined, and does not always occur at the end of a sentence; the correspondence may occur at the beginning, middle or end of clauses, or may be varied so that the middle of one clause corresponds with the beginning of another and the end with the middle: in fact, any arrangement of correspondences is permissible.

[79] neque enim semper paribus syllabis constat, ut est apud Afrum, amisso nuper infelicis aulae si non praesidio inter pericula tamen solacio inter adversa. eius fere videntur optima, in quibus initia sententiarum et fines, consentiunt, ut hic praesidio solacio, pericula adversa, paene ut similia sint verbis et paribus cadant et eodem modo desinant.

[79] Nor need the words which correspond consist of the same number of syllables. For example, we find the following sentence in Domitius Afer: *Amisso nuper infelicis aulae, si non praesidio inter pericula, tamen solacio inter adversa*. The best form of this figure is that in which the beginnings and ends of the clauses correspond (as in this case *praesidio* corresponds with

solacio and *pericula* with *adversa*), in such a way that there is a close resemblance between the words, while cadence and termination are virtually identical.

[80] etiam ut sint, quod est quartum, membris aequalibus, quod ἰσόκωλον dicitur: Si, quantum in agro locisque desertis audacia potest, tantum in foro atque iudiciis impudentia valeret ἰσόκωλον est et ὁμοιόπτωτον habet; non minus nunc in causa cederet Aulus Caecina Sexti Aebutii impudentiae, quam tum in vi facienda cessit audaciae, ἰσόκωλον, ὁμοιόπτωτον, ὁμοιοτέλευτον. accedit et ex illa figura gratia, qua nomina dixi mutatis casibus repeti: non minus cederet quam cessit. at hoc ὁμοιοτέλευτον et παρονομασία est: neminem alteri posse dare in matrimonium, nisi penes quem sit patrimonium.

[80] It is also desirable that the clauses should be of equal length, although as a matter of fact this forms the fourth *figure* of this class, and is known as ἰσόκωλον The following will serve as an example, being both ἰσόκωλον and ὁμοιόπτωτον: *Si, quantum in agro locisque desertis audacia potest, tantum in foro atque iudiciis impudentia valeret*; continuing, it combines ἰσόκωλον, ὁμοιόπτωτον, and ὁμοιοτέλευτον.: — non minus *nunc in causa cederet Aulus Caecina Sexti Aebutii impudentiae, quam turn in vi facienda cessit audaciae*. This passage derives an additional elegance from the figure which I mentioned above as consisting in the repetition of words with an alteration of case, tense, mood, etc., to be found in this instance in the words *non minus cederet quam cessit*. The following, on the other hand, combines *homoeoteleuton* and *paronomasia*: *Neminem alteri posse dare in matrimonium, nisi penes quem sit patrimonium*.

[81] contrapositum autem vel, ut quidam vocant, contentio (ἀντιθετον dicitur) non uno fit modo. nam et fit, si singula singulis opponuntur, ut in eo quod modo dixi, uicit pudorem libido, timorem audacia, et bina binis: non nostri ingenii, vestri auxilii est, et sententiae sententiis: dominetur in contionibus, iaceat in iudiciis.

[81] *Antithesis*, which Roman writers call either *contrapositum* or *contentio*, may be effected in more than one way. Single words may be contrasted with single, as in the passage recently quoted, *Vicit pudorem libido, timorem audacia*, or the contrast may be between pairs of words, as in *non nostri ingenii, vestri auxilii est*, or sentence may be contrasted with sentence, as in *dominetur in contionibus, iaceat in iudiciis*.

[82] cui commodissime subiungitur et ea species, quam distinctionem diximus: odit populus Romanus privatam luxuriam, publicam magnificentiam diligit; et, quae sunt simili casu, dissimili sententia in ultimo locata: Vt quod in tempore mali fuit, nihil obsit, quod in causa boni fuit, prosit.

[82] Next to this another form may appropriately be placed, namely that which we have styled *distinction* and of which the following is an example: *Odit*

populus Romanus privaia luxuriam, publicam magoificentiam diligit. The same is true of the figure by which words of similar termination, but of different meaning are placed at the end of corresponding clauses, as in *ut quod in tempore mali fuit, nihil obsit, quod in causa boni fruit, prosit.*

[83] *nec semper contrapositum subiungitur, ut in hoc, est igitur, haec iudices, non scripta sed nata lex, verum, sicut Cicero dicit, de singulis rebus propositis refertur ad singula, ut in eo quod sequitur, quam non didicimus, accepimus, legimus, verum ex natura ipsa arripuimus, hausimus, expressimus.*

[83] Nor is the contrasted phrase always placed immediately after that to which it is opposed, as it is in the following instance: *est igitur haec, indices, non scripta, sed nata lex:* but, as Cicero says, we may have correspondence between subsequent particulars and others previously mentioned, as in the passage which immediately follows that just quoted: *quam non didicimus, accepimus, legimus, verum ex natura ipsa arripuimus, hausimus, expressimus.*

[84] *nec semper, quod adversum est, contra ponitur, quale est apud Rutilium, nobis primis dii immortales fruges dederunt; nos, quod soli accepimus, in omnes terras distribuimus.*

[84] Again the contrast is not always expressed antithetically, as is shown by the following passage from Rutilius: *nobis primis dii immortales fruges dedunt, nos, quod soli accepimus, in omnes terras distribuimus.*

[85] *fit etiam adsumpta illa figura, qua verba declinata repetuntur, quod ἀντιμεταβολή dieitur: non, ut edam, vivo, sed, ut vivam, edo. Sed quod apud Ciceronem conversum ita est, ut, cum mutationem casus habeat, etiam similiter desinat: Vt et sine invidia culpa plectatur et sine culpa invidia ponatur.*

[85] Antithesis may also be effected by employing that *figure*, known as ἀντιμεταβολή by which words are repeated in different cases, tenses, moods, etc., as for instance when we say, *non ut edam, vivo, sed ut vivam, edo* (I do not live to eat, but eat to live). There is an instance of this in Cicero, where he has managed, while changing the case, to secure similarity of termination: *ut et sine invidia culpa plectatur et sine culpa invidia ponatur.*

[86] *Sed eodem eluditur verbo: ut quod dicit de se. Roscio, etenim, cum artifex eiusmodi est, ut solus videatur dignus qui in scena, spectetur, tum vir eiusmodi est, ut solus dignus esse rideatur, qui eo non accedat. est et in nominibus ex diverso collocatis sua gratia: Si Consul Antonius. Brutus hostis; si conservator rei publicae Brutus, hostis Antonius.*

[86] Again the clauses may end with the same word, as when Cicero says of Sextus Roscius: *etenim cum artifex eiusmodi est ut solus videatur dignus qui in scena spectetur, tum vir eiusmodi est ut solus dignus esse videatur qui eo*

non accedat. There is also a special elegance which may be secured by placing names in antithesis, as in the following instance, *Si consul Antonius, Brutus hostis; si conservator rei publicae Brutus, hostis Antonius.*

[87] olim plura de figuris quam necesse erat, et adhuc erunt, qui putent esse figuram: incredibile est, (quod dico, sed uerum; ἀνθυποφορὰν vocant; et aliquis hoc semel tulit, nemo bis, ego ter, διέξοδον et longius euectus sum sed redeo ad propositum, ἄφοδος.

[87] I have already said more than was necessary on the subject of *figures*. But there will still be some who think that the following (which they call ἀνθυποφορὰ is a *figure*: *Incredible est, quod dico, sed uerum*: they say the same of *Aliquis hoc semel tulit, nemo bis, ego ter* (which they style διέξοδος), and of *Longius euects sum, sed redeo ad propositum*, which they call ἄφοδος.

[88] quaedam verborum figurae paulum figuris sententiarum declinantur, ut dubitatio. nam cum est in re, priori parti adsignanda est, cum in verbo, sequenti; sive me malitiam sive stultitiam dicere oportet.

[88] There are some *figures of speech* which differ little from *figures of thought*, as for example that of hesitation. For when we hesitate over a thing, it belongs to the former class, whereas when we hesitate over a word, it must be assigned to the latter, as for instance if we say, “I do not know whether to call this wickedness or folly.”

[89] item correctionis eadem ratio est; nam quod illic dubitat, hic emendat. etiam in personae fictione accidere quidam idem putaverunt, ut in verbis esset haec figura: crudelitatis mater est avaritia, et apud Sallustium in Ciceronem O Romule Arpinas, et apud Menandrum Oedipus Thriasius. haec omnia copiosius sunt executi, qui non ut partem operis transcurrerunt, sed proprie libros huic operi dedicaverunt, sicut Caecilius, Dionysius, Rutilius, Cornificius, Visellius aliique non pauci; sed non minor erit eorum, qui vivunt, gloria.

[89] The same consideration applies to correction. For correction emends, where hesitation expresses a doubt. Some have even held that it applies to personification as well; they think, for example, that *Avarice is the mother of cruelty*, Sallust’s *O Romulus of Arpinum* in his speech against Cicero, and the *Thriasian Oedipus* of Menander are *figures of speech*. All these points have been discussed in full detail by those who have not given this subject merely incidental treatment as a portion of a larger theme, but have devoted whole books to the discussion of the topic: I allude to writers such as Caecilius, Dionysius, Rutilius, Cornificius, Visellius and not a few others, although there are living authors who will be no less famous than they.

[90] Vt fateor autem verborum quoque figuras posse plures reperiri a

quibusdam, ita iis, quae ab auctoribus claris traduntur, meliores non adsentior. nam in primis M. Tullius multas in tertio De Oratore libro posuit, quas in Oratore postea scripto transeundo videtur ipse damnassee; quarum pars est, quae sententiarum potius quam uerborum sit: ut imminutio, improvisum, imago, sibi ipsi responsio, digressio, permissio, contrarium (hoc enim puto, quod dicitur ἐναντιότης), sumpta ex aduerso probatio.

[90] Now though I am ready to admit that more *figures of speech* may perhaps be discovered by certain writers, I cannot agree that such figures are better than those which have been laid down by high authorities. Above all I would point out that Cicero has included a number of figures in the third book of the *de Oratore*, which in his later work, the *Orator*, he has omitted, thereby seeming to indicate that he condemned them. Some of these are *figures of thought* rather than *of speech*, such as meiosis, the introduction of the unexpected, imagery, answering our own questions, digression, permission, arguments drawn from opposites (for I suppose that by *contrarium* he means what is elsewhere styled ἐναντιότης), and proof borrowed from an opponent. There are some again which are not figures at all,

[91] quaedam omnino non sunt figurae, sicut ordo, dinumeratio, circumscriptio, sive hoc nomine significatur comprehensa breuiter sententia sive finitio; nam et hoc Cornificius atque Rutilius schema λέξεως putant. uerborum autem concinna transgressio, id est hyperbaton, quod Caecilius quoque putat schema, a nobis est inter tropos posita.

[91] such as arrangement, distinction by headings, and circumscription, whether this latter term be intended to signify the concise expression of thought or definition, which is actually regarded by Cornificius and Rutilius as a *figure of speech*. With regard to the elegant transposition of words, that is, *hyperbaton*, which Caecilius also thinks is a *figure*, I have included it among *tropes*. As for *mutation*

[92] Sed mutatio, si ea est, quam Rutilius ἀλλοίωσιν vocat, dissimilitudinem ostendit hominum, rerum, factorum; quae si latius fiat, figura non est, si angustius, in ἀντιθετον cadet; si uero haec appellatio significat ὑπαλλαγὴν, satis de ea dictum est.

[92] of the kind which Rutilius calls ἀλλοίωσις its function is to point out the differences between men, things and deeds: if it is used on an extended scale, it is not a *figure*, if on a narrower scale, it is mere *antithesis*, while if it is intended to mean *hypallage*, enough has already been said on the subject.

[93] quod uero schema est ad propositum subiecta ratio, quod Rutilius αἰτιολογίαν vocat? nam de illo dubitari possit, an schema sit distributis subiecta ratio, quod apud eundem primo loco positum est.

[93] Again what sort of a figure is this *addition of a reason, for what is*

advanced, which Rutilius calls αἰτιολογία? It may also be doubted whether the *assignment of a reason for each distinct statement*, with which Rutilius opens his discussion of figures, is really a figure.

[94] προσαπόδοσιν dicit, quae, ut maxime, servetur sane in pluribus propositis, quia aut singulis statim ratio subiiciatur, ut est apud C. Antonium, sed neque accusatorem eum metuo, quod sum innocens; neque competitorem vereor, quod sum Antonius; neque consulem spero, quod est Cicero;

[94] He calls it *προσσπόδοσις* and states that strictly it applies to a number of propositions, since the reason is either attached to each proposition separately, as in the following passage from Gaius Antonius: “But I do not fear him as an accuser, for I am innocent; I do not dread him as a rival candidate, for I am Antonius; I do not expect to see him consul, for he is Cicero”;

[95] *aut positis duobus vel tribus eodem ordine singulis continua reddatur, quale apud Brutum de dictatura Cn. Pompeii, praestat enim nemini imperare quam alicui servire; sine illo enim vivere honeste licet, cum hoc vivendi nulla condicio est.*

[95] or, after two or three propositions have been stated, the reasons for them may be given continuously in the same order, as for example in the words that Brutus uses of Gnaeus Pompeius: “For it is better to rule no man than to be the slave to any man: since one may live with honour without ruling, whereas life is no life for the slave.”

[96] *sed et uni rei multiplex ratio subiungitur, ut apud Vergilium,*

sire inde occultas vires et pabula terrae

pinguia concipiunt, sive illis omne per ignem

excoquitur vitium — et totus locus;

seu plures calor ille vias, — Seu durat magis.

Relationem quid accipi velit, non liquet mihi.

[96] But a number of reasons may also be assigned for one statement, as in the lines of Virgil:

“Whether that earth there from some hidden
strength

And fattening food derives, or that the tire

Bakes every blemish out, etc.

Or that the heat unlocks new passages. . . .

Or that it hardens more, etc.

“

As to what Cicero means by *reference*,

[97] *nam si ἀνάκλασιν aut ἐπάνοδον dicit, de omnibus locuti sumus. sed quidquid id est, neque hoc neque superiora in Oratore repetit. sola est in eo libro posita pariter inter figuras uerborum exclamatio, quam sententiae potius puto (adfectus enim est), de ceteris omnibus consentio.*

[97] I am in the dark: if he means *ἀνάκλασις* or *ἐπάνοδος* or *ἀντιμεταβολή*, I have already discussed them. But whatever its meaning may be, he does not

mention it in the Orator any more than the other terms I have just mentioned. The only figure of speech mentioned in that work, which I should prefer to regard as a figure of thought owing to its emotional character, is *exclamation*. I agree with him about all the rest. To these Caecilius adds *periphrasis*,

[98] adiicit his Caecilius περιφρασιν, de qua dixi; Cornificius interrogationem, ratiocinationem, subiectionem, transitionem, occultationem, praeterea sententiam, membrum, articulos, interpretationem, conclusionem. quorum priora alterius generis sunt schemata, sequentia schemata omnino non sunt.

[98] of which I have already spoken,⁵ while Cornificius adds interrogation, reasoning, suggestion, transition, concealment, and further, sentence, clause, isolated words, interpretation and conclusion. Of these the first (down to and including concealment) are *figures of thought*, while the remainder are not *figures* at all.

[99] item Rutilius praeter ea, quae apud alios quoque sunt, παρομολογίαν, ἀναγκαῖον, ἥθοποιίαν, δικαιολογίαν, πρόληψιν, χαρακτηρισμόν, βραχυλογίαν, παρασιώπησιν, παρῳήσιν de quibus idem dico. nam eos quidem auctores, qui nullum prope tinem fecerunt exquirendis nominibus, praeteribo, qui etiam, quae sunt argumentorum, figuris ascripserunt. ego illud de iis etiam, quae vere sunt,

[99] Rutilius also in addition to the figures found in other authors adds, παρομολογία ἀναγκαῖον ἥθοποιία δικαιολογία, πρόληψις, χαρακτηρισμός βραχυλογία, παρασιώπησις παρῳήσια of which I say the same. I will pass by those authors who set no limit to their craze for inventing technical terms and even include among *figures* what really comes under the head of arguments.

[100] adiiciam breviter, sicut ornent orationem opportune positaе, ita ineptissimas esse, cum immodice petantur. sunt qui neglecto rerum pondere et viribus sententiarum, si vel inania verba in hos modos depravarunt, summos se iudicent artifices ideoque non desinant eas nectere, quas sine substantia sectari tam est ridiculum quam quaerere habitum gestumque sine corpore.

[100] With regard to genuine *figures*, I would briefly add that, while, suitably placed, they are a real ornament to style, they become perfectly fatuous when sought after overmuch. There are some who pay no consideration to the weight of their matter or the force of their thoughts and think themselves supreme artists, if only they succeed in forcing even the emptiest of words into *figurative* form, with the result that they are never tired of stringing *figures* together, despite the fact that it is as ridiculous to hunt for *figures* without reference to the matter as it is to discuss dress and gesture without reference to the body.

[101] sed ne eae quidem, quae recte fiunt, densandae sunt nimis; nam et vultus mutatio oculorumque coniectus multum in actu valet; sed si quis ducere os

exquisitis modis et frontis ac luminum inconstantia trepidare non desinat, rideatur. Sed oratio habet rectam quandam velut faciem, quae ut stupere immobili rigore non debebit, ita saepius in ea, quam natura dedit, specie continenda est.

[101] But even perfectly correct *figures* must not be packed too closely together. Changes of facial expression and glances of the eyes are most effective in pleading, but if the orator never ceases to distort his face with affected grimaces or to wag his head and roll his eyes, he becomes a laughing-stock. So too oratory possesses a natural mien, which while it is far from demanding a stolid and immovable rigidity should as far as possible restrict itself to the expression with which it is endowed by nature.

[102] sciendum vero in primis, quid quisque in orando postulet locus, quid persona, quid tempus; maior enim pars harum figurarum posita est in delectatione. ubi vero atrocitate, invidia, miseratione pugnandum est, quis ferat contraposis et pariter cadentibus et consimilibus irascentem, flentem, rogantem cum in his rebus cura uerborum deroget adfectibus fidem et ubicunque ars ostentatur, veritas abesse videatur.

[102] But it is of the first importance that we should know what are the requirements of time, place and character on each occasion of speaking. For the majority of these figures aim at delighting the hearer. But when terror, hatred and pity are the weapons called for in the fray, who will endure the orator who expresses his anger, his sorrow or his entreaties in neat antitheses, balanced cadences and exact correspondences? Too much care for our words under such circumstances weakens the impression of emotional sincerity, and wherever the orator displays his art unveiled, the hearer says, "The truth is not in him."

4. De compositione non equidem post M. Tullium scribere auderem (cui nescio an ulla pars operis huius sit magis elaborata), nisi et eiusdem aetatis homines scriptis ad ipsum etiam litteris reprehendere id collocandi genus ausi fuissent, et post eum plures multa ad eandem rem pertinentia memoriae tradidissent.

4. I should not venture to speak of artistic structure after what Cicero has said upon the subject (for there is I think no topic to which he has devoted such elaborate discussion) but for the fact that his own contemporaries ventured to traverse his theories on this subject even in letters which they addressed to him, while a number of later writers have left on record numerous observations on the same topic.

[2] itaque accedam ut plerisque Ciceroni atque ut iis ero, quae indubitata sunt, brevior, ut quibusdam paulum fortasse dissentiam. nam etiam cum iudicium meum ostendero, suum tamen legentibus relinquam.

[2] Accordingly on a large number of questions I shall be found in agreement with Cicero and shall deal more briefly with those points which admit of no dispute, while there will be certain subjects on which I shall express a certain amount of disagreement. For, though I intend to make my own views clear, I shall leave my readers free to hold their own opinion.

[3] neque ignoro quosdam esse, qui curam omnem compositionis excludant, atque illum horridum sermonem, ut forte fluxerit, modo magis naturalem, modo etiam magis virilem esse contendant. qui si id demum naturale esse dicunt, quod natura primum ortum est et quale ante cultum fuit, tota haec ars orandi subvertitur.

[3] I am well aware that there are certain writers who would absolutely bar all study of artistic structure and contend that language as it chances to present itself in the rough is more natural and even more manly. If by this they mean that only that is natural which originated with nature and has never received any subsequent cultivation, there is an end to the whole art of oratory.

[4] neque enim locuti sunt ad hanc regulam et diligentiam primi homines, nec prooemiis praeparare, docere expositione, argumentis probare, adfectibus commovere scierunt. ergo his omnibus, non sola compositione caruerunt; quorum si fieri nihil melius licebat, ne domibus quidem casas aut vestibis pellium tegmina aut urbibus montes ac silvas mutari oportuit.

[4] For the first men did not speak with the care demanded by that art nor in accordance with the rules that it lays down. They knew nothing of introducing their case by means of an exordium, of instructing the jury by a statement of facts, of proving by argument or of arousing the emotions. They lacked all these qualifications as completely as they lacked all knowledge of the theory of artistic structure. But if they were to be forbidden all progress in this respect, they ought equally to have been forbidden to exchange their huts for houses, their cloaks of skin for civilised raiment and their mountains and forests for cities.

[5] quae porro ars statim fuit? quid non cultu mitescit? cur vites coercemus manu? cur eas fodimus? rubos arvis excidimus, terra et hos generat; mansuefacimus animalia, indomita nascuntur. verum id est maxime naturale, quod fieri natura optime patitur.

[5] What art was ever born fullgrown? What does not ripen with cultivation? Why do we train the vine? Why dig it? We clear the fields of brambles, and they too are natural products of the soil. We tame animals, and yet they are born wild. No, that which is most natural is that which nature permits to be done to the greatest perfection.

[6] fortius vero qui incompositum potest esse quam vinctum et bene collocatum? neque, si parvi pedes vim detrahunt rebus, ut Sotadeorum et

Galliamborum et quorundam ut oratione simili paene licentia lascivientium, compositionis est iudicandum.

[6] How can a style which lacks orderly structure be stronger than one that is welded together and artistically arranged? It must not be regarded as the fault of the study of structure that the employment of feet consisting of short syllables such as characterise the Sotadean and Galliambic metres and certain prose rhythms closely resembling them in wildness, weakens the force of our matter.

[7] ceterum quanto vehementior fluminum cursus est prono alveo ac nullas moras obiiiciente quam inter obstantia saxa fractis aquis ac reluctantibus, tanto, quae connexa est et totis viribus fluit, fragosa atque interrupta melior oratio. cur ergo vires ipsa specie solvi putent, quando res nec ulla sine arte satis valeat et comitetur semper artem decor?

[7] Just as river-currents are more violent when they run along a sloping bed, that presents no obstacles to check their course, than when their waters are broken and baffled by rocks that obstruct the channel, so a style which flows in a continuous stream with all the full development of its force is better than one which is rough and broken. Why then should it be thought that polish is inevitably prejudicial to vigour, when the truth is that nothing can attain its full strength without the assistance of art, and that art is always productive of beauty?

[8] An non eam, quae missa optime est, hastam speciosissime contortam ferri videmus, et arcu dirigentium tela quo certior manus, hoc est habitus ipse formosior? iam ut certamine armorum atque ut omni palaestra quid satis recte cavetur ac petitur, cui non artifex motus et certi quidam pedes adsint?

[8] Is it not the fact that grace always goes with the highest skill in throwing the spear, and that the truer the archer's aim, the more comely is his attitude? Again in fencing and all the contests of the wrestling school, what one of all the tricks of attack and defence is there, that does not require movements and firmness of foot such as can only be acquired by art?

[9] quare mihi compositione velut amentis quibusdam nervisve intendi et concitari sententiae videntur. ideoque eruditissimo cuique persuasum est, valere eam plurimum non ad delectationem modo sed ad motum quoque animorum,

[9] Consequently in my opinion artistic structure gives force and direction to our thoughts just as the throwing-thong and the bowstring do to the spear and the arrow. And for this reason all the best scholars are convinced that the study of structure is of the utmost value, not merely for charming the ear, but for stirring the soul.

[10] primum quia nihil intrare potest ut adfectus, quod ut aure velut quodam

vestibulo statim offendit; deinde quod natura ducimur ad modos. neque enim aliter eveniret, ut illi quoque organorum soni, quanquam verba non exprimunt, ut alios tamen atque alios motus ducerent auditorem.

[10] For in the first place nothing can penetrate to the emotions that stumbles at the portals of the ear, and secondly man is naturally attracted by harmonious sounds. Otherwise it would not be the case that musical instruments, in spite of the fact that their sounds are inarticulate, still succeed in exciting a variety of different emotions in the hearer.

[11] In certaminibus sacris non eadem ratione concitant animos ac remittunt, non eosdem modos adhibent, cum bellicum est canendum et cum posito genu supplicandum est; nec idem signorum concentus est procedente ad proelium exercitu, idem receptui carmen.

[11] In the sacred games different methods are employed to excite and calm the soul, different melodies are required for the war-song and the entreaty sung by the suppliant on bended knee, while the war-note of the trumpet that leads the army forth to battle has no resemblance to the call that sounds the retreat.

[12] pythagoreis certe moris fuit, et cum evigilassent, animos ad lyram excitare, quo essent ad agendum erectiores, et cum somnum peterent, ad eandem prius lenire mentes, ut, si quid fuisset turbidiorum cogitationum, componerent.

[12] It was the undoubted custom of the Pythagoreans, when they woke from slumber, to rouse their souls with the music of the lyre, that they might be more alert for action, and before they retired to rest, to soothe their minds by melodies from the same instrument, in order that all restlessness of thought might be lulled to orderly repose.

[13] quodsi numeris ac modis inest quaedam tacita vis, ut oratione ea vehementissima, quantumque interest sensus idem quibus verbis efferatur, tantum, verba eadem qua compositione vel ut textu iungantur vel ut fine claudantur; nam quaedam et sentiis parva et elocutione modica virtus haec sola commendat.

[13] But if there is such secret power in rhythm and melody alone, this power is found at its strongest in eloquence, and, however important the selection of words for the expression of our thoughts, the structural art which welds them together in the body of a period or rounds them off at the close, has at least an equal claim to importance. For there are some things which, despite triviality of thought and mediocrity of language, may achieve distinction in virtue of this excellence alone.

[14] denique quod cuique visum erit vehementer, dulciter, speciose dictum, solvat et turbet: abierit omnis vis, iucunditas, decor. solvit quaedam sua ut Oratore Cicero: neque me divitiae movent quibus omnis Africanos et Laelios nulli venalicii mercatoresque superarunt. immuta paululum ut sit 'multi

superarunt mercatores venaliciique,' et insequentes deinceps periodos; quas si ad illum modum turbes, velut fracta aut transversa tela proieceris.

[14] In fact, if we break up and disarrange any sentence that may have struck us as vigorous, charming or elegant, we shall find that all its force, attraction and grace have disappeared. Cicero in his *Orator* breaks up some of his own utterances in this way: "*Neque me divitiae movent, quibus omnes Africanos et Laelios multi venalicii mercatoresque superarunt.* Change the order but a little so that it will run *multi superarunt mercatores venaliciique,*" and so on. Disarrange these periods in such a manner, and you will find that the shafts you have hurled are broken or wide of the mark.

[15] idem corrigit quae a Graccho composita durius putat. illum decet; nos hac sumus probatione contenti, quod ut scribendo, quae se nobis solutiora obtulerunt, componimus. quid enim attinet eorum exempla quaerere, quae sibi quisque experiri potest? illud notasse satis habeo, quo pulchriora et sensu et elocutione dissolveris, hoc orationem magis deformem fore, quia negligentia collocationis ipsa verborum luce deprehenditur.

[15] Cicero also corrects passages in the speeches of Gracchus where the structure appears to him to be harsh. For Cicero this is becoming enough, but we may content ourselves with testing our own power of welding together in artistic form the disconnected words and phrases which present themselves to us. For why should we seek elsewhere for examples of faults which we may all of us find in our own work? One point, however, it is enough simply to notice — that the more beautiful in thought and language the sentence which you deprive of such structural cohesion, the more hideous will be the effect upon the style, for the very brilliance of the words at once exposes the carelessness of their arrangement.

[16] itaque ut confiteor, paene ultimam oratoribus artem compositionis, quae quidem perfecta sit, contigisse, ita illis quoque priscis habitam inter curas, ut quantum adhuc profecerant, puto. neque enim mihi quamlibet magnus auctor Cicero persuaserit, Lysian, Herodotum, Thucydiden parum studiosos eius fuisse. genus fortasse sint secuti non idem,

[16] Accordingly, although I admit that artistic structure, at any rate in perfection, was the last accomplishment to be attained by oratory, I still hold that even primitive orators regarded it as one of the objects of their study, as far at least as the rudeness of their attainments permitted. For even Cicero for all his greatness will never persuade me that Lysias, Herodotus and Thucydides were careless in this respect.

[17] quod Demosthenes aut Plato, quanquam et ii ipsi inter se dissimiles fuerunt. nam neque illud ut Lysia dicendi textum tenue atque rasum laetioribus numeris corrumpendum erat; perdidisset enim gratiam, quae ut eo maxima est, simplicis atque inadfectati coloris, perdidisset fidem quoque. nam

scribebat alis, non ipse dicebat, ut oportuerit esse illa rudibus et incompositis similia; quod ipsum compositio est.

[17] They may not perhaps have pursued the same ideals as Demosthenes and Plato, and even these latter differed in their methods. For it would never have done to spoil the fine and delicate texture of Lysias by the introduction of richer rhythms, since he would thus have lost all that surpassing grace which he derives from his simple and unaffected tone, while he would also have sacrificed the impression of sincerity which he now creates. For it must be remembered that he wrote his speeches for others to deliver, so that it was right that they should suggest a lack of form and artistic structure: indeed his success in producing this effect actually shows his mastery of structure.

[18] Et historiae, quae currere debet ac ferri, minus convenissent insistentes clausulae et debita actionibus respiratio et cludendi inchoandique sententias ratio. In contionibus quidem etiam similiter cadentia quaedam et contraposita deprehendas. In Herodoto vero cum omnia (ut ego quidem sentio) leniter fluunt, tum ipsa διὰλεκτος habet eam iucunditatem, ut latentes etiam ut se numeros complexa videatur.

[18] Again history, which should move with speed and impetuosity, would have been ill-suited by the halts imposed by the rounding off of the period, by the pauses for breath inevitable in oratory, and the elaborate methods of opening sentences and bringing them to a close. It is however true that in the speeches inserted by historians we may note something in the way of balanced cadences and antitheses. As regards Herodotus, while his flow, in my opinion, is always gentle, his dialect has such a sweetness of its own that it even seems to contain a certain rhythmical power hidden within itself.

[19] sed de propositorum diversitate post paulum. nunc, quae prius iis, qui recte componere volent, discenda sint.

est igitur ante omnia oratio alia vineta atque contexta, soluta alia, qualis ut sermone et epistolis, nisi cum aliquid supra naturam suam tractant, ut de philosophia, de re publica, similibus.

[19] However I shall speak of the different ideals a little later: my immediate task is to teach the student elementary rules which are essential if correctness of structure is to be attained.

There are then in the first place two kinds of style: the one is closely welded and woven together, while the other is of a looser texture such as is found in dialogues and letters, except when they deal with some subject above their natural level, such as philosophy, politics or the like.

[20] quod non eo dico, quia non illud quoque solutum habeat suos quosdam et forsitan difficiliore etiam pedes; neque enim aut hiare semper vocalibus aut destitui temporibus volunt sermo atque epistola; sed non fluunt nec cohaerent

nec verba verbis trahunt, ut potius laxiora ut his vincula quam nulla sint.

[20] In saying this, I do not mean to deny that even this looser texture has its own peculiar rhythms which are perhaps the most difficult of all to analyse. For dialogues and letters do not demand continual *hiatus* between vowels or absence of rhythm, but on the other hand they have not the flow or the compactness of other styles, nor does one word lead up so inexorably to another, the structural cohesion being loose rather than non-existent.

[21] nonnunquam ut causis quoque minoribus decet eadem simplicitas quae non nullis, sed aliis utitur numeris, dissimulatque eos et tantum communit occultius.

[21] Again in legal cases of minor importance a similar simplicity will be found to be most becoming, a simplicity, that is to say, that does not dispense with rhythm altogether, but uses rhythms of a different kind, conceals them and employs a certain secrecy in their construction.

[22] at illa connexa series tres habet formas: incisa quae κόμματα dicuntur, membra quae κῶλα, περίοδον, quae est vel ambitus vel circumductum vel continuatio vel conclusio. In omni porro compositione tria sunt genera necessaria: ordo, iunctura, numerus.

[22] But the more closely welded style is composed of three elements: the *comma*, or as we call it *incisum*, the *colon*, or in Latin *menbrum*, and the *period*, which Roman writers call *ambitus*, *circumductum*, *continuatio* or *conclusio*. Further, in all artistic structure there are three necessary qualities, *order*, *connexion* and *rhythm*.

Of these we will first discuss *order*,

[23] primum igitur de ordine. eius observatio ut verbis est singulis et contextis. singula sunt, quae ἁσύνδετα diximus. In his cavendum, ne decrescat oratio, et fortiori subiungatur aliquid infirmius, ut sacrilege fur, aut latroni petulans. augeri enim debent sententiae et insurgere, ut optime Cicero, tu, inquit, istis faucibus, istis lateribus, ista gladiatoria totius corporis firmitate. aliud enim maius alii supervenit. at si coepisset a toto corpore, non bene ad latera faucesque descenderet. est et alius naturalis ordo, ut viros ac feminas, diem ac noctem, ortum et occasum dicas potius quam retrorsum.

[23] which must be considered in connexion with words taken both singly and in conjunction. Words taken singly are known as *asyndeta* (unconnected). In dealing with them we must take care that our style does not diminish in force through the fact that a weaker word is made to follow a stronger: as, for example, if after calling a man a despoiler of temples we were to speak of him as a thief, or after styling him a highwayman were to dub him an insolent fellow. For sentences should rise and grow in force: of this an excellent example is provided by Cicero, where he says, "You, with that throat, those

lungs, that strength, that would do credit to a prizefighter, in every limb of your body”; for there each phrase is followed by one stronger than the last, whereas, if he had begun by referring to his whole body, he could scarcely have gone on to speak of his lungs and throat without an anticlimax. There is also another species of order which may be entitled natural, as for example when we speak of “men and women,” “day and night,” “rising and setting,” in preference to the reverse order.

[24] quaedam ordine permutato fiunt supervacua, ut fratres gemini; nam si gemini praecesserint, fratres addere non est necesse. illa nimia quorundam fuit observatio, ut vocabula verbis, verba rursus adverbis, nomina appositis et pronominiibus essent priora; nam fit contra quoque frequenter non indecore.

[24] In some cases a change in the order will make a word superfluous: for example, we write *fratres gemini* rather than *gemini fratres* (twin-brothers), since if *gemini* came first, there would be no necessity to add *fratres*. The rule which some have sought to enforce that nouns should precede verbs, and verbs adverbs, while epithets and pronouns should follow their substantives, is a mere extravagance, since the reverse order is often adopted with excellent effect.

[25] nec non et illud nimiae superstitionis, uti quaeque sint tempore, ea facere etiam ordine priora, non quin frequenter sit hoc melius, sed quia interim plus valent ante gesta, ideoque levioribus superponenda sunt. verbo sensum cludere multo,

[25] Another piece of extravagant pedantry is to insist that the first place should always be occupied by what is first in order of time: such an order is no doubt often the best, but merely because previous events are often the most important and should consequently be placed before matters of more trivial import.

[26] si compositio patiat, optimum est; ut verbis enim sermonis vis est. Si id asperum erit, cedet haec ratio numeris, ut fit apud summos Graecos Latinosque oratores frequentissime. sine dubio erit omne, quod non cludet, hyperbaton, sed ipsum hoc inter tropos vel figuras, quae sunt virtutes, receptum est.

[26] If the demands of artistic structure permit, it is far best to end the sentence with a verb: for it is in verbs that the real strength of language resides. But if it results in harshness of sound, this principle must give way before the demands of rhythm, as is frequently the case in the best authors of Rome and Greece. Of course, in every case where a verb does not end the sentence, we shall have an *hyperbaton*, but *hyperbaton* is an admitted *trope* or *figure*, and therefore is to be regarded as an adornment.

[27] non enim ad pedes verba dimensa sunt, ideoque ex loco transferuntur ut

locum, ut iungantur, quo congruunt maxime, sicut ut structura saxorum rudium etiam ipsa enormitas invenit, cui applicari et ut quo possit insistere. felicissimus tamen sermo est, cui et rectus ordo et apta iunctura et cum his numerus opportune cadens contigit. quaedam vero transgressiones et longae sunt nimis,

[27] For words are not cut to suit metrical feet, and are therefore transferred from place to place to form the most suitable combinations, just as in the case of unhewn stones their very irregularity is the means of suggesting what other stones they will best fit and what will supply them with the surest resting-place. On the other hand, the happiest effects of language are produced when it is found possible to employ the natural order, apt connexion and appropriate rhythm.

[28] ut superioribus diximus libris, et interim etiam compositione vitiosae, quae ut hoc ipsum petuntur, ut exultent atque lasciviant, quales illae Maecenatis, sole et aurora rubent plurima. inter se sacra movit aqua fraxinos. Ne exequias quidem unus inter miserrimos viderem meas. quod inter haec pessimum est, quia ut re tristi ludit compositio.

[28] Some transpositions are too long, as I have pointed out in previous books, while at times they involve faulty structure, although some writers actually aim at this vicious type of transposition, in order to create an appearance of freedom and license, as in the following phrases from Maecenas, *sole et aurora rubent plurima; inter se sacra movit aqua fraxinos; ne exequias quidem unus inter miserrimos viderem meas*. The worst feature in these examples, is that he plays pranks with his structure while dealing with a sad theme. It is, however,

[29] saepe tamen est vehemens aliquis sensus ut verbo, quod si ut media parte sententiae latet, transire intentionem et obscurari circumiacentibus solet, ut clausula positum adsignatur auditori et infigitur, quale illud est Ciceronis, *Vt tibi necesse esset ut conspectu populi Romani vomere postridie*.

[29] not infrequently possible to give special significance to a word by placing it at the close of the sentence and thereby stamping and impressing it on the mind of the hearer, whereas if it were placed in the middle of the sentence, it would remain unnoticed, escape the attention and be obscured by its surroundings; the following passage from Cicero will illustrate what I mean: *ut tibi necesse esset in conspectu populi Romani vomere postridie*.

[30] transfer hoc ultimum: minus valebit. nam totius ductus hic est quasi mucro, ut per se foeda vomendi necessitas iam nihil ultra expectantibus hanc quoque adiiiceret deformitatem, ut cibus teneri non posset postridie.

[30] Transfer the last word to some other position and the effect will be decreased. For the whole passage is made to converge to a point at the end;

the disgraceful circumstance of his being forced to vomit has been mentioned and the audience expect nothing more, when the orator adds yet a further revolting feature of the case, namely that he was still unable to retain his food the day after the carouse.

[31] solebat Afer Domitius traicere ut clausulas verba tantum asperandae compositionis gratia et maxime ut prooemiis, ut pro Cloatilla, gratias agam continuo, et pro Laelia, eis utrisque apud te iudicem periclitatur Laelia. adeo refugit teneram delicatamque modulandi voluptatem, ut currentibus per se numeris quod eos inhiberet obiiceret.

[31] Domitius Afer was in the habit of transferring words at the cadence of the sentence solely for the purpose of harshening his rhythm, more especially in his *exordia*, as, for example, in his defence of Cloatilla, where he says *gratias again continuo*, and in his defence of Laelia, where he says, *eis utrisque apud te iudicem periclitatur Laelia*. To such an extent did he avoid the voluptuous effect of soft and delicate rhythm, that he actually interposed obstacles to break the natural harmonies of his language.

[32] amphiboliam quoque fieri vitiosa locatione verborum, nemo est qui nesciat. haec arbitror, ut ut brevi, de ordine fuisse dicenda; qui si vitiosus est, licet et vincta sit et apte cadens oratio, tamen merito incomposita dicatur.

iunctura sequitur. est ut verbis, incisis, membris, periodis; omnia namque ista et virtutes et vitia ut complexu habent.

[32] There is a further drawback resulting from the faulty arrangement of words, with which we are all familiar, namely, that it leads to ambiguity. The above remarks will, I think, suffice as a brief summary of the points which require notice in connexion with order. If the order is faulty, our language will be deservedly liable to the charge of lacking artistic construction, however compact and rhythmical it may be.

The next point for consideration is connexion, that is to say connexion between words, *commata*, *cola* and periods. For all these have merits and defects which turn on the way in which they are linked together.

[33] atque, ut ordinem sequear, primum sunt quae imperitis quoque ad reprehensionem notabilia videntur, id est, quae, commissis inter se verbis duobus, ex ultima prioris ac prima sequentis syllaba deforme aliquod nomen efficiunt. tum vocalium concursus; quod cum accidit, hiat et intersistit et quasi laborat oratio. pessime longae, quae easdem inter se litteras committunt, sonabunt. praecipuus tamen erit hiatus earum, quae cavo aut patulo maxime ore efferuntur.

[33] I will follow the natural order and will begin by pointing out that there are some blemishes so obvious that even the uneducated regard them as worthy of censure; I refer to occasions when two consecutive words form some

unseemly expression by the coalescence of the last syllable of the first word and the first of the second. Again, there are occasions when vowels clash. When this happens, the language is broken by gaps and interstices and seems to labour. The most displeasing effects of sound will be produced by the juxtaposition of the same long vowels, while the worst *hiatus* occurs between vowels which are pronounced hollow- or open-mouthed.

[34] *E planior littera est, i angustior est, ideoque obscurius ut his vitium. minus peccabit, qui longis breves subiiciet, et adhuc, qui praeponet longae brevem. minima est ut duabus brevibus offensio. atque cum aliae subiunguntur aliis, proinde asperiores aut leniores erunt prout oris habitu simili aut diverso pronuntiabuntur.*

[34] *E* has a flatter, *i* a narrower sound, and consequently such blemishes are less noticeable where they are concerned. It is a less serious fault to place short vowels after long, a statement which applies even more strongly to placing short vowels before long. But the least unsatisfactory combination is that of two short vowels. And in all conjunctions of vowels, the resulting sound will be proportionately soft or harsh according as they resemble or differ from each other in the method of utterance.

[35] *non tamen id ut crimen ingens expavescendum est, ac nescio negligentia ut hoc an sollicitudo sit peior. Inhibeat enim necesse est hic metus impetum dicendi et a potioribus avertat. quare ut negligentiae passim hoc pati, ita humilitatis ubique perhorrescere, nimiosque non immerito ut hac cura putant omnes Isocraten secutos praecipueque Theopompum.*

[35] On the other hand, *hiatus* is not to be regarded as so very terrible a crime: in fact I do not know which is the worse fault in this connexion, carelessness or a pedantic solicitude for correctness. For anxiety on this score is bound to check the flow of our language and to divert us from more important considerations. Therefore while it is a sign of carelessness to admit *hiatus* here, there and everywhere, it is a symptom of grovelling timidity to be continually in terror of it, and there is good reason for the view that all the followers of Isocrates and more especially Theopompus pay accessive attention to the avoidance of this defect.

[36] *at Demosthenes et Cicero modice respexerunt ad hanc partem. nam et coeuntes litterae, quae συναλίσσονται dicuntur, etiam leviolem faciunt orationem, quam si omnia verba suo fine cludantur, et nonnunquam hiulca etiam decent faciuntque ampliora quaedam: ut pulchra oratione ista iacta te cum longae per se et velut opimae syllabae aliquid etiam medii temporis inter vocales, quasi intersistatur, adsumunt.*

[36] On the other hand Demosthenes and Cicero show a sense of proportion in the way in which they face the problem. For the coalescence of two letters, known as συναλοιφή, may make our language run more smoothly than if

every word closed with its own vowel, while sometimes *hiatus* may even prove becoming and create an impression of grandeur, as in the following case, *pulchra oratione ista iacta te*. For syllables which are naturally long and rich in sound gain something from the time which intervenes between two vowels, as though there were a perceptible pause.

[37] qua de re utar Ciceronis potissimum verbis. habet, inquit, ille tanquam hiatus et concursus vocalium molle quiddam, et quod indicet non ingratam negligentiam de re hominis magis quam de verbis laborantis.

ceterum consonantes quoque, earumque praecipue quae sunt asperiores, ut commissura verborum rixantur, ut si *s* ultima cum *x* proxima confligit, quarum tristior etiam, si binae collidantur, stridor est, ut *ars studiorum*.

[37] I cannot do better than quote the words of Cicero on this subject. *Hiatus*, he says, *and the meeting of vowels produce a certain softness of effect, such as to suggest a not unpleasing carelessness on the part of the orator, as though he were more anxious about his matter than his words.*

But consonants also are liable to conflict at the juncture of words, more especially those letters which are comparatively harsh in sound; as for instance when the final *s* of one word clashes with *x* at the opening of the next. Still more unpleasing is the hissing sound produced by the collision between a pair of these consonants, as in the phrase *ars studiorum*.

[38] quae fuit causa et Servio, ut dixit, subtrahendae *s* litterae, quotiens ultima esset aliaque consonante susciperetur; quod reprehendit Luranius, Messala defendit. nam neque Lucilium putat uti eadem ultima, cum dicit Aeserninus fuit et dignus locoque, et Cicero ut Oratore plures antiquorum tradit sic locutos.

[38] This was the reason why Servius, as he himself has observed, dropped the final *s*, whenever the next word began with a consonant, a practice for which Luranius takes him to task, while Messala defends him. For he thinks that Lucilius did not pronounce the final *s* in phrases such as, *Aeserninus fuit* and *dignus locoque*, while Cicero in his *Orator* records that this was the practice with many of the ancients.

[39] inde belligerare, pomeridiam, et ilia Censori Catonis dicae hanc, aequae *m* littera ut *e* mollita. quae ut veteribus libris reperta mutare imperiti solent, et dum librariorum insectari volunt inscientiam, suam confitentur.

[39] Hence we get forms such as *belligerare* and *pomeridiam*, to which the *dicae hanc* of Cato the Censor, where the final *m* is softened into an *e*, presents an analogy. Unlearned readers are apt to alter such forms when they come across them in old books, and in their desire to decry the ignorance of the scribes convict themselves of the same fault.

[40] atqui eadem illa littera, quotiens ultima est et vocalem verbi sequentis ita contingit, ut ut eam transire possit, etiamsi scribitur, tamen parum exprimitur, ut multum ille et quantum erat, adeo ut paene cuiusdam novae litterae sonum reddat. neque enim eximitur, sed obscuratur et tantum ut hoc aliqua inter duas vocales velut nota est, ne ipsae coeant.

[40] On the other hand, whenever this same letter *m* comes at the end of a word and is brought into contact with the opening vowel of the next word in such a manner as to render coalescence possible, it is, although written, so faintly pronounced (*e.g.* in phrases such as *nultum ille* and *quantum erat*) that it may almost be regarded as producing the sound of a new letter. For it is not elided, but merely obscured, and may be considered as a symbol occurring between two vowels simply to prevent their coalescence.

[41] videndum etiam, ne syllabae verbi prioris ultimae et primae sequentis sint eaedem; quod ne quis praecipere miretur, Ciceroni ut epistolis excidit, res mihi invisae visae sunt, Brute, et ut carmine,

O fortunatam natam me Consule Romam.

Etiam monosyllaba,

[41] Care must also be taken that the last syllables of one word are not identical with the opening syllables of the next. In case any of my readers should wonder that I think it worth while to lay down such a rule, I may point out that Cicero makes such a slip in his Letters, in the sentence *res mihi invisae visae sunt*, *Brute*, and in the following line of verse,

O fortunatam natam me consule Romam.

See XI. i. 24.

[42] si plura sunt, male continuabuntur, quia necesse est compositio multis clausulis concisa subsultet. ideoque etiam brevium verborum ac nominum vitanda continuatio et ex diverso quoque longorum; adfert enim quandam dicendi tarditatem. illa quoque vitia sunt eiusdem loci, si cadentia similiter et similiter desinentia et eodem modo declinata multa iunguntur.

[42] Again it is a blemish to have too many monosyllables in succession, since the inevitable result is that, owing to the frequency of the pauses, the rhythm degenerates into a series of jerks. For the same reason we must avoid placing a number of short verbs and nouns in succession; the converse also is true as regards long syllables, since their accumulation makes our rhythm drag. It is a fault of the same class to end a number of successive sentences with similar cadences, terminations and inflexions.

[43] Ne verba quidem verbis aut nomina nominibus similiaque his continuari decet, cum virtutes etiam ipsae taedium pariant nisi gratia varietatis adiutae.

[43] It is likewise inartistic to accumulate long series of verbs, nouns or other parts of speech, since even merits produce tedium unless they have the saving grace of variety.

[44] membrorum incisorumque iunctura non ea modo est observanda quae verborum, quanquam et ut his extrema ac prima coeunt, sed plurimum refert compositionis, quae quibus anteponas. nam et vomens frustis esculentis gremium suum et totum tribunal implevit ... 73 et contra (nam frequentius utar iisdem diversarum quoque rerum exemplis, quo sint magis familiaria) saxa atque solitudines voci respondent, bestiae saepe immanes cantu flectuntur atque consistent magis surgebat, si verteretur; nam plus est saxa quam bestias commoveri, vicit tamen compositionis decor. sed transeamus ad numeros.

[44] The principles by which the connexion of words is guided are not sufficient in the case of *commata* and *cola*, though even here beginnings and ends should harmonise; but our structural effect will very largely depend on the relative order of these two types of clause. For in the following instance *vomens frustis esculentis gremium suum et totum tribunal implevit* [the order is satisfactory, since the fact of his having filled the whole judgement seat with his vomiting is the more important of the two]. On the other hand (for I shall repeat the same illustrations for different purposes to make them more familiar) in the following passage, *saxa atque solitudines voci respondent, bestiae saepe immanes cantu flectuntur atque consistent*, the gradation would be improved, if it were reversed: for it is a greater miracle to move rocks than wild beasts: but the claims of structural grace have carried the day. However, let us pass to the consideration of *rhythm*.

[45] omnis structura ac dimensio et copulatio vocum constat aut numeris (numeros ῥυθμούς accipi volo) aut μέτροις id est dimensione quadam. quod, etiamsi constat utrumque pedibus, habet tamen non simplicem differentiam.

[46] All combination, arrangement and connexion of words involves either rhythms (which we call *numeri*), or metres, that is, a certain measure. Now though both rhythm and metre consist of feet, they differ in more than one respect.

[46] nam primum numeri spatio temporum constant, metra etiam ordine, ideoque alterum esse quantitatis videtur, alterum qualitatis. ῥυθμὸς est aut par ut dactylicus,

[46] For in the first place rhythm consists of certain lengths of time, while metre is determined by the order in which these lengths are arranged. Consequently the one seems to be concerned with quantity and the other with quality. Rhythm may depend on equal balance,

[47] una enim syllaba longa par est duabus brevibus (est quidem vis eadem et

aliis pedibus, sed nomen illud tenet; longam esse duorum temporum, brevem unius, etiam pueri sciunt) aut sescuplex ut paeonicus: is est ex longa et tribus brevibus, aut ex tribus brevibus et longa, vel alio quoquo modo ut tempora tria ad duo relata sescuplum faciant; aut duplex, ut iambus (nam est ex brevi et longa) quique est ei contrarius.

[47] as in the case of *dactylic* rhythm, where one long syllable balances two short, (there are it is true other feet of which this statement is equally true, but the title of dactylic has been currently applied to all, while even boys are well aware that a long syllable is equivalent to two beats and a short to one) or it may consist of feet in which one portion is half as long again as the other, as is the case with *paeanic* rhythm (a *paeon* being composed of one long followed by three shorts, three shorts followed by one long or with any other arrangement preserving the proportion of three beats to two) or finally one part of the foot may be twice the length of the other, as in the case of the *iambus*, which is composed of a short followed by a long, or of the *choreus* consisting of a long followed by a short.

[48] sunt hi et metrici pedes, sed hoc interest, quod rhythmo indifferens, dactylicusne ille priores habeat breves an sequentes; tempus enim solum metitur, ut a sublatione ad positionem idem spatii sit. proinde alia dimensio est versuum; pro dactylico poni non poterit anapaestus aut spondeus, nec paeon eadem ratione brevibus incipiet ac desinet.

[48] These feet are also employed by metre, but with this difference, that in rhythm it does not matter whether the two shorts of the *dactyl* precede or follow the long; for rhythm merely takes into account the measurement of the time, that is to say, it insists on the time taken from its rise to its fall being the same. The measure of verse on the other hand is quite different; the *anapaest* (u u) or *spondee* () cannot be substituted at will for the *dactyl*, nor is it a matter of indifference whether the *paeon* begins or ends with short syllables.

[49] neque solum alium pro alio pedem metrorum ratio non recipit, sed ne dactylum quidem aut forte spondeum alterum pro altero. itaque si quinque continuos dactylos, ut sunt ut illo

panditur interea domus omnipotentis Olympi

confundas, solveris versum.

[49] Further, the laws of metre not merely refuse the substitution of one foot for another, but will not even admit the arbitrary substitution of any *dactyl* or *spondee* for any other *dactyl* or *spondee*. For example, in the line

Panditur interea domus omnipotentis Olympi

Aen. x. l.

the alteration of the order of the *dactyls* would destroy the verse.

[50] sunt et illa discrimina, quod rhythmis libera spatia, metris finita sunt, et his certae clausulae, illi, quomodo coeperant, currunt usque ad μεταβολήν, id est transitum ad aliud rhythmī genus, et quod metrum ut verbis modo, rhythmos etiam ut corporis motu est.

[50] There are also the following differences, that rhythm has unlimited space over which it may range, whereas the spaces of metre are confined, and that, whereas metre has certain definite cadences, rhythm may run on as it commenced until it reaches the point of μεταβολή, or transition to another type of rhythm: further, metre is concerned with words alone, while rhythm extends also to the motion of the body.

[51] inania quoque tempora rhythmī facilius accipient, quanquam haec et ut metris accidunt. maior tamen illic licentia est, ubi tempora etiam aui mo metiuntur et pedum et digitorum ictu, et intervalla signant quibusdam notis atque aestimant, quot breves illud spatium habeat; inde τετράσημοι, πεντάσημοι deinceps longiores fiunt percussiones; nam σημεῖον tempus est unum.

[51] Again rhythm more readily admits of *rests* although they are found in metre as well. Greater license is, however, admitted when the time is measured by the beat of the feet or fingers, and the intervals are distinguished by certain symbols indicating the number of shorts contained within a given space: hence we speak of four or five time (τετράσημοι, or πεντάσημοι) and others longer still, the Greek σημεῖον indicating a single beat.

[52] In compositione orationis certior et magis omnibus aperta servari debet dimensio. est igitur ut pedibus et metricis quidem pedibus, qui adeo reperiuntur ut oratione, ut ut ea frequenter non sentientibus nobis omnium generum excidant versus; et contra nihil non, quod est prosa scriptum, redigi possit ut quaedam versiculorum genera vel ut membra, sicut ut molestos incidimus grammaticos,

[52] In prose the rhythm should be more definite and obvious to all. Consequently, it depends on feet, by which I mean metrical feet, which occur in oratory to such an extent that we often let slip verses of every kind without being conscious of the fact, while everything written in prose can be shown by analysis to consist of short lines of verse of certain kinds or sections of the same.

[53] quorum fuerunt, qui velut lyricorum quorundam carmina ut varias mensuras coegerunt. at Cicero frequentissime dicit totum hoc constare numeris, ideoque reprehenditur a quibusdam, tanquam orationem ad rhythmos adliget.

[53] For example, I have come across tiresome grammarians who attempted to force prose into definite metres, as though it were a species of lyric poetry.

Cicero, indeed, frequently asserts that the whole art of prose-structure consists in rhythm and is consequently censured by some critics on the ground that he would fetter our style by the laws of rhythm.

[54] nam sunt numeri rhythmī, ut et ipse constituit, et secuti eum Vergilius, cum dicit

numeros memini, si verba tenerem,

et Horatius

numerisque fertur

lege solutis.

Invadunt ergo hanc inter ceteras vocem:

[54] For these *numeri*, as he himself expressly asserts, are identical with rhythm, and he is followed in this by Virgil, who writes,

Numeros memini, si verba tenerem

Ecl. ix. 45.

and Horace, who says,

Numerisque fertur

Lege solutis.

Odes. IV. ii. 11.

[55] neque enim Demosthenis fulmina tantopere vibratura dicit, nisi numeris contorta ferrentur. In quo si hoc sentit rhythmis contorta, dissentio. nam rhythmī, ut dixi, neque finem habent certum nec ullam ut contextu varietatem, sed qua coeperunt sublatione ac positione, ad finem usque decurrunt; oratio non descendet ad crepitum digitorum et pedum.

[55] Among others they attack Cicero's statement that the *thunderbolts of Demosthenes would not have such force but for the rhythm with which they are whirled and sped upon their way*. If by *rhythmis contorta* he really means what his critics assert, I do not agree with him. For rhythms have, as I have said, no fixed limit or variety of structure, but run on with the same rise and fall till they reach their end, and the style of oratory will not stoop to be measured by the beat of the foot or the fingers.

[56] quod Cicero optime videt ac testatur frequenter se quod numerosum sit quaerere, ut magis non ἀπάλαιοι. quod esset incitum atque agreste, quam ἐνρυσθμον, quod poeticum est, esse compositionem velit; sicut etiam quos palaestras esse nolumus, tamen esse nolumus eos qui dicuntur ἀπάλαιοι.

[56] This fact is clearly understood by Cicero, who frequently shows that the

sense in which he desires that prose should be rhythmical is rather that it should not lack rhythm, a deficiency which would stamp the author as a man of no taste or refinement, than that it should be tied by definite rhythmical laws, like poetry; just as, although we may not wish certain persons to be professional gymnasts, we still do not wish them to be absolutely ignorant of the art of gymnastics.

[57] verum ea quae efficitur e pedibus apta conclusio nomen aliquod desiderat. quid sit igitur potius quam numerus, sed oratorius numerus, ut enthymema rhetoricus syllogismus? ego certe, ne ut calumniam cadam, qua ne M. quidem Tullius caruit, posco hoc mihi, ut, cum de compositionis dixero numero et ubicunque iam dixi, oratorium dicere intelligar.

[57] But the rounding of the period to an appropriate close which is produced by the combination of feet requires some name; and what name is there more suitable than rhythm, that is to say, the rhythm of oratory, just as the *enthymeme* is the syllogism of oratory? For my own part, to avoid incurring the calumny, from which even Cicero was not free, I ask my reader, whenever I speak of the rhythm of artistic structure (as I have done on every occasion), to understand that I refer to the rhythm of oratory, not of verse.

[58] collocatio autem verba iam probata et electa et velut adsignata sibi debet connectere; nam vel dure inter se commissa potiora sunt inutilibus. tamen et eligere quaedam, dum ex iis quae idem significant atque idem valeant, permiserim, et adiicere dum non otiosa, et detrahere dum non necessaria, et figuris mutare casus atque numeros, quorum varietas frequenter gratia compositionis adscita etiam suo nomine solet esse iucunda.

[58] It is the task of collocation to link together the words which have been selected, approved and handed over to its custody. For even harsh connexions are better than those which are absolutely valueless. None the less I should allow the orator to select certain words for their euphony, provided always that their force and meaning are the same as those of the alternative words. He may also be permitted to add words, provided they are not superfluous, and to omit them, provided they are not essential to the sense, while he may employ figures to alter case and number, since such variety is attractive in itself, quite apart from the fact that it is frequently adopted for the sake of the rhythm.

[59] etiam ubi aliud ratio, aliud consuetudo poscet, utrum volet, sumat compositio, vitavisse vel vitasse, deprehendere vel deprendere. coitus etiam syllabarum non negabo, et quidquid sentiis aut elocutioni non nocebit. praecipuum tamen ut hoc opus est,

[59] Again if reason demand one form and usage another, the claims of rhythm will decide our choice between the two, *e.g.* between *vitavisse* and *vitasse* or between *deprehendere* and *deprendere*. Further I do not object to the coalescence of syllables or anything that does no injury either to sense or

style.

[60] scire quod quoque loco verborum maxime quadret. atque is optime componet, qui hoc non solum componendi gratia facit.

ratio vero pedum ut oratione est multo quam ut versu difficilior: primum quod versus paucis continetur, oratio longiores habet saepe circuitus; deinde quod versus semper similis sibi est et una ratione decurrit, orationis compositio, nisi varia est, et offendet similitudine et ut adfectione deprehenditur.

[60] The most important task, however, is to know what word is best fitted to any given place. And the most accomplished artist will be the man who does not arrange his words solely with a view to rhythmic effect.

On the other hand the management of feet is far more difficult in prose than in verse, first because there are but few feet in a single line of verse which is far shorter than the lengthy periods of prose; secondly because each line of verse is always uniform and its movement is determined by a single definite scheme, whereas the structure of prose must be varied if it is to avoid giving offence by its monotony and standing convicted of affectation.

[61] Et ut omni quidem corpore totoque (ut ita dixerim) tractu numerus insertus est; neque enim loqui possumus nisi syllabis brevibus ac longis, ex quibus pedes fiunt. magis tamen et desideratur ut clausulis et apparet, primum quia sensus omnis habet suum finem poscitque naturale intervallum, quo a sequentis initio dividatur, deinde quod aures continuam vocem secutae ductaeque velut prono decurrentis orationis flumine tum magis iudicant, cum ille impetus stetit et intuendi tempus dedit.

[61] Rhythm pervades the whole body of prose through all its extent. For we cannot speak without employing the long and short syllables of which feet are composed. Its presence is, however, most necessary and most apparent at the conclusion of the period, firstly because every group of connected thoughts has its natural limit and demands a reasonable interval to divide it from the commencement of what is to follow: secondly because the ear, after following the unbroken flow of the voice and being carried along down the stream of oratory, finds its best opportunity of forming a sound judgement on what it has heard, when the rush of words comes to a halt and gives it time for consideration.

[62] non igitur durum sit neque abruptum, quo animi velut respirant ac reficiuntur. haec est sedes orationis, hoc auditor exspectat, hic laus omnis declamantium. Proximam clausulis diligentiam postulant initia; nam et ut haec intentus auditor est.

[62] Consequently all harshness and abruptness must be avoided at this point, where the mind takes breath and recovers its energy. It is there that style has its citadel, it is this point that excites the eager expectation of the audience, it

is from this that the declaimer wins all his glory. Next to the conclusion of the period, it is the beginning which claims the most care: for the audience have their attention fixed on this as well.

[63] sed eorum facilior ratio est, non enim cohaerent aliis nec praecedentibus serviunt; exordium sumunt cum clausula cum praecedentibus cohaereat: quamlibet sit enim composita ipsa, gratiam perdet, si ad eam rupta via venerimus. namque eo fit, ut, cum Demosthenis seuera videatur compositio, τοῖς θεοῖς εὐχομαι πᾶσι καὶ πάσαις; et illa (quae ab uno, quod sciam, Bruto minus probatur, ceteris placet) κἄν μήπω βάλλῃ μηδὲ τοξεύῃ,

[63] But the opening of the sentence presents less difficulty, since it is independent and is not the slave of what has preceded. It merely takes what has preceded as a starting point, whereas the conclusion coheres with what has preceded, and however carefully constructed, its elegance will be wasted, if the path which leads up to it be interrupted. Hence it is that although the rhythmical structure adopted by Demosthenes in the passage τοῖς θεοῖς εὐχομαι πᾶσι καὶ πάσαις; and again in another passage (approved by all, I think, except Brutus) κἄν μήπω βάλλῃ μηδὲ τοξεύῃ,

[64] Ciceronem carpant ut his, familiaris coeperat esse balneatori, et non minus dura archipiratae. nam balneatori et archipiratae idem finis est qui πᾶσι καὶ πάσαις et qui μηδὲ τοξεύῃ sed priora sunt severiora. est ut eo quoque nonnihil,

[64] is regarded as severely correct, Cicero is criticised for passages such as *familiaris coeperat esse balneatori* and for the not less unpleasing *archipiratae*. For although *balneatori* and *archipiratae* give exactly the same cadence as πᾶσι καὶ πάσαις and μηδὲ τοξεύῃ the former are more severely correct.

[65] quod hic singulis verbis bini pedes continentur, quod etiam ut carminibus est praemolle; nec solum ubi quinae, ut ut his, syllabae nectuntur, fortissima Tyndaridarum, sed etiam quaternae, cum versus cluditur Appennino et armamentis et Orione.

[65] There is also something in the fact that in the passages from Cicero two feet are contained in one word, a practice which even in verse produces an unduly effeminate effect, and that not merely when the line ends with a five-syllable word as in *fortissima Tyndaridarum* but also in four-syllable endings such as *Appennino, armamentis and Oreione*.

[66] quare hoc quoque vitandum est, ne plurium syllabarum verbis utamur ut fine.

mediis quoque non ea modo cura sit, ut inter se cohaereant, sed ne pigra, ne longa sint, ne, quod nunc maxime vitium est, brevium contextu resultent ac sonum reddant paene puerilium crepitaculorum. nam ut initia clausulaeque

plurimum momenti habent,

[66] Consequently we must also avoid ending our periods with words containing too many syllables. With regard to the middle portions of our periods we must take care not merely that they possess internal cohesion, but also that the rhythm is neither sluggish nor long, and above all that we do not fall into the now fashionable fault of placing a number of short syllables together with the result that we produce an effect not unlike the sound of a child's rattle.

[67] quotiens incipit sensus aut desinit, sic ut mediis quoque sunt quidam conatus iique leviter insistunt. currentium pes, etiamsi non moratur, tamen vestigium facit. itaque non modo membra atque incisa bene incipere atque cludi decet, sed etiam ut iis, quae non dubie contexta sunt nec respiratione utuntur, illi velut occulti gradus sint.

[67] For while the beginnings and conclusions of periods, where the sense begins or ends, are the most important, it is none the less the fact that the middle portion may involve some special efforts which necessitate slight pauses. Remember that the feet of a runner, even though they do not linger where they fall, still leave a footprint. Consequently not only must *commata* and *cola* begin and end becomingly, but even in parts which are absolutely continuous without a breathing space, there must be such almost imperceptible pauses.

[68] quis enim dubitet, unum sensum ut hoc et unum spiritum esse? animadverti, iudices, omnem accusatoris orationem ut duas divisam esse partes; tamen et duo prima verba et tria proxima et deinceps duo rursus ac tria suos quasi numeros habent et spiritum sustinemus, sicut apud rhythmicos aestimantur.

[68] Who, for example, can doubt that there is but one thought in the following passage and that it should be pronounced without a halt for breath? *Animadverti, iudices, omnem accusatoris orationem in duas divisam esse partes* Still the groups formed by the first two words, the next three, and then again by the next two and three, have each their own special rhythms and cause a slight check in our breathing: at least such is the opinion of specialists in rhythm.

[69] hae particulae prout sunt graves, acres, lentae, celeres, remissae, exultantes, proinde id, quod ex illis conficitur, aut severum aut luxuriosum aut quadratum aut solutum erit.

[69] And just in proportion as these small segments of the period are grave or vigorous, slow or rapid, languid or the reverse, so will the periods which they go to form be severe or luxuriant, compact or loose.

[70] quaedam etiam clausulae sunt claudae atque pendentes, si relinquantur, sed

sequentibus suscipi ac sustineri solent, eoque facto vitium, quod erat ut fine, continuatione emendatur. non vult populus Romanus obsoletis criminibus accusari Verrem durum, si desinas; sed cum sit continuatum iis quae sequuntur, quanquam natura ipsa divisa sunt, nova postulat, inaudita desiderat, salvus est cursus.

[70] Again, the conclusions of clauses sometimes seem to halt or hang, if they are regarded apart from their context, but are usually caught up and supported by what follows, so that what seemed a faulty cadence is corrected by the continuation. *Non vult populus Romanus obsoletis criminibus accusari Verrem* would be harsh in rhythm, if the sentence ended there; but when it is continued with what follows, *nova postulat, inaudita desiderat*, although the words are separate in meaning, the rhythmical effect is preserved.

[71] *Vt adeas, tantum dabis male cluderet*, nam et interim versus pars ultima est; excipit *Vt cibum vestitumque introferre liceat, tantum*; praiceps adhuc firmatur ac sustinetur ultimo nemo recusabat.

[71] *Ut adeas, tantum dabis* would be a bad conclusion, for it forms the last portion of an iambic trimeter: but it is followed by *ut cibum vestitumque introferre liceat, tantum*: the rhythm is still abrupt but is strengthened and supported by the last phrase of all, *nemo recusabat*.

[72] *versum ut oratione fieri multo foedissimum est totum, sed etiam ut parte deforme, utique si pars posterior ut clausula deprehendatur aut rursus prior ut ingressu. namque idem contra saepe etiam decet, quia et claudit interim optime prima pars versus, dum intra paucas syllabas, praecipue senarii atque octonarii.*

[72] The appearance of a complete verse in prose has a most uncouth effect, but even a portion of a verse is ugly, especially if the last half of a verse occurs in the cadence of a period or the first half at the beginning. The reverse order may on the other hand often be positively pleasing, since at times the first half of a verse will make an excellent conclusion, provided that it does not cover more than a few syllables.

[73] In Africa fuisse initium senarii est, primum pro Q. Ligario caput claudit; esse uideatur, iam nimis frequens, octonarium inchoat; talia sunt Demosthenis, *πᾶσι καὶ πάσαις et πᾶσιν ὑμῖν*, et totum paene principium. Et ultima versuum initio conveniunt orationis:

[73] This is especially the case with the *senarnis* or *octonarius*. In *Aliica fuisse* is the opening of a *senarius* and closes the first clause of the *pro Ligario*: *esse videatur*, with which we are now only too familiar as a conclusion, is the beginning of an *ocionarius*. Similar effects are to be found in Demosthenes, as for example *πᾶσι καὶ πάσαις* and *πᾶσιν ὑμῖν* and throughout almost the whole exordium of that speech. The ends of verses are also excellently suited

to the beginning of a period:

[74] *etsi vereor, iudices, et animadverti, iudices. sed initia initiis non convenient, ut T. Livius hexametri exordio coepit: facturusedne operae pretium sim (nam ita edidit, estque melius, quam quo modo emendatur),*

[74] *etsi vereor, iudices*, for example and *animadverti, iudices*. But the opening feet of a verse are not suited to the opening phrases of prose: Livy provides an example of this in his preface, which begins with the first half of a *hexameter*, '*Facturusedne operae premium sim:*' for these are the words as he wrote them, and they are better so than as they have been corrected. Again,

[75] *nec clausulae clausulis, ut Cicero, quo me vertam, nescio, qui trimetri finis est. trimetrum et senarium promiscue dicere licet, sex enim pedes, tres percussiones habet. peius cludit finis hexametri, ut Brutus ut epistolis: neque illi malunt habere tutores aut defensores, quoniam causam sciunt placuisse Catoni.*

[75] the cadence of a verse is not suitable to the cadence of a period: compare the phrase of Cicero, *Quo me vertam, nescio*, which is the end of a *trimeter*. It matters not whether we speak of a *trimeter* or of a *senarius*, since the line has six feet and three beats. The end of a *hexameter* forms a yet worse conclusion; compare the following passage from the letters of Brutus: *neque illi malunt habere tutores aut defensores, quoniam causam sciunt placuisse Catoni*.

[76] *illi minus sunt notabiles, quia hoc genus sermoni proximum est. itaque et versus hi fere excidunt, quos Brutus ipso componendi durius studio saepissime facit, non raro Asinius, sed etiam Cicero nonnunquam, ut ut principio statim orationis ut Lucium Pisonem: pro di immortales, qui hic nunc illuxit dies?*

[76] Iambic endings are less noticeable, because that metre is near akin to prose. Consequently such lines often slip from us unawares: they are specially common in Brutus as a result of his passion for severity of style; they are not infrequent in Asinius, and are sometimes even found in Cicero, as for example at the very beginning of his speech against Lucius Piso: *Pro di immortales, qui hic nunc illuxit dies?*

[77] non minore autem cura vitandum est quidquid est ἔνρυσθμον, quale apud Sallustium, falso queritur de natura sua. quamvis enim vineta sit, tamen soluta videri debet oratio. atqui Plato, diligentissimus compositionis, ut Timaeo prima statim parte vitare ista non potuit.

[77] Equal care must however be taken to avoid any phrase of a definitely metrical character, such as the following passage from Sallust: *Falso queritur de natura sua*. For although the language of prose is bound by certain laws, it should appear to be free. None the less Plato, despite the care which he devotes to his rhythm, has not succeeded in avoiding this fault at the very

opening of the Timaeus,

[78] nam et initium hexametri statim invenias, et Anacreontion protinus colon efficias, et si velis trimetron, et quod duobus pedibus et parte *πενθημιμερὲς* a Graecis dicitur, et haec omnia ut tribus versibus; et Thucydidi ὑπὲρ ἡμῖσιν ... κἄρες ἐφάνησαν ex mollissimo rhythmorum genere excidit.

[78] where we are met at the very outset with the opening of a *hexameter*, which is followed by a *colon* which can be scanned as an Anacreontic, or if you like, as a trimeter, while it is also possible to form what the Greeks call a *πενθημιμερὲς* (that is a portion of the hexameter composed of two feet and a part of a third): and all these instances occur within the space of three lines. Again Thucydides has allowed to slip from his pen a phrase of the most effeminate rhythm in ὑπὲρ ἡμῖσιν Κἄρες ἐφάνησαν

[79] sed quia omnem compositionem oratoriam constare pedibus dixi, aliqua de his quoque; quorum nomina quia varia traduntur, constituendum est, quo quemque appellemus. equidem Ciceronem sequar, (nam is eminentissimos Graecorum est secutus) excepto quod pes mihi tris syllabas non videtur excedere, quanquam ille paeane dochmioque, quorum prior ut quattuor, secundus ut quinque excurrit, utatur.

[79] But, having stated that all prose rhythm consists of feet, I must say something on these as well. Different names are given to these feet, and it is necessary to determine what we shall call each of them. For my part I propose to follow Cicero (for he himself followed the most eminent Greek authorities), with this exception, that in my opinion a foot is never more than three syllables long, whereas Cicero includes the *paeon* and the *dochmiac* (u – – u –), of which the former has four and the latter as many as five syllables.

[80] nec tamen ipse dissimulat, quibusdam numeros videri non pedes; neque immerito; quidquid est enim supra tris syllabas, id est ex pluribus pedibus. ergo cum constant quattuor pedes binis, octo ternis, spondeum longis duabus, pyrrhichium, quem alii pariambum vocant, brevibus, iambum brevi longaue, huic contrarium e longa et brevi choreum, non ut alii trochaeum nominemus.

[80] He does not, however, conceal the fact that some regard these as rhythms rather than feet: and they are right in so doing, since whatever is longer than three syllables involves more than one foot. Since then there are four feet which consist of two syllables, and eight composed of three, I shall call them by the following names: two long syllables make a *spondee*; the *pyrrhic* or *pariambus*, as some call it, is composed of two shorts; the *iambus* of a short followed by a long; its opposite, that is a long followed by a short, is a *choreus*, for I prefer that term to the name of *trochee* which is given it by others.

[81] ex iis vero, qui ternas syllabas habent, dactylum longa duabusque brevibus,

huic temporibus parem, sed retro actum appellari constat anapaeston. media inter longas brevis faciet amphimacrum, sed frequentius eius nomen est creticus; longa inter breves, amphibrachyn huic contrarium.

[81] Of trisyllabic feet the *dactyl* consists of a long followed by two shorts, while its opposite, which has the same time-length, is called an *anapaest*. A short between two longs makes an *amphimacer*, although it is more often called a *cretic*, while a long between two shorts produces its opposite, the *amphibruchys*. Two long syllables following a short make a *bacchius*,

[82] duabus longis brevem sequentibus bacchius, totidem longis brevem praecedentibus palimbacchius erit. tres breves trochaeum, quem tribrachyn dici volunt, qui choreo trochaei nomen imponunt; totidem longae molosson efficient.

[82] whereas, if the long syllables come first the foot is called a *palimbacchius*. Three shorts make a *trochee*, although those who give that name to the *choreus* call it a *tribrach*: three longs make a *molossus*.

[83] horum pedum nullus non ut orationem venit, sed quo quique sunt temporibus pleniores longisque syllabis magis stabiles, hoc graviorem faciunt orationem, breves celerem ac mobilem. utrumque locis utile; nam et illud, ubi opus est velocitate, tardum et segne, et hoc, ubi pondus exigitur,

[83] Every one of these feet is employed in prose, but those which take a greater time to utter and derive a certain stability from the length of their syllables produce a weightier style, short syllables being best adapted for a nimble and rapid style. Both types are useful in their proper place: for weight and slowness are rightly condemned in passages where speed is required, as are jerkiness and excessive speed in passages which call for weight.

[84] praeceps ac resultans merito damnetur. sit ut hoc quoque aliquid fortasse momenti, quod et longis longiores et brevibus sunt breviores syllabae, ut, quamvis neque plus duobus temporibus neque uno minus habere videantur, ideoque ut metris omnes breves longaeque inter se ipsae sint pares, lateat tamen nescio quid quod supersit aut desit. nam versuum propria condicio est, ideoque ut his quaedam etiam communes.

[84] It may also be important to remark that there are degrees of length in long syllables and of shortness in short. Consequently, although syllables may be thought never to involve more than two time-beats or less than one, and although for that reason in metre all shorts and all longs are regarded as equal to other shorts and longs, they none the less possess some undefinable and secret quality, which makes some seem longer and others shorter than the normal. Verse, on the other hand, has its own peculiar features, and consequently some syllables may be either long or short.

[85] veritas vero quia patitur aequae brevem esse vel longam vocalem, cum est

sola, quam cum eam consonantes una pluresve praecedunt, certe ut dimensione pedum syllaba, quae est brevis, insequente alia vel longa vel brevi, quae tamen duas primas consonantes habeat, fit longa, ut

agrestem tenui musam:

nam A brevis,

[85] Indeed, since strict law allows a vowel to be long or short, as the case may be, when it stands alone, no less than when one or more consonants precede it, there can be no doubt, when it comes to the measuring of feet, that a short syllable, followed by another which is either long or short, but is preceded by two consonants, is lengthened, as for example in the phrase *agrestem tenui musam*.

[86] *gres* brevis, faciet tamen longam priorem; dat igitur illi aliquid ex suo tempore. quo modo, nisi habet plus quam quae brevissima, qualis ipsa esset detractis consonantibus? nunc unum tempus accommodat priori et unum accipit a sequente; ita duae natura breves positione sunt temporum quattuor.

[86] For both a and *gres* are short, but the latter lengthens the former, thereby transferring to it something of its own time-length. But how can it do this, unless it possesses greater length than is the portion of the shortest syllables, to which it would itself belong if the consonants *st* were removed? As it is, it lends one time-length to the preceding syllable, and subtracts one from that which follows. Thus two syllables which are naturally short have their time-value doubled by position.

[87] miror autem ut hac opinione doctissimos homines fuisse, ut alios pedes ita eligerent aliosque damnarent, quasi ullus esset, quem non sit necesse ut oratione deprehendi. licet igitur paeana sequatur Ephorus, inventum a Thrasy-macho, probatum ab Aristotele, dactylumque ut temperatos brevibus ac longis, fugiat spondeum et trochaicum,

[87] I am, however, surprised that scholars of the highest learning should have held the view that some feet should be specially selected and others condemned for the purposes of prose, as if there were any foot which must not inevitably be found in prose. Ephorus may express a preference for the *paeana* (which was discovered by Thrasy-machus and approved by Aristotle) and for the *dactyl* also, on the ground that both these feet provide a happy mixture of long and short; and may avoid the *spondee* and the *trochee*,

[88] alterius tarditate nimia, alterius celeritate damnata, herous, qui est idem dactylus, Aristoteli amplior, iambus humilior videatur, trochaicum ut nimis currentem damnet eique cordacis nomen imponat, eademque dicant Theodectes ac Theophrastus, similia post eos Halicarnasseus Dionysius:

[88] condemning the one as too slow and the other as too rapid; Aristotle may

regard the *heroic* foot, which is another name for the *dactyl*, as too dignified and the *iambus* as too commonplace, and may damn the *trochee* as too hasty and dub it the *cancan*; Theodectes and Theophrastus may agree with him, and a later critic, Dionysius of Halicarnassus, may adopt a similar view;

[89] irrumpent etiam ad invitos, nec semper illis heroo aut paeane suo, quem, quia versum raro facit, maxime laudant, uti licebit. Vt sint tamen allis alii crebriores, non verba facient, quae neque augeri nec minui nec sicuti toni modulatione produci aut corripi possint, sed transmutatio et collocatio.

[89] but for all they say, these feet will force themselves upon them against their will, and it will not always be possible for them to employ the *dactyl* or their beloved *paean*, which they select for special praise because it so rarely forms part of a verse rhythm. It is not, however, the words which cause some feet to be of more common occurrence than others; for the words cannot be increased or diminished in bulk, nor yet can they, like the notes in music, be made short or long at will; everything depends on transposition and arrangement.

[90] plerique enim ex commissuris eorum vel divisione fiunt pedes; quo fit ut iisdem verbis alii atque alii versus fiant, ut memini quendam non ignobilem poetam talem exarasse:

astra tenet caelum, mare classes, area nessem.

hic retrorsum fit sotadeus; itemque e sotadeo retro trimetros:

caput exeruit mobile pinus repetita.

Miscendi ergo sunt,

[90] For a large proportion of feet are formed by the connexion or separation of words, which is the reason why several different verses can be made out of the same words: for example, I remember that a poet of no small distinction writing the following line:

Astra tenet caelum, mare classes, area messem,

a line which, if the order of the words be reversed, becomes a Sotadean; again, the following Sotadean, if reversed, reads as an *iambic trimeter*:

caput exeruit mobile pinus repelita.

Feet therefore should be mixed,

[91] curandumque, ut sint plures qui placent, et circumfusi bonis deteriores lateant. nec vero ut litteris syllabisque natura mutatur, sed refert, quae cum quaque optime coeat. plurimum igitur auctoritatis, ut dixi, et ponderis habent longae, celeritatis breves; quae si miscentur quibusdam longis, currunt, si continuantur, exultant.

[91] while care must be taken that the majority are of a pleasing character, and that the inferior feet are lost in the surrounding crowd of their superior kindred. The nature of letters and syllables cannot be changed, but their adaptability to each other is a consideration of no small importance. Long syllables, as I have said, carry the greater dignity and weight, while short syllables create an impression of speed: if the latter are intermixed with a few long syllables, their gait will be a run, but a gallop if they are continuous.

[92] *acres, quae ex brevibus ad longas insurgunt; leniores, quae a longis ut breves descendunt. optime incipitur a longis, recte aliquando a brevibus, ut novum crimen; lenius a duabus, ut animadverti indices; sed hoc pro Cluentio recte, quia initium eius partitioni simile est, quae celeritate gaudet.*

[92] When a short syllable is followed by a long the effect is one of vigorous ascent, while a long followed by a short produces a gentler impression and suggests descent. It is therefore best to begin with long syllables, though at times it may be correct to begin with short, as in the phrase *novum crimen*: a gentler effect is created, if we commence with two shorts, as in the phrase *animadverti iudices*: but this opening, which comes from the *pro Cluentio*, is perfectly correct, since that speech begins with something similar to partition, which requires speed.

[93] *clausula quoque e longis firmissima est; sed venit et ut breves, quamvis habeatur indifferens ultima. neque enim ego ignoro, ut fine pro longa accipi brevem, quia videtur aliquid vacantis temporis ex eo, quod insequitur, accedere; aures tamen consulens meas, intelligo multum referre, verene longa sit, quae cludit, an pro longa. neque enim tam plenum est dicere incipientem timere, quam illud ausus est confiteri.*

[93] Similarly the conclusion of a sentence is stronger when long syllables preponderate, but it may also be formed of short syllables, although the quantity of the final syllable is regarded as indifferent. I am aware that a concluding short syllable is usually regarded as equivalent to a long, because the time-length which it lacks appears to be supplied from that which follows. But when I consult my own ears I find that it makes a great difference whether the final syllable is really long or only treated as the equivalent of a long. For there is not the same fullness of rhythm in *diccre incipientem timere* as there is in *ausus est confiteri*.

[94] *atqui si nihil refert, brevis an longa sit ultima, idem pes erit; verum nescio quo modo sedebit hoc, illud subsistet. quo moti quidam longae ultimae tria tempora dederunt, ut illud tempus, quod brevis ex loco accipit, huic quoque accederet. nec solum refert, quis pes claudat, sed claudentem quis antecedit. retrorsum autem neque plus tribus,*

[94] But if it makes no difference whether the final syllable be long or short, the concluding feet in these two instances must be identical: and yet somehow or

other one gives the impression of sitting down and the other of a simple halt. This fact has led some critics to allow three timebeats for a final long syllable, adding the extra time-length which a short syllable derives from its position at the end of a sentence to the long syllable as well. And it not merely makes a difference with what foot a sentence ends, but the penultimate foot is also of importance.

[95] *iique, si non ternas syllabas habebunt, repetendi erunt (absit enim poetica observatio), neque minus duobus; alioqui pes erit, non numerus. potest tamen vel unus esse dichoreus, si unus est, qui constat e duobus choreis.*

[95] It is not, however, necessary to go back further than three feet, and only that if the feet contain less than three syllables, for we must avoid the exactitude of verse: on the other hand, we must not go back less than two: otherwise we shall be dealing with a foot and not with rhythm. But in this connexion the *dichoreus* may be regarded as one foot, if indeed a foot consisting of two *chorei* can be considered as a single foot.

[96] *itemque paeon, qui est ex choreo et pyrrhichio, quem aptum initiis putant, vel contra, qui est e tribus brevibus et longa, cui clausulam adsignant; de quibus fere duobus scriptores huius artis loquantur. alii omnes, ut quocunque sit loco longa, temporum quod ad rationem pertinet, paeanas appellant.*

[96] The same is true of the *paeon* composed of the *choreus* and a *pyrrhic*, a foot which is regarded as specially suitable to the beginning of a sentence, or of the other *paeon*, formed of three shorts followed by a long, to which the conclusion is specially dedicated. It is of these two forms that writers on rhythm generally speak. Some, however, call all feet containing three short syllables and a long by the name of *paeon*, irrespective of the position of the long syllable, and merely taking into account the total number of time-lengths that it contains.

[97] *est et dochmius, qui fit ex bacchio et iambo vel ex iambo et cretico, stabilis ut clausulis et severus. spondeus quoque, quo plurimum est Demosthenes usus, non eodem modo semper se habet. optime praecedet eum creticus, ut ut hoc, De qua ego nihil dicam, nisi depellendi criminis causa. non nihil est, quod supra dixi multum referre, unone verbo sint duo pedes comprehensi an uterque liber. Sic enim fit forte criminis casa; molle archipiratae, mollius, si tribrachys praecedat, facilitates, temeritates.*

[97] The *dochmiac*, again, which consists of a *bacchius* and an *iambus*, or of an *iambus* and a *cretic*, forms a solid and severe conclusion. The *spondee*, so frequently employed in this position by Demosthenes, is used with varying effect. It is most impressive when preceded by a *cretic*, as in the following instance: *De qua ego nihil dicam, nisi depellendi criminis causa*. Again there is a point, of the importance of which I spoke above, namely that it makes a considerable difference whether two feet are contained in a single word or

whether they are both detached. Thus *criminis causa* makes a strong and *archipiratae* a weak ending, while tile weakness is still further increased if the first foot be a *tribrach*, as for instance in words like *facilitates* or *temeritates*.

[98] est enim quoddam ipsa divisione verborum latens tempus, ut ut pentametri medio spondeo, qui nisi alterius verbi fine, alterius initio constat, versum non efficit. potest, etiamsi minus bene, praeponi anapaestos: muliere non solum nobili, verum etiam nota. cum anapaestus et creticus,

[98] For the mere fact that words are separated from each other involves an imperceptible length of time: for instance, the *spondee* forming the middle foot of a *pentameter* must consist of the last syllable of one word and the first of another, otherwise the verse is no verse at all. It is permissible, though less satisfactory, for the *spondee* to be preceded by an *anapaest*: e.g. *muliere non solum nobili, verum etiam nota*.

[99] iambus quoque, qui est utroque syllaba minor (praecedet enim tres longas brevis), sed et spondeus iambo recte praeponitur: iisdem ut armis fui. cum spondeus, et bacchius, sic enim fiet ultimus dochmius:

[99] Andit may also, in addition to the *anapaest* and *cretic*, be preceded by the *iambus*, which is a syllable less in length than both of them, thus making one short syllable precede three long. But it is also perfectly correct to place a *spondee* before an *iambus*, as in *armis fui*, or it may be preceded by a *bacchius* instead of a *spondee*, e.g. in *armis fui*, thereby making the last foot a *dochmiac*.

[100] In armis fui. ex iis quae supra probavi apparet molosson quoque clausulae convenire, dum habeat ex quocunque pede ante se brevem: illud scimus ubicunque sunt, esse pro nobis.

[100] From this it follows that the *molossus* also is adapted for use in the conclusion provided that it be preceded by a short syllable, though it does not matter to what foot the latter belongs: e.g. *illud scimus, ubicunque sunt, esse pro nobis*.

[101] minus gravis erit spondeus, praecedentibus palimbacchio et pyrrhichio, ut iudicii Iuniani, et adhuc peius priore paeane, ut Brute, dubitavi; nisi potius hoc esse volumus dactylum et bacchium. Duo spondei non fere se iungi patiuntur, quae ut versu quoque notabilis clausula est, nisi cum id fieri potest ex tribus quasi membris: cur de perfugis nostris copias comparat is contra nos? una syllaba, duabus, una.

[101] The effect of the *spondee* is less weighty, if it be preceded by a *palimbacchius* and *pyrrhic*, as in *iudicii Iuniani*. Still worse is the rhythm when the *spondee* is preceded by a *paeon*, as in *Brute, dubitavi*, although this phrase may, if we prefer, be regarded as consisting of a *dactyl* and a *bacchius*. As a rule, endings composed of two *spondees*, a termination which causes

comment even in a verse, are to be deprecated, unless the phrase is composed of three separate members, as in *cur de perfigis nostris copias comparat is contra nos?* where we have a word of two syllables preceded and followed by a monosyllable.

[102] Ne dactylus quidem spondeo bene praeponitur, quia finem versus damnamus ut fine orationis. *bacchius* et claudit et sibi iungitur: *uenenum timeres*; vel *choreum* et spondeum ante se amat: vt *venenum timeres*. contrarius quoque qui est, cludet, nisi si ultimam syllabam longam esse volumus, optimeque habebit ante se molosson: *civis Romanus sum*; aut *bacchium*, quod hic potest, *nos possemus*.

[102] Even the *dactyl* ought not to precede a final *spondee*, since we condemn verse-endings at the period's close. The *bacchius* is employed at the conclusion, sometimes in conjunction with itself as in *venenum timeres* while it is also effective when a *choreus* and *spondee* are placed before it as in *ut venenum timeres*. Its opposite, the *palimbacchius*, is also employed as a conclusion (unless, of course, we insist that the last syllable of a sentence is always long), and is best preceded by a *molossus*, as in *civis Romanus sum*, or by a *bacchius*, as in *quod hic potest, nos possemus*.

[103] sed versus erit claudere choreum praecedente spondeo, nam hic potius est numerus, nos possemus et Romanus sum. cludet et *dichoreus*, id est idem pes sibi ipse iungetur, quo Asiani sunt usi plurimum; cuius exemplum Cicero ponit, patris dictum sapiens temeritas filii comprobavit.

[103] It would, however, be truer to say that in such cases the conclusion consists of a *choreus* preceded by a *spondee*, for the rhythm is concentrated in *nos possemus* and *Romanus sum*. The *dichoreus*, which is the repetition of one and the same foot, may also form the conclusion, and was much beloved by the Asiatic school: Cicero illustrates it by *Patris dictum sapiens temeritas filii comprobavit*.

[104] accipiet ante se choreus et pyrrhichium: omnes prope cives virtute, gloria, dignitate superabat. cludet et dactylus, nisi eum observatio ultimae creticum facit: muliercula nixus ut litore. habebit ante se bene creticum et iambum, spondeum male, peius choreum.

[104] The *choreus* may also be preceded by a *pyrrhic*, as in *omnes prope cives virtute, gloria, dignitate superabat*. The *dactyl* also may come at the close, unless indeed it be held that, when it forms the final foot, it is transformed into a *cretic*: e.g. *muliercula nixus in litore*. The effect will be good if it is preceded by a *cretic* or an *iambus*, but unsatisfactory if it is preceded by a *spondee*, and worse still if by a *choreus*.

[105] cludit amphibrachys: Q. Ligarium ut Africa fuisse, si non eum malumus esse bacchium. non optimus est trochaeus, si ulla est ultima brevis, quod certe

sit necesse est; alioqui quomodo claudet, qui placet plerisque, dichoreus? illa observatione ex trochaeo fit anapaestus.

[105] The *amphibrachys* may close the cadence, as in Q. *Ligarium in Africa fuisse*, although in that case some will prefer to call it a *bacchius*. The *trochee* is one of the less good endings, if any final syllable is to be regarded as short, as it undoubtedly must be. Otherwise how can we end with the *dichoreus*, so dear to many orators? Of course, if it be insisted that the final syllable is long, the *trochee* becomes an *anapaest*.

[106] idem trochaeus praecedente longa fit paeon, quale est Si potero et dixit hoc Cicero, obstat invidia. sed hum initiis dederunt. cludet et pyrrhichius choreo praecedente, nam sic paeon est. sed omnes hi, qui ut breves excidunt, minus erunt stabiles, nec alibi fere satis apti, quam ubi cursus orationis exigitur et clausulis non intersistitur. creticus et initiis optimus:

[106] If preceded by a long syllable, the *trochee* becomes a *paeon*, as is the case with phrases such as *sipotero*, or *dirit hoc Cicero*, or *obstat invidia*. But this form of *paeon* is specially allotted to the beginnings of sentences. The *pyrrhic* may close a sentence if preceded by a *choreus*, thereby forming a *paeon*. But all these feet which end in short syllables will lack the stability required for the cadence, and should as a rule only be employed in cases where speed is required and there is no marked pause at the ends of the sentences.

[107] quod precatus a diis immortalibus sum, et clausulis: In conspectu populi Romani vomere postridie. apparet vero, quam bene eum praecedant vel anapaestos vel ille, qui videtur fini aptior, paeon. sed et se ipse sequitur: servare quam plurimos. sic melius quam choreo praecedente, quis non turpe duceret? si ultima brevis pro longa sit; sed fingamus sic, non turpe duceres.

[107] The *cretic* is excellent, both at the beginning (e.g. *quod precatus a diis immortalibus sum*) and at the close (e.g. *in conspectu populi Romani vomere postridie*). The last example makes it clear what a good effect is produced when it is preceded by an *anapaest* or by that form of *paeon* which is regarded as best suited to the end of a sentence. But the *cretic* may be preceded by a *cretic*, as in *servare quam plurimos*. It is better thus than when it is preceded by a *choreus*, as in *quis non turpe duceret?* assuming that we treat the final short syllable as long. However, for the sake of argument, let us substitute *duceres* for *duceret*.

[108] sed hic est illud inane, quod dixi: paulum enim morae damus inter ultimum ac proximum verbum et turpe illud intervallo quodam producimus; alioqui sit exultantissimum et trimetri finis: quis non turpe duceret? sicut illud ore excipere liceret, si iungas, lascivi carminis est; sed interpunctis quibusdam et tribus quasi initiis fit plenum auctoritatis.

[108] Here, however, we get the *rest* of which I spoke: for we make a short

pause between the last word and the last but one, thus slightly lengthening the final syllable of *turpe*; otherwise *quis non turpe duceret?* will give us a jerky rhythm resembling the end of an *iambic trimeter*. So, too, if you pronounce *ore excipere liceret* without a pause, you will reproduce the rhythm of a licentious metre, whereas if triply punctuated and thus provided with what are practically three separate beginnings, the phrase is full of dignity.

[109] *nec ego, cum praecedentes pedes posui, legem dedi ne alii essent, sed quid fere accideret et quid ut praesentia videretur optimum, ostendi. non quidem optime est sibi iunctus anapaestos, ut qui sit pentametri finis, vel rhythmos qui nomen ab eo traxit: nam ubi libido dominatur, innocentiae leve praesidium est; nam synaloephe facit, ut duae ultimae syllabae pro una sonent.*

[109] In specifying the feet above-mentioned, I do not mean to lay it down as an absolute law that no others can be used, but merely wish to indicate the usual practice and the principles that are best suited for present needs. I may add that two consecutive *anapaests* should be avoided, since they form the conclusion of a *pentameter* or reproduce the rhythm of the *anapaestic* metre, as in the passage, *nam ubi libido dominatur, innocentiae leve praesidium est*, where elision makes the last two syllables sound as one.

[110] *melior fiet praecedente spondeo vel bacchio, ut si idem mutes leave innocentiae praesidium est. non me capit (ut a magnis viris dissentiam) paeon, qui est ex tribus brevibus et longa. nam est et ipse una plus brevi anapaestos facilitas et agilitas. quid ita placuerit is, non video, nisi quod illum fere probaverunt, quibus loquendi magis quam orandi studium fuit.*

[110] The *anapaest* should preferably be preceded by a *spondee* or a *bacchius*, as, for instance, if you alter the order of words in the passage just quoted to *leve innocentiae praesidium est*. Personally, although I know that in this I am in disagreement with great writers, I am not attracted by the *paeon* consisting of three shorts followed by a long: for it is no more than an *anapaest* with the addition of another short syllable (e.g. *facilitas, agilitas*). Why it should have been so popular, I cannot see, unless it be that those who gave it their approval were students of the language of common life rather than of oratory. It is preferably preceded by short syllables,

[111] *nam et ante se brevibus gaudet pyrrhichio vel choreo, mea facilitas, nostra facilitas; ac praecedente spondeo tamen plane finis est trimetri, cum sit per se quoque. ei contrarius principiis merito laudatur, nam et primam stabilem et tres celeres habet. tamen hoc quoque meliores alios puto.*

[111] such as are provided by the *pyrrhic* or the *choreus* (e.g. *mea facilitas, nostra facilitas*); on the other hand, if it be preceded by a *spondee*, we have the conclusion of an *iambic trimeter*, as indeed we have in the *paeon* considered alone. The opposite form of *paeon* is deservedly commended as an opening: for the first syllable gives it stability and the next three speed. None

the less I think that there are other feet which are better suited for this purpose than even this *paean*.

[112] totus vero hic locus non ideo tractatur a nobis, ut oratio, quae ferri debet ac fluere, dimetiendis pedibus ac perpendendis syllabis consenescat; nam id cum miseri,

[112] My purpose in discussing this topic at length is not to lead the orator to enfeeble his style by pedantic measurement of feet and weighing of syllables: for oratory should possess a vigorous flow, and such solicitude is worthy only of a wretched pedant, absorbed in trivial detail:

[113] tum ut minimis occupati est, neque enim, qui se totum ut hac cura consumpserit, potioribus vacabit, si quidem relicto rerum pondere ac nitore contempto tesserulas, ut ait Lucilius, struet et vermiculate inter se lexis committet. nonne ergo refrigeretur sic calor et impetus pereat, ut equorum cursum delicati minutis passibus frangunt?

[113] since the man who exhausts himself by such painful diligence will have no time for more important considerations; for he will disregard the weight of his subject matter, despise true beauty of style and, as Lucilius says, will construct a *tesselated pavement of phrases nicely dovetailed together in intricate patterns*. The inevitable result will be that his passions will cool and his energy be wasted, just as our dandies destroy their horses' capacity for speed by training them to shorten their paces.

[114] quasi vero numeri non sint ut compositione deprehensi, sicut poema nemo dubitaverit impetu quodam initio fusum et aurium mensura et similiter decurrentium spatiorum observatione esse generatum, mox ut eo repertos pedes. satis igitur ut hoc nos componet multa scribendi exercitatio, ut ex tempore etiam similia fundamus.

[114] Prose-structure, of course, existed before rhythms were discovered in it, just as poetry was originally the outcome of a natural impulse and was created by the instinctive feeling of the ear for quantity and the observation of time and rhythm, while the discovery of feet came later. Consequently assiduous practice in writing will be sufficient to enable us to produce similar rhythmical effects when speaking extempore.

[115] neque vero tam sint intuendi pedes quam universa comprehensio, ut verum facientes totum illum decursum non sex vel quinque partes, ex quibus constat versus, aspiciunt. ante enim carmen ortum est quam observatio carminis, ideoque illud Fauni vatesque canebant.

[115] Further it is not so important for us to consider the actual feet as the general rhythmical effect of the period, just as the poet in writing a verse considers the metre as a whole, and does not concentrate his attention on the six or five individual feet that constitute the verse. For poetry originated

before the laws which govern it, a fact which explains Ennius' statement that *Fauns and prophets sang*.

[116] ergo quem ut poemate locum habet versificatio, eum ut oratione compositio.

optime autem de illa iudicant aures, quae plena sentiunt et parum expleta desiderant et fragosis offenduntur et levibus mulcentur et contortis excitantur et stabilia probant, clauda deprehendunt, redundantia ac nimia fastidiunt. ideoque docti rationem componendi intelligunt, etiam indocti voluptatem.

[116] Therefore rhythmical structure will hold the same place in prose that is held by versification in poetry.

The best judge as to rhythm is the ear, which appreciates fullness of rhythm or feels the lack of it, is offended by harshness, soothed by smooth and excited by impetuous movement, and approves stability, while it detects limping measures and rejects those that are excessive and extravagant. It is for this reason that those who have received a thorough training understand the theory of artistic structure, while even the untrained derive pleasure from it.

[117] quaedam vero tradi arte non possunt. mutandus est casus, si durius is, quo coeperamus, feratur. Num, ut quem transeamus ex quo, praecipi potest? figura laboranti compositioni variata saepe succurrit. quae? cum orationis, tum etiam sententiae? Num praescriptum eius rei ullum est? occasionibus utendum et cum re praesenti deliberandum est.

[117] There are some points, it is true, which are beyond the power of art to inculcate. For example if the case, tense or mood with which we have begun, produces a harsh rhythm, it must be changed. But is it possible to lay down any definite rule as to what the change of case, tense or mood should be? It is often possible to help out the rhythm when it is in difficulties by introducing variety through the agency of a *figure*. But what is this *figure* to be? A *figure of speech* or a *figure of thought*? Can we give any general ruling on the subject? In such cases opportunism is our only salvation, and we must be guided by consideration of the special circumstances.

[118] iam vero spatia ipsa, quae ut hac quidem parte plurimum valent, quod possunt nisi aurium habere iudicium? cur alia paucioribus verbis satis plena vel nimium, alia pluribus brevia et abscisa sunt? cur ut circumductionibus, etiam cum sensus finitus est, aliquid tamen loci vacare videatur?

[118] Further with regard to the time-lengths, which are of such importance where rhythm is concerned, what standard is there by which they can be regulated save that of the ear? Why do some sentences produce a full rhythmical effect, although the words which they contain are few, whereas others containing a greater number are abrupt and short in rhythm? Why again in periods do we get an impression of incompleteness, despite the fact that the

sense is complete?

[119] *neminem vestrum ignorare arbitror, iudices, hunc per hosce dies sermonem vulgi atque hanc opinionem populi Romani fuisse. cur hosce potius quam hos? neque enim erat asperum. rationem fortasse non reddam, sentiam tamen esse melius. cur non satis sit, sermonem vulgi fuisse, (compositio enim patiebatur) ignoro; sed ut audio hoc, animus accipit plenum sine hac geminatione non esse.*

[119] Consider the following example: *neminem vestrum ignorare arbitror, iudices, hunc per hosce dies sermonem vulgi atque hanc opinionem populi Romani fuisse*. Why is *hosce* preferable to *hos*, although the latter presents no harshness? I am not sure that I can give the reason, but none the less I feel that *hosce* is better. Why is it not enough to say *sermonem vulgifuisset*, which would have satisfied the bare demands of rhythm? I cannot tell, and yet my ear tells me that the rhythm would have lacked fullness without the reduplication of the phrase.

[120] *ad sensum igitur referenda sunt. Et si qui non satis forte, quid seuerum, quid iucundum sit, intelligent, facient quidem natura duce melius quam arte; sed naturae ipsi ars inest. illud prorsus oratoris,*

[120] The answer is that in such cases we must rely on feeling. It is possible to have an inadequate understanding of what it is precisely that makes for severity or charm, but yet to produce the required effect better by taking nature for our guide in place of art: none the less there will always be some principle of art underlying the promptings of nature.

[121] *scire ubi quoque genere compositionis sit utendum. ea duplex observatio est: altera, quae ad pedes refertur; altera, quae ad comprehensiones, quae efficiuntur ex pedibus. ac de his prius.*

[121] It is, however, the special duty of the orator to realise when to employ the different kinds of rhythm. There are two points which call for consideration if he is to do this with success. The one is concerned with feet, the other with the general rhythm of the period which is produced by their combination. I will deal with the latter first. We speak of *commata*, *cola* and periods.

[122] *diximus igitur esse incisa, membra, circuitus. incisum (quantum mea fert opinio) erit sensus non expleto numero conclusus, plerisque pars membri. tale est enim, quo Cicero utitur: domus tibi deerat? at habebas. pecunia superabat? at egebas. fiunt autem etiam singulis verbis incisa; diximus, testes dare volumus; incisum est diximus.*

[122] A *comma*, in my opinion, may be defined as the expression of a thought lacking rhythmical completeness; on the other hand, most writers regard it merely as a portion of the *colon*. As an example I may cite the following from Cicero: *Domus tibi deerat? at habebas: pecunia superabat? at egebas*. But a

comma may also consist of a single word, as in the following instance where *diximnus* is a *comma*: *Diximus, testes dare volumus*.

[123] *membrum autem est sensus numeris conclusus, sed a toto corpore abruptus et per se nihil efficiens. O callidos homines perfectum est, sed remotum a ceteris vim non habet, ut per se manus et pes et caput: et O rem excogitatam. quando ergo incipit corpus esse? cum venit extrema conclusio: quem, quaeso, nostrum fefellit, id vos ita esse facturos? quam Cicero brevissimam putat. itaque fere incisa et membra mutila sunt et conclusionem utique desiderant.*

[123] A *colon*, on the other hand, is the expression of a thought which is rhythmically complete, but is meaningless if detached from the whole body of the sentence. For example *O callidos homines* is complete in itself, but is useless if removed from the rest of the sentence, as the hand, foot or head if separated from the body. He goes on, *O rein excogitatam*. At what point do the members begin to form a body? Only when the conclusion is added: *quem, quaeso, nostrum fefellit, id vos ita esse facturos?* a sentence which Cicero regards as unusually concise. Thus as a rule *commata* and *cola* are fragmentary and require a conclusion.

[124] *periodo plurima nomina dat Cicero, ambitum, circuitum, comprehensiones, continuationem, circumscriptionem. genera eius duo sunt, alterum simplex, cum sensus unus longiore ambitu circumducitur, alterum, quod constat membris et incisis, quae plures sensus habent: aderat ianitor carceris, carnifex praetoris, reliqua. habet periodus membra minimum duo.*

[124] The period is given a number of different names by Cicero, who calls it *ambitus, circuitus, comprehensio, continuatio and circumscriptio*. It has two forms. The one is simple, and consists of one thought expressed in a number of words, duly rounded to a close. The other consists of *commata* and *cola*, comprising a number of different thoughts: for example, *aderat ianitor carceris, carnifex praetoris* and the rest.

[125] *medius numerus videntur quattuor, sed recipit frequenter et plura. modus eius a Cicerone aut quattuor senariis versibus aut ipsius spiritus modo terminatur. praestare debet ut sensum concludat; sit aperta, ut intelligi possit, non immodica, ut memoria contineri. membrum longius iusto tardum; brevius instabile est.*

[125] The period must have at least two *cola*. The average number would appear to be *four*, but it often contains even more. According to Cicero, its length should be restricted to the equivalent of four *senarii* or to the compass of a single breath. It is further essential that it should complete the thought which it expresses. It must be clear and intelligible and must not be too long to be carried in the memory. A *colon*, if too long, makes the sentence drag, while on the other hand, if it be too short it gives an impression of instability.

[126] ubicunque acriter erit, instanter, pugnaciter dicendum, membratim caesimque dicemus, nam hoc ut oratione plurimum valet; adeoque rebus accommodanda compositio, ut asperis asperos etiam numeros adhiberi oporteat et cum dicente aequae audientem inhorrescere.

[126] Wherever it is essential to speak with force, energy and pugnacity, we shall make free use of *commata* and *cola*, since this is most effective, and our rhythmical structure must be so closely conformed to our matter, that violent themes should be expressed in violent rhythms to enable the audience to share the horror felt by the speaker.

[127] membratim plerumque narrabimus, aut ipsas periodos maioribus intervallis et velut laxioribus nodis resolvemus, exceptis quae non docendi gratia, sed ornandi narrantur, ut ut Verrem Proserpinae raptus. haec enim lenis et fluens contextus decet.

[127] On the other hand we shall employ *cola* by preference when narrating facts, or relax the texture of our periods by considerable pauses and looser connexions, always excepting those passages in which narration is designed for decorative effect and not merely for the instruction of the audience, as for example the passage in the Verrines where Cicero tells the story of the Rape of Proserpine: for in such cases a smooth and flowing texture is required.

[128] periodos apta prooemiis maiorum causarum, ubi sollicitudine, commendatione, miseratione res eget, item communibus locis et ut omni amplificatione; sed poscitur tum austera, si accuses, tum fusa, si laudes. multum et ut epilogis pollet.

[128] The full periodic style is well adapted to the *exordium* of important cases, where the theme requires the orator to express anxiety, admiration or pity: the same is true of *commonplaces* and all kinds of *amplification*. But it should be severe when we are prosecuting and expansive in panegyric. It is also most effective in the *peroration*.

[129] totum autem hoc adhibendum est, quod sit amplius compositionis genus, cum iudex non solum rem tenet, sed etiam captus est oratione et se credit actori et voluptate iam ducitur. historia non tam finitos numeros quam orbem quandam contextumque desiderat. namque omnia eius membra connexa sunt et, quoniam lubrica est, hac atque illac fluit, ut homines, qui manibus invicem apprehensis gradum firmant, continent et continentur.

[129] But we must only employ this form of rhythmical structure in its full development, when the judge has not merely got a grasp of the matter, but has been charmed by our style, surrendered himself to the pleader and is ready to be led whither we will, by the delight which he experiences. History does not so much demand full, rounded rhythms as a certain continuity of motion and connexion of style. For all its *cola* are closely linked together, while the

fluidity of its style gives it great variety of movement; we may compare its motion to that of men, who link hands to steady their steps, and lend each other mutual support.

[130] demonstrativum genus omne fusiores habet liberioresque numeros; iudiciale et contionale, ut materia varium est, sic etiam ipsa collocatione verborum.

ubi iam nobis pars ex duabus, quas modo fecimus, secunda tractanda est. nam quis dubitat alia lenius, alia concitatus, alia sublimius, alia pugnacius, alia ornatus, alia gracilius esse dicenda;

[130] The *demonstrative* type of oratory requires freer and more expansive rhythms, while *forensic* and *deliberative* oratory will vary the arrangement of their words in conformity with the variety of their themes. I must now turn to discuss the first of the two points which I mentioned above. No one will deny that some portions of our speech require a gentle flow of language, while others demand speed, sublimity, pugnacity, ornateness or simplicity, as the case may be,

[131] gravibus, sublimibus, ornatis longas magis syllabas convenire? ita ut lenia spatium, sublimia et ornata claritatem quoque vocalium poscant; his contraria magis gaudere brevibus, argumenta, partitiones, iocos et quidquid est sermoni magis simile.

[131] or that long syllables are best adapted to express dignity, sublimity and ornateness. That is to say, while the gentler form of utterance requires length of vowel sounds, sublime and ornate language demands sonority as well. On the other hand, passages of an opposite character, such as those in which we argue, distinguish, jest or use language approximating to colloquial speech, are better served by short syllables.

[132] itaque componemus prooemium varie atque ut sensus eius postulabit. neque enim accesserim Celso, qui unam quandam huic parti formam dedit, et optimam compositionem esse prooemii, ut est apud Asinium, dixit, Si, Caesar, ex omnibus mortalibus, qui sunt ac fuerunt, posset huic causae disceptator legi, non quisquam te potius optandus nobis fuit.

[132] Consequently in the *exordium* we shall vary our structure to suit the thought. For I cannot agree with Celsus, when he would impose a single stereotyped form upon the *exordium* and asserts that the best example of the structure required for this purpose is to be found in Asinius: e. g., *si, Caesar, ex omnibus mortalibus, qui sunt ac fuerunt, posset huic causae disceptator legi, non quisquam te potius optandus nobis fuit.*

[133] non quia negem hoc bene esse compositum, sed quia legem hanc esse componendi ut omnibus principiis recusem. nam iudicis animus varie praeparatur: tum miserabiles esse volumus, tum modesti tum acres, tum

graves, tum blandi, tum flectere, tum ad diligentiam hortari. haec ut sunt diversa natura, ita dissimilem componendi quoque rationem desiderant. An similibus Cicero usus est numeris ut exordio pro Milone, pro Cluentio, pro Ligario?

[133] I do not for a moment deny that the structure of this passage is excellent, but I refuse to admit that the form of rhythmical structure which it exemplifies should be forced on all *exordia*. For there are various ways in which the judge's mind may be prepared for what is to come: at times we appeal for pity, at others take up a modest attitude, while we may assume an air of energy or dignity, flatter our audience, attempt to alter their opinions and exhort them to give us their best attention, according as the situation may demand. And as all these methods are different by nature, so each requires a different rhythmical treatment. Did Cicero employ similar rhythms in his *exordia* to the *pro Milone*, the *pro Cluentio* and the *pro Ligario*?

[134] narratio fere tardiores atque, ut sic dixerim, modestiores desiderat pedes ex omnibus maxime mixtos. nam et verbis, ut saepius pressa est, ita interim insurgit; sed docere et infigere animis res semper cupit, quod minime festinantium opus est. ac mihi videtur tota narratio constare longioribus membris, brevioribus periodis.

[134] The *statement of fact* as a rule requires slower and what I may be allowed to call more modest feet; and the different kinds of feet should, as far as possible, be intermixed. For while the style of this portion of our speech is generally marked by restraint of language, there are occasions when it is called upon to soar to greater heights, although on the other hand its aim will at all times be to instruct the audience and impress the facts upon their minds, a task which must not be carried out in a hurry. Indeed my personal opinion is that the *statement of fact* should be composed of long *cola* and short *periods*. Arguments,

[135] argumenta acria et citata pedibus quoque ad hanc naturam commodatis utentur, non tamen ita ut trochaeis quoque celeria quidem, sed sine viribus sint, verum iis, qui sint brevibus longisque mixti, non tamen plures longas quam breves habent.

[135] inasmuch as they are characterised by energy and speed, will employ the feet best adapted to these qualities. They will not however acquire rapidity at the expense of force by employing *trochees*, but will rather make use of those feet which consist of a mixture of long and short syllables, though the long should not outnumber the short. Lofty passages,

[136] illa sublimia spatiosas clarasque voces habentia amant amplitudinem dactyli quoque ac paeanis, etiamsi maiore ex parte syllabis brevibus, temporibus tamen satis pleni. aspera contra iambis maxime concitantur, non solum quod sunt e duabus modo syllabis eoque frequentiore quasi pulsum

habent, quae res lenitati contraria est, sed etiam quod omnibus pedibus insurgunt et e brevibus ut longas nituntur et crescunt, ideoque meliores choreis, qui ab longis ut breves cadunt.

[136] which employ long and sonorous vowels, are specially well served by the amplitude of the *dactyl* and the *paean*, feet which, although they contain a majority of short syllables, are yet not deficient in time-length. On the other hand, where violence is required, the requisite energy will be best secured by the employment of the *iambus*, not merely because that foot contains but two syllables, with the result that its beat is more frequent, making it unsuited to gentle language, but also because every foot gives the effect of an ascent, as they climb and swell from short to long, a fact which renders them superior to the *choreus*, which sinks from long to short.

[137] summissa, qualia ut epilogis sunt, lentas et ipsa, sed minus exclamantes exigunt.

vult esse Celsus aliquam et superiorem compositionem, quam equidem si scirem, non docerem; sed sit necesse est tarda et supina, verum nisi ex verbis atque sententiis. per se si id quaeritur, satis odiosa esse non poterit.

[137] Subdued passages, such as occur in the *peroration*, also require slow syllables, which must, however, be less sonorous.

Celsus insists that there is a special form of rhythmical structure which produces a particularly stately effect: I do not know to what he refers and, if I did, should not teach it, since it must inevitably be slow and flat, that is to say unless this quality is derived from the words and thoughts expressed. If it is to be sought for its own sake, independent of such considerations, I cannot sufficiently condemn it. But, to bring this discussion to a close,

[138] denique, ut semel finiam, sic fere componendum quomodo pronuntiandum erit. An non ut prooemiis plerumque summissi, (nisi cum ut accusatione concitandus est iudex aut aliqua indignatione complendus) ut narratione pleni atque expressi, ut argumentis citati atque ipso etiam motu celeres sumus, ut locis ac descriptionibus fusi ac fluentes, ut epilogis plerumque deiecti et infracti?

[138] I would remark that our rhythm must be designed to suit our delivery. Is not our tone subdued as a rule in the *exordium*, except of course in cases of accusation where we have to rouse the judge or fill him with indignation, full and clear in the *statement of fact*, in argument impetuous and rapid not merely in our language, but in our motions as well, expansive and fluent in *commonplaces* and descriptions and, as a rule, submissive and downcast in the *peroration*?

[139] atqui corporis quoque motui sunt sua quaedam tempora et ad signandos pedes non minus saltationi quam modulationibus adhibetur musica ratio

numerorum. quid? non vox et gestus accommodatur naturae ipsarum, de quibus dicimus, rerum? quo minus id mirere ut pedibus orationis, cum debeant sublimia ingredi, lenia duci, acria currere, delicata fluere. itaque tragoediae,

[139] But the motions of the body also have their own appropriate rhythms, while the musical theory of rhythm determines the value of metrical feet no less for dancing than for tunes. Again, do we not adapt our voice and gesture to the nature of the themes on which we are speaking? There is, therefore, all the less reason for wonder that the same is true of the feet employed in prose, since it is natural that what is sublime should have a stately stride, that what is gentle should seem to be led along, that what is violent should seem to run and what is tender to flow.

[140] ubi necesse est, adfectamus etiam tumorem ex spondeis atque iambis quibus maxime continetur:

en impero Argis, scepra mi liquit Pelops.

At ille comicus aequè senarius, quem trochaicum vocant, pluribus trochaeis, qui trochaei ab aliis dicuntur, pyrrhichiisque decurrit;

[140] Consequently, where necessary, we must borrow the pompous effect produced by the *spondees* and *iambi* which compose the greater portion of the rhythms of tragedy, as in the line,

En, impero Argis, scepra mi liquit Pelops.

From an unknown tragedian.

But the comic senarius, styled *trochaic*, contains a number of *pyrrhics* and *trochees*, which others call *tribrachs*, but loses in dignity what it gains in speed,

[141] sed quantum accipit celeritatis, tantum gravitatis amittit:

quid igitur faciam? non eam ne nunc quidem

Aspera vero et maledica, ut dixi, etiam ut carmine iambis grassantur:

quis hoc potest videre, quis potest pati,

nisi impudicus et vorax et aleo?

In universum autem,

[141] as for example in the line,

quid igitur faciam? non eam, ne nunc quidem?

Ter. Eun. I. i. 1. The pyrrhic never forms a separate foot, but does form part of the anapaest, tribrach and dactyl and it is in this connexion that it is

mentioned by Quintilian.

Violent and abusive language, on the other hand, even in verse, as I have said, employs the *iambic* for its attack: *e.g.*,

Quis hoc potest videre, quis potest pati,
nisi impudicus et vorax et aleo?

Cat. xxix. 1.

As a general rule, however,

[142] si sit necesse, duram potius atque asperam compositionem malim esse quam effeminatam et enervem, qualis apud multos et cotidie magis lascivissimis syntonorum modis saltat. ac ne tam bona quidem ulla erit, ut debeat esse continua et ut eosdem semper pedes ire.

[142] if the choice were forced upon me, I should prefer my rhythm to be harsh and violent rather than nerveless and effeminate, as it is in so many writers, more especially in our own day, when it trips along in wanton measures that suggest the accompaniment of castanets. Nor will any rhythm ever be so admirable that it ought to be continued with the same recurrence of feet.

[143] nam et versificandi genus est unam legem omnibus sermonibus dare; et id cum manifestae adfectionis est (cuius rei maxime cavenda suspicio est), tum etiam taedium ex similitudine ac satietatem creat; quoque est dulcius, magis perdit amittit que et fidem et adfectus motusque omnes, qui est ut hac cura deprehensus. nec potest ei credere aut propter eum dolere et irasci iudex, cui putat hoc vacare.

[143] For we shall really be indulging in a species of versification if we seek to lay down one law for all varieties of speech: further, to do so would lay us open to the charge of the most obvious affectation, a fault of which we should avoid even the smallest suspicion, while we should also weary and cloy our audience by the resulting monotony; the sweeter the rhythm, the sooner the orator who is detected in a studied adherence to its employment, will cease to carry conviction or to stir the passions and emotions. The judge will refuse to believe him or to allow him to excite his compassion or his anger, if he thinks that he has leisure for this species of refinement.

[144] ideoque interim quaedam quasi solvenda de industria sunt; et quidem illa maximi laboris, ne laborata videantur. sed neque longioribus, quam oportet, hyperbatis compositioni serviamus ne, quae eius rei gratia fecerimus, propter eam fecisse videamur; et certe nullum aptum atque idoneum verbum permutemus gratia levitatis.

[144] It will therefore be desirable from time to time that in certain passages the rhythm should be deliberately dissolved: this is a task of no small difficulty, if the appearance of effort is to be avoided. In so doing we must not come to the

assistance of the rhythm by introducing *bhyperhata* of extravagant length, for fear that we should betray the purpose of our action: and we should certainly never in our search for smoothness abandon for another any word that is apt and appropriate to our theme.

[145] neque enim ullum erit tam difficile, quod non commode inseri possit, nisi quod ut evitandis eiusmodi verbis non decorem compositionis quaerimus, sed facilitatem. non tamen mirabor Latinos magis indulsisse compositioni quam Atticos, cum minus ut verbis habeant severitatis et gratiae;

[145] As a matter of fact no word will be so intractable as to baffle all our attempts to find it a suitable position; but it must be remembered that when we avoid such words, we do so not to enhance the charm of our rhythm, but to evade a difficulty. I am not, however, surprised that Latin writers have paid more attention to rhythmical structure than the Athenians, since Latin words possess less correctness and charm.

[146] nec vitium duxerim, si Cicero a Demosthene paulum ut hac parte descivit. Sed quae sit differentia nostri Graecique sermonis, explicabit summus liber.

compositio (nam finem imponere egresso destinatum modum volumini festino) debet esse honesta, iucunda, varia.

[146] Nor again do I account it a fault in Cicero that, in this respect, he diverged to some extent from the practice of Demosthenes. However, my final book will explain the nature of the difference between our language and that of Greece.

But I must bring this book to a conclusion without more delay, since it has already exceeded the limits designed for it. To sum up then, artistic structure must be decorous, pleasing and varied.

[147] eius tres partes: ordo, coniunctio, numerus. ratio ut adiectione, detractio, mutatione; usus pro natura rerum, quas dicimus: cura ita magna, ut sentiendi atque eloquendi prior sit; dissimulatio curae praecipua, ut numeri sponte fluxisse, non arcessiti et coacti esse videantur.

[147] It consists of three parts, order, connexion and rhythm. The method of its achievement lies in addition, subtraction and alteration of words. Its practice will depend upon the nature of our theme. The care which it demands is great, but, still, less than that demanded by expression and thought. Above all it is necessary to conceal the care expended upon it so that our rhythms may seem to possess a spontaneous flow, not to have been the result of elaborate search or compulsion.

LIBER X — BOOK X

1. sed haec eloquendi praecepta, sicut cogitationi sunt necessaria, ita non satis ad vim dicendi valent, nisi illis firma quaedam facilitas, quae apud Graecos ἔξις nominatur, accesserit: ad quam scribendo plus an legendo an dicendo conferatur, solere quaeri scio. quod esset diligentius nobis examinandum, si qualibet earum rerum possemus una esse contenti.

1. But these rules of style, while part of the student's theoretical knowledge, are not in themselves sufficient to give him oratorical power. In addition he will require that assured facility which the Greeks call ἔξις I know that many have raised the question as to whether this is best acquired by writing, reading or speaking, and it would indeed be a question calling for serious consideration, if we could rest content with any one of the three.

[2] verum ita sunt inter se conexas et indiscreta omnia ut, si quid ex his defuerit, frustra sit in ceteris laboratum.

nam neque solida atque robusta fuerit unquam eloquentia nisi multo stilo vires acceperit, et citra lectionis exemplum labor ille carens rectore fluitabit; et qui sciet quae quoque sint modo dicenda, nisi tamen in procinctu paratamque ad omnes casus habuerit eloquentiam, velut clausis thesauris incubabit.

[2] But they are so intimately and inseparably connected, that if one of them be neglected, we shall but waste the labour which we have devoted to the others. For eloquence will never attain to its full development or robust health, unless it acquires strength by frequent practice in writing, while such practice without the models supplied by reading will be like a ship drifting aimlessly without a steersman. Again, he who knows what he ought to say and how he should say it, will be like a miser brooding over his hoarded treasure, unless he has the weapons of his eloquence ready for battle and prepared to deal with every emergency.

[3] non autem ut quidquid praecipue necessarium est, sic ad efficiendum oratorem maximi protinus erit momenti. nam certe, cum sit in eloquendo positum oratoris officium, dicere ante omnia est, atque hinc initium eius artis fuisse manifestum est; proximam deinde imitationem, novissimam scribendi quoque diligentiam.

[3] But the degree in which a thing is essential does not necessarily make it of immediate and supreme importance for the formation of the ideal orator. For obviously the power of speech is the first essential, since therein lies the primary task of the orator, and it is obvious that it was with this that the art of oratory began, and that the power of imitation comes next, and third and last diligent practice in writing.

[4] sed ut perveniri ad summa nisi ex principiis non potest, ita procedente iam opere etiam minima incipiunt esse quae prima sunt. verum nos non, quomodo instituendus orator, hoc loco dicimus; nam id quidem aut satis aut certe uti potuimus dictum est; sed athleta, qui omnes iam perdidicerit a praeceptore numeros, quo genere exercitationis ad certamina praeparandus sit. igitur eum, qui res invenire et disponere sciet, verba quoque et eligendi et collocandi rationem perceperit, instruamus, qua ratione quod didicerit facere quam optime, quam facillime possit.

[4] But as perfection cannot be attained without starting at the very beginning, the points which come first in time will, as our training proceeds, become of quite trivial importance. Now we have reached a stage in our enquiry where we are no longer considering the preliminary training of our orator; for I think the instructions already given should suffice for that; they are in any case as good as I could make them. Our present task is to consider how our athlete who has learnt all the technique of his art from his trainer, is to be prepared by actual practice for the contests in which he will have to engage. Consequently, we must assume that our student has learned how to conceive and dispose his subject matter and understands how to choose and arrange his words, and must proceed to instruct him how to make the best and readiest use of the knowledge which he has acquired.

[5] num ergo dubium est, quin ei velut opes sint quaedam parandae, quibus uti, ubicunque desideratum erit, possit? eae constant copia rerum ac verborum.

[5] There can then be no doubt that he must accumulate a certain store of resources, to be employed whenever they may be required. The resources of which I speak consist in a copious supply of words and matter.

[6] sed res propriae sunt cuiusque causae aut paucis communes, verba in universas paranda; quae si in rebus singulis essent singula, minorem curam postulerent, nam cuncta sese cum ipsis protinus rebus offerrent. sed cum sint aliis alia aut magis propria aut magis ornata aut plus efficientia aut melius sonantia, debent esse non solum nota omnia sed in promptu atque, ut ita dicam, in conspectu, ut, cum se iudicio dicentis ostenderint, facilis ex his optimorum sit electio.

[6] But while the matter is necessarily either peculiar to the individual case, or at best common to only a few, words must be acquired to suit all and every case. Now, if there were special words adapted to each individual thing, they would require less care, since they would automatically be suggested by the matter in hand. But since some words are more literal, more ornate, more significant or euphonious than others, our orator must not merely be acquainted with all of them, but must have them at his fingers' ends and before his very eyes, so that when they present themselves for his critical selection, he will find it easy to make the appropriate choice.

[7] et quae idem significarent solitos scio ediscere, quo facilius et occurreret unum ex pluribus et, cum essent usi aliquo, si breve intra spatium rursus desideraretur, effugiendae repetitionis gratia sumerent aliud quod idem intelligi posset. quod cum est puerile et cuiusdam infelicis operae tum etiam utile parum; turbam tantum modo congregat, ex qua sine discrimine occupet proximum quodque.

[7] I know that some speakers make a practice of learning lists of synonyms by heart, in order that one word out of the several available may at once present itself to them, and that if, after using one word, they find that it is wanted again after a brief interval, they may be able to select another word with the same meaning and so avoid the necessity of repetition. But this practice is childish and involves thankless labour, while it is really of very little use, as it merely results in the assembly of a disorderly crowd of words, for the speaker to snatch the first that comes to hand.

[8] nobis autem copia cum iudicio paranda est vim orandi non circulatoriam volubilitatem spectantibus. id autem consequemur optima legendo atque audiendo; non enim solum nomina ipsa rerum cognoscemus hac cura, sed quod quoque loco sit aptissimum.

[8] On the contrary, discrimination is necessary in the acquisition of our stock of words; for we are aiming at true oratory, not at the fluency of a cheapjack. And we shall attain our aim by reading and listening to the best writers and orators, since we shall thus learn not merely the words by which things are to be called, but when each particular word is most appropriate.

[9] omnibus enim fere verbis praeter pauca, quae sunt parum verecunda, in oratione locus est. nam scriptores quidem iamborum veterisque comoediae etiam in illis saepe laudantur, sed nobis nostrum opus intueri sat est. omnia verba, exceptis de quibus dixi, sunt alicubi optima; nam et humilibus interim et vulgaribus est opus, et quae nitidiores in parte videntur sordida, ubi res poscit, proprie dicuntur.

[9] For there is a place in oratory for almost every word, with the exception only of a very few, which are not sufficiently seemly. Such words are indeed often praised when they occur in writers of iambs or of the old comedy, but we need do no more than consider our own special task. All words, with these exceptions, may be admirably employed in some place or other. For sometimes we shall even require low and common words, while those which would seem coarse if introduced in the more elegant portions of our speech may, under certain circumstances, be appropriate enough.

[10] haec ut sciamus atque eorum non significationem modo sed formas etiam mensurasque norimus, ut, ubicunque erunt posita, convenient, nisi multa lectione atque auditione assequi nullo modo possumus, cum omnem sermonem auribus primum accipiamus. propter quod infantes a mutis

nutricibus iussu regum in solitudine educati, etiamsi verba quaedam emisisse traduntur,

[10] Now to acquire a knowledge of these words and to be acquainted not merely with their meaning, but with their forms and rhythmical values, so that they may seem appropriate wherever employed, we shall need to read and listen diligently, since all language is received first through the ear. It was owing to this fact that the children who, by order of a king, were brought up by a dumb nurse in a desert place, although they are said to have uttered certain words, lacked the power of speech.

[11] tamen loquendi facultate caruerunt. sunt autem alia huius naturae, ut idem pluribus vocibus declarent, ita ut nihil significationis, quo potius utaris, intersit, ut ensis et gladius; alia vero, etiamsi propria rerum aliquarum sint nomina, τροπικῶς quasi tamen ad eundem intellectum feruntur, ut ferrum et mucro.

[11] There are, however, some words of such a nature that they express the same sense by different sounds, so that it makes no difference to the meaning which we use, as, for instance, *gladius* and *ensis*, which may be used indifferently when we have to speak of a sword. Others, again, although properly applied to specific objects, are used by means of a *trope* to express the same sense, as, for example, *ferrum* (steel) and *muro* (point), which are both used in the sense of sword.

[12] nam per abusionem sicarios etiam omnes vocamus, qui caedem telo quocunque commiserint. alia circuitu verborum plurium ostendimus, quale est et pressi copia lactis. Plurima vero mutatione figuramus: Scio non ignoro et non me fugit et non me praeterit et quis nescit? et nemini dubium est.

[12] Thus, by the *figure* known as *abuse*, we call all those who commit a murder with any weapon whatsoever *sicarii* (poniarders). In other cases we express our meaning periphrastically, as, for instance, when Virgil describes cheese as

“Abundance of pressed milk.”

On the other hand, in a number of instances we employ *figures* and substitute one expression for another. Instead of “I know,” we say “I am not ignorant,” or “the fact does not escape me,” or “I have not forgotten,” or “who does not know?” or “it can be doubted by none.”

[13] sed etiam ex proximo mutuari libet. nam et intelligo et sentio et video saepe idem valent quod scio. quorum nobis ubertatem ac divitias dabit lectio, ut non solum quomodo occurrent sed etiam quomodo oportet utamur.

[13] But we may also borrow from a word of cognate meaning. For “I understand,” or “I feel” or “I see” are often equivalent to “I know.” Reading

will provide us with a rich store of expressions such as these, and will enable us not merely to use them when they occur to us, but also in the appropriate manner. For they are not always interchangeable:

[14] non semper enim haec inter se idem faciunt; nec sicut de intellectu animi recte dixerim video ita de visu oculorum intelligo, nec ut mucro gladium sic mucronem gladius ostendit.

[14] for example, though I may be perfectly correct in saying, “I see” for “I understand,” it does not follow that I can say “I understand” for “my eyes have seen,” and though *mucro* may be employed to describe a sword, a sword does not necessarily mean the same as *mucro* (point).

[15] sed ut copia verborum sic paratur, ita non uerborum tantum gratia legendum vel audiendum est. nam omnium, quaecunque docemus, hoc sunt exempla potentiora etiam ipsis quae traduntur artibus, cum eo qui discit perductus est, ut intelligere ea sine demonstrate et sequi iam suis viribus possit, quia, quae doctor praecepit, orator ostendit.

[15] But, although a store of words may be acquired by these means, we must not read or listen to orators merely for the sake of acquiring words. For in everything which we teach examples are more effective even than the rules which are taught in the schools, so long as the student has reached a stage when he can appreciate such examples without the assistance of a teacher, and can rely on his own powers to imitate them. And the reason is this, that the professor of rhetoric lays down rules, while the orator gives a practical demonstration.

[16] alia vero audientes, alia legentes magis adiuvant. excitat qui dicit spiritu ipso, nec imagine et ambitu rerum sed rebus incendit. vivunt omnia enim et moventur, excipimusque nova ilia velut nascentia cum favore ac sollicitudine. nec fortuna modo iudicii sed etiam ipsorum qui orant periculo adficimur.

[16] But the advantages conferred by reading and listening are not identical. The speaker stimulates us by the animation of his delivery, and kindles the imagination, not by presenting us with an elaborate picture, but by bringing us into actual touch with the things themselves. Then all is life and movement, and we receive the new-born offspring of his imagination with enthusiastic approval. We are moved not merely by the actual issue of the trial, but by all that the orator himself has at stake.

[17] praeter haec vox, actio decora, accommodata, ut quisque locus postulabit, pronuntiandi vel potentissima in dicendo ratio et, ut semel dicam, pariter omnia docent. in lectione certius iudicium, quod audienti frequenter aut suus cuique favor aut ille laudantium clamor extorquet.

[17] Moreover his voice, the grace of his gestures, the adaptation of his delivery (which is of supreme importance in oratory), and, in a word, all his

excellences in combination, have their educative effect. In reading, on the other hand, the critical faculty is a surer guide, inasmuch as the listener's judgment is often swept away by his preference for a particular speaker, or by the applause of an enthusiastic audience.

[18] pudet enim dissentire, et velut tacita quadam verecundia inhibemur plus nobis credere, cum interim et vitiosa pluribus placent, et a conrogatis laudantur etiam quae non placent.

[18] For we are ashamed to disagree with them, and an unconscious modesty prevents us from ranking our own opinion above theirs, though all the time the taste of the majority is vicious, and the *claque* may praise even what does not really deserve approval.

[19] sed e contrario quoque accidit, ut optime dictis gratiam prava iudicia non referant. lectio libera est nec actionis impetu transcurrit; sed repetere saepius licet, sive dubites sive memoriae penitus adfigere velis. repetamus autem et retractemus, et ut cibos mansos ac prope liquefactos demittimus, quo facilius digerantur, ita lectio non cruda, sed multa iteratione mollita et velut confecta, memoriae imitationique tradatur.

[19] On the other hand, it will sometimes also happen that an audience whose taste is bad will fail to award the praise which is due to the most admirable utterances. Reading, however, is free, and does not hurry past us with the speed of oral delivery; we can reread a passage again and again if we are in doubt about it or wish to fix it in the memory. We must return to what we have read and reconsider it with care, while, just as we do not swallow our food till we have chewed it and reduced it almost to a state of liquefaction to assist the process of digestion, so what we read must not be committed to the memory for subsequent imitation while it is still in a crude state, but must be softened and, if I may use the phrase, reduced to a pulp by frequent re-perusal.

[20] ac diu non nisi optimus quisque et qui credentem sibi minime fallat legendus est, sed diligenter ac paene ad scribendi sollicitudinem; nec per partes modo scrutanda omnia, sed perlectus liber utique ex integro resumendus, praecipueque oratio, cuius virtutes frequenter ex industria quoque occultantur.

[20] For a long time also we should read none save the best authors and such as are least likely to betray our trust in them, while our reading must be almost as thorough as if we were actually transcribing what we read. Nor must we study it merely in parts, but must read through the whole work from cover to cover and then read it afresh, a precept which applies more especially to speeches, whose merits are often deliberately disguised.

[21] saepe enim praeparat, dissimulat, insidiatur orator, eaque in prima parte actionis dicit, quae sunt in summa profutura. itaque suo loco minus placent,

adhuc nobis quare dicta sint ignorantibus, ideoque erunt cognitae omnibus repetenda.

[21] For the orator frequently prepares his audience for what is to come, dissembles and sets a trap for them and makes remarks at the opening of his speech which will not have their full force till the conclusion. Consequently what he says will often seem comparatively ineffective where it actually occurs, since we do not realise his motive and it will be necessary to re-read the speech after we have acquainted ourselves with all that it contains.

[22] illud vero utilissimum nosse eas causas, quarum orationes in manus sumpserimus et, quotiens continget, utrumque habitas legere actiones: ut Demosthenis atque Aeschinis inter se contrarias, et Servii Sulpicii atque Messalae, quorum alter pro Aufidia, contra dixit alter, et Pollionis et Cassii reo Asprenate aliasque plurimas.

[22] Above all, it is most desirable that we should familiarise ourselves with the facts of the case with which the speech deals, and it will be well also, wherever possible, to read the speeches delivered on both sides, such as those of Aeschines and Demosthenes in the case of Ctesiphon, of Servius Sulpicius and Messala for and against Aufidia, of Pollio and Cassius in the case of Asprenas, and many others.

[23] quinetiam si minus pares uidebuntur aliquae, tamen ad cognoscendam litium quaestionem recte requirentur, ut contra Ciceronis orationes Tuberonis in Ligarium et Hortensii pro Verre. quinetiam, easdem causas ut quisque egerit utile erit scire. Nam de domo Ciceronis dixit Calidius, et pro Milone orationem Brutus exercitationis gratia scripsit, etiamsi egisse eum Cornelius Celsus falso existimat; et Pollio et Messala defenderunt eosdem, et nobis pueris insignes pro Voluseno Catulo Domitii Afri, Crispi Passieni, Decimi Laelii orationes ferebantur.

[23] And even if such speeches seem unequal in point of merit, we shall still do well to study them carefully with a view to understanding the problems raised by the cases with which they deal: for example, we should compare the speeches delivered by Tuberus against Ligarius and by Hortensius in defence of Verres with those of Cicero for the opposite side, while it will also be useful to know how different orators pleaded the same case. For example, Calidius spoke on the subject of Cicero's house, Brutus wrote a declamation in defence of Milo, which Cornelius Celsus wrongly believes to have been actually delivered in court, and Pollio and Messalla defended the same clients, while in my boyhood remarkable speeches delivered by Domitius Afer, Crispus Passienus and Decimus Laelius in defence of Volusenus were in circulation.

[24] neque id statim legenti persuasum sit omnia quae optimi auctores dixerint utique esse perfecta. nam et labuntur aliquando et oneri cedunt et in dulgent

ingeniorum suorum voluptati, nec semper intendunt animum; nonnunquam fatigantur, cum Ciceroni dormire interim Demosthenes, Horatio vero etiam Homerus ipse videatur.

[24] The reader must not, however, jump to the conclusion that all that was uttered by the best authors is necessarily perfect. At times they lapse and stagger beneath the weight of their task, indulge their bent or relax their efforts. Sometimes, again, they give the impression of weariness: for example, Cicero thinks that Demosthenes sometimes nods, and Horace says the same of Homer himself.

[25] summi enim sunt, homines tamen, acciditque his qui, quidquid apud illos reppererunt, dicendi legem putant, ut deteriora imitentur, (id enim est facilius) ac se abunde similes putent, si vitia magnorum consequantur.

[25] For despite their greatness they are still but mortal men, and it will sometimes happen that their reader assumes that anything which he finds in them may be taken as a canon of style, with the result that he imitates their defects (and it is always easier to do this than to imitate their excellences) and thinks himself a perfect replica if he succeeds in copying the blemishes of great men.

[26] modesto tamen et circumspecto iudicio de tantis viris pronuntiandum est, ne, quod plerisque accidit, damnent quae non intelligunt. ac si necesse est in alteram errare partem: omnia eorum legentibus placere quam multa displicere maluerim.

[26] But modesty and circumspection are required in pronouncing judgment on such great men, since there is always the risk of falling into the common fault of condemning what one does not understand. And, if it is necessary to err on one side or the other, I should prefer that the reader should approve of everything than that he should disapprove of much.

[27] plurimum dicit oratori conferre Theophrastus lectionem poetarum, multique eius iudicium sequuntur; neque immerito. namque ab his in rebus spiritus et in verbis sublimitas et in adfectibus motus omnis et in personis decor petitur, praecipueque velut attrita cotidiano actu forensi ingenia optime rerum talium blanditia reparantur. ideoque in hac lectione Cicero requiescendum putat.

[27] Theophrastus says that the reading of poets is of great service to the orator, and has rightly been followed in this view by many. For the poets will give us inspiration as regards the matter, sublimity of language, the power to excite every kind of emotion, and the appropriate treatment of character, while minds that have become jaded owing to the daily wear and tear of the courts will find refreshment in such agreeable study. Consequently Cicero recommends the relaxation provided by the reading of poetry.

[28] meminerimus tamen, non per omnia poetas esse oratori sequendos nec libertate verborum nec licentia figurarum; genus ostentationi comparatum et praeter id, quod solam petit voluptatem eamque etiam fingendo non falsa modo sed etiam quaedam incredibilia sectatur,

[28] We should, however, remember that the orator must not follow the poets in everything, more especially in their freedom of language and their license in the use of figures. Poetry has been compared to the oratory of display, and further aims solely at giving pleasure, which it seeks to secure by inventing what is not merely untrue, but sometimes even incredible.

[29] patrocínio quoque aliquo iuvare, quod alligata ad certam pedum necessitatem non semper uti propriis possit, sed depulsa recta via necessario ad eloquendi quaedam deverticula confugiat, nec mutare quaedam modo verba, sed extendere, corripere, convertere, dividere cogatur; nos vero armatos stare in acie et summis de rebus discernere et ad victoriam niti.

[29] Further, we must bear in mind that it can be defended on the ground that it is tied by certain metrical necessities and consequently cannot always use straightforward and literal language, but is driven from the direct road to take refuge in certain by-ways of expression; and compelled not merely to change certain words, but to lengthen, contract, transpose or divide them, whereas the orator stands armed in the forefront of the battle, fights for a high stake and devotes all his effort to winning the victory.

[30] neque ergo arma squalere situ ac rubigine velim, sed fulgorem inesse qui terreat, qualis est ferri, quo mens simul visusque praestringitur, non qualis auri argentique, imbellis et potius habenti periculosus.

[30] And yet I would not have his weapons defaced by mould and rust, but would have them shine with a splendour that shall strike terror to the heart of the foe, like the flashing steel that dazzles heart and eye at once, not like the gleam of gold or silver, which has no warlike efficacy and is even a positive peril to its wearer.

[31] historia quoque alere oratorem quodam uberi iucundoque suco potest; verum et ipsa sic est legenda, ut sciamus, plerasque eius virtutes oratori esse vitandas. est enim proxima poetis et quodammodo carmen solutum, et scribitur ad narrandum non ad probandum, totumque opus non ad actum rei pugnamque praesentem, sed ad memoriam posteritatis et ingenii famam componitur; ideoque et verbis remotioribus et liberioribus figuris narrandi taedium evitat.

[31] History, also, may provide the orator with a nutriment which we may compare to some rich and pleasant juice. But when we read it, we must remember that many of the excellences of the historian require to be shunned by the orator. For history has a certain affinity to poetry and may be regarded

as a kind of prose poem, while it is written for the purpose of narrative, not of proof, and designed from beginning to end not for immediate effect or the instant necessities of forensic strife, but to record events for the benefit of posterity and to win glory for its author. Consequently, to avoid monotony of narrative, it employs unusual words and indulges in a freer use of figures.

[32] itaque, ut dixi, neque illa Sallustiana brevitās, quā nihil apud aures vacuās atque eruditās potest esse perfectius, apud occupatū variis cogitationibus iudicem et saepius ineruditum captanda nobis est; neque illa Livii lactea ubertas satis docebit eum, qui non speciem expositionis, sed fidem quaerit.

[32] Therefore, as I have already said, the famous brevity of Sallust, than which nothing can be more pleasing to the leisured ear of the scholar, is a style to be avoided by the orator in view of the fact that his words are addressed to a judge who has his mind occupied by a number of thoughts and is also frequently uneducated, while, on the other hand, the milky fullness of Livy is hardly of a kind to instruct a listener who looks not for beauty of exposition, but for truth and credibility.

[33] adde quod M. Tullius ne Thucydidem quidem aut Xenophontem utiles oratori putat, quanquam illum bellicum canere, huius ore Musas esse locutas existimet. licet tamen nobis in digressionibus uti vel historico nonnunquam nitore, dum in his, de quibus erit quaestio, meminerimus, non athletarum toris, sed militum lacertis opus esse; nec versicolorem illam, quā Demetrius Phalereus dicebatur uti, vestem bene ad forensem pulverem facere.

[33] We must also remember that Cicero thinks that not even ‘Thucydides or Xenophon will be of much service to an orator, although he regards the style of the former as a veritable call to arms and considers that the latter was the mouthpiece of the Muses. It is, however, occasionally permissible to borrow the graces of history to embellish our digressions, provided always that we remember that in those portions of our speech which deal with the actual question at issue we require not the swelling thews of the athlete, but the wiry sinews of the soldier, and that the cloak of many colours which Demetrius of Phalerum was said to wear is but little suited to the dust and heat of the forum.

[34] est et alius ex historiis usus et is quidem maximus, sed non ad praesentem pertinens locus, ex cognitione rerum exemplorumque, quibus in primis instructus esse debet orator, ne omnia testimonia exspectet a litigatore, sed pleraque ex vetustate diligenter sibi cognitaumat, hoc potentiora, quod ea sola criminibus odii et gratiae vacant.

[34] There is, it is true, another advantage which we may derive from the historians, which, however, despite its great importance, has no bearing on our present topic; I refer to the advantage derived from the knowledge of historical facts and precedents, with which it is most desirable that our orator should be acquainted; for such knowledge will save him from having to

acquire all his evidence from his client and will enable him to draw much that is germane to his case from the careful study of antiquity. And such arguments will be all the more effective, since they alone will be above suspicion of prejudice or partiality.

[35] A philosophorum vero lectione ut essent multa nobis petenda, vitio factum est oratorum, qui quidem illis optima sui operis parte cesserunt. nam et de iustis, honestis, utilibus, iisque quae sint istis contraria, et de rebus divinis maxime dicunt et argumentantur acriter Stoici, et altercationibus atque interrogationibus oratorem futurum optime Socratici praeparant.

[35] The fact that there is so much for which we must have recourse to the study of the philosophers is the fault of orators who have abandoned to them the fullest portion of their own task. The Stoics more especially discourse and argue with great keenness on what is just, honourable, expedient and the reverse, as well as on the problems of theology, while the Socratics give the future orator a first-rate preparation for forensic debates and the examination of witnesses.

[36] sed his quoque adhibendum est simile iudicium, ut etiam cum in rebus versemur iisdem, non tamen eandem esse condicionem sciamus litium ac disputationum, fori et auditorii, praeceptorum et periculorum.

[36] But we must use the same critical caution in studying the philosophers that we require in reading history or poetry; that is to say, we must bear in mind that, even when we are dealing with the same subjects, there is a wide difference between forensic disputes and philosophical discussions, between the law-courts and the lecture-room, between the precepts of theory and the perils of the bar.

[37] credo exacturos plerosque, cum tantum esse utilitatis in legendo iudicemus, ut id quoque adiungamus operi, qui sint legendi, quae in auctore quoque praecipua virtus. sed persequi singulos infiniti fuerit operis.

[37] Most of my readers will, I think, demand that, since I attach so much importance to reading, I should include in this work some instructions as to what authors should be read and what their special excellences may be. To do this in detail would be an endless task.

[38] quippe cum in Bruto M. Tullius tot milibus versuum de Romanis tantum oratoribus loquatur et tamen de omnibus aetatis suae, quibuscum vivebat, exceptis Caesare atque Marcello, silentium egerit, quis erit modus, si et illos et qui postea fuerunt et Graecos omnes?18

[38] Remember that Cicero in his *Brutus*, after writing pages and pages on the subject of Roman orators alone, says nothing of his own contemporaries with the exception of Caesar and Marcellus. What limit, then, would there be to my labours if I were to attempt to deal with them and with their successors and all

the orators of Greece as well?

[39] fuit igitur brevis illa tutissima, quae est apud Livium in epistola ad filium scripta, legendos Demosthenem atque Ciceronem, tum ita, ut quisque esset Demostheni et Ciceroni simillimus.

[39] No, it was a safer course that Livy adopted in his letter to his son, where he writes that he should read Cicero and Demosthenes and then such orators as most resembled them. Still,

[40] non est tamen dissimulanda nostri quoque iudicii summa. paucos enim vel potius vix ullum ex his qui vetustatem pertulerunt existimo posse reperiri, quin iudicium adhibentibus adlaturus sit utilitatis aliquid, cum se Cicero ab illis quoque vetustissimis auctoribus, ingeniosis quidem, sed arte carentibus, plurimum fateatur adiutum.

[40] I must not conceal my own personal convictions on this subject. I believe that there are few, indeed scarcely a single one of those authors who have stood the test of time who will not be of some use or other to judicious students, since even Cicero himself admits that he owes a great debt even to the earliest writers, who for all their talent were totally devoid of art.

[41] nec multo aliud de novis sentio. quotus enim quisque inveniri tam demens potest, qui ne minima quidem alicuius certe fiducia partis memoriam posteritatis speraverit? qui si quis est, intra primos statim versus deprehendetur et citius nos dimittet, quam ut eius nobis magno temporis detrimento constet experimentum.

[41] And my opinion about the moderns is much the same. For how few of them are so utterly crazy as not to have the least shadow of hope that some portion or other of their work may have claims upon the memory of posterity? If there is such an one, he will be detected before we have perused many lines of his writings, and we shall escape from him before the experiment of reading him has cost us any serious loss of time.

[42] sed non quidquid ad aliquam partem scientiae pertinet, protinus ad phrasin, de qua loquimur, accommodatum.

verum antequam de singulis, pauca in universum de varietate opinionum dicenda sunt.

[42] On the other hand, not everything that has some bearing on some department of knowledge will necessarily be of service for the formation of style, with which we are for the moment concerned.

Before, however, I begin to speak of individual authors, I must make a few general remarks about the variety of judgments which have been passed upon them.

[43] nam quidam solos veteres legendos putant neque in ullis aliis esse naturalem eloquentiam et robur viris dignum arbitrantur; alios recens haec lascivia deliciaeque et omnia ad voluptatem multitudinis imperitae composita delectant.

[43] For there are some who think that only the ancients should be read and hold that they are the sole possessors of natural eloquence and manly vigour; while others revel in the voluptuous and affected style of to-day, in which everything is designed to charm the ears of the uneducated majority.

[44] ipsorum etiam qui rectum dicendi genus sequi volunt, alii pressa demum et tenuia et quae minimum ab usu cotidiano recedant, sana et vere Attica putant; quosdam elatior ingenii vis et magis concitata et plena spiritus capit; sunt etiam lenis et nitidi et compositi generis non pauci amatores. de qua differentia disseram diligentius, cum de genere dicendi quaerendum erit. interim summatim, quid et a qua lectione petere possint, qui confirmare facultatem dicendi volunt, attingam. paucos enim qui sunt eminentissimi excerpere in animo est.

[44] And even if we turn to those who desire to follow the correct methods of style, we shall find that some think that the only healthy and genuinely Attic style is to be found in language which is restrained and simple and as little removed as possible from the speech of every day, while others are attracted by a style which is more elevated and full of energy and animation. There are, too, not a few who are devoted to a gentle, elegant and harmonious style. Of these different ideals I shall speak in greater detail, when I come to discuss the question of the particular styles best suited to oratory. For the moment I shall restrict myself to touching briefly on what the student who desires to consolidate his powers of speaking should seek in his reading and to what kind of reading he should devote his attention. My design is merely to select a few of the most eminent authors for consideration.

[45] facile est autem studiosis, qui sint his simillimi, iudicare; ne quisquam queratur omissos forte quos ipse valde probet. fateor enim plures legendos esse quam qui a me nominabuntur. sed nunc genera ipsa lectionum, quae praecipue convenire intendentibus ut oratores fiant, existimem, persequar.

[45] It will be easy for the student to decide for himself what authors most nearly resemble these: consequently, no one will have any right to complain if I pass over some of his favourites. For I will readily admit that there are more authors worth reading than those whom I propose to mention. But I will now proceed to deal with the various classes of reading which I consider most suitable for those who are ambitious of becoming orators.

[46] igitur, ut Aratus ab Iove incipiendum putat, ita nos rite coepturi ab Homero uidemur. hic enim, quenadmodum ex Oceano dicit ipse omnium amnium fontiumque cursus initium capere, omnibus eloquentiae partibus exemplum et

ortum dedit. hunc nemo in magnis rebus sublimitate, in parvis proprietate superaverit. idem laetus ac pressus, iucundus et gravis, tum copia tum brevitate mirabilis, nec poetica modo sed oratoria virtute eminentissimus.

[46] I shall, I think, be right in following the principle laid down by Aratus in the line, "With Jove let us begin," and in beginning with Homer. He is like his own conception of Ocean, which he describes as the source of every stream and river; for he has given us a model and an inspiration for every department of eloquence. It will be generally admitted that no one has ever surpassed him in the sublimity with which he invests great themes or the propriety with which he handles small. He is at once luxuriant and concise, sprightly and serious, remarkable at once for his fullness and his brevity, and supreme not merely for poetic, but for oratorical power as well.

[47] nam ut de laudibus, exhortationibus, consolationibus taceam, nonne vel nonus liber, quo missa ad Achillem legatio continetur, vel in primo inter duces illa contentio vel dictae in secundo sententiae omnes litium ac consiliorum explicant artes?

[47] For, to say nothing of his eloquence, which he shows in praise, exhortation and consolation, do not the ninth book containing the embassy to Achilles, the first describing the quarrel between the chiefs, or the speeches delivered by the counsellors in the second, display all the rules of art to be followed in forensic or deliberative oratory?

[48] adfectus quidem vel illos mites vel hos concitatos, nemo erit tam indoctus, qui non in sua potestate hunc auctorem habuisse fateatur. age vero, non utriusque operis sui ingressu in paucissimis versibus legem prooemiorum non dico servavit sed constituit? nam benevolum auditorem invocatione dearum, quas praesidere vatibus creditum est, et intentum proposita rerum magnitudine et docilem summa celeriter comprehensa facit.

[48] As regards the emotions, there can be no one so illeducated as to deny that the poet was the master of all, tender and vehement alike. Again, in the few lines with which he introduces both of his epics, has he not, I will not say observed, but actually established the law which should govern the composition of the exordium? For, by his invocation of the goddesses believed to preside over poetry he wins the goodwill of his audience, by his statement of the greatness of his themes he excites their attention and renders them receptive by the briefness of his summary.

[49] narrare vero quis brevius quam qui mortem nuntiat Patrocli, quis significantius potest quam qui Curetum Aetolorumque proelium exponit? iam similitudines, amplificationes, exempla, digressus, signa rerum et argumenta ceteraque genera probandi ac refutandi sunt ita multa, ut etiam qui de artibus scripserunt plurimi harum rerum testimonium ab hoc poeta petant.

[49] Who can narrate more briefly than the hero who brings the news of Patroclus' death, or more vividly than he who describes the battle between the Curetes and the Aetolians? Then consider his similes, his amplifications, his illustrations, digressions, indications of fact, inferences, and all the other methods of proof and refutation which he employs. They are so numerous that the majority of writers on the principles of rhetoric have gone to his works for examples of all these things.

[50] *nam epilogus quidem quis unquam poterit illis Priami rogantis Achillem precibus aequari? quid? in verbis, sentiis, figuris, dispositione totius operis nonne humani ingenii modum excedit? ut magni sit virtutes eius non aemulatione, quod fieri non potest, sed intellectu sequi.*

[50] And as for perorations, what can ever be equal to the prayers which Priam addresses to Achilles when he comes to beg for the body of his son? Again, does he not transcend the limits of human genius in his choice of words, his reflexions, figures, and the arrangement of his whole work, with the result that it requires a powerful mind, I will not say to imitate, for that is impossible, but even to appreciate his excellences?

[51] *verum hic omnes sine dubio et in omni genere eloquentiae procul a se reliquit, epicos tamen praecipue, videlicet quia clarissima in materia simili comparatio est.*

[51] But he has in truth outdistanced all that have come after him in every department of eloquence, above all, he has outstripped all other writers of epic, the contrast in their case being especially striking owing to the similarity of the material with which they deal.

[52] *raro assurgit Hesiodus, magnaue pars eius in nominibus est occupata; tamen utiles circa praecepta sententiae levitasque verborum et compositionis probabilis, daturque ei palma in illo medio genere dicendi.*

[52] Hesiod rarely rises to any height, while a great part of his works is filled almost entirely with names: none the less, his maxims of moral wisdom provide a useful model, the smooth flow of his words and structure merit our approval, and he is assigned the first place among writers of the intermediate style.

[53] *contra in Antimacho vis et gravitas et minime vulgare eloquendi genus habet laudem. sed quamvis ei secundas fere grammaticorum consensus deferat, et adfectibus et iucunditate et dispositione et omnino arte deficitur, ut plane manifesto appareat, quanto sit aliud proximum esse aliud secundum.*

[53] On the other hand, Antimachus deserves praise for the vigour, dignity and elevation of his language. But although practically all teachers of literature rank him second among epic poets, he is deficient in emotional power, charm, and arrangement of matter, and totally devoid of real art. No better example

can be found to show what a vast difference there is to being near another writer and being second to him.

[54] panyasin ex utroque mixtum putant in eloquendo neutriusque aequare virtutes, alterum tamen ab eo materia alterum disponendi ratione superari. Apollonius in ordinem a grammaticis datum non venit, quia Aristarchus atque Aristophanes, poetarum iudices, neminem sui temporis in numerum redegerunt; non tamen contemnendum reddidit opus aequali quadam mediocritate.

[54] Panyasis is regarded as combining the qualities of the last two poets, being their inferior in point of style, but surpassing Hesiod in the choice of his subject and Antimachus in its arrangement. Apollonius is not admitted to the lists drawn up by the professors of literature, because the critics, Aristarchus and Aristophanes, included no contemporary poets. None the less, his work is by no means to be despised, being distinguished by the consistency with which he maintains his level as a representative of the intermediate type.

[55] arati materia motu caret, ut in qua nulla varietas, nullus adfectus, nulla persona, nulla cuiusquam sit oratio; sufficit tamen operi, cui se parent credidit. admirabilis in suo genere Theocritus, sed musa illa rustica et pastoralis non forum modo, verum ipsam etiam urbem reformidat.

[55] The subject chosen by Aratus is lifeless and monotonous, affording no scope for pathos, description of character, or eloquent speeches. However, he is adequate for the task to which he felt himself equal. Theocritus is admirable in his own way, but the rustic and pastoral muse shrinks not merely from the forum, but from town-life of every kind.

[56] audire videor undique congerentes nomina plurimorum poetarum. quid? Herculis acta non bene Pisandros? Nicandrum frustra secuti Macer atque Vergilius? quid? Euphorionem transibimus? quem nisi probasset Vergilius, idem nunquam certe conditorum Chalcidico versu carminum fecisset in Bucolicis mentionem. quid? Horatius frustra Tyrtaeum Homero subiungit?

[56] I think I hear my readers on all sides suggesting the names of hosts of other poets. What? Did not Pisandros tell the story of Hercules in admirable style? Were there not good reasons for Virgil and Macer taking Nicander as a model? Are we to ignore Euphorion? Unless Virgil had admired him, he would never have mentioned

“verses written in Chalcidic strain”

in the *Eclogues*. Again, had Horace no justification for coupling the name of Tyrtaeus with that of Homer?

[57] nec sane quisquam est tam procul a cognitione eorum remotus, ut non indicem certe ex bibliotheca sumptum transferre in libros suos possit. nec

ignoro igitur quos transeo nec utique damno, ut qui dixerim esse in omnibus utilitatis aliquid.

[57] To which I reply, that there is no one so ignorant of poetic literature that he could not, if he chose, copy a catalogue of such poets from some library for insertion in his own treatises. I can therefore assure my readers that I am well aware of the existence of the poets whom I pass over in silence, and am far from condemning them, since I have already said that some profit may be derived from every author.

[58] sed ad illos iam perfectis constitutisque viribus revertemur; quod in cenis grandibus saepe facimus ut, cum optimis satiati sumus, varietas tamen nobis ex vilioribus grata sit. tunc et elegiam vacabit in manus sumere, cuius princeps habetur Callimachus, secundas confessione plurimorum Philetas occupavit.

[58] But we must wait till our powers have been developed and established to the full before we turn to these poets, just as at banquets we take our fill of the best fare and then turn to other food which, in spite of its comparative inferiority, is still attractive owing to its variety. Not until our taste is formed shall we have leisure to study the elegiac poets as well. Of these, Callimachus is regarded as the best, the second place being, according to the verdict of most critics, occupied by Philetas.

[59] sed dum adsequamur illam firmam, ut dixi, facilitatem, optimis adsuescendum est et multa magis quam multorum lectione formanda mens et ducendus color. itaque ex tribus receptis Aristarchi iudicio scriptoribus iamborum ad ἔξῃv maxime pertinebit unus Archilochus.

[59] But until we have acquired that assured facility of which I spoke, we must familiarise ourselves with the best writers only and must form our minds and develop an appropriate tone by reading that is deep rather than wide. Consequently, of the three writers of iambics approved by the judgment of Aristarchus, Archilochus will be far the most useful for the formation of the facility in question.

[60] summa in hoc vis elocutionis, cum validae tum breves vibrantesque sententiae, plurimum sanguinis atque nervorum, adeo ut videatur quibusdam, quod quouam minor est, materiae esse non ingenii vitium.

[60] For he has a most forcible style, is full of vigorous, terse and pungent reflexions, and overflowing with life and energy: indeed, some critics think that it is due solely to the nature of his subjects, and not to his genius, that any poets are to be ranked above him.

[61] novem vero Lyricorum longe Pindarus princeps spiritus magnificentia, sentiis, figuris, beatissima rerum verborumque copia et velut quodam eloquentiae flumine; propter quae Horatius eum merito credidit nemini

imitabilem.

[61] Of the nine lyric poets Pindar is by far the greatest, in virtue of his inspired magnificence, the beauty of his thoughts and figures, the rich exuberance of his language and matter, and his rolling flood of eloquence, characteristics which, as Horace rightly held, make him inimitable.

[62] Stesichorus quam sit ingenio validus, materiae quoque ostendunt, maxima bella et clarissimos canentem duces et epici carminis onera lyra sustinentem. reddit enim personis in agendo simul loquendoque debitam dignitatem, ac si tenuisset modum, videtur aemulari proximus Homerum potuisse; sed redundat atque effunditur, quod ut est reprehendendum, ita copiae vitium est.

[62] The greatness of the genius of Stesichorus is shown by his choice of subject: for he sings of the greatest wars and the most glorious of chieftains, and the music of his lyre is equal to the weighty themes of epic poetry. For both in speech and action he invests his characters with the dignity which is their due, and if he had only been capable of exercising a little more restraint, he might, perhaps, have proved a serious rival to Homer. But he is redundant and diffuse, a fault which, while deserving of censure, is nevertheless a defect springing from the very fullness of his genius.

[63] alcaeus in parte operis aureo plectro merito donatur, qua tyrannos insectatus multum etiam moribus confert in eloquendo quoque brevis et magnificus et dicendi vi plerumque oratori similis; sed et lusit et in amores descendit, maioribus tamen aptior.

[63] Alcaeus has deserved the compliment of being said to make music with *quill of gold* in that portion of his works in which he attacks the tyrants of his day and shows himself a real moral force. He is, moreover, terse and magnificent in style, while the vigour of his diction resembles that of oratory. But he also wrote poetry of a more sportive nature and stooped to erotic poetry, despite his aptitude for loftier themes.

[64] Simonides, tenuis alioqui, sermone proprio et iucunditate quadam commendari potest; praecipua tamen eius in commovenda miseratione virtus, ut quidam in hac eum parte omnibus eius operis auctoribus praeferant.

[64] Simonides wrote in a simple style, but may be recommended for the propriety and charm of his language. His chief merit, however, lies in his power to excite pity, so much so, in fact, that some rank him in this respect above all writers of this class of poetry.

[65] antiqua comoedia cum sinceram illam sermonis Attici gratiam prope sola retinet, tum facundissimae libertatis est et in insectandis vitiis praecipua, plurimum tamen virium etiam in ceteris partibus habet. nam et grandis et elegans et venusta, et nescio an ulla, post Homerum tamen, quem ut Achillem semper excipi par est, aut similior sit oratoribus aut ad oratores faciendos

aptior.

[65] The old comedy is almost the only form of poetry which preserves intact the true grace of Attic diction, while it is characterized by the most eloquent freedom of speech, and shows especial power in the denunciation of vice; but it reveals great force in other departments as well. For its style is at once lofty, elegant and graceful, and if we except Homer, who, like Achilles among warriors, is beyond all comparison, I am not sure that there is any style which bears a closer resemblance to oratory or is better adapted for forming the orator.

[66] plures eius auctores; Aristophanes tamen et Eupolis Cratinusque praecipui. tragoedias primus in lucem Aeschylus protulit, sublimis et gravis et grandiloquus saepe usque ad vitium, sed rudis in plerisque et incompositus; propter quod correctas eius fabulas in certamen deferre posterioribus poetis Athenienses permiserunt, suntque eo modo multi coronati.

[66] There are a number of writers of the old comedy, but the best are Aristophanes, Eupolis and Cratinus. Aeschylus was the first to bring tragedy into prominence: he is lofty, dignified, grandiloquent often to a fault, but frequently uncouth and inharmonious. Consequently, the Athenians allowed later poets to revise his tragedies and to produce them in the dramatic contests, and many succeeded in winning the prize by such means.

[67] sed longe clarius illustraverunt hoc opus Sophocles atque Euripides, quorum in dispari dicendi via uter sit poeta melior, inter plurimos quaeritur; idque ego sane, quoniam ad praesentem materiam nihil pertinet, iniudicatum relinquo. illud quidem nemo non fateatur necesse est, iis qui se ad agendum comparant utiliorem longe fore Euripiden.

[67] Sophocles and Euripides, however, brought tragedy to far greater perfection: they differ in style, but it is much disputed as to which should be awarded the supremacy, a question which, as it has no bearing on my present theme, I shall make no attempt to decide. But this much is certain and incontrovertible, that Euripides will be found of far greater service to those who are training themselves for pleading in court.

[68] namque is et sermone (quod ipsum reprehendunt, quibus gravitas et cothurnus et sonus Sophocli videtur esse sublimior) magis accedit oratorio generi et sentiis densus et in iis quae a sapientibus tradita sunt paene ipsi par, et dicendo ac respondendo cuilibet eorum qui fuerunt in foro disertis comparandus; in adfectibus vero cum omnibus mirus tum in iis qui miseratione constant facile praecipuus.

[68] For his language, although actually censured by those who regard the dignity, the stately stride and sonorous utterance of Sophocles as being more sublime, has a closer affinity to that of oratory, while he is full of striking

reflexions, in which, indeed, in their special sphere, he rivals the philosophers themselves, and for defence and attack may be compared with any orator that has won renown in the courts. Finally, although admirable in every kind of emotional appeal, he is easily supreme in the power to excite pity.

[69] hunc admiratus maxime est, ut saepe testatur, et secutus, quanquam in opere diverso, Menander, qui vel unus, meo quidem iudicio, diligenter lectus ad cuncta, quae praecipimus, effingenda sufficiat; ita omnem vitae imagine expressit, tanta in eo inveniendi copia et eloquendi facultas, ita est omnibus rebus, personis, adfectibus accommodatus.

[69] Menander, as he often testifies in his works, had a profound admiration for Euripides, and imitated him, although in a different type of work. Now, the careful study of Menander alone would, in my opinion, be sufficient to develop all those qualities with the production of which my present work is concerned; so perfect is his representation of actual life, so rich is his power of invention and his gift of style, so perfectly does he adapt himself to every kind of circumstance, character and emotion.

[70] nec nihil profecto viderunt, qui orationes, quae Charisii nomini addicuntur, a Menandro scriptas putant. sed mihi longe magis orator probari in opere suo videtur, nisi forte aut illa iudicia, quae Epitrepontes, Epicleros, Locroe habent, aut meditationes in Psophodee, Nomothete, Hypobolimaeo non omnibus oratoriis numeris sunt absolutae.

[70] Indeed, those critics are no fools who think the speeches attributed to Charisius were in reality written by Menander. But I consider that he shows his power as an orator far more clearly in his comedies; since assuredly we can find no more perfect models of every oratorical quality than the judicial pleadings of his Epitrepontes, Epicleros and Locri, or the declamatory speeches in the Psophodes, Nomothetes. and Hypobolimaeus.

[71] ego tamen plus adhuc quiddam collatum eum declamatoribus puto, quoniam his necesse est secundum condicionem controversiarum plures subire personas, patrum, filiorum, militum, rusticorum, divitum, pauperum, irascentium, deprecantium, mitium, asperorum. in quibus omnibus mire custoditur ab hoc poeta decor.

[71] Still, for my own part, I think that he will be found even more useful by declaimers, in view of the fact that they have, according to the nature of the various controversial themes, to undertake a number of different roles and to impersonate fathers, sons, soldiers, peasants, rich men and poor, the angry man and the suppliant, the gentle and the harsh. And all these characters are treated by this poet with consummate appropriateness.

[72] atque ille quidem omnibus eiusdem operis auctoribus abstulit nomen et fulgore quodam suae claritatis tenebras obduxit. tamen habent alii quoque

Comici, si cum venia leguntur, quaedam quae possis decerpere; et praecipue Philemon, qui ut prave sui temporis iudiciis Menandro saepe praelatus est, ita consensu tamen omnium meruit credi secundus.

[72] Indeed, such is his supremacy that he has scarce left a name to other writers of the new comedy, and has cast them into darkness by the splendour of his own renown. Still, you will find something of value in the other comic poets as well, if you read them in not too critical a spirit; above all, profit may be derived from the study of Philemon, who, although it was a depraved taste which caused his contemporaries often to prefer him to Menander, has none the less deserved the second place which posterity has been unanimous in awarding him.

[73] historiam multi scripsere praeclare, sed nemo dubitat longe duos ceteris praeferendos, quorum diversa virtus laudem paene est parem consecuta. densus et brevis et semper instans sibi Thucydides, dulcis et candidus et fusus Herodotus; ille concitatis hic remissis adfectibus melior, ille contionibus hic sermonibus, ille vi hic voluptate.

[74] If we turn to history, we shall find a number of distinguished writers; but there are two who must undoubtedly be set far above all their rivals: their excellences are different in kind, but have won almost equal praise. Thucydides is compact in texture, terse and ever eager to press forward: Herodotus is pleasant, lucid and diffuse: the former excels in vigour, speeches and the expression of the stronger passions; the latter in charm, conversations and the delineation of the gentler emotions.

[74] theopompus his proximus ut in historia praedictis minor, ita oratori magis similis, ut qui, antequam est ad hoc opus sollicitatus, diu fuerit orator. philistus quoque meretur, qui turbae quamvis bonorum post eos auctorum eximatur, imitator Thucydidis et ut multo infirmior ita aliquatenus lucidior. ephorus, ut Isocrati uisum, calcaribus eget.

[74] Theopompus comes next, and though as a historian he is inferior to the authors just mentioned, his style has a greater resemblance to oratory, which is not surprising, as he was an orator before he was urged to turn to history. Philistus also deserves special distinction among the crowd of later historians, good though they may have been: he was an imitator of Thucydides, and though far his inferior, was somewhat more lucid. Ephorus, according to Isocrates, needed the spur.

[75] clitarchi probatur ingenium, fides infamatur. longo post intervallo temporis natus Timagenes vel hoc est ipso probabilis, quod intermissam historias scribendi industriam nova laude reparavit. Xenophon non excidit mihi, sed inter philosophos reddendus est.

[75] Clitarchus has won approval by his talent, but his accuracy has been

impugned. Timagenes was born long after these authors, but deserves our praise for the very fact that he revived the credit of history, the writing of which had fallen into neglect. I have not forgotten Xenophon, but he will find his place among the philosophers.

[76] sequitur oratorum ingens manus, ut cum decem simul Athenis aetas una tulerit. quorum longe princeps Demosthenes ac paene lex orandi fuit; tanta vis in eo, tam densa omnia, ita quibusdam nervis intenta sunt, tam nihil otiosum, is dicendi modus, ut nec quod desit in eo nec quod redundet invenias.

[76] There follows a vast army of orators, Athens alone having produced ten remarkable orators in the same generation. Of these Demosthenes is far the greatest: indeed he came to be regarded almost as the sole pattern of oratory. Such is the force and compactness of his language, so muscular his style, so free from tameness and so self-controlled, that you will find nothing in him that is either too much or too little.

[77] plenior Aeschines et magis fusus et grandiori similis, quo minus strictus est; carnis tamen plus habet, minus lacertorum. dulcis in primis et acutus Hyperides, sed minoribus causis, ut non dixerim utilior, magis par.

[77] The style of Aeschines is fuller and more diffuse, while his lack of restraint gives an appearance of grandeur. But he has more flesh and less muscle. Hyperides has extraordinary charm and point, but is better qualified, not to say more useful, for cases of minor importance.

[78] his aetate Lysias maior, subtilis atque elegans et quo nihil, si oratori satis est docere, quaeras perfectius. nihil enim est inane, nihil arcessitum; puro tamen fonti quam magno flumini propior.

[78] Lysias belongs to an earlier generation than those whom I have just mentioned. He has subtlety and elegance and, if the orator's sole duty were merely to instruct, it would be impossible to conceive greater perfection. For there is nothing irrelevant or far-fetched in his speeches. None the less I would compare him to a clear spring rather than to a mighty river.

[79] Isocrates in diverso genere dicendi nitidus et comptus et palaestrae quam pugnae magis accommodatus omnes dicendi videres sectatus est, nec immerito; auditoriis enim se, non iudiciis compararat; in inventione facilis, honesti studiosus, in compositione adeo diligens, ut cura eius reprehendatur.

[79] Isocrates was an exponent of a different style of oratory: he is neat and polished and better suited to the fencingschool than to the battlefield. He elaborated all the graces of style, nor was he without justification. For he had trained himself for the lecture-room and not the law-courts. He is ready in invention, his moral ideals are high and the care which he bestows upon his rhythm is such as to be a positive fault.

[80] neque ego in his, de quibus sum locutus, has solas virtutes, sed has praecipuas puto, nec ceteros parum fuisse magnos. quin etiam Phalerea illum Demetrium, quanquam is primus inclinasse eloquentiam dicitur, multum ingenii habuisse et facundiae fateor, vel ob hoc memoria dignum, quod ultimus est fere ex Atticis, qui dici possit orator; quem tamen in illo medio genere dicendi praefero omnibus Cicero.

[80] I do not regard these as the sole merits of the orators of whom I have spoken, but have selected what seemed to me their chief excellences, while those whom I have passed over in silence were far from being indifferent. In fact, I will readily admit that the famous Demetrius of Phalerum, who is said to have been the first to set oratory on the downward path, was a man of great talent and eloquence and deserves to be remembered, if only for the fact that he is almost the last of the Attic school who can be called an orator: indeed Cicero prefers him to all other orators of the intermediate school.

[81] philosophorum, ex quibus plurimum se traxisse eloquentiae M. Tullius confitetur, quis dubitet Platonem esse praecipuum sive acumine disserendi sive eloquendi facultate divina quadam et Homerica? multum enim supra prosam orationem et quam pedestrem Graeci vocant surgit, ut mihi non hominis ingenio sed quodam Delphici videatur oraculo dei instinctus.

[81] Proceeding to the philosophers, from whom Cicero acknowledges that he derived such a large portion of his eloquence, we shall all admit that Plato is supreme whether in acuteness or perception or in virtue of his divine gift of style, which is worthy of Homer. For he soars high above the levels of ordinary prose or, as the Greeks call it, pedestrian language, and seems to me to be inspired not by mere human genius, but, as it were, by the oracles of the god of Delphi.

[82] quid ego commemorem Xenophontis illam iucunditatem inadfectatam, sed quam nulla consequi adfectatio possit? ut ipsae sermonem finxisse Gratiae videantur et, quod de Pericle veteris comoediae testimonium est, in hunc transferri iustissime possit, in labris eius sedisse quandam persuadendi deam. quid reliquorum Socraticorum elegantiam?

[82] Why should I speak of the unaffected charm of Xenophon, so far beyond the power of affectation to attain? The Graces themselves seem to have moulded his style, and we may with the utmost justice say of him, what the writer of the old comedy said of Pericles, that the goddess of persuasion sat enthroned upon his lips.

[83] quid Aristotelem? quem dubito scientia rerum an scriptorum copia an eloquendi suavitate an inventionum acumine an varietate operum clariorem putem. nam in Theophrasto tam est loquendi nitor ille divinus, ut ex eo nomen quoque traxisse dicatur.

[83] Why should I dwell on the elegance of the rest of the Socratics? or on Aristotle, with regard to whom I hesitate whether to praise him more for his knowledge, for the multitude of his writings, the sweetness of his style, the penetration revealed by his discoveries or the variety of the tasks which he essayed? In Theophrastus we find such a superhuman brilliance of style that his name is said to be derived therefrom.

[84] minus indulgere eloquentiae Stoici veteres; sed cum honesta suaserunt tum in colligendo probandoque quae instituerant plurimum valuerunt, rebus tamen acuti magis quam, id quod sane non adfectaverunt, oratione magnifici.

[84] The ancient Stoics indulged their eloquence comparatively little. Still, they pleaded the cause of virtue, and the rules which they laid down for argument and proof have been of the utmost value. But they showed themselves shrewd thinkers rather than striking orators, which indeed they never aimed at being.

[85] idem nobis per Romanos quoque auctores ordo ducendus est. itaque ut apud illos Homerus sic apud nos Vergilius auspiciatissimum dederit exordium, omnium eius generis poetarum Graecorum nostrorumque haud dubie proximus.

[85] I now come to Roman authors, and shall follow the same order in dealing with them. As among Greek authors Homer provided us with the most auspicious opening, so will Virgil among our own. For of all epic poets, Greek or Roman, he, without doubt, most nearly approaches to Homer.

[86] utar enim verbis iisdem, quae ex Afro Domitio iuvenis excepi; qui mihi interroganti, quem Homero crederet maxime accedere, Secundus, inquit, est Vergilius, propior tamen primo quam tertio. et hercule ut illi naturae caelesti atque immortalis cesserimus, ita curae et diligentiae vel ideo in hoc plus est, quod ei fuit magis laborandum, et quantum eminentibus vincimur, fortasse aequalitate pensamus.

[86] I will repeat the words which I heard Domitius Afer use in my young days. I asked what poet in his opinion came nearest to Homer, and he replied, "Virgil comes second, but is nearer first than third." And in truth, although we must needs bow before the immortal and superhuman genius of Homer, there is greater diligence and exactness in the work of Virgil just because his task was harder. And perhaps the superior uniformity of the Roman's excellence balances Homer's pre-eminence in his outstanding passages.

[87] ceteri omnes longe sequuntur. nam Macer et Lucretius legendi quidem, sed non ut phrasin, id est, corpus eloquentiae faciant, elegantes in sua quisque materia sed alter humilis, alter difficilis. atacinus Varro in iis, per quae nomen est adsecutus, interpret operis alieni, non spernendus quidem, verum ad augendam facultatem dicendi parum locuples.

[87] All our other poets follow a long way in the rear. Macer and Lucretius are,

it is true, worth reading, but not for the purpose of forming style, that is to say, the body of eloquence: both deal elegantly with their themes, but the former is tame and the latter difficult. The poems by which Varro of Atax gained his reputation were translations, but he is by no means to be despised, although his diction is not sufficiently rich to be of much service in developing the resources of eloquence.

[88] *ennium sicut sacros vetustate lucos adoremus, in quibus grandia et antiqua roboram iam non tantam habent speciem quantam religionem. propiores alii atque ad hoc, de quo loquimur, magis utiles. lascivus quidem in herois quoque Ovidius et nimium amator ingenii sui, laudandus tamen in partibus.*

[88] Ennius deserves our reverence, but only as those groves whose age has made them sacred, but whose huge and ancient trunks inspire us with religious awe rather than with admiration for their beauty. There are other poets who are nearer in point of time and more useful for our present purpose. Ovid has a lack of seriousness even when he writes epic and is unduly enamoured of his own gifts, but portions of his work merit our praise.

[89] *Cornelius autem Severus, etiam si sit versificator quam poeta melior, si tamen, ut est dictum, ad exemplar primi libri bellum Siculum perscripsisset, vindicaret sibi iure secundum locum. serranum consummari mors immatura non passa est; puerilia tamen eius opera et maximam indolem ostendunt et admirabilem praecipue in aetate illa recti generis voluntatem.*

[89] On the other hand, although Cornelius Severus is a better versifier than poet, yet if, as has been said, he had written his poem on the Sicilian war in the same style throughout as his first book, he would have had a just claim to the second place. A premature death prevented the powers of Serranus from ripening to perfection, but his youthful works reveal the highest talent and a devotion to the true ideal of poetry, which is remarkable in one so young.

[90] *multum in Valerio Flacco nuper amisimus. vehemens et poeticum ingenium Saleii Bassi fuit, nec ipsum senectute maturuit. Rabirius ac Pedo non indigni cognitione, si vacet. lucanus ardens et concitatus et sententiis clarissimus et, ut dicam quod sentio, magis oratoribus quam poetis imitandus.*

[90] We have suffered serious loss in the recent death of Valerius Flaccus. Saleius Bassus showed an ardent and genuinely poetic genius, but, like that of Serranus, it was not mellowed by years. Rabirius and Pedo deserve to be studied by those who have the time. Lucan is fiery and passionate and remarkable for the grandeur of his general reflexions, but, to be frank, I consider that he is more suitable for imitation by the orator than by the poet.

[91] *hos nominavimus, quia Germanicum Augustum ab institutis studiis deflexit cura terrarum, parumque dis visum est esse eum maximum poetarum. quid tamen his ipsis eius operibus, in quae donato imperio iuvenis secesserat,*

sublimius, doctius, omnibus denique numeris praestantius? quis enim caneret bella melius, quam qui sic gerit? quem praesidentes studiis deae propius audirent? cui magis suas artes aperiret familiare numen Minerva?

[91] I have restricted my list of poets to these names, because Germanicus Augustus has been distracted from the study of poetry on which he had embarked by his care for the governance of the world, and the gods have thought it scarce worthy of his powers that he should be the greatest of poets. But what can be more sublime, more learned, more perfect in every detail than those works to which he devoted himself in the seclusion to which he retired after conferring the supreme power upon his father and his brother? Who could sing of war better than he who wages it with such skill? To whom would the goddesses that preside over literature sooner lend an ear? To whom would Minerva, his familiar deity, more readily reveal her secrets?

[92] dicent haec plenius futura saecula, nunc enim ceterarum fulgore virtutum laus ista praestringitur. nos tamen sacra litterarum colentes feres, Caesar, si non tacitum hoc praeterimus et Vergiliano certe versu testamur,

inter uictrices hederam tibi serpere laurus.

[92] Future ages shall tell of these things more fully; to-day his glory as a poet is dimmed by the splendour of his other virtues. But you will forgive us, Caesar, who worship at the shrine of literature, if we refuse to pass by your achievements in silence and insist on testifying at least that, as Virgil sings,

The ivy creeps amid your victor bays

Ecl. viii. 13.

[93] elegia quoque Graecos provocamus, cuius mihi tersus atque elegans maxime videtur auctor Tibullus. sunt qui Propertium malint. Ovidius utroque lascivior, sicut durior Gallus. satura quidem tota nostra est, in qua primus insignem laudem adeptus Lucilius quosdam ita deditos sibi adhuc habet amatores, ut eum non eiusdem modo operis auctoribus, sed omnibus poetis praeferre non dubitent.

[93] We also challenge the supremacy of the Greeks in elegy. Of our elegiac poets Tibullus seems to me to be the most terse and elegant. There are, however, some who prefer Propertius. Ovid is more sportive than either, while Gallus is more severe. Satire, on the other hand, is all our own. The first of our poets to win renown in this connexion was Lucilius, some of whose devotees are so enthusiastic that they do not hesitate to prefer him not merely to all other satirists, but even to all other poets. I disagree with them as much as I do with Horace,

[94] ego quantum ab illis tantum ab Horatio dissentio, qui Lucilium fluere lutulentum et esse aliquid, quod tollere possis, putat. nam eruditio in eo mira

et libertas atque inde acerbitas et abunde salis. multum est tersior ac purus magis Horatius et, nisi labor eius amore, praecipuus. multum et verae gloriae quamvis uno libro Persius meruit. sunt clari hodieque et qui olim nominabuntur.

[94] who holds that Lucilius' verse has a "muddy flow, and that there is always something in him that might well be dispensed with." For his learning is as remarkable as his freedom of speech, and it is this latter quality that gives so sharp an edge and such abundance of wit to his satire. Horace is far terser and purer in style, and must be awarded the first place, unless my judgment is led astray by my affection for his work. Persius also, although he wrote but one book, has acquired a high and well-deserved reputation, while there are other distinguished satirists still living whose praises will be sung by posterity.

[95] alterum illud etiam prius saturae genus, sed non sola carminum varietate mixtum condidit Terentius Varro, vir Romanorum eruditissimus. plurimos hic libros et doctissimos composuit, peritissimus linguae Latinae et omnis antiquitatis et rerum Graecarum nostrarumque, plus tamen scientiae collaturus quam eloquentiae.

[95] There is, however, another and even older type of satire which derives its variety not merely from verse, but from an admixture of prose as well. Such were the satires composed by Terentius Varro, the most learned of all Romans. He composed a vast number of erudite works, and possessed an extraordinary knowledge of the Latin language, of all antiquity and of the history of Greece and Rome. But he is an author likely to contribute more to the knowledge of the student than to his eloquence.

[96] iambus non sane a Romanis celebratus est ut proprium opus, sed aliis quibusdam interpositus; cuius acerbitas in Catullo, Bibaculo, Horatio, quanquam illi epodos interveniat, reperietur. at Lyricorum idem Horatius fere solus legi dignus. nam et insurgit aliquando et plenus est iucunditatis et gratiae et varius figuris et verbis felicissime audax. si quem adiacere velis, is erit Caesius Bassus, quem nuper vidimus; sed eum longe praecedunt ingenia viventium.

[96] The iambic has not been popular with Roman poets as a separate form of composition, but is found mixed up with other forms of verse. It may be found in all its bitterness in Catullus, Bibaculus and Horace, although in the last-named the iambic is interrupted by the epode. Of our lyric writers Horace is almost the sole poet worth reading; for he rises at times to a lofty grandeur and is full of sprightliness and charm, while there is great variety in his figures, and his boldness in the choice of words is only equalled by his felicity. If any other lyric poet is to be mentioned, it will be Caesius Bassus, who has but lately passed from us. But he is far surpassed in talent by poets still living.

[97] tragoediae scriptores veterum Accius atque Pacuvius clarissimi gravitate sententiarum, verborum pondere, auctoritate personarum. ceterum nitor et summa in excolendis operibus manus magis videri potest temporibus quam ipsis defuisse. virium tamen Accio plus tribuitur; Pacuvium videri doctiorem qui esse docti adfectant volunt.

[97] Among writers of tragedy Accius and Pacuvius are most remarkable for the force of their general reflexions, the weight of their words and the dignity of their characters. But they lack polish, and failed to put the finishing touches on their works, although the fault was perhaps rather that of the times in which they lived than of themselves. Accius is generally regarded as the most vigorous, while those who lay claim to learning regard Pacuvius as the more learned of the two.

[98] iam Varii Thyestes cuilibet Graecarum comparari potest. ovidi Medea videtur mihi ostendere, quantam ille vir praestare potuerit, si ingenio suo imperare quam indulgere maluisset. eorum quos viderim longe princeps Pomponius Secundus, quem senes quidem parum tragicum putabant, eruditione ac nitore praestare confitebantur.

[98] The Thyestes of Varius is a match for any Greek tragedy, and the Medea of Ovid shows, in my opinion, to what heights that poet might have risen if he had been ready to curb his talents instead of indulging them. Of the tragic writers whom I myself have seen, Pomponius Secundus is by far the best: his older critics thought him insufficiently tragic, but admitted his eminence as far as learning and polish were concerned.

[99] in comoedia maxime claudicamus. licet Varro Musas, Aeli Stilonis sententia, Plautino dicat sermone locuturas fuisse, si Latine loqui vellent, licet Caecilium veteres laudibus ferant, licet Terentii scripta ad Scipionem Africanum referantur (quae tamen sunt in hoc genere elegantissima et plus adhuc habitura gratiae si intra versus trimetros stetissent), vix levem consequimur umbram,

[99] Comedy is our weakest point. Although Varro quotes Aelius Stilo as saying that if the Muses wished to speak Latin, they would use the language of Plautus, although the ancients extol Caecilius, and although Scipio Africanus is credited with the works of Terence (which are the most elegant of their kind, and would be still more graceful if the poet had confined himself to the iambic trimeter),

[100] adeo ut mihi sermo ipse Romanus non recipere videatur illam solis concessam Atticis venerem, cum eam ne Graeci quidem in alio genere linguae suae obtinuerint. togatis excellit Afranius; utinam non inquinasset argumenta puerorum foedis amoribus mores suos fassus.

[100] we still scarcely succeed in reproducing even a faint shadow of the charm

of Greek comedy. Indeed, it seems to me as though the language of Rome were incapable of reproducing that graceful wit which was granted to Athens alone, and was beyond the reach of other Greek dialects to achieve. Afranius excels in the purely Roman comedy, but it is to be regretted that he revealed his own character by defiling his plots with the introduction of indecent paederastic intrigues.

[101] at non historia cesserit Graecis, nec opponere Thucydidi Sallustium verear, neque indignetur sibi Herodotus aequari T. Livium, cum in narrando mirae iucunditatis clarissimique candoris, tum in contionibus supra quam enarrari potest eloquentem; ita quae dicuntur omnia cum rebus tum personis accommodata sunt; adfectus quidem, praecipueque eos qui sunt dulciores, ut parcissime dicam, inemo historicorum commendavit magis.

[101] In history, however, we hold our own with the Greeks. I should not hesitate to match Saillst against Thucydides, nor would Herodotus resent Titus Livius being placed on the same level as himself. For the latter has a wonderful charm and transparency in narrative, while his speeches are eloquent beyond description; so admirably adapted is all that is said both to the circumstances and the speaker; and as regards the emotions, especially the more pleasing of them, I may sum him up by saying that no historian has ever depicted them to greater perfection.

[102] ideoque immortalem illam Sallustii velocitatem diversis virtutibus consecutus est. nam mihi egregie dixisse videtur Servilius Nonianus, pares eos magis quam similes; qui et ipse a nobis auditus est, clarus vi ingenii et sententiis creber, sed minus pressus quam historiae auctoritas postulat.

[102] Thus it is that, although by different means, he has acquired no less fame than has been awarded to the immortal rapidity of Sallust. For I strongly approve of the saying of Servilius Nonianus, that these historians were equal rather than alike. Servilius, whom I myself have heard, is himself remarkable for the force of his intellect, and is full of general reflexions, but he is less restrained than the dignity of history demands.

[103] quam paulum aetate praecedens eum Bassus Aufidius egregie, utique in libris belli Germanici, praestitit genere ipso, probabilis in omnibus, sed in quibusdam suis ipse viribus minor.

[103] But that dignity is admirably maintained, thanks to his style, by Aufidius Bassus, a slightly earlier writer, especially in his work on the German war: he is always praiseworthy, though at times he fails to do his powers full justice.

[104] superest adhuc et exornat aetatis nostrae gloriam vir saeculorum memoria dignus, qui olim nominabitur, nunc intelligitur. habet amatores nec immerito Cremuti libertas, quanquam circumcisis quae dixisse ei nocuerat. sed elatum abunde spiritum et audaces sententias deprehendas etiam in his quae manent.

sunt et alii scriptores boni, sed nos genera degustamus, non bibliothecas excutimus.

[104] But there still survives to add lustre to this glorious age a man worthy to be remembered through all time: he is appreciated today, but after generations shall declare his name aloud. The bold utterances of Crenutius also have their admirers, and deserve their fame, though the passages which brought him to his ruin have been expurgated; still that which is left reveals a rich store of lofty animation and fearless reflexions upon life. There are other good writers as well, but I am merely selecting from the different departments of literature, not reviewing complete libraries.

[105] oratores vero vel praecipue Latinam eloquentiam parem facere Graecae possint. nam Ciceronem cuicumque eorum fortiter opposuerim. nec ignoro quantam mihi concitem pugnam, cum praesertim non sit id propositi, ut eum Demostheni comparem hoc tempore; neque enim attinet, cum Demosthenem in primis legendum vel ediscendum potius putem.

[105] But it is our orators, above all, who enable us to match our Roman eloquence against that of Greece. For I would set Cicero against any one of their orators without fear of refutation. I know well enough what a storm I shall raise by this assertion, more especially since I do not propose for the moment to compare him with Demosthenes; for there would be no point in such a comparison, as I consider that Demosthenes should be the object of special study, and not merely studied, but even committed to memory.

[106] quorum ego virtutes plerasque arbitror similes, consilium, ordinem, dividendi, praeparandi, probandi rationem, omnia denique quae sunt inventionis. in eloquendo est aliqua diversitas; densior ille hic copiosior, ille concludit adstrictius hic latius, pugnat ille acumine semper hic frequenter et pondere, illi nihil detrahi potest huic nihil adici, curae plus in illo in hoc naturae.

[106] I regard the excellences of these two orators as being for the most part similar, that is to say, their judgment, their gift of arrangement, their methods of division, preparation and proof, as well as everything concerned with invention. In their actual style there is some difference. Demosthenes is more concentrated, Cicero more diffuse; Demosthenes makes his periods shorter than Cicero, and his weapon is the rapier, whereas Cicero's periods are longer, and at times he employs the bludgeon as well: nothing can be taken from the former, nor added to the latter; the Greek reveals a more studied, the Roman a more natural art.

[107] salibus certe et commiseratione, qui duo plurimum in adfectibus valent, vincimus. et fortasse epilogos illi mos civitatis abstulerit; sed et nobis illa, quae Attici mirantur, diversa Latini sermonis ratio minus permiserit. in epistolis quidem, quanquam sunt utriusque, dialogisve, quibus nihil ille, nulla

contentio est.

[107] As regards wit and the power of exciting pity, the two most powerful instruments where the feelings are concerned, we have the advantage. Again, it is possible that Demosthenes was deprived by national custom of the opportunity of producing powerful perorations, but against this may be set the fact that the different character of the Latin language debars us from the attainment of those qualities which are so much admired by the adherents of the Attic school. As regards their letters, which have in both cases survived, and dialogues, which Demosthenes never attempted, there can be no comparison between the two.

[108] cedendum vero in hoc, quod et prior fuit et ex magna parte Ciceronem, quantus est, fecit. nam mihi videtur M. Tullius, cum se totum ad imitationem Graecorum contulisset, effinxisse vim Demosthenis, copiam Platonis, iucunditatem Isocratis.

[108] But, on the other hand, there is one point in which the Greek has the undoubted superiority: he comes first in point of time, and it was largely due to him that Cicero was able to attain greatness. For it seems to me that Cicero, who devoted himself heart and soul to the imitation of the Greeks, succeeded in reproducing the force of Demosthenes, the copious flow of Plato, and the charm of Isocrates.

[109] nec vero quod in quoque optimum fuit, studio consecutus est tantum; sed plurimas vel potius omnes ex se ipso virtutes extulit immortalis ingenii beatissima ubertas. non enim pluvias, ut ait Pindarus, aquas colligit, sed vivo gurgite exundat, dono quodam providentiae genitus, in quo totas vires suas eloquentia experiretur.

[109] But he did something more than reproduce the best elements in each of these authors by dint of careful study; it was to himself that he owed most of, or rather all his excellences, which spring from the extraordinary fertility of his immortal genius. For he does not, as Pindar says, "collect the rain from heaven, but wells forth with living water," since Providence at his birth conferred this special privilege upon him, that eloquence should make trial of all her powers in him.

[110] nam quis docere diligentius, movere vehementius potest? cui tanta unquam iucunditas adfuit? ut ipsa illa quae extorquet impetrare eum credas, et cum transversum vi sua iudicem ferat tamen ille non rapi videatur, sed sequi.

[110] For who can instruct with greater thoroughness, or more deeply stir the emotions? Who has ever possessed such a gift of charm? He seems to obtain as a boon what in reality he extorts by force, and when he wrests the judge from the path of his own judgment, the latter seems not to be swept away, but merely to follow.

[111] iam in omnibus quae dicit tanta auctoritas inest, ut dissentire pudeat, nec advocati studium sed testis aut iudicis adferat fidem, cum interim haec omnia, quae vix singula quisquam intentissima cura consequi posset, fluunt illaborata, et illa, qua nihil pulchrius auditum est, oratio prae se fert tamen felicissimam facilitatem.

[111] Further, there is such weight in all that he says that his audience feel ashamed to disagree with him, and the zeal of the advocate is so transfigured that it has the effect of the sworn evidence of a witness, or the verdict of a judge. And at the same time all these excellences, of which scarce one could be attained by the ordinary man even by the most concentrated effort, flow from him with every appearance of spontaneity, and his style, although no fairer has ever fallen on the ears of men, none the less displays the utmost felicity and ease.

[112] quare non immerito ab hominibus aetatis suae regnare in iudiciis dictus est, apud posteros vero id consecutus, ut Cicero iam non hominis nomen, sed eloquentiae habeatur. hunc igitur spectemus, hoc propositum nobis sit exemplum, ille se profecisse sciat, cui Cicero valde placebit.

[112] It was not, therefore, without good reason that his own contemporaries spoke of his “sovereignty” at the bar, and that for posterity the name of Cicero has come to be regarded not as the name of a man, but as the name of eloquence itself. Let us, therefore, fix our eyes on him, take him as our pattern, and let the student realise that he has made real progress if he is a passionate admirer of Cicero.

[113] multa in Asinio Pollione inventio, summa diligentia, adeo ut quibusdam etiam nimia videatur, et consilii et animi satis; a nitore et iucunditate Ciceronis ita longe abest, ut videri possit saeculo prior. at Messala nitidus et candidus et quadam modo praeferens in dicendo nobilitatem suam, viribus minor.

[113] Asinius Pollio had great gifts of invention and great precision of language (indeed, some think him too precise), while his judgment and spirit were fully adequate. But he is so far from equalling the polish and charm of Cicero that he might have been born a generation before him. Messala, on the other hand, is polished and transparent and displays his nobility in his utterance, but he fails to do his powers full justice.

[114] C. vero Caesar si foro tantum vacasset, non alius ex nostris contra Ciceronem nominaretur. tanta in eo vis est, id acumen, ea concitatio, ut illum eodem animo dixisse, quo bellavit, appareat; exornat tamen haec omnia mira sermonis, cuius proprie studiosus fuit, elegantia.

[114] As for Gaius Caesar, if he had had leisure to devote himself to the courts, he would have been the one orator who could have been considered a serious

rival to Cicero. Such are his force, his penetration and his energy that we realise that he was as vigorous in speech as in his conduct of war. And yet all these qualities are enhanced by a marvellous elegance of language, of which he was an exceptionally zealous student.

[115] multum ingenii in Caelio et praecipue in accusando multa urbanitas, dignusque vir cui et mens melior et vita longior contigisset. inveni qui Calvum praeferrent omnibus, inveni qui Ciceroni crederent, eum nimia contra se calumnia verum sanguinem perdidisse; sed est et sancta et gravis oratio et castigata et frequenter vehemens quoque. imitator autem est Atticorum, fecitque illi properata mors iniuriam, si quid adiecturus fuit.

[115] Caelius has much natural talent and much wit, more especially when speaking for the prosecution, and deserved a wiser mind and a longer life. I have come across some critics who preferred Calvus to all other orators, and others again who agreed with Cicero that too severe self-criticism had robbed him of his natural vigour. But he was the possessor of a solemn, weighty and chastened style, which was also capable at times of genuine vehemence. He was an adherent of the Attic school and an untimely death deprived him of his full meed of honour, at least if we regard him as likely to have acquired fresh qualities.

[116] et Servius Sulpicius insignem non inmerito famam tribus orationibus meruit. multa, si cum iudicio legatur, dabit imitatione digna Cassius Severus, qui si ceteris virtutibus colorem et gravitatem orationis adiecisset, ponendus inter praecipuos foret.

[116] Servius Sulpicius acquired a great and well-deserved reputation by his three speeches. Cassius Severus, if read with discrimination, will provide much that is worthy of imitation: if to his other merits he had added appropriateness of tone and dignity of style,

[117] nam et ingenii plurimum est in eo et acerbitas mira, et urbanitas et fervor; sed plus stomacho quam consilio dedit. praeterea ut amari sales, ita frequenter amaritudo ipsa ridicule est.

[117] he would deserve a place among the greatest. For his natural talents are great, his gift of bitterness, wit and passion remarkable, but he allowed the sharpness of his temper to prevail over his judgment. Moreover, though his jests are pungent enough, this very pungency often turned the laugh against himself.

[118] sunt alii multi disertissimi, (quos persequi longum est. eorum quos uiderim Domitius Afer et Iulius Africanus longe praestantissimi. arte ille et toto genere dicendi praeferendus et quem in numero veterum habere non timeas; hic concitator, sed in cura verborum nimius et compositione nonnunquam longior et translationibus parum modicus. erant clara et nuper ingenia.

[118] There are many other clever speakers, but it would be a long task to deal with them all. Domitius Afer and Julius Africanus are by far the most distinguished. The former is superior in art and in every department of oratory, indeed he may be ranked with the old orators without fear of contradiction. The latter shows greater energy, but is too great a precisian in the choice of words, prone to tediously long periods and somewhat extravagant in his metaphors. There have been distinguished talents even of more recent date.

[119] nam et Trachalus plerumque sublimis et satis apertus fuit et quem velle optima crederes, auditus tamen maior; nam et vocis, quantam in nullo cognovi, felicitas et pronuntiatio vel scenis suffectura et decor, omnia denique ei, quae sunt extra, superfuerunt; et Vibius Crispus compositus et iucundus et delectationi natus, privatis tamen causis quam publicis melior.

[119] For example, Trachalus was, as a rule, elevated and sufficiently clear in his language: one realised that his aims were high, but he was better to listen to than to read. For his voice was, in my experience, unique in its beauty of tone, while his delivery would have done credit to an actor, his action was full of grace and he possessed every external advantage in profusion. Vibius Crispus, again, was well-balanced, agreeable and born to charm, though he was better in private than in public cases.

[120] iulio Secundo, si longior contigisset aetas, clarissimum profecto nomen oratoris apud posteros foret. adiecisset enim atque adiciebat ceteris virtutibus suis quod desiderari potest; id est autem, ut esset multo magis pugnax et saepius ad curam rerum ab elocutione respiceret.

[120] Julius Secundus, had he lived longer, would undoubtedly have attained a great and enduring reputation. For he would have acquired, as he was actually acquiring, all that was lacking to his qualities, namely, a far greater pugnacity and a closer attention to substance as well as form.

[121] ceterum interceptus quoque magnum sibi vindicat locum; ea est facundia, tanta in explicando quod velit gratia, tam candidum et leve et speciosum dicendi genus, tanta verborum etiam quae adsumpta sunt proprietas, tanta in quibusdam ex periculo petitis significantia.

[121] But, in spite of the untimeliness of his end, he occupies a high place, thanks to his fluency, the grace with which he set forth whatever he desired, the lucidity, smoothness and beauty of his speech, the propriety revealed in the use of words, even when employed figuratively, and the point which characterises even his most hazardous expressions.

[122] habebunt, qui post nos de oratoribus scribent, magnam eos, qui nunc vigent, materiam vere laudandi. sunt enim summa hodie, quibus illustratur forum, ingenia. namque et consummati iam patroni veteribus aemulantur et

eos iuvenum ad optima tendentium imitatur ac sequitur industria.

[122] Subsequent writers on the history of oratory will find abundant material for praise among the orators who flourish to-day: for the law courts can boast a glorious wealth of talent. Indeed, the consummate advocates of the present day are serious rivals of the ancients, while enthusiastic effort and lofty ideals lead many a young student to tread in their footsteps and imitate their excellence.

[123] supersunt qui de philosophia scripserint, quo in genere paucissimos adhuc eloquentes litterae Romanae tulerunt. idem igitur M. Tullius, qui ubique, etiam in hoc opere Platonis aemulus exstitit. egregius vero multoque quam in orationibus praestantior Brutus suffecit ponderi rerum; scias eum sentire quae dicit.

[123] I have still to deal with writers on philosophy, of whom Rome has so far produced but few who are distinguished for their style. But Cicero, who is great in every department of literature, stands out as the rival of Plato in this department as well. Brutus was an admirable writer on such themes, in which he distinguished himself far more than in his speeches: he is equal to the serious nature of his subject, and the reader realises that he feels what he says.

[124] scripsit non parum multa Cornelius Celsus, Sextios secutus, non sine cultu ac nitore. Plautus in Stoicis rerum cognitioni utilis. in Epicureis levis quidem, sed non iniucundus tamen auctor est Catius.

[124] Cornelius Celsus, a follower of the Sextii, wrote a number of philosophical works, which have considerable grace and polish. Among the Stoics Plautus is useful as giving a knowledge of the subject.

[125] ex industria Senecam in omni genere eloquentiae distuli propter vulgatam falso de me opinionem, qua damnare eum et invisum quoque habere sum creditus. quod accidit mihi, dum corruptum et omnibus vitiis fractum dicendi genus revocare ad severiora iudicia contendo.

[125] Among the Epicureans Catius is agreeable to read, though lacking in weight. I have deliberately postponed the discussion of Seneca in connexion with the various departments of literature owing to the fact that there is a general, though false, impression that I condemn and even detest him. It is true that I had occasion to pass censure upon him when I was endeavouring to recall students from a depraved style, weakened by every kind of error, to a severer standard of taste.

[126] tum autem solus hic fere in manibus adolescentium fuit. quem non equidem omnino conabar excutere, sed potioribus praeferri non sinebam, quos ille non destiterat incessere, cum diversi sibi conscius generis placere se in dicendo posse iis, quibus illi placent, diffideret. Amabant autem eum magis quam imitabantur tantumque ab eo defluebant, quantum ille ab antiquis

descenderat.

[126] But at that time Seneca's works were in the hands of every young man, and my aim was not to ban his reading altogether, but to prevent his being preferred to authors superior to himself, but whom he was never tired of disparaging; for, being conscious of the fact that his own style was very different from theirs, he was afraid that he would fail to please those who admired them. But the young men loved him rather than imitated him, and fell as far below him as he fell below the ancients.

[127] foret enim optandum pares ac saltem proximos illi viro fieri. sed placebat propter sola vitia et ad ea se quisque dirigebat effingenda quae poterat; deinde cum se iactaret eodem modo dicere, Senecam infamabat.

[127] For I only wish they had equalled or at least approached his level. But he pleased them for his faults alone, and each individual sought to imitate such of those faults as lay within his capacity to reproduce: and then brought reproach on his master by boasting that he spoke in the genuine Senecan manner.

[128] cuius e multae alioqui et magnae virtutes fuerunt, ingenium facile et copiosum, plurimum studii, multa rerum cognitio; in qua tamen aliquando ab his, quibus inquirenda quaedam mandabat, deceptus est.

[128] Seneca had many excellent qualities, a quick and fertile intelligence with great industry and wide knowledge, though as regards the last quality he was often led into error by those whom he had entrusted with the task of investigating certain subjects on his behalf.

[129] tractavit etiam omnem fere studiorum materiam. nam et orationes eius et poemata et epistolae et dialogi feruntur. in philosophia parum diligens, egregius tamen vitiorum insectator fuit. multae in eo claraeque sententiae, multa etiam morum gratia legenda; sed in eloquendo corrupta pleraque atque eo perniciosissima, quod abundant dulcibus vitiis.

[129] He dealt with almost every department of knowledge; for speeches, poems, letters and dialogues all circulate under his name. In philosophy he showed a lack of critical power, but was none the less quite admirable in his denunciations of vice. His works contain a number of striking general reflexions and much that is worth reading for edification; but his style is for the most part corrupt and exceedingly dangerous, for the very reason that its vices are so many and attractive.

[130] velles eum suo ingenio dixisse, alieno iudicio. nam si oblique contempsisset, si parum recta non concupisset, si non omnia sua amasset, si rerum pondera minutissimis sententiis non fregisset, consensus potius eruditorum quam puerorum amore comprobaretur.

[130] One could wish that, while he relied on his own intelligence, he had

allowed himself to be guided by the taste of others. For if he had only despised all unnatural expressions and had not been so passionately fond of all that was incorrect, if he had not felt such affection for all that was his own, and had not impaired the solidity of his matter by striving after epigrammatic brevity, he would have won the approval of the learned instead of the enthusiasm of boys.

[131] *verum sic quoque iam robustis et severiore genere satis firmatis legendus vel ideo quod exercere potest utrinque iudicium. multa enim, ut dixi, probanda in eo, multa etiam admiranda sunt, eligere modo curae sit; quod utinam ipse fecisset. digna enim fuit illa natura, quae meliora vellet; quod voluit effecit.*

[131] But even as it is, he deserves to be read by those whose powers have been formed and firmly moulded on the standards of a severer taste, if only because he will exercise their critical faculties in distinguishing between his merits and his defects. For, as I have said, there is much in him which we may approve, much even that we may admire. Only we must be careful in our selection: would he had been as careful himself. For his genius deserved to be devoted to better aims, since what it does actually aim at, it succeeds in achieving.

2. *ex his ceterisque lectione dignis auctoribus et verborum sumenda copia est et varietas figurarum et componendi ratio, tum ad exemplum virtutum omnium mens dirigenda. neque enim dubitari potest, quin artis pars magna contineatur imitatione. nam ut invenire primum fuit estque praecipuum, sic ea, quae bene inventa sunt, utile sequi.*

2. It is from these and other authors worthy of our study that we must draw our stock of words, the variety of our figures and our methods of composition, while we must form our minds on the model of every excellence. For there can be no doubt that in art no small portion of our task lies in imitation, since, although invention came first and is all-important, it is expedient to imitate whatever has been invented with success.

[2] *atque omnis vitae ratio sic constat, ut quae probamus in aliis facere ipsi velimus. sic litterarum ductus, ut scribendi fiat usus, pueri sequuntur, sic musici vocem doctentium, pictores opera priorum, rustici probatam experimento culturam in exemplum intuentur; omnis denique disciplinae initia ad propositum sibi praescriptum formari videmus.*

[2] And it is a universal rule of life that we should wish to copy what we approve in others. It is for this reason that boys copy the shapes of letters that they may learn to write, and that musicians take the voices of their teachers, painters the works of their predecessors, and peasants the principles of agriculture which have been proved in practice, as models for their imitation. In fact, we may note that the elementary study of every branch of learning is directed by reference to some definite standard that is placed before the learner.

[3] et hercule necesse est aut similes aut dissimiles bonis sirus. similem raro natura praestat, frequenter imitatio. sed hoc ipsum, quod tanto faciliorem nobis rationem rerum omnium facit quam fuit iis, qui nihil quod sequerentur habuerunt, nisi caute et cum iudicio apprehenditur, nocet.

[3] We must, in fact, either be like or unlike those who have proved their excellence. It is rare for nature to produce such resemblance, which is more often the result of imitation. But the very fact that in every subject the procedure to be followed is so much more easy for us than it was for those who had no model to guide them, is a positive drawback, unless we use this dubious advantage with caution and judgment.

[4] ante omnia igitur imitatio per se ipsa non sufficit, vel quia pigri est ingenii contentum esse iis, quae sint ab allis inventa. quid enim futurum erat temporibus illis, quae sine exemplo fuerunt, si homines nihil, nisi quod iam cognovissent, faciendum sibi aut cogitandum putassent? nempe nihil fuisset inventum.

[4] The first point, then, that we must realise is that imitation alone is not sufficient, if only for the reason that a sluggish nature is only too ready to rest content with the inventions of others. For what would have happened in the days when models were not, if men had decided to do and think of nothing that they did not know already? The answer is obvious: nothing would ever have been discovered.

[5] cur igitur nefas est reperiri aliquid a nobis, quod ante non fuerit? An illi rudes sola mentis natura ducti sunt in hoc ut tam multa generarent, nos ad quaerendum non eo ipso concitemur, quod certe scimus invenisse eos qui quaesierunt?

[5] Why, then, is it a crime for us to discover something new? Were primitive men led to make so many discoveries simply by the natural force of their imagination, and shall we not then be spurred on to search for novelty by the very knowledge that those who sought of old were rewarded by success?

[6] et cum illi, qui nullum cuiusquam rei habuerunt magistrum, plurima in posteros tradiderunt, nobis usus aliarum rerum ad eruendas alias non proderit, sed nihil habebimus nisi beneficii alieni? quemadmodum quidam pictores in id solum student, ut describere tabulas mensuris ac lineis sciant.

[6] And seeing that they, who had none to teach them anything, have handed down such store of knowledge to posterity, shall we refuse to employ the experience which we possess of some things, to discover yet other things, and possess nought that is not owed to the beneficent activity of others? Shall we follow the example of those painters whose sole aim is to be able to copy pictures by using the ruler and the measuring rod?

[7] turpe etiam illud est, contentum esse id consequi quod imiteris. nam rursus

quid erat futurum, si nemo plus effecisset eo quem sequebatur? nihil in poetis supra Livium Andronicum, nihil in historiis supra Pontificum annales haberemus; ratibus adhuc navigaremus; non esset pictura, nisi quae lineas modo extremas umbrae, quam corpora in sole fecissent, circumscriberet.

[7] It is a positive disgrace to be content to owe all our achievement to imitation. For what, I ask again, would have been the result if no one had done more than his predecessors? Livius Andronicus would mark our supreme achievement in poetry and the annals of the *Pontifices* would be our *ne plus ultra* in history. We should still be sailing on rafts, and the art of painting would be restricted to tracing a line round a shadow thrown in the sunlight.

[8] ac si omnia percenseas, nulla mansit ars, qualis inventa est, nec intra initium stetit, nisi forte nostra potissimum tempora damnamus huius infelicitatis, ut nunc demum nihil crescat. nihil autem crescit sola imitatione.

[8] Cast your eyes over the whole of history; you will find that no art has remained just as it was when it was discovered, nor come to a standstill at its very birth, unless indeed we are ready to pass special condemnation on our own generation on the ground that it is so barren of invention that no further development is possible; and it is undoubtedly true that no development is possible for those who restrict themselves to imitation.

[9] quodsi prioribus adicere fas non est, quomodo sperare possumus illum oratorem perfectum? cum in his, quos maximos adhuc novimus, nemo sit inventus, in quo nihil aut desideretur aut reprehendatur. sed etiam qui summa non appetent, contendere potius quam sequi debent. nam qui hoc agit ut prior sit,

[9] But if we are forbidden to add anything to the existing stock of knowledge, how can we ever hope for the birth of our ideal orator? For of all the greatest orators with whom we are as yet acquainted, there is not one who has not some deficiency or blemish. And even those who do not aim at supreme excellence, ought to press toward the mark rather than be content to follow in the tracks of others.

[10] forsitan, etiamsi non transierit, aequabit. eum vero nemo potest aequare, cuius vestigiis sibi utique insistendum putat; necesse est enim semper sit posterior qui sequitur. adde quod plerumque facilius est plus facere quam idem. tantam enim difficultatem habet similitudo, ut ne ipsa quidem natura in hoc ita evaluerit, ut non res quae simillimae, quaeque pares maxime videantur, utique discrimine aliquo discernantur.

[10] For the man whose aim is to prove himself better than another, even if he does not surpass him, may hope to equal him. But he can never hope to equal him, if he thinks it his duty merely to tread in his footsteps: for the mere follower must always lag behind. Further, it is generally easier to make some

advance than to repeat what has been done by others, since there is nothing harder than to produce an exact likeness, and nature herself has so far failed in this endeavour that there is always some difference which enables us to distinguish even the things which seem most like and most equal to one another.

[11] *adde quod, quidquid alteri simile est, necesse est minus sit eo, quod imitatur, ut umbra corpore et imago facie et actus histrionum veris adfectibus. quod in orationibus quoque evenit. namque eis, quae in exemplum adsumimus, subest natura et vera vis; contra omnis imitatio ficta est et ad alienum propositum accommodatur.*

[11] Again, whatever is like another object, must necessarily be inferior to the object of its imitation, just as the shadow is inferior to the substance, the portrait to the features which it portrays, and the acting of the player to the feelings which he endeavours to reproduce. The same is true of oratory. For the models which we select for imitation have a genuine and natural force, whereas all imitation is artificial and moulded to a purpose which was not that of the original orator.

[12] *quod facit, ut minus sanguinis ac virium declamationes habeant quam orationes, quod in illis vera, in his adsimulata materia est. adde quod ea, quae in oratore maxima sunt, imitabilia non sunt, ingenium, inventio, vis, facilitas et quidquid arte non traditur.*

[12] This is the reason why declamations have less life and vigour than actual speeches, since the subject is fictitious in the one and real in the other. Again, the greatest qualities of the orator are beyond all imitation, by which I mean, talent, invention, force, facility and all the qualities which are independent of art.

[13] *ideoque plerique, cum verba quaedam ex orationibus excerpserunt aut aliquos compositionis certos pedes, mire a se, quae legerunt, effingi arbitrantur; cum et verba intercidant invalescantque temporibus, ut quorum certissima sit regula in consuetudine, eaque non sua natura sint bona aut mala (nam per se soni tantum sunt), sed prout opportune proprieque aut secus collocata sunt, et compositio cum rebus accommodata sit, tum ipsa varietate gratissima.*

[13] Consequently, there are many who, after excerpting certain words from published speeches or borrowing certain particular rhythms, think that they have produced a perfect copy of the works which they have read, despite the fact that words become obsolete or current with the lapse of years, the one sure standard being contemporary usage; and they are not good or bad in virtue of their inherent nature (for in themselves they are no more than mere sounds), but solely in virtue of the aptitude and propriety (or the reverse) with which they are arranged, while rhythmical composition must be adapted to the

theme in hand and will derive its main charm from its variety.

[14] quapropter exactissimo iudicio circa hanc partem studiorum examinanda sunt omnia. primum, quos imitemur; nam sunt plurimi, qui similitudinem pessimi cuiusque et corruptissimi concupierunt; tum in ipsis, quos elegerimus, quid sit, ad quod nos efficiendum comparemus.

[14] Consequently the nicest judgment is required in the examination of everything connected with this department of study. First we must consider whom to imitate. For there are many who have shown a passionate desire to imitate the worst and most decadent authors. Secondly, we must consider what it is that we should set ourselves to imitate in the authors thus chosen.

[15] nam in magnis quoque auctoribus incidunt aliqua vitiosa et a doctis, inter ipsos etiam mutuo reprehensa; atque utinam tam bona imitantes dicerent melius quam mala peius dicunt. nec vero saltem iis, quibus ad evitanda vitia iudicii satis fuit, sufficiat imaginem virtutis effingere et solam, ut sic dixerim, cutem vel potius illas Epicuri figuras, quas e summis corporibus dicit effluere.

[15] For even great authors have their blemishes, for which they have been censured by competent critics and have even reproached each other. I only wish that imitators were more likely to improve on the good things than to exaggerate the blemishes of the authors whom they seek to copy. And even those who have sufficient critical acumen to avoid the faults of their models will not find it sufficient to produce a copy of their merits, amounting to no more than a superficial resemblance, or rather recalling those sloughs which, according to Epicurus, are continually given off by material things.

[16] hoc autem his accidit, qui non introspectis penitus virtutibus ad primum se velut aspectum orationis aptarunt; et cum iis felicissime cessit imitatio, verbis atque numeris sunt non multum differentes, vim dicendi atque inventionis non adsequuntur, sed plerumque declinant in peius et proxima virtutibus vitia comprehendunt fiuntque pro grandibus tumidi, pressis exiles, fortibus temerarii, laetis corrupti, compositis exultantes, simplicibus negligentes.

[16] But this is just what happens to those who mould themselves on the first impressions derived from the style of their model, without devoting themselves to a thorough investigation of its good qualities, and, despite the brilliance of their imitation and the close resemblance of their language and rhythm, not only fail absolutely to attain the force of style and invention possessed by the original, but as a rule degenerate into something worse, and achieve merely those faults which are hardest to distinguish from virtues: they are turgid instead of grand, bald instead of concise, and rash instead of courageous, while extravagance takes the place of wealth, over-emphasis the place of harmony and negligence of simplicity.

[17] ideoque qui horride atque incomposite quidlibet illud frigidum et inane

extulerunt, antiquis se pares credunt; qui carent cultu atque sententiis, Attici scilicet; qui praecisus conclusionibus obscuri, Sallustium atque Thucydidem superant; tristes ac ieiuni Pollionem aemulantur: otiosi et supini, si quid modo longius circumdlexerunt, iurant ita Ciceronem locuturum fuisse.

[17] As a result, those who flaunt tasteless and insipid thoughts, couched in an uncouth and inharmonious form, think that they are the equals of the ancients; those who lack ornament and epigram, pose as Attic; those who darken their meaning by the abruptness with which they close their periods, count themselves the superiors of Sallust and Thucydides; those who are dreary and jejune, think that they are serious rivals to Pollio, while those who are tame and listless, if only they can produce long enough periods, swear that this is just the manner in which Cicero would have spoken.

[18] noveram quosdam, qui se pulchre expressisse genus illud caelestis huius in dicendo viri sibi viderentur, si in clausula posuissent esse videatur. ergo primum est, ut quod imitaturus est quisque intelligat et quare bonum sit sciat.

[18] I have known some who thought that they had produced a brilliant imitation of the style of that divine orator, by ending their periods with the phrase *esse videatur*. Consequently it is of the first importance that every student should realise what it is that he is to imitate, and should know why it is good.

[19] tum in suscipiendo onere consulat suas vires. nam quaedam sunt imitabilia, quibus aut infirmitas naturae non sufficiat aut diversitas repugnet. ne, cui tenue ingenium erit, sola velit fortia et abrupta; cui forte quidem, sed indomitum, amore subtilitatis et vim suam perdat et elegantiam quam cupit non persequatur; nihil est enim tam indecens, quam cum mollia dure fiunt.

[19] The next step is for each student to consult his own powers when he shoulders his burden. For there are some things which, though capable of imitation, may be beyond the capacity of any given individual, either because his natural gifts are insufficient or of a different character. The man whose talent is for the plain style should not seek only what is bold and rugged, nor yet should he who has vigour without control suffer himself through love of subtlety at once to waste his natural energy and fail to attain the elegance at which he aims: for there is nothing so unbecoming as delicacy wedded to ruggedness.

[20] atque ego illi praeceptori, quem institueram in libro secundo, credidi non ea sola docenda esse, ad quae quemque discipulorum natura compositum videret; nam is et adiuvere debet, quae in quoque eorum invenit bona, et, quantum fieri potest, adicere quae desunt et emendare quaedam et mutare; rector enim est alienorum ingeniorum atque formator.

[20] True, I did express the opinion that the instructor whose portrait I painted

in my second book, should not confine himself to teaching those things for which he perceived his individual pupils to have most aptitude. For it is his further duty to foster whatever good qualities he may perceive in his pupils, to make good their deficiencies as far as may be, to correct their faults and turn them to better things. For he is the guide and director of the minds of others. It is a harder task to mould one's own nature.

[21] *difficilius est naturam suam fingere. sed ne ille quidem doctor, quanquam omnia quae recta sunt velit esse in suis auditoribus quam plenissima, in eo tamen, cui naturam obstare viderit, laborabit.*

id quoque vitandum, in quo magna pars errat, ne in oratione poetas nobis et historicos, in illis operibus oratores aut declamatores imitandos putemus.

[21] But not even our ideal teacher, however much he may desire that everything that is correct should prevail in his school to the fullest extent, will waste his labour in attempting to develop qualities to the attainment of which he perceives nature's gifts to be opposed.

It is also necessary to avoid the fault to which the majority of students are so prone, namely, the idea that in composing speeches we should imitate the poets and historians, and in writing history or poetry should copy orators and declaimers.

[22] *sua cuique proposita lex, suus cuique decor est. nam nec comoedia in cothurnos adsurgit, nec contra tragoedia socco ingreditur. habet tamen omnis eloquentia aliquid commune; id imitemur quod commune est.*

[22] Each branch of literature has its own laws and its own appropriate character. Comedy does not seek to increase its height by the buskin and tragedy does not wear the slipper of comedy. But all forms of eloquence have something in common, and it is to the imitation of this common element that our efforts should be confined.

[23] *etiam hoc solet incommodi accidere iis, qui se uni alicui generi dediderunt, ut, si asperitas iis placuit alicuius, hanc etiam in leni ac remisso causarum genere non exuant; si tenuitas ac iucunditas, in asperis gravibusque causis ponderi rerum parum respondeant: cum sit diversa non causarum modo inter ipsas condicio, sed in singulis etiam causis partium, sintque alia leniter alia aspere, alia concitate alia remisse, alia docendi alia movendi gratia dicenda; quorum omnium dissimilis atque diversa inter se ratio est.*

[23] There is a further fault to which those persons are liable who devote themselves entirely to the imitation of one particular style: if the rude vigour of some particular author takes their fancy, they cling to it even when the case on which they are engaged calls for an easy and flowing style; if, on the other hand, it is a simple or agreeable style that claims their devotion, they fail to meet the heavy demands of severe and weighty cases. For not only do cases

differ in their general aspect, but one part of a case may differ from another, and some things require a gentle and others a violent style, some require an impetuous and others a calm diction, while in some cases it is necessary to instruct and in others to move the audience, in all these instances dissimilar and different methods being necessary.

[24] itaque ne hoc quidem suaserim, uni se alicui proprie, quem per omnia sequatur, addicere. longe perfectissimus Graecorum Demosthenes, aliquid tamen aliquo in loco melius alii, plurima ille. sed non qui maxime imitandus, et solus imitandus est.

[24] Consequently I should be reluctant even to advise a student to select one particular author to follow through thick and thin. Demosthenes is by far the most perfect of Greek orators, yet there are some things which others have said better in some contexts as against the many things which he has said better than others. But it does not follow that because we should select one author for special imitation, he should be our only model. What then?

[25] quid ergo? non est satis omnia sic dicere, quomodo M. Tullius dixit? mihi quidem satis esset, si omnia consequi possem. quid tamen noceret vim Caesaris, asperitatem Caelii, diligentiam Pollionis, iudicium Calvi quibusdam in locis adsumere?

[25] Is it not sufficient to model our every utterance on Cicero? For my own part, I should consider it sufficient, if I could always imitate him successfully. But what harm is there in occasionally borrowing the vigour of Caesar, the vehemence of Caelius, the precision of Pollio or the sound judgment of Calvus?

[26] nam praeter id quod prudentis est, quod in quoque optimum est, si possit, suum facere, tum in tanta rei difficultate unum intuentes vix aliqua pars sequitur. ideoque cum totum exprimere quem elegeris paene sit homini inconcessum, plurium bona ponamus ante oculos, ut aliud ex alio haereat, et quod cuique loco conveniat aptemus.

[26] For quite apart from the fact that a wise man should always, if possible, make whatever is best in each individual author his own, we shall find that, in view of the extreme difficulty of our subject, those who fix their eyes on one model only will always find some one quality which it is almost impossible to acquire therefrom. Consequently, since it is practically impossible for mortal powers to produce a perfect and complete copy of any one chosen author, we shall do well to keep a number of different excellences before our eyes, so that different qualities from different authors may impress themselves on our minds, to be adopted for use in the place that becomes them best.

[27] imitatio autem (nam saepius idem dicam) non sit tantum in verbis. illuc intendenda mens, quantum fuerit illis viris decoris in rebus atque personis,

quod consilium, quae dispositio, quam omnia, etiam quae delectationi videantur data, ad victoriam spectent; quid agatur prooemio, quae ratio et quam varia narrandi, quae vis probandi ac refellendi, quanta in adfectibus omnis generis movendis scientia, quamque laus ipsa popularis utilitatis gratia adsumpta, quae tum est pulcherrima, cum sequitur, non cum arcessitur. haec si perviderimus, tum vere imitabimur.

[27] But imitation (for I must repeat this point again and again) should not be confined merely to words. We must consider the appropriateness with which those orators handle the circumstances and persons involved in the various cases in which they were engaged, and observe the judgment and powers of arrangement which they reveal, and the manner in which everything they say, not excepting those portions of their speeches which seem designed merely to delight their audience, is concentrated on securing the victory over their opponents. We must note their procedure in the exordium, the method and variety of their statement of facts, the power displayed in proof and refutation, the skill revealed in their appeal to every kind of emotion, and the manner in which they make use of popular applause to serve their case, applause which is most honourable when it is spontaneous and not deliberately courted. If we have thoroughly appreciated all these points, we shall be able to imitate our models with accuracy.

[28] qui vero etiam propria his bona adiecerit, ut suppleat quae deerant, circumcidat, si quid redundabit, is erit, quem quaerimus, perfectus orator; quem nunc consummari potissimum oporteat, cum tanto plura exempla bene dicendi supersint quam illis, qui adhuc summi sunt, contigerunt. nam erit haec quoque laus eorum, ut priores superasse, posteros docuisse dicantur.

[28] But the man who to these good qualities adds his own, that is to say, who makes good deficiencies and cuts down whatever is redundant, will be the perfect orator of our search; and it is now above all times that such perfection should be attained when there are before us so many more models of oratorical excellence than were available for those who have thus far achieved the highest success. For this glory also shall be theirs, that men shall say of them that while they surpassed their predecessors, they also taught those who came after.

3. et haec quidem auxilia extrinsecus adhibentur; in iis autem quae nobis ipsis paranda sunt, ut laboris sic utilitatis etiam longe plurimum adfert stilus. nec immerito M. Tullius hunc optimum effectorem ac magistrum dicendi vocat; cui sententiae personam L. Crassi in disputationibus quae sunt de oratore adsignando, iudicium suum cum illius auctoritate coniunxit.

3. Such are the aids which we may derive from external sources; as regards those which we must supply for ourselves, it is the pen which brings at once the most labour and the most profit. Cicero is fully justified in describing it as

the best producer and teacher of eloquence, and it may be noted that in the *de Oratore* he supports his own judgment by the authority of Lucius Crassus, in whose mouth he places this remark.

[2] scribendum ergo quam diligentissime et quam plurimum. nam ut terra alte refossa generandis alendisque seminibus fecundior fit, sic profectus non a summio petitus studiorum fructus effundit uberius et fidelius continet. nam sine hac quidem conscientia ipsa illa ex tempore dicendi facultas inanem modo loquacitatem dabit et verba in labris nascentia.

[2] We must therefore write as much as possible and with the utmost care. For as deep ploughing makes the soil more fertile for the production and support of crops, so, if we improve our minds by something more than mere superficial study, we shall produce a richer growth of knowledge and shall retain it with greater accuracy. For without the consciousness of such preliminary study our powers of speaking extempore will give us nothing but an empty flow of words, springing from the lips and not from the brain.

[3] illic radices, illic fundamenta sunt, illic opes velut sanctiore quodam aerario conditae, unde ad subitos quoque casus, cum res exiget, proferantur. vires faciamus ante omnia, quae sufficiant labori certaminum et usu non exhauriantur.

[3] It is in writing that eloquence has its roots and foundations, it is writing that provides that holy of holies where the wealth of oratory is stored, and whence it is produced to meet the demands of sudden emergencies. It is of the first importance that we should develop such strength as will not faint under the toil of forensic strife nor be exhausted by continual use.

[4] nihil enim rerum ipsa natura voluit magnum effici cito praeposuitque pulcherrimo cuique operi difficultatem; quae nascendi quoque hanc fecerit legem, ut maiora animalia diutius visceribus parentis continerentur.

sed cum sit duplex quaestio, quomodo et quae maxime scribi oporteat, iam hinc ordinem sequar.

[4] For it is an ordinance of nature that nothing great can be achieved in a moment, and that all the fairest tasks are attended with difficulty, while on births as well she has imposed this law, that the larger the animal, the longer should be the period of gestation.

There are, however, two questions which present themselves in this connexion, namely, what should be our method and what the subjects on which we write, and I propose to treat them in this order.

[5] sit primo vel tardus dum diligens stilus, quaeramus optima nec protinus offerentibus se gaudeamus, adhibeatur iudicium inventis, dispositio probatis. delectus enim rerum uerborumque agendus est et pondera singulorum

examinanda. post subeat ratio collocandi versenturque omni modo numeri, non ut quodque se proferet verbum occupet locum.

[5] At first, our pen must be slow yet sure: we must search for what is best and refuse to give a joyful welcome to every thought the moment that it presents itself; we must first criticise the fruits of our imagination, and then, once approved, arrange them with care. For we must select both thoughts and words and weigh them one by one. This done, we must consider the order in which they should be placed, and must examine all the possible varieties of rhythm, refusing necessarily to place each word in the order in which it occurs to us.

[6] quae quidem ut diligentius exsequamur, repetenda saepius erunt scriptorum proxima. nam praeter id quod sic melius iunguntur prioribus sequentia, calor quoque ille cogitationis, qui scribendi mora refrixit, recipit ex integro vires et velut repetito spatio sumit impetum; quod in certamine saliendi fieri videmus, ut conatum longius petant et ad illud, quo contenditur, spatium cursu ferantur; utque in iaculando brachia reducimus et expulsuri tela nervos retro tendimus.

[6] In order to do this with the utmost care, we must frequently revise what we have just written. For beside the fact that thus we secure a better connexion between what follows and what precedes, the warmth of thought which has cooled down while we were writing is revived anew, and gathers fresh impetus from going over the ground again. We may compare this process with what occurs in jumping matches. The competitors take a longer run and go at full speed to clear the distance which they aim at covering; similarly, in throwing the javelin, we draw back our arms, and in archery pull back the bow-string to propel the shaft.

[7] interim tamen, si feret flatus, danda sunt vela, dum nos indulgentia illa non fallat. omnia enim nostra, dum nascuntur, placent; alioqui nec scriberentur. sed redeamus ad iudicium et retractemus suspectam facilitate.

[7] At times, however, we may spread our sails before the favouring breeze, but we must beware that this indulgence does not lead us into error. For we love all the offspring of our thought at the moment of their birth; were that not so, we should never commit them to writing. But we must give them a critical revision, and go carefully over any passage where we have reason to regard our fluency with suspicion.

[8] sic scripsisse Sallustium accepimus, et sane manifestus est etiam ex opere ipso labor. vergilium quoque paucissimos die composuisse versus auctor est Varius. oratoris quidem alia condicio est;

[8] It is thus, we are told, that Sallust wrote, and certainly his works give clear evidence of the labour which he expended on them. Again, we learn from Varius that Virgil composed but a very small number of verses every day.

[9] itaque hanc moram et sollicitudinem initiis impero. nam primum hoc constituendum, hoc obtinendum est, ut quam optime scribamus; celeritatem dabit consuetudo. paulatim res facilius se ostendent, verba respondebunt, compositio sequetur, cuncta denique ut in familia bene instituta in officio erunt. summa haec est rei:

[9] It is true that with orators the case is somewhat different, and it is for this reason that I enjoin such slowness of speed and such anxious care at the outset. For the first aim which we must fix in our minds and insist on carrying into execution is to write as well as possible; speed will come with practice. Gradually thoughts will suggest themselves with increasing readiness, the words will answer to our call and rhythmical arrangement will follow, till everything will be found fulfilling its proper function as in a well-ordered household. The sum of the whole matter is this:

[10] cito scribendo non fit, ut bene scribatur; bene scribendo fit, ut cito. sed tum maxime, cum facultas illa contigerit, resistamus ut provideamus et efferentes equos frenis quibusdam coerceamus; quod non tam moram faciet quam novos impetus dabit. neque enim rursus eos, qui robur aliquod in stilo fecerint, ad infelicem calumniandi se poenam alligandos puto.

[10] write quickly and you will never write well, write well and you will soon write quickly. But it is just when we have acquired this facility that we must pause awhile to look ahead and, if I may use the metaphor, curb the horses that would run away with us. This will not delay our progress so much as lend us fresh vigour. For I do not think that those who have acquired a certain power in writing should be condemned to the barren pains of false self-criticism.

[11] nam quomodo sufficere officiis civilibus possit, qui singulis actionum partibus insenescat? sunt autem quibus nihil sit satis; omnia mutare, omnia aliter dicere quam occurrit velint; increduli quidam et de ingenio suo pessime meriti, qui diligentiam putant facere sibi scribendi difficultatem.

[11] How can anyone fulfil his duties as an advocate if he wastes his time in putting unnecessary finish on each portion of his pleadings? There are some who are never satisfied. They wish to change everything they have written and to put it in other words. They are a diffident folk, and deserve but ill of their own talents, who think it a mark of precision to cast obstacles in the way of their own writing.

[12] nec promptum est dicere, utros peccare validius putem, quibus omnia sua placent an quibus nihil. accidit enim etiam ingeniosis adolescentibus frequenter, ut labore consumantur et in silentium usque descendant nimia bene dicendi cupiditate. qua de re memini narrasse mihi iulium Secundum illum, aequalem meum atque a me, ut notum est, familiariter amatum, mirae facundiae virum, infinitae tamen curae, quid esset sibi a patruo suo dictum.

[12] Nor is it easy to say which are the most serious offenders, those who are satisfied with everything or those who are satisfied with nothing that they write. For it is of common occurrence with young men, however talented they may be, to waste their gifts by superfluous elaboration, and to sink into silence through an excessive desire to speak well. I remember in this connexion a story that Julius Secundus, my contemporary, and, as is well known, my very dear friend, a man with remarkable powers of eloquence, but with an infinite passion for precision, told me of the words once used to him by his uncle,

[13] is fuit Iulius Florus, in eloquentia Galliarum, quoniam ibi demum exercuit eam, princeps, alioqui inter paucos disertus et dignus illa propinquitate. is cum Secundum, scholae adhuc operatum, tristem forte vidisset, interrogavit, quae causa frontis tam adductae.

[13] Julius Florus, the leading orator of Gaul, for it was there that he practised, a man eloquent as but few have ever been, and worthy of his nephew. He once noticed that Secundus, who was still a student, was looking depressed, and asked him the meaning of his frowns. The youth made no concealment of the reason:

[14] nec dissimulavit adolescens, tertium iam diem esse, quod omni labore materiae ad scribendum destinatae non inveniret exordium; quo sibi non praesens tantum dolor, sed etiam desperatio in posterum fieret. tum Florus arridens, numquid tu, inquit, melius dicere vis quam potes?

[14] he had been working for three days, and had been unable, in spite of all his efforts, to devise an exordium for the theme which he had been given to write, with the result that he was not only vexed over his immediate difficulty, but had lost all hope of future success. Florus smiled and said, "Do you really want to speak better than you can?"

[15] ita se res habet. curandum est ut quam optime dicamus; dicendum tamen pro facultate. ad profectum enim opus est studio non indignatione. ut possimus autem scribere etiam plura et celerius, non exercitatio modo praestabit, in qua sine dubio multum est, sed etiam ratio; si non resupini spectantesque tectum et cogitationem murmure agitantes exspectaverimus quid obveniat; sed quid res poscat, quid personam deceat, quod sit tempus, qui iudicis animus intuiti, humano quodam modo ad scribendum accesserimus. sic nobis et initia et quae sequuntur natura ipsa praescribit.

[15] There lies the truth of the whole matter. We must aim at speaking as well as we can, but must not try to speak better than our nature will permit. For to make any real advance we need study, not selfaccusation. And it is not merely practice that will enable us to write at greater length and with increased fluency, although doubtless practice is most important. We need judgement as well. So long as we do not lie back with eyes turned up to the ceiling, trying to fire our imagination by muttering to ourselves, in the hope that something will

present itself, but turn our thoughts to consider what the circumstances of the case demand, what suits the characters involved, what is the nature of the occasion and the temper of the judge, we shall acquire the power of writing by rational means. It is thus that nature herself bids us begin and pursue our studies once well begun.

[16] certa sunt enim pleraque et, nisi conieueamus, in oculos incurrunt; ideoque nec indocti nec rustici diu quaerunt, unde incipiant; quo pudendum est magis, si difficultatem facit doctrina. non ergo semper putemus optimum esse quod latet; immutescamus alioqui, si nihil dicendum videatur, nisi quod non invenimus.

[16] For most points are of a definite character and, if we keep our eyes open, will spontaneously present themselves. That is the reason why peasants and uneducated persons do not beat about the bush to discover with what they should begin, and our hesitation is all the more shameful if it is simply the result of education. We must not, therefore, persist in thinking that what is hard to find is necessarily best; for, if it seems to us that there is nothing to be said except that which we are unable to find, we must say nothing at all.

[17] diversum est huic eorum vitium, qui primo decurrere per materiam stilo quam velocissimo volunt et sequentes calorem atque impetum ex tempore scribunt; hanc silvam vocant. repetunt deinde et componunt quae effuderant; sed verba emendantur et numeri, manet in rebus temere congestis quae fuit levitas.

[17] On the other hand, there is a fault which is precisely the opposite of this, into which those fall who insist on first making a rapid draft of their subject with the utmost speed of which their pen is capable, and write in the heat and impulse of the moment. They call this their rough copy. They then revise what they have written, and arrange their hasty outpourings. But while the words and the rhythm may be corrected, the matter is still marked by the superficiality resulting from the speed with which it was thrown together.

[18] protinus ergo adhibere curam rectius erit atque ab initio sic opus ducere, ut caelandum, non ex integro fabricandum sit. aliquando tamen adfectus sequemur, in quibus fere plus calor quam diligentia valet. satis apparet ex eo, quod hanc scribentium negligentiam damno, quid de illis dictandi delictis sentiam.

[18] The more correct method is, therefore, to exercise care from the very beginning, and to form the work from the outset in such a manner that it merely requires to be chiselled into shape, not fashioned anew. Sometimes, however, we must follow the stream of our emotions, since their warmth will give us more than any diligence can secure.

[19] nam in stilo quidem quamlibet properato dat aliquam cogitationi moram

non consequens celeritatem eius manus; ille cui dictamus urget, atque interim pudet etiam dubitare aut resistere aut mutare quasi conscium infirmitatis nostrae timentes.

[19] The condemnation which I have passed on such carelessness in writing will make it pretty clear what my views are on the luxury of dictation which is now so fashionable. For, when we write, however great our speed, the fact that the hand cannot follow the rapidity of our thoughts gives us time to think, whereas the presence of our amanuensis hurries us on, and at times we feel ashamed to hesitate or pause, or make some alteration, as though we were afraid to display such weakness before a witness.

[20] quo fit, ut non rudia tantum et fortuita, sed impropria interim, dum sola est connectendi sermonis cupiditas, effluent, quae nec scribentium curam nec dicentium impetum consequantur. at idem ille, qui excipit, si tardior in scribendo aut incertior in intellegendo velut offensator fuit, inhibetur cursus, atque omnis quae erat concepta mentis intentio mora et interdum iracundia excutitur.

[20] As a result our language tends not merely to be haphazard and formless, but in our desire to produce a continuous flow we let slip positive improprieties of diction, which show neither the precision of the writer nor the impetuosity of the speaker. Again, if the amanuensis is a slow writer, or lacking in intelligence, he becomes a stumbling-block, our speed is checked, and the thread of our ideas is interrupted by the delay or even perhaps by the loss of temper to which it gives rise.

[21] tum illa, quae altiorem animi motum sequuntur quaeque ipsa animum quodammodo concitant, quorum est iactare nanum, torquere vultum, frontem et latus interim obiurgare, quaeque Persius notat, cum leviter dicendi genus significat,

nec pluteum,

inquit, caedit nec demorsos sapit unguis,

etiam ridicula sunt, nisi cum soli sumus.

[21] Moreover, the gestures which accompany strong feeling, and sometimes even serve to stimulate the mind, the waving of the hand, the contraction of the brow, the occasional striking of forehead or side, and those which Persius notes when he describes a trivial style as one that

“Thumps not the desk nor smacks of bitten nails,”

all these become ridiculous, unless we are alone, Finally,

[22] denique ut semel quod est potentissimum dicam, secretum in dictando perit. atque liberum arbitris locum et quam altissimum silentium scribentibus

maxime convenire nemo dubitaverit. non tamen protinus audiendi, qui credunt aptissima in hoc nemora silvasque, quod illa caeli libertas locorumque amoenitas sublimem animum et beatiorem spiritum parent.

[22] we come to the most important consideration of all, that the advantages of privacy are lost when we dictate. Everyone, however, will agree that the absence of company and deep silence are most conducive to writing, though I would not go so far as to concur in the opinion of those who think woods and groves the most suitable localities for the purpose, on the ground that the freedom of the sky and the charm of the surroundings produce sublimity of thought and wealth of inspiration.

[23] mihi certe iucundus hic magis quam studiorum hortator videtur esse secessus. namque illa, quae ipsa delectant, necesse est avocent ab intentione operis destinati. neque enim se bona fide in multa simul intendere animus totum potest, et quocunque respexit, desinit intueri quod propositum erat.

[23] Personally I regard such an environment as a pleasant luxury rather than a stimulus to study. For whatever causes us delight, must necessarily distract us from the concentration due to our work. The mind cannot devote its undivided and sincere attention to a number of things at the same time, and wherever it turns its gaze it must cease to contemplate its appointed task.

[24] quare silvarum amoenitas et praeterlabentia flumina et inspirantes ramis arborum aerae volucrumque cantus et ipsa late circumspiciendi libertas ad se trahunt, ut mihi remittere potius voluptas ista videatur cogitationem quam intendere.

[24] Therefore, the charm of the woods, the gliding of the stream, the breeze that murmurs in the branches, the song of birds, and the very freedom with which our eyes may range, are mere distractions, and in my opinion the pleasure which they excite is more likely to relax than to concentrate our attention.

[25] Demosthenes melius, qui se in locum, ex quo nulla exaudiri vox et ex quo nihil prospici posset, recondebat ne aliud agere mentem cogerent oculi. ideoque lucubrantem silentium noctis et clausum cubiculum et lumen unum velut tectos maxime teneat.

[25] Demosthenes took a wiser view; for he would retire to a place where no voice was to be heard, and no prospect greeted the sight, for fear that his eyes might force his mind to neglect its duty. Therefore, let the burner of the midnight oil seclude himself in the silence of night, within closed doors, with but a solitary lamp to light his labours.

[26] sed cum in omni studiorum genere tum in hoc praecipue bona valetudo, quaeque eam maxime praestat, frugalitas, necessaria est, cum tempora ab ipsa rerum natura ad quietem refectionemque nobis data in acerrimum laborer

convertimus. cui tamen non plus irrogandum est quam quod somno supererit, haud deerit.

[26] But for every kind of study, and more especially for night work, good health and its chief source, simple living, are essential; for we have fallen into the habit of devoting to relentless labour the hour which nature has appointed for rest and relaxation. From those hours we must take only such time as is superfluous for sleep, and will not be missed.

[27] obstat enim diligentiae scribendi etiam fatigatio, et abunde, si vacet, lucis spatia sufficiunt; occupatos in noctem necessitas agit. est tamen lucubratio, quotiens ad eam integri ac refecti venimus, optimum secreti genus.

[27] For fatigue will make us careless in writing, and the hours of daylight are amply sufficient for one who has no other distractions. It is only the busy man who is driven to encroach on the hours of darkness. Nevertheless, night work, so long as we come to it fresh and untired, provides by far the best form of privacy.

[28] sed silentium et secessus et undique liber animus ut sunt maxime optanda, ita non semper possunt contingere, ideoque non statim, si quid obstrepet, abiiciendi codices erunt et deplorandus dies; verum incommodis repugnandum et hic faciendus usus, ut omnia quae impediunt vincat intentio; quam si tota mente in opus ipsum direxeris, nihil eorum, quae oculis vel auribus incursant, ad animum perveniet.

[28] But although silence and seclusion and absolute freedom of mind are devoutly to be desired, they are not always within our power to attain. Consequently we must not fling aside our book at once, if disturbed by some noise, and lament that we have lost a day: on the contrary, we must make a firm stand against such inconveniences, and train ourselves so to concentrate our thoughts as to rise superior to all impediments to study. If only you direct all your attention to the work which you have in hand, no sight or sound will ever penetrate to your mind.

[29] An vero frequenter etiam fortuita hoc cogitatio praestat, ut obvios non videamus et itinere deerremus: non consequemur idem, si et voluerimus? non est indulgendum causis desidia. nam si non nisi refecti, non nisi hilares, non nisi omnibus aliis curis vacantes studendum existimarimus, semper erit propter quod nobis ignoscamus.

[29] If even casual thoughts often occupy us to such an extent that we do not see passers-by, or even stray from our path, surely we can obtain the same result by the exercise of our will. We must not give way to pretexts for sloth. For unless we make up our mind that we must be fresh, cheerful and free from all other care when we approach our studies, we shall always find some excuse for idleness.

[30] quare in turba, itinere, conviviiis etiam faciat sibi cogitatio ipsa secretum. quid alioqui fiet, cum in medio foro, tot circumstantibus iudiciis, iurgiis, fortuitis etiam clamoribus, erit subito continua oratione dicendum, si particulas quas ceris mandamus nisi in solitudine reperire non possumus? propter quae idem ille tantus amator secreti Demosthenes in litore, in quo se maximo cum sono fluctus illideret, meditans consuescebat contionum fremitus non expavescere.

[30] Therefore, whether we be in a crowd, on a journey, or even at some festive gathering, our thoughts should always have some inner sanctuary of their own to which they may retire. Otherwise what shall we do when we are suddenly called upon to deliver a set speech in the midst of the forum, with lawsuits in progress on every side, and with the sound of quarrels and even casual outcries in our ears, if we need absolute privacy to discover the thoughts which we jot down upon our tablets? It was for this reason that Demosthenes, the passionate lover of seclusion, used to study on the seashore amid the roar of the breakers that they might teach him not to be unnerved by the uproar of the public assembly.

[31] illa quoque minora (sed nihil in studiis parvum est) non sunt transeunda: scribi optime ceris, in quibus facillima est ratio delendi, nisi forte visus infirmior membranarum potius usum exigit, quae ut iuvant aciem, ita crebra relatione, quoad intinguntur, calami morantur manum et cogitationis impetum frangunt.

[31] There are also certain minor details which deserve our attention, for there is nothing too minute for the student. It is best to write on wax owing to the facility which it offers for erasure, though weak sight may make it desirable to employ parchment by preference. The latter, however, although of assistance to the eye, delays the hand and interrupts the stream of thought owing to the frequency with which the pen has to be supplied with ink.

[32] relinquendae autem in utrolibet genere contra erunt vacuae tabellae, in quibus libera adiiciendo sit excursio. nam interim pigritiam emendandi angustiae faciunt aut certe novorum interpositione priora confundant. ne latas quidem ultra modum esse ceras velim, expertus iuvenem studiosum alioqui praelongos habuisse sermones, quia illos numero versuum metiebatur, idque vitium, quod frequenti admonitione corrigi non potuerat, mutatis codicibus esse sublatum.

[32] But whichever we employ, we must leave blank pages that we may be free to make additions when we will. For lack of space at times gives rise to a reluctance to make corrections, or, at any rate, is liable to cause confusion when new matter is inserted. The wax tablets should not be unduly wide; for I have known a young and over-zealous student write his compositions at undue length, because he measured them by the number of lines, a fault which

persisted, in spite of frequent admonition, until his tablets were changed, when it disappeared.

[33] debet vacare etiam locus, in quo notentur quae scribentibus solent extra ordinem, id est ex aliis, quam qui sunt in manibus loci, occurrere. irrumpunt enim optimi nonnunquam sensus, quos neque inserere oportet neque differre tutum est, quia interim elabuntur, interim memoriae suae intentos ab alia inventione declinant ideoque optime sunt in deposito.

[33] Space must also be left for jotting down the thoughts which occur to the writer out of due order, that is to say, which refer to subjects other than those in hand. For sometimes the most admirable thoughts break in upon us which cannot be inserted in what we are writing, but which, on the other hand, it is unsafe to put by, since they are at times forgotten, and at times cling to the memory so persistently as to divert us from some other line of thought. They are, therefore, best kept in store.

4. sequitur emendatio, pars studiorum longe utilissima. neque enim sine causa creditum est stilum non minus agere, cum delet. huius autem operis est adiicere, detrahere, mutare. sed facilius in iis simpliciusque iudicium, quae replenda vel deiicienda sunt; premere vero tumentia, humilia extollere, luxuriantia adstringere, inordinata digerere, soluta componere, exultantia coercere, duplicis operae. nam et damnanda sunt quae placuerunt et inveniendae quae fugerant.

4. The next point which we have to consider is the correction of our work, which is by far the most useful portion of our study: for there is good reason for the view that erasure is quite as important a function of the pen as actual writing. Correction takes the form of addition, excision and alteration. But it is a comparatively simple and easy task to decide what is to be added or excised. On the other hand, to prune what is turgid, to elevate what is mean, to repress exuberance, arrange what is disorderly, introduce rhythm where it is lacking, and modify it where it is too emphatic, involves a twofold labour. For we have to condemn what had previously satisfied us and discover what had escaped our notice.

[2] nec dubium est optimum esse emendandi genus, si scripta in aliquod tempus reponantur, ut ad ea post intervallum velut nova atque aliena redeamus, ne nobis scripta nostra tanquam recentes fetus blandiantur.

[2] There can be no doubt that the best method of correction is to put aside what we have written for a certain time, so that when we return to it after an interval it will have the air of novelty and of being another's handiwork; for thus we may prevent ourselves from regarding our writings with all the affection that we lavish on a newborn child.

[3] sed neque hoc contingere semper potest praesertim oratori, cui saepius

scribere ad praesentes usus necesse est; et ipsa emendatio finem habeat. sunt enim qui ad omnia scripta tanquam vitiosa redeant et, quasi nihil fas sit rectum esse quod primum est, melius existiment quidquid est aliud, idque faciant, quotiens librum in manus resumpserunt, similes medicis etiam integra secantibus. accidit itaque ut cicatricosa sint et exsanguis et cura peiora.

[3] But this is not always possible, especially in the case of an orator who most frequently has to write for immediate use, while some limit, after all, must be set to correction. For there are some who return to everything they write with the presumption that it is full of faults and, assuming that a first draft must necessarily be incorrect, think every change an improvement and make some alteration as often as they have the manuscript in their hands: they are, in fact, like doctors who use the knife even where the flesh is perfectly healthy. The result of their critical activities is that the finished work is full of scars, bloodless, and all the worse for their anxious care.

[4] sit ergo aliquando quod placeat aut certe quod sufficiat, ut opus poliat lima, non exerat. temporis quoque esse debet modus. nam quod Cinnae Zmyrnam novem annis accepimus scriptam, et panegyricum Isocratis, qui parcissime, decem annis dicunt elaboratum, ad oratorem nihil pertinet, cuius nullum erit, si tam tardum fuerit, auxilium.

[4] No! let there be something in all our writing which, if it does not actually please us, at least passes muster, so that the file may only polish our work, not wear it away. There must also be a limit to the time which we spend on its revision. For the fact that Cinna took nine years to write his Smyrna, and that Isocrates required ten years, at the lowest estimate, to complete his Panegyric does not concern the orator, whose assistance will be of no use, if it is so long delayed.

5. proximum est, ut dicamus, quae praecipue scribenda sint ἔξιν parantibus. non est huius quidem operis, ut explicemus quae sint materiae, quae prima aut secunda aut deinceps tractanda sint (nam id factum est etiam primo libro, quo puerorum, et secundo, quo iam robustorum studiis ordinem dedimus) sed de quo nunc agitur, unde copia ac facilitas maxime veniat.

5. My next task is to indicate what those should write whose aim is to acquire facility. At this part of my work there is no necessity for me to set forth the subjects which should be selected for writing, or the order in which they should be approached, since I have already done this in the first book, where I prescribed the sequence of studies for boys, and in the second book, where I did the same for young men. The point which concerns me now is to show from what sources copiousness and facility may most easily be derived.

Our earlier orators thought highly of translation from Greek into Latin.

[2] vertere Graeca in Latinum veteres nostri oratores optimum iudicabant. id se

L. Crassus in illis Ciceronis de Oratore libris dicit facitasse. id Cicero sua ipse persona frequentissime praecipit, quin etiam libros Platonis atque Xenophontis edidit hoc genere translatos. id Messalae placuit, multaeque sunt ab eo scriptae ad hunc modum orationes, adeo ut etiam cum illa Hyperidis pro Phryne difficillima Romanis subtilitate contenderet.

[2] In the *de Oratore* of Cicero, Lucius Crassus says that he practised this continually, while Cicero himself advocates it again and again, nay, he actually published translations of Xenophon and Plato, which were the result of this form of exercise. Messala likewise gave it his approval, and we have a number of translations of speeches from his hand; he even succeeded in coping with the delicacy of Hyperides' speech in defence of Phryne, a task of exceeding difficulty for a Roman.

[3] et manifesta est exercitationis huiusce ratio. nam et rerum copia Graeci auctores abundant et plurimum artis in eloquentiam intulerunt, et hos transferentibus verbis uti optimis licet, omnibus enim utimur nostris. figuras vero, quibus maxime ornatur oratio, multas ac varias excogitandi etiam necessitas quaedam est, quia plerumque a Graecis Romana dissentiunt.

[3] The purpose of this form of exercise is obvious. For Greek authors are conspicuous for the variety of their matter, and there is much art in all their eloquence, while, when we translate them, we are at liberty to use the best words available, since all that we use are our very own. As regards figures, too, which are the chief ornament of oratory, it is necessary to think out a great number and variety for ourselves, since in this respect the Roman idiom differs largely from the Greek.

[4] sed et illa ex Latinis conversio multum et ipsa contulerit. ac de carminibus quidem neminem credo dubitare, quo solo genere exercitationis dicitur usus esse Sulpicius. nam et sublimis spiritus attollere orationem potest, et verba poetica libertate audaciora non praesumunt eadem proprie dicendi facultatem. sed et ipsis sententiis adiicere licet oratorium robur et omissa supplere, effusa substringere.

[4] But paraphrase from the Latin will also be of much assistance, while I think we shall all agree that this is specially valuable with regard to poetry; indeed, it is said that the paraphrase of poetry was the sole form of exercise employed by Sulpicius. For the lofty inspiration of verse serves to elevate the orator's style and the bold license of poetic language does not preclude our attempting to render the same words in the language natural to prose. Nay, we may add the vigour of oratory to the thoughts expressed by the poet, make good his omissions, and prune his diffuseness.

[5] neque ego paraphrasim esse interpretationem tantum volo, sed circa eosdem sensus certamen atque aemulationem. ideoque ab illis dissentio, qui vertere orationes Latinas vetant, quia optimis occupatis, quidquid aliter dixerimus,

necesse sit esse deterius. nam neque semper est desperandum, aliquid illis, quae dicta sunt, melius posse reperiri; neque adeo ieiunam ac pauperem natura eloquentiam fecit, ut una de re bene dici nisi semel non possit.

[5] But I would not have paraphrase restrict itself to the bare interpretation of the original: its duty is rather to rival and vie with the original in the expression of the same thoughts. Consequently, I disagree with those who forbid the student to paraphrase speeches of our own orators, on the ground that, since all the best expressions have already been appropriated, whatever we express differently must necessarily be a change for the worse. For it is always possible that we may discover expressions which are an improvement on those which have already been used, and nature did not make eloquence such a poor and starveling thing, that there should be only one adequate expression for any one theme.

[6] nisi forte histrionum multa circa voces easdem variare gestus potest, orandi minor vis, ut dicatur aliquid, post quod in eadem materia nihil dicendum sit. sed esto neque melius quod invenimus esse neque par:

[6] It can hardly be argued that, while the gestures of the actor are capable of imparting a wealth of varied meaning to the same words, the power of oratory is restricted to a narrower scope, so that when a thing has once been said, it is impossible to say anything else on the same theme. Why, even if it be granted that no new expression we discover can be better than or even equal to the old, it may, at any rate, be a good second.

[7] est certe proximis locus. An vero ipsi non bis ac saepius de eadem re dicimus et quidem continuas nonnunquam sententias? nisi forte contendere nobiscum possumus, cum aliis non possumus. nam si uno genere bene diceretur, fas erat existimari praeclusam nobis a prioribus viam; nunc vero innumerabiles sunt modi plurimaeque eodem viae ducunt.

[7] Do we not often speak twice, or even more frequently, on the same subject, sometimes even to the extent of a number of sentences in succession? It will scarce be asserted that we must not match ourselves against others when we are permitted to match ourselves against ourselves. For if there were only one way in which anything could be satisfactorily expressed, we should be justified in thinking that the path to success had been sealed to us by our predecessors. But, as a matter of fact, the methods of expression still left us are innumerable, and many roads lead us to the same goal.

[8] sua brevitati gratia, sua copiae, alia translatis virtus alia propriis, hoc oratio recta illud figura declinata commendat. ipsa denique utilissima est exercitationi difficultas. quid, quod auctores maximi sic diligentius cognoscuntur? non enim scripta lectione secura transcurrimus, sed tractamus singula et necessario introspicimus et, quantum virtutis habeant, vel hoc ipso cognoscimus, quod imitari non possumus.

[8] Brevity and copiousness each have their own peculiar grace, the merits of metaphor are one thing and of literalness another, and, while direct expression is most effective in one case, in another the best result is gained by a use of figures. Further, the exercise is valuable in virtue of its difficulty; and again, there is no better way of acquiring a thorough understanding of the greatest authors. For, instead of hurriedly running a careless eye over their writings, we handle each separate phrase and are forced to give it close examination, and we come to realise the greatness of their excellence from the very fact that we cannot imitate them.

[9] nec aliena tantum transferre sed etiam nostra pluribus modis tractare proderit, ut ex industria sumamus sententias quasdam easque versemus quam numerosissime, velut eadem cera aliae aliaeque formae duci solent.

[9] Nor is it only the paraphrase of the works of others that we shall find of advantage: much may be gained from paraphrasing our own words in a number of different ways: for instance, we may specially select certain thoughts and recast them in the greatest variety of forms, just as a sculptor will fashion a number of different images from the same piece of wax.

[10] plurimum autem parari facultatis existimo ex simplicissima quaque materia. nam illa multiplici personarum, causarum, temporum, locorum, dictorum, factorum diversitate facile delitescet infirmitas, tot se undique rebus, ex quibus aliquam apprehendas, offerentibus.

[10] But it is the simplest subjects which, in my opinion, will serve us best in our attempt to acquire facility. For our lack of talent may easily shelter itself behind the complicated mass of detail presented by persons, cases, circumstances of time and place, words and deeds, since the subjects which present themselves on all sides are so many that it will always be possible to lay hold of some one or other.

[11] illud virtutis indicium est fundere quae natura contracta sunt, augere parva, varietatem similibus, voluptatem expositis dare et bene dicere multa de paucis.

in hoc optime facient infinitae quaestiones, quas vocari θέσεις diximus, quibus Cicero iam princeps in re publica exerceri solebat.

[11] True merit is revealed by the power to expand what is naturally compressed, to amplify what is small, to lend variety to sameness, charm to the commonplace, and to say a quantity of good things about a very limited number of subjects.

For this purpose indefinite questions, of the kind we call *theses*, will be found of the utmost service: in fact, Cicero still exercised himself upon such themes after he had become the leading man in the state.

[12] his confinis est destructio et confirmatio sententiarum. nam cum sit sententia decretum quoddam atque praeceptum, quod de re idem de iudicio rei quaeri potest. tum loci communes, quos etiam scriptos ab oratoribus scimus. nam qui haec recta tantum et in nullos flexus recedentia copiose tractaverit, utique in illis plures excursus recipientibus magis abundabit eritque in omnes causas paratus. omnes enim generalibus quaestionibus constant.

[12] Akin to these are the proof or refutation of general statements. For such statements are a kind of decree or rule, and whatever problem may arise from the thing, may equally arise from the decision passed upon the thing. Then there are commonplaces, which, as we know, have often been written by orators as a form of exercise. The man who has practised himself in giving full treatment to such simple and uncomplicated themes, will assuredly find his fluency increased in those subjects which admit of varied digression, and will be prepared to deal with any case that may confront him, since all cases ultimately turn upon general questions.

[13] nam quid interest, Cornelius tribunus plebis quod codicem legerit, reus sit, an quaeramus, violeturne maiestas, si magistratus rogationem suam populo ipse recitaverit; Milo Clodium rectene occiderit, veniat in iudicium, an, oporteatne insidiatorem interfici vel perniciosum rei publicae civem, etiamsi non insidiatur; Cato Marciam honestene tradiderit Hortensio, an, conveniatne res talis bono viro? de personis iudicatur, sed de rebus contenditur.

[13] For what difference is there between the special case where Cornelius, the tribune of the people, is charged with reading the text of a proposed law, and the general question whether it is *lése-majesté* for a magistrate himself to read the law which he proposes to the people; what does it matter whether we have to decide whether Milo was justified in killing Clodius, or whether it is justifiable to kill a man who has set an ambush for his slayer, or a citizen whose existence is a danger to the state, even though he has set no such ambush? What difference is there between the question whether it was an honourable act on the part of Cato to make over Marcia to Hortensius, or whether such an action is becoming to a virtuous man? It is on the guilt or innocence of specific persons that judgement is given, but it is on general principles that the case ultimately rests.

[14] declamationes vero, quales in scholis rhetorum dicuntur, si modo sunt ad veritatem accommodatae et orationibus similes, non tantum dum adolescit profectus sunt utilissimae, quia inventionem et dispositionem pariter exercent, sed etiam cum est consummatus ac iam in foro clarus. alitur enim atque enitescit velut pabulo laetiore facundia et adsidua contentionum asperitate fatigata renovatur.

[14] As for declamations of the kind delivered in the schools of the rhetoricians, so long as they are in keeping with actual life and resemble speeches, they are

most profitable to the student, not merely while he is still immature, for the reason that they simultaneously exercise the powers both of invention and arrangement, but even when he has finished his education and acquired a reputation in the courts. For they provide a richer diet from which eloquence derives nourishment and brilliance of complexion, and at the same time afford a refreshing variety after the continuous fatigues of forensic disputes.

[15] quapropter historiae nonnunquam ubertas in aliqua exercendi stili parte ponenda et dialogorum libertate gestiendum. ne carmine quidem ludere contrarium fuerit, sicut athletae, remissa quibusdam temporibus ciborum atque exercitationum certa necessitate, otio et iucundioribus epulis reficiuntur.

[15] For the same reason, the wealth of language that marks the historian should be from time to time imported into portions of our written exercises, and we should indulge in the easy freedom of dialogue. Nay, it may even be advantageous to amuse ourselves with the writing of verse, just as athletes occasionally drop the severe regime of diet and exercise to which they are subjected and refresh themselves by taking a rest and indulging in more dainty and agreeable viands.

[16] ideoque mihi videtur M. Tullius tantum intulisse eloquentiae lumen, quod in hos quoque studiorum secessus excurrit. nam si nobis sola materia fuerit ex litibus, necesse est deteratur fulgor et durescat articulus et ipse ille mucro ingenii cotidiana pugna retundatur.

[16] Indeed, in my opinion, one of the reasons why Cicero was enabled to shed such glory upon the art of speaking is to be found in his excursions to such bypaths of study. For if all our material was drawn solely from actions at law, our eloquence must needs lose its gloss, our limbs grow stiff, and the keen edge of the intellect be blunted by its daily combats.

[17] sed quemadmodum forensibus certaminibus exercitatos et quasi milites reficit ac reparat haec velut sagina dicendi, sic adolescentes non debent nimium in falsa rerum imagine detineri et inanibus simulacris usque adeo, ut difficilis ab his digressus sit, assuescere, ne ab illa, in qua prope consenuerunt, umbra vera discrimina velut quandam solem reformident.

[17] But although those who find their practice in the contests of forensic warfare derive fresh strength and repair their forces by means of this rich fare of eloquence, the young should not be kept too long at these false semblances of reality, nor should they be allowed to become so familiar with these empty shadows that it is difficult for them to leave them: otherwise there is always the danger that, owing to the seclusion in which they have almost grown old, they will shrink in terror from the real perils of public life, like men dazzled by the unfamiliar sunlight.

[18] quod accidissee etiam M. Porcio Latroni, qui primus clari nominis professor

fuit, traditur, ut, cum ei summam in scholis opinionem obtinenti causa in foro esset oranda, impense petierit, uti subsellia in basilicam transferrentur. ita illi caelum novum fuit, ut omnis eius eloquentia contineri tecto ac parietibus videretur.

[18] Indeed it is recorded that this fate actually befell Marcus Porcius Latro, the first professor of rhetoric to make a name for himself; for when, at the height of his fame in the schools, he was called upon to plead a case in the forum, he put forward the most earnest request that the court should be transferred to some public hall. He was so unaccustomed to speak in the open air that all his eloquence seemed to reside within the compass of a roof and four walls.

[19] quare iuvenis, qui rationem inveniendi eloquendique a praeceptoribus diligenter acceperit (quod non est infiniti operis, si docere sciant et velint), exercitationem quoque modicam fuerit consecutus, oratorem sibi aliquem, quod apud maiores fieri solebat, deligat, quem sequatur, quem imitetur; iudiciis intersit quam plurimis et sit certaminis, cui destinatur, frequens spectator.

[19] For this reason a young man who has acquired a thorough knowledge from his instructors of the methods of invention and style (which is not by any means an endless task, if those instructors have the knowledge and the will to teach), and who has also managed to obtain a reasonable amount of practice in the art, should follow the custom in vogue with our ancestors, and select some one orator to follow and imitate. He should attend as many trials as possible and be a frequent spectator of the conflicts in which he is destined to take part.

[20] tum causas vel easdem, quas agi audierit, stilo et ipse componat, vel etiam alias veras modo et utrinque tractet, et, quod in gladiatoribus fieri videmus, decretoriis exerceatur, ut fecisse Brutum diximus pro Milone. melius hoc quam rescribere veteribus orationibus, ut fecit Cestius contra Ciceronis actionem habitam pro eodem, cum alteram partem satis nosse non posset ex sola defensione.

[20] Next he should write out speeches of his own dealing either with the cases which he has actually heard pleaded or with others, provided always they be actual cases, and should argue them from both sides, training himself with the real weapons of his warfare, just as gladiators do or as Brutus did in that speech in defence of Milo which I have already mentioned. This is better than writing replies to old speeches, as Cestius did to Cicero's defence of Milo in spite of the fact that, his knowledge being confined to what was said for the defence, he could not have possessed sufficient acquaintance with the other side of the case.

[21] citius autem idoneus erit iuvenis, quem praeceptor coegerit in declamando quam simillimum esse veritati et per totas ire materias, quarum nunc facillima et maxime favorabilia decerpunt. obstant huic, quod secundo loco posui, fere

turba discipulorum et consuetudo classium certis diebus audiendarum, nonnihil etiam persuasio patrum numerantium potius declamationes quam aestimantium.

[21] The young man, however, whom his instructor has compelled to be as realistic as possible in declamation, and to deal with every class of subject, instead of merely selecting the easiest and most attractive cases, as is done at present, will thus qualify himself much more rapidly for actual forensic practice. Under existing circumstances the practice of the principle which I mentioned second is, as a rule, hampered by the large size of the classes and the practice of allotting certain days for recitation, to which must be added the contributory circumstance that the boys' parents are more interested in the number of their sons' recitations than their quality.

[22] sed, quod dixi primo, ut arbitror, libro, nec ille se bonus praeceptor maiore numero quam sustinere possit onerabit et inanem loquacitatem recidet, ut omnia quae sunt in controversia, non, ut quidem volunt, quae in rerum natura, dicantur; et vel longiore potius dierum spatio laxabit dicendi necessitatem vel materias dividere permittet.

[22] But, as I think I said in the first book, the really good teacher will not burden himself with a larger number of pupils than he can manage, and will prune any tendency to excessive loquacity, limiting their remarks to the actual points involved by the subject of the declamation and forbidding them to range, as some would have them do, over every subject in heaven and earth: further, he will either extend the period within which he insists on their speaking, or will permit them to divide their themes into several portions.

[23] una enim diligenter effecta plus proderit quam plures inchoatae et quasi degustatae. propter quod accidit, ut nec suo loco quidque ponatur, nec illa quae prima sunt servant suam legem, iuvenibus flosculos omnium partium in ea quae sunt dicturi congerentibus; quo fit, ut timentes, ne sequentia perdant, priora confundant.

[23] The thorough treatment of one theme will be more profitable than the sketchy and superficial treatment of a number of subjects. For the latter practice has the result that nothing is put in its proper place and that the opening of the declamation exceeds all reasonable bounds, since the young orator crams all the flowers of eloquence which belong to all the different portions of the theme into that portion which he has to deliver, and fearing to lose what should naturally come later, introduces wild confusion into the earlier portions of his speech.

6. proxima stilo cogitatio est, quae et ipsa vires ab hoc accipit, estque inter scribendi laborem extemporalemque fortunam media quaedam et nescio an usus frequentissimi. nam scribere non ubique nec semper possumus; cogitationi temporis ac loci plurimum est. haec paucis admodum horis magnas

etiam causas complectitur; haec, quotiens intermissus est somnus, ipsis noctis tenebris adiuvatur; haec inter medios rerum actus aliquid invenit vacui nec otium patitur.

6. Having dealt with writing, the next point which claims our attention is premeditation, which itself derives force from the practice of writing and forms an intermediate stage between the labours of the pen and the more precarious fortunes of improvisation; indeed I am not sure that it is not more frequently of use than either. For there are places and occasions where writing is impossible, while both are available in abundance for premeditation. For but a few hours' thought will suffice to cover all the points even of cases of importance; if we wake at night, the very darkness will assist us, while even in the midst of legal proceedings our mind will find some vacant space for meditation, and will refuse to remain inactive.

[2] neque vero rerum ordinem modo, quod ipsum satis erat, intra se ipsa disponit, sed verba etiam copulat totamque ita contextit orationem, ut ei nihil praeter manum desit. nam memoriae quoque plerumque inhaerent fidelius, quae nulla scribendi securitate laxantur.

sed ne ad hanc quidem vim cogitandi perveniri potest aut subito aut cito.

[2] Again, this practice will not merely secure the proper arrangement of our matter without any recourse to writing, which in itself is no small achievement, but will also set the words which we are going to use in their proper order, and bring the general texture of our speech to such a stage of completion that nothing further is required beyond the finishing touches. And as a rule the memory is more retentive of thoughts when the attention has not been relaxed by the fancied security which results from committing them to writing.

But the concentration which this requires cannot be attained in a moment or even quickly.

[3] nam primum facienda multo stilo forma est, quae nos etiam cogitantes sequatur; tum adsumendus usus paulatim, ut pauca primum complectamur animo, quae reddi fideliter possint; mox per incrementa tam modica, ut onerari se labor ille non sentiat, augenda vis et exercitatione multa continenda est, quae quidem maxima ex parte memoria constat. ideoque aliqua mihi in illum locum differenda sunt.

[3] For, in the first place, we must write much before we can form that ideal of style which must always be present to our minds even when engaged in premeditation. Secondly, we must gradually acquire the habit of thought: to begin with, we shall content ourselves with covering but a few details, which our minds are capable of reproducing with accuracy; then by advances so gradual that our labour is not sensibly increased we must develop our powers

and confirm them by frequent practice, a task in which the most important part is played by the memory.

[4] eo tandem pervenit, ut is, cui non refragetur ingenium, acri studio adiutus tantum consequatur, ut ei tam quae cogitarit quam quae scripserit atque edidicerit in dicendo fidem servant. Cicero certe Graecorum Metrodorum Scepsium et Empylum Rhodium nostrorumque Hortensium tradidit, quae cogitaverant, ad verbum in agendo retulisse.

[4] For this reason I must postpone some of my remarks to the portion of this work reserved for the treatment of that topic. At length, however, our powers will have developed so far that the man who is not hampered by lack of natural ability will by dint of persistent study be enabled, when it comes to speaking, to rely no less on what he has thought out than what he has written out and learnt by heart. At any rate, Cicero records that Metrodorus of Scepsis, Empylus of Rhodes, and our own Hortensius were able to reproduce what they had thought out word for word when it came to actual pleading.

[5] sed si forte aliquis inter dicendum effulserit extemporalis color, non superstitiose cogitatis demum est inhaerendum. neque enim tantum habent curae, ut non sit dandus et fortunae locus, cum saepe etiam scriptis ea quae subito nata sunt inserantur. ideoque totum hoc exercitationis genus ita instituendum est, ut et digredi ex eo et redire in id facile possimus.

[5] If, however, some brilliant improvisation should occur to us while speaking, we must not cling superstitiously to our premeditated scheme. For premeditation is not so accurate as to leave no room for happy inspiration: even when writing we often insert thoughts which occur to us on the spur of the moment. Consequently this form of preparation must be conceived on such lines that we shall find no difficulty either in departing from it or returning to it at will.

[6] nam ut primum est domo adferre paratam dicendi copiam et certam, ita refutare temporis munera longe stultissimum est. quare cogitatio in hoc praeparetur, ut nos fortuna decipere non possit, adiuvari possit. id autem fiet memoriae viribus, ut illa, quae complexi animo sumus, fluant secura, non sollicitos et respicientes et una spe suspensos recordationis non sinant providere. alioqui vel extemporalem temeritatem malo quam male cohaerentem cogitationem.

[6] For, although it is essential to bring with us into court a supply of eloquence which has been prepared in advance in the study and on which we can confidently rely, there is no greater folly than the rejection of the gifts of the moment. Therefore our premeditation should be such that fortune may never be able to fool us, but may, on the contrary, be able to assist us. This end will be obtained by developing the power of memory so that our conceptions may flow from us without fear of disaster, and that we may be

enabled to look ahead without anxious backward glances or the feeling that we are absolutely dependent on what we can call to mind. Otherwise I prefer the rashness of improvisation to the coherence given by premeditation.

[7] *peius enim quaeritur retrorsus, quia, dum illa desideramus, ab allis avertimur, et ex memoria potius res petimus quam ex materia. plura sunt autem, si utrumque quaerendum est, quae inveniri possunt quam quae inventa sunt.*

[7] For such backward glances place us at a disadvantage, because our search for our premeditated ideas makes us miss others, and we draw our matter from our memory rather than from the subject on which we are speaking. And even if we are to rely on our memory and our subject alike, there are more things that may be discovered than ever yet have been.

7. *Maximus vero studiorum fructus est et velut primus quoddam amplissimum longi laboris ex tempore dicendi facultas, quam qui non erit consecutus, mea quidem sententia civilibus officiis renuntiabit et solam scribendi facultatem potius ad alia opera convertet. vix enim bonae fidei viro convenit auxilium in publicum polliceri, quod praesentissimis quibusque periculis desit, intrare portum ad quem navis accedere nisi lenibus ventis vecta non possit,*

7. But the crown of all our study and the highest reward of our long labours is the power of improvisation. The man who fails to acquire this had better, in my opinion, abandon the task of advocacy and devote his powers of writing to other branches of literature. For it is scarcely decent for an honourable man to promise assistance to the public at large which he may be unable to provide in the most serious emergencies, or to attempt to enter a harbour which his ship cannot hope to make safe when sailing before a gentle breeze.

[2] *siquidem innumerabiles accidunt subitae necessitates vel apud magistratus vel repraesentatis iudiciis continuo agendi. quarum si qua, non dico cuicunque innocentium civium sed amicorum ac propinquorum alicui evenerit, stabitne mutus et salutarem petentibus uocem statimque, si non succurratur, perituris, moras et secessum et silentium quaeret, dum illa verba fabricentur et memoriae insidant et vox ac latus praeparetur?*

[2] For there are countless occasions when the sudden necessity may be imposed upon him of speaking without preparation before the magistrates or in a trial which comes on unexpectedly. And if any such sudden emergency befalls, I will not say any innocent citizen, but some one of the orator's friends or connexions, is he to stand tongue-tied and, in answer to those who seek salvation in his eloquence and are doomed, unless they secure assistance, to ask for delay of proceedings and time for silent and secluded study, till such moment as he can piece together the words that fail him, commit them to memory and prepare his voice and lungs for the effort?

[3] quae vero patitur hoc ratio, ut quisquam possit orator omittere aliquando casus Quid, cum adversario respondendum erit, fiet? nam saepe ea, quae opinati sumus et contra quae scripsimus, fallunt, ac tota subito causa mutatur; atque ut gubernatori ad incursus tempestatum, sic agenti ad varietatem causarum ratio mutando est.

[3] What theory of the duties of an orator is there which permits him to ignore such sudden issues? What will happen when he has to reply to his opponent? For often the expected arguments to which we have written a reply fail us and the whole aspect of the case undergoes a sudden change; consequently the variation to which cases are liable makes it as necessary for us to change our methods as it is for a pilot to change his course before the oncoming storm.

[4] quid porro multus stilus et adsidua lectio et longa studiorum aetas facit, si manet eadem quae fuit incipientibus difficultas? perisse profecto confitendum est praeteritum laborem, cui semper idem laborandum est. neque ego hoc ago ut ex tempore dicere malit, sed ut possit. id autem maxime hoc modo consequemur.

[4] Again, what use is much writing, assiduous reading and long years of study, if the difficulty is to remain as great as it was in the beginning? The man who is always faced with the same labour can only confess that his past labour has been spent in vain. I do not ask him to prefer to speak extempore, but merely that he should be able to do so. And this capacity is best acquired by the following method.

[5] nota sit primum dicendi via. neque enim prius contingere cursus potest quam scierimus, quo sit et qua perveniendum. nec satis est non ignorare quae sunt causarum iudicialium partes, aut quaestionum ordinem recte disponere, quanquam ista sunt praecipua, sed quid quoque loco primum sit ac secundum et deinceps; quae ita sunt natura copulata, ut mutari aut intervelli sine confusione non possint.

[5] In the first place, we must note the direction which the argument is likely to take, since we cannot run our race unless we know the goal and the course. It is not enough to know what are the parts into which forensic pleadings are divided or the principles determining the order of the various questions, important though these points are. We must realise what should come first, second, and so on, in the several parts; for these points are so closely linked together by the very nature of things that they cannot be separated, nor their order changed, without giving rise to confusion.

[6] quisquis autem via dicet, ducetur ante omnia rerum ipsa serie velut duce; propter quod homines etiam modice exercitati facillime tenorem in narrationibus servant. deinde, quid quoque loco quaerant, scient. nec circumspectabunt nec offerentibus se aliunde sensibus turbabuntur nec confundent ex diversis orationem velut salientes huc illuc nec usquam

insistentes.

[6] The orator, who speaks methodically, will above all take the actual sequence of the various points as his guide, and it is for this reason that even but moderately trained speakers find it easiest to keep the natural order in the *statement of facts*. Secondly, the orator must know what to look for in each portion of his case: he must not beat about the bush or allow himself to be thrown off the track by thoughts which suggest themselves from irrelevant quarters, or produce a speech which is a confused mass of incongruities, owing to his habit of leaping this way and that, and never sticking to any one point.

[7] postremo habebunt modum et fine, qui esse citra divisionem nullus potest. expletis pro facultate omnibus quae proposuerint, pervenisse se ad ultimum sentient.

et haec quidem ex arte, illa vero ex studio: ut copiam sermonis optimi, quemadmodum praeceptum est, comparemus: multo ac fideli stilo sic formetur oratio, ut scriptorum colorem etiam quae subito effusa sint reddant, ut, cum multa scripserimus, etiam multa dicamus.

[7] Finally, he must confine himself to certain definite bounds, and for this *division* is absolutely necessary. When to the best of his ability he has dealt fully with all the points which he has advanced, he will know that he has reached his goal.

The precepts just given are dependent on theory. Those to which I now come depend on individual study. We must acquire a store of the best words and phrases on lines that I have already laid down, while our style must be formed by continuous and conscientious practice in writing, so that even our improvisations may reproduce the tone of our writing, and after writing much, we must give ourselves frequent practice in speaking.

[8] nam consuetudo et exercitatio facilitatem maxime parit; quae si paulum intermissa fuerit, non velocitas illa modo tardatur, sed ipsum os coit atque concurrit. quanquam enim opus est naturali quadam mobilitate animi ut, dum proxima dicimus, struere ulteriora possimus semperque nostram vocem provisa et formata cogitatio excipiat,

[8] For facility is mainly the result of habit and exercise and, if it be lost only for a brief time, the result will be not merely that we fall short of the requisite rapidity, but that our lips will become clogged and slow to open. For although we need to possess a certain natural nimbleness of mind to enable us, while we are saying what the instant demands, to build up what is to follow and to secure that there will always be some thought formed and conceived in advance ready to serve our voice, none the less,

[9] vix tamen aut natura aut ratio in tam multiplex officium diducere animum

queat, ut inventioni, dispositioni, elocutioni, ordini rerum verborumque, tum iis, quae dicit, quae subiuncturus est, quae ultra spectanda sunt, adhibita vocis, pronuntiationis, gestus observatione, una sufficiat.

[9] it is scarcely possible either for natural gifts or for methodic art to enable the mind to grapple simultaneously with such manifold duties, and to be equal at one and the same time to the tasks of invention, arrangement, and style, together with what we are uttering at the moment, what we have got to say next and what we have to look to still further on, not to mention the fact that it is necessary all the time to give close attention to voice, delivery and gesture.

[10] longe enim praecedat oportet intentio ac prae se res agat, quantumque dicendo consumitur, tantum ex ultimo prorogetur; ut, donec perveniamus ad finem, non minus prospectu procedamus quam gradu, si non intersistentes offensantesque brevia illa atque concisa singulantium modo eiecturi sumus.

[10] For our mental activities must range far ahead and pursue the ideas which are still in front, and in proportion as the speaker pays out what he has in hand, he must make advances to himself from his reserve funds, in order that, until we reach our conclusion, our mind's eye may urge its gaze forward, keeping time with our advance: otherwise we shall halt and stumble, and pour forth short and broken phrases, like persons who can only gasp out what they have to say.

[11] est igitur usus quidam irrationalis, quem Graeci ἄλογον τριβὴν vocant, qua manus in scribendo decurrit, qua oculi totos simul in lectione versus flexusque eorum et transitus intuentur, et ante sequentia vident quam priora dixerunt. quo constant miracula illa in scenis pilariorum ac ventilatorum, ut ea quae emisierint ultro venire in manus credas et qua iubentur decurrere.

[11] There is, therefore, a certain mechanical knack, which the Greeks call ἄλογος τριβή, which enables the hand to go on scribbling, while the eye takes in whole lines at once as it reads, observes the intonations and the stops, and sees what is coming before the reader has articulated to himself what precedes. It is a similar knack which makes possible those miraculous tricks which we see jugglers and masters of sleight of hand perform upon the stage, in such a manner that the spectator can scarcely help believing that the objects which they throw into the air come to hand of their own accord, and run where they are bidden.

[12] sed hic usus ita proderit, si ea de qua locuti sumus ars antecesserit, ut ipsum illud, quod in se rationem non habet, in ratione versetur. nam mihi ne dicere quidem videtur nisi qui disposite, ornate, copiose dicit, sed tumultuari.

[12] But this knack will only be of real service if it be preceded by the art of which we have spoken, so that what is irrational in itself will nevertheless be founded on reason. For unless a man speaks in an orderly, ornate and fluent

manner, I refuse to dignify his utterance with the name of speech, but consider it the merest rant.

[13] nec fortuiti sermonis contextum mirabor unquam, quem iurgentibus etiam mulierculis superfluere video, cum eo quod, si calor ac spiritus tulit, frequenter accidit ut successum extemporalem consequi cura non possit.

[13] Nor again shall I ever be induced to admire a continuous flow of random talk, such as I note streams in torrents even from the lips of women when they quarrel, although, if a speaker is swept away by warmth of feeling and genuine inspiration, it frequently happens that he attains a success from improvisation which would have been beyond the reach of the most careful preparation.

[14] deum tunc adfuisse, cum id evenisset, veteres oratores, ut Cicero, dictitabant. sed ratio manifesta est. nam bene concepti adfectus et recentes rerum imagines continuo impetu feruntur, quae nonnumquam mora stili refrigescunt et dilatae non revertuntur. utique vero, cum infelix illa verborum cavillatio accessit et cursus ad singula vestigia restitit, non potest ferri contorta vis, sed, ut optime vocum singularum cedat electio, non continua, sed composita est.

[14] When this occurred, the old orators, such as Cicero, used to say that some god had inspired the speaker. But the reason is obvious. For profound emotion and vivid imagination sweep on with unbroken force, whereas, if retarded by the slowness of the pen, they are liable to grow cold and, it put off for the moment, may never return. Above all, if we add to these obstacles an unhealthy tendency to quibble over the choice of words, and check our advance at each step, the vehemence of our onset loses its impetus; while even though our choice of individual words may be of the happiest, the style will be a mere patchwork with no regular pattern.

[15] quare capiendae sunt illae, de quibus dixi, rerum imagines, quas vocari παντασίας indicavimus, omniaque, de quibus dicturi erimus, personae, quaestiones, spes, metus habenda in oculis, in adfectus recipienda. pectus est enim, quod disertos facit, et vis mentis. ideoque imperitis quoque, si modo sint aliquo adfectu concitati, verba non desunt.

[15] Consequently those vivid conceptions of which I spoke and which, as I remarked, are called παντασῖαι, together with everything that we intend to say, the persons and questions involved, and the hopes and fears to which they give rise, must be kept clearly before our eyes and admitted to our hearts: for it is feeling and force of imagination that make us eloquent. It is for this reason that even the uneducated have no difficulty in finding words to express their meaning, if only they are stirred by some strong emotion.

[16] tum intendendus animus, non in aliquam rem unam, sed in plures simul

continuas; ut, si per aliquam rectam viam mittamus oculos, simul omnia quae sunt in ea circaque intuemur, non ultimum tantum videmus sed usque ad ultimum. addit ad dicendum etiam pudor stimulos, mirumque videri potest, quod, cum stilus secreto gaudeat atque omnes arbitros reformidet, extemporalis actio auditorium frequentia, ut miles congestu signorum, excitatur.

[16] Further the attention of the mind must be directed not to some one thing, but simultaneously to a number of things in continuous sequence. The result will be the same as when we cast our eyes along some straight road and see at once all that is on and near it, obtaining a view not merely of its end, but of the whole way there. Dread of the shame of failure is also a powerful stimulant to oratory, and it may be regarded as a matter for wonder that, whereas when writing we delight in privacy and shrink from the presence of witnesses, in extempore pleading a large audience has an encouraging effect, like that which the sight of the massed standards has on the soldier.

[17] namque et difficiliorem cogitationem exprimit et expellit dicendi necessitas, et secundos impetus auget placendi cupido. adeo pretium omnia spectant, ut eloquentia quoque, quanquam plurimum habeat in se voluptatis, maxime tamen praesenti fructu laudis opinionisque ducatur.

[17] For the sheer necessity of speaking thrusts forward and forces out our labouring thought, and the desire to win approbation kindles and fosters our efforts. So true is it that there is nothing which does not look for some reward, that eloquence, despite the fact that its activity is in itself productive of a strong feeling of pleasure, is influenced by nothing so much as the immediate acquisition of praise and renown.

[18] nec quisquam tantum fidat ingenio, ut id sibi speret incipienti statim posse contingere, sed, sicut in cogitatione praecipimus, ita facilitatem quoque extemporalem a parvis initiis paulatim perducemus ad summam, quae neque perfici neque contineri nisi usu potest.

[18] Nor should any man put such trust in his native ability as to hope that this power will present itself to him at the outset of his career as an orator; for the precepts which I laid down for premeditation apply to improvisation also; we must develop it by gradual stages from small beginnings, until we have reached that perfection which can only be produced and maintained by practice.

[19] ceterum pervenire eo debet, ut cogitatio non utique melior sit ea sed tutior, cum hanc facilitatem non prosa modo multi sint consecuti, sed etiam carmine, ut Antipater Sidonius et Licinius Archias (credendum enim Ciceroni est), non quia nostris quoque temporibus non et fecerint quidam hoc et faciant. quod tamen non ipsum tam probabile puto, (neque enim habet aut usum res aut necessitatem) quam exhortandis in hanc spem, qui foro praeparantur, utile

exemplum.

[19] Moreover, the orator should reach such a pitch of excellence that, while premeditation may still be the safer method, it will not necessarily be the better, since many have acquired the gift of improvisation not merely in prose, but in verse as well, as, for example, Antipater of Sidon and Licinius Archias (for whose powers we have the unquestionable authority of Cicero), not to mention the fact that there are many, even in our own day, who have done this and are still doing it. I do not, however, regard this accomplishment as being particularly valuable in itself, for it is both unpractical and unnecessary, but mention it as a useful example to encourage students training for the bar, in the hope that they may be able to acquire this accomplishment.

[20] neque vero tanta esse unquam debet fiducia facilitatis, ut non breve saltem tempus, quod nusquam fere deerit, ad ea quae dicturi simus dispicienda sumamus, quod quidem in iudiciis ac foro datur semper. neque enim quisquam est, qui causam quam non didicerit agat.

[20] Still our confidence in our power of speaking extempore should never be so great that we should neglect to devote a few minutes to the consideration of what we are going to say. There will but rarely be occasions when this is impossible, while in the lawsuits of the courts there is always some time allowed for the purpose. For no one can plead a cause with the facts of which he is unacquainted.

[21] declamatores quosdam perversa ducit ambitio, ut exposita controversia protinus dicere velint; quin etiam, quod est in primis frivolum ac scenicum, verbum petant, quo incipiant. sed tam contumeliosos in se ridet invicem eloquentia, et qui stultis videri eruditi volunt, stulti eruditis videntur.

[21] Some declaimers, it is true, are led by a perverse ambition to attempt to speak the moment their theme has been given them, and even ask for a word with which to start, an affectation which is in the worst and most theatrical taste. But eloquence has, in her turn, nothing but derision for those that insult her thus, and speakers who wish to seem learned to fools are merely regarded as fools by the learned.

[22] si qua tamen fortuna tam subitam fecerit agendi necessitatem, mobiliore quodam opus erit ingenio, et vis omnis intendenda rebus, et in praesentia remittendum aliquid ex cura verborum, si consequi utrumque non dabitur. tum et tardior pronuntiatio moras habet et suspensa ac velut dubitans oratio, ut tamen deliberate, non haesitare videamur.

[22] If, however, chance should impose the necessity upon us of pleading a case at such short notice, we shall require to develop special mental agility, to give all our attention to the subject, and to make a temporary sacrifice of our care for the niceties of language, if we find it impossible to secure both. On

such occasions a slower delivery and a style of speaking suggestive of a certain indecision and doubt will secure us time to think, but we must be careful to do this in such a way as to give the impression of thought, not of hesitation.

[23] hoc, dum egredimur e portu, si nos nondum aptatis satis armamentis aget ventus; deinde paulatim simul euntes aptabimus vela et disponemus rudentes et impleri sinus optabimus. Id potius quam se inani verborum torrenti dare quasi tempestatibus quo volent auferendum.

[23] This precaution may be employed while we are clearing harbour, if the wind drive us forward before all our tackle is ready. Afterwards, as we proceed upon our course, we shall trim our sails, arrange our ropes, and pray that the breeze may fill our sails. Such a procedure is preferable to yielding ourselves to an empty torrent of words, that the storm may sweep us where it will.

[24] sed non minore studio continetur haec facultas quam paratur. ars enim semel percepta non labitur, stilus quoque intermissione paulum admodum de celeritate deperdit; promptum hoc et in expedito positum exercitatione sola continetur. hac uti sic optimum est, ut cotidie dicamus audientibus pluribus, maxime de quorum simus iudicio atque opinione solliciti; rarum est enim ut satis se quisque vereatur.

[24] But it requires no less careful study to maintain than to acquire this facility. Theory once mastered is not forgotten, and the pen loses but little of its speed by disuse: but this promptitude and readiness for action can be maintained by practice only. The best form of exercise is to speak daily before an audience of several persons, who should, as far as possible, be selected from those whose judgement and good opinion we value, since it is rare for anyone to be sufficiently critical of himself. It is even better to speak alone than not at all.

[25] *vel soli tamen dicamus potius quam omnino non dicamus. est et illa exercitatio cogitandi totasque materias vel silentio (dum tamen quasi dicat intra se ipsum) persequendi, quae nullo non et tempore et loco, quando non aliud agimus, explicari potest, et est in parte utilior quam haec proxima.*

[25] There is yet another method of exercising this faculty: it consists in going over our subjects in their entirety in silent thought, although we must all the time formulate the words to ourselves: such practice is possible at any moment or place that finds us unoccupied, and is, in some respects, more useful than that which I have just mentioned;

[26] *diligentius enim componitur quam illa, in qua contextum dicendi intermittere veremur. rursus in alia plus prior confert, vocis firmitatem, oris facilitatem, motum corporis, qui et ipse, ut dixi, excitat oratorem et iactatione manus, pedis supplensione, sicut cauda leones facere dicuntur, hortatur. studendum vero semper et ubique.*

[26] for we are more careful about our composition than when we are actually speaking and in momentary fear of interrupting the continuous flow of our language. On the other hand, the first method is more valuable for certain purposes, as it gives strength to our voice, fluency to our tongue and vigour to our gesture; and the latter, as I have already remarked, in itself excites the orator and spurs him on, as he waves his hand or stamps his foot: he is, in fact, like the lion, that is said to lash himself to fury with his tail. But we must study always and everywhere.

[27] *neque enim fere tam est ullus dies occupatus, ut nihil lucrativae, ut Cicero Brutum facere tradit, operae ad scribendum aut legendum aut dicendum rapi aliquo momento temporis possit; siquidem C. Carbo etiam in tabernaculo solebat hac uti exercitatione dicendi.*

[27] For there is scarce a single day in our lives that is so full of occupations that we may not, at some moment or other, snatch a few precious minutes, as Cicero records that Brutus was wont to do, either for writing or reading or speaking; Gaius Carbo, for example, was in the habit of indulging in such exercises even in his tent.

[28] *ne id quidem tacendum, quod eidem Ciceroni placet, nullum nostrum*

usquam negligentem esse sermonem; quidquid loquimur ubicunque, sit pro sua scilicet portione perfectum. scribendum certe nunquam est magis, quam cum multa dicemus ex tempore. ita enim servabitur pondus, et innatans illa verborum facilitas in altum reducetur; sicut rustici proximas vitis radices amputant, quae illam in summum solum ducunt, ut inferiores penitus descendendo firmentur.

[28] I must also mention the precept (which again has the approval of Cicero) that we should never be careless about our language. Whatever we say, under whatever circumstances, should be perfect in its way. As regards writing, this is certainly never more necessary than when we have frequently to speak extempore. For it maintains the solidity of our speech and gives depth to superficial facility. We may compare the practice of husbandmen who cut away the uppermost roots of their vines, which run close to the surface of the soil, that the taproots may strike deeper and gain in strength.

[29] ac nescio an, si utrumque cum cura et studio fecerimus, invicem prosit, ut scribendo dicamus diligentius, dicendo scribamus facilius. scribendum ergo, quotiens licebit; si id non dabitur, cogitandum; ab utroque exclusi debent tamen sic dicere, ut neque deprehensus orator neque litigator destitutus esse videatur.

[29] Indeed I am not sure that, if we practise both with care and assiduity, mutual profit will not result, and writing will give us greater precision of speech, while speaking will make us write with greater facility. We must write, therefore, whenever possible; if we cannot write, we must meditate: if both are out of the question, we must still speak in such a manner that we shall not seem to be taken unawares nor our client to be left in the lurch.

[30] plerumque autem multa agentibus accidit, ut maxime necessaria et utique initia scribant, cetera quae domo adferunt cogitatione complectantur, subitis ex tempore occurrant; quod fecisse M. Tullium commentariis ipsius apparet. sed feruntur aliorum quoque et inventi forte, ut eos dicturus quisque composuerat, et in libros digesti, ut causarum quae sunt actae a Ser. Sulpicio, cuius tres orationes extant; sed hi de quibus loquor commentarii ita sunt exacti, ut ab ipso mihi in memoriam posteritatis videantur esse compositi.

[30] It is, however, a common practice with those who have many cases to plead to write out the most necessary portions, more especially the beginnings of their speeches, to cover the remainder of that which they are able to prepare by careful premeditation and to trust to improvisation in emergency, a practice regularly adopted by Cicero, as is clear from his note-books. But the notes of other orators are also in circulation; some have been discovered by chance, just as they were jotted down previous to a speech, while others have been edited in book form, as in the case of the speeches delivered in the courts by Servius Sulpicius, of whose works only three speeches survive. These

memoranda, however, of which I am speaking are so carefully drawn up that they seem to me to have been composed by himself for the benefit of posterity.

[31] nam Ciceronis ad praesens modo tempus aptatos libertus Tiro contraxit; quos non ideo excuso, quia non probem, sed ut sint magis admirabiles. in hoc genere prorsus recipio hanc brevem adnotationem libellosque, qui vel manu teneantur, et ad quos interim respicere fas sit.

[31] But Cicero's notes were originally intended merely to meet the requirements of the moment, and were afterwards collected by Tiro. In making this apology I do not mean to imply that I disapprove of them, but merely wish to make them more worthy of admiration. And in this connexion I must state that I admit the use of brief memoranda and note-books, which may even be held in the hand and referred to from time to time.

[32] illud quod Laenas praecipit displicet mihi, vel in his quae scripserimus velut summas in commentarium et capita conferre. facit enim ediscendi negligentiam haec ipsa fiducia et lacerat ac deformat orationem. ego autem ne scribendum quidem puto, quod non sinus memoria persecuturi. nam hic quoque accidit, ut revocet nos cogitatio ad illa elaborata nec sinat praesentem fortunam experiri.

[32] But I disapprove of the advice given by Laenas, that we should set down in our note-books, duly tabulated under the appropriate headings, summaries of what we propose to say, even in cases where we have already written it out in full. For reliance on such notes as these makes us careless in learning what we have written and mutilates and deforms our style. For my own part I think that we should never write out anything which we do not intend to commit to memory. For if we do, our thoughts will run back to what we have elaborated in writing and will not permit us to try the fortune of the moment.

[33] sic anceps inter utrumque animus aestuat, cum et scripta perdidit et non quaerit nova. sed de memoria destinatus est libro proximo locus nec huic parti subiungendus, quia sunt alia prius nobis dicenda.

[33] Consequently, the mind will waver in doubt between the two alternatives, having forgotten what was committed to writing and being unable to think of anything fresh to say. However, as the topic of memory will be discussed in the next book, I will not introduce it here, as there are other points which require to be dealt with first.

LIBER XI — BOOK XI

1. parata, sicut superior libro continetur, facultate scribendi cogitandique et ex tempore etiam, cum res poscet, orandi, proxima est cura, ut dicamus apte; quam virtutem quartam elocutionis Cicero demonstrat, quaeque est meo quidem iudicio maxime necessaria.

1. After acquiring the power of writing and thinking, as described in the preceding book, and also of pleading extempore, if occasion demand, our next task will be to ensure that appropriateness of speech, which Cicero shows to be the fourth department of style, and which is, in my opinion, highly necessary.

[2] nam cum sit ornatus orationis varius et multiplex conveniatque alius alii, nisi fuerit accommodatus rebus atque personis, non modo non illustrabit eam, sed etiam destruet et vim rerum in contrarium vertet. quid enim prodest, esse verba et Latina et significantia et nitida, figuris etiam numerisque elaborata, nisi cum iis, in quae iudicem duci formarique volumus,

[2] For since the ornaments of style are varied and manifold and suited for different purposes, they will, unless adapted to the matter and the persons concerned, not merely fail to give our style distinction, but will even destroy its effect and produce a result quite the reverse of that which our matter should produce. For what profit is it that our words should be Latin, significant and graceful, and be further embellished with elaborate figures and rhythms, unless all these qualities are in harmony with the views to which we seek to lead the judge and mould his opinions?

[3] consentiant, si genus sublime dicendi parvis in causis, parvum limatumque grandibus, laetum tristibus, lene asperis, minax supplicibus, summissum concitatis, trux atque violentum iucundis adhibeamus? ut monilibus et margaritis ac veste longa, quae sunt ornamenta feminarum, deformentur viri, nec habitus triumphalis, quo nihil excogitari potest augustius, feminas deceat.

[3] What use is it if we employ a lofty tone in cases of trivial import, a slight and refined style in cases of great moment, a cheerful tone when our matter calls for sadness, a gentle tone when it demands vehemence, threatening language when supplication, and submissive when energy is required, or fierceness and violence when our theme is one that asks for charm? Such incongruities are as unbecoming as it is for men to wear necklaces and pearls and flowing raiment which are the natural adornments of women, or for women to robe themselves in the garb of triumph, than which there can be conceived no more majestic raiment.

[4] hunc locum Cicero breviter in tertio de Oratore libro perstringit, neque tamen videri potest quidquam omisisse dicendo, non omni causae neque

auditori neque personae neque tempori congruere orationis unum genus. nec fere pluribus in Oratore eadem. sed illic L. Crassus, cum apud summos oratores hominesque eruditissimos dicat, satis habet partem hanc velut notare inter agnoscentes;

[4] This topic is discussed by Cicero in the third book of the *de Oratore*, and, although he touches on it but lightly, he really covers the whole subject when he says, *One single style of oratory is not suited to every case, nor to every audience, nor every speaker, nor every occasion.* And he says the same at scarcely greater length in the *Orator*. But in the first of these works Lucius Crassus, since he is speaking in the presence of men distinguished alike for their learning and their eloquence, thinks it sufficient merely to indicate this topic to his audience for their recognition;

[5] et hic Cicero adloquens Brutum testatur esse haec ei nota ideoque brevius a se dici, quanquam sit fusus locus tracteturque a philosophis latius. nos institutionem professi non solum scientibus ista, sed etiam discentibus tradimus, ideoque paulo pluribus verbis debet haberi venia.

[5] while in the latter work Cicero asserts that, as these facts are familiar to Brutus, to whom that treatise is addressed, they will be given briefer treatment, despite the fact that the subject is a wide one and is discussed at greater length by the philosophers. I, on the other hand, have undertaken the education of an orator, and, consequently, am speaking not merely to those that know, but also to learners; I shall, therefore, have some claim to forgiveness if I discuss the topic in greater detail.

[6] quare notum sit nobis ante omnia, quid conciliando, docendo, movendo iudici conveniat, quid quaque parte orationis petamus. ita nec vetera aut translata aut ficta verba in incipiendo, narrando, argumentando tractabimus neque decurrentes contexto nitore circuitus, ubi dividenda erit causa et in partes suas digerenda, neque humile atque cotidianum sermonis genus et compositione ipsa dissolutum epilogis dabimus, nec iocis lacrimas, ubi opus erit miseratione, siccabimus.

[6] For this reason, it is of the first importance that we should know what style is most suitable for conciliating, instructing or moving the judge, and what effects we should aim at in different parts of our speech. Thus we shall eschew antique, metaphorical and newly-coined words in our *exordium*, *statement of facts* and *arguments*, as we shall avoid flowing periods woven with elaborate grace, when the case has to be divided and distinguished under its various heads, while, on the other hand, we shall not employ mean or colloquial language, devoid of all artistic structure, in the *peroration*, nor, when the theme calls for compassion, attempt to dry the tears of our audience with jests.

[7] nam ornatus omnis non tam sua quam rei, cui adhibetur, condicione constat; nec plus refert, quid dicas quam quo loco. sed totum hoc apte dicere

non elocutionis tantum genere constat, sed est cum inventione commune. nam si tantum habent etiam verba momentum, quanto res ipsae magis? quarum quae esset observatio, suis locis subinde subiecimus.

[7] For all ornament derives its effect not from its own qualities so much as from the circumstances in which it is applied, and the occasion chosen for saying anything is at least as important a consideration as what is actually said. But the whole of this question of appropriate language turns on something more than our choice of style, for it has much in common with invention. For if words can produce such an impression, how much greater must that be which is created by the facts themselves. But I have already laid down rules for the treatment of the latter in various portions of this work.

[8] illud est diligentius docendum, eum demum dicere apte, qui non solum quid expediat, sed etiam quid deceat inspexerit. nec me fugit, plerumque haec esse coniuncta. nam quod decet, fere prodest, neque alio magis animi iudicium conciliari aut, si res in contrarium tulit, alienari solent.

[8] Too much insistence cannot be laid upon the point that no one can be said to speak appropriately who has not considered not merely what it is expedient, but also what it is becoming to say. I am well aware that these two considerations generally go hand in hand. For whatever is becoming is, as a rule, useful, and there is nothing that does more to conciliate the good-will of the judge than the observance or to alienate it than the disregard of these considerations.

[9] aliquando tamen et haec dissentiunt. quotiens autem pugnabunt, ipsam utilitatem vincet quod decet. nam quis nescit, nihil magis profuturum ad absolutionem Socrati fuisse, quam si esset usus illo iudiciali genere defensionis et oratione summissa conciliasset iudicum animos sibi crimenque ipsum sollicitate redarguisset?

[9] Sometimes, however, the two are at variance. Now, whenever this occurs, expediency must yield to the demands of what is becoming. Who is there who does not realise that nothing would have contributed more to secure the acquittal of Socrates than if he had employed the ordinary forensic methods of defence and had conciliated the minds of his judges by adopting a submissive tone and had devoted his attention to refuting the actual charge against him?

[10] verum id eum minime decebat; ideoque sic egit, ut qui poenam suam honoribus summis esset aestimaturus. maluit enim vir sapientissimus, quod superesset ex vita, sibi perire, quam quod praeterisset. et quando ab hominibus sui temporis parum intelligebatur, posteriorum se iudiciis reservavit, brevi detrimento iam ultimae senectutis aevum saeculorum omnium consecutus.

[10] But such a course would have been unworthy of his character, and, therefore, he pleaded as one who would account the penalty to which he might

be sentenced as the highest of honours. The wisest of men preferred to sacrifice the remnant of his days rather than to cancel all his past life. And since he was but ill understood by the men of his own day, he reserved his case for the approval of posterity and at the cost of a few last declining years achieved through all the ages life everlasting.

[11] itaque quamvis Lysias, qui tum in dicendo praestantissimus habebatur, defensionem illi scriptam obtulisset, uti ea noluit, cum bonam quidem, sed parum sibi convenientem iudicavisset. quo vel solo patet non persuadendi sed bene dicendi finem in oratore servandum, cum interim persuadere deforme sit. non fuit hoc utile absolutioni, sed, quod est maius, homini fuit.

[11] And so although Lysias, who was accounted the first orator of that time, offered him a written defence, he refused to make use of it, since, though he recognised its excellence, he regarded it as unbecoming to himself. This instance alone shows that the end which the orator must keep in view is not persuasion, but speaking well, since there are occasions when to persuade would be a blot upon his honour. The line adopted by Socrates was useless to secure his acquittal, but was of real service to him as a man; and that is by far the greater consideration.

[12] et nos secundum communem potius loquendi consuetudinem quam ipsam veritatis regulam divisione hac utimur, ut ab eo, quod deceat, utilitatem separemus; nisi forte prior ille Africanus, qui patria cedere quam cum tribuno plebis humillimo contendere de innocentia sua maluit, inutiliter sibi videtur consuluisse; aut P. Rutilius, vel cum illo paene Socratico genere defensionis est usus, vel cum revocante eum P. Sulla manere in exilio maluit, quid sibi maxime conduceret, nesciebat.

[12] In drawing this distinction between what is expedient and what is becoming, I have followed rather the usage of common speech than the strict law of truth; unless, indeed, the elder Africanus is to be regarded as having failed to consult his true interests, when he retired into exile sooner than wrangle over his own innocence with a contemptible tribune of the people, or unless it be alleged that Publius Rutilius was ignorant of his true advantage both on the occasion when he adopted a defence which may almost be compared with that of Socrates, and when he preferred to remain in exile rather than return at Sulla's bidding.

[13] hi vero parva illa, quae abiectissimus quisque animus utilia credit, si cum virtute conferantur despicienda iudicaverunt, ideoque perpetua saeculorum admiratione celebrantur. neque nos simus tam humiles, ut quae laudamus inutilia credamus.

[13] No, these great men regarded all those trifles that the most abject natures regard as advantageous, as being contemptible if weighed in the balance with virtue, and for this reason they have their reward in the deathless praise of all

generations. Let not us, then, be so poor spirited as to regard the acts, which we extol, as being inexpedient.

[14] sed hoc quaecunque discrimen raro admodum eveniet: idem fere, ut dixi, in omni genere causarum et proderit et decebit. est autem, quod omnes et semper et ubique deceat, facere ac dicere honeste, contraque neminem unquam ullo in loco turpiter. minora vero quaeque sunt ex mediis plerumque sunt talia, ut aliis sint concedenda, aliis non sint, aut pro persona, tempore, loco, causa magis ac minus vel excusata debeant videri vel reprehendenda.

[14] However, it is but rarely that this distinction, such as it is, is called into play. As I have said, the expedient and the becoming will, as a rule, be identical in every kind of case. Still, there are two things which will be becoming to all men at all times and in all places, namely, to act and speak as befits a man of honour, and it will never at any time beseem any man to speak or act dishonourably. On the other hand, things of minor importance and occupying something like a middle position between the two are generally of such a nature that they may be conceded to some, but not to others, while it will depend on the character of the speaker and the circumstances of time, place and motive whether we regard them as more or less excusable or reprehensible.

[15] cum dicamus autem de rebus aut alienis aut nostris, dividenda ratio est eorum, dum sciamus pleraque neutro loco convenire. in primis igitur omnis vitiosa iactatio est, eloquentiae tamen in oratore praecipue, adfertque audientibus non fastidium modo, sed plerumque etiam odium.

[15] When, however, we are speaking of our own affairs or those of others, we must distinguish between the expedient and the becoming, while recognising that the majority of the points which we have to consider will fall under neither head.

In the first place, then, all kinds of boasting are a mistake, above all, it is an error for an orator to praise his own eloquence, and, further, not merely wearies, but in the majority of cases disgusts the audience.

[16] habet enim mens nostra sublime quiddam et erectum et impatiens superioris; ideoque abiectos aut summittentes se libenter allevamus, quia hoc facere tanquam maiores videmur; et quotiens discessit aemulatio, succedit humanitas. at qui se supra modum extollit, premere ac despicere creditur, nec tam se maiorem quam minores ceteros facere.

[16] For there is ever in the mind of man a certain element of lofty and unbending pride that will not brook superiority: and for this reason we take delight in raising the humble and submissive to their feet, since such an act gives us a consciousness of our superiority, and as soon as all sense of rivalry disappears, its place is taken by a feeling of humanity. But the man who exalts

himself beyond reason is looked upon as depreciating and showing a contempt for others and as making them seem small rather than himself seem great.

[17] inde invident humiliores, (hoc vitium est eorum, qui nec cedere volunt nec possunt contendere) rident superiores, improbant boni. plerumque vere deprehendas arrogantium falsum de se opinionem; sed in veris quoque sufficit conscientia.

reprehensus est in hac parte non mediocriter Cicero, quanquam is quidem rerum a se gestarum maior quam eloquentiae fuit in orationibus utique iactor.

[17] As a result, those who are beneath him feel a grudge against him (for those who are unwilling to yield and yet have not the strength to hold their own are always liable to this failing), while his superiors laugh at him and the good disapprove. Indeed, as a rule, you will find that arrogance implies a false self-esteem, whereas those who possess true merit find satisfaction enough in the consciousness of possession.

Cicero has been severely censured in this connexion, although he was far more given to boasting of his political achievements than of his eloquence, at any rate, in his speeches.

[18] et plerumque illud quoque non sine aliqua ratione fecit. aut enim tuebatur eos, quibus erat adiutoribus usus in opprimenda coniuratione, aut respondebat invidiae (cui tamen non fuit par, servatae patriae poenam passus exilium), ut illorum, quae egerat in consulatu, frequens commemoratio possit videri non gloriae magis quam defensionis data.

[18] And as a rule he had some sound reason for his self-praise. For he was either defending those who had assisted him to crush the conspiracy of Catiline, or was replying to attacks made upon him by those who envied his position; attacks which he was so far unable to withstand that he suffered exile as the penalty for having saved his country. Consequently, we may regard his frequent reference to the deeds accomplished in his consulship as being due quite as much to the necessities of defence as to the promptings of vainglory.

[19] eloquentiam quidem, cum plenissimam diversae partis advocatis concederet, sibi nunquam in agendo immodice adrogavit. illius sunt enim: si quid est ingenii in me, quod sentio quam sit exiguum, et, quo ingenio minus possum, subsidium mihi diligentia comparavi.

[19] As regards his own eloquence, he never made immoderate claims for it in his pleading, while he always paid a handsome tribute to the eloquence of the advocate, who opposed him. For example, there are passages such as the following: "If there be aught of talent in me, and I am only too conscious how little it is," and, "In default of talent, I turned to industry for aid."

[20] *quin etiam contra Q. Caecilium de accusatore in Verrem constituendo, quamvis multum esset in hoc quoque momenti, uter ad agendum magis idoneus veniret, dicendi tamen facultatem magis illi detraxit quam adrogavit sibi, seque non consecutum, sed omnia fecisse, ut posset eam consequi, dixit.*

[20] Again, in his speech against Caecilius on the selection of an accuser for Verres, despite the fact that the question as to which was the most capable pleader, was a factor of great importance, he rather depreciated his opponent's eloquence than exalted his own, and asserted that he had done all in his power to make himself an orator, though he knew he had not succeeded.

[21] *in epistolis aliquando familiariter apud amicos, nonnunquam in dialogis aliena tamen persona verum de eloquentia sua dicit. et aperte tamen gloriari nescio an sit magis tolerabile vel ipsa vitii huius simplicitate, quam illa iactatio perversa, si abundans opibus pauperem se neget, nobilis obscurum et potens infirmum et disertus imperitum plane et infantem vocet.*

[21] In his letters to intimate friends, it is true, and occasionally in his dialogues, he tells the truth of his own eloquence, though in the latter case he is careful always to place the remarks in question in the mouth of some other character. And yet I am not sure that open boasting is not more tolerable, owing to its sheer straightforwardness, than that perverted form of self-praise, which makes the millionaire say that he is not a poor man, the man of mark describe himself as obscure, the powerful pose as weak, and the eloquent as unskilled and even inarticulate.

[22] *ambitiosissimum gloriandi genus est etiam deridere. ab aliis ergo laudemur; nam ipsos, ut Demosthenes ait, erubescere, etiam cum ab aliis laudabimur, decet. neque hoc dico, non aliquando de rebus a se gestis oratori esse dicendum, sicut eidem Demostheni pro Ctesiphonte; quod tamen ita emendavit, ut necessitatem id faciendi ostenderet invidiamque omnem in eum regeret, qui hoc se coegisset.*

[22] But the most ostentatious kind of boasting takes the form of actual self-derision. Let us therefore leave it to others to praise us. For it befits us, as Demosthenes says, to blush even when we are praised by others. I do not mean to deny that there are occasions when an orator may speak of his own achievements, as Demosthenes himself does in his defence of Ctesiphon. But on that occasion he qualified his statements in such a way as to show that he was compelled by necessity to do so, and to throw the odium attaching to such a proceeding on the man who had forced him to it.

[23] *et M. Tullius saepe dicit de oppressa coniuratione Catilinae; sed modo id virtuti senatus, modo providentiae deorum immortalium adsignat. plerumque contra inimicos atque obtrectatores plus vindicat sibi. erant enim illa tuenda, cum obiicerentur.*

[23] Again, Cicero often speaks of his suppression of the Catilinarian conspiracy, but either attributes his success to the courage shown by the senate or to the providence of the immortal gods. If he puts forward stronger claims to merit, it is generally when speaking against his enemies and detractors; for he was bound to defend his actions when they were denounced as discreditable.

[24] in carminibus utinam pepercisset, quae non desierunt carpere maligni:

cedant arma togae, concedat laurea linguae;

et

O fortunatam natam me consule Romam;

et Iovem illum, a quo in concilium deorum advocatur; et Minervam, quae artes eum edocuit; quae sibi ille secutus quaedam Graecorum exempla permiserat.

[24] One could only wish that he had shown greater restraint in his poems, which those who love him not are never weary of criticising. I refer to passages such as:

“Let arms before the peaceful toga yield,

Laurels to eloquence resign the field,

“

or

“O happy Rome, born in my consulship!”

together with that “Jupiter, by whom he is summoned to the assembly of the gods,” and the “Minerva that taught him her accomplishments”; extravagances which he permitted himself in imitation of certain precedents in Greek literature.

[25] verum eloquentiae ut indecora iactatio, ita nonnunquam concedenda fiducia est. nam quis reprehendat haec: quid putem? contemptumne me? non video nec in vita nec in gratia nec in rebus gestis nec in hac mea mediocritate ingenii, quid despicere possit Antonius? et paulo post apertius:

[25] But while it is unseemly to make a boast of one's eloquence, it is, however, at times permissible to express confidence in it. Who, for instance, can blame the following? “What, then, am I to think? That I am held in contempt? I see nothing either in my past life, or my position, or such poor talents as I may possess, that Antony can afford to despise.” And a little later he speaks yet more openly:

[26] An decertare mecum voluit contentione dicendi? hoc quidem est beneficium. quid enim plenius, quid uberius quam mihi et pro me et contra

Antonium dicere?

[26] “Or did he wish to challenge me to a contest of eloquence? I could wish for nothing better. For what ampler or richer theme could I hope to find than to speak at once for myself and against Antony?”

[27] arrogantes et illi, qui se iudicasse de causa nec aliter adfuturos fuisse proponunt. nam et inviti iudices audiunt praesumentem partes suas, nec hoc oratori contingere inter aduersarios quod Pythagorae inter discipulos potest ipse dixit. sed istud magis minusve vitiosum est pro personis dicentium.

[27] Another form of arrogance is displayed by those who declare that they have come to a clear conviction of the justice of their cause, which they would not otherwise have undertaken. For the judges give but a reluctant hearing to such as presume to anticipate their verdict, and the orator cannot hope that his opponents will regard his *ipse dixit* with the veneration accorded by the Pythagoreans to that of their master. But this fault will vary in seriousness according to the character of the orator who uses such language.

[28] defenditur enim aliquatenus aetate, dignitate, auctoritate; quae tamen vix in ullo tanta fuerint, ut non hoc adfirmationis genus temperandum sit aliqua moderatione sicut omnia, in quibus patronus argumentum ex se ipso pete. quid fuisset tumidius, si accipiendum criminis loco negasset Cicero equitis Romani esse filium, se defendente? at ille fecit hoc etiam fauorabile coniungendo cum iudiciis dignitatem suam: equilis autem Romani esse filium, criminis loco poni ab accusatoribus, neque vobis iudicantibus oportuit neque defendentibus nobis.

[28] For such assertions may to some extent be justified by the age, rank, and authority of the speaker. But scarcely any orator is possessed of these advantages to such an extent as to exempt him from the duty of tempering such assertions by a certain show of modesty, a remark which also applies to all passages in which the advocate draws any of his arguments from his own person. What could have been more presumptuous than if Cicero had asserted that the fact that a man was the son of a Roman knight should never be regarded as a serious charge, in a case in which *he* was appearing for the defence? But he succeeded in giving this very argument a favourable turn by associating his own rank with that of the judges, and saying, “The fact of a man being the son of a Roman knight should never have been put forward as a charge by the prosecution when these gentlemen were in the jury-box and I was appearing for the defendant.”

[29] impudens, tumultuosa, iracunda actio omnibus indecora, sed ut quisque aetate, dignitate, usu praecedat, magis in ea reprehendendus. videas autem rixatores quosdam neque iudicum reverentia neque agendi more ac modo contineri, quo ipso mentis habitu manifestum sit, tam in suscipiendis quam in agendis causis nihil pensi habere.

[29] An impudent, disorderly, or angry tone is always unseemly, no matter who it be that assumes it; and it becomes all the more reprehensible in proportion to the age, rank, and experience of the speaker. But we are familiar with the sight of certain brawling advocates who are restrained neither by respect for the court nor by the recognised methods and manners of pleading. The obvious inference from this attitude of mind is that they are utterly reckless both in undertaking cases and in pleading them.

[30] profert enim mores plerumque oratio et animi secret detegit. nec sine causa Graeci prodiderunt, ut vivat, quemque etiam dicere. humiliora illa vitia: summissa adulatio, adfectata scurrilitas, in rebus ac verbis parum modestis ac pudicis vilis pudor, in omni negotio neglecta auctoritas; quae fere accidunt iis, qui nimium aut blandi esse aut ridiculi volunt.

[30] For a man's character is generally revealed and the secrets of his heart are laid bare by his manner of speaking, and there is good ground for the Greek aphorism that, "as a man lives, so will he speak." The following vices are of a meaner type: grovelling flattery, affected buffoonery, immodesty in dealing with things or words which are unseemly or obscene, and disregard of authority on all and every occasion. They are faults which, as a rule, are found in those who are over-anxious either to please or amuse.

[31] ipsum etiam eloquentiae genus alios aliud decet. nam neque tam plenum et erectum et audax et praecultum senibus convenerit quam pressum et mite et limatum et quale intelligi vult Cicero, cum dicit, orationem suam coepisse canescere; sicut vestibis quoque non purpura coccoque fulgentibus illa aetas satis apta sit.

[31] Again, different kinds of eloquence suit different speakers. For example, a full, haughty, bold and florid style would be less becoming to an old man than that restrained, mild and precise style to which Cicero refers, when he says that his style is beginning to grow grey-haired. It is the same with their style as their clothes; purple and scarlet raiment goes ill with grey hairs.

[32] in iuvenibus etiam uberiora paulo et paene periclitantia feruntur. at in iisdem siccum et sollicitum et contractum dicendi propositum plerumque adfectione ipsa severitatis invisum est, quando etiam morum senilis auctoritas immatura in adolescentibus creditur. simpliciora militares decet.

[32] In the young, however, we can endure a rich and even, perhaps, a risky style. On the other hand, a dry, careful and compressed style is unpleasing in the young as suggesting the affectation of severity, since even the authority of character that goes with age is considered as premature in young men. Soldiers are best suited by a simple style.

[33] philosophiam ex professo, ut quidam faciunt, ostentantibus parum decori sunt plerique orationis ornatus maximeque ex adfectibus, quos illi vitia dicunt.

verba quoque exquisitiora et compositio numerosa tali proposito diversa.

[33] Those, again, who make ostentatious profession, as some do, of being philosophers, would do well to avoid most of the ornaments of oratory, more especially those which consist in appeals to the passions, which they regard as moral blemishes. So, too, the employment of rare words and of rhythmical structure are incongruous with their profession.

[34] non enim sola illa laetiora, qualia a Cicerone dicuntur, saxa atque solitudines voci respondent; sed etiam illa, quanquam plena sanguinis, vos enim iam, Albani tumuli atque luci, vos, inquam, imploro atque testor, mosque, Albanorum obrutae arae, sacrorum populi Romani sociae et aequales, non conveniant barbae illi atque tristitiae.

[34] For their beards and gloomy brows are ill-suited not merely to luxuriance of style, such as we find in Cicero's "Rocks and solitudes answer to the voice," but even to full-blooded passages as, "For on you I call, ye hills and groves of Alba; I call you to bear me witness, and ye, too, fallen altars of the Albans, that were once the peers and equals of the holy places of Rome."

[35] at vir civilis vereque sapiens, qui se non otiosis disputationibus, sed administrationi rei publicae dederit, a qua longissime isti, qui philosophi vocantur, recesserunt, omnia, quae ad efficiendum oratione quod proposuerit valent, libenter adhibebit, cum prius quid honestum sit efficere in animo suo constituerit.

[35] But the public man, who is truly wise and devotes himself not to idle disputations, but to the administration of the state, from which those who call themselves philosophers have withdrawn themselves afar, will gladly employ every method that may contribute to the end which he seeks to gain by his eloquence, although he will first form a clear conception in his mind as to what aims are honourable and what are not.

[36] est quod principes deceat, aliis non concesseris. imperatorum ac triumphalium separata est aliqua ex parte ratio eloquentiae, sicut Pompeius abunde disertus rerum suarum narrator, et hic, qui bello civili se interfecit, Cato eloquens senator fuit.

[36] There is a form of eloquence which is becoming in the greatest men, but inadmissible in others. For example, the methods of eloquence employed by commanders and conquerors in their hour of triumph are to a great extent to be regarded as in a class apart. The comparison of the eloquence of Plompey and Cato the younger, who slew himself in the civil war, will illustrate my meaning. The former was extraordinarily eloquent in the description of his own exploits, while the latter's powers were displayed in debates in the senate.

[37] idem dictum saepe in alio liberum, in alio furiosum, in alio superbum est.

verba adversus Agamemnonem a Thersite habita ridentur; da illa Diomedea aliis cui pari: magnum animum ferre prae se videbuntur. ego te consulem putem, inquit L. Crassus Philippo, cum tu me non putes senatorem? uox honestissimae libertatis; non tamen ferres quemcumque dicentem.

[37] Again, the same remark will seem freedom of speech in one's mouth, madness in another's, and arrogance in a third. We laugh at the words used by Thersites to Agamemnon; but put them in the mouth of Diomedes or some other of his peers, and they will seem the expression of a great spirit. "Shall I regard you as consul," said Lucius Crassus to Philippius, "when you refuse to regard me as a senator?" That was honourable freedom of speech, and yet we should not tolerate such words from everybody's lips.

[38] negat se magni facere aliquis poetarum, utrum Caesar ater an albus homo sit, insania; verte, ut idem Caesar de illo dixerit, arrogantia est. maior in personis observatio est apud tragicos comicosque, multis enim utuntur et variis. eadem et eorum, qui orationes aliis scribebant, fuit ratio et declamantium est; non enim semper ut advocati sed plerumque ut litigatores dicimus.

[38] One of the poets says that he does not care whether Caesar be white or black. That is madness. But reverse the case. Suppose that Caesar said it of the poet? That would be arrogance. The tragic and comic poets pay special attention to character, since they introduce a great number and variety of persons. Those who wrote speeches for others paid a like attention to these points, and so do the declaimers; for we do not always speak as advocates, but frequently as actual parties to the suit.

[39] verum etiam in iis causis, quibus advocamur, eadem differentia diligenter est custodienda. utimur enim fictione personarum et velut ore alieno loquimur, dandique sunt iis, quibus vocem accommodamus, sui mores. aliter enim P. Clodius, aliter Appius Caecus, aliter Caecilianus ille, aliter Terentianus pater fingitur. quid asperius lictore Verris: ut adeas, tantum dabis?

[39] But even in these cases in which we appear as advocates, differences of character require careful observation. For we introduce fictitious personages and speak through other's lips, and we must therefore allot the appropriate character to those to whom we lend a voice. For example, Publius Clodius will be represented in one way, Appius Caecus in another, while Caecilius makes the father in his comedy speak in quite a different manner from the father in the comedy of Terence.

[40] quid fortius illo, cuius inter ipsa verberum supplicia una vox audiebatur: cuius Romanus sum? quam dignae Milonis in peroratione ipsa voces eo viro, qui pro re publica seditiosum civem totiens compescuisset quique insidias virtute superasset?

[40] What can be more brutal than the words of Verres' lictor, "To see him you will pay so much"? or braver than those of the man from whom the scourge could wring but one cry, "I am a Roman citizen!" Again, read the words which Cicero places in the mouth of Milo in his peroration: are they not worthy of the man who to save the state had so oft repressed a seditious citizen, and had triumphed by his valour over the ambush that was laid for him?

[41] *denique non modo quot in causa totidem in prosopopoeia sunt varietates, sed hoc etiam plures, quod in his puerorum, feminarum, populorum, mutarum etiam rerum assimilamus adfectus, quibus omnibus debetur suus decor.*

[41] Further, it is not merely true that the variety required in impersonation will be in proportion to the variety presented by the case, for impersonation demands even greater variety, since it involves the portrayal of the emotions of children, women, nations, and even of voiceless things, all of which require to be represented in character.

[42] *eadem in iis, pro quibus agemus, observanda sunt; aliter enim pro alio saepe dicendum est, ut quisque honestus, humilis, invidiosus, favorabilis erit, adiecta propositorum quoque et anteactae vitae differentia. iucundissima vero in oratore humanitas, facilitas, moderatio, benivolentia. sed illa quoque diversa bonum virum decent: malos odisse, publica vice commoveri, ultum ire scelera et iniurias, et omnia, ut initio dixi, honesta.*

[42] The same points have to be observed with respect to those for whom we plead: for our tone will vary with the character of our client, according as he is distinguished, or of humble position, popular or the reverse, while we must also take into account the differences in their principles and their past life. As regards the orator himself, the qualities which will most commend him are courtesy, kindness, moderation and benevolence. But, on the other hand, the opposite of these qualities will sometimes be becoming to a good man. He may hate the bad, be moved to passion in the public interest, seek to avenge crime and wrong, and, in fine, as I said at the beginning, may follow the promptings of every honourable emotion.

[43] *nec tantum, quis et pro quo sed etiam apud quem dicas, interest. facit enim et fortuna discrimen et potestas, nec eadem apud principem, magistratum, senatorem, privatum, tantum liberum ratio est, nec eodem sono publica iudicia et arbitrorum disceptationes aguntur.*

[43] The character of the speaker and of the person on whose behalf he speaks are, however, not the only points which it is important to take into account: the character of those before whom we have to speak calls for serious consideration. Their power and rank will make no small difference; we shall employ different methods according as we are speaking before the emperor, a magistrate, a senator, a private citizen, or merely a free man, while a different

tone is demanded by trials in the public courts, and in cases submitted to arbitration.

[44] nam ut orantem pro capite sollicitudo deceat et cura et omnes ad amplificandam orationem quasi machinae, ita in parvis rebus iudiciisque vana sint eadem, rideaturque merito, qui apud disceptatorem de re levissima sedens dicturus utatur illa Ciceronis confessione, non modo se animo commoveri, sed etiam corpore ipso perhorrescere.

[44] For while a display of care and anxiety, and the employment of every device available for the amplification of our style are becoming when we are pleading for a client accused on a capital charge, it would be useless to employ the same methods in cases and trials of minor importance, and the speaker who, when speaking from his chair before an arbitrator on some trivial question, should make an admission like that made by Cicero, to the effect that it was not merely his soul that was in a state of commotion, but that his whole body was convulsed with shuddering, would meet with well-deserved ridicule.

[45] quis vero nesciat, quanto aliud dicendi genus poscat gravitas senatoria, aliud aura popularis? cum etiam singulis iudicantibus non idem apud graves viros quod leviores, non idem apud eruditum quod militem ac rusticum deceat, sitque nonnunquam summittenda et contrahenda oratio, ne iudex eam vel intelligere vel capere non possit.

[45] Again, who does not know what different styles of eloquence are required when speaking before the grave assembly of the senate and before the fickle populace, since even when we are pleading before single judges the same style will not be suitable for use before one of weighty character and another of a more frivolous disposition, while a learned judge must not be addressed in the same tone that we should employ before a soldier or a rustic, and our style must at times be lowered and simplified, for fear that he may be unable to take it in or to understand it.

[46] tempus quoque ac locus egent observatione propria. nam et tempus tum triste, tum laetum, tum liberum, tum angustum est, atque ad haec omnia componendus orator;

[46] Again, circumstances of time and place demand special consideration. The occasion may be one for sorrow or for rejoicing, the time at our disposal may be ample or restricted, and the orator must adapt himself to all these circumstances.

[47] et loco publico privatone, celebri an secreto, aliena civitate an tua, in castris denique an foro dicas, interest plurimum, ac suam quidque formam et proprium quendam modum eloquentiae poscit: cum etiam in ceteris actibus vitae non idem in foro, curia, campo, theatro, domi facere conveniat; et

pleraque, quae natura non sunt reprehendenda atque adeo interim sunt necessaria, alibi quam mos permiserit turpia habeantur.

[47] It, likewise, makes no small difference whether we are speaking in public or in private, before a crowded audience or in comparative seclusion, in another city or our own, in the camp or in the forum: each of these places will require its own style and peculiar form of oratory, since even in other spheres of life the same actions are not equally suited to the forum, the senate-house, the Campus Martius, the theatre or one's own house, and there is much that is not in itself reprehensible, and may at times be absolutely necessary, which will be regarded as unseemly if done in some place where it is not sanctioned by custom.

[48] illud iam diximus, quanto plus nitoris et cultus demonstrativae materiae, ut ad delectationem audientium compositae, quam, quae sunt in actu et contentione, suasoriae iudicialesque permittant.

hoc adhuc adiiciendum aliquas etiam, quae sunt egregiae dicendi virtutes, quo minus deceant, effici condicione causarum.

[48] I have already pointed out how much more elegance and ornament is allowed by the topics of demonstrative oratory, whose main object is the delectation of the audience, than is permitted by deliberative or forensic themes which are concerned with action and argument.

To this must be added the fact that certain qualities, which are in themselves merits of a high order, may be rendered unbecoming by the special circumstances of the case.

[49] An quisquam tulerit reum in discrimine capitis, praecipueque si apud victorem et principem pro se ipse dicat, frequenti translatione, fictis aut repetitis ex vetustate verbis, composition quae sit maxime a vulgari usu remote, decurrentibus periodis, quam laetissimis locis sententiisque dicentem? non perdant haec omnia necessarium periclitanti sollicitudinis colorem, petendumque etiam innocentibus misericordiae auxilium?

[49] For example, when a man is accused on a capital charge, and, above all, if he is defending himself before his conqueror or his sovereign, it would be quite intolerable for him to indulge in frequent metaphors, antique or newlycoined words, rhythms as far removed as possible from the practice of every-day speech, rounded periods, florid commonplaces and ornate reflexions. Would not all these devices destroy the impression of anxiety which should be created by a man in such peril, and rob him of the succour of pity, on which even the innocent are forced to rely?

[50] moveaturne quisquam eius fortuna, quem tumidum ac sui iactantem et ambitiosum institorem eloquentiae in ancipiti sorte videat? non immo oderit reum verba aucupantem et anxium de fama ingenii, et cui esse diserto vacet?

[50] Would any man be moved by the sad plight of one who revealed himself as a vainglorious boaster, and ostentatiously flaunted the airs and graces of his eloquence at a moment when his fate hung in suspense? Would he not rather hate the man who, despite his position as accused, hunted for fine words, showed himself concerned for his reputation as a clever speaker, and found time at such a moment to display his eloquence?

[51] quod mire M. Caelius in defensione causae, qua reus de vi fuit, comprehendisse videtur mihi: ne cui vestrum atque etiam omnium, qui ad rem agendam adsunt, meus aut vultus molestior aut vox immoderatio aliqua aut denique, quod minimum est, iactantior gestus fuisse videatur.

[51] I consider that Marcus Caelius, in the speech in which he defended himself against a charge of breach of the peace, showed a wonderful grasp of these facts, when he said: "I trust that none of you gentlemen, or of all those who have come to plead against me, will find offence in my mien or insolence in my voice, or, though that is a comparative trifle, any trace of arrogance in my gesture."

[52] atqui sunt quaedam actiones in satisfactione, deprecatione, confessione positae: sententiolisne flendum erit? epiphonemata aut enthymemata exorabunt? non, quidquid meris adiicietur adfectibus, omnes eorum diluet vires et miserationem securitate laxabit?

[52] But there are some cases where the success of the pleader depends on apology, entreaties for mercy, or confession of error. Can sorrow be expressed in epigram? Or will *enthymemes* or *epiphonemata* avail to win the judge's mercy? Will not all embellishment of pure emotion merely impair its force and dispel compassion by such a display of apparent unconcern?

[53] age, si de morte filii sui vel iniuria, quae morte sit gravior, dicendum patri fuerit, aut in narrando gratiam illam expositionis, quae continget ex sermone puro atque dilucido, quaeret, breviter ac significanter ordinem rei protulisse contentus, aut argumenta diducet in digitos et propositionum ac partitionum captabit leporem et, ut plerumque in hoc genere moris est, intentione omni remissa loquetur?

[53] Or, suppose that a father has to speak of his son's death, or of some wrong that is worse than death, will he, in making his statement of facts, seek to achieve that grace in exposition which is secured by purity and lucidity of language, and content himself with setting forth his case in due order with brevity and meaning? Or will he count over the heads of his argument upon his fingers, aim at niceties of division and proposition, and speak without the least energy of feeling as is usual in such portions of a speech?

[54] quo fugerit interim dolor ille? ubi lacrimae substiterint? unde se in medium tam securo observatio artium miserit? non ab exordio usque ad ultimam

vocem continens quidam gemitus et idem tristitiae vultus servabitur, si quidem volet dolorem suum etiam in audientes transfundere? quem si usquam remiserit, in animum iudicantium non reducet.

[54] Whither will his grief have fled while he is thus engaged? Where has the fountain of his tears been stayed? How came this callous attention to the rules of text-books to obtrude itself? Will he not rather, from his opening words to the very last he utters, maintain a continuous voice of lamentation and a mien of unvaried woe, if he desires to transplant his grief to the hearts of his audience? For if he once remits aught of his passion of grief, he will never be able to recall it to the hearts of them that hear him.

[55] quod praecipue declamantibus (neque enim me paenitet ad hoc quoque opus meum et curam susceptorum semel adolescentium respicere) custodiendum est, quo plures in schola finguntur adfectus, quos non ut advocati, sed ut passi subimus.

[55] This is a point which declaimers, above all, must be careful to bear in mind: I mention this because I have no compunction in referring to a branch of the art which was once also my own, or in reverting to the consideration of the youthful students such as once were in my charge: the declaimer, I repeat, must bear this in mind, since in the schools we often feign emotions that affect us not as advocates, but as the actual sufferers.

[56] cum etiam hoc genus simulari litium soleat, cum ius mortis a senatu quidam ob aliquam magnam infelicitatem vel etiam paenitentiam petunt, in quibus non solum cantare, quod vitium pervasit, aut lascivire, sed ne argumentari quidem nisi mixtis, et quidem ita ut ipsa probatione magis emineant, adfectibus decet. nam qui intermittere in agendo dolorem potest, videtur posse etiam deponere.

[56] For example, we even imagine cases where persons, either because of some overwhelming misfortune or repentance for some sin, demand from the senate the right to make an end of their lives; and in these cases it is obviously unbecoming not merely to adopt a chanting intonation, a fault which has also become almost universal, or to use extravagant language, but even to argue without an admixture of emotional appeal, so managed as to be even more prominent than the proof which is advanced. For the man who can lay aside his grief for a moment while he is pleading, seems capable even of laying it aside altogether

[57] nescio tamen an huius, de quo loquimur, decoris custodia maxime circa eos, contra quos dicimus, examinanda sit. nam sine dubio in omnibus statim accusationibus hoc agendum est, ne ad eas libenter descendisse videamur. ideoque mihi illud Cassii Severi non mediocriter displicet: di boni, vico; et, quo me vivere iuvet, Asprenatem reum video. non enim iusta ex causa vel necessaria videri potest postulasse eum, sed quadam accusandi voluptate.

[57] I am not sure, however, that it is not in our attitude towards our opponents that this care for decorum, which we are now discussing, should be most rigorously maintained. For there can be no doubt, that in all accusations our first aim should be to give the impression that it is only with the greatest reluctance that we have consented to undertake the role of accuser. Consequently, I strongly disapprove of such remarks as the following which was made by Cassius Severus: "Thank Heaven, I am still alive; and that I may find some savour in life, I see Asprenas arraigned for his crimes." For, after this, it is impossible to suppose that he had just or necessary reasons for accusing Asprenas, and we cannot help suspecting that his motive was sheer delight in accusation.

[58] *praeter hoc tamen, quod est commune, propriam moderationem quaedam causae desiderant. quapropter et, qui curationem bonorum patris postulabit, doleat eius valetudinem; et quamlibet gravia filio pater obiecturus miserrimam sibi ostendat esse hanc ipsam necessitatem, nec hoc paucis modo verbis, sed toto colore actionis, ut id eum non dicere modo, sed etiam vere dicere appareat.*

[58] But, beside this consideration, which applies to all cases, there is the further point that certain cases demand special moderation. Therefore, a man who demands the appointment of a curator for his father's property, should express his grief at his father's affliction; and, however grave be the charges that a father may be going to bring against his son, he should emphasize the painful nature of the necessity that is imposed upon him. And this he should do not merely in a few brief words, but his emotion should colour his whole speech, so that it may be felt not merely that he is speaking, but that he is speaking the truth.

[59] *nec causanti pupillo sic tutor irascatur unquam, ut non remaneant amoris vestigia et sacra quaedam patris eius memoria. iam quomodo contra abdicantem patrem, querentem uxorem, agi causam oporteret, in libro, ut arbitror, septimo dixi. quando etiam ipsos loqui, quando advocati voce uti deceat, quartus liber, in quo prooemii praecepta sunt, continet.*

[59] Again, if a ward make allegations against his guardian, the latter must never give way to such anger that no trace is left of his former love or of a certain reverent regard for the memory of his opponent's father. I have already spoken, in the seventh book, I think, of the way in which a case should be pleaded against a father who disinherits his son, or a wife who brings a charge of illtreatment against her husband, while the fourth book, in which I prescribed certain rules for the exordium, contains my instructions as to when it is becoming that the parties should speak themselves, and when they should employ an advocate to speak for them.

[60] *esse et in verbis quod deceat aut turpe sit, nemini dubium est. unum iam*

igitur huic loco, quod est sane summae difficultatis, adiciendum videtur, quibus modis ea, quae sunt natura parum speciosa quaeque non dicere, si utrumlibet esset liberum, maluissemus, non tamen sint indecora dicentibus.

[60] It will be readily admitted by everyone that words may be becoming or offensive in themselves. There is therefore a further point, which presents the most serious difficulty, that requires notice in this connexion: we must consider by what means things which are naturally unseemly and which, had we been given the choice, we should have preferred not to say, may be uttered without indecorum.

[61] quid asperiores habere frontem potest aut quid aures hominum magis respuunt, quam cum est filio filiiv advocatis in matrem perorandum? aliquando tamen necesse est, ut in causa Cluentii Habiti. sed non semper illa via, qua contra Sasiam Cicero usus est; non quia non ille optime, sed quia plurimum refert, qua in re et quo modo laedit.

[61] What at first sight can be more unpleasing and what more revolting to the ears of men than a case in which a son or his advocate has to speak against his mother? And yet sometimes it is absolutely necessary, as, for example, in the case of Cluentius Habitus. But it is not always desirable to employ the method adopted by Cicero against Sasia, not because he did not make most admirable use of it, but because in such cases it makes the greatest difference what the point may be and what the manner in which the mother seeks to injure her son.

[62] itaque illa, cum filii caput palam impugnaret, fortiter fuit repellenda. duo tamen, quae sola supererant, divine Cicero servavit, primum, ne oblivisceretur reverentiae, quae parentibus debetur; deinde ut, repetitis altius causis, diligentissime ostenderet, quam id, quod erat in matrem dicturus, non oporteret modo fieri, sed etiam necesse esset.

[62] In the case of Sasia she had openly sought to procure the destruction of her son, and consequently vigorous methods were justified against her. But there were two points, the only points which remained to be dealt with, that were handled by Cicero with consummate skill: in the first place, he does not forget the reverence that is due to parents, and in the second, after a thorough investigation of the history of the crime, he makes it clear that it was not merely right, but a positive necessity that he should say what he proposed to say against the mother.

[63] primaque haec expositio fuit, quanquam ad praesentem quaestionem nihil pertinebat. adeo in causa difficili atque perplexa nihil prius intuendum credidit quam quid deceret. fecit itaque nomen parentis non filio invidiosum, sed ipsi in quam dicebatur.

[63] And he placed this explanation in the forefront of his case, although it had

really nothing to do with the actual question at issue; a fact which shows that his first consideration in that difficult and complicated case was the consideration of what was becoming for him to say. He therefore made the name of mother cast odium not on the son, but on her who was the object of his denunciations.

[64] potest tamen aliquando mater et in re levior aut minus infeste contra filium stare; tum lenior atque summissior decebit oratio. nam et satisfaciendo aut nostram minuemus invidiam aut etiam in diversum eam transferemus; et si graviter dolere filium palam fuerit, credetur abesse ab eo culpam fietque ultro miserabilis.

[64] It is, however, always possible that a mother may be her son's opponent in a case of less serious import, or at any rate in a way which involves less deadly hostility. Under such circumstances the orator must adopt a gentler and more restrained tone. For example, we may offer apology for the line which we take, and thus lessen the odium which we incur or even transfer it to a different quarter, while if it be obvious that the son is deeply grieved by the situation, it will be believed that he is blameless in the matter and he will even become an object of pity.

[65] avertere quoque in alios crimen decet, ut fraude aliquorum concita credatur, et omnia nos passuros, nihil aspere dicturos testandum, ut, etiamsi non possumus non conviciari, nolle videamur. etiam, si quid obiiciendum erit, officium est patroni, ut id filio invito, sed fide cogente facere credatur. ita poterit uterque laudari.

[65] It will also be desirable to throw the blame on others, so that it may be believed that the mother's action was instigated by their malice, and to assert that we will put up with every form of provocation, and will say nothing harsh in reply, so that, even although strong language may be absolutely necessary on our part, we may seem to be driven to use it against our will. Nay, if some charge has to be made against the mother, it will be the advocate's task to make it seem that he does so against the desire of the son and from a sense of duty to his client. Thus both son and advocate will win legitimate praise.

[66] quod de matre dixi, de utroque parente accipiendum est; nam inter patres etiam filiosque, cum intervenisset emancipatio, litigatum scio. in aliis quoque propinquitatibus custodiendum est, ut inviti et necessario et parce iudicemur dixisse, magis autem aut minus, ut cuique personae debetur reverentia. eadem pro libertis adversus patronos observantia. et ut semel plura complectar, nunquam decebit sic adversus tales agere personas, quomodo contra nos agi ab hominibus condicionis eiusdem iniquo animo tulissemus.

[66] What I have said about mothers will apply to either parent; for I have known of litigation taking place between fathers and sons as well, after the *emancipation* of the son. And when other relationships are concerned, we

must take care to create the impression that we have spoken with reluctance and under stress of necessity and that we have been forbearing in our language; but the importance of so doing will vary according to the respect due to the persons concerned. The same courtesy should be observed in speaking on behalf of freedmen against their patrons. In fact, to sum up, it will never become us to plead against such persons in a tone which we ourselves should have resented in the mouth of men of like condition.

[67] praestatur hoc aliquando etiam dignationibus, ut libertatis nostrae ratio reddatur, ne quis nos aut petulantes in laedendis eis aut etiam ambituosos putet. itaque Cicero, quanquam erat in Cottam gravissime dicturus, neque aliter agi P. Oppii causa poterat, longa tamen praefatione excusavit officii sui necessitatem.

[67] The same respect is on occasion due to persons of high rank, and it may be necessary to offer justification for our freedom of speech to avoid giving the impression that we have shown ourselves insolent or ostentatious in our attack upon such persons. Consequently Cicero, although he intended to speak against Cotta with the utmost vehemence, and indeed the case of Publius Oppius was such that he could not do otherwise, prefaced his attack by pleading at some length the necessity imposed upon him by his duty to his client.

[68] aliquando etiam inferioribus praecipueque adolescentulis parcere aut videri decet. utitur hac moderatione Cicero pro Caelio contra Atratinum, ut eum non inimice corripere, sed paene patrie monere videatur. nam et nobilis et iuvenis et non iniusto dolore venerat ad accusandum.

sed in his quidem, in quibus vel iudici vel etiam adsistentibus ratio nostrae moderationis probari debet, minor est labor; illic plus difficultatis, ubi ipsos, contra quos dicimus, veremur offendere.

[68] Sometimes, again, it will beseem us to spare or seem to spare our inferiors, more especially if they be young. Cicero gives an example of such moderation in the way in which he deals with Atratinus in his defence of Caelius: he does not lash him like an enemy, but admonishes him almost like a father. For Atratinus was of noble birth and young, and the grievance which led him to bring the accusation was not unreasonable.

But the task is comparatively easy in those cases in which it is to the judge, or even, it may be, to our audience that we have to indicate the reason for our moderation. The real difficulty arises when we are afraid of offending those against whom we are speaking.

[69] duae simul huiusmodi personae Ciceroni pro Murena dicenti obstiterunt, M. Catonis Servique Sulpicii. quam decenter tamen Sulpicio, cum omnes concessisset virtutes, scientiam petendi consulatus ademit? quid enim aliud

esset, quo se victum homo nobilis et iuris antistes magis ferret? ut vero rationem defensionis suae reddidit, cum se studuisse petitioni Sulpicii contra honorem Murenae, non idem debere accusationi contra caput diceret!

[69] The difficulties of Cicero when defending Murena were increased by the fact that he was opposed by two persons of this character, namely Marcus Cato and Servius Sulpicius. And yet in what courteous language, after allowing Sulpicius all the virtues, he refuses to admit that he has any idea of the way to conduct a candidature for the consulship. What else was there in which a man of high birth and a distinguished lawyer would sooner admit his inferiority? With what skill he sets forth his reasons for undertaking the defence of Murena, when he says that he supported Sulpicius' candidature as opposed to that of Murena, but did not regard that preference as reason why he should support him in bringing a capital charge against his rival!

[70] quam molli autem articulo tractavit Catonem Cuius natura summe admiratus non ipsius vitio, sed Stoicae sectae quibusdam in rebus factam duriores videri volebat; ut inter eos non forensem contentionem, sed studiosam disputationem crederes incidisse.

[70] And with what a light touch he deals with Cato! He has the highest admiration for his character and desires to show that the fact that in certain respects it has become severe and callous is due not to any personal fault, but to the influence of the Stoic school of philosophy; in fact you would imagine that they were engaged not in a forensic dispute, but merely in some philosophical discussion.

[71] haec est profecto ratio et certissimum praeceptorum genus illius viri observatio, ut, cum aliquid detrahare salva gratia velis, concedas alia omnia: in hoc solo vel minus peritum quam in ceteris, adiecta, si poterit fieri, etiam causa, cur id ita sit, vel paulo pertinaciores vel credulum vel iratum vel impulsus ab aliis.

[71] This is undoubtedly the right method, and the safest rule in such cases will be to follow the practice of Cicero, namely, that, when we desire to disparage a man without giving offence, we should allow him to be the possessor of all other virtues and point out that it is only in this one respect that he falls short of his high standard, while we should, if possible, add some reason why this should be so, such, for example, as his being too obstinate or credulous or quick to anger, or acting under the influence of others.

[72] hoc enim commune remedium est, si in tota actione aequaliter appareat non honor modo eius, sed etiam caritas. praeterea causa sit nobis iusta sic dicendi, neque id moderate tantum faciamus, sed etiam necessario.

[72] (For we may generally find a way out of such embarrassments by making it clear throughout our whole speech that we not merely honour the object of

our criticism, but even regard him with affection.) Further, we should have good cause for speaking thus and must do so not merely with moderation, but also give the impression that our action is due to the necessities of the case.

[73] *diversum ab hoc sed facilius, cum hominum aut alioqui turpium aut nobis invisorum quaedam facta laudanda sunt. decet enim rem ipsam probare in qualicunque persona. dixit Cicero pro Gabinio et P. Vatinius, inimicissimis antea sibi hominibus et in quos orationes etiam scripserat, uerum ait, ut sit iusta causa sic faciendi, non se de ingenii fama, sed de fide esse sollicitum.*

[73] A different situation arises, but an easier one, when we have to praise the actions of men who are otherwise disreputable or hateful to ourselves: for it is only right that we should award praise where it is deserved, whatever the character of the person praised may be. Cicero spoke in defence of Gabinius and Publius Vatinius, both of them his deadly enemies and men against whom he had previously spoken and even published his speeches: but he justifies himself by declaring that he does so not because he is anxious for his reputation as an accomplished speaker, but because he is concerned for his honour.

[74] *difficilior ei ratio in iudicio Cluentiano fuit, cum Scamandrum necesse haberet dicere nocentem, cuius egerat causam. verum id elegantissime cum eorum, a quibus ad se perductus esset, precibus, tum etiam adolescentia sua excusat, detracturus alioqui plurimum auctoritatis sibi, in causa praesertim suspecta, si eum se esse, qui temere nocentes reos susciperet, fateretur.*

[74] He had a more difficult task in his defence of Cluentius, as it was necessary for him to denounce Scamander's guilt, although he had previously appeared for him. But he excuses his action with the utmost grace, alleging the importunity of those persons who had brought Scamander to him, and his own youth at the time, whereas it would have been a serious blot on his reputation, especially in connexion with a case of the most dubious character, if he had admitted that he was one who was ready to undertake the defence of guilty persons without asking awkward questions.

[75] *apud iudicem vero, qui aut erit inimicus aut propter aliquod commodum a causa, quam nos susceperimus, aversus, ut persuadendi ardua ratio, ita dicendi expeditissima. fiducia enim iustitiae eius et nostrae causae nihil nos timere simulabimus. ipse erit gloria inflandus, ut tanto clarior eius futura sit fides ac religio in pronuntiando, quanto minus vel offensae vel utilitati suae indulserit.*

[75] On the other hand, when we are pleading before a judge, who has special reasons for being hostile to us or is for some personal motive ill-disposed to the cause which we have undertaken, although it may be difficult to persuade him, the method which we should adopt in speaking is simple enough: we shall pretend that our confidence in his integrity and in the justice of our cause is such that we have no fears. We must play upon his vanity by pointing out

that the less he indulges his own personal enmity or interest, the greater will be the reputation for conscientious rectitude that will accrue to him from his verdict.

[76] hoc et apud eos, a quibus appellatum erit, si forte ad eosdem remitemur; adiicienda ratio vel necessitatis alicuius, si id causa concedit, vel erroris vel suspicionis. tutissimum ergo paenitentiae confessio et satisfactio culpae, perducendusque omni modo iudex ad irae pudorem.

[76] The same method may be adopted if our case should chance to be sent back to the same judges from whom we have appealed: but we may further, if the case should permit, plead that we were forced to take the action which we did or were led to it by error or suspicion. The safest course will therefore be to express our regret, apologise for our fault and employ every means to induce the judge to feel compunction for his anger.

[77] accidit etiam nonnunquam ut eadem de causa, de qua pronuntiari, cognoscat iterum. tum illud quidem commune: apud alium nos iudicem disputaturos de illius sententia non fuisse, neque enim emendari ab alio quam ipso fas esse; ceterum ex causa, ut quaeque permittet, aut ignorata quaedam aut defuisse testes aut (quod timidissime et, si nihil aliud plane fuerit, dicendum est) patronos non suffecisse succurret.

[77] It will also sometimes happen that a judge may have to try the same case on which he has previously given judgment. In such circumstances the method commonly adopted is to say that we should not have ventured to dispute his sentence before any other judge, since he alone would be justified in revising it: but (and in this we must be guided by the circumstances of the case) we may allege that certain facts were not known on the previous occasion or certain witnesses were unavailable, or, though this must be advanced with the utmost caution and only in the last resort, that our clients' advocates were unequal to their task.

[78] etiam, si apud alios iudices agatur, ut in secunda adsertione aut in centumviralibus iudiciis duplicibus, parte victa decentius erit, quotiens contigerit, servare iudicium pudorem; de qua re latius probationum loco dictum est. potest evenire, ut in aliis reprehendenda sint, quae ipsi fecerimus, ut obiicit Tubero Ligario, quod in Africa fuerit.

[78] And even if we have to plead a case afresh before different judges, as may occur in a second trial of a claim to freedom or in cases in the centumviral courts, which are divided between two different panels, it will be most seemly, if we have lost our case before the first panel, to say nothing against the judges who tried the case on that occasion. But this is a subject with which I dealt at some length in the passage where I discussed *proofs*.

It may happen that we have to censure actions in others, of which we have

been guilty ourselves, as, for example, when Tubero charges Ligarius with having been in Africa.

[79] et ambitus quidam damnati recuperandae dignitatis gratia reos eiusdem criminis detulerunt, ut in scholis luxuriantem patrem luxuriosus ipse iuvenis accusat. id quomodo decenter fieri possit, equidem non invenio, nisi aliquid reperitur, quod intersit, persona, actus, tempus, causa, locus, animus.

[79] Again, there have been cases where persons condemned for bribery have indicted others for the same offence with a view to recovering their lost position: for this the schools provide a parallel in the theme where a luxurious youth accuses his father of the same offence. I do not see how this can be done with decorum unless we succeed in discovering some difference between the two cases, such as character, age, motives, circumstances of time and place or intention.

[80] Tubero, iuvenem se patri haesisse, illum a senatu missum non ad bellum, sed ad frumentum coemendum ait, ut primum licuerit, a partibus recessisse; Ligarium et perseverasse et non pro Cn. Pompeio, inter quem et Caesarem dignitatis fuerit contentio, cum salvam uterque rem publicam vellet, sed pro iuba atque Afris inimicissimis populo Romano stetisse.

[80] Tubero, for example, alleges that he was a young man at the time and went thither in the company of his father, who had been sent by the senate not to take part in the war, but to purchase corn, and further that he left the party as soon as he could, whereas Ligarius clung to the party and gave his support, not to Gnaeus Pompeius, who was engaged with Caesar in a struggle for the supreme power, though both wished to preserve the state, but to Juba and the Africans who were the sworn enemies of Rome.

[81] ceterum vel facillimum est, ibi alienam culpam incusare, ubi fateris tuam. verum id iam indicis est, non actoris. quodsi nulla contingit excusatio, sola colorem habet paenitentia. potest enim videri satis emendatus, qui in odium eorum, in quibus erraverat, ipse conversus est.

[81] The easiest course, however, is to denounce another's guilt, while admitting our own in the same connexion. However, that is the part of an informer, not of a pleader. But if there is no excuse available, penitence is our only hope. For the man who is converted to the hatred of his own errors, may perhaps be regarded as sufficiently reformed.

[82] sunt enim casus quidam, qui hoc natura ipsa rei non indecens faciant: ut cum pater ex meretrice natus, quod duxerit meretricem in matrimonium, abdicat; scholastica materia sed non quae in foro non possit accidere. Hic igitur multa non deformiter dicit: vel quod omnium sit votum parentum, ut honestiores quam sint ipsi liberos habeant, (nam et si filia nata, meretrix eam mater pudicam esse voluisset) vel quod humilior ipse fuerit, (licet enim huic

ducere)⁹ vel quod non habuerit patrem qui moneret;

[82] For there are occasionally circumstances which from the very nature of the case may make such an attitude not unbecoming, as, for example, in the case where the father disinherits a son born of a harlot because that son has married a harlot, a case which, although it forms a scholastic theme, might actually arise in a court of law. There are a number of pleas which the father may put forward with becoming effect.

[83] quin eo minus id faciendum filio fuisse, ne renovaret domus pudorem et exprobraret patri nuptias, matri prioris vitae necessitatem, ne denique legem quandam suis quoque rursum liberis daret. credibilis erit etiam propria quaedam in illa meretrice turpitudine, quam nunc hic pater ferre non possit. alia praetereo; neque enim nunc declamamus, sed ostendimus nonnunquam posse dicentem ipsis incommodis bene uti.

[83] He will say that it is the prayer of all parents that their sons should be better men than themselves (for example, if a daughter also had been born to him, the harlot, her mother, would have wished her to be chaste), or that he himself was in a humbler position (for a man in such a position is permitted to marry a harlot), or that he had no father to warn him; and further that there was an additional reason against his son's conduct, namely, that he should not revive the old family scandal nor reproach his father with his marriage and his mother with the hard necessity of her former life, nor give a bad example to his own children in their turn. We may also plausibly suggest that there is some particularly shameful feature in the character of the harlot married by the son, which the father cannot under existing circumstances tolerate. There are other possible arguments which I pass by: for I am not now engaged in declamation, but am merely pointing out that there are occasions when the speaker may turn his own drawbacks to good account.

[84] illic maior aestus, ubi quis pudenda queritur, ut stuprum, praecipue in maribus, aut os profanatum. non dico, si loquatur ipse; nam quid aliud ei quam gemitus ac fletus et exsecratio vitae conveniat, ut iudex intelligat potius dolorem illum quam audiat? sed patrono quoque per similes adfectus eundum erit, quia hoc iniuriae genus verecundius est fateri passis quam ausis.

[84] More arduous difficulties confront us when we have to deal with a complaint of some shameful act such as rape, more especially when this is of an unnatural kind. I do not refer to cases when the victim himself is speaking. For what should he do but groan and weep and curse his existence, so that the judge will understand his grief rather than hear it articulately expressed? But the victim's advocate will have to exhibit similar emotions, since the admission of such wrongs cause more shame to the sufferer than the criminal.

[85] mollienda est in plerisque alio colore asperitas orationis, ut Cicero de proscriptorum liberis fecit. quid enim crudelius quam homines honestis

parentibus ac maioribus natos a re publica summoveri? itaque durum id esse summus ille tractandorum animorum artifex confitetur, sed ita legibus Sullae cohaerere statum civitatis adfirmat, ut iis solutis stare ipsa non possit. adsecutus itaque est, ut aliquid eorum quoque causa videretur facere contra quos diceret.

[85] In many cases it is desirable to soften the harshness of our language by the infusion of a more conciliatory tone, as, for example, Cicero did in his speech dealing with the children of the proscribed. What fate could be more cruel than that the children of men of good birth and the descendants of distinguished ancestors should be excluded from participation in public life? For this reason that supreme artist in playing on the minds of men admits that it is hard, but asserts that the constitution is so essentially dependent on the laws of Sulla, that their repeal would inevitably involve its destruction. Thus he succeeded in creating the impression that he was doing something on behalf of those very persons against whom he spoke.

[86] illud etiam in iocis monui, quam turpis esset fortunae insectatio, et ne in totos ordines aut gentes aut populos petulantia incurreret. sed interim fides patrocinii cogit quaedam de universo genere aliquorum hominum dicere, libertinorum vel militum vel publicanorum vel similiter aliorum.

[86] I have already pointed out, in dealing with the subject of jests, how unseemly it is to take the position in life of individuals as the target for our gibes, and also have urged that we should refrain from insulting whole classes, races or communities. But at times our duty toward our client will force us to say something on the general character of a whole class of people, such as freedmen, soldiers, tax farmers or the like.

[87] in quibus omnibus commune remedium est, ut ea, quae laedunt, non libenter tractare videaris nec in omnia impetum facias, sed in id quod expugnandum est, et reprehendens alia laude compenses:

[87] In all these cases the usual remedy is to create the impression that it is with reluctance that we introduce topics which must give pain, while further we shall avoid attacking everything, and even while using the language of reproof with regard to the essential point of attack, shall make up for our censure by praising our victims in some other connexion.

[88] si cupidos milites dicas, sed non mirum, quod periculorum ac sanguinis maiora sibi deberi praemia putent; eosdem petulantes, sed hoc fieri, quod bellis magis quam paci consuerint. libertinis detrahenda est auctoritas; licet iis testimonium reddere industriae, per quam exierint de servitute.

[88] For example, if we charge soldiers with rapacity, we shall qualify our statement by saying that the fact is not surprising, as they think that they are entitled to some special reward for the perils they have faced and the wounds

they have sustained. Or, if we censure them for insolence, we shall add that this quality is due to the fact that they are more accustomed to war than to peace. In the case of freedmen we should disparage their influence: but we may also give them credit for the industry which secured their emancipation.

[89] *quod ad nationes exteras pertinet, Cicero varie: detractus Graecis testibus fidem, doctrinam iis concedit ac litteras, seque eius gentis amatorem esse profitetur, Sardos contemnit, Allobrogas ut hostes insectatur; quorum nihil tunc, cum diceretur, parum aptum aut remotum cura decoris fuit.*

[89] With regard to foreign nations, Cicero's practice varies. When he intends to disparage the credibility of Greek witnesses he admits their distinction in learning and literature and professes his admiration for their nation. On the other hand, he has nothing but contempt for the Sardinians and attacks the Allobroges as the enemies of Rome. In all these cases none of his remarks, at the time they were made, were inconsistent with or adverse to the claims of decorum.

[90] *verborum etiam moderatione detrahi solet, si qua est rei invidia: si asperum dicas nimium severum, iniustum persuasione labi, pertinacem ultra modum tenacem esse propositi; plerumque velut ipsos coneris ratione vincere, quod est mollissimum.*

[90] If there be anything offensive in the subject on which we have to speak, it may be toned down by a studied moderation in our language; for example, we may describe a brutal character as being unduly severe, an unjust man as led astray by prejudice, an obstinate man as unreasonably tenacious of his opinion. And there are a large number of cases where we should attempt to defeat our opponents by reasoning, which forms the gentlest of all methods of attack.

[91] *indecorum est super haec omne nimium, ideoque etiam quod natura rei satis aptum est, nisi modo quoque temperatur, gratiam perdit. cuius rei observatio iudicio magis quodam sentiri quam praeceptis tradi potest, quantum satis sit et quantum recipiant aures. non habet res mensuram et quasi pondus, quia ut in cibis alia aliis magis complent.*

[91] To these remarks I would add that all extravagance of any kind is indecorous, and consequently statements which are in sufficient harmony with the facts will none the less lose all their grace unless they are modified by a certain restraint. It is hard to give rules as to the exact method in which this precept should be observed, but the problem will easily be solved by following the dictates of our own judgement, which will tell us what it is sufficient to say and how much the ears of our audience will tolerate. We cannot weigh or measure our words by fixed standards: they are like foods, some of which are more satisfying than others.

[92] adiiciendum etiam breviter videtur, quod fit ut dicendi virtutes diversissimae non solum suos amatores habeant, sed ab eisdem saepe laudentur. nam Cicero quodam loco scribit, id esse optimum, quod, cum te facile credideris consequi imitatione, non possis. alio vero, non id egisse, ut ita diceret, quomodo se quilibet posse confideret, sed quomodo nemo.

[92] I think I should also add a few brief words to the effect that not only very different rhetorical virtues have their special admirers, but that they are often praised by the same persons. For instance, there is one passage in Cicero where he writes that the best style is that which we think we can easily acquire by imitation, but which we find is really beyond our powers. But in another passage he says that his aim was not to speak in such a manner that everyone should be confident that he could do the same, but rather in a style that should be the despair of all.

[93] quod potest pugnare inter se videri. verum utrumque ac merito laudatur; causarum enim modo distat, quia simplicitas illa et velut securitas inadfectatae orationis mire tenues causas decet, maioribus illud admirabile dicendi genus magis convenit. in utroque eminet Cicero; ex quibus alterum imperiti se posse consequi credent, neutrum, qui intelligunt.

[93] These two statements may seem to be inconsistent, but as a matter of fact both alike deserve the praise which they receive. The difference is due to the fact that cases differ in character. Those of minor importance are admirably suited by the simplicity and negligence of unaffected language, whereas cases of greater moment are best suited by the grand style. Cicero is pre-eminent in both. Now while eminence in one of these styles may seem to the inexperienced to be within their grasp, those who understand know that they are capable of eminence in neither.

2. memoriam quidam naturae modo esse munus existimaverunt, estque in ea non dubie plurimum, sed ipsa excolendo sicut alia omnia augetur; et totus, de quo diximus adhuc, inanis est labor, nisi ceterae partes hoc velut spiritu continentur. nam et omnis disciplina memoria constat, frustra docemur, si quidquid audimus praeterfluat; et exemplorum, legum, responsorum, dictorum denique factorumque velut quasdam copias, quibus abundare quasque in promptu semper habere debet orator, eadem illa vis praesentat. neque immerito thesaurus hic eloquentiae dicitur.

2. Some regard memory as being no more than one of nature's gifts; and this view is no doubt true to a great extent; but, like everything else, memory may be improved by cultivation. And all the labour of which I have so far spoken will be in vain unless all the other departments be co-ordinated by the animating principle of memory. For our whole education depends upon memory, and we shall receive instruction all in vain if all we hear slips from us, while it is the power of memory alone that brings before us all the store of

precedents, laws, rulings, sayings and facts which the orator must possess in abundance and which he must always hold ready for immediate use. Indeed it is not without good reason that memory has been called the treasure-house of eloquence.

[2] *sed non firme tantum continere, verum etiam cito percipere multa acturos oportet, nec quae scripseris modo iterata lectione complecti, sed in cogitatis quoque rerum ac verborum contextum sequi, et quae sint ab adversa parte dicta meminisse, nec utique ea, quo dicta sunt ordine, refutare, sed opportunis locis ponere.*

[2] But pleaders need not only to be able to retain a number of facts in their minds, but also to be quick to take them in; it is not enough to learn what you have written by dint of repeated reading; it is just as necessary to follow the order both of matter and words when you have merely thought out what you are going to say, while you must also remember what has been said by your opponents, and must not be content merely with refuting their arguments in the order in which they were advanced, but must be in a position to deal with each in its appropriate place.

[3] *quid? extemporalis oratio non alio mihi videtur mentis vigore constare. nam dum alia dicimus, quae dicturi sumus intuenda sunt. ita, cum semper cogitatio ultra eat, id quod est longius quaerit, quidquid autem repperit quodam modo apud memoriam deponit; quod illa quasi media quaedam manus acceptum ab inventione tradit elocutioni.*

[3] Nay, even extempore eloquence, in my opinion, depends on no mental activity so much as memory. For while we are saying one thing, we must be considering something else that we are going to say: consequently, since the mind is always looking ahead, it is continually in search of something which is more remote: on the other hand, whatever it discovers, it deposits by some mysterious process in the safe-keeping of memory, which acts as a transmitting agent and hands on to the delivery what it has received from the imagination.

[4] *non arbitror autem mihi in hoc immorandum, quid sit quod memoriam faciat, quanquam plerique imprimi quaedam vestigia animo, velut in ceris anulorum signa servantur, existimant. neque ero tam credulus, ut, qui habitu tardioremem firmioremque memoriam fieri videam, ei artem quoque audeam impertire.*

[4] I do not conceive, however, that I need dwell upon the question of the precise function of memory, although many hold the view that certain impressions are made upon the mind, analogous to those which a signet-ring makes on wax. Nor, again, shall I be so credulous, in view of the fact that the retentiveness or slowness of the memory depends upon our physical condition, as to venture to allot a special art to memory.

[5] magis admirari naturam subit, tot res vetustas tanto ex intervallo repetitas reddere se et offerre, nec tantum requirentibus sed etiam sponte interim, nec vigilantibus sed etiam quiete compositis:

[5] My inclination is rather to marvel at its powers of reproducing and presenting a number of remote facts after so long an interval, and, what is more, of so doing not merely when we seek for such facts, but even at times of its own accord, and not only in our waking moments, but even when we are sunk in sleep.

[6] eo magis, quod illa quoque animalia, quae carere intellectu videntur, meminerunt et agnoscunt et quamlibet longo itinere deducta ad adsuetas sibi sedes revertuntur. quid? non haec varietas mira est, excidere proxima, vetera inhaerere? hesternorum immemores acta pueritiae recordari?

[6] And my wonder is increased by the fact that even beasts, which seem to be devoid of reason, yet remember and recognise things, and will return to their old home, however far they have been taken from it. Again, is it not an extraordinary inconsistency that we forget recent and remember distant events, that we cannot recall what happened yesterday and yet retain a vivid impression of the acts of our childhood?

[7] quid quod quaedam requisita se occultant et eadem forte succurrunt? nec manet semper memoria, sed aliquando etiam redit? nesciretur tamen, quanta vis esset eius, quanta divinitas illa, nisi in hoc lumen vim orandi extulisset. non

[7] And what, again, shall we say of the fact that the things we search for frequently refuse to present themselves and then occur to us by chance, or that memory does not always remain with us, but will even sometimes return to us after it has been lost? But we should never have realised the fullness of its power nor its supernatural capacities, but for the fact that it is memory which has brought oratory to its present position of glory.

[8] enim rerum modo sed etiam verborum ordinem praestat, nec ea pauca contextit, sed durat prope in infinitum, et in longissimis actionibus prius audiendi patientia quam memoriae fides deficit.

[8] For it provides the orator not merely with the order of his thoughts, but even of his words, nor is its power limited to stringing merely a few words together; its capacity for endurance is inexhaustible, and even in the longest pleadings the patience of the audience flags long before the memory of the speaker.

[9] quod et ipsum argumentum est subesse artem aliquam iuvarique ratione naturae, cum idem docti facere illud, indocti inexercitatieque non possimus. quanquam invenio apud Platonem obstare memoriae usum litterarum, videlicet quoniam illa, quae scriptis reposuimus,

[9] This fact may even be advanced as an argument that there must be some art of memory and that the natural gift can be helped by reason, since training enables us to do things which we cannot do before we have had any training or practice. On the other hand, I find that Plato asserts that the use of written characters is a hindrance to memory, on the ground, that is, that once we have committed a thing to writing, we cease to guard it in our memory and lose it out of sheer carelessness.

[10] *velut custodire desinimus et ipsa securitate dimittimus. nec dubium est quin plurimum in hac parte valeat mentis intentio et velut acies luminum a prospectu rerum, quas intuetur, non aversa. unde accidit, ut quae per plures dies scribimus ediscendi causa, cogitatione ipsa contineamus.*

[10] And there can be no doubt that concentration of mind is of the utmost importance in this connexion; it is, in fact, like the eyesight, which turns to, and not away from, the objects which it contemplates. Thus it results that after writing for several days with a view to acquiring by heart what we have written, we find that our mental effort has of itself imprinted it on our memory.

[11] *artem autem memoriae primus ostendisse dicitur Simonides. cuius vulgata fabula est: cum pugili coronato carmen, quale componi victoribus solet, mercede pacta scripsisset, abnegatam ei pecuniae partem, quod more poetis frequentissimo digressus in laudes Castoris ac Pollucis exierat. quapropter partem ab iis petere, quorum facta celebrasset, iuebatur.*

[11] The first person to discover an art of memory is said to have been Simonides, of whom the following well-known story is told. He had written an ode of the kind usually composed in honour of victorious athletes, to celebrate the achievement of one who had gained the crown for boxing. Part of the sum for which he had contracted was refused him on the ground that, following the common practice of poets, he had introduced a digression in praise of Castor and Pollux, and he was told that, in view of what he had done, he had best ask for the rest of the sum due from those whose deeds he had extolled. And according to the story they paid their debt.

[12] *et persolverunt, ut traditum est. nam cum esset grande convivium in honorem eiusdem victoriae atque adhibitus ei cenae Simonides, nuntio est excitus, quod eum duo iuvenes equis advecti desiderare maiorem in modum dicebantur. et illos quidem non invenit, fuisse tamen gratos erga se deos exitu comperit.*

[12] For when a great banquet was given in honour of the boxer's success, Simonides was summoned forth from the feast, to which he had been invited, by a message to the effect that two youths who had ridden to the door urgently desired his presence. He found no trace of them, but what followed proved to him that the gods had shown their gratitude.

[13] nam vix eo ultra limen egresso, triclinium illud supra convivas corrui-
atque ita confudit, ut non ora modo oppressorum, sed membra etiam omnia
requirantes ad sepulturam propinqui nulla nota possent discernere. tum
Simonides dicitur memor ordinis, quo quisque discubuerat, corpora suis
reddidisse.

[13] For he had scarcely crossed the threshold on his way out, when the
banqueting hall fell in upon the heads of the guests and wrought such havoc
among them that the relatives of the dead who came to seek the bodies for
burial were unable to distinguish not merely the faces but even the limbs of
the dead. Then it is said, Simonides, who remembered the order in which the
guests had been sitting, succeeded in restoring to each man his own dead.

[14] est autem magna inter auctores dissensio, Glaucone Carystio an Leocrati
an Agatharcho an Scopae scriptum sit id carmen; et Pharsali fuerit haec
domus, ut ipse quodam loco significare Simonides videtur utque Apollodorus
et Eratosthenes et Euphorion et Larissaeus Eurypylus tradiderunt, an
Crannone, ut Apollas Callimachus, quam secutus Cicero hanc famam latius
fudit.

[14] There is, however, great disagreement among our authorities as to whether
this ode was written in honour of Glaucus of Carystus, Leocrates, Agatharcus
or Scopas, and whether the house was at Pharsalus, as Simonides himself
seems to indicate in a certain passage, and as is recorded by Apollodorus,
Eratosthenes, Euphorion and Eurypylus of Larissa, or at Crannon, as is stated
by Apollas Callimachus, who is followed by Cicero, to whom the wide
circulation of this story is due.

[15] scopam nobilem Thessalum periisse in eo convivio constat; adiicitur
sororis eius filius; putant et ortos plerosque ab alio Scopae, qui maior aetate
fuerit.

[15] It is agreed that Scopas, a Thessalian noble, perished at this banquet, and it
is also said that his sister's son perished with him, while it is thought that a
number of descendants of an elder Scopas met their death at the same time.

[16] quanquam mihi totum de Tyndaridis fabulosum videtur, neque omnino
huius rei meminit usquam poeta ipse, profecto non taciturus de tanta sua
gloria.

[16] For my own part, however, I regard the portion of the story which
concerns Castor and Pollux as being purely fictitious, since the poet himself
has nowhere mentioned the occurrence; and he would scarcely have kept
silence on an affair which was so much to his credit.

[17] ex hoc Simonidis facto notatum videtur, iuvare memoriam signatis animo
sedibus, idque credere suo quisque experimento potest. Nam cum in loca
aliqua post tempus reversi sumus, non ipsa agnoscimus tantum, sed etiam,

quae in his fecerimus, reminiscimur personaeque subeunt, nonnunquam tacitae quoque cogitationes in mentem revertuntur. nata est igitur, ut in plerisque, ars ab experimento. loca deligunt quam maxime spatiosa,

[17] This achievement of Simonides appears to have given rise to the observation that it is an assistance to the memory if localities are sharply impressed upon the mind, a view the truth of which everyone may realise by practical experiment. For when we return to a place after considerable absence, we not merely recognise the place itself, but remember things that we did there, and recall the persons whom we met and even the unuttered thoughts which passed through our minds when we were there before.

[18] multa varietate signata, domum forte magnam et in multos diductam recessus. in ea quidquid notabile est, animo diligenter adfigunt, ut sine cunctatione ac mora partes eius omnes cogitatio possit percurrere. et primus hic labor est non haerere in occurso; plus enim quam firma debet esse memoria, quae aliam memoriam adiuvet.

[18] Thus, as in most cases, art originates in experiment. Some place is chosen of the largest possible extent and characterised by the utmost possible variety, such as a spacious house divided into a number of rooms. Everything of note therein is carefully committed to the memory, in order that the thought may be enabled to run through all the details without let or hindrance. And undoubtedly the first task is to secure that there shall be no delay in finding any single detail, since an idea which is to lead by association to some other idea requires to be fixed in the mind with more than ordinary certitude.

[19] tum, quae scripserunt vel cogitatione complexi sunt, aliquo signo, quo moneantur, notant; quod esse vel ex re tota potest, ut de navigatione, militia, vel ex verbo aliquo; nam etiam excidentis unius admonitione verbi in memoriam reponuntur. Sit autem signum navigationis ut ancora, militiae ut aliquid ex armis.

[19] The next step is to distinguish something which has been written down or merely thought of by some particular symbol which will serve to jog the memory; this symbol may have reference to the subject as a whole, it may, for example, be drawn from navigation, warfare, etc., or it may, on the other hand, be found in some particular word. (For even in cases of forgetfulness one single word will serve to restore the memory.) However, let us suppose that the symbol is drawn from navigation, as, for instance, an anchor; or from warfare, as, for example, some weapon. These symbols are then arranged as follows.

[20] haec ita digerunt. primum sensum vestibulo quasi adsignant, secundum, puta, atrio, tum impluvia circumeunt, nec cubiculis modo aut exedris, sed statuis etiam similibusque per ordinem committunt. hoc facto, cum est repetenda memoria, incipiunt ab initio loca haec recensere, et quod cuique

crediderunt reposcunt, ut eorum imagine admonentur. ita, quamlibet multa sint, quorum meminisse oporteat, fiunt singula conexa quodam choro, nec errant coniungentes prioribus consequentia solo ediscendi labore.

[20] The first though is placed, as it were, in the forecourt; the second, let us say, in the living-room; the remainder are placed in due order all round the *impluvium* and entrusted not merely to bedrooms and parlours, but even to the care of statues and the like. This done, as soon as the memory of the facts requires to be revived, all these places are visited in turn and the various deposits are demanded from their custodians, as the sight of each recalls the respective details. Consequently, however large the number of these which it is required to remember, all are linked one to the other like dancers hand in hand, and there can be no mistake since they join what precedes to what follows, no trouble being required except the preliminary labour of committing the various points to memory.

[21] quod de domo dixi, et in operibus publicis et in itinere longo et urbium ambitu et picturis fieri potest. etiam fingere sibi has imagines licet. opus est ergo locis, quae vel finguntur vel sumuntur, et imaginibus vel simulacris, quae utique fingenda sunt. imagines voces sunt, quibus ea quae ediscenda sunt notamus, ut, quomodo Cicero dicit, locis pro cera, simulacris pro litteris utamur.

[21] What I have spoken of as being done in a house, can equally well be done in connexion with public buildings, a long journey, the ramparts of a city, or even pictures. Or we may even imagine such places to ourselves. We require, therefore, places, real or imaginary, and images or symbols, which we must, of course, invent for ourselves. By images I mean the words by which we distinguish the things which we have to learn by heart: in fact, as Cicero says, we use "places like wax tablets and symbols in lieu of letters."

[22] illud quoque ad verbum ponere optimum fuerit: locis est utendum multis, inlustribus, explicatis, modicis intervallis, imaginibus autem agentibus, acribus, insignitis, quae occurrere celeriterque percutere animum possint. quo magis miror, quomodo Metrodorus in XII signis, per quae sol meat, trecenos et sexagenos invenerit locos. vanitas nimirum fuit atque iactatio circa memoriam sua potius arte quam natura gloriantis.

[22] It will be best to give his words *verbatim*: "We must for this purpose employ a number of remarkable places, clearly envisaged and separated by short intervals: the images which we use must be active, sharply-cut and distinctive, such as may occur to the mind and strike it with rapidity." This makes me wonder all the more, how Metrodorus should have found three hundred and sixty different localities in the twelve signs of the Zodiac through which the sun passes. It was doubtless due to the vanity and boastfulness of a man who was inclined to vaunt his memory as being the result of art rather

than of natural gifts.

[23] equidem haec ad quaedam prodesse non negaverim, ut si rerum nomina multa per ordinem audita reddenda sint. namque in iis quae didicerunt locis ponunt res illas: mensam, ut hoc utar, in vestibulo et pulpitum in atrio et sic cetera, deinde relegentes inveniunt, ubi posuerunt.

[23] I am far from denying that those devices may be useful for certain purposes, as, for example, if we have to reproduce a number of names in the order in which we heard them. For those who use such aids place the things which have to be remembered in localities which they have previously fixed in the memory; they put a table, for instance, in the forecourt, a platform in the hall and so on with the rest, and then, when they retrace their steps, they find the objects where they had placed them.

[24] et forsitan hoc sunt adiuti qui, auctione dimissa, quid cuique vendidissent testibus argentariorum tabulis reddiderunt; quod praestitisse Hortensium dicunt. minus idem proderit in ediscendis, quae orationis perpetuae erunt. nam et sensus non eandem imaginem quam res habent, cum alterum fingendum sit, et horum tamen utcunque commonet locus, sicut sermonis alicuius habiti. at verborum contextus eadem arte quomodo comprehendetur?

[24] Such a practice may perhaps have been of use to those who, after an auction, have succeeded in stating what object they had sold to each buyer, their statements being checked by the books of the money takers; a feat which it is alleged was performed by Hortensius. It will, however, be of less service in learning the various parts of a set speech. For thoughts do not call up the same images as material things, and a symbol requires to be specially invented for them, although even here a particular place may serve to remind us, as, for example, of some conversation that may have been held there. But how can such a method grasp a whole series of connected words?

[25] mitto quod quaedam nullis simulacris significari possunt, ut certe coniunctiones. habeamus enim sane, ut qui notis scribunt, certas imagines omnium et loca scilicet infinita, per quae verba, quot sunt in quinque contra Verrem secundae actionis libris, explicentur, meminimus etiam omnium quasi depositorum: nonne impediri quoque dicendi cursum necesse est duplici memoriae cura?

[25] I pass by the fact that there are certain things which it is impossible to represent by symbols, as, for example, conjunctions. We may, it is true, like shorthand writers, have definite symbols for everything, and may select an infinite number of places to recall all the words contained in the five books of the second pleading against Verres, and we may even remember them all as if they were deposits placed in safe-keeping. But will not the flow of our speech inevitably be impeded by the double task imposed upon our memory?

[26] nam quomodo poterunt copulata fluere, si propter singula verba ad singulas formas respiciendum erit? quare et Charmadas et Scepsius, de quo modo dixi, Metrodorus, quos Cicero dicit usos hac exercitatione, sibi habeant sua; nos simpliciora tradamus.

[26] For how can our words be expected to flow in connected speech, if we have to look back at separate symbols for each individual word? Therefore the experts mentioned by Cicero as having trained their memory by methods of this kind, namely Charmadas, and Metrodorus of Scepsis, to whom I have just referred, may keep their systems for their own use. My precepts on the subject shall be of a simpler kind.

[27] si longior complectenda memoria fuerit oratio, proderit per partes ediscere; laborat enim maxime onere; et hae partes non sint perexiguae, alioqui rursus multae erunt et eam distinguunt atque concident. nec utique certum imperaverim modum, sed maxime ut quisque finietur locus, ni forte tam numerosus, ut ipse quoque dividi debeat.

[27] If a speech of some length has to be committed to memory, it will be well to learn it piecemeal, since there is nothing so bad for the memory as being overburdened. But the sections into which we divide it for this purpose should not be very short: otherwise they will be too many in number, and will break up and distract the memory. I am not, however, prepared to recommend any definite length; it will depend on the natural limits of the passage concerned, unless, indeed, it be so long as itself to require subdivision.

[28] dandi sunt certi quidam termini, ut contextum verborum, qui est difficillimus, continua et crebra meditatio, partes deinceps ipsas repetitus ordo coniungat. non est inutile, iis quae difficillimus haereant aliquas apponere notas, quarum recordatio commoneat et quasi excitet memoriam;

[28] But some limits must be fixed to enable us, by dint of frequent and continuous practice, to connect the words in their proper order, which is a task of no small difficulty, and subsequently to unite the various sections into a whole when we go over them in order. If certain portions prove especially difficult to remember, it will be found advantageous to indicate them by certain marks, the remembrance of which will refresh and stimulate the memory.

[29] nemo etiam fere tam infelix, ut, quod cuique loco signum destinaverit, nesciat. at, si tardus ad hoc, eo quoque adhuc remedio utetur ut ipsae notae (hoc enim est ex illa arte non inutile) aptentur ad eos qui excidunt sensus: ancora ut supra pro posui, si de nave dicendum est, spiculum, si de proelio.

[29] For there can be but few whose memory is so barren that they will fail to recognise the symbols with which they have marked different passages. But if anyone is slow to recognise his own signs, he should employ the following

additional remedy, which, though drawn from the mnemonic system discussed above, is not without its uses: he will adapt his symbols to the nature of the thoughts which tend to slip from his memory, using an anchor, as I suggested above, if he has to speak of a ship, or a spear, if he has to speak of a battle.

[30] *multum enim signa faciunt, et ex alia memoria venit alia: ut cum translatus anulus vel alligatus commoneat nos, cur id fecerimus. haec magis adhuc adstringunt, qui memoriam ab aliquo simili transferunt ad id quod continendum est: ut in nominibus, si Fabius forte sit tenendus, referamus ad illum Cunctatorem, qui excidere non potest, aut ad aliquem amicum, qui idem vocetur.*

[30] For symbols are highly efficacious, and one idea suggests another: for example, if we change a ring from one finger to another or tie a thread round it, it will serve to remind us of our reason for so doing. Specially effective are those devices which lead the memory from one thing to another similar thing which we have got to remember; for example, in the case of names, if we desire to remember the name Fabius, we should think of the famous Cunctator, whom we are certain not to forget, or of some friend bearing the same name.

[31] *quod est facilius in Apris et in Ursis et Nasone aut Crispo, ut id memoriae adfigatur unde sunt nomina. origo quoque aliquando declinatorum tenendi magis causa est, ut in Cicerone, Verrio, Aurelio. sed hoc miserim.*

[31] This is specially easy with names such as Aper, Ursus, Naso, or Crispus, since in these cases we can fix their origin in our memory. Origin again may assist us to a better remembrance of derivative names, such as Cicero, Verrius, or Aurelius. However, I will say no more on this point.

[32] *illud neminem non iuvabit, iisdem quibus scripserit ceris ediscere. sequitur enim vestigiis quibusdam memoriam, et velut oculis intuetur non paginas modo, sed versus prope ipsos, estque cum dicit similis legenti. iam vero si litura aut adiectio aliqua atque mutatio interveniat, signa sunt quaedam, quae intuentes deerrare non possumus.*

[32] There is one thing which will be of assistance to everyone, namely, to learn a passage by heart from the same tablets on which he has committed it to writing. For he will have certain tracks to guide him in his pursuit of memory, and the mind's eye will be fixed not merely on the pages on which the words were written, but on individual lines, and at times he will speak as though he were reading aloud. Further, if the writing should be interrupted by some erasure, addition or alteration, there are certain symbols available, the sight of which will prevent us from wandering from the track.

[33] *haec ratio, ut est illi, de qua primum locutus sum, arti non dissimilis, ita, si*

quid me experimenta docuerunt, et expeditior et potentior. ediscere tacite (nam id quoque est quaesitum) erat optimum, si non subirent velut otiosum animum plerumque aliae cogitationes; propter quas excitandus est voce, ut duplici motu iuветur memoria dicendi et audiendi. sed haec vox sit modica et magis murmur.

[33] This device bears some resemblance to the mnemonic system which I mentioned above, but if my experience is worth anything, is at once more expeditious and more effective. The question has been raised as to whether we should learn by heart in silence; it would be best to do so, save for the fact that under such circumstances the mind is apt to become indolent, with the result that other thoughts break in. For this reason the mind should be kept alert by the sound of the voice, so that the memory may derive assistance from the double effort of speaking and listening. But our voice should be subdued, rising scarcely above a murmur.

[34] qui autem legente alio ediscit, in parte tardatur, quod acrior est oculorum quam aurium sensus; in parte iuari potest, quod, cum semel aut bis audierit, continuo illi memoriam suam experiri licet et cum legente contendere. nam et alioqui id maxime faciendum est, ut nos subinde temptemus, quia continua lectio et quae magis et quae minus haerent aequaliter transit.

[34] On the other hand, if we attempt to learn by heart from another reading aloud, we shall find that there is both loss and gain; on the one hand, the process of learning will be slower, because the perception of the eye is quicker than that of the ear, while, on the other hand, when we have heard a passage once or twice, we shall be in a position to test our memory and match it against the voice of the reader. It is, indeed, important for other reasons to test ourselves thus from time to time, since continuous reading has this drawback, that it passes over the passages which we find hard to remember at the same speed as those which we find less difficulty in retaining.

[35] in experiendo teneasne, et maior intentio est et nihil supervacui temporis perit, quo etiam quae tenemus repeti solent; ita sola, quae exciderunt, retractantur, ut crebra iteratione firmentur, quanquam solent hoc ipso maxime haerere, quod exciderunt. illud ediscendo scribendoque commune est, utrique plurimum conferre bonam valetudinem, digestum cibum, animum cogitationibus alis liberum.

[35] By testing ourselves to see whether we remember a passage, we develop greater concentration without waste of time over the repetition of passages which we already know by heart. Thus, only those passages which tend to slip from the memory are repeated with a view to fixing them in the mind by frequent rehearsal, although as a rule the mere fact that they once slipped our memory makes us ultimately remember them with special accuracy. Both learning by heart and writing have this feature in common: namely, that good

health, sound digestion, and freedom from other preoccupations of mind contribute largely to the success of both.

[36] verum et in iis quae scripsimus complectendis multum valent, et in iis quae cogitamus continendis prope solae (excepta, quae potentissima est, exercitatione) divisio et compositio. nam qui recte diviserit, nunquam poterit in rerum ordine errare.

[36] But for the purpose of getting a real grasp of what we have written under the various heads, division and artistic structure will be found of great value, while, with the exception of practice, which is the most powerful aid of all, they are practically the only means of ensuring an accurate remembrance of what we have merely thought out. For correct division will be an absolute safeguard against error in the order of our speech,

[37] certa sunt enim non solum in digerendis quaestionibus, sed etiam in exsequendis, si modo recte dicimus, prima ac secunda et deinceps; cohaeretque omnis rerum copulatio, ut ei nihil neque subtrahi sine manifesto intellectu neque inseri possit.

[37] since there are certain points not merely in the distribution of the various questions in our speech, but also in their development (provided we speak as we ought), which naturally come first, second, and third, and so on, while the connexion will be so perfect that nothing can be omitted or inserted without the fact of the omission or insertion being obvious.

[38] An vero Scaevola in lusu duodecim scriptorum, cum prior calculum promovisset essetque victus, dum rus tendit, repetito totius certaminis ordine, quo dato errasset recordatus, rediit ad eum, quocum luserat, isque ita factum esse confessus est? minus idem ordo valebit in oratione, praesertim totus nostro arbitrio constitutus, cum tantum ille valeat alternus?

[38] We are told that Scaevola, after a game of draughts in which he made the first move and was defeated, went over the whole game again in his mind on his way into the country, and on recalling the move which had cost him the game, returned to tell the man with whom he had been playing, and the latter acknowledged that he was right. Is order, then, I ask you, to be accounted of less importance in a speech, in which it depends entirely on ourselves, whereas in a game our opponent has an equal share in its development?

[39] etiam quae bene composita erunt, memoriam serie sua ducent. nam sicut facilius versus ediscimus quam prosam orationem, ita prosae vincta quam dissoluta. sic contingit, ut etiam quae ex tempore videbantur effusa, ad verbum repetita reddantur. quod meae quoque memoriae mediocritatem sequebatur, si quando interventus aliquorum, qui hunc honorem mererentur, iterare declamationis partem coegisset. nec est mendacio locus, salvis qui interfuerunt.

[39] Again, if our structure be what it should, the artistic sequence will serve to guide the memory. For just as it is easier to learn verse than prose, so it is easier to learn prose when it is artistically constructed than when it has no such organisation. If these points receive attention, it will be possible to repeat *verbatim* even such passages as gave the impression of being delivered extempore. My own memory is of a very ordinary kind, but I found that I could do this with success on occasions when the interruption of a declamation by persons who had a claim to such a courtesy forced me to repeat part of what I had said. There are persons still living, who were then present to witness if I lie.

[40] *si quis tamen unam maximamque a me artem memoriae quaerat, exercitatio est et labor; multa ediscere, multa cogitare, et si fieri potest cotidie, potentissimum est. nihil aequae vel augetur cura vel negligentia intercidit.*

[40] However, if anyone asks me what is the one supreme method of memory, I shall reply, practice and industry. The most important thing is to learn much by heart and to think much, and, if possible, to do this daily, since there is nothing that is more increased by practice or impaired by neglect than memory.

[41] *quare et pueri statim, ut praecepi, quam plurima ediscant, et, quaecunque aetas operam iuvandae studio memoriae dabit, devoret initio taedium illud et scripta et lecta saepius revolvendi et quasi eundem cibum remandendi. quod ipsum hoc fieri potest levius, si pauca primum et quae odium non adferant coeperimus ediscere, tum cotidie adiciere singulos versus, quorum accessio labori sensum incrementi non adferat, in summam ad infinitum usque perveniat, et poetica prius, tum oratorum, novissime etiam solutiora numeris et magis ab usu dicendi remota, qualia sunt iurisconsultorum.*

[41] Therefore boys should, as I have already urged, learn as much as possible by heart at the earliest stage, while all who, whatever their age, desire to cultivate the power of memory, should endeavour to swallow the initial tedium of reading and re-reading what they have written or read, a process which we may compare to chewing the cud. This task will be rendered less tiresome if we begin by confining ourselves to learning only a little at a time, in amounts not sufficient to create disgust: we may then proceed to increase the amount by a line a day, an addition which will not sensibly increase the labour of learning, until at last the amount we can attack will know no limits. We should begin with poetry and then go on to oratory, while finally we may attempt passages still freer in rhythm and less akin to ordinary speech, such, for example, as passages from legal writers.

[42] *difficiliora enim debent esse, quae exercent, quo sit levius ipsum illud, in quod exercent, ut athletae ponderibus plumbeis adsuefaciunt manus, quibus vacuis et nudis in certamine utendum est. non omittam etiam, quod cotidianis*

experimentis deprehenditur, minime fidelem esse paulo tardioribus ingeniis recentem memoriam.

[42] For passages intended as an exercise should be somewhat difficult in character if they are to make it easy to achieve the end for which the exercise is designed; just as athletes train the muscles of their hands by carrying weights of lead, although in the actual contests their hands will be empty and free. Further, I must not omit the fact, the truth of which our daily practice will teach us, that in the case of the slower type of mind the memory of recent events is far from being exact.

[43] mirum dictu est nec in promptu ratio, quantum nox interposita adferat firmitatis, sive requiescit labor ille, cuius sibi ipsa fatigatio obstabat, sive maturatur atque concoquitur, quae firmissima eius pars est, recordatio; quae statim referri non poterant, contexuntur postera die, confirmatque memoriam illud tempus, quod esse in causa solet oblivionis.

[43] It is a curious fact, of which the reason is not obvious, that the interval of a single night will greatly increase the strength of the memory, whether this be due to the fact that it has rested from the labour, the fatigue of which constituted the obstacle to success, or whether it be that the power of recollection, which is the most important element of memory, undergoes a process of ripening and maturing during the time which intervenes. Whatever the cause, things which could not be recalled on the spot are easily co-ordinated the next day, and time itself, which is generally accounted one of the causes of forgetfulness, actually serves to strengthen the memory.

[44] etiam illa praevelox fere cito effluit, et, velut praesenti officio functa nihil in posterum debeat, tanquam dimissa discedit. nec est mirum, magis haerere animo quae diutius adfixa sint.

ex hac ingeniorum diversitate nata dubitatio est, ad verbum sit ediscendum dicturis, an vim modo rerum atque ordinem complecti satis sit; de quo sine dubio non potest in universum pronuntiari.

[44] On the other hand, the abnormally rapid memory fails as a rule to last and takes its leave as though, its immediate task accomplished, it had no further duties to perform. And indeed there is nothing surprising in the fact that things which have been implanted in the memory for some time should have a greater tendency to stay there.

The difference between the powers of one mind and another, to which I have just referred, gives rise to the question whether those who are intending to speak should learn their speeches *verbatim* or whether it is sufficient to get a good grasp of the essence and the order of what they have got to say. To this problem no answer is possible that will be of universal application.

[45] nam si memoria suffragatur, tempus non defuit, nulla me velim syllaba

effugiat; alioqui etiam scribere sit supervacuum. idque praecipue a pueris obtinendum, atque in hanc consuetudinem memoria exercitatione redigenda, ne nobis discamus ignorare. ideoque et admoneri et ad libellum respicere vitiosum, quod libertatem negligentiae facit, nec quisquam se parum tenere iudicat, quod, ne sibi excidat, non timet.

[45] Give me a reliable memory and plenty of time, and I should prefer not to permit a single syllable to escape me: otherwise writing would be superfluous. It is specially important to train the young to such precision, and the memory should be continually practised to this end, that we may never learn to become indulgent to its failure. For this reason I regard it as a mistake to permit the student to be prompted or to consult his manuscript, since such practices merely encourage carelessness, and no one will ever realise that he has not got his theme by heart, if he has no fear of forgetting it.

[46] inde interruptus actionis impetus et resistens ac salebrosa oratio; et qui dicit ediscenti similis, etiam omnem bene scriptorum gratiam perdit vel hoc ipso, quod scripsisse se confitetur. memoria autem facit etiam prompti ingenii famam, ut illa, quae dicimus, non domo attulisse sed ibi protinus sumpsisse videamur; quod et oratori et ipsi causae plurimum confert.

[46] It is this which causes interruptions in the flow of speech and makes the orator's language halting and jerky, while he seems as though he were learning what he says by heart and loses all the grace that a well-written speech can give, simply by the fact that he makes it obvious that he has written it. On the other hand, a good memory will give us credit for quickness of wit as well, by creating the impression that our words have not been prepared in the seclusion of the study, but are due to the inspiration of the moment, an impression which is of the utmost assistance both to the orator and to his cause.

[47] nam et magis miratur et minus timet iudex, quae non putat adversus se praeparata. idque in actionibus inter praecipua servandum est, ut quaedam etiam, quae optime vinximus, velut soluta enuntiemus et cogitantibus nonnunquam et dubitantibus similes quaerere videamur quae attulimus.

[47] For the judge admires those words more and fears them less which he does not suspect of having been specially prepared beforehand to outwit him. Further, we must make it one of our chief aims in pleading to deliver passages which have been constructed with the utmost care, in such manner as to make it appear that they are but casually strung together, and to suggest that we are thinking out and hesitating over words which we have, as a matter of fact, carefully prepared in advance.

[48] ergo quid sit optimum, neminem fugit. si vero aut memoria natura durior erit aut non suffragabitur tempus, etiam inutile erit ad omnia se verba adligare, cum oblivio unius eorum cuiuslibet aut deformem haesitationem aut etiam

silentium inducat, tutiusque multo comprehensis animo rebus ipsis libertatem sibi eloquendi relinquere.

[48] It should now be clear to all what is the best course to adopt for the cultivation of memory. If, however, our memory be naturally somewhat dull or time presses, it will be useless to tie ourselves down rigidly to every word, since if we forget any one of them, the result may be awkward hesitation or even a tongue-tied silence. It is, therefore, far safer to secure a good grasp of the facts themselves and to leave ourselves free to speak as we will.

[49] nam et invitus perdit quisque id quod elegerat verbum, nec facile reponit aliud, dum id, quod scripserat, quaerit. sed ne hoc quidem infirmae memoriae remedium est nisi in iis, qui sibi facultatem aliquam dicendi ex tempore paraverunt. quodsi cui utrumque defuerit, huic omittere omnino totum actionum laborem ac, si quid in litteris valet, ad scribendum potius suadebo convertere. sed haec rara infelicitas erit.

[49] For the loss of even a single word that we have chosen is always a matter for regret, and it is hard to supply a substitute when we are searching for the word that we had written. But even this is no remedy for a weak memory, except for those who have acquired the art of speaking extempore. But if both memory and this gift be lacking, I should advise the would-be orator to abandon the toil of pleading altogether and, if he has any literary capacity, to betake himself by preference to writing. But such a misfortune will be of but rare occurrence.

[50] ceterum quantum natura studioque valeat memoria, vel Themistocles testis, quem unum intra annum optime locutum esse Persice constat; vel Mithridates, cui duas et viginti linguas, quot nationibus imperabat, traditur notas fuisse; vel Crassus ille Dives, qui, cum Asiae praesset, quinque Graeci sermonis differentias sic tenuit ut, qua quisque apud eum lingua postulasset, eadem ius sibi redditum ferret; vel Cyrus, quem omnium militum tenuisse creditum est nomina.

[50] For the rest there are many historical examples of the power to which memory may be developed by natural aptitude and application. Themistocles is said to have spoken excellently in Persian after a year's study; Mithridates is recorded to have known twenty-two languages, that being the number of the different nations included in his empire; Crassus, surnamed the Rich, when commanding in Asia had such a complete mastery of five different Greek dialects, that he would give judgement in the dialect employed by the plaintiff in putting forward his suit; Cyrus is believed to have known the name of every soldier in his army,

[51] quin semel auditos quamlibet multos versus protinus dicitur reddidisse Theodectes. dicebantur etiam nunc esse, qui facerent, sed mihi nunquam, ut ipse interesset, contigit; habenda tamen fides est vel in hoc ut, qui crediderit,

et speret.

[51] while Theodectes is actually said to have been able to repeat any number of verses after only a single hearing. I remember that it used to be alleged that there were persons still living who could do the same, though I never had the good fortune to be present at such a performance. Still, we shall do well to have faith in such miracles, if only that he who believes may also hope to achieve the like.

3. pronuntiatio a plerisque actio dicitur, sed prius nomen a voce, sequens a gestu videtur accipere. namque actionem Cicero alias quasi sermonem alias eloquentiam quandam corporis dicit. idem tamen duas eius partes facit, quae sunt eadem pronuntiationis, vocem atque motum.

3. *Delivery* is often styled *action*. But the first name is derived from the voice, the second from the gesture. For Cicero in one passage speaks of *action* as being *a form of speech*, and in another as being *a kind of physical eloquence*. None the less, he divides action into two elements, which are the same as the elements of delivery, namely, voice and movement. Therefore, it matters not which term we employ.

[2] qua propter utraque appellatione indifferenter uti licet. habet autem res ipsa miram quandam in orationibus vim ac potestatem; neque enim tam refert, qualia sint, quae intra nosmet ipsos composuimus, quam quo modo efferantur; nam ita quisque, ut audit, movetur. quare neque probatio ulla, quae modo venit ab oratore, tam firma est, ut non perdat vires suas, nisi adiuvatur adseveratione dicentis. adfectus omnes languescant necesse est, nisi voce, vultu, totius prope habitu corporis inardescunt.

[2] But the thing itself has an extraordinarily powerful effect in oratory. For the nature of the speech that we have composed within our minds is not so important as the manner in which we produce it, since the emotion of each member of our audience will depend on the impression made upon his hearing. Consequently, no proof, at least if it be one devised by the orator himself, will ever be so secure as not to lose its force if the speaker fails to produce it in tones that drive it home. All emotional appeals will inevitably fall flat, unless they are given the fire that voice, look, and the whole carriage of the body can give them.

[3] nam cum haec omnia fecerimus, felices tamen, si nostrum illum ignem iudex conceperit; nedom eum supini securique moveamus, ac non et ipse nostra oscitatione solvatur.

[3] For when we have done all this, we may still account ourselves only too fortunate if we have succeeded in communicating the fire of our passion to the judge: consequently, we can have no hope of moving him if we speak with languor and indifference, nor of preventing him from yielding to the narcotic

influence of our own yawns.

[4] documento sunt vel scenici actores, qui et optimis poetarum tantum adiiciunt gratiae, ut nos infinito magis eadem illa audita quam lecta delectent; et vilissimis etiam quibusdam impetrant aures, ut, quibus nullus est in bibliothecis locus, sit etiam frequens in theatris.

[4] A proof of this is given by actors in the theatre. For they add so much to the charm even of the greatest poets, that the verse moves us far more when heard than when read, while they succeed in securing a hearing even for the most worthless authors, with the result that they repeatedly win a welcome on the stage that is denied them in the library.

[5] quodsi in rebus, quas fictas esse scimus et inanes, tantum pronuntiatio potest, ut iram, lacrimas, sollicitudinem adferat, quanto plus valeat necesse est, ubi et credimus? equidem vel mediocre orationem commendatam viribus actionis adfirmarim plus habituram esse momenti quam optimam eadem illa destitutam.

[5] Now if delivery can count for so much in themes which we know to be fictitious and devoid of reality, as to arouse our anger, our tears or our anxiety, how much greater must its effect be when we actually believe what we hear? For my own part I would not hesitate to assert that a mediocre speech supported by all the power of delivery will be more impressive than the best speech unaccompanied by such power.

[6] siquidem et Demosthenes, quid esset in toto dicendi opere primum, interrogatus pronuntiationi palmam dedit eidemque secundum ac tertium locum, donec ab eo quaeri desineret, ut eam videri posset non praecipuam, sed solam iudicasse;

[6] It was for this reason that Demosthenes, when asked what was the most important thing in oratory, gave the palm to delivery and assigned it second and third place as well, until his questioner ceased to trouble him. We are therefore almost justified in concluding that he regarded it not merely as the first, but as the only virtue of oratory.

[7] ideoque ipse tam diligenter apud Andronicum hypocriten studuit, ut admirantibus eius orationem Rhodiis non immerito Aeschines dixisse videatur: quid si ipsum audissetis? et M. Cicero unam in dicendo actionem dominari putat.

[7] This explains why he studied under the instruction of the actor Andronicus with such diligence and success as thoroughly to justify the remark made by Aeschines to the Rhodians when they expressed their admiration of the speech of Demosthenes on behalf of Ctesiphon, "What would you have said if you had heard him yourselves?" Cicero likewise regards *action* as the supreme element of oratory.

[8] hac Cn. Lentulum plus opinionis consecutum quam eloquentia tradit, eadem C. Gracchum in deflenda fratris nece totius populi Romani lacrimas concitasse, Antonium et Crassum multum valuisse, plurimum vero Q. Hortensium. cuius rei fides est, quod eius scripta tantum intra famam sunt, qua diu princeps oratorum, aliquando aemulus Ciceronis existimatus est, novissime, quoad vixit, secundus, ut appareat placuisse aliquid eo dicente, quod legentes non invenimus.

[8] He records that Gnaeus Lentulus acquired a greater reputation by his delivery than by his actual eloquence, and that Gaius Gracchus by the same means stirred the whole Roman people to tears when he bewailed his brother's death, while Antonius and Crassus produced a great impression by their command of this quality, though the greatest of all was that produced by Quintus Hortensius. This statement is strongly supported by the fact that the latter's writings fall so far short of the reputation which for so long secured him the first place among orators, then for a while caused him to be regarded as Cicero's rival, and finally, for the remainder of his life assigned him a position second only to that of Cicero, that his speaking must clearly have possessed some charm which we fail to find when we read him.

[9] et hercule cum valeant multum verba per se, et vox propriam vim adiiciat rebus, et gestus motusque significet aliquid, profecto perfectum quiddam fieri, cum omnia coierunt, necesse est.

[9] And, indeed, since words in themselves count for much and the voice adds a force of its own to the matter of which it speaks, while gesture and motion are full of significance, we may be sure of finding something like perfection when all these qualities are combined.

[10] sunt tamen qui rudem illam, et qualem impetus cuiusque animi tulit, actionem iudicent fortiolem et solam viris dignam, sed non alii fere quam qui etiam in dicendo curam et artem et nitorem, et quidquid studio paratur, ut adfectata et parum naturalia solent improbare, vel qui verborum atque ipsius etiam soni rusticitate, ut L. Cottam dicit Cicero fecisse, imitationem antiquitatis adfectant.

[10] There are some, however, who consider that delivery which owes nothing to art and everything to natural impulse is more forcible, and in fact the only form of delivery which is worthy of a manly speaker. But these persons are as a rule identical, either with those who are in the habit of disapproving of care, art, polish and every form of premeditation in actual speaking, as being affected and unnatural, or else with those who (like Lucius Cotta, according to Cicero) affect the imitation of ancient writers both in their choice of words and even in the rudeness of their intonation and rhythm.

[11] verum illi persuasionem suam fruuntur, qui hominibus, ut sint oratores, satis putant nasci; nostro labori dent veniam, qui nihil credimus esse perfectum,

nisi ubi natura cura iuvetur. in hoc igitur non contumaciter consentio primas partes esse naturae.

[11] Those, however, who think it sufficient for men to be born to enable them to become orators, are welcome to their opinion, and I must ask them to be indulgent to the efforts to which I am committed by my belief that we cannot hope to attain perfection unless nature is assisted by study. But I will not be so obstinate as to deny that to nature must be assigned the first place.

[12] nam certe bene pronuntiare non poterit, cui aut in scriptis memoria aut in iis, quae subito dicenda erunt, facilitas prompta defuerit, nec si inemendabilia oris incommoda obstabunt. corporis etiam potest esse aliqua tanta deformitas, ut nulla arte vincatur.

[12] For a good delivery is undoubtedly impossible for one who cannot remember what he has written, or lacks the quick facility of speech required by sudden emergencies, or is hampered by incurable impediments of speech. Again, physical uncouthness may be such that no art can remedy it,

[13] sed ne vox quidem exilis actionem habere optimam potest. bona enim firmaque, ut volumus, uti licet; mala vel imbecilla et inhibet multa, ut insurgere et exclamare, et aliqua cogit, ut intermittere et deflectere et rasas faces ac latus fatigatum deformi cantico reficere. sed nos de eo nunc loquamur, cui non frustra praecipitur.

[13] while a weak voice is incompatible with first-rate excellence in delivery. For we may employ a good, strong voice as we will; whereas one that is ugly or feeble not only prevents us from producing a number of effects, such as a *crescendo* or a sudden *fortissimo*, but at times forces faults upon us, making us drop the voice, alter its pitch and refresh the hoarseness of the throat and fatigue of the lungs by a hideous chanting intonation. However, let me now turn to consider the speaker on whom my precepts will not be wasted.

[14] cum sit autem omnis actio, ut dixi, in duas divisa partes, vocem gestumque, quorum alter oculos, altera aures movet, per quos duos sensus omnis ad animum penetrat adfectus, prius est de voce dicere, cui etiam gestus accommodatur. in ea prima observatio est, qualem habeas; secunda, quomodo utaris. natura vocis spectatur quantitate et qualitate.

[14] All delivery, as I have already said, is concerned with two different things, namely, voice and gesture, of which the one appeals to the eye and the other to the ear, the two senses by which all emotion reaches the soul. But the voice has the first claim on our attention, since even our gesture is adapted to suit it.

The first point which calls for consideration is the nature of the voice, the second the manner in which it is used. The nature of the voice depends on its quantity and quality.

[15] *quantitas simplicior; in summa enim grandis aut exigua est, sed inter has extremitates mediae sunt species, et ab ima ad summam ac retro sunt multi gradus. qualitas magis varia. nam est et candida et fusca, et plena et exilis, et lenis et aspera, et contracta et fusa, et dura et flexibilis, et clara et obtusa. spiritus etiam longior breviorque.*

[15] The question of quantity is the simpler of the two, since as a rule it is either strong or weak, although there are certain kinds of voice which fall between these extremes, and there are a number of gradations from the highest notes to the lowest and from the lowest to the highest. Quality, on the other hand, presents more variations; for the voice may be clear or husky, full or thin, smooth or harsh, of wide or narrow compass, rigid or flexible, and sharp or flat, while lung-power may be great or small.

[16] *nec causas, cur quidque eorum accadat, persequi proposito operi necessarium est: eorumne sit differentia, in quibus aura illa concipitur, an eorum, per quae velut organa meat; ipsi propria natura, an prout movetur; lateris pectorisve firmitas an capitis etiam plus adiuvet. nam opus est omnibus sicut non oris modo suavitate, sed narium quoque, per quas quod superest vocis egeritur. dulcis esse tamen debet non exprobrans sonus.*

[16] It is not necessary for my purpose to enquire into the causes which give rise to these peculiarities. I need not raise the question whether the difference lies in those organs by which the breath is produced, or in those which form the channels for the voice itself; whether the voice has a character of its own or depends on the motions which produce it; whether it be the strength of the lungs, chest or the vocal organs themselves that affords it most assistance, since the co-operation of all these organs is required. For example, it is not the mouth only that produces sweetness of tone; it requires the assistance of the nostrils as well, which carry off what I may describe as the overflow of the voice. The important fact is that the tone must be agreeable and not harsh.

[17] *utendi voce multiplex ratio. nam praeter illam differentiam, quae est tripartita, acutae, gravis, flexae, tum intentis, tum remissis, tum elatis, tum inferioribus modis opus est, spatiis quoque lentioribus aut citatioribus.*

[17] The methods of using the voice present great variety. For in addition to the triple division of accents into sharp, grave and circumflex, there are many other forms of intonation which are required: it may be intense or relaxed, high or low, and may move in slow or quick time.

[18] *sed his ipsis media interiacent multa, et ut facies, quanquam ex paucissimis constat, infinitam habet differentiam, ita vox, etsi paucas, quae nominari possint, continet species, propria cuique est, et non haec minus auribus quam oculis illa dinoscitur.*

[18] But here again there are many intermediate gradations between the two

extremes, and just as the face, although it consists of a limited number of features, yet possesses infinite variety of expression, so it is with the voice: for though it possesses but few varieties to which we can give a name, yet every human being possesses a distinctive voice of his own, which is as easily distinguished by the ear as are facial characteristics by the eye.

[19] *augentur autem sicut omnium, ita vocis quoque bona cura, negligentia minuuntur. sed cura non eadem oratoribus quae phonascis convenit; tamen multa sunt utrisque communia, firmitas corporis, ne ad spadonum et mulierum et aegrorum exilitatem vox nostra tenuetur; quod ambulatio, unctio, veneris abstinencia, facilis ciborum digestio, id est frugalitas, praestat.*

[19] The good qualities of the voice, like everything else, are improved by training and impaired by neglect. But the training required by the orator is not the same as that which is practised by the singing-master, although the two methods have many points in common. In both cases physical robustness is essential to save the voice from dwindling to the feeble shrillness that characterises the voices of eunuchs, women and invalids, and the means for creating such robustness are to be found in walking, rubbing-down with oil, abstinence from sexual intercourse, an easy digestion, and, in a word, in the simple life.

[20] *praeterea ut sint fauces integrae, id est molles ac leves, quarum vitio et frangitur et obscuratur et exasperatur et scinditur vox. nam ut tibiae eodem spiritu accepto alium clausis, alium apertis foraminibus, alium non satis purgatae, alium quassae sonum reddunt, ita fauces tumentes strangulant vocem, obtusae obscurant, rasae exasperant, convulsae fractis sunt organis similes.*

[20] Further, the throat must be sound, that is to say, soft and smooth; for if the throat be unsound, the voice is broken or dulled or becomes harsh or squeaky. For just as the sound produced in the pipe by the same volume of breath varies according as the stops are closed or open, or the instrument is clogged or cracked, so the voice is strangled if the throat be swollen, and muffled if it is obstructed, while it becomes rasping if the throat is inflamed, and may be compared to an organ with broken pipes in cases where the throat is subject to spasms.

[21] *finditur etiam spiritus obiectu aliquo sicut lapillo tenues aquae, quarum cursus etiamsi ultra paulum coit, aliquid tamen cavi relinquit post id ipsum quod offenderat. humor quoque vocem ut nimius impedit, ita consumptus destituit. nam fatigatio, ut corpora, non ad praesens modo tempus, sed etiam in futurum adficit.*

[21] Again, the presence of some obstacle may divide the breath just as a pebble will divide shallow waters, which, although their currents unite again soon after the obstruction is past, still leave a hollow space in rear of the

object struck. An excess of moisture also impedes the voice, while a deficiency weakens it. As regards fatigue, its effect is the same as upon the body: it affects the voice not merely at the moment of speaking, but for some time afterwards.

[22] sed ut communiter et phonascis et oratoribus necessaria est exercitatio, qua omnia convalescent, ita curae non idem genus est. nam neque certa tempora ad spatiandum dari possunt tot civilibus officiis occupato, nec praeparare ab imis sonis vocem ad summos nec semper a contentione condere licet, cum pluribus iudiciis saepe dicendum sit.

[22] But while exercise, which gives strength in all cases, is equally necessary both for orators and singing-masters, it is a different kind of exercise which they require. For the orator is too much occupied by civil affairs to be able to allot fixed times for taking a walk, and he cannot tune his voice through all the notes of the scale nor spare it exertion, since it is frequently necessary for him to speak in several cases in succession.

[23] ne ciborum quidem est eadem observatio. non enim tam molli teneraque voce quam forti ac durabili opus est, cum illi omnes etiam altissimos sonos leniant cantu oris, nobis pleraque aspere sint concitateque dicenda et vigilandae noctes et fuligo lucubrationum bibenda et in sudata veste durandum.

[23] Nor is the same regime suitable as regards food: for the orator needs a strong and enduring voice rather than one which is soft and sweet, while the singer mellows all sounds, even the highest, by the modulation of his voice, whereas we have often to speak in harsh and agitated tones, must pass wakeful nights, swallow the soot that is produced by the midnight oil and stick to our work though our clothes be dripping with sweat.

[24] quare vocem deliciis non molliamus, nec imbuatur ea consuetudine, quam desideratura sit; sed exercitatio eius talis sit qualis usus, ne silentio subsidat, sed firmetur consuetudine, qua difficultas omnis levatur.

[24] Consequently, we must not attempt to mellow our voice by coddling it nor accustom it to the conditions which it would like to enjoy, but rather give it exercise suited to the tasks on which it will be employed, never allowing it to be impaired by silence, but strengthening it by practice, which removes all difficulties.

[25] ediscere autem, quo exercearis, erit optimum (nam ex tempore dicentes avocat a cura vocis ille, qui ex rebus ipsis concipitur, adfectus) et ediscere quam maxime varia, quae et clamorem et disputationem et sermonem et flexus habeant, ut simul in omnia paremur. hoc satis est;

[25] The best method for securing such exercise is to learn passages by heart (for if we have to speak extempore, the passion inspired by our theme will

distract us from all care for our voice), while the passages selected for the purpose should be as varied as possible, involving a combination of loud, argumentative, colloquial and modulated utterance, so that we may prepare ourselves for all exigencies simultaneously. This will be sufficient.

[26] *alioqui nitida illa et curata vox insolitum laborem recusabit, ut assueta gymnasiis et oleo corpora, quamlibet sint in suis certaminibus speciosa atque robusta, si militare iter fascemque et vigilias imperes, deficient et quaerant unctores suos nudumque sudorem.*

[26] Otherwise your delicate, over trained voice will succumb before any unusual exertion, like bodies accustomed to the oil of the training school, which for all the imposing robustness which they display in their own contests, yet, if ordered to make a day's march with the troops, to carry burdens and mount guard at night, would faint beneath the task and long for their trainers to rub them down with oil and for the free perspiration of the naked limbs.

[27] *illa quidem in hoc opere praecipi quis ferat vitandos soles atque ventos et nubila etiam ac siccitates? ita, si dicendum in sole aut ventoso, humido, calido die fuerit, reos deseremus? nam crudum quidem aut saturum aut ebrium aut eiecto modo vomitu, quae cavenda quidam monent, declamare neminem, qui sit mentis compos, puto.*

[27] Who would tolerate me if in a work such as this I were to prescribe avoidance of exposure to sun, wind, rain or parching heat? If we are called upon to speak in the sun or on a windy, wet or warm day, is that a reason for deserting the client whom we have undertaken to defend? While as for the warning given by some that the orator should not speak when dyspeptic, replete or drunk, or immediately after vomiting, I think that no sane person would dream of declaiming under such circumstances.

[28] *illud non sine causa est ab omnibus praeceptum, ut parcat maxime voci in illo a pueritia in adolescentiam transitu, quia naturaliter impeditur, non, ut arbitror, propter calorem, quod quidam putaverunt (nam est maior alias), sed propter humorem potius; nam hoc aetas illa turgescit.*

[28] There is, however, good reason for the rule prescribed by all authorities, that the voice should not be overstrained in the years of transition between boyhood and manhood, since at that period it is naturally weak, not, I think, on account of heat, as some allege (for there is more heat in the body at other periods), but rather on account of moisture, of which at that age there is a superabundance.

[29] *itaque nares etiam ac pectus eo tempore tument, atque omnia velut germinant eoque sunt tenera et iniuriae obnoxia. sed, ut ad propositum redeam, iam confirmatae constitutaeque voci genus exercitationis optimum*

duco, quod est operi simillimum, dicere cotidie sicut agimus. namque hoc modo non vox tantum confirmatur et latus, sed etiam corporis decens et accommodatus orationi motus componitur.

[29] For this reason the nostrils and the breast swell at this stage, and all the organs develop new growth, with the result that they are tender and liable to injury. However, to return to the point, the best and most realistic form of exercise for the voice, once it has become firm and set, is, in my opinion, the practice of speaking daily just as we plead in the courts. For thus, not merely do the voice and lungs gain in strength, but we acquire a becoming deportment of the body and develop grace of movement suited to our style of speaking.

[30] non alia est autem ratio pronuntiationis quam ipsius orationis. nam ut illa emendata, dilucida, ornata, apta esse debet, ita haec quoque emendata erit, id est, vitio carebit, si fuerit os facile, explanatum, iucundum, urbanum, id est, in quo nulla neque rusticitas neque peregrinitas resonet.

[30] The rules for delivery are identical with those for the language of oratory itself. For, as our language must be correct, clear, ornate and appropriate, so with our delivery; it will be correct, that is, free from fault, if our utterance be fluent, clear, pleasant and “urbane,” that is to say, free from all traces of a rustic or a foreign accent.

[31] non enim sine causa dicitur barbarum Graecumve. nam sonis homines ut aera tinnitu dinoscimus. ita fiet illud, quod Ennius probat, cum dicit suauiloquenti ore Cethegum fuisse, non quod Cicero in his reprehendit, quos ait latrare non agere. sunt enim multa vitia, de quibus dixi, cum in quadam primi libri parte puerorum ora formarem, opportunius ratus, in ea aetate facere illorum mentionem, in qua emendari possunt.

[31] For there is good reason for the saying we so often hear, “He must be a barbarian or a Greek”: since we may discern a man’s nationality from the sound of his voice as easily as we test a coin by its ring. If these qualities be present, we shall have those harmonious accents of which Ennius expresses his approval when he describes Cethegus as one whose “words rang sweetly,” and avoid the opposite effect, of which Cicero expresses his disapproval by saying, “They bark, not plead.” For there are many faults of which I spoke in the first book when I discussed the method in which the speech of children should be formed, since I thought it more appropriate to mention them in connexion with a period of life when it is still possible to correct them.

[32] itemque si ipsa vox primum fuerit, ut sic dicam, sana, id est, nullum eorum, de quibus modo rettuli, patietur incommodum; deinde non subsurda, rudis, immanis, dura, rigida, rava, praepinguis, aut tenuis, inanis, acerba, pusilla, mollis, effeminata, spiritus nec brevis nec parum durabilis nec in receptu difficilis.

[32] Again, the delivery may be described as correct if the voice be sound, that is to say, exempt from any of the defects of which I have just spoken, and if it is not dull, coarse, exaggerated, hard, stiff, hoarse or thick, or again, thin, hollow, sharp, feeble, soft or effeminate, and if the breath is neither too short nor difficult to sustain or recover.

[33] dilucida vero erit pronuntiatio primum, si verba tota exierint, quorum pars devorari, pars destitui solet, plerisque extremes syllabas non perferentibus, dum priorum sono indulgent. ut est autem necessaria uerborum explanatio, ita omnes imputare et velut adnumerare litteras molestum et odiosum.

[33] The delivery will be clear if, in the first place, the words are uttered in their entirety, instead of being swallowed or clipped, as is so often the case, since too many people fail to complete the final syllables through over-emphasising the first. But although words must be given their full phonetic value, it is a tiresome and offensive trick to pronounce every letter as if we were entering them in an inventory.

[34] nam et vocales frequentissime coeunt, et consonantium quaedam insequente vocali dissimulantur. utriusque exemplum posuimus:

mullum ille et terris

Vitatur etiam duriorum inter se congressus,

[34] For vowels frequently coalesce and some consonants disappear when followed by a vowel. I have already given an example of both these occurrences: — *mullum ille et terris*.

[35] unde pellexit et collegit, et quae alio loco dicta sunt; ideoque laudatur in Catulo suavis appellatio litterarum. Secundum est, ut sit oratio distincta, id est, qui dicit, et incipiat ubi oportet et desinat. observandum etiam, quo loco sustinendus et quasi suspendendus sermo sit, quod Graeci ὑποδιαστολήν vel ὑποστιγμήν vocant, quo deponendus.

[35] Further, we avoid placing two consonants near each other when their juxtaposition would cause a harsh sound; thus, we say *pellexit* and *collegiate* and employ other like forms of which I have spoken elsewhere. It is with this in mind that Cicero praises Catulus for the sweetness with which he pronounced the various letters. The second essential for clearness of delivery is that our language should be properly punctuated, that is to say, the speaker must begin and end at the proper place. It is also necessary to note at what point our speech should pause and be momentarily suspended (which the Greeks term ὑποδιαστολή and ὑποστιγμή and when it should come to a full stop.

[36] suspenditur arma virumque cano, quia illud virum ad sequentia pertinet, ut sit virum Troiae qui primus ab oris, et hic iterum. nam etiamsi aliud est, unde

venit quam quo venit, non distinguendum tamen, quia utrumque eodem verbo continetur venit.

[36] After the words *arma virumque cano* there is a momentary suspension, because *virum* is connected with what follows, the full sense being given by *virum Troiae qui primus ab oris*, after which there is a similar suspension. For although the mention of the hero's destination introduces an idea different from that of the place whence he came, the difference does not call for the insertion of a stop, since both ideas are expressed by the same verb *venit*.

[37] *tertio Italiam*, quia interiectio est *fato profugus* et continuum sermonem, qui faciebat *Italiam Lavinaque*, dividit. ob eandemque causam quarto *profugus*, deinde *Lavinaque venit litora*, ubi iam erit distinctio, quia inde alius incipit sensus. sed in ipsis etiam distinctionibus tempus alias brevius, alias longius dabimus; interest enim, sermonem finiant an sensum.

[37] After *Italiam* comes a third pause, since *fato profugus* is parenthetical and breaks up the continuity of the phrase *Italian, Lavinaque*. For the same reason there is a fourth pause after *profugus*. Then follows *Lavinaque venit litora*, where a stop must be placed, as at this point a new sentence begins. But stops themselves vary in length, according as they mark the conclusion of a phrase or a sentence.

[38] itaque illam distinctionem *litora* protinus altero spiritus initio insequar; cum illuc venero atque altae moenia Romae, deponam et morabor et novum rursus exordium faciam.

[38] Thus after *litora* I shall pause and continue after taking breath. But when I come to *atque altae moenia Romae* I shall make a full stop, halt and start again with the opening of a fresh sentence.

[39] sunt aliquando et sine respiratione quaedam morae etiam in periodis. ut enim illa in coetu vero populi Romani, negotium publicum gerens, magister equitum, et., multa membra habent (sensus enim sunt alii atque alii), sed unam circumductionem, ita paulum morandum in his intervallis, non interrompendus est contextus. et e contrario spiritum interim recipere sine intellectu morae necesse est, quo loco quasi surripiendus est; alioqui si inscite recipiatur, non minus adferat obscuritatis quam vitiosa distinctio. virtus autem distinguendi fortasse sit parva; sine qua tamen esse nulla alia in agendo potest.

[39] There are also occasionally, even in periods, pauses which do not require a fresh breath. For although the sentence *in coetu vero populi Romani, negotium publicum gerens, magister equitum*, etc., contains a number of different *cola*, expressing a number of different thoughts, all these *cola* are embraced by a single period: consequently, although short pauses are required at the appropriate intervals, the flow of the period as a whole must not be broken. On the other hand, it is at times necessary to take breath without any

perceptible pause: in such cases we must do so surreptitiously, since if we take breath unskilfully, it will cause as much obscurity as would have resulted from faulty punctuation. Correctness of punctuation may seem to be but a trivial merit, but without it all the other merits of oratory are nothing worth.

[40] ornata est pronuntiatio, cui suffragatur vox facilis, magna te, beata, flexibilis, firma, dulcis, durabilis, clara, pura, secans aëra et auribus sedens (est enim quaedam ad auditum accommodata non magnitudine, sed proprietate), ad hoc velut tractabilis, utique habens omnes in se qui desiderantur sinus intentionesque et toto, ut aiunt, organo instructa; cui aderit lateris firmitas, spiritus cum spatio pertinax, tum labori non facile cessurus.

[40] Delivery will be ornate when it is supported by a voice that is easy, strong, rich, flexible, firm, sweet, enduring, resonant, pure, carrying far and penetrating the ear (for there is a type of voice which impresses the hearing not by its volume, but by its peculiar quality): in addition, the voice must be easily managed and must possess all the necessary inflexions and modulations, in fact it must, as the saying is, be a perfect instrument, equipped with every stop: further, it must have strong lungs to sustain it, and ample breathing power that will be equal to all demands upon it, however fatiguing.

[41] neque gravissimus autem in musica sonus nec acutissimus orationibus convenit. nam et hic parum clarus nimiumque plenus nullum adferre animis motum potest, et ille praetenuis et immodicae claritatis, cum est ultra verum, tum neque pronuntiatione flecti neque diutius ferre intentionem potest.

[41] The deepest bass and the highest treble notes are unsuited to oratory: for the former lack clearness and, owing to their excessive fullness, have no emotional power, while the latter are too thin and, owing to excess of clearness, give an impression of extravagance and are incompatible with the inflexions demanded by delivery and place too great a strain upon the voice.

[42] nam vox ut nervi, quo remissior, hoc gravior et plenior, quo tensor, hoc tennis et acuta magis est. sic ina vim non habet, summa rumpi periclitatur. mediis ergo utendum sonis, hique tum agenda intentione excitandi, tum summittenda sunt temperandi.

[42] For the voice is like the strings of a musical instrument; the slacker it is the deeper and fuller the note produced, whereas if it be tightened, the sound becomes thinner and shriller. Consequently, the deepest notes lack force, and the higher run the risk of cracking the voice. The orator will, therefore, employ the intermediate notes, which must be raised when we speak with energy and lowered when we adopt a more subdued tone.

[43] nam prima est observatio recte pronuntiandi aequalitas, ne sermo subsultet imparibus spatiis ac sonis, miscens longa brevibus, gravia acutis, elata summissis, et inaequalitate horum omnium sicut pedum claudicet; secunda

varietas, quod solum est pronuntiatio.

[43] For the first essential of a good delivery is evenness. The voice must not run joltingly, with irregularity of rhythm and sound, mixing long and short syllables, grave accents and acute, tones loud and low, without discrimination, the result being that this universal unevenness produces the impression of a limping gait. The second essential is variety of tone, and it is in this alone that delivery really consists.

[44] ac ne quis pugnare inter se putet aequalitatem et varietatem, cum illi virtuti contrarium vitium sit inaequalitas, huic, quod dicitur *μονοειδεια*, quasi quidam unus aspectus. ars porro variandi cum gratiam praebeat ac renovat aures, tum dicentem ipsa laboris mutatione reficit, ut standi, ambulandi,

[44] I must warn my readers not to fall into the error of supposing that evenness and variety are incompatible with one another, since the fault opposed to evenness is unevenness, while the opposite of variety is that which the Greeks term *μονοειδεια*, or uniformity of aspect. The art of producing variety not merely charms and refreshes the ear, but, by the very fact that it involves a change of effort, revives the speaker's flagging energies. It is like the relief caused by changes in position, such as are involved by standing, walking, sitting and lying, none of which can be endured for a long time together.

[45] sedendi, iacendi vices sunt, nihilque eorum pati unum diu possumus. illud vero maximum (sed id paulo post tractabimus), quod secundum rationem rerum, de quibus dicimus, animorumque habitus conformanda vox est, ne ab oratione discordet. vitemus igitur illam, quae Graece *μονοτονια* vocatur, una quaedam spiritus ac soni intentio; non solum ne dicamus omnia clamose, quod insanum est, aut intra loquendi modum, quod motu caret, aut summisso murmure, quo etiam debilitatur omnis intentio;

[45] But the most important point (which I shall proceed to discuss a little later) is the necessity of adapting the voice to suit the nature of the various subjects on which we are speaking and the moods that they demand: otherwise our voice will be at variance with our language. We must, therefore, avoid that which the Greeks call *monotony*, that is to say, the unvarying exertion both of lungs and voice. By this I do not simply mean that we must avoid saying everything in a loud tone, a fault which amounts to madness, or in a colloquial tone, which creates an impression of lifelessness, or in a subdued murmur, which is utterly destructive of all vigour.

[46] sed ut in iisdem partibus iisdemque adfectibus sint tamen quaedam non ita magnae vocis declinationes, prout aut verborum dignitas aut sententiarum natura aut depositio aut inceptio aut transitus postulabit: ut, qui singulis pinxerunt coloribus, alia tamen eminentiora alia reductiora fecerunt, sine quo ne membris quidem suas lineas dedissent.

[46] What I mean is this: within the limits of one passage and the compass of one emotion we may vary our tone to a certain, though not a very great extent, according as the dignity of the language, the nature of the thought, the conclusion and opening of our sentences or transitions from one point to another, may demand. Thus, those who paint in monochrome still represent their objects in different planes, since otherwise it would have been impossible to depict even the limbs of their figures.

[47] proponamus enim nobis illud Ciceronis in oratione nobilissima pro Milone principium; nonne ad singulas paene distinctiones quamvis in eadem facie tamen quasi vultus mutandus est? etsi vereor, iudices, ne turpe sit, pro fortissimo viro dicere incipientem limere.

[47] Let us take as an example the opening of Cicero's magnificent speech in defence of Milo. Is it not clear that the orator has to change his tone almost at every stop? it is the same face, but the expression is changed. *Etsi vereor, iudices, ne turpe sit,*

[48] etiamsi est toto proposito contractum atque summissum, quia et exordium est et solliciti exordium, tamen fuerit necesse est aliquid plenius et erectius, dum dicit pro fortissimo viro, quam cum etsi vereor et turpe sit et timere.

[48] *pre fortissimo viro dicere incipientem timere.* Although the general tone of the passage is restrained and subdued, since it is not merely an *exordium*, but the *exordium* of a man suffering from serious anxiety, still something fuller and bolder is required in the tone, when he says *pro fortissimo viro*, than when he says *etsi vereor et turpe sit* and *timere*.

[49] iam secunda respiratio increscat oportet et naturali quodam conatu, quo minus pavide dicimus quae sequuntur, et quod magnitudo animi Milonis ostenditur: minimeque deceat, cum T. Annii ipse magis de rei publicae salute quam de sua perturbetur. deinde quasi obiurgatio sui est: me ad eius causam parem animi magnitudinem ut ferre non posse.

[49] But his second breath must be more vigorous, partly owing to the natural increase of effort, since we always speak our second sentence with less timidity, and partly because he indicates the high courage of Milo: *minimeque deceat, cum T. Annii ipse magis de rei publicae salute quam de sua perturbetur.* Then he proceeds to something like a reproof of himself: *me ad eius causam parem animi magnitudinem adferre non posse.*

[50] tum invidiosiora: tamen haec novi iudicii nova forma terret oculos. illa vero iam paene apertis, ut aiunt, tibiis: qui, quocunque inciderunt, consuetudinem fori et pristinum morem iudiciorum requirunt. nam sequens latum etiam atque fustum est: non enim corona consessus vester cinctus est, ut solebat.

[50] The next clause suggests a reflexion on the conduct of others: *tamen haec*

novi iudicii nova forma terret oculos. And then in what follows he opens every stop, as the saying is: *qui, quocunque inciderunt, consuetudinem fori et pristinum morem iudiciorum requirunt:* while the next clause is even fuller and freer: *non enim corona cousessus vester cinctus est, ut solebat.*

[51] quod notavi, ut appareret, non solum in membris causae, sed etiam in articulis esse aliquam pronuntiandi uarietatem, sine qua nihil neque maius neque minus est.

vox autem ultra vires urgenda non est. nam et suffocatur saepe et maiore nisu minus clara est et interim elisa in illum sonum erumpit, cui Graeci nomen a gallorum immaturo cantu dederunt.

[51] I have called attention to these points to make it clear that there is a certain variety, not merely in the delivery of *cola*, but even in that of phrases consisting of one word, a variety the lack of which would make every word seem of equal importance.

The voice, however, must not be pressed beyond its powers, for it is liable to be choked and to become less and less clear in proportion to the increase of effort, while at times it will break altogether and produce the sound to which the Greeks have given a name derived from the crowing of cocks before the voice is developed.

[52] nec volubilitate nimia confundenda quae dicimus, qua et distinctio perit et adfectus, et nonnunquam etiam verba aliqua sui parte fraudantur. cui contrarium est vitium nimiae tarditatis; nam et difficultatem inveniendi fatetur et segnitia solvit animos et, in quo est aliquid, temporibus praefinitis aquam perdit. promptum sit os, non praeceps, moderatum, non lentum;

[52] We must also beware of confusing our utterance by excessive volubility, which results in disregard of punctuation, loss of emotional power, and sometimes in the clipping of words. The opposite fault is excessive slowness of speech, which is a sign of lack of readiness in invention, tends by its sluggishness to render our hearers inattentive, and, further, wastes the time allotted to us for speaking, a consideration which is of some importance. Our speech must be ready, but not precipitate, under control, but not slow,

[53] spiritus quoque nec crebro receptus concidat sententiam, nec eo usque trahatur, donec deficiat. nam et deformis est consumpti illius sonus et respiratio sub aqua diu pressi similis et receptus longior et non opportunus, ut qui fiat non ubi volumus, sed ubi necesse est. quare longiorem dicturis periodum colligendus est spiritus, ita tamen, ut id neque diu neque cum sono faciamus, neque omnino ut manifestum sit; reliquis partibus optime inter iuncturas sermonis revocabitur.

[53] while we must not take breath so often as to break up our sentence, nor, on the other hand, sustain it until it fails us from exhaustion. For the sound

produced by loss of breath is disagreeable; we gasp like a drowning man and fill our lungs with long drawn inhalations at in appropriate moments, giving the impression that our action is due not to choice, but to compulsion. Therefore, in attacking a period of abnormal length, we should collect our breath, but quickly, noiselessly and imperceptibly. On other occasions we shall be able to take breath at the natural breaks in the substance of our speech.

[54] exercendus autem est, ut sit quam longissimus; quod Demosthenes ut efficeret, scandens in adversum continuabat quam posset plurimos versus. idem, quo facilius verba ore libero exprimeret, calculos lingua volvens dicere domi solebat.

[54] But we must exercise our breathing capacity to make it as great as possible. To produce this result Demosthenes used to recite as many successive lines as possible, while he was climbing a hill. He also, with a view to securing fluency free from impediment, used to roll pebbles under his tongue when speaking in the privacy of his study.

[55] est interim et longus et plenus et clarus satis spiritus, non tamen firmae intentionis ideoque tremulus, ut corpora, quae aspectu integra nervis parum sustinentur; id βραχυόν⁴³ Graeci vocant. sunt qui spiritum cum stridore per raritatem dentium non recipiunt, sed resorbent. sunt qui crebro anhelitu et introrsum etiam clare sonante imitentur iumenta onere et iugo laborantia.

[55] Sometimes the breath, although capable of sustained effort and sufficiently full and clear, lacks firmness when exerted, had for that reason is liable to become tremulous, like bodies which, although to all appearances sound, receive insufficient support from the sinews. This the Greeks call βραχυός. There are some too who, owing to the loss of teeth, do not draw in the breath naturally, but suck it in with a hissing sound. There are others who pant incessantly and so loudly that it is perfectly audible within them: they remind one of heavily-laden beasts of burden straining against the yoke.

[56] quod adfectant quoque, tanquam inuentionis copia urgeantur maiorque vis eloquentiae ingruat, quam quae emitti faucibus possit. est aliis concursus oris et cum verbis suis colluctatio. iam tussire et exspuere crebro et ab imo pulmone pituitam trochleis adducere et oris humore proximos spargere et maiorem partem spiritus in loquendo per nares effundere, etiamsi non utique vocis sunt vitia, quia tamen propter vocem accidunt, potissimum huic loco subiiciantur.

[56] Some indeed actually affect this mannerism, as though to suggest that they are struggling with the host of ideas that crowd themselves upon them and oppressed by a greater flood of eloquence than their throats are capable of uttering. Others, again, find a difficulty in opening their mouths, and seem to struggle with their words; and, further, although they are not actually faults of

the voice, yet since they arise out of the use of the voice, I think this is the most appropriate place for referring to the habit of coughing and spitting with frequency while speaking, of hawking up phlegm from the depths of the lungs, like water from a well, sprinkling the nearest of the bystanders with saliva, and expelling the greater portion of the breath through the nostrils.

[57] *sed quodcunque ex his vitium magis tulerim quam, quo nunc maxime laboratur in causis omnibus scholisque, cantandi, quod inutilius sit an foedius, nescio. quid enim minus oratori convenit quam modulatio scenica et nonnunquam ebriorum aut comissantium licentiae similis?*

[57] But any of these faults are tolerable compared with the practice of chanting instead of speaking, which is the worst feature of our modern oratory, whether in the courts or in the schools, and of which I can only say that I do not know whether it is more useless or more repugnant to good taste. For what can be less becoming to an orator than modulations that recall the stage and a sing-song utterance which at times resembles the maudlin utterance of drunken revellers?

[58] *quid vero movendis affectibus contrarium magis quam, cum dolendum, irascendum, indignandum, commiserandum sit, non solum ab his affectibus, in quos inducendus est iudex, recedere, sed ipsam fori sanctitatem Lyciorum et Carum licentia solvere? nam Cicero illos ex Lycia et Caria rhetoras paene cantare in epilogis dixit. nos etiam cantandi severiorem paulo modum excessimus.*

[58] What can be more fatal to any emotional appeal than that the speaker should, when the situation calls for grief, anger, indignation or pity, not merely avoid the expression of those emotions which require to be kindled in the judge, but outrage the dignity of the courts with noises such as are dear to the Lycians and Carians? For Cicero has told us that the rhetoricians of Lycia and Caria come near to singing in their perorations. But, as a matter of tact, we have somewhat overstepped the limits imposed by the more restrained style of singing.

[59] *quisquamne, non dico de homicidio, sacrilegio, parricidio, sed de calculis certe atque rationibus, quisquam denique, ut semel finiam, in lite cantat? quod si omnino recipiendum est, nihil causae est, cur non illam vocis modulationem fidibus ac tibiis, immo me hercule, quod est huic deformitati propius, cymbalis adiuvemus.*

[59] I ask you, does anyone sing, I will not say when his theme is murder, sacrilege or parricide, but at any rate when he deals with figures or accounts, or, to cut a long story short, when he is pleading in any kind of lawsuit whatever? And if such a form of intonation is to be permitted at all, there is really no reason why the modulations of the voice should not be accompanied by harps and flutes, or even by cymbals, which would be more appropriate to

the revolting exhibitions of which I am speaking.

[60] *facimus tamen hoc libenter; nam nec cuiquam sunt iniucunda quae cantant ipsi, et laboris in hoc quam in agendo minus est. et sunt quidam, qui secundum alia vitae vitia etiam hac ubique audiendi, quod aures mulceat, voluptate ducantur. Quid ergo? non et Cicero dicit esse aliquem in oratione cantum obscuriorem? et hoc quodam naturali initio venit? ostendam non multo post, ubi et quatenus recipiendus sit hic flexus et cantus quidem sed, quod plerique intelligere nolunt, obscurior.*

[60] And yet we show no reluctance in indulging this vicious practice. For no one thinks his own singing hideous, and it involves less trouble than genuine pleading. There are, moreover, some persons who, in thorough conformity with their other vices, are possessed with a perpetual passion for hearing something that will soothe their ears. But, it may be urged, does not Cicero himself say that there is a suggestion of singing in the utterance of an orator? And is not this the outcome of a natural impulse? I shall shortly proceed to show to what extent such musical modulations are permissible: but if we are to call it singing, it must be no more than a suggestion of singing, a fact which too many refuse to realise.

[61] *iam enim tempus est dicendi, quae sit apta pronuntiatio. quae certe ea est, quae iis, de quibus dicimus, accommodatur. quod quidem maxima ex parte praestant ipsi motus animorum, sonatque vox, ut feritur; sed cum sint alii veri adfectus, alii ficti et imitati, veri naturaliter erumpunt, ut dolentium, irascentium, indignantium, sed carent arte, ideoque sunt disciplina et ratione formandi.*

[61] But it is now high time for me to explain what I mean by appropriate delivery. Such appropriateness obviously lies in the adaptation of the delivery to the subjects on which we are speaking. This quality is, in the main, supplied by the emotions themselves, and the voice will ring as passion strikes its chords. But there is a difference between true emotion on the one hand, and false and fictitious emotion on the other. The former breaks out naturally, as in the case of grief, anger or indignation, but lacks art, and therefore requires to be formed by methodical training.

[62] *contra qui effinguntur imitatione, artem habent; sed hi carent natura, ideoque in iis primum est bene adfici et concipere imagines rerum et tanquam veris moveri. sic velut media vox, quem habitum a nobis acceperit, hunc iudicum animis dabit. est enim mentis index ac totidem, quot illa, mutationes habet.*

[62] The latter, on the other hand, does imply art, but lacks the sincerity of nature: consequently in such cases the main thing is to excite the appropriate feeling in oneself, to form a mental picture of the facts, and to exhibit an emotion that cannot be distinguished from the truth. The voice, which is the

intermediary between ourselves and our hearers, will then produce precisely the same emotion in the judge that we have put into it. For it is the index of the mind, and is capable of expressing all its varieties of feeling.

[63] itaque laetis in rebus plena et simplex et ipsa quodammodo hilaris fluit; at in certamine erecta totis viribus et velut omnibus nervis intenditur. atrox in ira et aspera ac densa et respiratione crebra; neque enim potest esse longus spiritus, cum immoderate effunditur. paulum in invidia facienda lentior, quia non fere ad hanc nisi inferiores confugiunt; at in blandiendo, fatendo, satisfaciendo, rogando, lenis et summissa.

[63] Therefore when we deal with a lively theme, the flow of the voice is characterised by fullness, simplicity and cheerfulness; but when it is roused to battle, it puts forth all its strength and strains every nerve. In anger it is fierce, harsh and intense, and calls for frequent filling of the lungs, since the breath cannot be sustained for long when it is poured forth without restraint. When it is desired to throw odium upon our opponents, it will be somewhat slower, since, as a rule, it is none save the weaker party takes refuge in such tactics. On the other hand, in flattery, admission, apology or question it will be gentle and subdued.

[64] suadentium et monentium et pollicentium et consolantium gravis, in metu et verecundia contracta, adhortationibus fortis, disputationibus teres, miseratione flexa et flebilis et consulto quasi obscurior; at in egressionibus fusa et securae claritatis, in expositione ac sermonibus recta et inter acutum sonum et gravem media.

[64] If we advise, warn, promise or console, it will be grave and dignified, modest if we express fear or shame, bold in exhortation, precise in argument, full of modulations, suggestive of tears and designedly muffled in appeals for pity, whereas in digression it will be full and flowing, and will have all the resonance that is characteristic of confidence; in exposition of facts or conversations it will be even and pitched half-way betwixt high and low.

[65] attollitur autem concitatis adfectibus, compositis descendit pro utriusque rei modo altius vel inferius.

quid autem quisque in dicendo postulet locus, paulum differam, ut de gestu prius dicam, qui et ipse voci consentit et animo cum ea simul paret. is quantum habeat in oratore momenti, satis vel ex eo patet quod pleraque etiam citra verba significat.

[65] But it will be raised to express violent emotion, and sink when our words are of a calmer nature, rising and falling according to the demands of its theme.

However, for the moment I will defer speaking of the variations in tone required by different topics, and will proceed first to the discussion of gesture

which conforms to the voice, and like it, obeys the impulse of the mind. Its importance in oratory is sufficiently clear from the fact that there are many things which it can express without the assistance of words.

[66] quippe non manus solum, sed nutus etiam declarant nostram voluntatem et in mutis pro sermone sunt, et saltatio frequenter sine voce intelligitur atque adficit, et ex vultu ingressuque perspicitur habitus animorum; et animalium quoque sermone carentium ira, laetitia, adlatio et oculis et quibusdam aliis corporis signis deprehenditur.

[66] For we can indicate our will not merely by a gesture of the hands, but also with a nod from the head: signs take the place of language in the dumb, and the movements of the dance are frequently full of meaning, and appeal to the emotions without any aid from words. The temper of the mind can be inferred from the glance and gait, and even speechless animals show anger, joy, or the desire to please by means of the eye and other physical indications.

[67] nec mirum, si ista, quae tamen in aliquo posita sunt motu, tantum in animis valent, cum picture, tacens opus et habitus semper eiusdem, sic in intimos penetret adfectus, ut ipsam vim dicendi nonnunquam superare videatur. contra si gestus ac vultus ab oratione dissentiat, tristia dicamus hilares, adfirmemus aliqua renuentes non auctoritas modo verbis, sed etiam fides desit. decor quoque a gestu atque motu venit;

[67] Nor is it wonderful that gesture which depends on various forms of movement should have such power, when pictures, which are silent and motionless, penetrate into our innermost feelings with such power that at times they seem more eloquent than language itself. On the other hand, if gesture and the expression of the face are out of harmony with the speech, if we look cheerful when our words are sad. or shake our heads when making a positive assertion, our words will not only lack weight, but will fail to carry conviction.

[68] ideoque Demosthenes grande quoddam intuens speculum componere actionem solebat; adeo, quamvis fulgor ille sinistras imagines reddat, suis demum oculis credidit, quod efficeret.

praecipuum vero in actione sicut in corpore ipso caput est cum ad illum, de quo dixi, decorem, tum etiam ad significationem.

[68] Gesture and movement are also productive of grace. It was for this reason that Demosthenes used to practise his delivery in front of a large mirror, since, in spite of the fact that its reflexions are reversed, he trusted his eyes to enable him to judge accurately the effect produced.

The head, being the chief member of the body, has a corresponding importance in delivery, serving not merely to produce graceful effect, but to illustrate our meaning as well.

[69] decoris illa sunt, ut sit primo rectum et secundum naturam. nam et deiecto humilitas et supino arrogantia et in latus inclinato languor et praeduro ac rigente barbaria quaedam mentis ostenditur. tum accipiat aptos ex ipsa actione motus, ut cum gestu concordet et manibus ac lateribus obsequatur.

[69] To secure grace it is essential that the head should be carried naturally an erect. For a droop suggests humility, while if it be thrown back it seems to express arrogance, if inclined to one side it gives an impression of languor, while if it is held too stiffly and rigidly it appears to indicate a rude and savage temper. Further, it should derive appropriate motion from the subject of our pleading, maintaining harmony with the gesture and following the movement of the hands and side.

[70] aspectus enim semper eodem vertitur quo gestus, exceptis quae aut damnare aut concedere aut a nobis remove oportebit, ut idem illud vultu videamur aversari, manu repellere:

— Di talem avertite pestem.

— haud equidem tali me dignor honore.

Significat vero plurimis modis.

[70] For the eyes are always turned in the same direction as the gesture, except when we are called upon to condemn or concede something or to express abhorrence, when we shall show our aversion by turning away the face and by thrusting out our hands as though to repel the thought, as in the lines:

Ye gods, such dread calamity avert!

Aen. iii. 620.

or

Not for me

To claim such honour!

Aen. i. 335.

[71] nam praeter adnuendi, renuendi confirmandique motus sunt et verecundiae et dubitationis et admirationis et indignationis noti et communes omnibus. solo tamen eo facere gestum scenici quoque doctores vitiosum putaverunt. etiam frequens eius nutus non caret vitio; adeo iactare id et comas excutientem rotare fanaticum est.

[71] The methods by which the head may express our meaning are manifold. For in addition to those movements which indicate consent, refusal and affirmation, there are those expressive of modesty, hesitation, wonder or indignation, which are well known and common to all. But to confine the gesture to the movement of the head alone is regarded as a fault by those who

teach acting as well as by professors of rhetoric. Even the frequent nodding of the head is not free from fault, while to toss or roll it till our hair flies free is suggestive of a fanatic.

[72] *dominatur autem maxime vultus. hoc supplices, hoc minaces, hoc blandi, hoc tristes, hoc hilares, hoc erecti, hoc summissi sumus; hoc pendent homines, line intuentur, hic spectator, etiam antequam dicimus; hoc quosdam amamus, hoc odimus, hoc plurima intelligimus, hic est saepe pro omnibus verbis.*

[72] By far the greatest influence is exercised by the glance. For it is by this that we express supplication, threats, flattery, sorrow, joy, pride or submission. It is on this that our audience hang, on this that they rivet their attention and their gaze, even before we begin to speak. It is this that inspires the hearer with affection or dislike, this that conveys a world of meaning and is often more eloquent than all our words.

[73] *itaque in iis, quae ad scenam componuntur, fabulis artifices pronuntiandi a personis quoque adfectus mutuuntur, ut sit Aerope in tragoedia tristis, atrox Medea, attonitus Ajax, truculentus Hercules.*

[73] Consequently in plays destined for the stage, the masters of the art of delivery design even their masks to enhance the emotional effect. Thus, in tragedy, Aerope will be sad, Medea fierce, Ajax bewildered, Hercules truculent.

[74] *in comoediis vero praeter aliam observationem, qua servi, lenones, parasiti, rustici, milites, meretriculae, ancillae, senes austeri ac mites, iuvenes severi ac luxuriosi, matronae, puellae inter se discernuntur, pater ille, cuius praecipuae partes sunt, quia interim concitatus, interim lenis est, altero erecto, altero composito est supercilio; atque id ostendere maxime latus actoribus moris est, quod cum iis, quas agunt, partibus congruat.*

[74] In comedy, on the other hand, over and above the methods adopted to distinguish between slaves, pimps, parasites, rustics, soldiers, harlots, maidservants, old men stern and mild, youths moral or luxurious, married women and girls, we have the important rôle of the father who, because at times he is excited and at others call, has one eyebrow raised and the other normal, the custom among actors being to turn that side of the face to the audience which best suits the role.

[75] *sed in ipso vultu plurimum valent oculi, per quos maxime animus eminet, ut citra motum quoque et hilaritate enitescant et tristitiae quoddam nubilum ducant. quin etiam lacrimas iis natura mentis indices dedit, quae aut erumpunt dolore aut laetitia manant. motu vero intenti, remissi, superbi, torvi, mites, asperi fiunt, quae, ut actus poposcerit, fingentur.*

[75] But of the various elements that go to form the expression, the eyes are the most important, since they, more than any-thing else, reveal the temper of the

mind, and without actual movement will twinkle with merriment or be clouded with grief. And further, nature has given them tears to serve as interpreters of our feelings, tears that will break forth for sorrow or stream for very joy. But, when the eyes move, they become intent, indifferent, proud, fierce, mild, or angry; and they will assume all these characters according as the pleading may demand.

[76] rigidi vero et extenti, aut languidi et torpentes, aut stupentes, aut lascivi et mobiles, et natantes et quadam voluptate suffusi, aut limi et, ut sic dicam, uenerii, aut poscentes aliquid pollicentesve nunquam esse debebunt. nam opertos compressosve eos in dicendo quis nisi plane rudis aut stultus habeat?

[76] But they must never be fixed or protruding, languid or sluggish, lifeless, lascivious, restless, nor swim with a moist voluptuous glance, nor look aslant nor leer in amorous fashion, nor yet must they seem to promise or ask a boon. As for keeping them fully or partially closed while speaking, surely none save an uneducated man or a fool would dream of doing such a thing.

[77] et ad haec omnia exprimenda in palpebris etiam et in genis est quoddam deserviens iis ministerium.

[77] And in addition to all these forms of expression, the upper and lower eyelids can render service in support of the eyes.

[78] multum et superciliis agitur. nam et oculos formant aliquatenus et fronti imperant. his contrahitur, attollitur, remittitur, ut una res in ea plus valeat, sanguis ille, qui mentis habitu movetur et, cum infirmam verecundia cutem accipit, effunditur in ruborem, cum metu refugit, abit omnis et pallore frigescit; temperatus medium quoddam serenum efficit.

[78] The eyebrows also may be used with great effect. For to some extent they mould the expression of the eyes and determine that of the forehead. It is by means of the eyebrows that we contract, raise or smooth the latter: in fact, the only thing which has greater influence over it is the blood, which moves in conformity with the emotions that control the mind, causing a blush on a skin that is sensitive to shame, and giving place to an icy pallor under the influence of fear, whereas, when it is under control, it produces a peaceful complexion, intermediate between the two.

[79] vitium in superciliis, si aut immota sunt omnino aut nimium mobilia aut inaequalitate, ut modo de persona comica dixeram, dissident aut contra id quod dicimus finguntur. ira enim contractis, tristitia deductis, hilaritas remissis ostenditur. adnuendi quoque et renuendi ratione demittuntur aut allevantur.

[79] Complete immobility in the eyebrows is a fault, as also is excess of mobility or the tendency to raise one and lower the other, as in the comic mask which I mentioned just now: while it is a further blemish if they express a feeling out of keeping with the words we utter. For they show anger by

contraction, grief by depression and cheerfulness by their expansion. They are also dropped or raised to express consent or refusal respectively.

[80] *naribus labrisque non fere quidquam decenter ostendimus, tametsi derisus iis, contemptus, fastidium significari solet. nam et corrugare nares, ut Horatius ait, et inflare et movere et digito inquietare et impulso subito spiritu excutere et diducere saepius et plana manu resupinare indecorum est, cum emunctio etiam frequentior non sine causa reprehendatur.*

[80] It is not often that the lips or nostrils can be becomingly employed to express our feelings, although they are often used to indicate derision, contempt or loathing. For to “wrinkle the nostrils” (as Horace says), or blow them out, or twitch them, or fret them with our finger, or snort through them with a sudden expulsion of the breath, or stretch them wide or push them up with the flat of the hand are all indecorous, since it is not without reason that censure is passed even on blowing the nose too frequently.

[81] *labra et porriguntur male et scinduntur et adstringuntur et diducuntur et dentes nudant et in latus ac paene ad aurem trahuntur et velut quodam fastidio replicantur et pendent et vocem tantum altera parte dimittunt. lambere quoque ea et mordere deforme est, cum etiam in efficiendis verbis modicus eorum esse debeat motus; ore enim magis quam labris loquendum est.*

[81] It is also an ugly habit to protrude the lips, open them with a sudden smack, compress them, draw them apart and bare the teeth, or twist them awry to one side till they almost reach the ear, or to curl them in scorn, or let them droop, or allow the voice to escape only on one side. It is also unbecoming to lick or bite them, since their motion should be but slight even when they are employed in forming words. For we must speak with the mouth rather than the lips.

[82] *cervicem rectam oportet esse, non rigidam aut supinam. collum diversa quidem, sed pari deformitate et contrahitur et tenditur, sed tenso subest et labor, tenuaturque vox ac fatigatur; adfixum pectori mentum minus claram et quasi latiore presso gutture facit.*

[82] The neck must be straight, not stiff or bent backward. As regards the throat, contraction and stretching are equally unbecoming, though in different ways. If it be stretched, it causes strain as well, and weakens and fatigues the voice, while if the chin be pressed down into the chest it makes the voice less distinct and coarsens it, owing to the pressure on the windpipe.

[83] *humerorum raro decens adleuatio atque contractio est; breviatur enim cervix et gestum quendam humilem atque servilem et quasi fraudulentum facit, cum se in habitum adulationis, admirationis, metus tingunt.*

[83] It is, as a rule, unbecoming to raise or contract the shoulders. For it shortens the neck and produces a mean and servile gesture, which is even

suggestive of dishonesty when men assume an attitude of flattery, admiration or fear.

[84] Brachi moderate proiectio, remissis humeris atque explicantibus se in proferenda mania digitis, continues et decurrentes locos maxime decet. at cum speciosius quid uberiusque dicendum est, ut illud saxa atque solitudines voci respondent, exspatiatur in latus et ipsa quodammodo se cum gestu fundit oratio.

[84] In continuous and flowing passages a most becoming gesture is slightly to extend the arm with shoulders well thrown back and the fingers opening as the hand moves forward. But when we have to speak in specially rich or impressive style, as, for example, in the passage *saxa atiqu solitudines voci respondent*, the arm will be thrown out in a stately sidelong sweep and the words will, as it were, expand in unison with the gesture.

[85] manus vero, sine quibus trunca esset actio ac debilis, vix dici potest, quot motus habeant, cum paene ipsam verborum copiam consequantur. nam ceterae partes loquentem adiuuant, hae, prope est ut dicam, ipsae loquuntur.

[85] As for the hands, without which all action would be crippled and enfeebled, it is scarcely possible to describe the variety of their motions, since they are almost as expressive as words. For other portions of the body merely help the speaker, whereas the hands may almost be said to speak.

[86] annon his poscimus, pollicemur, uocamus, dimittimus, minamur, supplicamus, abominamur, timemus, interrogamus, negamus; gaudium, tristitiam, dubitationem, confessionem, paenitentiam, modum, copiam, numerum, tempus ostendimus?

[86] Do we not use them to demand, promise, summon, dismiss, threaten, supplicate, express aversion or fear, question or deny? Do we not employ them to indicate joy, sorrow, hesitation, confession, penitence, measure, quantity, number and time?

[87] non eadem concitant, inhihent, probant, admirantur, verecundantur? non in demonstrandis locis ac personis adverbiorum atque pronominum obtinent vicem? ut in tanta per omnes gentes nationesque linguae diversitate hic mihi omnium hominum communis sermo videatur.

[87] Have they not power to excite and prohibit, to express approval, wonder or shame? Do they not take the place of adverbs and pronouns when we point at places and things? In fact, though the peoples and nations of the earth speak a multitude of tongues, they share in common the universal language of the hands.

[88] et hi quidem, de quibus sum locutus, cum ipsis vocibus naturaliter exeunt gestus; alii sunt, qui res imitatione significant, ut si aegrum temptantis venas

medici similitudine aut citharoedum formatis ad modum percutientis nervos manibus ostendas; quod est genus quam longissime in actione fugiendum.

[88] The gestures of which I have thus far spoken are such as naturally proceed from us simultaneously with our words. But there are others which indicate things by means of mimicry. For example, you may suggest a sick man by mimicking the gesture of a doctor feeling the pulse, or a harpist by a movement of the hands as though they were plucking the strings. But this is a type of gesture which should be rigorously avoided in pleading.

[89] abesse enim plurimum a saltatore debet orator, ut sit gestus ad sensus magis quam ad verba accommodatus; quod etiam histrionibus paulo gravioribus facere moris fuit. ergo ut ad se manum referre, cum de se ipso loquatur, et in eum quem demonstret intendere et aliqua his similia permiserit, ita non effingere status quosdam et quidquid dicet ostendere.

[89] For the orator should be as unlike a dancer as possible, and his gesture should be adapted rather to his thought than to his actual words, a practice which was indeed once upon a time even adopted by the more dignified performers on the stage. I should, therefore, permit him to direct his hand towards his body to indicate that he is speaking of himself, or to point it at some one else to whom he is alluding, together with other similar gestures which I need not mention. But, on the other hand, I would not allow him to use his hands to imitate attitudes or to illustrate anything he may chance to say.

[90] neque id in manibus solum, sed in omni gestu ac voce servandum est. non enim aut in illa periodo, stetit soleatus praetor populi Romani, inclinatio incumbens in mulierculam Verris effingenda est; aut in illa, caedebatur in medio foro Messanae, motus laterum, qualis esse ad verbera solet, torquendus, aut vox, qualis dolore exprimitur, eruenda;

[90] And this rule applies not merely to the hands, but to all gesture and to the voice as well. For in delivering the period *stetit soleatus praetor populi Romani*, it would be wrong to imitate Verres leaning on his mistress, or in uttering the phrase *caedebatur in medio foro Messanae* to make the side writhe, as it does when quivering beneath the lash, or to utter shrieks, such as are extorted by pain.

[91] cum mihi comoedi quoque pessime facere videantur, quod, etiamsi iuvenem agant, cum tamen in expositione aut senis sermo, ut in Hydriae prologo, aut mulieris, ut in Georgo, incidit, tremula vel effeminata voce pronuntiant. adeo in illis quoque est aliqua vitiosa imitatio, quorum ars omnis constat imitatione.

[91] For even comic actors seem to me to commit a gross offence against the canons of their art when, if they have in the course of some narrative to quote

either the words of an old man (as, for example, in the prologue to the *Hydria*), or of a woman (as in the (*Georgus*), they litter them in a tremulous or a treble voice, notwithstanding the fact that they are playing the part of a young man. So true is it that certain forms of imitation may be a blemish even in those whose whole art consists in imitation.

[92] est autem gestus ille maxime communis, quo medius digitus in pollicem contrahitur explicitis tribus, et principiiis utilis cum leni in utramque partem motu modice prolatus, simul capite atque humeris sensim ad id, quo manus feratur, obsecundantibus, et in narrando certus, sed tum paulo productior, et in exprobrando et coarguendo acer atque instans, longius enim partibus his et liberius exeritur.

[92] One of the commonest of all the gestures consists in placing the middle finger against the thumb and extending the remaining three: it is suitable to the *exordium*, the hand being moved forward with an easy motion a little distance both to right and left, while the head and shoulders gradually follow the direction of the gesture. It is also useful in the *statement of facts*, but in that case the hand must be moved with firmness and a little further forward, while, if we are reproaching or refuting our adversary, the same movement may be employed with some vehemence and energy, since such passages permit of greater freedom of extension.

[93] vitiose vero idem sinistrum quasi humerum petens in latum agi solet, quanquam adhuc peius aliqui transversum brachium proferunt et cubito pronuntiant. duo quoque medii sub pollicem veniunt, et est hic adhuc priore gestus instantior, principio et narrationi non commodatus.

[93] On the other hand, this same gesture is often directed sideways towards the left shoulder: this is a mistake, although it is a still worse fault to thrust the arm across the chest and gesticulate with the elbow. The middle and third fingers are also sometimes turned under the thumb, producing a still more forcible effect than the gesture previously described, but not well adapted for use in the *exordium* or *state-meant of facts*.

[94] at cum tres contracti pollice premuntur, tum digitus ille, quo usum optime Crassus Cicero dicit, explicari solet. is in exprobrando et indicando, unde ei nomen est, valet, et adlevata ac spectante humerum manu paulum inclinatus adfirmat, versus in terram et quasi pronus urget; et aliquando pro numero est.

[94] But when three fingers are doubled under the thumb, the finger, which Cicero says that Crassus used to such effect, is extended. It is used in denunciation and in indication (whence its name of index finger), while if it be slightly dropped after the hand has been raised toward the shoulder, it signifies affirmation, and if pointed as it were face downwards toward the ground, it expresses insistence. It is sometimes also used to indicate number.

[95] idem summo articulo utrinque leviter apprehenso, duobus modice curvatis, minus tamen minimo, aptus ad disputandum est. acrius tamen argumentari videntur, qui medium articulum potius tenent, tanto contractioribus ultimis digitis, quanto priores descenderunt.

[95] Again, if its top joint is lightly gripped on either side, with the two outer fingers slightly curved, the little finger rather less than the third, we shall have a gesture well suited for argument. But for this purpose the same gesture is rendered more emphatic by holding the middle joint of the finger and contracting the last two fingers still further to match the lower position of the middle finger and thumb.

[96] est et ille verecundae orationi aptissimus, quo, quattuor primis leviter in summum coeuntibus digitis, non procul ab ore aut pectore fertur ad nos manus et deinde prona ac paulum prolata laxatur.

[96] The following gesture is admirably adapted to accompany modest language: the thumb and the next three fingers are gently converged to a point and the hand is carried to the neighbourhood of the mouth or chest, then relaxed palm downwards and slightly advanced.

[97] hoc modo coepisse Demosthenen credo in illo pro Ctesiphonte timido summissoque principio, sic formatam Ciceronis manum, cum diceret: si quid est ingenii in me, quod senior quam sit exiguum. eadem aliquatenus liberius deorsum spectantibus digitis colligitur in nos et fusius paulo in diversum resolvitur, ut quodammodo sermonem ipsum proferre videatur.

[97] It was with this gesture that I believe Demosthenes to have commenced the timid and subdued exordium of his speech in defence of Ctesiphon, and it was, I think, in such a position that Cicero held his hand, when he said, "If I have any talent, though I am conscious how little it is." Slightly greater freedom may be given to the gesture by pointing the fingers down and drawing the hand in towards the body and then opening it somewhat more rapidly in the opposite direction, so that it seems as though it were delivering our words to the audience.

[98] binos interim digitos distinguimus, sed non inserto pollice, paulum tamen inferioribus intra spectantibus, sed ne illis quidem tensis, qui supra sunt.

[98] Sometimes we may hold the first two fingers apart without, however, inserting the thumb between them, the remaining two pointing inwards, while even the two former must not be fully extended.

[99] interim extremi palmam circa ima pollicis premunt, ipse prioribus ad medios articulos iungitur; interim quartus oblique reponitur; interim quattuor remissis magis quam tensis, pollice intus inclinato, habilem demonstrando in latus aut distinguendis, quae dicimus, manum facimus, cum supina in sinistrum latus, prona in alterum fertur.

[99] Sometimes, again, the third and little finger may be pressed in to the palm near the base of the thumb, which in its turn is pressed against the middle joints of the first and middle fingers; at others the little finger is sometimes drooped obliquely, or the four fingers may be relaxed rather than extended and the thumb slanted inwards: this last gesture is well adapted to pointing to one side or marking the different points which we are making, the hand being carried palmupwards to the left and swept back to the right face-downwards.

[100] sunt et illi breves gestus, cum manus leviter pandata, qualis voventium est, parvis intervallis et subadsentibus humeris movetur, maxime apta parce et quasi timide loquentibus. est admiratione conveniens ille gestus, quo manus modice supinata ac per singulos a minimo collecta digitos redeunte flexu simul explicatur atque convertitur.

[100] The following short gestures are also employed: the hand may be slightly hollowed as it is when persons are making a vow, and then moved slightly to and fro, the shoulders swaying gently in unison: this is adapted to passages where we speak with restraint and almost with timidity. Wonder is best expressed as follows: the hand turns slightly upwards and the fingers are brought in to the palm, one after the other, beginning with the little finger; the hand is then opened and turned round by a reversal of this motion.

[101] nec uno modo interrogantes gestum componimus, plerumque tamen vertentes manum, utcunque composita est. pollicis proximus digitus mediumque, qua dexter est, unguem pollicis summo suo iungens, remissis ceteris, est et adprobantibus et narrantibus et distinguentibus decorus.

[101] There are various methods of expressing interrogation; but, as a rule, we do so by a turn of the hand, the arrangement of the fingers being indifferent. If the first finger touch the middle of the right-hand edge of the thumb-nail with its extremity, the other fingers being relaxed, we shall have a graceful gesture well suited to express approval or to accompany *statements of facts*, and to mark the distinction between our different points.

[102] cui non dissimilis, sed complicitis tribus digitis, quo nunc Graeci plurimum utuntur, etiam utraque manu, quotiens enthymemata sua gestu corrotundant velut caesim. manus lenior promittit et adsentatur, citatior hortatur, interim laudat. est et ille urgentis orationem gestus vulgaris magis quam ex arte, qui contrahit alterno celerique motu et explicat manum.

[102] There is another gesture not unlike the preceding, in which the remaining three fingers are folded: it is much employed by the Greeks both for the left hand and the right, in rounding off their *enthymemes*, detail by detail. A gentle movement of the hand expresses promise or assent, a more violent movement suggests exhortation or sometimes praise. There is also that familiar gesture by which we drive home our words, consisting in the rapid opening and shutting of the hand: but this is a common rather than an artistic gesture.

[103] est et illa cava et rara et supra humeri altitudinem elata cum quodam motu velut hortatrix manus; a peregrinis scholis tamen prope recepta tremula scenica est. digitos, cum summi coierunt, ad os referre, cur quibusdam displicuerit, nescio. nam id et leviter admirantes et interim subita indignatione velut pavescentes et deprecantes facimus.

[103] Again, there is the somewhat unusual gesture in which the hand is hollowed and raised well above the shoulder with a motion suggestive of exhortation. The tremulous motion now generally adopted by foreign schools is, however, fit only for the stage. I do not know why some persons disapprove of the movement of the fingers, with their tops converging, towards the mouth. For we do this when we are slightly surprised, and at times also employ it to express fear or entreaty when we are seized with sudden indignation.

[104] quin compressam etiam manum in paenitentia vel ira pectori admoemus, ubi vox vel inter dentes expressa non dedecet: quid nunc agant? quid facias? Averso pollice demonstrare aliquid, receptum magis puto quam oratori decorum.

[104] Further, we sometimes clench the hand and press it to our breast when we are expressing regret or anger, an occasion when it is not unbecoming even to force the voice through the teeth in phrases such as "What shall I do now?" "What would you do?" To point at something with the thumb turned back is a gesture which is in general just, but is not, in my opinion, becoming to an

orator.

[105] sed cum omnis motus sex partes habeat, septimus sit ille, qui in se redit, orbis. vitiosa est una circumversio: reliqui ante nos et dextra laevaue et sursum et deorsum aliquid ostendunt; in posteriora gestus non dirigitur.

[105] Motion is generally divided into six kinds, but circular motion must be regarded as a seventh. The latter alone is faulty when applied to gesture. The remaining motions — that is, forward, to right or left and up or down — all have their significance, but the gesture is never directed to what lies behind us, though we do at times throw the hand back.

[106] interim tamen velut reici solet. optime autem manus a sinistra parte incipit, in dextra deponitur, sed ut ponere non ut ferire videatur; quanquam et in fine interim cadit, ut cito tamen redeat, et nonnunquam resilit vel negantibus nobis vel admirantibus.

Hic veteres artifices illud recte adiecerunt, ut manus cum sensu et inciperet et deponeretur. alioqui enim aut ante vocem erit gestus aut post vocem, quod est utrumque deforme.

[106] The best effect is produced by letting the motion of the hand start from the left and end on the right, but this must be done gently, the hand sinking to rest and avoiding all appearance of giving a blow, although at the end of a sentence it may sometimes be allowed to drop, but must quickly be raised again: or it may occasionally, when we desire to express wonder or dissent, spring back with a rapid motion.

In this connexion the earlier instructors in the art of gesture rightly added that the movement of the hand should begin: and end with the thought that is expressed. Otherwise the gesture will anticipate or lag behind the voice, both of which produce an unpleasing effect.

[107] in illo lapsi nimia subtilitate sunt, quod intervallum motus tria verba esse voluerunt; quod neque observatur neque fieri potest, sed illi quasi mensuram tarditatis celeritatisque aliquam esse voluerunt, neque immerito, ne aut diu otiosa esset manus aut, quod multi faciunt, actionem continue motu concideret.

[107] Some, through excess of subtlety, have erroneously prescribed that there should be an interval of three words between each movement; but this rule is never observed, nor can it be. These persons, however, were desirous that there should be some standard of speed or slowness (a most rational desire), with a view to avoid prolonged inactivity on the part of the hands as well as the opposite fault, into which so many fall, of breaking up the natural flow of their delivery by continual motion.

[108] aliud est, quod et fit frequentius et magis fallit. sunt quaedam latentes

sermonis percussiones et quasi aliqui pedes, ad quos plurimorum gestus cadit, ut sit unus motus novum crimen, alter C. Caesar, tertius et ante hanc diem, quartus non auditum, deinde propinquus meus, et ad te, et Quintus Tubero, et detulit.

[108] There is another still more common error, which is less easy of detection. Language possesses certain imperceptible stresses, indeed we might almost call them feet, to which the gesture of most speakers conforms. Thus there will be one movement at *novum crimen*, another at *Gai Caesar*, a third at *et ante diem*, a fourth at *non auditum*, a fifth at *propinquus meus*, a sixth at *ad te* and others at *Quintus Tubero* and *detulit*.

[109] unde id quoque fluit vitium, ut iuvenes, cum scribunt, gestum praemodulati cogitatione sic componant, quomodo casura manus est. inde et illud vitium, ut gestus, qui in fine dexter esse debet, in sinistrum frequenter desinat.

[109] From this springs a further error, namely, that young men, when writing out their speeches, devise all their gestures in advance and consider as they compose how the hand is to fall at each particular point. A further unfortunate result is that the movement of the hand, which should end on the right, frequently finishes on the left.

[110] melius illud, cum sint in sermone omni brevia quaedam membra, ad quae, si necesse sit, recipere spiritum liceat, ad haec gestum disponere: ut puta novum crimen, C. Caesar, habet per se fine quendam suum, quia sequitur coniunctio; deinde et ante hanc diem non auditum satis circumscriptum est. ad haec commodanda manus est, idque dum erit prima et composita actio.

[110] It is therefore better, in view of the fact that all speech falls into a number of brief clauses, at the end of which we can take breath, if necessary, to arrange our gesture to suit these sections. For example, the words *novum crimes*, *Gai Caesar*, in a sense form a phrase complete in itself, since they are followed by a conjunction, while the next words, *et ante hanc diem non auditum*, are also sufficiently self-contained. To these phrases the motions of the hand must be conformed, before the speech has passed beyond the calmness of tone on which it opens.

[111] at ubi eam calor concitaverit; etiam gestus cum ipsa orationis celeritate crebrescet. aliis locis citata, aliis pressa conveniet pronuntiatio. illa transcurrimus, congerimus, festinamus; hac instamus, inculcamos, infigimus. plus autem adfectus habent lentiora; ideoque Roscius citatior, Aesopus gravior fuit, quod ille comoedias, hic tragoedias egit.

[111] But when increasing warmth of feeling has fired the orator, the gesture will become more frequent, in keeping with the impetus of the speech. Some places are best suited by a rapid, and others by a restrained delivery. In the

one case we pass rapidly on, fire a volley of arguments and hurry upon our way; in the other, we drive home our points, force them on the hearer and implant them in his mind. But the slower the delivery, the greater its emotional power: thus, Rosins was rapid and ESOPs weighty in his delivery, because the former was a comic and the latter a tragic actor.

[112] eadem motus quoque observatio est. itaque in fabulis iuvenum, senum, militum, matronarum gravior ingressus est; servi, ancillulae, parasiti, piscatores citatius moventur. tolli autem manum artifices supra oculos, demitti infra pectus vetant; adeo a capite eum petere aut ad imum ventrem deducere, vitiosum habetur.

[112] The same rule applies to the movemints. Consequently on the stage young men and old, soldiers and married women all walk sedately, while slaves, maidservants, parasites and fishermen are more lively in their movements. But instructors in the art of gesture will not permit the hand to be raised above the level of the eyes or lowered beneath that of the breast; since it is thought a grave blemish to lift it to the top of the head or lower it to the lower portions of the belly.

[113] in sinistrum intra humerum promovetur; ultra non decet. sed cum aversantes in laevam partem velut propellemus manum, sinister humerus proferendus, ut cum capite ad dextram ferente consentiat.

[113] It may be moved to the left within the limits of the shoulder, but no further without loss of decorum. On the other hand, when, to express our aversion, we thrust our hand out to the left, the left shoulder must be brought forward in unison with the head, which will incline to the right.

[114] mantis sinistra numquam sola gestum recte facit; dextrae se frequenter accommodat, sive in digitos argumenta digerimus sive aversas in sinistram palmis abominamur sive obiicimus adversas sive in latus utramque distendimus,

[114] It is never correct to employ the left hand alone in gesture, though it will often conform its motion to that of the right, as, for example, when we are counting our arguments on the fingers, or turn the palms of the hands to the left to express our horror of something,

[115] sive satisfacientes aut supplicantes (diversi autem sunt hi gestus) summittimus sive adorantes atollimus sive aliqua demonstratione aut inuocatione protendiinus: vos Albani tumuli atque luci, aut Gracchanum illud: quo me miser conferam? in Capitolium? ad fratris sanguine madet: an domum?

[115] or thrust them out in front or spread them out to right and left, or lower them in apology or supplication (though the gesture is not the same in these two cases), or raise them in adoration, or stretch them out in demonstration or

invocation, as in the passage, “Ye hills and groves of Alba,” or in the passage from Gracchus: “Whither, alas! shall I turn me? To the Capitol? Nay, it is wet with my brother’s blood. To my home?” etc.

[116] plus enim adfectus in his iunctae exhibent manus; in rebus parvis, mitibus, tristibus breves; magnis, laetis, atrocibus exertiores. Vitia quoque earum subiicienda sunt,

[116] For in such passages greater emotional effect is produced if both hands co-operate, short gestures being best adapted to matters of small importance and themes of a gentle or melancholy character, and longer gestures to subjects of importance or themes calling for joy or horror.

[117] quae quidem accidere etiam exercitatis actoribus solent. nam gestum poculum poscentis aut verbera minantis aut numerum quingentorum flexo pollice efficientis, quae sunt a quibusdam scriptoribus notata, ne in rusticis quidem vidi.

[117] It is desirable also that I should mention the faults in the use of the hands, into which even experienced pleaders are liable to fall. As for the gesture of demanding a cup, threatening a flogging, or indicating the number 500 by crooking the thumb, all of which are recorded by writers on the subject, I have never seen them employed even by uneducated rustics.

[118] at ut brachio exerto introspectatur latus, ut manum alius ultra sinum proferre non audeat, alius, in quantum patet longitudo, protendat aut ad tectum erigat aut repetito ultra laevum humerum gestu ita in tergum flagellet, ut consistere post eum parum tutum sit, aut sinistrum ducat orbem aut temere sparsa manu in proximos offendat aut cubitum utrumque in diversum latus uentilet, saepe scio evenire.

[118] But I know that it is of frequent occurrence for a speaker to expose his side by stretching his arm too far, to be afraid in one case of extending his hand beyond the folds of his cloak, and in another to stretch it as far as it will go, to raise it to the roof, or by swinging it repeatedly over his left shoulder to deliver such a rain of blows to the rear that it is scarcely safe to stand behind him, or to make a circular sweep to the left, or by casting out his hand at random to strike the standers-by or to flap both elbows against his sides.

[119] solet esse et pigra et trepida et secanti similis; interim etiam uncis digitis, ut aut a capite deiiciatur aut eadem manu supinata in superiora iactetur. fit et ille gestus, qui, inclinato in humerum dextrum capite, brachio ab aure protenso, manum infesto pollice extendit; qui quidem maxime place iis, qui se dicere sublata manu iactant.

[119] There are others, again, whose hands are sluggish or tremulous or inclined to saw the air; sometimes, too, the fingers are crooked and brought down with a run from the top of the head, or tossed up into the air with the hand turned

palm upwards. There is also a gesture, which consists in inclining the head to the right shoulder, stretching out the arm from the ear and extending the hand with the thumb turned down. This is a special favourite with those who boast that they speak “with uplifted hand.”

[120] adiicias licet eos, qui sententias vibrantes digitis iaculantur aut manu sublata denuntiant aut, quod per se interim recipiendum est, quotiens aliquid ipsis placuit, in ungues eriguntur; sed vitiosum id faciunt, aut digito, quantum plurimum possunt, erecto aut etiam duobus, aut utraque manu ad modum aliquid portantium composita.

[120] To these latter we may add those speakers who hurl quivering epigrams with their fingers or denounce with the hand upraised, or rise on tiptoe, whenever they say something of which they are specially proud. This last proceeding may at times be adopted by itself; but they convert it into a blemish by simultaneously raising one or even two fingers as high as they can reach, or heaving up both hands as if they were carrying something.

[121] his accedunt vitia non naturae sed trepidationis, cum ore concurrente rixari, si memoria fefellerit aut cogitatio non suffragetur, quasi faucibus aliquid obstiterit, insonare, in adversum tergere nares, obambulare sermone imperfecto, resistere subito et laudem silentio poscere; quae omnia persequi prope infinitum est; sua enim cuique sunt vitia.

[121] In addition to these faults, there are those which spring not from nature, but from nervousness, such as struggling desperately with our lips when they refuse to open, making inarticulate sounds, as though something were sticking in our throat, when our memory fails us, or our thoughts will not come at our call; rubbing the end of our nose, walking up and down in the midst of an unfinished sentence, stopping suddenly and courting applause by silence, with many other tricks which it would take too long to detail, since everybody has his own particular faults.

[122] pectus ac venter ne proiiciantur, observandum; pendant enim posteriora, et est odiosa omnis supinitas. latera cum gestu consentiant. facit enim aliquid et totius corporis motus, adeo ut Cicero plus illo agi quam manibus ipsis putet. ita enim dicit in *Oratore*: nullae argutiae digitorum, non ad numerum articulus cadens, trunco magis toto se ipse moderans et virili laterum flexione.

[122] We must take care not to protrude the chest or stomach, since such an altitude arches the back, and all bending backwards is unsightly. The flanks must conform to the gesture; for the motion of the entire body contributes to the effect: indeed, Cicero holds that the body is more expressive than even the hands. For in the *de Orator* he says, “There must be no quick movements of the fingers, no marking time with the finger-tips, but the orator should control himself by the poise of the whole trunk and by a manly inclination of the side.”

[123] femur ferire, quod Athenis primus fecisse creditur Cleon, et usitatum est et indignantes decet et excitat auditorem. idque in Calidio Cicero desiderat; non, frons, inquit, percussa, non femur. quanquam, si licet, de fronte dissentio. nam etiam complodere manus scenicum est pectus caedere.

[123] Slapping the thigh, which Clean is said to have been the first to introduce at Athens, is in general use and is becoming as a mark of indignation, while it also excites the audience. Cicero regrets its absence in Calidius, "There was no striking of the forehead," he complains, "nor of the thigh." With regard to the forehead I must beg leave to differ from him: for it is a purely theatrical trick even to clap the hands or beat the breast.

[124] illud quoque raro decebit cava manu summis digitis pectus appetere, si quando nosmet ipsos alloquimur, cohortantes, obiurgantes, miserantes; quod si quando fiet, togam quoque inde removeri non dedecebit. in pedibus observantur status et incessus. prolato dextro stare et eandem manum ac pedem proferre, deforme est.

[124] it is only on rare occasions, too, that it is becoming to touch the breast with the finger-tips of the hollowed hand, when, for example, we address ourselves or speak words of exhortation, reproach or commiseration. But if ever we do employ this gesture, it will not be unbecoming to pull back the toga at the same time. As regards the feet, we need to be careful about our gait and the attitudes in which we stand. To stand with the right foot advanced or to thrust forward the same foot and hand are alike unsightly.

[125] in dextrum incumbere interim datur sed aequo pectore, qui tamen comicus magis quam oratorius gestus est. male etiam sinistrum pedem insistentium dexter aut tollitur aut summis digitis suspenditur. varicare supra modum et in stando deforme est et, accedente motu, prope obscenum. procursio opportuna brevis, moderata, rara.

[125] At times we may rest our weight on the right foot, but without any corresponding inclination of the chest, while, in any case, the gesture is better suited to the comic actor than to the orator. It is also a mistake, when resting on the left foot, to lift the right or poise it on tiptoe. To straddle the feet is ugly if we are standing still, and almost indecent if we are actually moving. To start forward may be effective, provided that we move but a short distance and do so but rarely and without violence.

[126] conveniet etiam ambulatio quaedam propter immodicas laudationum moras, quanquam Cicero rarum incessum neque ita longum probat. discursare vero et, quod Domitius Afer de Sura Manlio dixit, satagere, ineptissimum, urbaneque Flavus Verginius interrogavit de quodam suo antisophiste, quot milia passuum declamasset.

[126] It will also at times be found convenient to walk to and fro, owing to the

extravagant pauses imposed by the plaudits of the audience; Cicero, however, says that this should be done only on rare occasions, and that we should take not more than a few steps. On the other hand, to run up and down, which, in the ease of Manlius Sura, Domitius Afer called overdoing it, is sheer folly, and there was no little wit in the question put by Virginias Flatus to a rival professor, when he asked how many miles he had declaimed.

[127] *praecipi et illud scio, ne ambulantes avertamur a iudicibus, sed sint obliqui pedes ad consilium nobis respicientibus. id fieri iudiciis privatis non potest. verum et breviora sunt spatia, nec aversi diu sumus. interim tamen recedere sensim datur. quidam et resiliunt, quod est plane ridiculum.*

[127] I know, too, that some authorities warn us not to walk with our backs turned to the judges, but to move diagonally and keep our eyes fixed on the panel. This cannot be done in private trials, but in such cases the space available is small and the time during which our backs are turned is of the briefest. On the other hand, we are permitted at times to walk backwards gradually. Some even jump backwards, which is merely ludicrous.

[128] *pedis suppositio ut loco est opportuna, ut ait Cicero, in contentionibus aut incipiendis aut finiendis, ita crebra et inepti est hominis et desinit; iudicem in se convertere. est et illa indecora in dextrum ac laevum latus vacillatio alternis pedibus insistentium. longissime fugienda mollis actio, qualem in Titio Cicero dicit fuisse, unde etiam saltationis quoddam genus Titius sit appellatum.*

[128] Stamping the foot is, as Cicero says, effective when done on suitable occasions, that is to say, at the commence meant or close of a lively argument, but if it be frequently indulged in, it brands the speaker as a fool and ceases to attract the attention of the judge. There is also the unsightly habit of swaying to right and left, and shifting the weight from one foot to the other. Above all, we must avoid effeminate movements, such as Cicero ascribes to Titus, a circumstance which led to a certain kind of dance being nicknamed Titus.

[129] *reprehendenda et illa frequens et concitata in utramque partem nutatio, quam in Curione patre irrisit et iulius, quaerens, quis in lintre loqueretur, et Sicinius; nam cum, adsidente collega, qui erat propter valetudinem et deligatus et plurimis medicamentis delibutus, multum se Curio ex more iactasset, nunquam, inquit, Octavi, collegae tuo gratiam referes, qui nisi fuisset, hodie te istic muscae comedissent.*

[129] Another reprehensible practice is that of nodding frequently and rapidly to either side, a mannerism for which the elder Curio was derided by Julius, who asked who it was who was speaking in a boat, while on another occasion, when Curio had been tossing himself about in his usual manner, while Octaves, his colleague, was sitting beside him bandaged and reeking with medicaments on account of ill-health, Spiciness remarked, "Octaves, you can never be sufficiently grateful to your colleague: for if he wasn't there, the flies

would have devoured you this very day where you sit.

[130] iactantur et humeri; quod uitium Demosthenes ita dicitur emendasse ut, cum in angusto quodam pulpito stans diceret, hasta humero dependens immineret, ut, si calore dicendi vitare id excidisset, offensatioque illa commoneretur. ambulanti loqui ita demum oportet, si in causis publicis, in quibus multi sunt indices, quod dicimus quasi singulis inculcare peculiariter velimus.

[130] “ The shoulders also are apt to be jerked to and fro, a fault of which Demosthenes is said to have cured himself by speaking on a narrow platform with a spear hanging immediately above his shoulder, in order that, if in the heat of his eloquence he failed to avoid this fault, he might have his attention called to the fact by a prick from the spear. The only condition that justifies our walking about while speaking is if we are pleading in a public trial before a large number of judges and desire specially to impress our arguments upon them individually.

[131] illud non ferendum, quod quidam, reiecta in humerum toga, cum dextra sinum usque ad lumbos reduxerunt, sinistra gestum facientes spatiantur et fabulantur, cum etiam laevam restringere prolata longius dextra sit odiosum. under moneor, (ut ne id quidem transeam) ineptissime fieri, cum inter moras laudationum aut in aurem alicuius loquuntur aut cum sodalibus iocantur aut nonnunquam ad librarios suos ita respiciunt, ut sportulam dictare videantur.

[131] The practice adopted by some of throwing the toga back over the shoulder, while they draw up the fold to their waist with the right hand, and use the left for gesticulation as they walk up and down and discourse, is not to be tolerated; for even to draw back the left hand while extending the right is an objectionable habit. This reminds me of an extremely foolish trick, which I think I ought to mention, that some speakers have of employing the intervals when the audience are applauding by whispering in someone's ear or jesting with their friends or looking back at their clerks, as if telling them to make a note of some gratuity to be dispensed to their supporters.

[132] inclinari ad iudicem, cum doceas, utique si id de quo loquaris sit obscurius, decet. incumbere advocato adversis subselliis sedenti contumeliosum. reclinari etiam ad suos et manibus sustineri, nisi plane iusta fatigatio est, delicatum, sicut palam moneri excidentis aut legere.

[132] On the other hand, when we are making some explanation to the judge, more especially if the point be somewhat obscure, a slight inclination in his direction will be not unbecoming. But to lean forward towards the advocate seated on the benches of our opponent is offensive, while, unless we are genuinely fatigued, it is a piece of affectation to lean back among our own friends and to be supported in their arms; the same remark also applies to the practice of being prompted aloud or reading from manuscript as though

uncertain of our memory.

[133] namque in his omnibus et vis illa dicendi solvitur et frigescit adfectus et iudex parum sibi praestari reverentiae credit. transire in diversa subsellia parum verecundum est. nam et Cassius Severus urbane adversus hoc facientem lineas poposcit. et si aliquando concitate itur, nunquam non frigide reditur.

[133] For all these mannerisms impair the force of our speaking, chill the effect of emotional appeals and make the judge think that he is not being treated with sufficient respect. To cross over to the seats of our opponents borders on impudence, and Cassius Severus showed a neat turn of wit when he demanded that a barrier might be erected between himself and an opponent who behaved in this fashion. Moreover, though to advance towards our opponent may at times produce an impression of passionate energy, the return to our former position will always prove correspondingly tame.

[134] multum ex iis, quae praecepimus, mutari necesse est ab iis, qui dicunt apud tribunalia. nam et vultus erectior, ut eum, apud quem dicitur, spectet; et gestus ut ad eundem tendens elatior sit, necesse est; et alia, quae occurrere etiam me tacente omnibus possunt. itemque ab iis, qui sedentes agent. nam et fere fit hoc in rebus minoribus, et iidem impetus actionis esse non possunt, et quaedam vitia fiunt necessaria.

[134] Many of the rules which I have given will require modification by those who have to plead before judges seated on a dais. For in such cases the face must be raised somewhat higher, so that the speaker's eyes may be fixed on the president of the court: for the same reason his gestures must also be carried a little higher, while there are other details which will readily occur to my reader without any mention from me. Similar modifications will be likewise necessary for those who plead sitting. For this is done, as a rule, only in cases of minor importance, where delivery will necessarily be more restrained, and certain defects are inevitable.

[135] nam et dexter pes a laeva iudicis sedenti proferendus est, et ex altera parte multi gestus necesse est in sinistrum eant, ut ad iudicem spectent. equidem plerosque et ad singulas clausulas sententiarum video adsurgentes et nonnullos subinde aliquid etiam spatiantes, quod an deceat, ipsi viderint; cum id faciunt, non sedentes agunt.

[135] For example, when the speaker sits on the left side of the judge, he will have to advance his right foot, while if he be seated on the right, many of his gestures must be made from right to left, in order that they may be addressed to the judge. Personally, I note that many speakers start up at the conclusion of individual periods, while some proceed to walk to and fro for a little: it is for them to decide whether this is becoming or not: I will merely remark that, when they do this, they are not pleading seated.

[136] bibere aut etiam esse inter agendum, quod multis moris fuit et est quibusdam, ab oratore meo procul absit. nam si quis aliter dicendi onera perferre non possit, non ita miserum est non agere potiusque multo quam et operis et hominum contemptum fateri.

[136] It was a common custom, which has not entirely disappeared, to drink or even to eat while pleading; but I shall not permit my ideal orator to do anything of the kind. For if a man cannot endure the burdens imposed by oratory without having recourse to such remedies, he should not find it a serious hardship to give up pleading altogether, a course which is far preferable to acknowledging his contempt both for his profession and his audience.

[137] cultus non est proprius oratoris aliquis sed magis in oratore conspicitur. quare sit, ut in omnibus honestis debet esse, splendidus et virilis. nam et toga et calceus et capillus tam nimia cura quam negligentia sunt reprehendenda. est aliquid in amictu, quod ipsum aliquatenus temporum condicione mutatum est. nam veteribus nulli sinus, perquam breves post illos fuerunt.

[137] With regard to dress, there is no special garb peculiar to the orator, but his dress comes more under the public eye than that of other men. It should, therefore, be distinguished and manly, as, indeed, it ought to be with all men of position. For excessive care with regard to the cut of the toga, the style of the shoes, or the arrangement of the hair, is just as reprehensible as excessive carelessness. There are also details of dress which are altered to some extent by successive changes in fashion. The ancients, for example, wore no folds, and their successors wore them very short.

[138] itaque etiam gestu necesse est usos esse in principiis eos alio, quorum brachium, sicut Graecorum, veste continebatur. sed nos de praesentibus loquimur. cui lati clavi ius non erit, ita cingatur, ut tunicae prioribus oris infra genua paulum, posterioribus ad medios poplites usque perveniant. nam infra mulierum est, supra centurionum.

[138] Consequently it follows that in view of the fact that their arms were, like those of the Greeks, covered by the garment, they must have employed a different form of gesture in the exordium from that which is now in use. However, I am speaking of our own day. The speaker who has not the right to wear the broad stripe, will wear his girdle in such a way that the front edges of the tunic fall a little below his knees, while the edges in rear reach to the middle of his hams. For only women draw them lower and only centurions higher.

[139] ut purpura recte descendat, levis cura est; notatur interim negligentia. latum habentium clavum modus est, ut sit paulum cinctis summissior. ipsam togam rotundam esse et apte caesam velim, aiter enim multis modis fiet enormis. pars eius prior mediis cruribus optime terminatur, posterior eadem

portione altius qua cinctura.

[139] If we wear the purple stripe, it requires but little care to see that it fills becomingly; negligence in this respect sometimes excites criticism. Among those who wear the broad stripe, it is the fashion to let it hang somewhat lower than in garments that are retained by the girdle. The toga itself should, in my opinion, be round, and cut to fit, otherwise there are a number of ways in which it may be unshapely. Its front edge should by preference reach to the middle of the shin, while the back should be higher in proportion as the girdle is higher behind than in front.

[140] sinus decentissimus, si aliquanto supra imam tunicam fuerit; nunquam certe sit inferior. ille, qui sub humero dextro ad sinistrum oblique ducitur velut balteus, nec strangulet nec fluat. pars togae, quae postea imponitur, sit inferior; nam ita et sedet melius et continetur. subducenda etiam pars aliqua tunicae, ne ad lacertum in actu redeat; tum sinus iniciendus humero, cuius extremam oram reiecisce non dedecet.

[140] The fold is most becoming, if it fall to a point a little above the lower edge of the tunic, and should certainly never fall below it. The other fold which passes obliquely like a belt under the right shoulder and over the left, should neither be too tight nor too loose. The portion of the toga which is last to be arranged should fall rather low, since it will sit better thus and be kept in its place. A portion of the tunic also should be drawn back in order that it may not fall over the arm when we are pleading, and the fold should be thrown over the shoulder, while it will not be unbecoming if the edge be turned back.

[141] operiri autem humerum cum toto iugulo non oportet, alioqui amictus fiet angustus et dignitatem, quae est in latitudine pectoris, perdet. sinistrum brachium eo usque adlevandum est, ut quasi normalem illum angulum faciat, super quod ora ex toga duplex aequaliter sedeat.

[141] On the other hand, we should not cover the shoulder and the whole of the throat, otherwise our dress will be unduly narrowed and will lose the impressive effect produced by breadth at the chest. The left arm should only be raised so far as to form a right angle at the elbow, while the edge of the toga should fall in equal lengths on either side.

[142] manus non impleatur anulis, praecipue medios articulos non transeuntibus; cuius erit habitus optimus adlevato pollice et digitis leviter inflexis, nisi si libellum tenebit. quod non utique captandum est; videtur enim fateri memoriae diffidentiam et ad multos gestus est impedimento.

[142] The hand should not be overloaded with rings, which should under no circumstances encroach upon the middle joint of the finger. The most becoming attitude for the hand is produced by raising the thumb and slightly curving the fingers, unless it is occupied with holding manuscript. But we

should not go out of our way to carry the latter, for it suggests an acknowledgement that we do not trust our memory, and is a hindrance to a number of gestures.

[143] togam veteres ad calceos usque demittebant ut Graeci pallium; idque ut fiat, qui de gestu scripserunt circa tempora illa, Plotius Nigidiusque praecipunt. quo magis miror Plinii Secundi docti hominis et in hoc utique libro paene etiam nimium curiosi persuasionem, qui solitum id facere Ciceronem velandorum uaricum gratia tradit; cum hoc amictus genus in statu eorum quoque, qui post Ciceronem fuerunt, appareat.

[143] The ancients used to let the toga fall to the heels, as the Greeks are in the habit of doing with the cloak: Plotius and Nigidius both recommend this in the books which they wrote about gesture as practised in their own day. I am consequently all the more surprised at the view expressed by so learned a man as Plinius Secundus, especially since it occurs in a book which carries minute research almost to excess: for he asserts that Cicero was in the habit of wearing his toga in such a fashion to conceal his varicose veins, despite the fact that this fashion is to be seen in the statues of persons who lived after Cicero's day.

[144] palliolum sicut fascias, quibus crura vestiuntur, et focalia et aurium ligamenta sola excusare potest valetudo.

sed haec amictus observatio, dum incipimus; procedente vero actu, iam paene ab initio narrationis, sinus ab humero recte velut sponte delabitur, et, cum ad argumenta ac locos ventum est, reicere a sinistro togam, deiicere etiam, si haereat, sinum conveniet.

[144] As regards the short cloak, bandages used to protect the legs, mufflers and coverings for the ears, nothing short of ill-health can excuse their use.

But such attention to our dress is only possible at the beginning of a speech, since, as the pleading develops, in fact, almost from the beginning of the *statement of facts*, the fold will slip down from the shoulder quite naturally and as it were of its own accord, while when we come to arguments and commonplaces, it will be found convenient to throw back the toga from the left shoulder, and even to throw down the fold if it should stick.

[145] laeva a faucibus ac summo pectore abducere licet: ardent enim iam omnia. et ut vox vehementior ac magis varia est, sic amictus quoque habet actum quendam velut proeliantem.

[145] The left hand may be employed to pluck the toga from the throat and the upper portion of the chest, for by now the whole body will be hot. And just as at this point the voice becomes more vehement and more varied in its utterance, so the clothing begins to assume something of a combative pose.

[146] itaque ut laevam involvere toga et incingi paene furiosum est, sinum vero in dextrum humerum ab imo reicere solutum ac delicatum, fiuntque adhuc peius aliqua, ita cur laxiorem sinum sinistro brachio non subiiciamus? habet enim acre quiddam atque expeditum et calori concitationique non inhabile.

[146] Consequently, although to wrap the toga round the left hand or to pull it about us as a girdle would be almost a symptom of madness, while to throw back the fold from its bottom over the right shoulder would be a foppish and effeminate gesture, and there are yet worse effects than these, there is, at any rate, no reason why we should not place the looser portions of the fold under the left arm, since it gives an air of vigour and freedom not ill-suited to the warmth and energy of our action.

[147] cum vero magna pars est exhausta orationis, utique adflante fortuna, paene omnia decent, sudor ipse et fatigatio et negligentior amictus et soluta ac velut labens undique toga.

[147] When, however, our speech draws near its close, more especially if fortune shows herself kind, practically everything is becoming; we may stream with sweat, show signs of fatigue, and let our dress fall in careless disorder and the toga slip loose from us on every side.

[148] quo magis miror hanc quoque succurrisse Plinio curam, ut ita sudario frontem siccari iuberet, ne comae turbarentur, quas componi post paulum, sicuti dignum erat, graviter et severe vetuit. mihi vero illae quoque turbatae prae se ferre aliquid adfectus et ipsa oblivione curae huius commendari videntur.

[148] This fact makes me all the more surprised that Pliny should think it worth while to enjoin the orator to dry his brow with a handkerchief in such a way as not to disorder the hair, although a little later he most properly, and with a certain gravity and sternness of language, forbids us to rearrange it. For my own part, I feel that dishevelled locks make an additional appeal to the emotions, and that neglect of such precautions creates a pleasing impression.

[149] at si incipientibus aut paulum progressis decidat toga, non reponere eam prorsus negligentis aut pigri aut quomodo debeat amiciri nescientis est.

hac sunt vel illustramenta pronuntiationis vel vitia, quibus propositis multa cogitare debet orator.

[149] On the other hand, if the toga falls down at the beginning of our speech, or when we have only proceeded but a little way, the failure to replace it is a sign of indifference, or sloth, or sheer ignorance of the way in which clothes should be worn.

The above are the chief adornments and faults of delivery. But there are a number of further considerations which the orator must bear in mind.

[150] primum, quos, apud quos, quibus praesentibus sit acturus. nam ut dicere alia aliis et apud alios magis concessum est, sic etiam facere. neque eadem in voce, gestu, incessu, apud principem, senatum populum, magistratus, privato, publico iudicio, postulatione, actione similiter decent. quam differentiam subiicere sibi quisque, qui animum intenderit, potest; tum qua de redicat, et efficere quid velit.

[150] In the first place there is the question as to the character of speaker, judges and audience. For just as the methods of speaking may justifiably be varied to suit the characteristics of different orators and different judges, so it is with delivery. The same characteristics of voice, gesture and gait are not equally becoming in the presence of the emperor, the senate, the people, and magistrates, or in private and public trials, or in making a request to the praetor for the appointment of a judge to hear our case, and in actual pleading. Anyone who will reflect upon the matter will realise the nature of the differences involved, as he will also be able to realise the nature of the subject on which he is speaking and the effect which he desires to produce.

[151] rei quadruplex observatio est. una in tota causa. sunt enim tristes, hilares, sollicitae, securae, grandes, pusillae, ut vix unquam ita sollicitari partibus earum debeamus, ut non summae meminerimus.

[151] The considerations with regard to the subject are four in number, of which the first has reference to the case as a whole. For the case may be of a gloomy or a cheerful nature, an anxious business, or one that calls for no alarm, and may involve issues of great or trivial importance. We ought, therefore, never to be so preoccupied over particular portions of a case as to forget to consider the case as a whole.

[152] altera, quae est in differentia partium, ut in prooemio, narratione, argumentatione, epilogo. tertia in sentiis ipsis, in quibus secundum res et adfectus variantur omnia. quarta in verbis, quorum ut est vitiosa, si efficere omnia velimus, imitatio, ita quibusdam nisi sua natura redditur, vis omnis aufertur.

[152] The second point is concerned with the different aspects of the various portions of the speech, that is, the *exordium*, *statement of facts*, *arguments* and *peroration*. The third concerns the thoughts, which will vary according to the subject matter and the emotions which we require to awaken. The fourth has reference to the words, which must be given appropriate expression, unless their force is to be entirely wasted, although it is an error to attempt to make our delivery reproduce the sense of every single word.

[153] igitur in laudationibus, nisi si funebres erunt, gratiarum actione, exhortatione, similibus laeta et magnifica et sublimis est actio. funebres contiones, consolationes, plerumque causae reorum tristes atque summissae. in senatu conservanda auctoritas, apud populum dignitas, in privatis modus.

De partibus causae et sententiis verbisque, quae sunt multiplicia, pluribus dicendum.

[153] Consequently, in panegyric, funeral orations excepted, in returning thanks, exhortations and the like, the delivery must be luxuriant, magnificent, and grand. On the other hand, in funeral or consolatory speeches, together with most of those in defence of accused persons, the delivery will be melancholy and subdued. When we speak in the senate, it will be authoritative, when we address the people, dignified, and when we are pleading in private cases, restrained. As regards the respective portions of speeches, thoughts and words, I must speak at somewhat greater length, as the problems involved are manifold.

[154] tria autem praestare debet pronuntiatio: conciliet, persuadeat, moveat, quibus natura cohaeret, ut etiam delectet. conciliatio fere aut commendatione morum, qui nescio quomodo ex voce etiam atque actione perlucet, aut orationis suavitate constat; persuadendi vis adfirmatione, quae interim plus ipsis probationibus valet.

[154] There are three qualities which delivery should possess. It should be conciliatory, persuasive and moving, and the possession of these three qualities involves charm as a further requisite. A conciliatory effect may be secured either by charm of style or by producing an impression of excellence of character, which is in some mysterious way clearly revealed both by voice and gesture. A persuasive effect, on the other hand, is produced by the power of assertion, which is sometimes more convincing even than actual proof.

[155] An ista, inquit Calidio Cicero, si vera essent, sic a te dicerentur? et, tantum abfuit, ut inflammares nostros animos; somnum isto loco vix tenebamus Fiducia igitur appareat et constantia, utique si auctoritas subest.

[155] “Would those statements,” says Cicero to Calidius, “have been delivered by you in such a manner if they had been true?” And again, “You were far from kindling our emotions. Indeed, at that point of your speech we could scarcely keep ourselves awake.” We must therefore reveal both confidence and firmness, above all, if we have the requisite authority to back them.

[156] movendi autem ratio aut in repraesentandis est aut imitandis adfectibus. ergo cum iudex in privatis aut praeco in publicis dicere de causa iusserit, leniter consurgendum; tum in componenda toga vel, si necesse erit, etiam ex integro inicienda, dumtaxat in iudiciis (apud principem enim et magistratus ac tribunalia non licebit), paulum est commorandum, ut et amictus sit decentior et protinus aliquid spatii ad cogitandum.

[156] The method of arousing the emotions depends on our power to represent or imitate the passions. Therefore when the judge in private, or the usher in public cases, calls upon us to speak, we must rise with deliberation. We shall

then, to make our garb the more becoming, and to secure a moment for reflexion, devote a brief space to the arrangement of our toga or even, if necessary, to throwing it on afresh; but it must be borne in mind that this injunction applies only to cases in the courts; for *we* must not do this if we are speaking before the emperor or a magistrate, or in cases where the judge sits in a position of superior authority.

[157] *etiam cum ad iudicem nos converterimus, et consultus praetor permiserit dicere, non protinus est erumpendum, sed danda brevis cogitationi mora. mire enim auditurum dicturi cura delectat, et iudex se ipse componit.*

[157] Even when we turn to the judge, and have requested and received the praetor's permission to address the court, we must not break forth at once into speech, but should allow ourselves a few moments for reflexion. For the display of such care on the part of one who is about to speak attracts the audience and gives the judge time to settle down.

[158] *hoc praecipit Homerus Ulixis exemplo, quem stetisse oculis in terram defixis immotoque sceptro, priusquam illam eloquentiae procellam effunderet, dicit. in hac cunctatione sunt quaedam non indecentes, ut appellant scenici, morae, caput mulcere, manum intueri, infringere articulos, simulare conatum, suspiratione sollicitudinem fateri, aut quod quemque magis decet, eaque diutius, si iudex nondum intendet animum.*

[158] Homer inculcates this practice by placing before us the example of Ulysses, whom he describes as having stood for a while with eyes fixed on the ground and staff held motionless, before he poured forth his whirlwind of eloquence. In this preliminary delay there are certain pauses, as the actors call them, which are not unbecoming. We may stroke our head, look at our hand, wring the fingers, pretend to summon all our energies for the effort, confess to nervousness by a deep sigh, or may adopt any other method suited to our individual character, while these proceedings may be extended over some time, if we find that the judge is not yet giving us his attention.

[159] *status sit rectus, aequi et diducti paulum pedes vel procedens minimo momento sinister; genua recta, sic tamen, ut non extendantur; humeri remissi, vultus severus, non maestus nec stupens nec languidus; brachia a latere modice remota; manus sinistra, qualem supra demonstraui; dextra, cum iam incipiendum erit, paulum prolata ultra sinum gestu quam modestissimo, velut spectans quando incipiendum sit.*

[159] Our attitude should be upright, our feet level and a slight distance apart, or the left may be very slightly advanced. The knees should be upright, but not stiff; the shoulders relaxed, the face stern, but not sad, expressionless or languid: the arms should be held slightly away from the side, the left hand being in the position described above, while the right, at the moment when our speech begins, should be slightly extended beyond the fold of the toga

with the most modest of gestures, as though waiting for the commencement.

[160] vitiosa enim sunt illa, intueri lacunaria, perfricare faciem et quasi improbam facere, tendere confidentia vultum aut, quo sit magis torvus, superciliis adstringere, capillos a fronte contra naturam retroagere, ut sit horror ille terribilis; tum, id quod Graeci frequentissime faciunt, crebro digitorum labiorumque motu commentari, dare excreare, pedem alterum longe proferre, partem togae sinistra tenere, stare diductum vel rigidum vel supinum vel incurvum vel humeris, ut luctaturi solent, ad occipitium ductis.

[160] For it is a mistake to look at the ceiling, to rub the face and give it a flush of impudence, to crane it boldly forward, to frown in order to secure a fierce expression, or brush back the hair from the forehead against its natural direction in order to produce a terrifying effect by making it stand on end. Again, there are other unseemly tricks, such as that so dear to the Greeks of twitching our fingers and lips as though studying what to say, clearing the throat with a loud noise, thrusting out one foot to a considerable distance, grasping a portion of the toga in the left hand, standing with feet wide apart, holding ourselves stiffly, leaning backwards, stooping, or bunching our shoulders toward the back of the head, as wrestlers do when about to engage.

[161] prooemio frequentissime lenis convenit pronuntiatio. nihil enim est ad conciliandum gratius verecundia, non tamen semper; neque enim uno modo dicuntur exordia, ut docui. plerumque tamen et vox temperata et gestus modestus et sedens humero toga et laterum lenis in utramque partem motus, eodem spectantibus oculis, decebit.

[161] A gentle delivery is most often best suited to the *exordium*. For there is nothing better calculated than modesty to win the good-will of the judge, although there are exceptions to the rule, since, as I have already pointed out, all *exordia* are not delivered in the same manner. But, generally speaking, a quiet voice, a modest gesture, a toga sitting well upon the shoulder, and a gentle motion of the sides to right and left, accompanied by a corresponding movement of the eyes, will all be found to produce a becoming effect.

[162] narratio magis prolatam manum, amictum recidentem, gestum distinctum, vocem sermoni proximam et tantum acriorem, sonum simplicem frequentissime postulabit in his dumttaxat: Q. enim Ligarius, cum esset in Africa nulla belli suspicio, et A. Cluentius Habitus paler huiusce. aliud in eadem poscent adfectus, vel concitati nubit genero socrus, vel flebiles constituitur in foro Laodiceae spectaculum acerbum et miserum toti Asiae provinciae. maxime varia et multiplex actio est probationum.

[162] In the *statement of facts* the hand should on most occasions be further extended, the toga allowed to slip back, the gestures sharply distinguished and the voice colloquial, but slightly more emphatic, while there should also be uniformity of tone. Such, at any rate, should be the delivery of a passage such

as the following: “For Quintus Ligarius, since there was no hint of the likelihood of the war in Africa,” or “Aulus Cluentius Habitus, this man’s father.” But different methods may be called for in this same portion of the speech, in passionate utterances such as, “The mother-in-law weds her son-in-law,” or in pathetic passages such as, “There in the market-place of Laodicea was displayed a grievous and afflicting spectacle for all the province of Asia to behold.”

[163] nam et proponere, partiri, interrogare sermoni sunt proxima, et contradictionem sumere: nam ea quoque diversa propositio est. sed haec tamen aliquando irridentes, aliquando imitantes pronuntiamus.

[163] The *proofs*, however, require the utmost variety of delivery. For to state them and distinguish between their various points, and to examine witnesses, we employ something not far removed from a colloquial tone, as is also the case in anticipating objections, which is really another form of statement. But in all these cases we sometimes deride, and sometimes mimic our opponents.

[164] argumentatio plerumque agilior et acrior et instantior consentientem orationi postulat etiam gestum, id est fortem celeritatem. instandum quibusdam in partibus et densanda oratio. egressiones fere lenes et dulces et remissae, raptus Proserpinae, Siciliae descriptio, Cn. Pompeii laus. neque enim mirum minus habere contentionis ea quae sunt extra quaestionem.

[164] *Argument*, being as a rule of a livelier, more energetic and aggressive character, demands a type of gesture adapted to its style, that is to say, it should be bold and rapid. There are certain portions of our arguments that require to be pressed home with energy, and in these our style must be compact and concentrated. *Digressions*, as a rule, are characterised by gentleness, calm and placidity, as, for example, in Cicero’s description of the Rape of Proserpine, his picture of Sicily, or his panegyric of Pompey. For naturally passages which deal with subjects lying outside the main question in dispute demand a less combative tone.

[165] mollior nonnunquam cum reprehensione diversae partis imitatio: uidebar videre alios intrantis, alios autem exeuntes, quosdam ex vino vacillantes. ubi non dissidens a voce permittitur gestus quoque, in utramque partem tenera quaedam, sed intra manus tamen et sine motu laterum translatio.

[165] There are occasions on which we may adopt a gentle manner in depreciating our opponents by giving a picture of their character, as in the following passage: “I seemed to see some persons entering the room and others leaving it, while others were staggering to and fro under the influence of wine.” Under such circumstances we may even allow the gesture to match the voice, and may employ a gentle movement from side to side: but this motion should be confined to the hands, and there should be no movement of the flanks.

[166] accendendi iudicis plures sunt gradus. Summus ille et quo nullus est in oratore acutior: suscepto bello, Caesar, gesto iam etiam ex parte magna. praedixit enim: quantum potero voce contendam, ut populus hoc Romanus exaudiat. paulum inferior et habens aliquid iam iucunditatis: quid enim tuus ille, Tubero, in acie Pharsalica gladius agebat?

[166] There are a number of gradations of tone which may be employed to kindle the feeling of the judges. The most vehement tones that an orator is ever called upon to use will be employed in passages such as the following: "When the war was begun, Caesar, and was, in fact, well on its way to a conclusion." For he has just said: "I will use my voice to its fullest power, that all the Roman people may hear me." On the other hand, a lower tone, not devoid of a certain charm, should be employed in passages such as: "What was that sword of yours doing, 'Tubero, that sword that was drawn on the field of Pharsalus?"

[167] plenius adhuc et lentius ideoque dulcius: in coetu vero populi Romani negotium publicum gerens. producenda omnia trahendaeque tum vocales aperiendaeque sunt fauces. pleniore tamen haec canali fluunt: vos, Albani tumuli atque luci. iam cantici quiddam habent sensimque resupina sunt: saxa atque solitudines voci respondent.

[167] But the utterance must be fuller, slower, and consequently sweeter, when the orator says, "But in an assembly of the Roman people, and when he was performing his official functions." In this passage every sound should be drawn out, we should dwell upon the vowel-sounds and speak full-throated. Still fuller should be the stream of our voice in the invocation, "You, hills and groves of Alba"; while a tone not far removed from chanting, and dying away to a cadence, should be employed in delivering the phrase, "Rocks and solitudes answer to the voice."

[168] tales sunt illae inclinationes vocis, quas invicem Demosthenes atque Aeschines exprobrant, non ideo improbandae; cum enim uterque alteri obiiciat, palam est utrumque fecisse. nam neque ille per Marathonis et Plataearum et Salaminis propugnatores recto sono iuravit, nec ille Thebas sermone deflevit.

[168] These are the modulations denounced by Demosthenes and Aeschines, but they do not necessarily for that reason merit our disapprobation. For as each of these orators taunts the other with making use of them, it is clear that they were employed by both. We may be sure that Demosthenes did not restrict himself to his ordinary simplicity of tone when he swore by those that fought for their country at Marathon, Plataea and Salamis, nor did Aeschines employ a colloquial utterance when he lamented for the fate of Thebes.

[169] est his diversa vox et paene extra organum, cui Graeci nomen amaritudinis dederunt, super modum ac paene naturam vocis humanae acerba:

quin compescitis vocem istam, indicem stultitiae, testem paucitatis? sed id, quod excedere modum dixi, in illa parte prima est: quin compescitis.

[169] There is also an entirely different tone, which might be described as lying almost outside the range of the instrument. The Greeks call it bitterness, and it consists in an extravagant acerbity almost beyond the compass of the human voice. It is employed in passages such as, “Why do you not restrain those cries, the proof of your folly and the evidence of your small numbers?” But the extravagance of which I spoke will come in at the opening, where the orator cries, “Why do you not restrain?”

[170] epilogus, si enumerationem rerum habet, desiderat quandam concisorum continuationem; si ad concitandos iudices est accommodatus, aliquid ex iis, quae supra dixi; si placandos, inclinatam quandam lenitatem; si misericordia commovendos, flexum vocis et flebilem suavitatem, qua praecipue franguntur animi, quaeque est maxime naturalis. nam etiam orbos viduasque videas in ipsis funeribus canoro quodam modo proclamantes.

[170] The *peroration*, if it involves a recapitulation, requires an even utterance of short, clear-cut clauses. If, on the other hand, it is designed to stir the emotions of the judges, it will demand some of the qualities already mentioned. If it aims at soothing them, it should How softly; if it is to rouse them to pity, the voice must be delicately modulated to a melancholy sweetness, which is at once most natural and specially adapted to touch the heart. For it may be noted that even orphans and widows have a certain musical quality in the lamentations which they utter at funerals.

[171] Hic etiam fusca illa vox, qualem Cicero fuisse in Antonio dicit, mire faciet; habet enim in se, quod imitatur. duplex est tamen miseratio, altera cum invidia, qualis modo dicta de damnatione Philodami, altera cum deprecatione demissior.

[171] A muffled voice, such as Cicero says was possessed by Antonius, will also be exceedingly effective under such circumstances, since it has just the natural tone which we seek to imitate. Appeals to pity are, however, of two kinds: they may be marked by an admixture of indignation, as in the passage just quoted describing the condemnation of Philodamus, or they may be coupled with appeals for mercy, in which case their tone will be more subdued.

[172] quare, etiamsi est in illis quoque cantus obscurior, in coetu vero populi Romani (non enim haec rixantis modo dixit); et vos, Albani tumuli (non enim, quasi inclamaret aut testaretur, locutus est), tamen infinito magis illa flexa et circumducta sunt: me miserum, me infelicem, et quid respondebo liberis meis? et revocare tu me in patriam potuisti, Milo, per hos; ego te in eadem patria per eosdem retinere non potero? et cum bona C. Rabirii nummo sestertio addicit: O meum miserum acerbumque praeconium.

[172] Therefore although there is a suggestion of the chanting tone in the delivery of such passages as “In an assembly of the Roman people” (for he did not utter these words in a contentious tone), or in “Ye hills and groves of Alba” (for he did not say this as though he were appealing to them or calling them to witness), the ensuing phrases require infinitely greater modulation and longer-drawn harmonies: “Ah, woe is me, unhappy that I am!” and “What shall I reply to my children?” and “You, Milo, had the power to recall me to my country with the aid of these men, and shall I be powerless by their aid to keep you in that same country, your native land and mine?” or when he offers to sell the property of Gaius Rabirius at one sesterce, “Ah, what a sad and bitter task my voice is called on to perform!” Again,

[173] *ilia quoque mire facit in peroratione velut deficientis dolore et fatigatione confessio, ut pro eodem Milone, sed. finis sit; neque enim prae lacrimis iam loqui possum. quae similem verbis habere debent etiam pronuntiationem.*

[173] it is a most effective device to confess in the peroration that the strain of grief and fatigue is overpowering, and that our strength is sinking beneath them, as Cicero does in his defence of Milo: “But here I must make an end: I can no longer speak for tears.” And in such passages our delivery must conform to our words.

[174] *possunt videri alia quoque huius partis atque officii, reos excitare, pueros attollere, propinquos producere, vestes laniare; sed suo loco dicta sunt.*

et quia in partibus causae talis est varietas, satis apparet, accommodandam sententiis ipsis pronuntiationem, sicut ostendimus, sed verbis quoque, quod novissime dixeram, non semper, sed aliquando.

[174] It may be thought that there are other points which should be mentioned in connexion with the duties of the orator in this portion of his speech, such as calling forward the accused, lifting up his children for the court to see, producing his kinsfolk, and rending his garments; but they have been dealt with in their proper place.

Such being the variety entailed by the different portions of our pleading, it is sufficiently clear that our delivery must be adapted to our matter, as I have already shown, and sometimes also, though not always conform to our actual words, as I have just remarked.

[175] *An non hoc misellus et pauperculus summissa atque contracta, fortis et uehemens et latro erecta et concitata voce dicendum est? accedit enim vis et proprietates rebus tali adstipulatione, quae nisi adsit, aliud vox, aliud animus ostendat.*

[175] For instance, must not the words, “This poor wretched, poverty-stricken man,” be uttered in a low, subdued tone, whereas, “A bold and violent fellow and a robber,” is a phrase requiring a strong and energetic utterance? For such

conformity gives a force and appropriateness to our matter, and without it the expression of the voice will be out of harmony with our thought.

[176] quid? quod eadem verba mutata pronuntiatione indicant, adfirmant, exprobrant, negant, mirantur, indignantur, interrogant, irrident, elevant? aliter enim dicitur: tu mihi quodcunque hoc regni et cantando it illum? et tune ille Aeneas? et meque timoris Argue tu, Drance. et ne morer, intra se quisque vel hoc vel aliud, quod volet, per omnes adfectus verset, verum esse quod dicimus sciet.

[176] Again, what of the fact that a change of delivery may make precisely the same words either demonstrate or affirm, express reproach, denial, wonder or indignation, interrogation, mockery or depreciation? For the word “thou” is given a different expression in each of the following passages:

Thou this poor kingdom dost on me bestow.

Aen. i. 78.

and

Thou vanquish him in song?

Ecl. iii. 25.

and

Art thou, then, that Aeneas?

Aen i. 617.

and

And of fear,
Do thou accuse me, Drances!

Aen. xi. 383.

To cut a long matter short, if my reader will take this or any other word he chooses and run it through the whole gamut of emotional expression, he will realise the truth of what I say.

[177] unum iam his adiiciendum est, cum praecipue in actione spectetur decorum, saepe aliud alios decere. est enim latens quaedam in hoc ratio et inenarrabilis; et ut vere hoc dictum est, caput esse artis decere quod facias, ita id neque sine arte esse neque totum arte tradi potest.

[177] There is one further remark which I must add, namely, that while what is becoming is the main consideration in delivery, different methods will often suit different speakers. For this is determined by a principle which, though it is obscure and can hardly be expressed in words, none the less exists: and,

though it is a true saying that “the main secret of artistic success is that whatever we do should become us well,” none the less, despite the fact that such success cannot be attained without art, it is impossible entirely to communicate the secret by the rules of art.

[178] in quibusdam virtutes non habent gratiam, in quibusdam vitia ipsa delectant. maximos actores comoediarum, Demetrium et Stratoclea, placere diversis virtutibus vidimus. sed illud minus mirum, quod alter deos et iuvenes et bonos patres servosque et matronas et graves anus optime, alter acres senes, callidos servos, parasitos, lenones et omnia agitatiora melius: fuit enim natura diversa. nam vox quoque Demetrii iucundior, illius acrior erat.

[178] There are some persons in whom positive excellences have no charm, while there are others whose very faults give pleasure. We have seen the greatest of comic actors, Demetrius and Stratocles, win their success by entirely different merits. But that is the less surprising owing to the fact that the one was at his best in the rôles of gods, young men, good fathers and slaves, matrons and respectable old women, while the other excelled in the portrayal of sharptempered old men, cunning slaves, parasites, pimps and all the more lively characters of comedy. For their natural gifts differed. For Demetrius' voice, like his other qualities, had greater charm, while that of Stratocles was the more powerful.

[179] adnotandae magis proprietates, quae transferri non poterant, manus iactare et dulces exclamationes theatri causa producere et ingrediendo ventum concipere veste et nonnunquam dextro latere facere gestus, quod neminem alium nisi Demetrium decuit; namque in haec omnia statura et mira specie adiuwabatur;

[179] But yet more noticeable were the incommunicable peculiarities of their action. Demetrius showed unique gifts in the movements of his hands, in his power to charm his audience by the longdrawn sweetness of his exclamations, the skill with which he would make his dress seem to puff out with wind as he walked, and the expressive movements of the right side which he sometimes introduced with effect, in all of which things he was helped by his stature and personal beauty.

[180] illum cursus et agilitas et vel parum conveniens personae risus, quem non ignarus rationis populo dabat, et contracta etiam cervicula. quidquid horum alter fecisset, foedissimum videretur. Quare norit se quisque, nec tantum ex communibus praeceptis, sed etiam ex natura sua capiat consilium formandae actionis.

[180] On the other hand, Stratocles' *forte* lay in his nimbleness and rapidity of movement, in his laugh (which, though not always in keeping with the character lie represented, he deliberately employed to awaken answering laughter in his audience), and finally, even in the way in which he sank his

neck into his shoulders. If either of these actors had attempted any of his rival's tricks, he would have produced a most unbecoming effect. Consequently, every man must get to know his own peculiarities and must consult not merely the general rules of technique, but his own nature as well with a view to forming his delivery.

[181] neque illud tamen est nefas, ut aliquem vel omnia vel plura deceant. huius quoque loci clausula sit eadem necesse est, quae ceterorum est, regnare maxime modum. non enim comoedum esse, sed oratorem volo. quare neque in gestu persequemur omnes argutias nec in loquendo distinctionibus, temporibus, adfectionibus moleste utemur.

[181] But there is no law of heaven which prohibits the possession of all or at any rate the majority of styles by one and the same person. I must conclude this topic with a remark which applies to all my other topics as well, that the prime essential is a sense of proportion. For I am not trying to form a comic actor, but an orator. Consequently, we need not study all the details of gesture nor, as regards our speaking, be pedantic in the use we make of the rules governing punctuation, rhythm and appeals to the emotions.

[182] ut si sit in scena dicendum:

quid igitur faciam? non eam, ne nunc quidem,
cum arcessor ultro? an potius ita me comparem
non perpeti meretricum contumelias?

Hic enim dubitationis moras, vocis flexus, varias manus, diversos nutus actor adhibebit. aliud oratio sapit nec vult nimium esse condita; actione enim constat, non imitatione.

[182] For example, if an actor has to speak the following lines on the stage:

“What shall I do then? Not go, even now,
Now when she calls me? Or shall I steel my soul
No longer to endure a harlot's insults?
“

he will hesitate as in doubt, will vary the modulations of his voice, together with the movements of hand and head. But oratory has a different flavour and objects to elaborate condiments, since it consists in serious pleading, not in mimicry.

[183] quare non immerito reprehenditur pronuntiatio vultuosa et gesticulationibus molesta et vocis mutationibus resultans. nec inutiliter ex Graecis veteres transtulerunt, quod ab iis sumptum Laenas Popilius posuit, esse hanc negotiosam actionem.

[183] There is, therefore, good reason for the condemnation passed on a delivery which entails the continual alteration of facial expression, annoying restlessness of gesture and gusty changes of tone. And it was a wise saying that the ancient orators borrowed from the Greeks, as is recorded by Popilius Laenas, to the effect that there is too much “business” in such delivery.

[184] optime igitur idem, qui omnia, Cicero praeceperat, quae supra ex Oratore posui; quibus similia in Bruto de M. Antonio dicit. sed iam recepta est actio paulo agitatior et exigitur et quibusdam partibus convenit, ita tamen temperanda, ne, dum actoris captamus elegantiam, perdamus viri boni et gravis auctoritatem.

[184] The instructions given by Cicero on this subject, as on all others, are quite admirable; I allude to the passages which I have already quoted from his *Orator*, while there are similar observations in the *Brutus* with reference to Marcus Antonius. But to-day a rather more violent form of delivery has come into fashion and is demanded of our orators: it is well adapted to certain portions of a speech, but requires to be kept under control. Otherwise, in our attempt to ape the elegances of the stage, we shall lose the authority which should characterise the man of dignity and virtue.

LIBER XII — BOOK XII

Introduction

pr. ventum est ad partem operis destinati longe gravissimam. cuius equidem onus si tantum opinione prima concipere potuissem, quanto me premi ferens sentio, maturius consulmssem vires meas. sed initio pudor omittendi, quae promiseram, tenuit; mox, quanquam per singulas prope partes labor cresceret, ne perderem, quae iam effecta erant, per omnes difficultates animo me sustentavi.

[1] I now come to what is by far the most arduous portion of the task which I have set myself to perform. Indeed had I fully realised the difficulties when I first designed this work, I should have considered betimes whether my strength was sufficient to support the load that now weighs upon me so heavily. But to begin with, I felt how shameful it would be to fail to perform what I had promised, and later, despite the fact that my labour became more and more arduous at almost every stage, the fear of stultifying what I had already written sustained my courage through every difficulty.

[2] quare nunc quoque, licet maior quam unquam moles prernat, tamen prospicienti finem mihi constitutum est vel deficere potius quam desperare. fefellit autem quod initium a parvis ceperamus. mox velut aura sollicitante provecti longius, dum tamen nota illa et plerisque artium scriptoribus tractata praecipimus, nec adhuc a litore procul videbamur et multos circa velut iisdem se ventis credere ausos habebamus.

[2] Consequently even now, though the burden that oppresses me is greater than ever, the end is in sight and I am resolved to faint by the wayside rather than despair. But the fact that I began with comparatively trivial details deceived me. Subsequently I was lured still further on my voyage by the temptations of the favouring breeze that filled my sails; but the rules which I was then concerned to give were still of a familiar kind and had been already treated by most writers of rhetorical textbooks: thus far I seemed to myself to be still in sight of shore and I had the company of many who had ventured to entrust themselves to the self-same winds.

[3] iam cum eloquendi rationem novissime repertam paucissimisque temptatam ingressi sumus, rarts, qui tam procul a portu recessisset, reperiebatur. postquam vero nobis ille, quem instituebamus, orator a dicendi magistris dimissus aut suo iam impetu fertur aut maiora sibi auxilia ex ipsis sapientiae penentralibus petit, quam in altum simus ablati sentire coepimus.

[3] But presently when I entered on the task of setting forth a theory of eloquence which had been but newly discovered and rarely essayed, I found but few that had ventured so far from harbour. And finally now that the ideal

orator, whom it was my design to mould, has been dismissed by his masters and is either proceeding on his way borne onward by his own impetus, or seeking still mightier assistance from the innermost shrine of wisdom, I begin to feel how far I have been swept into the great deep.

[4] nunc caelum undique et undique pontus. unum modo in illa immensa vastitate cernere videmur M. Tullium, qui tamen ipse, quamvis tanta atque ita instruct nave hoc mare ingressus, contrahit vela inllibetque remos et de ipso demum genere dicendi, quo sit usus perfectus orator, satis habet dicere. at nostra temeritas etiam mores ei conabitur dare et adsignabit officia. ita nec antecedentem consequi possumus, et longius eundum est, ut res feret. probabilis tamen cupiditas honestorum et velut tutoris audentiae est temptare, quibus paratior venia est.

[4] Now there is

Nothing before and nothing behind but the sky and the Ocean.

Aen. iii. 193.

One only can I discern in all the boundless waste of waters, Marcus Tullius Cicero, and even he, though the ship in which he entered these seas is of such size and so well found, begins to lessen sail and to row a slower stroke, and is content to speak merely of the kind of speech to be employed by the perfect orator. But my temerity is such that I shall essay to form my orator's character and to teach him his duties. Thus I have no predecessor to guide my steps and must press far, far on, as my theme may demand. Still an honourable ambition is always deserving of approval, and it is all the less hazardous to dare greatly, when forgiveness is assured us if we fail.

1. sit ergo nobis orator, quem constituimus, is, qui a M. Catone finitur, vir bonus dicendi peritus; verum, id quod et ille posuit prius et ipsa natura potius ac maius est, utique vir bonus. id non eo tantum, quod, si vis illa dicendi malitiam instruxerit, nihil sit publicis privatisque rebus perniciosius eloquentia, nosque ipsi, qui pro virili parte conferre aliquid ad facultatem dicendi conati sumus, pessime mercamur de rebus humanis, si latroni comparamus haec arma, non militi.

1. The orator then, whom I am concerned to form, shall be the orator as defined by Marcus Cato, "a good man, skilled in speaking." But above all he must possess the quality which Cato places first and which is in the very nature of things the greatest and most important, that is, he must be a good man. This is essential not merely on account of the fact that, if the powers of eloquence serve only to lend arms to crime, there can be nothing more pernicious than eloquence to public and private welfare alike, while I myself, who have laboured to the best of my ability to contribute something of value to oratory, shall have rendered the worst of services to mankind, if I forge

these weapons not for a soldier, but for a robber. But why speak of myself?

[2] *quid de nobis loquor? rerum ipsa natura in eo, quod praecipue indulsisse homini videtur quoque nos a ceteris animalibus separasse, non parens, ns, sed noverca fuerit, si facultatem dicendi, sociam scelerum, adversam innocentiae, hostem veritatis invenit. mutos enim nasci et egere omni ratione satius fuisset quam providentiae munera in mutuam perniciem convertere.*

[2] Nature herself will have proved not a mother, but a stepmother with regard to what we deem her greatest gift to man, the gift that distinguishes us from other living things, if she devised the power of speech to be the accomplice of crime, the foe to innocence and the enemy of truth. For it had been better for men to be born dumb and devoid of reason than to turn the gifts of providence to their mutual destruction.

[3] *longius tendit hoc iudicium meum. neque enim tantum id dico, eum, qui sit orator, virum bonum esse oportere, sed ne futurum quidem oratorem nisi virum bonum. nam certe neque intelligentiam concesseris iis qui, proposita honestorum ac turpium via, peiorem sequi malent, neque prudentiam, cum in gravissimas frequenter legum, semper vero malae conscientiae poenas a semet ipsis improvise rerum exitu induantur.*

[3] But this conviction of mine goes further. For I do not merely assert that the ideal orator should be a good man, but I affirm that no man can be an orator unless he is a good man. For it is impossible to regard those men as gifted with intelligence who on being offered the choice between the two paths of virtue and of vice choose the latter, nor can we allow them prudence, when by the unforeseen issue of their own actions they render themselves liable not merely to the heaviest penalties of the laws, but to the inevitable torment of an evil conscience.

[4] *quodsi neminem malum esse nisi stultum eundem non modo a sapientibus dicitur, sed vulgo quoque semper est creditum, certe non fiet unquam stultus orator. adde quod ne studio quidem operis pulcherrimi vacare mens nisi omnibus vitiis libera potest: primum quod in eodem pectore nullum est honestorum turpiumque consortium, et cogitare optima simul ac deterrima non magis est unius animi quam eiusdem hominis bonum esse ac malum;*

[4] But if the view that a bad man is necessarily a fool is not merely held by philosophers, but is the universal belief of ordinary men, the fool will most assuredly never become an orator. To this must be added the fact that the mind will not find leisure even for the study of the noblest of tasks, unless it first be free from vice. The reasons for this are, first, that vileness and virtue cannot jointly inhabit in the selfsame heart and that it is as impossible for one and the same mind to harbour good and evil thoughts as it is for one man to be at once both good and evil:

[5] tum illa quoque ex causa, quod mentem tantae rei intentam vacare omnibus aliis etiam culpa carentibus curis oportet. ita demum enim libera ac tota, nulla distringente atque alio ducente causa, spectabit id solum ad quod accingitur.

[5] and secondly, that if the intelligence is to be concentrated on such a vast subject as eloquence it must be free from all other distractions, among which must be included even those preoccupations which are free from blame. For it is only when it is free and self-possessed, with nothing to divert it or lure it elsewhere, that it will fix its attention solely on that goal, the attainment of which is the object of its preparations.

[6] quodsi agrorum nimia cura et sollicitior rei familiaris diligentia et venandi voluptas et dati spectaculis dies multum studiis auferunt (huic enim rei perit tempus, quodcumque alteri datur), quid putamus facturas cupiditatem, avaritiam, invidiam, quarum impotentissimae cogitationes somnos etiam ipsos et illa per quietem visa perturbent?

[6] If on the other hand inordinate care for the development of our estates, excess of anxiety over household affairs, passionate devotion to hunting or the sacrifice of whole days to the shows of the theatre, rob our studies of much of the time that is their due (for every moment that is given to other things involves a loss of time for study), what, think you, will be the results of desire, avarice, and envy, which waken such violent thoughts within our souls that they disturb our very slumbers and our dreams?

[7] nihil est enim tam occupatum, tam multiforme, tot ac tam variis adfectibus concisum atque laceratum quam mala mens. nam et cum insidiatur, spe, curis, labore distringitur; et etiam cum sceleris compos fuit, sollicitudine, paenitentia, poenarum omnium expectatione torquetur. quis inter haec litteris aut ulli bonae arti locus? non hercule magis quam frugibus in terra sentibus ac rubis occupata.

[7] There is nothing so preoccupied, so distracted, so rent and torn by so many and such varied passions as an evil mind. For when it cherishes some dark design, it is tormented with hope, care and anguish of spirit, and even when it has accomplished its criminal purpose, it is racked by anxiety, remorse and the fear of all manner of punishments. Amid such passions as these what room is there for literature or any virtuous pursuit? You might as well look for fruit in land that is choked with thorns and brambles.

[8] age, non ad perferendos studiorum labores necessaria frugalitas? quid ergo ex libidine ac luxuria spei? non praecipue acuit ad cupiditatem litterarum amor laudis? num igitur malis esse laudem curae putamus? iam hoc quis non videt, maximam partem orationis in tractatu aequi bonique consistere? dicetne de his secundum debitam rerum dignitatem malus atque iniquus?

[8] Well then, I ask you, is not simplicity of life essential if we are to be able to

endure the toil entailed by study? What can we hope to get from lust or luxury? Is not the desire to win praise one of the strongest stimulants to a passion for literature? But does that mean that we are to suppose that praise is an object of concern to bad men? Surely every one of my readers must by now have realised that oratory is in the main concerned with the treatment of what is just and honourable? Can a bad and unjust man speak on such themes as the dignity of the subject demands?

[9] *denique, ut maximam partem quaestionis eximam, demus, id quod nullo modo fieri potest, idem ingenii, studii, doctrinae, pessimo atque optimo viro: uter melior dicetur orator? nimirum qui homo quoque melior. non igitur unquam malus idem homo et perfectus orator.*

[9] Nay, even if we exclude the most important aspects of the question now before us, and make the impossible concession that the best and worst of men may have the same talent, industry and learning, we are still confronted by the question as to which of the two is entitled to be called the better orator. The answer is surely clear enough: it will be he who is the better man. Consequently, the bad man and the perfect orator can never be identical.

[10] *non enim perfectum est quidquam, quo melius est aliud. sed, ne more Socraticorum nobismet ipsi responsum finxisse videamur, sit aliquis adeo contra veritatem obstinatus, ut audeat dicere, eodem ingenio, studio, doctrina praeditum nihilo deteriore futurum oratorem malum virum quam bonum: convincamus huius quoque amentiam.*

[10] For nothing is perfect, if there exists something else that is better. However, as I do not wish to appear to adopt the practice dear to the Socratics of framing answers to my own questions, let me assume the existence of a man so obstinately blind to the truth as to venture to maintain that a bad man equipped with the same talents, industry and learning will be not a whit inferior to the good man as an orator; and let me show that he too is mad.

[11] *nam hoc certe nemo dubitabit, omnem orationem id agere, ut iudici, quae proposita fuerint, vera et honesta videantur. utrum igitur hoc facilius bonus vir persuadebit an malus? bonus quidem et dicet saepius vera atque honesta.*

[11] There is one point at any rate which no one will question, namely, that the aim of every speech is to convince the judge that the case which it puts forward is true and honourable. Well then, which will do this best, the good man or the bad? The good man will without doubt more often say what is true and honourable.

[12] *sed etiam si quando aliquo ductus officio (quod accidere, ut mox docebimus, potest) falso haec adfirmare conabitur, maiore cum fide necesse est audiatur. at malis hominibus ex contemptu opinionis et ignorantia recti nonnunquam excidit ipsa simulatio. inde immodeste proponunt, sine pudore*

adfirmant.

[12] But even supposing that his duty should, as I shall show may sometimes happen, lead him to make statements which are false, his words are still certain to carry greater weight with his audience. On the other hand bad men, in their contempt for public opinion and their ignorance of what is right, sometimes drop their mask unawares, and are impudent in the statement of their case and shameless in their assertions.

[13] sequitur in iis, quae certum est effici non posse, deformis pertinacia et irritus labor. nam sicut in vita, ita in causis quoque spes improbas habent. frequenter autem accidit, ut iis etiam vera dicentibus fides desit, videaturque talis advocatus malae causae argumentum.

[13] Further, in their attempt to achieve the impossible they display an unseemly persistency and unavailing energy. For in lawsuits no less than in the ordinary paths of life, they cherish depraved expectations. But it often happens that even when they tell the truth they fail to win belief, and the mere fact that such a man is its advocate is regarded as an indication of the badness of the case.

[14] nunc de iis dicendum est, quae mihi quasi conspiratione quadam vulgi reclamari videntur. Orator ergo Demosthenes non fuit? atqui malum virum accepimus. non Cicero? atqui huius quoque mores multi reprehenderunt. quid agam? magna responsi invidia subeunda est, mitigandae sunt prius cures.

[14] I must now proceed to deal with the objections which common opinion is practically unanimous in bringing against this view. Was not Demosthenes an orator? And yet we are told that he was a bad man. Was not Cicero an orator? And yet there are many who have found fault with his character as well. What am I to answer? My reply will be highly unpopular and I must first attempt to conciliate my audience.

[15] mihi enim nec Demosthenes tam gravi morum dignus videtur invidia, ut omnia, quae in eum ab inimicis congesta sunt, credam, cum et pulcherrima eius in re publica consilia et finem vitae clarum legam,

[15] I do not consider that Demosthenes deserves the serious reflexions that have been made upon his character to such an extent that I am bound to believe all the charges amassed against him by his enemies; for my reading tells me that his public policy was of the noblest and his end most glorious.

[16] nec Marco Tullio defuisse video in ulla parte civis optimi voluntatem. testimonio est actus nobilissime consulatus, integerrime provincia administrate et repudiatus vigintiviratus, et civilibus bellis, quae in aetatem eius gravissima inciderunt, neque spe neque metu declinatus animus, quo minus optimis se partibus, id est rei publicae, iungeret.

[16] Again, I cannot see that the aims of Cicero were in any portion of his career other than such as may become an excellent citizen. As evidence I would cite the fact that his behaviour as consul was magnificent and his administration of his province a model of integrity, while he refused to become one of the twenty commissioners, and in the grievous civil wars which afflicted his generation beyond all others, neither hope nor fear ever deterred him from giving his support to the better party, that is to say, to the interests of the common weal. Some, it is true, regard him as lacking in courage.

[17] *parum fortis videtur quibusdam, quibus optime respondit ipse, non se timidum in suscipiendis, sed in providendis periculis; quod probavit morte quoque ipsa, quam praestantissimo suscepit animo.*

[17] The best answer to these critics is to be found in his own words, to the effect that he was timid not in confronting peril, but in anticipating it. And this he proved also by the manner of his death, in meeting which he displayed a singular fortitude.

[18] *quodsi defuit his viris summa virtus, sic quaerentibus, an oratores fuerint, respondebo, quomodo Stoici, si interrogentur an sapiens Zeno, an Cleanthes, an Chrysippus ipse, respondeant, magnos quidem illos ac venerabiles, non tamen id, quod natura hominis summum habet, consecutos.*

[18] But even if these two men lacked the perfection of virtue, I will reply to those who ask if they were orators, in the manner in which the Stoics would reply, if asked whether Zeno, Cleanthes or Chrysippus himself were wise men. I shall say that they were great men deserving our veneration, but that they did not attain to that which is the highest perfection of man's nature.

[19] *nam et Pythagoras non sapientem se, ut qui ante eum fuerunt, sed studiosum sapientiae vocari voluit. ego tamen secundum communem loquendi consuetudinem saepe dixi dicamque, perfectum oratorem esse Ciceronem; ut amicos et bonos viros et prudentissimos dicimus vulgo, quorum nihil nisi perfecte sapienti datur. sed cum proprie et ad legem ipsam veritatis loquendum erit, cum quaeram oratorem, quem et ille quaerebat.*

[19] For did not Pythagoras desire that he should not be called a wise man, like the sages who preceded him, but rather a student of wisdom? But for my own part, conforming to the language of every day, I have said time and again, and shall continue to say, that Cicero was a perfect orator, just as in ordinary speech we call our friends good and sensible men, although neither of these titles can really be given to any save to him that has attained to perfect wisdom. But if I am called upon to speak strictly and in accordance with the most rigid laws of truth, I shall proclaim that I seek to find that same perfect orator whom Cicero also sought to discover.

[20] *quanquam enim stetisse ipsum in fastigio eloquentiae fateor, ac vix, quid adiici potuerit, inuenio, fortasse inventurus, quod adhuc abscisurum putem fuisse (nam fere sic docti iudicaverunt, plurimum in eo virtutum, nonnihil fuisse vitiorum, et se ipse multa ex illa iuvenili abundantia coercuisse testatur), tamen, quando nec sapientis sibi nomen, minime sui contemptor, asseruit et melius dicere, certe data longiore vita et tempore ad componendum securiore, potuisset, non maligne crediderim defuisse ei summam illam, ad quam nemo propius accessit.*

[20] For while I admit that he stood on the loftiest pinnacle of eloquence, and can discover scarcely a single deficiency in him, although I might perhaps discover certain superfluities which I think he would have pruned away (for the general view of the learned is that he possessed many virtues and a few faults, and he himself states that he has succeeded in suppressing much of his youthful exuberance), none the less, in view of the fact that, although he had by no means a low opinion of himself, he never claimed to be the perfect sage, and, had he been granted longer life and less troubled conditions for the composition of his works, would doubtless have spoken better still, I shall not lay myself open to the charge of ungenerous criticism, if I say that I believe that he failed actually to achieve that perfection to the attainment of which none have approached more nearly,

[21] *et licebat, si aliter sentirem, fortius id liberiusque defendere. An vero M. Antonius neminem a se visum eloquentem, quod tanto minus erat, professus est; ipse etiam M. Tullius quaerit adhuc eum et tantum imaginatur ac fingit, ego non audeam dicere, aliquid in hac, quae superest, aeternitate inveniri posse eo, quod fuerit, perfectius?*

[21] and indeed had I felt otherwise in this connexion, I might have defended my point with greater boldness and freedom. Marcus Antonius declared that he had seen no man who was genuinely eloquent (and to be eloquent is a far less achievement than to be an orator), while Cicero himself has failed to find his orator in actual life and merely imagines and strives to depict the ideal. Shall I then be afraid to say that in the eternity of time that is yet to be, something more perfect may be found than has yet existed?

[22] *transeo illos, qui Ciceroni ac Demostheni ne in eloquentia quidem satis tribuunt; quanquam neque ipsi Ciceroni Demosthenes videatur satis esse perfectus, quem dormire interim dicit, nec Cicero Bruto Calvoque, qui certe compositionem illius etiam apud ipsum reprehendunt, nec Asinio utrique, qui vitia orationis eius etiam inimice pluribus locis insequuntur.*

[22] I say nothing of those critics who will not allow sufficient credit even for eloquence to Cicero and Demosthenes, although Cicero himself does not regard Demosthenes as flawless, but asserts that he sometimes nods, while even Cicero fails to satisfy Brutus and Calvus (at any rate they criticised his

style to his face), or to win the complete approval of either of the Asinii, who in various passages attack the faults of his oratory in language which is positively hostile.

[23] concedamus sane, quod minime natura patitur, repertum esse aliquem malum virum summe disertum: nihilo tamen minus oratorem eum negabo. nam nec omnibus, qui fuerint manu prompti, viri fortis nomen concesserim, quia sine virtute intelligi non potest fortitudo.

[23] However, let us fly in the face of nature and assume that a bad man has been discovered who is endowed with the highest eloquence. I shall none the less deny that he is an orator. For I should not allow that every man who has shown himself ready with his hands was necessarily a brave man, because true courage cannot be conceived of without the accompaniment of virtue.

[24] An ei, qui ad defendendas causas advocatur, non est opus fide, quam nec cupiditas corrumpat nec gratia avertat nec metus frangat; sed proditorem, transfugam, praevaricatorem donabimus oratoris illo sacro nomine? quodsi mediocribus etiam patronis convenit haec, quae vulgo dicitur, bonitas, cur non orator ille, qui nondum fuit, sed potest esse, tam sit moribus quam dicendi virtute perfectus?

[24] Surely the advocate who is called to defend the accused requires to be a man of honour, honour which greed cannot corrupt, influence seduce, or fear dismay. Shall we then dignify the traitor, the deserter, the turncoat with the sacred name of orator? But if the quality which is usually termed goodness is to be found even in quite ordinary advocates, why should not the orator, who has not yet existed, but may still be born, be no less perfect in character than in excellence of speech?

[25] non enim forensem quandam instituimus operam nec mercennariam vocem nec, ut asperioribus verbis parcamus, non inutilem sane litium advocatum, quem denique causidicum vulgo vocant, sed virum cum ingenii natura praestantem tum vero tot pulcherrimas artes penitus mente complexum, datum tandem rebus humanis, qualem nulla antea vetustas cognoverit, singularem perfectumque undique, optima sentientem optimeque dicentem.

[25] It is no hack-advocate, no hireling pleader, nor yet, to use no harsher term, a serviceable attorney of the class generally known as *causidici*, that I am seeking to form, but rather a man who to extraordinary natural gifts has added a thorough mastery of all the fairest branches of knowledge, a man sent by heaven to be the blessing of mankind, one to whom all history can find no parallel, uniquely perfect in every detail and utterly noble alike in thought and speech.

[26] in hoc quota pars erit, quod aut innocentes tuebitur aut improborum scelera comescet, aut in pecuniariis quaestionibus veritati contra calumniam aderit?

summus ille quidem in his quoque operibus fuerit, sed maioribus clarius elucebit, cum regenda senatus consilia et popularis error ad meliora ducendus.

[26] How small a portion of all these abilities will be required for the defence of the innocent, the repression of crime or the support of truth against falsehood in suits involving questions of money? It is true that our supreme orator will bear his part in such tasks, but his powers will be displayed with brighter splendour in greater matters than these, when he is called upon to direct the counsels of the senate and guide the people from the paths of error to better things.

[27] An non talem quendam videtur finxisse Vergilius, quem in seditione vulgi iam faces et saxa iaculantis moderatorem dedit:

tum pietate gravem ac meritis si forte virum quem
conspexere, silent arrectisque auribus adstant?

Habemus igitur ante omnia virum bonum, post haec adiiciet dicendi peritum:
ille regit dictis animos et pectora mulcet.

Quid?

[27] Was not this the man conceived by Virgil and described as quelling a riot when torches and stones have begun to fly:

“Then, if before their eyes some statesman grave
Stand forth, with virtue and high service crowned,
Straight are they dumb and stand intent to hear.
“

Here then we have one who is before all else a good man, and it is only after this that the poet adds that he is skilled in speaking:

“His words their minds control, their passions soothe.”

Again,

[28] non in bellis quoque idem ille vir, quem instituimus, si sit ad proelium miles cohortandus, ex mediis sapientiae praeceptis orationem trahet? nam quomodo pugnam ineuntibus tot simul metus laboris, dolorum, postremo mortis ipsius exciderint, nisi in eorum locum pietas et fortitudo et honesti praesens imago successerit?

[28] will not this same man, whom we are striving to form, if in time of war he be called upon to inspire his soldiers with courage for the fray, draw for his eloquence on the innermost precepts of philosophy? For how can men who stand upon the verge of battle banish all the crowding fears of hardship, pain and death from their minds, unless those fears be replaced by the sense of the

duty that they owe their country, by courage and the lively image of a soldier's honour?

[29] quae certe melius persuadebit aliis qui prius persuaserit sibi. prodit enim se, quamlibet custodiatur, simulatio, nec unquam tanta fuerit loquendi facultas, ut non titubet atque haereat, quotiens ab animo verba dissentiunt. vir autem malus aliud dicat necesse est quam sentit.

[29] And assuredly the man who will best inspire such feelings in others is he who has first inspired them in himself. For however we strive to conceal it, insincerity will always betray itself, and there was never in any man so great eloquence as would not begin to stumble and hesitate so soon as his words ran counter to his inmost thoughts.

[30] bonos nunquam honestus sermo deficiet, nunquam rerum optimarum (nam iidem etiam prudentes erunt) inventio; quae etiamsi lenociniis destituta sit, satis tamen natura sua ornatur nec quidquam non diserte, quod honeste, dicitur.

[30] Now: a bad man cannot help speaking things other than he feels. On the other hand, the good will never be at a loss for honourable words or fail to find matter full of virtue for utterance, since among his virtues practical wisdom will be one. And even though his imagination lacks artifice to lend it charm, its own nature will be ornament enough, for if honour dictate the words, we shall find eloquence there as well.

[31] quare, iuventus, immo omnes aetates, (neque enim rectae voluntati serum est tempus ullum) totis mentibus huc tendamus, in hoc elaboremus; forsitan et consummare contingat. nam si natura non prohibet et esse virum bonum et esse dicendi peritum, cur non aliquis etiam unus utrumque consequi possit? cur autem non se quisque speret fore illum aliquem?

[31] Therefore, let those that are young, or rather let all of us, whatever our age, since it is never too late to resolve to follow what is right, strive with all our hearts and devote all our efforts to the pursuit of virtue and eloquence; and perchance it may be granted to us to attain to the perfection that we seek. For since nature does not forbid the attainment of either, why should not someone succeed in attaining both together? And why should not each of us hope to be that happy man?

[32] ad quod si vires ingenii non suffecerint, tamen ad quem usque modum processerimus, meliores erimus ex utroque. hoc certe procul eximatur animo, rerum pulcherrimam eloquentiam cum vitiis mentis posse misceri. facultas dicendi, si in malos incidit, et ipsa iudicanda est malum; peiores enim illos facit, quibus contigit.

[32] But if our powers are inadequate to such achievement, we shall still be the better for the double effort in proportion to the distance which we have

advanced toward either goal. At any rate let us banish from our hearts the delusion that eloquence, the fairest of all things, can be combined with vice. The power of speaking is even to be accounted an evil when it is found in evil men; for it makes its possessors yet worse than they were before.

[33] videor mihi audire quosdam (neque enim deerunt unquam, qui deserti esse quam boni malint) illa dicentes: Quid ergo tantum est artis in eloquentia? cur tu de coloribus et difficultium causarum defensione, nonnihil etiam de confessione locutus es, nisi aliquando vis ac facultas dicendi expugnat ipsam veritatem? bonus enim vir non agit nisi bonas causas, eas porro etiam sine doctrina satis per se tuetur veritas ipsa.

[33] I think I hear certain persons (for there will always be some who had rather be eloquent than good) asking, "Why then is there so much art in connexion with eloquence? Why have you talked so much of 'glosses,' the methods of defence to be employed in difficult cases, and sometimes even of actual confession of guilt, unless it is the case that the power and force of speech at times triumphs over truth itself? For a good man will only plead good cases, and those might safely be left to truth to support without the aid of learning."

[34] quibus ego, cum de meo primum opere respondero, etiam pro boni viri officio, si quando eum ad defensionem nocentium ratio duxerit, satisfaciam. pertractare enim, quomodo aut pro falsis aut etiam pro iniustis aliquando dicatur, non est inutile, vel propter hoc solum, ut ea facilius et deprehendamus et refellamus; quemadmodum remedia melius adhibebit, cui nota quae nocent fuerint.

[34] Now, though my reply to these critics will in the first place be a defence of my own work, it will also explain what I consider to be the duty of a good man on occasions when circumstances have caused him to undertake the defence of the guilty. For it is by no means useless to consider how at times we should speak in defence of falsehood or even of injustice, if only for this reason, that such an investigation will enable us to detect and defeat them with the greater ease, just as the physician who has a thorough knowledge of all that can injure the health will be all the more skilful in the prescription of remedies.

[35] neque enim Academici, cum in utramque disserunt partem, non secundum alteram vivunt, nec Carneades ille, qui Romae audiente Censorio Catone non minoribus viribus contra iustitiam dicitur disseruisse quam pridie pro iustitia dixerat, iniustus ipse vir fuit. verum et virtus quid sit, adversa ei malitia detegit, et aequitas fit ex iniqui contemplatione manifestior, et plurima contrariis probantur. debent ergo oratori sic esse adversariorum nota consilia ut hostium imperatori.

[35] For the Academicians, although they will argue on either side of a question, do not thereby commit themselves to taking one of these two views

as their guide in life to the exclusion of the other, while the famous Carneades, who is said to have spoken at Rome in the presence of Cato the Censor, and to have argued against justice with no less vigour than he had argued for justice on the preceding day, was not himself an unjust man. But the nature of virtue is revealed by vice, its opposite, justice becomes yet more manifest from the contemplation of injustice, and there are many other things that are proved by their contraries. Consequently the schemes of his adversaries should be no less well known to the orator than those of the enemy to a commander in the field.

[36] *verum et illud, quod prima propositio durum videtur, potest adferre ratio, ut vir bonus in defensione causae velit auferre aliquando iudici veritatem. quod si quis a me proponi mirabitur, (quanquam non est haec mea proprie sententia, sed eorum, quos grauissimos sapientiae magistros aetas vetus credit)* sic iudicet, pleraque esse, quae non tam factis quam causis eorum vel honesta fiant vel turpia.

[36] But it is even true, although at first sight it seems hard to believe, that there may be sound reason why at times a good man who is appearing for the defence should attempt to conceal the truth from the judge. If any of my readers is surprised at my making such a statement (although this opinion is not of my own invention, but is derived from those whom antiquity regarded as the greatest teachers of wisdom), I would have him reflect that there are many things which are made honourable or the reverse not by the nature of the facts, but by the causes from which they spring.

[37] *nam si hominem occidere saepe virtus, liberos necare nonnunquam pulcherrimum est, asperiora quaedam adhuc dictu, si communis utilitas exegerit, facere conceditur, ne hoc quidem nudum est intuendum, qualem causam vir bonus, sed etiam quare et qua mente defendat.*

[37] For if to slay a man is often a virtue and to put one's own children to death is at times the noblest of deeds, and if it is permissible in the public interest to do deeds yet more horrible to relate than these, we should assuredly take into consideration not solely and simply what is the nature of the case which the good man undertakes to defend, but what is his reason and what his purpose in so doing.

[38] *ac primum concedant mihi omnes oportet, quod Stoicorum quoque asperrimi confitentur, facturum aliquando virum bonum ut mendacium dicat, et quidem nonnunquam levioribus causis, ut in pueris aegrotantibus utilitatis eorum gratia multa fingimus, multa non facturi promittimus;*

[38] And first of all everyone must allow, what even the sternest of the Stoics admit, that the good man will sometimes tell a lie, and further that he will sometimes do so for comparatively trivial reasons; for example we tell countless lies to sick children for their good and make many promises to them

which we do not intend to perform.

[39] *nedum si ab homine occidendo grassator avertendus sit aut hostis pro salute patriae fallendus; ut hoc, quod alias in servis quoque reprehendendum est, sit alias in ipso sapiente laudandum. id si constiterit, multa iam video posse evenire, propter quae orator bene suscipiat tale causae genus, quale remota ratione honesta non recepisset.*

[39] And there is clearly far more justification for lying when it is a question of diverting an assassin from his victim or deceiving an enemy to save our country. Consequently a practice which is at times reprehensible even in slaves, may on other occasions be praiseworthy even in a wise man. If this be granted, I can see that there will be many possible emergencies such as to justify an orator in undertaking cases of a kind which, in the absence of any honourable reason, he would have refused to touch.

[40] *nec hoc dico (quia severiores sequi placet leges) pro patre, fratre, amico periclitantibus, tametsi non mediocris haesitatio est, hinc iustitiae proposita imagine, inde pietatis. nihil dubii relinquamus. sit aliquis insidiatus tyranno atque ob id reus: utrumne salvum eum nolet is, qui a nobis finitur, orator? an, si tuendum susceperit, non tam falsis defendet, quam qui apud iudices malam causam tuetur?*

[40] In saying this I do not mean that we should be ready under any circumstances to defend our father, brother or friend when in peril (since I hold that we should be guided by stricter rules in such matters), although such contingencies may well cause us no little perplexity, when we have to decide between the rival claims of justice and natural affection. But let us put the problem beyond all question of doubt. Suppose a man to have plotted against a tyrant and to be accused of having done so. Which of the two will the orator, as defined by us, desire to save? And if he undertakes the defence of the accused, will he not employ falsehood with no less readiness than the advocate who is defending a bad case before a jury?

[41] *quid si quaedam bene facta damnaturus est iudex, nisi ea non esse facta convicerimus, non vel hoc modo servabit orator non innocentem modo, sed etiam laudabilem civem? quid si quaedam iusta natura, sed condicione temporum inutilia civitati sciemus, nonne utemur arte dicendi bona quidem, sed malis artibus simili?*

[41] Again, suppose that the judge is likely to condemn acts which were rightly done, unless we can convince him that they were never done. Is not this another case where the orator will not shrink even from lies, if so he may save one who is not merely innocent, but a praiseworthy citizen? Again, suppose that we realise that certain acts are just in themselves, though prejudicial to the state under existing circumstances. Shall we not then employ methods of speaking which, despite the excellence of their intention, bear a close

resemblance to fraud.

[42] ad hoc nemo dubitabit, quin, si nocentes mutari in bonam mentem aliquo modo possint, sicut posse conceditur, salvos esse eos magis e re publica sit quam puniri. si liqueat igitur oratori futurum bonum virum, cui vera obiiciuntur, non id aget, ut salvus sit?

[43] Further, no one will hesitate for a moment to hold the view that it is in the interests of the commonwealth that guilty persons should be acquitted rather than punished, if it be possible thereby to convert them to a better state of mind, a possibility which is generally conceded. If then it is clear to an orator that a man who is guilty of the offences laid to his charge will become a good man, will he not strive to secure his acquittal?

[43] da nunc, ut crimine manifesto prematur dux bonus et sine quo vincere hostem civitas non possit: nonne ei communis utilitas oratorem advocabit? certe Fabricius Cornelium Rufinum, et alioqui malum civem et sibi inimicum, tamen, quia utilem sciebat ducem, imminente bello, palam consulem suffragio suo fecit atque id mirantibus quibusdam respondit, a cive se spoliari malle quam ab hoste venire. ita, si fuisset orator, non defendisset eundem Rufinum vel manifesti peculatus reum?

[43] Imagine for example that a skilful commander, without whose aid the state cannot hope to crush its enemies, is labouring under a charge which is obviously true: will not the common interest irresistibly summon our orator to defend him? We know at any rate that Fabricius publicly voted for and secured the election to the consulate of Cornelius Rufinus, despite the fact that he was a bad citizen and his personal enemy, merely because he knew that he was a capable general and the state was threatened with war. And when certain persons expressed their surprise at his conduct, he replied that he had rather be robbed by a fellow-citizen than be sold as a slave by the enemy. Well then, had Fabricius been an orator, would he not have defended Rufinus against a charge of peculation, even though his guilt were as clear as day?

[44] multa dici possunt similia, sed vel unum ex iis quodlibet sufficit. non enim hoc agimus, ut istud illi, quem formamus, viro saepe sit faciendum; sed ut, si talis coegerit ratio, sit tamen vera finitio, oratorem esse virum bonum divendi peritum.

[44] I might produce many other similar examples, but one of them taken at random is enough. For my purpose is not to assert that such tasks will often be incumbent on the orator whom I desire to form, but merely to show that, in the event of his being compelled to take such action, it will not invalidate our definition of an orator as a "good man, skilled in speaking."

[45] praecipere vero ac discere, quomodo etiam probatione difficilia tractentur, necessarium est. nam frequenter etiam optimae causae similes sunt malis, et

innocens reus multis verisimilibus premitur; quo fit, ut eadem actionis ratione defendendus sit, qua si nocens esset. iam innumerabilia sunt bonis causis malisque communia, testes, litterae, suspiciones, opiniones. non aliter autem verisimilia quam vera et confirmantur et refelluntur. quapropter, ut res feret, flectetur oratio manente honesta voluntate.

[45] And it is necessary also both to teach and learn how to establish difficult cases by proof. For often even the best cases have a resemblance to bad and, the charges which tell heavily against an innocent person frequently have a strong resemblance to the truth. Consequently, the same methods of defence have to be employed that would be used if he were guilty. Further, there are countless elements which are common to both good cases and bad, such as oral and documentary evidence, suspicions and opinions, all of which have to be established or disposed of in the same way, whether they be true or merely resemble the truth. Therefore, while maintaining his integrity of purpose, the orator will modify his pleading to suit the circumstances.

2. quando igitur orator est vir bonus, is autem citra virtutem intelligi non potest, virtus, etiamsi quosdam impetus ex natura sumit, tamen perficienda doctrina est: mores ante omnia oratori studiis erunt excolendi atque omnis honesti iustique disciplina pertractanda, sine qua nemo nec vir bonus esse nec dicendi peritus potest.

2. Since then the orator is a good man, and such goodness cannot be conceived as existing apart from virtue, virtue, despite the fact that it is in part derived from certain natural impulses, will require to be perfected by instruction. The orator must above all things devote his attention to the formation of moral character and must acquire a complete knowledge of all that is just and honourable. For without this knowledge no one can be either a good man or skilled in speaking,

[2] nisi forte accedemus iis, qui natura constare mores et nihil adiuvare disciplina putant; scilicet ut ea quidem, quae manu fiunt, atque eorum etiam contemptissima confiteantur egere doctoribus, virtutem vero, qua nihil homini, quo ad deos immortales propius accederet, datum est, obviam et illaboratam, tantum quia nati simus, habeamus. abstinens erit qui id ipsum, quid sit abstinencia, ignoret?

[2] unless indeed we agree with those who regard morality as intuitive and as owing nothing to instruction: indeed they go so far as to acknowledge that handicrafts, not excluding even those which are most despised among them, can only be acquired by the result of teaching, whereas virtue, which of all gifts to man is that which makes him most near akin to the immortal gods, comes to him without search or effort, as a natural concomitant of birth. But can the man who does not know what abstinence is, claim to be truly abstinent?

[3] et fortis qui metus doloris, mortis, superstitionis nulla ratione purgaverit? et iustus qui aequi bonique tractatum, qui leges, quaeque natura sunt omnibus datae quaeque propriae populis et gentibus constitutae, nunquam eruditore aliquo sermone tractarit? O quam istud parvum putant, quibus tam facile videtur!

[3] or brave, if he has never purged his soul of the fears of pain, death and superstition? or just, if he has never, in language approaching that of philosophy, discussed the nature of virtue and justice, or of the laws that have been given to mankind by nature or established among individual peoples and nations? What a contempt it argues for such themes to regard them as being so easy of comprehension!

[4] sed hoc transeo, de quo neminem, qui litteras vel primis, ut aiunt, labris degustarit, dubitaturum puto. ad illud sequens praevertar, ne dicendi quidem satis peritum fore, qui non et naturae vim omnem penitus perspexerit et mores praeceptis ac ratione formarit.

[4] However, I pass this by; for I am sure that no one with the least smattering of literary culture will have the slightest hesitation in agreeing with me. I will proceed to my next point, that no one will achieve sufficient skill even in speaking, unless he makes a thorough study of all the workings of nature and forms his character on the precepts of philosophy and the dictates of reason.

[5] neque enim frustra in tertio de Oratore libro L. Crassus cuncta, quae de aequo, iusto, vero, bono deque iis, quae sunt contra posita, dicantur, propria esse oratoris adfirmat, ac philosophos, cum ea dicendi viribus tumentur, uti rhetorum armis, non suis. idem tamen confitetur, ea iam esse a philosophia petenda, videlicet quia magis haec illi videtur in possessione earum rerum fuisse.

[5] For it is with good cause that Lucius Crassus, in the third book of the *de Oratore*, affirms that all that is said concerning equity, justice, truth and the good, and their opposites, forms part of the studies of an orator, and that the philosophers, when they exert their powers of speaking to defend these virtues, are using the weapons of rhetoric, not their own. But he also confesses that the knowledge of these subjects must be sought from the philosophers for the reason that, in his opinion, philosophy has more effective possession of them.

[6] hinc etiam illud est, quod Cicero pluribus libris et epistolis testatur dicendi facultatem ex intimis sapientiae fontibus fluere, ideoque aliquamdiu praeceptores eosdem fuisse morum atque dicendi. quapropter haec exhortatio mea non eo pertinet ut esse oratorem philosophum velim, quando non alia vitae secta longius a civilibus officiis atque ab omni munere oratoris recessit.

[6] And it is for the same reason that Cicero in several of his books and letters

proclaims that eloquence has its fountain-head in the most secret springs of wisdom, and that consequently for a considerable time the instructors of morals and of eloquence were identical. Accordingly this exhortation of mine must not be taken to mean that I wish the orator to be a philosopher, since there is no other way of life that is further removed from the duties of a statesman and the tasks of an orator.

[7] *nam quis philosophorum aut in iudiciis frequens aut clarus in contionibus fuit? quis denique in ipsa, quam maxime plerique praecipunt, rei publicae administratione versatus est? atqui ego illum, quem instituo, Romanum quendam velim esse sapientem, qui non secretis disputationibus, sed rerum experimentis atque operibus vere civilem virum exhibeat.*

[7] For what philosopher has ever been a frequent speaker in the courts or won renown in public assemblies? Nay, what philosopher has ever taken a prominent part in the government of the state, which forms the most frequent theme of their instructions? None the less I desire that he, whose character I am seeking to mould, should be a “wise man” in the Roman sense, that is, one who reveals himself as a true statesman, not in the discussions of the study, but in the actual practice and experience of life.

[8] *sed quia deserta ab his, qui se ad eloquentiam contulerunt, studia sapientiae non iam in actu suo atque in hac fori luce versantur, sed in porticus et in gymnasia primum, mox in conventus scholarum recesserunt: id, quod est oratori necessarium nec a dicendi praeceptoribus traditur, ab iis petere nimirum necesse est, apud quos remansit, evolvendi penitus auctores, qui de virtute praecipunt, ut oratoris vita cum scientia diuinarum rerum sit humanarumque coniuncta.*

[8] But inasmuch as the study of philosophy has been deserted by those who have turned to the pursuit of eloquence, and since philosophy no longer moves in its true sphere of action and in the broad daylight of the forum, but has retired first to porches and gymnasia and finally to the gatherings of the schools, all that is essential for an orator, and yet is not taught by the professors of eloquence, must undoubtedly be sought from those persons in whose possession it has remained. The authors who have discoursed on the nature of virtue must be read through and through, that the life of the orator may be wedded to the knowledge of things human and divine.

[9] *quae ipsae quanto maiores ac pulchriores viderentur, si illas ii docerent, qui etiam eloqui praestantissime possent? utinamque sit tempus unquam, quo perfectus aliquis, qualem optamus, orator hanc artem superbo nomine et vitiis quorundam bona eius corrumpentium invisam vindicet sibi ac, velut rebus repetitis, in corpus eloquentiae adducat.*

[9] But how much greater and fairer would such subjects appear if those who taught them were also those who could give them most eloquent expression!

O that the day may dawn when the perfect orator of our heart's desire shall claim for his own possession that science that has lost the affection of mankind through the arrogance of its claims and the vices of some that have brought disgrace upon its virtues, and shall restore it to its place in the domain of eloquence, as though he had been victorious in a trial for the restoration of stolen goods!

[10] quae quidem cum sit in tris divisa partes, naturalem, moralem, rationalem, qua tandem non est cum oratoris opere coniuncta?

nam ut ordinem retro agamus, de ultima illa, quae tota versatur in verbis, nemo dubitaverit, si et proprietates vocis cuiusque nosse et ambigua aperire et perplexa discernere et de falsis iudicare et colligere ac resolvere quae velis oratorum est.

[10] And since philosophy falls into three divisions, physics, ethics and dialectic, which, I ask you, of these departments is not closely connected with the task of the orator?

Let us reverse the order just given and deal first with the third department which is entirely concerned with words. If it be true that to know the properties of each word, to clear away ambiguities, to unravel perplexities, to distinguish between truth and falsehood, to prove or to refute as may be desired, all form part of the functions of an orator, who is there that can doubt the truth of my contention?

[11] quanquam ea non tam est minute atque concise in actionibus utendum quam in disputationibus, quia non docere modo, sed movere etiam ac delectare audientes debet orator, ad quod impetu quoque ac viribus et decore est opus; ut vis amnium maior est altis ripis multoque gurgitis tractu fluentium quam tenuis aquae et obiectu lapillorum resultantis.

[11] I grant that we shall not have to employ dialectic with such minute attention to detail when we are pleading in the courts as when we are engaged in philosophical debate, since the orator's duty is not merely to instruct, but also to move and delight his audience; and to succeed in doing this he needs a strength, impetuosity and grace as well. For oratory is like a river: the current is stronger when it flows within deep banks and with a mighty flood, than when the waters are shallow and broken by the pebbles that bar their way.

[12] et ut palaestrici doctores illos, quos numeros vocant, non idcirco discentibus tradunt, ut iis omnibus ii, qui didicerint, in ipso luctandi certamine utantur (plus enim pondere et firmitate et spiritu agitur), sed ut subsit copia illa, ex qua unum aut alterum, cuius se occasio dederit,

[12] And just as the trainers of the wrestling school do not impart the various *throws* to their pupils that those who have learnt them may make use of all of them in actual wrestling matches (for weight and strength and wind count for

more than these), but that they may have a store from which to draw one or two of such tricks, as occasion may offer;

[13] *efficient, ita haec pars dialectica, sive illam dicere malumus disputatricem, ut est utilis saepe et finitionibus et comprehensionibus et separandis quae sunt differentia, et resolvenda ambiguitate, distinguendo, dividendo, illiciendo, implicando, ita, si totum sibi vindicaverit in foro certamen, obstatit melioribus et sectas ad tenuitatem suam vires ipsa subtilitate consumet.*

[13] even so the science of dialectic, or if you prefer it of disputation, while it is often useful in definition, inference, differentiation, resolution of ambiguity, distinction and classification, as also in luring on or entangling our opponents, yet if it claim to assume the entire direction of the struggles of the forum, will merely stand in the way of arts superior to itself and by its very subtlety will exhaust the strength that has been pared down to suit its limitations.

[14] *itaque reperias quosdam in disputando mire callidos, cum ab ilia cavillatione discesserint, non magis sufficere in aliquo graviore actu quam parva quaedam animalia, quae in angustiis mobilia campo deprehenduntur.*

[14] As a result you will find that certain persons who show astonishing skill in philosophical debate, as soon as they quit the sphere of their quibbles, are as helpless in any case that demands more serious pleading as those small animals which, though nimble enough in a confined space, are easily captured in an open field.

[15] *iam quidem pars illa moralis, quae dicitur Ethice, certe tota oratori est accommodata. nam in tanta causarum, sicut superioribus libris diximus, varietate, cum alia coniectura quaerantur, alia finitionibus concludantur, alia iure summoveantur vel transferantur, alia colligantur vel ipsa inter se concurrant vel in diversum ambiguitate ducantur, nulla fere dici potest, cuius non parte in aliqua tractatus aequi ac boni reperiatur, plerasque vero esse quis nescit, quae totae in sola qualitate consistant?*

[15] Proceeding to moral philosophy or ethics, we may note that it at any rate is entirely suited to the orator. For vast as is the variety of cases (since in them, as I have pointed out in previous books, we seek to discover certain points by conjecture, reach our conclusions in others by means of definition, dispose of others on legal grounds' or by raising the question of competence, while other points are established by syllogism and others involve contradictions or are diversely interpreted owing to some ambiguity of language), there is scarcely a single one which does not at some point or another involve the discussion of equity and virtue, while there are also, as everyone knows, not a few which turn entirely on questions of quality.

[16] *in consiliis vero quae ratio suadendi est ab honesti quaestione seposita? quin ilia etiam pars tertia, quae laudandi ac vituperandi officiis continetur,*

nempe in tractatu recti pravique versatur.

[16] Again in deliberative assemblies how can we advise a policy without raising the question of what is honourable? Nay, even the third department of oratory, which is concerned with the tasks of praise and denunciation, must without a doubt deal with questions of right and wrong.

[17] An de iustitia, fortitudine, abstinencia, temperantia, pietate non plurima dicet orator? sed ille vir bonus, qui haec non vocibus tantum sibi nota atque nominibus aurium tenus in usum linguae perceperit, sed qui virtutes ipsas mente complexus ita sentiat, nec in cogitando ita laborabit sed, quod sciet, vere dicet.

[17] For the orator will assuredly have much to say on such topics as justice, fortitude, abstinence, self-control and piety. But the good man, who has come to the knowledge of these things not by mere hearsay, as though they were just words and names for his tongue to employ, but has grasped the meaning of virtue and acquired a true feeling for it, will never be perplexed when he has to think out a problem, but will speak out truly what he knows.

[18] cum sit autem omnis generalis quaestio speciali potentior, quia universo pars continetur, non utique accedit parti quod universum est, profecto nemo dubitabit, generales quaestiones in illo maxime studiorum more versatas.

[18] Since, however, *general* questions are always more important than special (for the particular is contained in the universal, while the universal is never to be regarded as something superimposed on the particular), everyone will readily admit that the studies of which we are speaking are pre-eminently concerned with general questions.

[19] iam veropr cum sint multa propriis brevibusque comprehensionibus finienda (unde etiam status causarum dicitur finitius), nonne ad id quoque instrui ab iis, qui plus in hoc studii dederunt, oportet? quid? non quaestio iuris omnis aut verborum proprietate aut aequi disputatione aut voluntatis coniectura continetur? quorum pars ad rationalem, pars ad moralem tractatum redundat.

[19] Further, since there are numerous points which require to be determined by appropriate and concise definitions (hence the *definitive basis* of cases), it is surely desirable that the orator should be instructed in such things by those who have devoted special attention to the subject. Again, does not every question of law turn either on the precise meaning of words, the discussion of equity, or conjecture as to the intention — subjects which in part encroach on the domain of dialectic and in part on that of ethics?

[20] ergo natura permixta est omnibus istis oratio, quae quidem oratio est vere. nam ignara quidem huiusce doctrinae loquacitas erret necesse est, ut quae vel nullos vel falsos duces habeat.

pars vero naturalis, cum est ad exercitationem dicendi tanto ceteris uberior, quanto maiore spiritu de divinis rebus quam humans eloquendum est, tum illam etiam moralem, sine qua nulla esse, ut docuimus, oratio potest, totam complectitur.

[20] Consequently all oratory involves a natural admixture of all these philosophic elements — at least, that is to say, all oratory that is worthy of the name. For mere garrulity that is ignorant of all such learning must needs go astray, since its guides are either non-existent or false.

Physics on the other hand is far richer than the other branches of philosophy, if viewed from the standpoint of providing exercise in speaking, in proportion as a loftier inspiration is required to speak of things divine than of things human; and further it includes within its scope the whole of ethics, which as we have shown are essential to the very existence of oratory.

[21] nam si regitur providentia mundus, administranda certe bonis viris erit res publica; si divina nostris animis origo, tendendum ad virtutem nec voluptatibus terreni corporis serviendum. An haec non frequenter tractabit orator? iam de auguriis, responsis, religione denique omni, de quibus maxima saepe in senatu consilia versata sunt, non erit ei disserendum, si quidem, ut nobis placet, futurus est vir civilis idem? quae denique intelligi saltem potest eloquentia hominis optima nescientis?

[21] For, if the world is governed by providence, it will certainly be the duty of all good men to bear their part in the administration of the state. If the origin of our souls be divine, we must win our way towards virtue and abjure the service of the lusts of our earthly body. Are not these themes which the orator will frequently be called upon to handle? Again there are questions concerned with auguries and oracles or any other religious topic (all of them subjects that have often given rise to the most important debates in the senate) on which the orator will have to discourse, if he is also to be the statesman we would have him be. And finally, how can we conceive of any real eloquence at all proceeding from a man who is ignorant of all that is best in the world?

[22] haec si ratione manifesta non essent, exemplis tamen crederemus. siquidem et Periclem, cuius eloquentiae, etiamsi nulla ad nos monumenta venerunt, vim tamen quandam incredibilem cum historici, tum etiam, liberrimum hominum genus, comici veteres tradunt, Anaxagorae physici constat auditorem fuisse, et Demosthenem, principem omnium Graeciae oratorum, dedisse operam Platoni.

[22] If our reason did not make these facts obvious, we should still be led by historical examples to believe their truth. For Pericles, whose eloquence, despite the fact that it has left no visible record for posterity, was none the less, if we may believe the historians and that free-speaking tribe, the old comic poets, endowed with almost incredible force, is known to have been a

pupil of the physicist Anaxagoras, while Demosthenes, greatest of all the orators of Greece, sat at the feet of Plato.

[23] nam M. Tullius, non tantum se debere scholis rhetorum, quantum Academiae spatiis, frequenter ipse testatus est; neque se tanta in eo unquam fudisset ubertas, si ingenium suum consaepto fori, non ipsius rerum naturae finibus terminasset.

verum ex hoc alia mihi quaestio exoritur, quae secta conferre plurimum eloquentiae possit, quanquam ea non inter multas potest esse contentio.

[23] As for Cicero, he has often proclaimed the fact that he owed less to the schools of rhetoric than to the walks of Academe: nor would he ever have developed such amazing fertility of talent, had he bounded his genius by the limits of the forum and not by the frontiers of nature herself.

But this leads me to another question as to which school of philosophy is like to prove of most service to oratory, although there are only a few that can be said to contend for this honour.

[24] nam in primis nos Epicurus a se ipse dimittit, qui fugere omnem disciplinam navigatione quam velocissima iubet. neque vero Aristippus, summum in voluptate corporis bonum ponens, ad hunc nos laborem hortetur. pyrrhon quidem quas in hoc opere habere partes potest? cui iudices esse, apud quos verba faciat, et reum, pro quo loquatur, et senatum, in quo sit dicenda sententia, non liquebit.

[24] For in the first place Epicurus banishes us from his presence without more ado, since he bids all his followers to fly from learning in the swiftest ship that they can find. Nor would Aristippus, who regards the highest good as consisting in physical pleasure, be likely to exhort us to the toils entailed by our study. And what part can Pyrrho have in the work that is before us? For he will have doubts as to whether there exist judges to address, accused to defend, or a senate where he can be called upon to speak his opinion.

[25] academiam quidam utilissimam credunt, quod mos in utramque partem disserendi ad exercitationem forensium causarum proxime accedat. adiiciunt loco probationis, quod ea praestantissimos in eloquentia viros ediderit. peripatetici studio quoque se quodam oratorio iactant; nam theses dicere exercitationis gratia fere est ab iis institutum. Stoici, sicut copiam nitoremque eloquentiae fere praeceptoribus suis defuisse concedant necesse est, ita nullos aut probare acrius aut concludere subtilius contendunt.

[25] Some authorities hold that the Academy will be the most useful school, on the ground that its habit of disputing on both sides of a question approaches most nearly to the actual practice of the courts. And by way of proof they add the fact that this school has produced speakers highly renowned for their eloquence. The Peripatetics also make it their boast that they have a form of

study which is near akin to oratory. For it was with them in the main that originated the practice of declaiming on general questions by way of exercise. The Stoics, though driven to admit that, generally speaking, their teachers have been deficient both in fullness and charm of eloquence, still contend that no men can prove more acutely or draw conclusions with greater subtlety than themselves.

[26] *sed haec inter ipsos, qui velut sacramento rogati vel etiam superstitione constricti nefas ducunt a suscepta semel persuasione discedere. oratori vero nihil est necesse in cuiusquam iurare leges.*

[26] But all these arguments take place within their own circle, for, as though they were tied by some solemn oath or held fast in the bonds of some superstitious belief, they consider that it is a crime to abandon a conviction once formed. On the other hand, there is no need for an orator to swear allegiance to any one philosophic code.

[27] *maius enim est opus atque praestantius, ad quod ipse tendit, et cuius est velut candidatus, si quidem est futurus cum vitae, tum etiam eloquentiae laude perfectus. quare in exemplum bene dicendi facundissimum quemque proponet sibi ad imitandum, moribus vero formandis quam honestissima praecepta rectissimamque ad virtutem viam deliget. exercitatione quidem utetur omni, sed tamen erit plurimus in maximis quibusque ac natura pulcherrimis.*

[27] For he has a greater and nobler aim, to which he directs all his efforts with as much zeal as if he were a candidate for office, since he is to be made perfect not only in the glory of a virtuous life, but in that of eloquence as well. He will consequently select as his models of eloquence all the greatest masters of oratory, and will choose the noblest precepts and the most direct road to virtue as the means for the formation of an upright character. He will neglect no form of exercise, but will devote special attention to those which are of the highest and fairest nature.

[28] *nam quae potest materia reperiri ad graviter copioseque dicendum magis abundans quam de virtute, de re publica, de providentia, de origine animorum, de amicitia? haec sunt, quibus mens pariter atque oratio insurgat, quae vere bona, quid mitiget metus, coerceat cupiditates, eximat nos opinionibus vulgi animumque caelestem erigat.*

[28] For what subject can be found more fully adapted to a rich and weighty eloquence than the topics of virtue, politics, providence, the origin of the soul and friendship? The themes which tend to elevate mind and language alike are questions such as what things are truly good, what means there are of assuaging fear, restraining the passions and lifting us and the soul that came from heaven clear of the delusions of the common herd.

[29] *neque ea solum, quae talibus disciplinis continentur, sed magis etiam, quae*

sunt tradita antiquitus dicta ac facta praeclare, et nosse et animo semper agitare conveniet. quae profecto nusquam plura maioraque quam in nostrae civitatis monumentis reperientur.

[29] But it is desirable that we should not restrict our study to the precepts of philosophy alone. It is still more important that we should know and ponder continually all the noblest sayings and deeds that have been handed down to us from ancient times. And assuredly we shall nowhere find a larger or more remarkable store of these than in the records of our own country.

[30] An fortitudinem, iustitiam, fidem, continentiam, frugalitatem, contemptum doloris ac mortis melius alii docebunt quam Fabricii, Curii, Reguli, Decii, Mucii aliique innumerabiles? quantum enim Graeci praeceptis valent, tantum Romani, quod est maius, exemplis.

[30] Who will teach courage, justice, loyalty, self-control, simplicity, and contempt of grief and pain better than men like Fabricius, Curius, Regulus, Decius, Mucius and countless others? For if the Greeks bear away the palm for moral precepts, Rome can produce more striking examples of moral performance, which is a far greater thing.

[31] tantum quod non cognitis ille rebus adqueverit, qui non modo proximum tempus lucemque praesentem intueri satis credat, sed omnem posteritatis memoriam spatium vitae honestae et curriculum laudis existimet. hinc mihi ille iustitiae haustus bibat, hinc sumptam libertatem in causis atque consiliis praestet. neque erit perfectus orator, nisi qui honeste dicere et sciet et audebit.

[31] But the man who does not believe that it is enough to fix his eyes merely on his own age and his own transitory life, but regards the space allotted for an honourable life and the course in which glory's race is run as conditioned solely by the memory of posterity, will not rest content with a mere knowledge of the events of history. No, it is from the thought of posterity that he must inspire his soul with justice and derive that freedom of spirit which it is his duty to display when he pleads in the courts or gives counsel in the senate. No man will ever be the consummate orator of whom we are in quest unless he has both the knowledge and the courage to speak in accordance with the promptings of honour.

3. iuris quoque civilis necessaria huic viro scientia est et morum ac religionum eius rei publicae, quam capesset. nam qualis esse suasor in consiliis publicis privatisve poterit tot rerum, quibus praecipue civitas continetur, ignarus? quo autem modo patronum se causarum non falso dixerit, qui, quod est in causis potentissimum, sit ab altero petiturus, paene non dissimilis iis, qui poetarum scripta pronuntiant?

3. Our orator will also require a knowledge of civil law and of the custom and religion of the state in whose life he is to bear his part. For how will he be

able to advise either in public or in private, if he is ignorant of all the main elements that go to make the state? How can he truthfully call himself an advocate if he has to go to others to acquire that knowledge which is all-important in the courts? He will be little better than if he were a reciter of the poets.

[2] nam quodammodo mandata perferet, et ea, quae sibi a iudice credi postulaturus est, aliena fide dicet, et ipse litigantium auxiliator egebit auxilio. quod ut fieri nonnunquam minore incommodo possit, cum domi praecepta et composita et sicut cetera, quae in causa sunt, inde discendo cognita ad iudicem perfert, quid fiet in iis quaestionibus, quae subito inter ipsas actiones nasci solent? non deformiter respectet et inter subsellia minores advocatos interroget?

[2] For he will be a mere transmitter of the instructions that others have given him, it will be on the authority of others that he propounds what he asks the judge to believe, and he whose duty it is to succour the litigant will himself be in need of succour. It is true that at times this may be effected with but little inconvenience, if what he advances for the edification of the judge has been taught him and composed in the seclusion of his study and learnt by heart there like other elements of the case. But what will he do, when he is confronted by unexpected problems such as frequently arise in the actual course of pleading? Will he not disgrace himself by looking round and asking the junior counsel who sit on the benches behind him for advice?

[3] potest autem satis diligenter accipere, quae tum audiet, cum ei dicenda sunt, aut fortiter adfirmare aut ingenue pro suis dicere? possit in actionibus: quid fiet in altercatione, ubi occurrendum continuo, nec libera ad discendum mora est? Quid, si forte peritus iuris ille non aderit? quid, si quis non satis in ea re doctus falsum aliquid subiecerit? hoc enim est maximum ignorantiae malum, quod credit eum scire qui moneat.

[3] Can he hope to get a thorough grasp of such information at the very moment when he is required to produce it in his speech? Can he make his assertions with confidence or speak with native simplicity as though his arguments were his own? Grant that he may do so in his actual speech. But what will he do in a debate, when he has continually to meet fresh points raised by his opponent and is given no time to learn up his case? What will do, if he has no legal expert to advise him or if his prompter through insufficient knowledge of the subject provides him with information that is false? It is the most serious drawback of such ignorance, that he will always believe that his adviser knows what he is talking about.

[4] neque ego sum nostri moris ignarus oblitusve eorum, qui velut ad arculas sedent et tela agentibus subministrant, neque idem Graecos quoque nescio factitasse, unde nomen his pragmaticorum datum est. sed loquor de oratore,

qui non clamorem modo suum causis, sed omnia, quae profutura sunt, debet.

[4] I am not ignorant of the generally prevailing custom, nor have I forgotten those who sit by our store-chests and provide weapons for the pleader: I know too that the Greeks did likewise: hence the name of *pragmaticus* which was bestowed on such persons. But I am speaking of an orator, who owes it as a duty to his case to serve it not merely by the loudness of his voice, but by all other means that may be of assistance to it.

[5] itaque eum nec inutilem, si ad horam forte constiterit, neque in testationibus faciendis esse imperitum velim. quis enim potius praeparabit ea quae, cum aget, esse in causa velit? nisi forte imperatorem quis idoneum credit in proeliis quidem strenuum et fortem et omnium, quae pugna poscit, artificem, sed neque delectus agere nec copias contrahere atque instruere nec prospicere commeatus nec locum capere castris scientem; prius est enim certe parare bella quam gerere.

[5] Consequently I do not wish my orator to be helpless, if it so chance that he puts in an appearance for the preliminary proceedings to which the hour before the commencement of the trial is allotted, or to be unskilful in the preparation and production of evidence. For who, sooner than himself, should prepare the points which he wishes to be brought out when he is pleading? You might as well suppose that the qualifications of a successful general consist merely in courage and energy in the field of battle and skill in meeting all the demands of actual conflict, while suffering him to be ignorant of the methods of levying troops, mustering and equipping his forces, arranging for supplies or selecting a suitable position for his camp, despite the fact that preparation for war is an essential preliminary for its successful conduct.

[6] atqui simillimus huic sit advocatus, si plura, quae ad vincendum valent, aliis reliquerit, cum praesertim hoc, quod est maxime necessarium, nec tam sit arduum, quam procul intuentibus fortasse videatur. namque omne ius, quod est certum, aut scripto aut moribus constat; dubium aequitatis regula examinandum est.

[6] And yet such a general would bear a very close resemblance to the advocate who leaves much of the detail that is necessary for success to the care of others, more especially in view of the fact that this, the most necessary element in the management of a case, is not as difficult as it may perhaps seem to outside observers. For every point of law, which is certain, is based either on written law or accepted custom: if, on the other hand, the point is doubtful, it must be examined in the light of equity.

[7] quae scripta sunt aut posita in more civitatis, nullam habent difficultatem, cognitionis sunt enim, non inventionis; at quae consultorum responsis explicantur, aut in uerborum interpretatione sunt posita aut in recti pravique discrimine. vim cuiusque vocis intelligere aut commune prudentium est aut

proprium oratoris; aequitas optino cuique notissima.

[7] Laws which are either written or founded on accepted custom present no difficulty, since they call merely for knowledge and make no demand on the imagination. On the other hand, the points explained in the rulings of the legal experts turn either on the interpretation of words or on the distinction between right and wrong. To understand the meaning of each word is either common to all sensible men or the special possession of the orator, while the demands of equity are known to every good man.

[8] nos porro et bonum virum et prudentem in primis oratorem putamus, qui cum se ad id, quod est optimum natura, direxerit, non magnopere commovebitur, si quis ab eo consultus dissentiet; cum ipsis illis diversas inter se opiniones tueri concessum sit. sed etiam, si nosse, quid quisque senserit, volet, lectionis opus est, qua nihil est in studiis minus laboriosum.

[8] Now I regard the orator above all as being a man of virtue and good sense, who will not be seriously troubled, after having devoted himself to the study of that which is excellent by nature, if some legal expert disagrees with him; for even they are allowed to disagree among themselves. But if he further wishes to know the views of everyone, he will require to read, and reading is the least laborious of all the tasks that fall to the student's lot.

[9] quodsi plerique, desperata facultate agendi, ad discendum ius declinaverunt, quam id scire facile est oratori, quod discunt qui sua quoque confessione oratores esse non possunt? verum et M. Cato cum in dicendo praestantissimus, tum iuris idem fuit peritissimus, et Scaevolae Servioque Sulpicio concessa est etiam facundiae virtus.

[9] Moreover, if the class of legal experts is as a rule drawn from those who, in despair of making successful pleaders, have taken refuge with the law, how easy it must be for an orator to know what those succeed in learning, who by their own confession are incapable of becoming orators! But Marcus Cato was at once a great orator and an expert lawyer, while Scaevola and Servius Sulpicius were universally allowed to be eloquent as well.

[10] et M. Tullius non modo inter agendum nunquam est destitutus scientia iuris, sed etiam componere aliqua de eo coeperat, ut appareat posse oratorem non discendo tantum iuri vacare, sed etiam docendo.

[10] And Cicero not merely possessed a sufficient supply of legal knowledge to serve his needs when pleading, but actually began to write on the subject, so that it is clear that an orator has not merely time to learn, but even to teach the law.

[11] verum ea, quae de moribus excolendis studioque iuris praecipimus, ne quis eo credat reprehendenda, quod multos cognovimus, qui taedio laboris, quem ferre tendentibus ad eloquentiam necesse est, confugerint ad haec deverticula

desidia. quorum alii se ad album ac rubricas transtulerunt et formularii vel, ut Cicero ait, leguleii quidam esse maluerunt, tanquam utiliora eligentes ea, quorum solam facilitatem sequebantur;

[11] Let no one, however, regard the advice I have given as to the attention due to the development of character and the study of the law as being impugned by the fact that we are familiar with many who, because they were weary of the toil entailed on those who seek to scale the heights of eloquence, have betaken themselves to the study of law as a refuge for their indolence. Some of these transfer their attention to the praetor's edicts or the civil law, and have preferred to become specialists in *formulae*, or legalists, as Cicero calls them, on the pretext of choosing a more useful branch of study, whereas their real motive was its comparative easiness.

[12] alii pigritiae arrogantioris, qui subito fronte conficta immissaque barba, veluti despexissent oratoria praecepta, paulum aliquid sederunt in scholis philosophorum, ut deinde in publico tristes, domi dissoluti captarent auctoritatem contemptu ceterorum. philosophia enim simulari potest, eloquentia non potest.

[12] Others are the victims of a more arrogant form of sloth; they assume a stern air and let their beards grow, and, as though despising the precepts of oratory, sit for a while in the schools of the philosophers, that, by an assumption of a severe mien before the public gaze and by an affected contempt of others they may assert their moral superiority, while leading a life of debauchery at home. For philosophy may be counterfeited, but eloquence never.

4. in primis vero abundare debet orator exemplorum copia cum veterum, tum etiam novorum, adeo ut non ea modo, quae conscripta sunt historiis aut sermonibus velut per manus tradita, quaeque cotidie aguntur, debeat nosse, verum ne ea quidem, quae sunt a clarioribus poetis ficta, negligere.

4. Above all, our orator should be equipped with a rich store of examples both old and new: and he ought not merely to know those which are recorded in history or transmitted by oral tradition or occur from day to day, but should not neglect even those fictitious examples invented by the great poets.

[2] nam illa quidem priora aut testimoniorum aut etiam iudicatorum obtinent locum, sed haec quoque aut vetustatis fide tuta sunt aut ab hominibus magnis praeceptorum loco ficta creduntur. sciat ergo quam plurima; unde etiam senibus auctoritas maior est, quod plura nosse et vidisse creduntur, quod Homerus frequentissime testatur. sed non est expectanda ultima aetas, cum studia praestent ut, quantum ad cognitionem pertinet rerum, etiam praeteritis saeculis vixisse videamur.

[2] For while the former have the authority of evidence or even of legal

decisions, the latter also either have the warrant of antiquity or are regarded as having been invented by great men to serve as lessons to the world. He should therefore be acquainted with as many examples as possible. It is this which gives old age so much authority, since the old are believed to have a larger store of knowledge and experience, as Homer so frequently bears witness. But we must not wait till the evening of our days, since study has this advantage that, as far as knowledge of facts is concerned, it is capable of giving the impression that we have lived in ages long gone by.

5. haec sunt, quae me redditurum promiseram, instrumenta non artis, ut quidam putaverunt, sed ipsius oratoris. haec arma habere ad manum, horum scientia debet esse succinctus, accedente verborum figurarumque facili copia et inventionis ratione et disponendi usu et memoriae firmitate et actionis gratia. sed plurimum ex his valet animi praestantia, quam nec metus frangat nec adclamatio terreat nec audientium auctoritas ultra debitam reverentiam tardet.

5. Such are the instruments of which I promised to give account, the instruments, that is, not merely of the art, as some have held, but of the orator himself. These are the weapons that he should have ready to his hand, this the knowledge with which he must be equipped, while it must be supplemented by a ready store of words and figures, power of imagination, skill in arrangement, retentiveness of memory and grace of delivery. But of all these qualities the highest is that loftiness of soul which fear cannot dismay nor uproar terrify nor the authority of the audience fetter further than the respect which is their due.

[2] nam ut abominanda sunt contraria his vitia confidentiae, temeritatis, improbitatis, arrogantiae, ita citra constantiam, fiduciam, fortitudinem nihil ars, nihil studium, nihil profectus ipse profuerit, ut si des arma timidus et imbellibus. invitus mehercule dico, quoniam et aliter accipi potest, ipsam verecundiam, vitium quidem, sed amabile et quae virtutes facillime generet, esse interim adversam, multisque in causa fuisse, ut bona ingenii studiique in lucem non prolata situ quodam secreti consumerentur.

[2] For although the vices which are its opposites, such as arrogance, temerity, impudence and presumption, are all positively obnoxious, still without constancy, confidence and courage, art, study and proficiency will be of no avail. You might as well put weapons into the hands of the unwarlike and the coward. It is indeed with some reluctance, as it may give rise to misunderstanding, that I say that even modesty (which, though a fault in itself, is an amiable failing which may easily be the mother of virtues) is on occasion an impediment and has frequently caused the fruits of genius and study to consume away in the mildew of obscurity merely because they have never been displayed to the public day.

[3] sciat autem, si quis haec forte minus adhuc peritus distinguendi vim cuiusque verbi leget, non probitatem a me reprehendi, sed verecundiam, quae est timor quidam reducens animum ab iis quae facienda sunt; inde confusio et coepta paenitentia et subitum silentium. quis porro dubitet vitiis adscribere affectum, propter quem facere honeste pudet?

[3] But in case any of my readers should still lack skill to distinguish the precise meaning of each word, I would have him know that it is not honest shame that is the object of my criticism, but that excess of modesty which is really a form of fear deterring the soul from doing what is its duty to do, and resulting in confusion of mind, regret that our task was ever begun, and sudden silence. For who can hesitate to give the name of fault to a feeling that makes a man ashamed to do what is right?

[4] neque ego rursus nolo eum, qui sit dicturus, et sollicitum surgere et colore mutari et periculum intelligere; quae si non accident, etiam simulanda erunt. sed intellectus hic sit operis, non metus, moveamurque, non concidamus. optima est autem emendatio verecundiae fiducia, et quamlibet imbecilla frons magna conscientia sustinetur.

[4] On the other hand, I am not unwilling that the man who has got to make a speech should show signs of nervousness when he rises to his feet, should change colour and make it clear that he feels the risks of his position: indeed, if these symptoms do not occur naturally, it will be necessary to simulate them. But the feeling that stirs us should be due to the realisation of the magnitude of our task and not to fear: we should be moved, but not to the extent of collapsing. But the best remedy for such excess of modesty is confidence: however great our natural timidity of mien, we shall find strength and support in the consciousness of the nobility of our task.

[5] sunt et naturalia, ut supra dixi, quae tamen et cura iuvantur, instrumenta, vox, latus, decor; quae quidem tantum valent, ut frequenter famam ingenii faciant. habuit oratores aetas nostra copiosiores, sed, cum diceret, eminere inter aequales Trachalus videbatur. ea corporis sublimitas erat, is ardor oculorum, frontis auctoritas, gestus praestantia, vox quidem non, ut Cicero desiderat, paene tragoedorum, sed super omnes, quos ego quidem audierim, tragoedos.

[5] There are also those natural instruments which, as I mentioned above, may be further improved by care, such as voice, lungs and grace of carriage and movement, all of which are of such importance as frequently to give a speaker the reputation for talent. Our own age has had orators of greater resource and power, but Trachalus appeared to stand out above all his contemporaries, when he was speaking. Such was the elect produced by his lofty stature, the fire of his eye, the dignity of his brow, the excellence of his gesture, coupled with a voice which was not almost a tragedian's, as Cicero demands that it

should be, but surpassed the voice of all tragedians that I have ever heard.

[6] certe cum in basilica Iulia diceret primo tribunal, quattuor autem iudicia, ut moris est, cogerentur, atque omnia clamoribus fremerent, et auditum eum et intellectum et, quod agentibus ceteris contumeliosissimum fuit, laudatum quoque ex quattuor tribunalibus memini. sed hoc votum est et rara felicitas; quae si non adsit, sane sufficiat ab iis, quibus quis dicit, audiri. talis esse debet orator, haec scire.

[6] At any rate I remember that, when he was speaking in the Basilica Julia before the first tribunal, and the four panels of judges were assembled as usual and the whole building was full of noise, he could still be heard and understood and applauded from all four tribunals at once, a fact which was not complimentary to the other pleaders. But gifts like these are such as all may pray for and few are happy enough to attain. And if we cannot achieve such fortune, we must even be content to be heard by the court which we are addressing. Such then should the orator be, and such are the things which he should know.

6. agendi autem initium sine dubio secundum vires cuiusque sumendum est. neque ego annos definiam, cum Demosthenen puerum admodum actiones pupillares habuisse manifestum sit, Calvus, Caesar, Pollio multum ante quaestoriam omnes aetatem gravissima iudicia susceperint, praetextatos egisse quosdam sit traditum, Caesar Augustus duodecim natus annos aviam pro rostris laudaverit.

6. The age at which the orator should begin to plead will of course depend on the development of his strength. I shall not specify it further, since it is clear that Demosthenes pleaded against his guardians while he was still a mere boy, Calvus, Caesar and Pollio all undertook cases of the first importance before they were old enough to be qualified for the quaestorship, others are said to have pleaded while still wearing the garb of boyhood, and Augustus Caesar delivered a funeral oration over his grandmother from the public rostra when he was only twelve years old.

[2] modus mihi videtur quidam tenendus, ut neque praepropere destringatur immatura frons et, quidquid est illud adhuc acerbum, proferatur; nam inde et contemptus operis innascitur et fundamenta iaciuntur impudentiae et, quod est ubicunque perniciosissimum, praevenit vires fiducia.

[2] In my opinion we should aim at a happy mean. The unripe brow of boyhood should not be prematurely robbed of its ingenuous air nor should the young speaker's powers be brought before the public while yet unformed, since such a practice leads to a contempt for study, lays the foundations of impudence and induces a fault which is pernicious in all departments of life, namely, a self-confidence that is not justified by the speaker's resources.

[3] nec rursus differendum est tirocinium in senectutem; nam cotidie metus crescit, maiusque fit semper quod ausuri sumus et, dum deliberamus quando incipiendum sit, incipere iam serum est. quare fructum studiorum viridem et adhuc dulcem promi decet, dum et veniae spes est et paratus favor et audere non dedecet et, si quid desit operi, supplet aetas, et, si qua sunt dicta iuveniliter, pro indole accipiuntur:

[3] On the other hand, it is undesirable to postpone the apprenticeship of the bar till old age: for the fear of appearing in public grows daily and the magnitude of the task on which we must venture continually increases and we waste time deliberating when we should begin, till we find it is too late to begin at all. Consequently it is desirable that the fruit of our studies should be brought before the public eye while it is still fresh and sweet, while it may hope for indulgence and be secure of a kindly disposition in the audience, while boldness is not unbecoming and youth compensates for all defects and boyish extravagance is regarded as a sign of natural vigour.

[4] ut totus ille Ciceronis pro Sexto Roscio locus: quid enim tam commune quam spiritus vivis, terra mortuis, mare fluctuantibus, litus eiectis? quae cum sex et viginti natus annos summis audientium clamoribus dixerit, defervisse tempore et annis liquata iam senior idem fatetur. et hercule quantumlibet secreta studia contulerint, est tamen proprius quidam fori profectus, alia lux, alia veri discriminis facies, plusque, si separet, usus sine doctrina quam citra usum doctrina valet.

[4] Take for example the whole of the well-known passage from Cicero's defence of Sextus Roscius: "For what is more common than the air to the living, than the earth to the dead, than the sea to mariners or the shore to shipwrecked men?" etc. This passage was delivered at the age of twenty-six amid loud applause from the audience, but in later years he acknowledges that the ferment of youth has died down and his style been clarified with age. And, indeed, however much private study may contribute to success, there is still a peculiar proficiency that the courts alone can give: for there the atmosphere is changed and the reality of the peril puts a different complexion on things, while, if it is impossible to combine the two, practice without theory is more useful than theory without practice. Consequently,

[5] ideoque nonnulli senes in schola facti stupent novitate, cum in iudicia venerunt, et omnia suis exercitationibus similia desiderant. at illic et iudex tacet et adversarius obstrepit et nihil temere dictum perit et, si quid tibi ipse sumas, probandum est, et laboratam congestamque dierum ac noctium studio actionem aqua deficit, et omisso magna semper flandi tumore in quibusdam causis loquendum est; quod illi diserti minime sciunt.

[5] some who have grown old in the schools lose their heads when confronted by the novelty of the law courts and wish that it were possible to reproduce all

the conditions under which they delivered their exercises. But there sits the judge in silence, their opponent bellows at them, no rash utterance passes unnoticed and all assumptions must be proved, the clock cuts short the speech that has been laboriously pieced together at the cost of hours of study both by day and night, and there are certain cases which require simplicity of language and the abandonment of the perpetual bombast of the schools, a fact which these fluent fellows completely fail to realise.

[6] itaque nonnullos reperias, qui sibi eloquentiores videantur, quam ut causas agant. ceterum illum, quem iuvenem tenerisque adhuc viribus nitentem in forum deduximus, et incipere quam maxime facili ac favorabili causa velim, ferarum ut catuli molliore praeda saginantur, et non utique ab hoc initio continuare operam et ingenio adhuc alendo callum inducere, sed iam scientem, quid sit pugna, et in quam rem studendum sit, refici atque renovari.

[6] And so you will find some persons who regard themselves as too eloquent to speak in the courts. On the other hand, the man, whom we conducted to the forum while still young and in the charm of immaturity, should begin with as easy and favourable a case as may be (just as the cubs of wild beasts are brought up to start with on softer forms of prey), and should not proceed straight from this commencement to plead case after case without a break, or cause his talents to set and harden while they still require nourishment; on the contrary, as soon as he has come to realise the nature of the conflicts in which he will have to engage and the object to which his studies should be directed, he should take an interval of rest and refreshment. Thus,

[7] sic et tirocinii metum, dum facilius est audere, transient, nec audendi facilitate usque ad contemptum operis adduxerit. usus est hac ratione M. Tullius, et cum iam clarum meruisset inter patronos, qui tum erant, nomen, in Asiam navigavit seque et aliis sine dubio eloquentiae ac sapientiae magistris, sed praecipue tamen Apollonio Moloni, quem Romae quoque audierat, Rhodi rursus formandum ac velut recoquendum dedit. tum dignum operae pretium venit, cum inter se congruunt praecepta et experimenta.

[7] at an age to which boldness is still natural, he will find it easy to get over the timidity which invariably accompanies the period of apprenticeship, and will not, on the other hand, carry his boldness so far as to lead him to despise the difficulties of his task. This was the method employed by Cicero: for when he had already won a distinguished position at the bar of his day, he took ship to Asia and there studied under a number of professors of philosophy and rhetoric, but above all under Apollonius Molon, whose lectures he had attended at Rome and to whom he now at Rhodes entrusted the refashioning and recasting of his style. It is only when theory and practice are brought into a perfect harmony that the orator reaps the reward of all his study.

7. cum satis in omni certamine virium fecerit, prima ei cura in suscipiendis

causis erit; in quibus defendere quidem reos profecto quam facere vir bonus malet, non tamen ita nomen ipsum accusatoris horrebit, ut nullo neque publico neque privato duci possit officio, ut aliquem ad reddendam rationem vitae vocet. nam et leges ipsae nihil valeant, nisi actoris idonea voce munitae; et si poenas scelerum expetere fas non est, prope est ut scelera ipsa permissa sint, et licentiam malis dari certe contra bonos est.

7. When our orator has developed his strength to such a pitch that it is equal to every kind of conflict in which he may be called upon to bear his part, his first consideration should be to exercise care in the choice of the cases which he proposes to undertake. A good man will undoubtedly prefer defence to prosecution, but he will not have such a rooted objection to the task of accuser as to disregard his duty towards the state or towards individuals and refuse to call any man to render an account of his way of life. For the laws themselves would be powerless without the assistance of advocates equal to the task of supporting them; and to regard it as a sin to demand the punishment of crime is almost equivalent to the sanctioning of crime, while it is certainly contrary to the interest of the good to give the wicked free leave to work their will.

[2] quare neque sociorum querelas nec amici vel propinqui necem nec erupturas in rem publicam conspirationes inultas patietur orator, non poenae nocentium cupidus, sed emendandi vitia corrigendique mores. nam qui ratione traduci ad meliora non possunt, solo metu continentur.

[2] Therefore, our orator will not suffer the complaints of our allies, the death of friends or kinsmen, or conspiracies that threaten the common weal to go unavenged, while his conduct will be governed not by a passion to secure the punishment of the guilty, but by the desire to correct vice and reform morals. For fear is the only means of restraining those who cannot be led to better ways by the voice of reason.

[3] itaque ut accusatoriam vitam vivere et ad deferendos reos praemio duci proximum latrocinio est, ita pestem intestinam propulsare cum propugnatoribus patriae comparandum. ideoque principes in re publica viri non detrectaverunt hanc officii partem, creditique sunt etiam clari iuvenes obsidem rei publicae dare malorum civium accusationem, quia nec odisse improbos nec similitates provocare nisi ex fiducia bonae mentis videbantur;

[3] Consequently, while to devote one's life to the task of accusation, and to be tempted by the hope of reward to bring the guilty to trial is little better than making one's living by highway robbery, none the less to rid one's country of the pests that gnaw its vitals is conduct worthy of comparison with that of heroes, who champion their country's cause in the field of battle. For this reason men who were leaders of the state have not refused to undertake this portion of an orator's duty, and even young men of high rank have been regarded as giving their country a pledge of their devotion by accusing bad

citizens, since it was thought that their hatred of evil and their readiness to incur enmity were proofs of their confidence in their own rectitude.

[4] idque cum ab Hortensio, Lucullis, Sulpicio, Cicerone, Caesare, plurimis aliis, tum ab utroque Catone factum est, quorum alter appellatus est sapiens, alter nisi creditur fuisse, vix scio, cui reliquerit huius nominis locum. neque defendet omnis orator idem, portumque illum eloquentiae suae salutarem non etiam piratis patefaciet duceturque in advocacionem maxime causa.

[4] Such action was taken by Hortensius, the Luculli, Sulpicius, Cicero, Caesar and many others, among them both the Catos, of whom one was actually called the Wise, while if the other is not regarded as wise, I do not know of any that can claim the title after him. On the other hand, this same orator of ours will not defend all and sundry: that haven of safety which his eloquence provides will never be opened to pirates as it is to others, and he will be led to undertake cases mainly by consideration of their nature.

[5] quoniam tamen omnes, qui non improbe litigabunt, quorum certe bona pars est, sustinere non potest unus, aliquid et commendantium personis dabit et ipsorum qui iudicio decernent, ut optimi cuiusque voluntate moveatur; namque hos et amicissimos habebit vir bonus.

[5] However, since one man cannot undertake the cases of all litigants who are not, as many undoubtedly are, dishonest, he will be influenced to some extent by the character of the persons who recommend clients to his protection and also by the character of the litigants themselves, and will allow himself to be moved by the wishes of all virtuous men; for a good man will naturally have such for his most intimate friends.

[6] summovendum vero est utrumque ambitus genus vel potentibus contra humiles venditandi operam suam vel illud etiam iactantius minores utique contra dignitatem attollendi. non enim fortuna causas vel iustas vel improbas facit. neque vero pudor obstat, quo minus susceptam, cum melior videretur, litem cognita inter discendum iniquitate dimittat, cum prius litigatori dixerit verum.

[6] But he must put away from him two kinds of pretentious display, the one consisting in the officious proffering of his services to the powerful against those of meaner position, and the other, which is even more obtrusive, in deliberately supporting inferiors against those of high degree. For a case is not rendered either just or the reverse by the social position of the parties engaged. Nor, again, will a sense of shame deter him from throwing over a case which he has undertaken in the belief that it had justice on its side, but which his study of the facts has shown to be unjust, although before doing so he should give his client his true opinion on the case.

[7] nam et in hoc maximum, si aequi iudices sumus, beneficium est, ut non

fallamus vana spe litigantem. neque est dignus opera patroni, qui non utitur consilio, et certe non convenit ei, quem oratorem esse volumus, iniusta tueri scientem. nam si ex illis, quas supra diximus, causis falsum tuebitur, erit tamen honestum quod ipse faciet.

[7] For, if we judge aright, there is no greater benefit that we can confer on our clients than this, that we should not cheat them by giving them empty hopes of success. On the other hand, no client that does not take his advocate into his counsel deserves that advocate's assistance, and it is certainly unworthy of our ideal orator that he should wittingly defend injustice. For if he is led to defend what is false by any of the motives which I mentioned above, his own action will still be honourable.

[8] gratisne ei semper agendum sit, tractari potest. quod ex prima statim fronte diiudicare imprudentium est. nam quis ignorat, quin id longe sit honestissimum ac liberalibus disciplinis et illo, quem exigimus, animo dignissimum, non vendere operam nec elevare tanti beneficii auctoritatem, cum pleraque hoc ipso possint videri vilia, quod pretium habent?

[8] It is an open question whether he should never demand a fee for his services. To decide the question at first sight would be the act of a fool. For we all know that by far the most honourable course, and the one which is most in keeping with a liberal education and that temper of mind which we desiderate, is not to sell our services nor to debase the value of such a boon as eloquence, since there are not a few things which come to be regarded as cheap, merely because they have a price set upon them.

[9] caecis hoc, ut aiunt, satis clarum est, nec quisquam, qui sufficientia sibi (modica autem haec sunt) possidebit, hunc quaestum sine crimine sordium fecerit. at si res familiaris amplius aliquid ad usus necessarios exigit, secundum omnium sapientium leges patietur sibi gratiam referri, cum et Socrati collatum sit ad victum, et Zeno, Cleanthes, Chrysippus mercedes a discipulis acceptaverint.

[9] This much even the blind can see, as the saying is, and no one who is the possessor of sufficient wealth to satisfy his needs (and that does not imply any great opulence) will seek to secure an income by such methods without laying himself open to the charge of meanness. On the other hand, if his domestic circumstances are such as to require some addition to his income to enable him to meet the necessary demands upon his purse, there is not a philosopher who would forbid him to accept this form of recompense for his services, since collections were made even on behalf of Socrates, and Zeno, Cleanthes and Chrysippus took fees from their pupils.

[10] neque enim video, quae iustior acquirendi ratio quam ex honestissimo labore et ab iis, de quibus optime meruerint, quique, si nihil invicem praestent, indigni fuerint defensione. quod quidem non iustum modo, sed necessarium

etiam est, cum haec ipsa opera tempusque omne alienis negotiis datum facultatem aliter acquirendi recidant.

[10] Nor can I see how we can turn a more honest penny than by performance of the most honourable of tasks and by accepting money from those to whom we have rendered the most signal services and who, if they made no return for what we have done for them, would show themselves undeserving to have been defended by us. Nay, it is not only just, but necessary that this should be so, since the duties of advocacy and the bestowal of every minute of our time on the affairs of others deprive us of all other means of making money.

[11] sed tum quoque tenendus est modus, ac plurimum refert et a quo accipiat et quantum et quo usque. paciscendi quidem ille piraticus mos et imponentium periculis pretia procul abominanda negotiatio etiam a mediocriter improbis aberit, cum praesertim bonos homines bonasque causas tuenti non sit metuendus ingratus; quodsi sit futurus, malo tamen ille peccet.

[11] But we must none the less observe the happy mean, and it makes no small difference from whom we take payment, what payment we demand, and how long we continue to do so. As for the piratical practice of bargaining and the scandalous traffic of those who proportion their fees to the peril in which their would-be client stands, such a procedure will be eschewed even by those who are more than half scoundrels, more especially since the advocate who devotes himself to the defence of good men and worthy causes will have nothing to fear from ingratitude. And even if a client should prove ungrateful, it is better that he should be the sinner and not our orator.

[12] nihil ergo acquirere volet orator ultra quam satis erit; ac ne pauper quidem tanquam mercedem accipiet, sed mutua benivolentia utetur, cum sciat se tanto plus praestitisse. non enim, quia venire hoc beneficium non oportet, oportet perire. denique ut gratus sit ad eum magis pertinet qui debet.

[12] To conclude, then, the orator will not seek to make more money than is sufficient for his needs, and even if he is poor, he will not regard his payment as a fee, but rather as the expression of the principle that one good turn deserves another, since he will be well aware that he has conferred far more than he receives. For it does not follow that because his services ought not to be sold, they should therefore be unremunerated. Finally, gratitude is primarily the business of the debtor.

8. proxima discendae causae ratio, quod est orationis fundamentum. neque enim quisquam ingenio tam tenui reperietur, qui, cum omnia quae sunt in causa diligenter cognoverit, ad docendum certe iudicem non sufficiat.

8. We have next to consider how a case should be studied, since such study is the foundation of oratory. There is no one so destitute of all talent as, after making himself thoroughly familiar with all the facts of his case, to be unable

at least to communicate those facts to the judge.

[2] sed eius rei paucissimis cura est. nam ut taceam de negligentibus, quorum nihil refert, ubi litium cardo vertatur, dum sint quae vel extra causam ex personis aut communi tractatu locorum occasionem clamandi largiantur, aliquos et ambitio pervertit, qui partim tanquam occupati semperque aliud habentes, quod ante agendum sit, pridie ad se venire litigatorem aut eodem matutino iubent, nonnunquam etiam inter ipsa subsellia didicisse se gloriantur;

[2] But those who devote any serious attention to such study are very few indeed. For, to say nothing of those careless advocates who are quite indifferent as to what the pivot of the whole case may be, provided only there are points which, though irrelevant to the case, will give them the opportunity of declaiming in thunderous tones on the character of persons involved or developing some commonplace, there are some who are so perverted by vanity that, on the oft-repeated pretext that they are occupied by other business, they bid their client come to them on the day preceding the trial or early on the morning of the day itself, and sometimes even boast that they learnt up their case while sitting in court;

[3] partim iactantia ingenii, ut res cito accepisse videantur, tenere se et intelligere prius paene quam audiant mentiti, cum multa et diserte summisque clamoribus, quae neque ad iudicem neque ad litigatorem pertineant, decantaverunt, bene sudantes beneque comitati per forum reducuntur.

[3] while others by way of creating an impression of extraordinary talent, and to make it seem that they are quick in the uptake, pretend that they have grasped the facts of the case and understand the situation almost before they have heard what it is, and then after chanting out some long and fluent discourse which has nought to do either with the judge or their client, but awakens the clamorous applause of the audience, they are escorted home through the forum, perspiring at every pore and attended by flocks of enthusiastic friends.

[4] ne illas quidem tulerim delicias eorum, qui doceri amicos suos iubent, quanquam minus mali est, si illi saltem recte discant recteque doceant. sed quis discet tam bene quam patronus? quomodo autem sequester ille et media litium manus et quidam interpres impendet aequo animo laborem in alienas actiones, cum dicturis tanti suae non sint?

[4] Further, I would not even tolerate the affectation of those who insist that their friends, and not themselves, should be instructed in the facts of the case, though this is a less serious evil, if the friends can be relied upon to learn and supply the facts correctly. But who can give such effective study to the case as the advocate himself? How can the intermediary, the go-between or interpreter, devote himself whole-heartedly to the study of other men's cases,

when those who have got to do the actual pleading do not think it worth while to get up their own?

[5] *pessimae vero consuetudinis libellis esse contentum, quos componit aut litigator qui confugit ad patronum, quia liti ipse non sufficit, aut aliquis ex eo genere advocatorum, qui se non posse agere confitentur, deinde faciunt id quod est in agendo difficillimum. nam qui iudicare, quid dicendum, quid dissimulandum, quid declinandum, mutandum, fingendum etiam sit, potest, cur non sit orator, quando, quod difficilius est, oratorem facit?*

[5] On the other hand, it is a most pernicious practice to rest content with a written statement of the case composed either by the litigant who betakes himself to an advocate because he finds that his own powers are not equal to the conduct of his case, or by some member of that class of legal advisers who admit that they are incapable of pleading, and then proceed to take upon themselves the most difficult of all the tasks that confront the pleader. For if a man is capable of judging what should be said, what concealed, what avoided, altered or even invented, why should he not appear as orator himself, since he performs the far more difficult feat of making an orator?

[6] *hi porro non tantum nocerent, si omnia scriberent uti gesta sunt. nunc consilium et colores adiiciunt et aliqua peiora veris, quae plerique cum acceperunt, mutare nefas habent et velut themata in scholis posita custodiunt. deinde deprehenduntur et causam, quam discere ex suis litigatoribus noluerunt, ex adversariis discunt.*

[6] Such persons would not, however, do so much harm if they would only put down all the facts as they occurred. But as it is, they add suggestions of their own, put their own construction on the facts and insert inventions which are far more damaging than the unvarnished truth. And then the advocate as a rule, on receiving the document, regards it as a crime to make any alteration, and keeps to it as faithfully as if it were a theme set for declamation in the schools. The sequel is that they are tripped up and have to learn from their opponents the case which they refused to learn from their own clients.

[7] *liberum igitur demus ante omnia iis, quorum negotium erit, tempus ac locum, exhortemurque ultro, ut omnia quamlibet verbose et unde volent repetita ex tempore exponant. non enim tam obest audire supervacua quam ignorare necessaria.*

[7] We should therefore above all allow the parties concerned ample time for an interview in a place free from interruption, and should even exhort them to set forth on the spot all the facts in as many words as they may choose to use and allowing them to go as far back as they please. For it is less of a drawback to listen to a number of irrelevant facts than to be left in ignorance of essentials. Moreover,

[8] frequenter autem et vulnus et remedium in iis orator inveniet, quae litigatori in neutram partem habere momentum videbantur. nec tanta sit acturo memoriae fiducia, ut subscribere audita pigeat. nec semel audisse sit satis; cogendus eadem iterum ac saepius dicere litigator, non solum quia effugere aliqua prima expositione potuerunt, praesertim hominem (quod saepe evenit) imperitum, sed etiam ut sciamus an eadem dicat.

[8] the orator will often detect both the evil and its remedy in facts which the litigant regarded as devoid of all importance, one way or the other. Further, the advocate who has got to plead the case should not put such excessive confidence in his powers of memory as to disdain to jot down what he has heard.

Nor should one hearing be regarded as sufficient. The litigant should be made to repeat his statements at least once, not merely because certain points may have escaped him on the occasion of his first statement, as is extremely likely to happen if, as is often the case, he is a man of no education, but also that we may note whether he sticks to what he originally said.

[9] plurimi enim mentiuntur et, tanquam non doceant causam, sed agant, non ut cum patrono sed ut cum iudice loquuntur. quapropter nunquam satis credendum est, sed agitandus omnibus modis et turbandus et evocandus.

[9] For a large number of clients lie, and hold forth, not as if they were instructing their advocate in the facts of the case, but as if they were pleading with a judge. Consequently we must never be too ready to believe them, but must test them in every way, try to confuse them and draw them out.

[10] nam ut medicis non apparentia modo vitia curanda sunt sed etiam invenienda quae latent, saepe ipsis ea, qui sanandi sunt, occultantibus, ita advocatus plura quam ostenduntur aspiciat. nam cum satis in audiendo patientiae impenderit, in aliam rursus ei personam transeundum est, agendusque adversarius, proponendum quidquid omnino excogitari contra potest, quidquid recipit in eiusmodi disceptatione natura. interrogandus quam infestissime ac premendus.

[10] For just as doctors have to do more than treat the ailments which meet the eye, and need also to discover those which he hid, since their patients often conceal the truth, so the advocate must look out for more points than his client discloses to him. After he considers that he has given a sufficiently patient hearing to the latter's statements, he must assume another character and adopt the rôle of his opponent, urging every conceivable objection that a discussion of the kind which we are considering may permit.

[11] nam dum omnia quaerimus, aliquando ad verum, ubi minime expectavimus, pervenimus.

in summa optimus est in discendo patronus incredulus. promittit enim litigator

omnia, testem populum, paratissimas consignationes, ipsum denique adversarium quaedam non negaturum.

[11] The client must be subjected to a hostile cross-examination and given no peace: for by enquiring into everything, we shall sometimes come upon the truth where we least expect it.

In fact, the advocate who is most successful in getting up his case is he who is incredulous. For the client promises everything: the people, he says, will bear witness to the truth of what he says, he can produce documentary evidence at a moment's notice and there are some points which he says his opponent

[12] *ideoque opus est intueri omne litis instrumentum; quod videre non est satis, perlegendum erit. nam frequentissime aut non sunt omnino, quae promittebantur, aut minus continent aut cum alio aliquo nocituro permixta sunt aut nimia sunt et fidem hoc ipso detractura quod non habent modum.*

[12] will not deny. It is therefore necessary to look into every document connected with the case, and where the mere sight of them is not sufficient, they must be read through. For very frequently they are either not at all what the client alleged them to be, or contain less, or are mixed up with elements that may damage our case, or prove more than is required and are likely to detract from their credibility just because they are so extravagant.

[13] *denique linum ruptum aut turbatam ceram aut sine agnitore signa frequenter invenies; quae, nisi domi excusseris, in foro inopinata decipient, plusque nocebunt destituta quam non promissa nocuissent. multa etiam, quae litigator nihil ad causam pertinere crediderit, patronus eruet, modo per omnes, quos tradidimus, argumentorum locos eat.*

[13] Further, it will often be found that the thread is broken or the seal tampered with or the signatures unsupported by witnesses. And unless you discover such facts at home, they will take you by surprise in court and trip you up, doing you more harm by forcing you to abandon them than they would have done had they never been promised you. There are also a number of points which the client regards as irrelevant to his case, which the advocate will be able to elicit, provided he go carefully through all the "dwelling places" of argument which I have already described.

[14] *quos ut circumspectare in agendo et attentare singulos minime convenit, propter quas diximus causas, ita in discendo rimari necessarium est, quae personae, quae tempora et loca, instituta, instrumenta, cetera, ex quibus non tantum illud, quod est artificiale probationis genus, colligi possit, sed qui metuendi testes, quomodo sint refellendi. nam plurimum refert, invidia reus an odio an contemptu laboret, quorum fere pars prima superiores, proxima pares, tertia humiliores premit.*

[14] Now though, for reasons already mentioned, it is most undesirable that he

should hunt for and try every single one of those, while actually engaged in pleading his case, it is most necessary in the preliminary study of the case to leave no stone unturned to discover the character of the persons involved, the circumstances of time and place, the customs and documents concerned, and the rest, from which we may not merely deduce the proofs known as artificial, but may also discover which witnesses are most to be feared and the best method of refuting them. For it makes a great difference whether it be envy, hatred or contempt that forms the chief obstacle to the success of the defence, since of these obstacles the first tells most against superiors, the second against equals, and the third against those of low degree.

[15] sic causam perscrutatus, propositis ante oculos omnibus quae prosint noceantve, tertiam deinceps personam induat iudicis, fingatque apud se agi causam, et, quod ipsum movisset de eadem re pronuntiaturum, id potentissimum, apud quemcunque agetur, existimet. sic eum raro fallat eventus, aut culpa iudicis erit.

[15] Having thus given a thorough examination to the case and clearly envisaged all those points which will tell for or against his client, the orator must then place himself in the position of a third person, namely, the judge, and imagine that the case is being pleaded before himself, and assume that the point which would have carried most weight with himself, had he been trying the case, is likely to have the greatest influence with the actual judge. Thus he will rarely be deceived as to the result of the trial, or, if he is, it will be the fault of the judge.

9. quae sint in agendo servanda, toto fere opere exsecuti sumus; pauca tamen propria huius loci, quae non tam dicendi arte quam officiis agentis continentur, attingam. ante omnia ne, quod plerisque accidit, ab utilitate eum causae praesentis cupido laudis abducat.

9. As regards the points to be observed in the actual pleading, I have dealt with these in every portion of this work, but there still remain a few on which I must touch as being specially appropriate to the present place, since they are concerned not so much with the art of speaking as with the duties of the advocate. Above all it is important that he should never, like so many, be led by a desire to win applause to neglect the interest of the actual case.

[2] nam ut gerentibus bella non semper exercitus per plana et amoena ducendus est, sed adeundi plerumque asperi colles, expugnandae civitates quamlibet praecisis impositae rupibus aut operum mole difficiles, ita oratio gaudebit quidem occasione laetius decurrendi et aequo congressa campo totas vires populariter explicabit;

[2] It is not always the duty of generals in the field to lead their armies through flat and smiling country: it will often be necessary to cross rugged mountain ranges, to storm cities placed on inaccessible cliffs or rendered difficult of

access by elaborate fortifications. Similarly oratory will always be glad of the opportunity of manœuvring in all its freedom and delighting the spectator by the deployment of its full strength for conflict in the open field;

[3] *at si iuris anfractus aut eruendae veritatis latebras adire cogetur, non obequitabit nec illis vibrantibus concitatisque sententiis velut missilibus utetur, sed operibus et cuniculis et insidiis et occultis artibus rem geret.*

[3] but if it is forced to enter the tortuous defiles of the law, or dark places whence the truth has to be dragged forth, it will not go prancing in front of the enemy's lines nor launch its shafts of quivering and passionate epigram of the fashion that is now so popular, but will wage war by means of sap and mine and ambush and all the tactics of secrecy.

[4] *quae omnia non dum fiunt laudantur, sed cum facta sunt; unde etiam cupidissimis opinionis plus fructus venit. nam cum illa dicendi vitiosa iactatio inter plausores suos detonuit, resurgit verae virtutis fortior fama, nec iudices a quo sint moti, dissimulant, et doctis creditur, nec est orationis vera laus nisi cum finita est.*

[4] None of these methods win applause during their actual execution: the reward comes after they have been carried to a successful termination, when even the most ambitious will reap a richer recompense than they could ever have secured by other means. For so soon as the thunders of applause awakened among their admirers by these affected declamatory displays have died away, the glory of true virtue rises again with renewed splendour, the judges do not conceal who it is has moved them, the well-trained orator wins their belief and oratory receives its only genuine tribute, the praise accorded it when its task is done.

[5] *veteribus quidem etiam dissimulare eloquentiam fuit moris, idque M. Antonius praecipit, quo plus dicentibus fidei minusque suspectae advocatorum insidiae forent. sed illa dissimulari, quae tum erat, potuit; nondum enim tantum dicendi lumen accesserat, ut etiam per obstantia erumperet. quare artes quidem et consilia lateant et quidquid, si deprehenditur, perit. hactenus eloquentia secretum habet.*

[5] The old orators indeed used to conceal their eloquence, a method which is recommended by Marcus Antonius, as a means of securing that the speaker's words should carry conviction and of masking the advocate's real designs. But the truth is that the eloquence of those days was capable of concealment, for it had not yet attained that splendour of diction which makes it impossible to hide its light under a bushel. Therefore artifice and stratagem should be masked, since detection in such cases spells failure. Thus far, and thus only, may eloquence hope to enjoy the advantages of secrecy.

[6] *verborum quidem delectus, gravitas sententiarum, figurarum elegantia aut*

non sunt aut apparent. sed vel propter hoc ipsum ostendenda non sunt quod apparent; aut si unum sit ex duobus eligendum, causa potius laudetur quam patronus. finem tamen hunc praestabit orator, ut videatur optimam causam optime egisse. illud certum erit neminem peius agere quam qui displicente causa placet; necesse est enim extra causam sit quod placet.

[6] But when we come to consider the choice of words, the weight essential to general reflexions and the elegance demanded by figures, we are confronted by elements which must either strike the attention or be condemned to nonexistence. But the very fact that they strike the attention is a reason why they should not flaunt themselves obtrusively. And, if we have to make the choice, I should prefer that it should be the cause, and not the orator, to which we award our praise. Nevertheless, the true orator will achieve the distinction of seeming to speak with all the excellence that an excellent case deserves. One thing may be regarded as certain, that no one can plead worse than he who wins applause despite the disapproval meted out to his case. For the inevitable conclusion is that the applause must have been evoked by something having no connexion with the case.

[7] nec illo fastidio laborabit orator non agendi causas minores, tanquam infra eum sint aut detractura sit opinioni minus liberalis materia. nam et suscipiendi ratio iustissima est officium, et optandum etiam ut amici quam minimas lites habeant; et abunde dixit bene, quisquis rei satisfacit.

[7] Further, the true orator will not turn up his nose at cases of minor importance on the ground of their being beneath his dignity or as being likely to detract from his reputation because the subject matter does not allow his genius full scope. For the strongest reason for undertaking a case is to be found in our duty towards our clients: nay, we should even desire the suits in which our friends are involved to be as unimportant as possible, and remember that the advocate who gives an adequate presentment to his case, has spoken exceeding well.

[8] at quidam, etiamsi forte susceperunt negotia paulo ad dicendum tenuiora, extrinsecus adductis ea rebus circumlinunt ac, si defecerint alia, conviciis implent vacua causarum, si contingit, veris, si minus, fictis, modo sit materia ingenii mereaturque clamorem dum dicitur. quod ego adeo longe puto ab oratore perfecto, ut eum ne vera quidem obiecturum, nisi id causa exigit, credam.

[8] But there are so he who, even although the cases which they have undertaken give but small scope for eloquence, none the less trick it out with matter drawn from without and, if all else fails, fill up the gaps in their case with abuse of their opponents, true if possible, but false if necessary, the sole consideration that weighs with them being that it affords exercise for their talents and is likely to win applause during its delivery. Such conduct seems

to me so unworthy of our perfect orator that, in my opinion, he will not even bring true charges against his opponents unless the case demand.

[9] ea est enim prorsus canina, ut ait Appius, eloquentia, cognituram male dicendi subire; quod facientibus etiam male audiendi praesumenda patientia est. nam et in ipsos fit impetus frequenter, qui egerunt, et certe petulantiam patron litigator luit. sed haec minora sunt ipso illo vitio animi, quod maledicus a malefico non distat nisi occasione.

[9] For it is a dog's eloquence, as Appius says, to undertake the task of abusing one's opponent, and they who do so should steel themselves in advance to the prospect of being targets for like abuse themselves, since those who adopt this style of pleading are frequently attacked themselves, and there can at any rate be no doubt that the litigant pays dearly for the violence of his advocate. But such faults are less serious than that which lies deep in the soul itself, making the evil speaker to differ from the evil doer only in respect of opportunity.

[10] turpis voluptas et inhumana et nulli audientium bona gratia a litigatoribus quidem frequenter exigitur, qui ultionem malunt quam defensionem. sed neque alia multa ad arbitrium eorum facienda sunt. hoc quidem quis hominum liberi modo sanguinis sustineat petulans esse ad alterius arbitrium?

[10] It is not uncommon for the litigant to demand a base and inhuman gratification of his rancour, such as not a single man among the audience will approve, for it is on revenge rather than on protection that his heart is set. But in this, as in a number of other points, it is the duty of the orator to refuse to comply with his clients' desires. For how can a man with the least degree of gentlemanly feeling consent to make a brutal attack merely because another desires it?

[11] atqui etiam in advocatos partis adversae libenter nonnulli invehuntur; quod, nisi si forte meruerunt, et inhumanum est respectu communium officiorum, et cum ipsi qui dicit inutile (nam idem iuris responsuris datur), tum causae contrarium, cui plane adversarii fiunt et inimici, et quantulumcunque eis uirium est, contumelia augetur.

[11] And yet there are some who take pleasure in directing their onslaughts against their opponents' counsel as well, a practice which, unless they have deserved such attacks, shows an inhuman disregard of the duties incumbent on the profession, and is not merely useless to the speaker (since he thereby gives his opponent the right to reply in the same strain), but contrary to the interests of his case, since it creates a hostile and antagonistic disposition in the advocates attacked, whose eloquence, however feeble it may be, will be redoubled by resentment at the insults to which they have been subjected.

[12] super omnia perit illa, quae plurimum oratori et auctoritatis et fidei adfert, modestia, si a viro bono in rabulam latratoremque convertitur, compositus non

ad animum iudicis sed ad stomachum litigatoris.

[12] Above all, it involves a complete waste of one of the most valuable of an orator's assets, namely that self-restraint which gives weight and credit to his words, if he debases himself from an honest man into a snarling wrangler, directing all his efforts not to win the goodwill of the judge, but to gratify his client's spite.

[13] frequenter etiam species libertatis deducere ad temeritatem solet non causis modo, sed ipsis quoque, qui dixerunt, periculosam. Nec immerito Pericles solebat optare, ne quod sibi verbum in mentem veniret, quo populus offenderetur. sed quod ille de populo, id ego de omnibus sentio, qui tantundem possunt nocere. nam quae fortia dum dicuntur videbantur, stulta cum laeserunt vocantur.

[13] Often too the attractions of freedom of speech will lure him into a rashness of language perilous not merely to the interests of the case, but to those of the speaker himself. It was not without good reason that Pericles used to pray that no word might occur to his mind that could give offence to the people. But what he felt with regard to the people, I feel with regard to every audience, since they can cause just as much harm to the orator as the people could ever do to Pericles. For utterances which seemed courageous at the moment of speaking, are called foolish when it is found that they have given offence.

[14] nunc, quia varium fere propositum agentium fuit, et quorundam cura tarditatis, quorundam facilitas temeritatis crimine laboravit, quem credam fore in hoc oratoris modum, tradere non alienum videtur.

[14] In view of the fact that there is commonly a great variety in the aims which pleaders set before themselves and that the diligence shown by some is branded as tedious caution, while the readiness of others is criticised as rashness, I think that this will be an appropriate place to set forth my views as to how the orator may strike the happy mean.

[15] adferet ad dicendum curae semper quantum plurimum poterit. neque enim hoc solum negligentis, sed mali et in suscepta causa perfidi ac proditoris est, peius agere quam possit. ideoque ne suscipiendae quidem sunt causae plures quam quibus suffecturum se sciat.

[15] He will show all the diligence of which he is capable in his pleading. For to plead worse than he might have done, is not merely an indication of negligence, but stamps him as a bad man and a traitor, disloyal to the cause which he has undertaken. Consequently he must refuse to undertake more cases than he feels he can manage.

[16] dicet scripta quam res patietur plurima et, ut Demosthenes ait, si continget, et sculpta. sed hoc aut primae actiones aut quae in publicis iudiciis post interiectos dies dantur permiserint; at cum protinus respondendum est, omnia

parari non possunt, adeo ut paulo minus promptis etiam noceat scripsisse, si alia ex diverso, quam opinati fuerint, ocem'rerint.

[16] As far as possible he will deliver only what he has written, and, if circumstances permit, only what he has, as Demosthenes says, carved into shape. Such a practice is possible in first hearings and also in subsequent hearings such as are granted in the public courts after an interval of several days. On the other hand, when we have to reply on the spot, it is impossible to prepare everything: in fact for the less ready type of speaker, it may, in the event of his opponents putting forward arguments quite other than those which they were expected to advance, be a positive drawback to have written anything.

[17] *inviti enim recedunt a praeparatis et tota actione respiciunt requiruntque, num aliquid ex illis intervelli atque ex tempore dicendis inseri possit; quod si fiat, non cohaeret nec commissuris modo, ut in opere male iuncto, hiantibus sed ipsa coloris inaequalitate detegitur.*

[17] For it is only with reluctance that such speakers will under such circumstances consent to abandon what they have written, and throughout their pleading keep looking back and trying to discover whether any portion of their manuscript can be saved from the wreck and interpolated into what they have to improvise. And if they do make such interpolations, the result is a lack of cohesion which is betrayed not merely by the gaping of the seams where the patch has been unskilfully inserted, but by the differences of style.

[18] *ita nec liber est impetus nec cura contexta, et utrumque alteri obstat; illa enim quae scripta sunt reticent animum, non sequuntur. itaque in his actionibus omni, ut agricolae dicunt, pede standum est.*

[18] Consequently, the vigour of their eloquence will be hampered and their thought will lack connexion, each of which circumstances reacts unfavourably upon the other, since what is written trammels the mind instead of following its lead. Therefore, in such pleadings we must, as the rustic adage says, "stand on all our feet."

[19] *nam cum in propositione ac refutatione causa consistat, quae nostrae partis sunt scripta esse possunt, quae etiam responsurum adversarium certum est (est enim aliquando certum) pari cura refelluntur. ad alia unum paratum adferre possumus, ut causam bene noverimus, alterum ibi sumere, ut dicentem adversarium diligenter audiamus.*

[19] For since the case turns on the propounding and refutation of arguments, it is always possible to write out what we propose to advance on our own behalf, and similar preparation is also possible with regard to the refutation of such replies as are absolutely certain to be made by our adversary: for there are times when we have this certainty. But with regard to all other portions of

our speech, the only preparation that is possible in advance consists in a thorough knowledge of our case, while there is a second precaution which may be taken in court, consisting in giving our best attention to our opponent's speech.

[20] licet tamen praecogitare plura et animum ad omnes casus componere, idque est tutius stilo, quo facilius et omittitur cogitatio et transfertur. sed sive in respondendo fuerit subito dicendum, sive quae alia ita exegerit ratio, non oppressum se ac deprehensum credet orator, cui disciplina et studium et exercitatio dederit vires etiam facilitatis;

[20] On the other hand, there is much that may be thought out in advance and we may forearm our mind against all possible emergencies, a course which is far safer than writing, since a train of thought can easily be abandoned or diverted in a new direction. But whether we have to improvise a reply, or are obliged to speak extempore by some other reason, the orator on whom training, study and practice have conferred the gift of facility, will never regard himself as lost or taken at hopeless disadvantage.

[21] quem armatum semper ac velut in procinctu stantem non magis unquam in causis oratio quam in rebus cotidianis ac domesticis sermo deficiet, nec se unquam propter hoc oneri subtrahet, modo sit causae discendae tempus; nam cetera semper sciet.

[21] He stands armed for battle, ever ready for the fray, and his eloquence will no more fail him in the courts than speech will fail him in domestic affairs and the daily concerns of life: and he will never shirk his burden for fear of failing to find words, provided he has time to study his case: for all other knowledge will always be his at command.

10. superest ut dicam de genere orationis. Hic erat propositus a nobis in divisione prima locus tertius; nam ita promiseram me de arte, de artifice, de opere dicturum. cum sit autem rhetorices atque oratoris opus oratio pluresque eius formae, sicut ostendam, in omnibus his et ars est et artifex. plurimum tamen invicem differunt; nec solum specie, ut signum signo et tabula tabulae et actio actioni, sed genere ipso, ut Graecis Tuscanicae statuae, ut Asianus eloquens Attico.

10. The question of the "kind of style" to be adopted remains to be discussed. This was described in my original division of my subject as forming its third portion: for I promised that I would speak of the art, the artist and the work. But since oratory is the work both of rhetoric and of the orator, and since it has many forms, as I shall show, the art and the artist are involved in the consideration of all these forms. But they differ greatly from one another, and not merely in *species*, as statue differs from statue, picture from picture and speech from speech, but in *genus* as well, as, for example, Etruscan statues differ from Greek and Asiatic orators from Attic.

[2] suos autem haec operum genera, quae dico, ut auctores, sic etiam amatores habent; atque ideo nondum est perfectus orator ac nescio an ars ulla, non solum quia aliud in alio magis eminet, sed quod non una omnibus forma placuit, partim condicione vel temporum vel locorum, partim iudicio cuiusque atque proposito.

[2] But these different kinds of work, of which I speak, are not merely the product of different authors, but have each their own following of admirers, with the result that the perfect orator has not yet been found, a statement which perhaps may be extended to all arts, not merely because some qualities are more evident in some artists than in others, but because one single form will not satisfy all critics, a fact which is due in part to conditions of time or place, in part to the taste and ideals of individuals.

[3] primi, quorum quidem opera non vetustatis modo gratia visenda sunt, clari pictores fuisse dicuntur Polygnotus atque Aglaophon, quorum simplex color tam sui studiosos adhuc habet, ut illa prope rudia ac velut futurae mox artis primordia maximis, qui post eos exstiterunt, auctoribus praeferant, proprio quodam intelligendi, ut mea opinio est, ambitu.

[3] The first great painters, whose works deserve inspection for something more than their mere antiquity, are said to have been Polygnotus and Aglaophon, whose simple colouring has still such enthusiastic admirers that they prefer these almost primitive works, which may be regarded as the first foundations of the art that was to be, over the works of the greatest of their successors, their motive being, in my opinion, an ostentatious desire to seem persons of superior taste.

[4] post Zeuxis atque Parrhasius non multum aetate distantes, circa Peloponnesia ambo tempora (Nam cum Parrhasio sermo Socratis apud Xenophontem invenitur) plurimum arti addiderunt. quorum prior luminum umbrarumque inuenisse rationem, secundus examinasse subtilius lineas traditur.

[4] Later Zeuxis and Parrhasius contributed much to the progress of painting. These artists were separated by no great distance of time, since both flourished about the period of the Peloponnesian war: for example, Xenophon has preserved a conversation between Socrates and Parrhasius. The first-mentioned seems to have discovered the method of representing light and shade, while the latter is said to have devoted special attention to the treatment of line.

[5] nam Zeuxis plus membris corporis dedit, id amplius atque augustius ratus atque, ut existimant, Homerum secutus, cui validissima quaeque forma etiam in feminis placet. ille vero ita circumscripsit omnia, ut eum legum latorem vocent, quia deorum atque heroum effigies, quales ab eo sunt traditae, ceteri, tanquam ita necesse sit, sequuntur.

[5] For Zeuxis emphasised the limbs of the human body, thinking thereby to add dignity and grandeur to his style: it is generally supposed that in this he followed the example of Homer, who likes to represent even his female characters as being of heroic mould. Parrhasius, on the other hand, was so fine a draughtsman that he has been styled the law-giver of his art, on the ground that all other artists take his representations of gods and heroes as models, as though no other course were possible.

[6] floruit autem circa Philippum et usque ad successores Alexandri pictura praecipue, sed diversis virtutibus. nam cura Protogenes, ratione Pamphilus ac Melanthius, facilitate Antiphilus, concipiendis visionibus, quas φαντασίας vocant, Theon Samius, ingenio et gratia, quam in se ipse maxime iactat, Apelles est praestantissimus. Euphranorem admirandum facit, quod et ceteris optimis studiis inter praecipuos et pingendi fingendique idem mirus artifex fuit.

[6] It was, however, from about the period of the reign of Philip down to that of the successors of Alexander that painting flourished more especially, although the different artists are distinguished for different excellences. Protogenes, for example, was renowned for accuracy, Pamphilus and Melanthius for soundness of taste, Antiphilus for facility, Theon of Samos for his depiction of imaginary scenes, known as φαντασῖαι, and Apelles for genius and grace, in the latter of which qualities he took especial pride. Euphranor, on the other hand, was admired on the ground that, while he ranked with the most eminent masters of other arts, he at the same time achieved marvellous skill in the arts of sculpture and painting.

[7] similis in statuariis differentia Nam duriora et Tuscanicis proxima Callon atque Hegesias, iam minus rigida Calamis, molliora adhuc supra dictis Myron fecit. diligentia ac decor in Polyclito supra ceteros, cui quamquam a plerisque tribuitur palma, tamen, ne nihil detrahatur, deesse pondus putant.

[7] The same differences exist between sculptors. The art of Callon and Hegesias is somewhat rude and recalls the Etruscans, but the work of Calamis has already begun to be less stiff, while Myron's statues show a greater softness of form than had been achieved by the artists just mentioned. Polyclitus surpassed all others for care and grace, but although the majority of critics account him as the greatest of sculptors, to avoid making him faultless they express the opinion that his work is lacking in grandeur.

[8] nam ut humane formae decorem addiderit supra verum, ita non explevisse deorum auctoritatem videtur. quin aetatem quoque graviorem dicitur refugisse nihil ausus ultra leves genas. at quae Polyclito defuerunt, Phidiae atque Alcameni dantur.

[8] For while he gave the human form an ideal grace, he is thought to have been less successful in representing the dignity of the gods. he is further

alleged to have shrunk from representing persons of maturer years, and to have ventured on nothing more difficult than a smooth and beardless face. But the qualities lacking in Polyclitus are allowed to have been possessed by Phidias and Alcamenes.

[9] Phidias tamen diis quam hominibus efficiendis melior artifex creditur in ebore vero longe citra aemulum, vel si nihil nisi Minervam Athenis aut Olympium in Elide Iovem fecisset, cuius pulchritudo adiecisse aliquid etiam receptae religioni videtur; adeo maiestas operis deum aequavit. ad veritatem Lysippum ac Praxitelen accessisse optime adfirmant. nam Demetrius tanquam nimius in ea reprehenditur et fuit similitudinis quam pulchritudinis amantior.

[9] On the other hand, Phidias is regarded as more gifted in his representation of gods than of men, and indeed for chryselephantine statues he is without a peer, as he would in truth be, even if he had produced nothing in this material beyond his Minerva at Athens and his Jupiter at Olympia in Elis, whose beauty is such that it is said to have added something even to the awe with which the god was already regarded: so perfectly did the majesty of the work give the impression of godhead. Lysippus and Praxiteles are asserted to be supreme as regards faithfulness to nature. For Demetrius is blamed for carrying realism too far, and is less concerned about the beauty than the truth of his work.

[10] in oratione vero si species intueri velis, totidem paene reperiās ingeniorum quot corporum formas. sed fuere quaedam genera dicendi condicione temporum horridiora, alioqui magnam iam ingenii vim prae se ferentia. hinc sint Laelii, Africani, Catones etiam Gracchique, quos tu licet Polygnotos vel Callonas appelles. mediam illam formam teneant L. Crassus, Q. Hortensius.

[10] Now, if we turn our attention to the various styles of oratory, we shall find almost as great variety of talents as there are of personal appearance. There were certain kinds of oratory which, owing to the circumstances of the age, suffered from lack of polish, although in other respects they displayed remarkable genius. In this class we may place orators such as Laelius, Africanus, Cato, and even the Gracchi, whom we may call the “Polygnoti” and “Callones” of oratory.

[11] tum deinde efflorescat non multum inter se distantium tempore oratorum ingens proventus. Hic vim Caesaris, indolem Caellii, subtilitatem Calidii, diligentiam Pollionis, dignitatem Messalae, sanctitatem Calvi, gravitatem Bruti, acumen Sulpicii, acerbitem Cassii reperiemus; in iis etiam, quos ipsi vidimus, copiam Senecae, vires Africani, maturitatem Afri, iucunditatem Crispi, sonum Trachali, elegantiam Secundi.

[11] Among orators of the intermediate type we may rank Lucius Crassus and Quintus Hortensius. Then let us turn to a vast harvest of orators who flourished much about the same period. It is here that we find the vigour of

Caesar, the natural talent of Caelius, the subtlety of Calidius, the accuracy of Pollio, the dignity of Messala, the austerity of Calvus, the gravity of Brutus, the acumen of Sulpicius and the bitterness of Cassius, while among those whom we have seen ourselves we admire the fluency of Seneca, the strength of Africanus, the mellowness of Afer, the charm of Crispus, the sonority of Trachalus and the elegance of Secundus.

[12] at M. Tullium non illum habemus Euphranorem circa plures artium species praestantem, sed in omnibus, quae in quoque laudantur, eminentissimum. quem tamen et suorum homines temporum incessere audebant ut tumidiorem et Asianum et redundantem et in repetitionibus nimium et in salibus aliquando frigidum et in compositione fractum, exultantem ac paene, quod procul absit, viro molliorem;

[12] But in Cicero we have one who is not, like Euphranor, merely distinguished in a number of different forms of art, but is supreme in all the different qualities which are praised in each individual orator. And yet even his own contemporaries ventured to attack him on the ground that he was bombastic, Asiatic, redundant, given to excessive repetition, liable at times to be pointless in his witticisms, sensuous, extravagant and (an outrageous accusation!) almost effeminate in his rhythm.

[13] postea vero quam triumvirali proscriptione consumptus est, passim qui oderant, qui invidebant qui aemulabantur, adultores etiam praesentis potentiae non responsurum inuaserunt. ille tamen, qui ieiunus a quibusdam et aridus habetur, non aliter ab ipsis inimicis male audire quam nimiis floribus et ingenii affluentia potuit. falsum utrumque, sed tamen illa mentiendi propior occasio.

[13] And later, after he had fallen a victim to the proscription of the second triumvirate, those who hated and envied him and regarded him as their rival, nay, even those who had flattered him in the days of his power, attacked him now that he could no longer reply. But that very man, who is now regarded by some as being too jejune and dry, was attacked by his personal enemies on no other ground than that his style was too florid and his talents too little under control. Both charges are false, but there is more colour for the he in the latter case than in the former.

[14] praecipue vero presserunt eum, qui videri Atticorum imitatores concupierant. haec manus quasi quibusdam sacris initiata ut alienigenam et parum superstitiosum devinctumque illis legibus insequeretur; unde nunc quoque aridi et exsuci et exangues.

[14] Those, however, who criticised him most severely were the speakers who desired to be regarded as the imitators of Attic oratory. This coterie, regarding themselves as the sole initiates in the mysteries of their art, assailed him as an alien, indifferent to their superstitions and refusing to be bound by their laws.

Their descendants are among us to-day, a withered, sapless and anemic band.

[15] hi sunt enim, qui suae imbecillitati sanitatis appellationem, quae est maxime contraria, obtendant; qui, quia clariorem vim eloquentiae velut solem ferre non possunt, umbra magni nominis delitescunt. quibus quia multa et pluribus locis Cicero ipse respondit, tutior mihi de hoc disserendi brevitās erit.

[15] For it is they that flaunt their weakness under the name of health, in defiance of the actual truth, and because they cannot endure the dazzling rays of the sun of eloquence, hide themselves beneath the shadow of a mighty name. However, as Cicero himself answered them at length and in a number of passages, it will be safer for me to be brief in my treatment of this topic.

[16] et antiqua quidem illa divisio inter Atticos atque Asianos fuit, cum hi pressi et integri, contra inflati illi et inanes haberentur, in his nihil superflueret, illis iudicium maxime ac modus deesset. quod quidam, quorum et Santra est, hoc putant accidisse, quod, paulatim sermone Graeco in proximas Asiae civitates influente, nondum satis periti loquendi facundiam concupierint, ideoque ea, quae proprie signari poterant, circuitu coeperint enuntiare ac deinde in eo perseverarint.

[16] The distinction between the Attic and the Asiatic schools takes us back to antiquity. The former were regarded as concise and healthy, the latter as empty and inflated: the former were remarkable for the absence of all superfluity, while the latter were deficient alike in taste and restraint. The reason for this division, according to some authorities, among them Santra, is to be found in the fact that, as Greek gradually extended its range into the neighbouring cities of Asia, there arose a class of men who desired to distinguish themselves as orators before they had acquired sufficient command of the language, and who consequently began to express by periphrases what could have been expressed directly, until finally this practice became an ingrained habit.

[17] mihi autem orationis differentiam fecisse et dicentium et audientium naturae videntur, quod Attici limati quidam et emuncti nihil inane aut redundans ferebant, Asiana gens tumidior alioqui atque iactantior vaniore etiam dicendi gloria inflata est.

[17] My own view, however, is that the difference between the two styles is attributable to the character both of the orators and the audiences whom they addressed: the Athenians, with their polish and refinement, refused to tolerate emptiness and redundancy, while the Asiatics, being naturally given to bombast and ostentation, were puffed up with a passion for a more vainglorious style of eloquence.

[18] tertium mox, qui haec dividebant, adiecerunt genus Rhodium, quod velut medium esse atque ex utroque mixtum volunt; neque enim Attice pressi neque

Asiane sunt abundantes, ut aliquid habere videantur gentis, aliquid auctoris.

[18] At a later period, the critics, to whom we owe this classification, added a third style, the Rhodian, which they asserted to be midway between the two and to be a blend of both, since the orators of this school are neither so concise as the Attic nor redundant like the Asiatic school, but appear to derive their style in part from their national characteristics, in part from those of their founder.

[19] Aeschines enim, qui hunc exilio delegerat locum, intulit eo studia Athenarum, quae, velut sata quaedam caelo terraque degenerant, saporem illum Atticum peregrino miscuerunt. lenti ergo quidam ac remissi, non sine pondere tamen neque fontibus puris neque torrentibus turbidis, sed lenibus stagnis similes habentur.

[19] For it was Aeschines who introduced the culture of Athens at Rhodes, which he had chosen as his place of exile: and just as certain plants degenerate as a result of change of soil and climate, so the fine Attic flavour was marred by the admixture of foreign ingredients. Consequently certain of the orators of this school are regarded as somewhat slow and lacking in energy, though not devoid of a certain weight, and as resembling placid pools rather than the limpid springs of Athens or the turbid torrents of Asia.

[20] nemo igitur dubitaverit, longe esse optimum genus Atticorum. in quo ut est aliquid inter ipsos commune, id est indicium acre tersumque, ita ingeniorum plurimae formae.

[20] No one therefore should have any hesitation in pronouncing Attic oratory to be by far the best. But although all Attic writers have something in common, namely a keen and exact judgement, their talents manifest themselves in a number of different forms.

[21] quapropter milii falli multum videntur, qui solos esse Atticos credunt tennes et lucidos et significantes sed quadam eloquentiae frugalitate contentos ac semper manum intra pallium continentes. nam quis erit hic Atticus? sit Lysias; hunc enim amplectuntur amatores istius nominis modum. non igitur iam usque ad Coccum et Andocidem remitemur. interrogare tamen velim, an Isocrates Attice dixerit.

[21] Consequently I regard those critics as committing a serious error who regard only those authors as Attic who, while they are simple, lucid and expressive, are none the less content with a certain frugality of eloquence, and keep their hands modestly within the folds of their cloaks. For what author is there who answers to this conception? I am prepared to grant that there is Lysias, since he is the favourite model of the admirers of this school, and such an admission will save us from being referred to Coccus and Andocides.

[22] nihil enim tam est Lysiae diversum. negabunt. At eius schola principes

oratorum dedit. quaeratur similis aliquid. Hyperides Atticus? certe, at plus indulsit voluptati. transeo plurimos, Lycurgum, Aristogitona et his priores Isaeum, Antiphonta; quos ut homines inter se genere similes, differentes dixeris specie. quid ille, cuius modo fecimus mentionem, Aeschines?

[22] But I should like to ask whether Isocrates spoke in the Attic style. For there is no author less like Lysias. They will answer in the negative. And yet it is to the school of Isocrates that we owe the greatest orators. Let us look for something closer. Is Hyperides Attic? Yes, they reply, but of an over-sensuous character. I pass by a number of orators, such as Lycurgus and Aristogeiton and their predecessors Isaeus and Antiphon; for though they have a certain *generic* resemblance, they may be said to differ in *species*.

[23] nonne his latior et audentior et excelsior? quid denique Demosthenes? non cunctos illos tenues et circumspectos vi, sublimitate, impetu, cultu, compositione superavit? non insurgit locis? non figuris gaudet? non translationibus nitet? non oratione ficta dat tacentibus vocem?

[23] But what of Aeschines, whom I mentioned just now? Is not his style ampler and bolder and more lofty than theirs? And what of Demosthenes himself? Did not he surpass all those simple and circumspect orators in force, loftiness, energy, polish and rhythm? Does he not rise to great heights in his *commonplaces*? Does he not rejoice in the employment of figures? Does he not make brilliant use of metaphor? Does he not lend a voice, a fictitious utterance to speechless things?

[24] non illud iusiurandum per caesos in Marathone ac Salamine propugnatores rei publicae satis manifesto docet praeceptorem eius Platonem fuisse? quem ipsum num Asianum appellabimus plerumque instinctis divino spiritu vatibus comparandum? quid Periclea? similemne credemus Lysiacae gracilitati, quem fulminibus et caelesti fragori comparant comici, dum illi conviciantur? quid est igitur,

[24] Does not his famous oath by the warriors who fell fighting for their country at Salamis and Marathon show that Plato was his master? And shall we call Plato an Asiatic, Plato who as a rule deserves comparison with poets instinct with the divine fire of inspiration? What of Pericles? Can we believe that his style was like the slender stream of Lysias' eloquence, when the comedians, even while they revile him, compare his oratory to the bolts and thunder of the skies?

[25] cur in iis demum, qui tenui venula per calculos fluunt, Atticum saporem putent, ibi demum thymum redolere dicant? quos ego existimo, si quod in iis finibus uberius invenerint solum fertiliorēve segetem, negaturos Atticam esse, quod plus, quam acceperit, seminis reddat, quia hanc eius terrae fidem Menander eludit.

[25] What is the reason, then, why these critics regard that style which flows in a slender trickle and babbles among the pebbles as having the true Attic flavour and the true scent of Attic thyme? I really think that, if they were to discover a soil of exceptional richness and a crop of unusual abundance within the boundaries of Attica, they would deny it to be Attic, on the ground that it has produced more seed than it received: for you will remember the mocking comments passed by Menander on the exact fidelity with which the soil of Attica repays its deposits.

[26] ita nunc, si quis ad eas Demosthenis virtutes, quas ille summus orator habuit, tamen quae defuisse ei sive ipsius natura seu lege civitatis videntur, adiecerit, ut adfectus concitatus moveat, audiam dicentem, non fecit hoc Demosthenes? et si quid numeris exierit aptius (fortasse non possit, sed tamen si quid exierit) non erit Atticum? melius de hoc nomine sentiant credantque Attice dicere esse optime dicere.

[26] Well, then, if any man should, in addition to the actual virtues which the great orator Demosthenes possessed, show himself to be the possessor of others, that either owing to his own temperament or the laws of Athens Demosthenes is thought to have lacked, and should reveal in himself the power of strongly stirring the emotions, shall I hear one of these critics protesting that Demosthenes never did this? And if he produces something rhythmically superior (an impossible feat, perhaps, but let us assume it to be so), are we to be told that it is not Attic? These critics would show finer feeling and better judgement, if they took the view that Attic eloquence meant perfect eloquence.

[27] atque in hac tamen opinione perseverantes Graecos magis tulerim. Latina mihi facundia, ut inventione, dispositione, consilio, ceteris huius generis artibus similis Graecae ac prorsus discipula eius videtur, ita circa rationem eloquendi vix habere imitationis locum. namque est ipsis statim sonis durior, quando et iucundissimas ex Graecis litteras non habemus, vocalem alteram, alteram consonantem, quibus nullae apud eos dulcius spirant; quas mutuari solemus, quotiens illorum nominibus utimur.

[27] Still I should find this attitude less intolerable if it were only the Greeks that insisted on it. For Latin eloquence, although in my opinion it closely resembles the Greek as far as invention, arrangement, judgement and the like are concerned, and may indeed be regarded as its disciple, cannot aspire to imitate it in point of elocution. For, in the first place, it is harsher in sound, since our alphabet does not contain the most euphonious of the Greek letters, one a vowel and the other a consonant, than which there are none that fall more sweetly on the ear, and which we are forced to borrow whenever we use Greek words.

[28] quod cum contingit, nescio quomodo hilarior protinus renidet oratio, ut in

Zephyris et zopyris. quae si nostris litteris scribantur, surdum quiddam et barbarum efficient, et velut in locum earum succedunt tristes et horridae, quibus Graecia caret.

[28] The result of such borrowing is, for some reason or other, the immediate accession to our language of a certain liveliness and charm. Take, for example, words such as *sephyri* and *zophori*: if they were spelt according to the Latin alphabet, they would produce a heavy and barbarous sound. For we replace these letters by others of a harsh and unpleasant character, from which Greece is happily immune.

[29] nam et illa, quae est sexta nostrarum, paene non humana voce vel omnino non voce potius inter discrimina dentium efflanda est; quae, etiam cum vocalem proxima accipit, quassa quodammodo, utique quotiens aliquam consonantium frangit, it in hoc ipso frangit, multo fit horridior. aeolicae quoque litterae, qua servum ceruumque dicimus, etiamsi forma a nobis repudiata est, vis tamen nos ipsa persequitur.

[29] For the sixth letter in our alphabet is represented by a sound which can scarcely be called human or even articulate, being produced by forcing the air through the interstices of the teeth. Such a sound, even when followed by a vowel, is harsh enough and, as often as it clashes (*frangit*) with a consonant, as it does in this very word *frangit*, becomes harsher still. Then there is the Aeolic digamma whose sound occurs in words such as our *servus* and *cervus*; for even though we have rejected the actual form of the letter, we cannot get rid of that which it represents.

[30] duras et illa syllabus facit, quae ad coniungendas demum subiectas sibi uocalis est utilis, alias supervacua, ut equos hac et aequum scribimus; cum etiam ipsae hae vocales duae efficiant sonum, qualis apud Graecos nullus est, ideoque scribi illorum litteris non potest.

[30] Similarly the letter Q, which is superfluous and useless save for the purpose of attaching to itself the vowels by which it is followed, results in the formation of harsh syllables, as, for example, when we write *equos* and *aequum*, more especially since these two vowels together produce a sound for which Greek has no equivalent and which cannot therefore be expressed in Greek letters.

[31] quid? quod pleraque nos illa quasi mugiente M littera cludimus in quam nullum Graece verbum cadit: at illi ny iucundam et in fine praecipue quasi tinnientem illius loco ponunt, quae est apud nos rarissima in clausulis.

[31] Again, we have a number of words which end with M, a letter which suggests the mooing of a cow, and is never the final letter in any Greek word: for in its place they use the letters *nu*, the sound of which is naturally pleasant and produces a ringing tone when it occurs at the end of a word, whereas in

Latin this termination is scarcely ever found.

[32] quid? quod syllabae nostrae in B litteram et D innituntur adeo aspere, ut plerique non antiquissimorum quidem, sed tamen veterum mollire temptaverint non solum aversa pro abversis dicendo, sed et in praepositione B litterae absonam et ipsam S subiiciendo.

[32] Again, we have syllables which produce such a harsh effect by ending in B and D, that *many*, not, it is true, of our most ancient writers, but still writers of considerable antiquity, have attempted to mitigate the harshness not merely by saying *aversa* for *abversa*, but by adding an S to the preposition *ab*, although S is an ugly letter

[33] sed accentus quoque, cum rigore quodam, tum similitudine ipsa, minus suaves habemus, quia ultima syllaba nec acuta unquam excitatur nec flexa circumducitur, sed in gravem vel duas graves cadit semper. itaque tanto est sermo Graecus Latino iucundior, ut nostri poetae, quotiens dulce carmen esse voluerint, illorum id nominibus exornent.

[33] in itself Our accents also are less agreeable than those of the Greeks. This is due to a certain rigidity and monotony of pronunciation, since the final syllable is never marked by the rise of the acute accent nor by the rise and fall of the circumflex, but one or even two grave accents are regularly to be found at the end. Consequently the Greek language is so much more agreeable in sound than the Latin, that our poets, whenever they wish their verse to be especially harmonious, adorn it with Greek words.

[34] his ilia potentiora, quod res plurimae carent appellationibus, ut eas necesse sit transferre aut circumire; etiam in iis, quae denominata sunt, summa paupertas in eadem nos frequentissime revolvit; at illis non verborum modo, sed linguarum etiam inter se differentium copia est.

[34] A still stronger indication of the inferiority of Latin is to be found in the fact that there are many things which have no Latin names, so that it is necessary to express them by metaphor or periphrasis, while even in the case of things which have names, the extreme poverty of the language leads us to resort to the same practice. On the other hand, the Greeks have not merely abundance of words, but they have also a number of different dialects.

[35] quare qui a Latinis exigit illam gratiam sermonis Attici, det mihi in eloquendo eandem iucunditatem et parem copiam. quod si negatum est, sententias aptabimus iis vocibus quas habemus, nec rerum nimiam tenuitatem, ut non dicam pinguioribus, fortioribus certe verbis miscebimus, ne virtus utraque pereat ipsa confusione.

[35] Consequently he who demands from Latin the grace of Attic Greek, must first provide a like charm of tone and equal richness of vocabulary. If this advantage is denied us, we must adapt our thoughts to suit the words we have

and, where our matter is unusually slight and delicate, must avoid expressing it in words which are, I will not say too gross, but at any rate too strong for it, for fear that the combination should result in the destruction both of delicacy and force.

[36] nam quo minus adiuvat sermo, rerum inventione pugnandum est. sensus sublimes variique eruantur. permovendi omnes adfectus erunt, oratio translationum nitore illuminanda. non possumus esse tam graciles: simus fortiores. subtilitate vincimur: valeamus pondere. proprietas penes illos est certior: copia vincamus.

[36] For the less help we get from the language, the more must we rely on inventiveness of thought to bring us through the conflict. We must discover sentiments full of loftiness and variety, must stir all the emotions and illumine our style by brilliance of metaphor. Since we cannot be so delicate, let us be stronger. If they beat us for subtlety, let us prevail by weight, and if they have greater precision, let us outdo them in fullness of expression.

[37] ingenia Graecorum etiam minora suos portus habent: nos plerumque maioribus velis mouemur, validior spiritus nostros sinus tendat; non tamen alto semper feremur, nam et litora interim sequenda sunt. illis facilis per quaelibet vada accessus; ego aliquid, non multo tamen, altius, in quo mea cumba non sidat, inveniam.

[37] Even the lesser orators of Greece have their own havens where they may ride in safety, while we as a rule carry more sail. Let stronger gales fill our canvas, and yet let us not always keep the high seas; for at times we must cling to shore. The Greeks can easily traverse any shallows; I must find a deeper, though not much deeper, channel, that my bark may not run aground.

[38] neque enim, si tenuiora haec ac pressiora Graeci melius, in eoque vincimur solo et ideo in comoediis non contendimus, prorsus tamen omittenda pars haec orationis, sed exigenda ut optime possumus; possumus autem rerum et modo et iudicio esse similes, verborum gratia, quam in ipsis non habemus, extrinsecus condienda est.

[38] For even though the Greeks surpass us where circumstances call for delicacy and restraint, though we acknowledge their superiority in this respect alone, and therefore do not claim to rival them in comedy, that is no justification for our abandonment of this department of oratory, but rather a reason why we should handle it as best we can. Now we can at any rate resemble the Greeks in the method and judgement with which we treat our matter, although that grace of language, which our words cannot provide, must be secured by the admixture of foreign condiments.

[39] An non in privatis et acutus et indistinctus et non super modum elatus M. Tullius? non in M. Calidio insignis haec virtus? non Scipio, Laelius, Cato in

eloquendo uelut Attici Romanorum fuerunt? cui porro non satis est, quo nihil esse melius potest?

[39] For example, is not Cicero shrewd, simple and not unduly exalted in tone, when he deals with private cases? Is not Calpurnius also distinguished for the same virtue? Were not Scipio, Laelius and Cato the Attic orators of Rome? Surely we ought to be satisfied with them, since nothing can be better.

[40] adhuc quidam nullam esse naturalem putant eloquentiam, nisi quae sit cotidiano sermoni simillima, quo cum amicis, coniugibus, liberis, servis loquamur, contento promere animi voluntatem nihilque arcessiti et elaborati requirentes; quidquid huc sit adiectum, id esse adfectionis et ambitiosae in loquendo iactantiae, remotum a veritate fictumque ipsorum gratia verborum, quibus solum natura sit officium attributum, servire sensibus:

[40] There are still some critics who deny that any form of eloquence is purely natural, except that which closely resembles the ordinary speech of everyday life, which we use to our friends, our wives, our children and our slaves, a language, that is to say, which contents itself with expressing the purpose of the mind without seeking to discover anything in the way of elaborate and far-fetched phraseology. And they hold that whatever is added to this simplicity lays the speaker open to the charge of affectation and pretentious ostentation of speech, void of all sincerity and elaborated merely for the sake of the words, although the sole duty assigned to words by nature is to be the servants of thought.

[41] sicut athletarum corpora, etiamsi validiora fiant exercitatione et lege quadam ciborum, non tamen esse naturalia atque ab illa specie, quae sit concessa hominibus, abhorrere. quid enim, inquiunt, attinet circuitu res ostendere et translationibus, id est aut pluribus aut alienis verbis, cum sua cuique sint adsignata nomina?

[41] Such language may be compared to the bodies of athletes, which although they develop their strength by exercise and diet, are of unnatural growth and abnormal in appearance. For what, say these critics, is the good of expressing a thing by periphrasis or metaphor (that is, either by a number of words or by words which have no connexion with the thing), when everything has been allotted a name of its own?

[42] denique antiquissimum quemque maxime secundum naturam dixisse contendunt: mox poetis similiores exstitisse, etiamsi parcius, simili tamen ratione, falsa et impropria virtutes ducentes. qua in disputatione nonnihil veri est, ideoque non tam procul, quam fit a quibusdam, recedendum a propriis atque communibus.

[42] Finally, they urge that all the earliest orators spoke according to the dictates of nature, but that subsequently there arose a class of speakers

resembling poets rather than orators, who regarded false and artificial methods of expression as positive merits; they were, it is true, more sparing than the poets in their use of such expressions, but none the less worked on similar lines. There is some truth in this contention, and we should therefore be careful not to depart from the more exact usage of ordinary speech to the extent that is done by certain orators.

[43] si quis tamen, ut in loco dixi compositionis, ad necessaria, quibus nihil minus est, aliquid melius adiecerit, non erit hac calumnia reprehendendus. nam mihi aliam quandam videtur habere naturam sermo vulgaris, aliam viri eloquentis oratio; cui si res modo indicare satis esset, nihil ultra verborum proprietatem elaboraret; sed cum debeat delectare, movere, in plurimas animum audientis species impellere, utetur his quoque adiutoriis, quae sunt ab eadem nobis concessa natura.

[43] On the other hand, that is no reason for thus calumniating the man who, as I said in dealing with the subject of artistic structure, succeeds in improving upon the bare necessities of style. For the common language of every day seems to me to be of a different character from the style of an eloquent speaker. If all that was required of the latter was merely to indicate the facts, he might rest content with literalness of language, without further elaboration. But since it is his duty to delight and move his audience and to play upon the various feelings, it becomes necessary for him to employ those additional aids which are granted to us by that same nature which gave us speech.

[44] nam et lacertos exercitatione constringere et augere vires et colorem trahere naturale est. ideoque in omnibus gentibus alius alio facundior habetur et eloquendo dulcis magis (quod si non eveniret, omnes pares essent); at idem homines aliter de re alia loquuntur et servant personarum discrimina. ita, quo quisque plus efficit dicendo, hoc magis secundum naturam eloquentiae dicit.

[44] It is, in fact, as natural to do this as to harden the muscles, increase our strength and improve our complexion by means of exercise. It is for this reason that among all nations one man is regarded as more eloquent and more attractive in his style than another (since if this were not the case, all speakers would be equal); but the same men speak differently on different subjects and observe distinctions of character. Consequently the more effective a man's speaking, the more in accordance with the nature of eloquence will it be.

[45] quapropter ne illis quidem nimirum repugno, qui dandum putant nonnihil etiam temporibus atque auribus nitidius aliquid atque adfectius postulantis. itaque non solum ad priores Catone Gracchisque, sed ne ad hos quidem ipsos oratorem adligandum puto. atque id fecisse M. Tullium video, ut cum plurimum utilitati, tum partem quandam delectationi daret; cum et suam se rem agere diceret, ageret autem maxime litigatoris.

[45] I have, therefore, no strong objection even to the views expressed by those

who think that some concession should be made to the circumstances under which we speak and to the ears of the audience which require something more polished and emotional than ordinary speech. For this reason I consider that it would be absurd to restrict an orator to the style of the predecessors of Cato and the Gracchi, or even of those orators themselves. And I note that it was the practice of Cicero, while devoting himself in the main to the interests of his case, to take into account the delectation of his audience as well, since, as he pointed out, his own interests were concerned as well as those of his client, although of course the latter were of paramount importance. For his very charm was a valuable asset.

[46] nam hoc ipso proderat, quod placet. ad cuius voluptates nihil equidem quod addi possit invenio, nisi ut sensus nos quidem dicamus plures. neque enim non fieri potest salva tractatione causae et dicendi auctoritate, si non crebra hac lumina et continua fuerint et invicem offererint. sed me hactenus cedentem nemo insequatur ultra.

[46] I do not know what can be added by way of improvement to the charms of his style, except perhaps the introduction of something more in the way of brilliant reflexions to suit the taste of our own times. For this can be done without injury to the treatment of our case or impairing the authority of our language, provided that such embellishments are not too frequent or continuous, and do not mutually destroy the effects which they were designed to produce.

[47] do tempori, ne hirta toga sit, non ut serica; ne intonsum caput, non ut in gradus atque anulos comptum, cum eo quod, si non ad luxuriam ac libidinem releras, eadem speciosiora quoque sint, quae honestiora.

[47] I am ready to go so far along the path of concession, but let no man press me further. I concur in the fashion of the day to the extent of agreeing that the toga should not be long in the nap, but not to the extent of insisting that it should be of silk: I agree that the hair should be cut, but not that it should be dressed in tiers and ringlets, since we must always remember that ornaments, unless they be judged from the standpoint of the fop and the debauchee, are always effective in proportion to their seemliness.

[48] ceterum hoc, quod vulgo sententias vocamus, quod veteribus praecipueque Graecis in usu non fuit (apud Ciceronem enim invenio), dum rem contineant et copia non redundant et ad victoriam spectent, quis utile neget? feriunt animum et uno ictu frequenter impellunt et ipsa brevitate magis haerent et delectatione persuadent.

[48] But with regard to those passages to which we give the name of *reflexions*, a form of ornament which was not employed by the ancients and, above all, not by the Greeks, although I do find it in Cicero, who can deny their usefulness, provided they are relevant to the case, are not too diffuse and

contribute to our success? For they strike the mind and often produce a decisive effect by one single blow, while their very brevity makes them cling to the memory, and the pleasure which they produce has the force of persuasion.

[49] at sunt qui haec excitatiora lumina, etiamsi dicere permittant, a componendis tamen orationibus excludenda arbitrentur. quocirca mihi ne Hic quidem locus intactus est omittendus; nam plurimi eruditorum aliam esse dicendi rationem, aliam scribendi putaverunt; ideoque in agendo clarissimos quosdam nihil posteritati mansurisque mox litteris reliquisse, ut Periclem, ut Demaden; rursus alios ad componendum optimos actionibus idoneos non fuisse, ut Isocraten;

[49] There are, however, some who, while allowing the actual delivery of such specially brilliant forms of ornament, think that they should be excluded from the written speech. Consequently I must not dismiss even this topic without a word of discussion. For a number of learned authorities have held that the written and the spoken speech stand on different footings, and that consequently some of the most eloquent of speakers have left nothing for posterity to read in durable literary form, as, for example, is the case with Pericles and Decades Again, they urge that there have been authors, like Isocrates, who, while admirable writers, were not well-fitted for actual speaking;

[50] praeterea in agendo plus impetus plerumque et petitas vel paulo licentius voluptates, commovendos enim esse ducendosque animos imperitorum; at quod libris dedicatum in exemplum edatur, id tersum ac limatum et ad legem ac regulam conpositum esse oportere, quia veniat in manus doctorum et iudices artis habeat artifices.

[50] and, further, that actual pleading is characterised by a greater energy and by the employment, almost verging on license, of every artifice designed to please, since the minds of an uneducated audience require to be moved and led. On the other hand, the written speech which is published as a model of style must be polished and filed and brought into conformity with the accepted rules and standards of artistic construction, since it will come into the hands of learned men and its art will be judged by artists.

[51] quin illi subtiles (ut sibimet ac multis persuaserunt) magistri παράδειγμα dicendo, ἐνθύμημα scribendo esse aptius tradiderunt. mihi unum atque idem videtur bene dicere ac bene scribere, neque aliud esse oratio scripta quam monumentum actionis habitae. itaque nullas non, ut opinor, debet habere virtutes, virtutes dico, non vitia. nam imperitis placere aliquando quae vitiosa sint, scio.

[51] These subtle teachers (for such they have persuaded themselves and others that they are) have laid it down that the παράδειγμα is best suited for actual

speech and the ἔνθῦμα for writing. My own view is that there is absolutely no difference between writing well and speaking well, and that a written speech is merely a record of one that has actually been delivered. Consequently it must in my opinion possess every kind of merit, and note that I say merit, not fault. For I know that faults do sometimes meet with the approval of the uneducated.

[52] quo different igitur? quodsi mihi des consilium iudicum sapientium, perquam multa recidam ex orationibus non Ciceronis modo, sed etiam eius, qui est strictior multo, Demosthenis. neque enim adfectus omnino movendi erunt, nec aures delectatione mulcendae, cum etiam prooemia supervacua esse apud tales Aristoteles existimet; non enim trahentur his illi sapientes; proprie et significanter rem indicare, probationes colligere satis est.

[52] What, then, will be the difference between what is written and what is spoken? If I were given a jury of wise men, I should cut down a large number of passages from the speeches not only of Cicero, but even of Demosthenes, who is much more concise. For with such a jury there would be no need to appeal to the emotions nor to charm and soothe the ears, since according to Aristotle even exordia are superfluous, if addressed to such persons, as they will have no influence upon judges who are truly wise: it will be sufficient to state the facts with precision and significance and to marshal our array of proofs.

[53] cum vero iudex detur aut populus aut ex populo, laturique sint sententiam indocti saepius atque interim rustici, omnia quae ad obtinendum, quod intendimus, prodesse credemus adhibenda sunt; eaque et cum dicimus promenda et cum scribimus ostendenda sunt, si modo ideo scribimus, ut doceamus quomodo dici oporteat.

[53] Since, however, our judges are the people, or drawn from the people, and since those who are appointed to give sentence are frequently ill-educated and sometimes mere rustics, it becomes necessary to employ every method that we think likely to assist our case, and these artifices must not merely be produced in speech, but exhibited in the written version as well, at least if in writing it our design is to show how it should be spoken.

[54] An Demosthenes male sic egisset, ut scripsit, aut Cicero? aut eos praestantissimos oratores alia re quam scriptis cognoscimus? melius egerunt igitur an peius? nam si peius, sic potius oportuit dici, ut scripserunt; si melius, sic potius oportuit scribi, ut dixerunt.

[54] If Demosthenes or Cicero had spoken the words as they wrote them, would either have spoken ill And is our acquaintance with either of those two great orators based on anything save their writings? Did they speak better, then, or worse than they wrote? If they spoke worse, all that can be said is that they should have spoken as they wrote, while, if they spoke better, they should

have written as they spoke.

[55] quid ergo? semper sic aget orator, ut scribet? si licebit, semper. si vero quando impedian brevitate tempora a iudice data, multum ex eo, quod oportuit dici, recidetur; editio habebit omnia. quae tamen secundum naturam iudicantium dicta sunt, non ita posteris tradentur, ne videantur propositi fuisse, non temporis.

[55] Well, you ask, is an orator then always to speak as he writes? If possible, always. If, however, the time allowed by the judge is too short for this to be possible, he will have to cut out much that he should have said, but the published speech will contain the omitted passages. On the other hand, such passages as were uttered merely to suit the character of the judges will not be published for the benefit of posterity, for fear that they should seem to indicate the author's deliberate judgement instead of being a mere concession to the needs of the moment.

[56] nam id quoque plurimum refert, quomodo audire iudex velit, atque eius vultus saepe ipse rector est dicentis, ut Cicero praecipit. ideoque instandum iis quae placere intellexeris, resiliendum ab iis quae non recipiuntur. sermo ipse, qui facillime iudicem doceat, aptandus. nec id mirum sit, cum etiam testium personis aliqua mutantur.

[56] For it is most important that we should know how the judge is disposed to listen, and his face will often (as Cicero reminds us) serve as a guide to the speaker. Consequently we must press the points that we see commend themselves to him, and draw back from those which are ill-received, while our actual language must be so modified that he will find our arguments as intelligible as possible. That this should be necessary is scarcely surprising, when we consider the alterations that are frequently necessary to suit the characters of the different witnesses.

[57] prudenter enim, qui cum interrogasset rusticum testem, an Amphionem nosset, negante eo, detraxit aspirationem breviavitque secundam eius nominis syllabam, et ille eum sic optime norat. huiusmodi casus efficient, ut aliquando dicatur liter quam scribitur, cum dicere, quomodo scribendum est, non licet.

[57] He was a shrewd man who, when he asked a rustic witness whether he knew Amphion, and the witness replied that he did not, dropped the aspirate and shortened the second syllable, whereupon the witness recognised him at once. Such situations, when it is impossible to speak as we write, will sometimes make it necessary to speak in language other than that which we use in writing.

[58] altera est divisio, quae in tres partes et ipsa discedit, qua discerni posse etiam recte dicendi genera inter se videntur. namque unum subtile, quod ἱσχνόν vocant, alterum grande atque robustum, quod ἄδρὸν dicunt,

constituunt; tertium alii, medium ex duobus, alii floridum (namque id ἀνθηρόν appellant) addiderunt.

[58] There is another threefold division, whereby, it is held, we may differentiate three styles of speaking, all of them correct. The first is termed the plain (or ἰσχνόν), the second grand and forcible (or ᾀδρόν), and the third either intermediate or florid, the latter being a translation of ἀνθηρόν.

[59] quorum tamen ea fere ratio est, ut primum docendi, secundum movendi, tertium illud, utrocumque est nomine, delectandi sire, ut alii dicunt, conciliandi praestare videatur officium; in docendo autem acumen, in conciliando lenitas, in movendo vis exigi videatur. itaque illo subtili praecipue ratio narrandi probandique consistet, sed saepe id etiam detractis ceteris virtutibus suo genere plenum.

[59] The nature of these three styles is, broadly speaking, as follows. The first would seem best adapted for instructing, the second for moving, and the third (by whichever name we call it) for charming or, as others would have it, conciliating the audience; for instruction the quality most needed is acumen, for conciliation gentleness, and for stirring the emotions force. Consequently it is mainly in the plain style that we shall state our facts and advance our proofs, though it should be borne in mind that this style will often be sufficiently full in itself without any assistance whatever from the other two.

[60] medius hic modus et translationibus crebrior et figuris erit iucundior, egressionibus amoenus, compositione aptus, sententiis dulcis, lenior tamen ut amnis lucidus quidem sed uirentibus utrinque ripis inumbratus.

[60] The intermediate style will have more frequent recourse to metaphor and will make a more attractive use of figures, while it will introduce alluring digressions, will be neat in rhythm and pleasing in its reflexions: its flow, however, will be gentle, like that of a river whose waters are clear, but overshadowed by the green banks on either side.

[61] at ille, qui saxa devolvat et pontem indignetur et ripas sibi faciat, multus et torrens iudicem vel nitentem contra feret coetque ire, qua rapiet. Hic orator et defunctos excitabit ut Appium Caecum, apud hunc et patria ipsa exclamabit, aliquandoque ut Ciceronem in oratione contra Catilinam in senatu alloquetur.

[61] But he whose eloquence is like to some great torrent that rolls down rocks and “disdains a bridge” and carves out its own banks for itself, will sweep the judge from his feet, struggle as he may, and force him to go whither he bears him. This is the orator that will call the dead to life (as, for example, Cicero calls upon Appius Caecus); it is in his pages that his native land itself will cry aloud and at times address the orator himself, as it addresses Cicero in the speech delivered against Catiline in the senate.

[62] Hic et amplificationibus extollet orationem, et in superlationem quoque erigetur. quae Charybdis tam vorax? et Oceanus medius fidius ipse. nota sunt enim iam studiosis haec lumina. Hic deos ipsos in congressum prope suum sermonemque deducet: vos enim Albani tumuli atque luci; vos, inquam, Albanorum obrutae arae, sacrorum populi Romani sociae et aequales. Hic iram, hic misericordiam inspirabit, hoc dicente iudex deos appellabit et flebit et per omnes adfectus tractatus huc atque illuc sequetur nec doceri desiderabit.

[62] Such an orator will also exalt his style by amplification and rise even to *hyperbole*, as when Cicero cries, “What Charybdis was ever so voracious!” or “By the god of truth, even Ocean’s self,” etc. (I choose these fine passages as being familiar to the student). It is such an one that will bring down the Gods to form part of his audience or even to speak with him, as in the following, “For on you I call, ye hills and groves of Alba, on you, I say, ye fallen altars of the Albans, altars that were once the peers and equals of the holy places of Rome.” This is he that will inspire anger or pity, and while he speaks the judge will call upon the gods and weep, following him wherever he sweeps him from one emotion to another, and no longer asking merely for instruction.

[63] quare si ex tribus his generibus necessario sit eligendum unum, quis dubitet hoc praeferre omnibus et validissimum alioqui et maximis quibusque causis accommodatissimum?

[63] Wherefore if one of these three styles has to be selected to the exclusion of the others, who will hesitate to prefer this style to all others, since it is by far the strongest and the best adapted to the most important cases?

[64] nam et Homerus brevem quidem cum iucunditate et propriam, id enim est non deerrare uerbis, et carentem supervacuis eloquentiam Menelao dedit, quae sunt virtutes generis illius primi, et ex ore Nestoris dixit dulciorem melle profluere sermonem, qua certe delectatione nihil fingi maius potest; sed summam expressurus in Ulixie facundiam et magnitudinem illi vocis et vim orationis niuibis hibernis et copia verborum atque impetu parem tribuit.

[64] For Homer himself assigns to Menelaus an eloquence, terse and pleasing, exact (for that is what is meant by “making no errors in words”) and devoid of all redundancy, which qualities are virtues of the first type: and he says that from the lips of Nestor flowed speech sweeter than honey, than which assuredly we can conceive no greater delight: but when he seeks to express the supreme gift of eloquence possessed by Ulysses he gives a mighty voice and a vehemence of oratory equal to the snows of winter in the abundance and the vigour of its words.

[65] cum hoc igitur nemo mortalium contendet; hunc ut deum homines intuebuntur. hanc vim et celeritatem in Pericle miratur Eupolis, hanc fulminibus Aristophanes comparat, haec est vere dicendi facultas.

[65] “With him then,” he says, “no mortal will contend, and men shall look upon him as on a god.” It is this force and impetuosity that Eupolis admires in Pericles, this that Aristophanes compares to the thunderbolt, this that is the power of true eloquence.

[66] sed neque his tribus quasi formis inclusa eloquentia est. nam ut inter gracile validumque tertium aliquid constitutum est, ita horum inter se intervalla sunt, atque inter haec ipsa mixture quiddam ex duobus medium est eorum.

[66] But eloquence cannot be confined even to these three forms of style. For just as the third style is intermediate between the grand and the plain style, so each of these three are separated by interspaces which are occupied by intermediate styles compounded of the two which he on either side.

[67] nam et subtili plenius aliquid atque subtilius et vehementi remissius atque vehementius invenitur, ut illud lene aut ascendit ad fortiora aut ad tenuiora summittitur. ac sic prope innumerabiles species reperiuntur, quae utique aliquo momento inter se differant: sicut quattuor ventos generaliter a totidem mundi cardinibus accepimus flare, cum interim plurimi medii et eorum varia nomina et quidam etiam regionum ac fluminum propriiprehenduntur.

[67] For there are styles fuller or plainer than the plain, and gentler or more vehement than the vehement, while the gentler style itself may either rise to greater force or sink to milder tones. Thus we may discover almost countless species of styles, each differing from the other by some fine shade of difference. We may draw a parallel from the winds. It is generally accepted that there are four blowing from the four quarters of the globe, but we find there are also a large number of winds which lie between these, called by a variety of names, and in certain cases confined to certain districts and river valleys.

[68] eademque musicis ratio est, qui, cum in cithara quinque constituerunt sonos, plurima deinde varietate complent spatia illa nervorum, atque his, quos interposuerunt, inserunt alios, ut pauci illi transitus multos gradus habeant.

[68] The same thing may be noted in music. For after assigning five notes to the lyre, musicians fill up the intervals between the strings by a variety of notes, and between these again they interpose yet others, so that the original divisions admit of a number of gradations.

[69] plures igitur etiam eloquentiae faces, sed stultissimum quaerere, ad quam se recturus sit orator, cum omnis species, quae modo recta est, habeat usum, atque id ipsum non sit oratoris, quod vulgo genus dicendi vocant. utetur enim, ut res exigit, omnibus, nec pro causa modo, sed pro partibus causae.

[69] Eloquence has, therefore, a quantity of different aspects, but it is sheer folly to inquire which of these the orator should take as his model, since every

species that is in itself correct has its use, and what is commonly called *style of speaking* does not depend on the orator. For he will use all styles, as circumstances may demand, and the choice will be determined not only by the case as a whole, but by the demands of the different portions of the case.

[70] nam ut non eodem modo pro reo capitis et in certamine hereditatis et de interdictis ac sponsionibus et de certa credita dicet, sententiarum quoque in senatu et contionum et privatorum consiliorum servabit discrimina, multa ex differentia personarum, locorum temporumque mutabit, ita in eadem oratione aliter concitabit, aliter conciliabit, non ex iisdem haustibus iram et misericordiam petet, alias ad docendum alias ad movendum adhibebit artes.

[70] For just as he will not speak in the same way when he is defending a client on a capital charge and when he is speaking in a lawsuit concerned with an inheritance, or discussing interdicts and suits taking the form of a wager, or claims in connexion with loans, so too he will preserve a due distinction between the speeches which he makes in the senate, before the people and in private consultations, while he will also introduce numerous modifications to suit the different persons and circumstances of time and place. Thus in one and the same speech he will use one style for stirring the emotions, and another to conciliate his hearers; it is from different sources that he will derive anger or pity, and the art which he employs in instructing the judge will be other than that which he employs to move him.

[71] non unus color prooemii, narrationis, argumentorum, egressionis, perorationis servabitur. dicet idem graviter, severe, acriter, vehementer, concitate, copiose, amare, comiter, remisse, subtiliter, blande, leniter, dulciter, breviter, urbane, non ubique similis, sed ubique par sibi.

[71] He will not maintain the same tone throughout his *exordium*, *statement of fact*, *arguments*, *digression* and *peroration*. He will speak gravely, severely, sharply, with vehemence, energy, fullness, bitterness, or geniality, quietly, simply, Hatteringly, gently, sweetly, briefly or wittily; he will not always be like himself, but he will never be unworthy of himself.

[72] sic fiet cum id, propter quod maxime repertus est usus orationis, ut dicat utiliter et ad efficiendum quod intendit potenter, tum laudem quoque nec doctorum modo sed etiam vulgi consequatur.

[72] Thus the purpose for which oratory was above all designed will be secured, that is to say, he will speak with profit and with power to effect his aim, while he will also win the praise not merely of the learned, but of the multitude as well.

[73] falluntur enim plurimum, qui vitiosum et corruptum dicendi genus, quod aut verborum licentia exultat aut puerilibus sententiolis lascivit aut immodico tumore turgescit aut inanibus locis bacchatur aut casuris, si leviter excutiantur,

flosculis nitet aut praecipitia pro sublimibus habet aut specie libertatis insanit, magis existimant populare atque plausibile. quod quidem placere multis nec infitior nec miror.

[73] They make the gravest mistake who consider that the style which is best adapted to win popularity and applause is a faulty and corrupt style of speaking which revels in license of diction or wantons in childish epigram or swells with stilted bombast or riots in empty commonplace or adorns itself with blossoms of eloquence which will fall to earth if but lightly shaken, or regards extravagance as sublime or raves wildly under the pretext of free speech.

[74] Est enim iucunda auribus ac favorabilis qualiscunque eloquentia et ducit animos naturali voluptate vox omnis, neque aliunde illi per fora atque aggerem circuli; quo minus mirum est, quod nulli non agentium parata vulgi corona est.

[74] I am ready to admit that such qualities please many, and I feel no surprise that this should be the case. For any kind of eloquence is pleasing and attractive to the ear, and every effort of the voice inspires a natural pleasure in the soul of man; indeed this is the sole cause of those familiar gatherings in the Forum or on the Old Wall, so that there is small reason for wonder if any pleader is safe to draw a ring of listeners from the crowd.

[75] ubi vero quid exquisitius dictum accidit auribus imperitorum, qualecunque id est, quod modo se ipsi posse desperent, habet admirationem, neque immerito; nam ne illud quidem facile est. sed evanescunt hac atque emoriuntur comparatione meliorum, ut lana tincta fuco citra purpuram placet; at si contuleris Tyriae eam laetae, conspectu melioris obruatur, ut Ovidius ait.

[75] And when any unusually precious phrase strikes the ears of an uneducated audience, whatever its true merits, it wakens their admiration just for the very reason that they feel they could never have produced it themselves. And it deserves their admiration, since even such success is hard to attain. On the other hand, when such displays are compared with their betters, they sink into insignificance and fade out of sight, for they are like wool dyed red that pleases in the absence of purple, but, as Ovid says, if compared with a cloak of Tyrian dye, pales in the presence of the fairer hue.

[76] si vero iudicium his corruptis acrius adhibeas ut fucinis sulfura, iam illum, quo fefellerant, exuant mentitum colorem et quadam vix enarrabili foeditate pallescant. lucent igitur haec citra solem, ut quaedam exigua animalia igniculi videntur in tenebris. denique mala multi probant, nemo improbat bona.

[76] If, however, we test such corrupt eloquence by the touchstone of a critical taste, as, for example, we test inferior dyes with sulphur, it will lay aside the

false brilliance that deceived the eye and fade to a pallor almost too repulsive to describe. Such passages shine only in the absence of the sunlight, just as certain tiny insects seem transformed in the darkness to little flames of fire. Finally, while many approve of things that are bad, no one disapproves of that which is good.

[77] neque vero omnia ista, de quibus locuti sumus, orator optime tantum sed etiam facillime faciet. neque enim vim summam dicendi et os admiratione dignum infelix usque ad ultimum sollicitudo persequitur, quae oratorem macerat et coquit aegre verba vertentem et perpendendis coagmentandisque eis intabescentem.

[77] But the true orator will not merely be able to achieve all the feats of which I have spoken with supreme excellence, but with the utmost ease as well. For the sovereign power of eloquence and the voice that awakens well-deserved applause will be free from the perpetual distress of harassing anxiety which wastes and fevers the orator who painfully corrects himself and pines away over the laborious weighing and piecing together of his words.

[78] nitidus ille et sublimis et locuples circumfluentibus undique eloquentiae copiis imperat. desinit enim in adversa niti, qui pervenit in summum. scandenti circa ima labor est; ceterum quantum processeris, mollior clivus ac laetius solum.

[78] No, our orator, brilliant, sublime and opulent of speech, is lord and master of all the resources of eloquence, whose affluence surrounds him. For he that has reached the summit has no more weary hills to scale. At first the climber's toil is hard, but the higher he mounts the easier becomes the gradient and the richer the soil.

[79] et si haec quoque iam lenius supina perseverantibus studiis evaseris, inde fructus illaborati offerunt sese et omnia sponte proveniunt; quae tamen cotidie nisi decerpantur, arisi decerpantur, arescunt. sed et copia habeat modum, sine quo nihil nec laudabile nec salutare est, et nitor ille cultum virilem et inventio iudicium.

[79] And if by perseverance of study he pass even beyond these gentler slopes, fruits for which none have toiled thrust themselves upon him, and all things spring forth unbidden; and yet if they be not gathered daily, they will wither away. But even such wealth must observe the mean, without which nothing is either praiseworthy or beneficial, while brilliance must be attended by manliness, and imagination by soundness of taste.

[80] sic erunt magna non nimia, sublimia non abrupta, fortia non temeraria, severa non tristia, gravia non tarda, laeta non luxuriosa, iucunda non dissoluta, grandia non tumida. similis in ceteris ratio est ac tutissima fere per medium via, quia utriusque ultimum vitium est.

[80] Thus the works of the orator will be great not extravagant, sublime not bombastic, bold not rash, severe but not gloomy, grave but not slow, rich but not luxuriant, pleasing but not effeminate, grand but not grandiose. It is the same with other qualities: the mean is safest, for the worst of all faults is to fly to extremes.

11. his dicendi virtutibus usus orator ad iudiciis, consiliis, contionibus, senatu, ad omni denique officio boni civis finem quoque dignum et optimo viro et opere sanctissimo faciet, non quia prodesse unquam satis sit et illa mente atque illa facultate praedito non optandum operis pulcherrimi quam longissimum tempus, sed quia decet hoc quoque prospicere, ne quid peius, quam fecerit, faciat.

11. After employing these gifts of eloquence in the courts, in councils, in public assemblies and the debates of the senate, and, in a word, in the performance of all the duties of a good citizen, the orator will bring his activities to a close in a manner worthy of a blameless life spent in the pursuit of the noblest of professions. And he will do this, not because he can ever have enough of doing good, or because one endowed with intellect and talents such as his would not be justified in praying that such glorious labours may be prolonged to their utmost span, but for this reason, that it is his duty to look to the future, for fear that his work may be less effective than it has been in the past.

[2] neque enim scientia modo constat orator, quae augetur annis, sed voce, latere, firmitate; quibus fractis aut imminutis aetate seu valetudine cavendum est, ne quid ad oratore summo desideretur, ne intersistat fatigatus, ne quae dicet parum audiri sentiat, ne se quaerat priorem.

[2] For the orator depends not merely on his knowledge, which increases with the years, but on his voice, lungs and powers of endurance. And if these be broken or impaired by age or health, he must beware that he does not fall short in something of his high reputation as a master of oratory, that fatigue does not interrupt his eloquence, that he is not brought to realise that some of

his words are inaudible, or to mourn that he is not what once he was.

[3] vidi ego longe omnium, quos mihi cognoscere contigit, summum oratorem, Domitium Afrum valde senem, cotidie aliquid ex ea quam meruerat auctoritate perdentem, cum agente illo, quem principem fuisse quondam fori non erat dubium, alii, quod indignum videatur, riderent, alii erubescerent; quae occasio fuit de illo dicendi, malle eum deficere quam desinere.

[3] Domitius Afer was by far the greatest of all the orators whom it has been my good fortune to know, and I saw him, when far advanced in years, daily losing something of that authority which his merits had won for him; he whose supremacy in the courts had once been universally acknowledged, now pleaded amid the unworthy laughter of some, and the silent blushes of others, giving occasion to the malicious saying that he had rather “faint than finish.”

[4] neque erant ilia qualiacunque mala sed minora.

quare antequam ad has aetatis veniat insidias, receptui canet et ad portum integra nave perveniet. neque enim minores eum, cum id fecerit, studiorum fructus prosequuntur. aut ille monumenta rerum posteris aut, ut L. Crassus ad libris Ciceronis destinat, iura quaerentibus reddet aut eloquentiae component artem aut pulcherrimis vitae praeceptis dignum os dabit.

[4] And yet even then, whatever his deficiencies, he spoke not badly, but merely less well.

Therefore before ever he fall a prey to the ambush where time lies in wait for him, the orator should sound the retreat and seek harbour while his ship is yet intact. For the fruits of his studies will not be lessened by retirement. Either he will bequeath the history of his own times for the delight of after ages, or will interpret the law to those who seek his counsels, as Lucius Crassus proposes to do in the *de Oratore* of Cicero, or compose some treatise on the art of oratory, or give worthy utterance to the sublimest ideals of conduct.

[5] frequentabunt vero eius domum optimi iuvenes more veterum et vere dicendi viam velut ex oraculo petent. hos ille formabit quasi eloquentiae parens, et ut vetus gubernator litora et portus et quae tempestatum signa, quid secundis flatibus, quid adversis ratio poscat, docebit, non humanitatis solum communi ductus officio, sed amore quodam operis. nemo enim minui velit id, ad quo maximus fuit.

[5] His house will, as in the days of old, be thronged by all the best of the rising generation, who will seek to learn from him as from an oracle how they may find the path to true eloquence. And he as their father in the art will mould them to all excellence, and like some old pilot will teach them of the shores whereby their ships must sail, of the harbours where they may shelter, and the signs of the weather, and will expound to them what they shall do when the breeze is fair or the tempest blows. Whereto he will be inclined not

only by the common duty of humanity, but by a certain passion for the task that once was his, since no man desires that the art wherein he was once supreme should suffer decay or diminution.

[6] quid porro est honestius quam docere quod optime scias? sic ad se Caelium deductum a patre Cicero profitetur; sic Pansam, Hirtium, Dolabellam ad morem praeceptoris exercuit cotidie dicens audiensque.

[6] And what can be more honourable than to teach that which you know surpassing well? It was for this that the elder Caelius brought his son to Cicero, as the latter tells us, and it was with this intent that the same great orator took upon himself the duties of instructor, and trained Pansa, Hirtius and Dolabella by declaiming daily before them or hearing them declaim.

[7] ac nescio an eum tum beatissimum credi oporteat fore, cum iam secretus et consecratus, liber invidia, procul contentionibus famam ad tuto collocarit et sentiet vivus eam, quae post fata praestari magis solet, venerationem et, quid apud posteros futurus sit, videbit.

[7] And I know not whether we should not deem it the happiest moment in an orator's life, when he has retired from the public gaze, the consecrated priest of eloquence, free from envy and far from strife, when he has set his glory on a pinnacle beyond the reach of detraction, enjoys, while still living, that veneration which most men win but after death, and sees how great shall be his renown amid generations yet unborn.

[8] conscius sum mihi, quantum mediocritate valui, quaeque antea scierim, quaeque operis huiusce gratia potuerim inquirere, candide me atque simpliciter ad notitiam eorum, si qui forte cognoscere voluissent, protulisse. atque id viro bono satis est, docuisse quod scierit.

[8] I can say with a good conscience that, as far as my poor powers have permitted, I have published frankly and disinterestedly, for the benefit of such as might wish to learn, all that my previous knowledge and the researches made for the purpose of this work might supply. And to have taught what I know is satisfaction enough for any good man.

[9] vereor tamen, ne aut magna nimium videar exigere, qui eundem virum bonum esse et dicendi peritum velim, aut multa, qui tot artibus ad pueritia discendis morum quoque praecepta et scientiam artis civilis praeter ea, quae de eloquentia tradebantur, adiecerim, quique haec operi nostro necessaria esse crediderint, velut moram rei perhorrescant et desperent ante experimentum.

[9] I fear, however, that I may be regarded as setting too lofty an ideal for the orator by insisting that he should be a good man skilled in speaking, or as imposing too many subjects of study on the learner. For in addition to the many branches of knowledge which have to be studied in boyhood and the traditional rules of eloquence, I have enjoined the study of morals and of civil

law, so that I am afraid that even those who have regarded these things as essential to my theme, may be appalled at the delay which they impose and abandon all hope of achievement before they have put my precepts to the test.

[10] qui primum renuntient sibi, quanta sit humani ingenii vis, quam potens efficiendi quae velit, cum maria transire, siderum cursus numerosque cognoscere, mundum ipsum paene dimetiri, minores, sed difficiliores artes potuerint. tum cogitent, quantam rem petant, quamque nullus sit hoc proposito praemio labor recusandus.

[10] I would ask them to consider how great are the powers of the mind of man and how astonishing its capacity for carrying its desires into execution: for has not man succeeded in crossing the high seas, in learning the number and the courses of the stars, and almost measuring the universe itself, all of them accomplishments of less importance than oratory, but of far greater difficulty? And then let them reflect on the greatness of their aims and on the fact that no labour should be too huge for those that are beckoned by the hope of such reward.

[11] quod si mente conceperint, huic quoque parti facilius accedent, ut ipsum iter neque impervium neque saltem durum putent. nam id, quod prius quodque maius est, ut boni viri simus, voluntate maxime constat; quam qui vera fide induerit, facile eas, quae virtutem docent, artes accipiet.

[11] If they can only rise to the height of this conception, they will find it easier to enter on this portion of their task, and will cease to regard the road as impassable or even hard. For the first and greatest of the aims we set before us, namely that we shall be good men, depends for its achievement mainly on the will to succeed: and he that truly and sincerely forms such resolve, will easily acquire those forms of knowledge that teach the way to virtue.

[12] neque enim aut tam perplexa aut tam numerosa sunt quae praecipiantur, ut non paucorum admodum annorum intentione discantur. longam enim facit operam quod repugnamus; brevis est institution vitae honestae beataeque, si credas. natura enim nos ad mentem optimam genuit, adeoque discere meliora uolentibus promptum est, ut vere intuenti mirum sit illud magis malos esse tam multos.

[12] For the precepts that are enjoined upon us are not so complex or so numerous that they may be acquired by little more than a few years' study. It is repugnance to learn that makes such labour long. For if you will only believe it, you will quickly learn the principles that shall lead you to a life of virtue and happiness. For nature brought us into the world that we might attain to all excellence of mind, and so easy is it for those to learn who seek for better things, that he who directs his gaze aright will rather marvel that the bad should be so many.

[13] nam ut aqua piscibus, ut sicca terrenis, circumfusus nobis spiritus volucris convenit, ita certe facilius esse oportebat secundum naturam quam contra eam vivere. cetera vero, etiamsi aetatem nostram non spatio senectutis sed tempore adolescentiae metiamur, abunde multos ad discendum annos habent. omnia enim breviora reddet ordo et ratio et modus.

[13] For as water is the natural element of fish, dry land for creatures of the earth and the circumambient atmosphere for winged things, even so it should be easier to live according to nature than counter to her will. As regards other accomplishments, there are plenty of years available for their acquisition, even though we measure the life of man not by the span of age, but by the period of youth. For in every case order and method and a sense of proportion will shorten our labour.

[14] sed culpa est ad praeceptoribus prima, qui libenter detinent quos occupaverunt, partim cupiditate diutius exigendi mercedulas, partim ambitione, quo difficilior videatur esse quod pollicentur, partim etiam inscientia tradendi vel negligentia. proxima ad nobis, qui morari ad eo quod novimus, quam discere quae nondum scimus, melius putamus.

[14] But the chief fault lies with our teachers, in that they love to keep back the pupils they have managed to lay their hands on, partly from the desire to draw their miserable fees for as long as possible, partly out of ostentation, to enhance the difficulty of acquiring the knowledge which they promise to impart, and to some extent owing to their ignorance or carelessness in teaching. The next most serious fault lies in ourselves, who think it better to linger over what we have learned than to learn what we do not yet know.

[15] nam ut de nostris potissimum studiis dicam, quid attinet tam multis annis quam ad more est plurimorum (ut de his, a quibus magna ad hoc pars aetatis absumitur, taceam) declamare ad schola et tantum laboris ad rebus falsis consumere, cum satis sit modico tempore imaginem veri discriminis et dicendi leges comperisse Quod non eo diro,

[15] For example, to restrict my remarks mainly to the study of rhetoric, what is the use of spending so many years, after the fashion now so prevalent (for I will say nothing of those who spend almost their whole lives), in declaiming in the schools and devoting so much labour to the treatment of fictitious themes, when it would be possible with but slight expenditure of time to form some idea of what the true conflicts are in which the orator must engage, and of the laws of speaking which he ought to follow?

[16] quasi sit umquam omittenda dicendi exercitatio, sed quia non ad una sit eius specie consensendum. res varias cognoscere et praecepta vivendi perdiscere et ad foro nos experiri potuimus, dum scholastici sumus. discendi ratio talis, ut non multos poscat annos. quaelibet enim ex iis artibus, quarum habui mentionem, ad paucos libros contrahi solet; adeo non est infinito spatio

ad traditionem opus. reliqua est exercitatio, quae vires cito facit, cum fecit, tuetur.

[16] In saying this, I do not for a moment mean to suggest that we should ever omit to exercise ourselves in speaking. I merely urge that we should not grow old over one special form of exercise. We have been in a position to acquire varied knowledge, to familiarise ourselves with the principles that should guide our life, and to try our strength in the courts, while we were still attending the schools. The theory of speaking is of such a nature that it does not demand many years for its acquisition. For any one of the various branches of knowledge which I have mentioned will, as a rule, be found to be comprised in a few volumes, a fact which shows that instruction does not require an indefinite amount of time to be devoted to it. The rest depends entirely on practice, which at once develops our powers and maintains them, once developed.

[17] rerum cognitio cotidie crescit, et tamen quam multorum ad eam librorum necessaria lectio est, quibus aut rerum exempla ab historicis aut dicendi ab oratoribus petuntur, philosophorum quoque consultorumque opiniones, si utilia velimus legere non, quod ne fieri quidem potest, omnia? sed breve nobis tempus nos facimus.

[17] Knowledge increases day by day, and yet how many books is it absolutely necessary to read in our search for its attainment, for examples of facts from the historians or of eloquence from the orators, or, again, for the opinions of the philosophers and the lawyers, that is to say, if we are content to read merely what is useful without attempting the impossible task of reading everything?

[18] quantulum enim studiis partimur Alias horas vanus salutandi labor, alias datum tabulis otium, alias spectacula, alias convivia trahunt. adice tot genera ludendi et insanam corporis curam, peregrinatio, rura, calculorum anxiam sollicitudinem, invitamenta libidinum et vinum et flagrantibus omni genere voluptatum animis ne ea quidem tempora idonea, quae supersunt.

[18] But it is ourselves that make the time for study short: for how little time we allot to it! Some hours are passed in the futile labour of ceremonial calls, others in idle chatter, others in staring at the shows of the theatre, and others again in feasting. To this add all the various forms of amusement, the insane attention devoted to the cultivation of the body, journeys abroad, visits to the country, anxious calculation of loss and gain, the allurements of lust, wine-bibbing and those remaining hours which are all too few to gratify our souls on fire with passion for every kind of pleasure.

[19] quae si omnia studiis impenderentur, iam nobis longa aetas et abunde satis ad discendum spatii viderentur vel diurna tantum computantibus tempora ut nihil noctes, quarum bona pars omni somno longior est, adiuvent. nunc

computamus annos, non quibus studuimus, sed quibus viximus.

[19] If all this time were spent on study, life would seem long enough and there would be plenty of time for learning, even though we should take the hours of daylight only into our account, without asking any assistance from the night, of which no little space is superfluous even for the heaviest sleeper. As it is, we count not the years which we have given to study, but the years we have lived.

[20] nec vero si geometrae et musici et grammatici ceterarumque artium professores omnem suam vitam, quamlibet longa fuerit, ad singulis artibus consumpserunt, sequitur ut plures quasdam vitas ad plura discenda desideremus. neque enim illi didicerunt haec usque ad senectutem, sed ea sola didicisse contenti fuerunt ac tot annos non ad percipiendo exhausserunt, sed ad praecipiendo.

[20] And indeed even although geometricians, musicians and grammarians, together with the professors of every other branch of knowledge, spend all their lives, however long, in the study of one single science, it does not therefore follow that we require several lives more if we are to learn more. For they do not spend all their days even to old age in learning these things, but being content to have learned these things and nothing more, exhaust their length of years not in acquiring, but in imparting knowledge.

[21] ceterum, ut de Homero taceam, ad quo nullius non artis aut opera perfecta aut certe non dubia vestigia reperiuntur, (ut Eleum Hippiam transeam, qui non liberalium modo disciplinarum prae se scientiam tulit, sed vestem et anulum crepidasque, quae omni manu sua fecerat, ad usu habuit, atque ita se praeparavit, ne cuius alterius opere egeret,) illuisse tot malis, quot summa senectus habet, uniuersae Graeciae credimus Gorgian, qui quaerere auditores de quo quisque vellet iubebat.

[21] However, to say nothing of Homer, in whom we may find either the perfect achievements, or at any rate clear signs of the knowledge of every art, and to pass by Hippias of Elis, who not merely boasted his knowledge of the liberal arts, but wore a robe, a ring and shoes, all of which he had made with his own hands, and had trained himself to be independent of external assistance, we accept the universal tradition of Greece to the effect that Gorgias, triumphant over all the countless ills incident to extreme old age, would bid his hearers propound any questions they pleased for him to answer.

[22] quae tandem ars digna litteris Platoni defuit? quot sacculis Aristoteles didicit, ut non solum, quae ad philosophos atque oratores pertinent, scientia complecteretur, sed animalum satorumque naturas omnes perquireret? illis haec invenienda fuerunt, nobis cognoscenda sunt. tot nos praeceptoribus, tot exemplis instruxit antiquitas, ut possit videri nulla sorte nascendi aetas felicior quam nostra, cui docendae priores elaborarunt.

[22] Again in what branch of knowledge worthy of literary expression was Plato deficient? How many generations' study did Aristotle require to embrace not merely the whole range of philosophical and rhetorical knowledge, but to investigate the nature of every beast and plant. And yet they had to discover all these things which we only have to learn. Antiquity has given us all these teachers and all these patterns for our imitation, that there might be no greater happiness conceivable than to be born in this age above all others, since all previous ages have toiled that we might reap the fruit of their wisdom.

[23] *M. igitur Cato idem summus imperator, idem sapiens, idem orator, idem historiae conditor, idem iris, idem rerum rusticarum peritissimus fuit inter tot operas militiae, tantas domi contentiones, rudi saeculo, litteras Graecas aetate iam declinata; didicit, ut esset hominibus documento ea quoque percipi posse quae senes concupissent.*

[23] Marcus Cato was at once a great general, a philosopher, orator, historian, and an expert both in law and agriculture, and despite his military labours abroad and the distractions of political struggles at home, and despite the rudeness of the age in which he lived, he none the less learned Greek, when far advanced in years, that he might prove to mankind that even old men are capable of learning that on which they have set their hearts.

[24] *quam multa, paene omnia, tradidit Varro! quod instrumentum dicendi M. Tullio defuit? quid plura? cum etiam Cornelius Celsus, mediocri vir ingenio, non solum de his omnibus conscripserit artibus, sed amplius rei militaris et rusticae et medicinae praecepta reliquerit, dignus vel ipso proposito, ut eum scisse omnia illa credamus.*

[24] How wide, almost universal, was the knowledge that Varro communicated to the world! What of all that goes to make up the equipment of an orator was lacking to Cicero? Why should I say more, since even Cornelius Celsus, a man of very ordinary ability, not merely wrote about rhetoric in all its departments, but left treatises on the art of war, agriculture and medicine as well. Indeed the high ambition revealed by his design gives him the right to ask us to believe that he was acquainted with all these subjects.

[25] *at perficere tantum opus arduum et nemo perfecit. ante omnia sufficit ad exhortationem studiorum, capere id rerum naturam nec, quidquid non est factum, ne fieri quidem posse; tum omnia, quae magna sunt atque admirabilia, tempus aliquod quo primum efficerentur habuisse.*

[25] But, it will be urged, to carry out such a task is difficult and has never been accomplished. To which I reply that sufficient encouragement for study may be found in the fact, firstly, that nature does not forbid such achievement and it does not follow that, because a thing never has been done, it therefore never can be done, and secondly, that all great achievements have required time for

their first accomplishment.

[26] nam et poesis ab Homero et Vergilio tantum fastigium accepit et eloquentia a Demosthene atque Cicerone. denique quidquid est optimum, ante non fuerat. verum etiam si quis summa desperet (quod cur faciat, cui ingenium, valetudo, facultas, praeceptores non deerunt?), tamen est, ut Cicero ait, pulchrum ad secundis tertiisque consistere.

[26] Poetry has risen to the heights of glory, thanks to the efforts of poets so far apart as Homer and Virgil, and oratory owes its position to the genius of Demosthenes and Cicero. Finally, whatever is best in its own sphere must at some previous time have been non-existent. But even if a man despair of reaching supreme excellence (and why should he despair, if he have talents, health, capacity and teachers to aid him?), it is none the less a fine achievement, as Cicero says, to win the rank of second or even third.

[27] neque enim, si quis Achillis gloriam ad bellicis consequi non potest, Aiakis aut Diomedis laudem aspernabitur, nec qui Homeri non fuerunt, Tyrtaei. Quin immo si hanc cogitationem homines habuissent, ut nemo se meliorem fore eo qui optimus fuisset, arbitraretur, ii ipsi, qui sunt optimi, non fuissent, neque post Lucretium ac Macrum Vergilius nec post Crassum et Hortensium Cicero, sed nec illi, qui post eos fuerunt.

[27] For even if a soldier cannot achieve the glory of Achilles in war, he will not despise fame such as fell to the lot of Ajax and Diomedes, while those who cannot be Homers may be content to reach the level of Tyrtaeus. Nay, if men had been obsessed by the conviction that it was impossible to surpass the man who had so far shown himself best, those whom we now regard as best would never have reached such distinction, Lucretius and Macer would never have been succeeded by Virgil, nor Crassus and Hortensius by Cicero, nor they in their turn by those who flourished after them.

[28] verum ut transeundi spes non sit, magna tamen est dignitas subsequendi. An Pollio et Messala, qui iam Cicerone arcem tenente eloquentiae agere coeperunt, parum ad vita dignitatis habuerunt, parum ad posteros gloriae tradiderunt? alioqui pessime de rebus humanis perductae ad summum artes mererentur, si, quod optimum, idem ultimum fuisset.

[28] But even though we cannot hope to surpass the great, it is still a high honour to follow in their footsteps. Did Pollio and Messala, who began to plead when Cicero held the citadel of eloquence, fail to obtain sufficient honour in their lifetime or to hand down a fair name to posterity? The arts which have been developed to the highest pitch of excellence would deserve but ill of mankind if that which was best had also been the last of its line.

[29] adde quod magnos modica quoque eloquentia parit fructus ac, si quis haec studia utilitate sola metiatur, paene illi perfectae par est. neque erat difficile

vel veteribus vel novis exemplis palam facere, non aliunde maiores opes, honores, amicitias, laudem praesentem, futuram hominibus contigisse, nisi indignum litteris esset, ab opere pulcherrimo, cuius tractatus atque ipsa possessio plenissimam studiis gratiam refert, hanc minorem exigere mercedem, more eorum, qui a se non virtutes sed voluptatem, quae fit ex virtutibus, peti dicunt.

[29] Add to this the further consideration that even moderate eloquence is often productive of great results and, if such studies are to be measured solely by their utility, is almost equal to the perfect eloquence for which we seek. Nor would it be difficult to produce either ancient or recent examples to show that there is no other source from which men have reaped such a harvest of wealth, honour, friendship and glory, both present and to come. But it would be a disgrace to learning to follow the fashion of those who say that they pursue not virtue, but only the pleasure derived from virtue, and to demand this meaner recompense from the noblest of all arts, whose practice and even whose possession is ample reward for all our labours.

[30] ipsam igitur orandi maiestatem, qua nihil dii immortales melius homini dederunt et qua remota muta sunt omnia et luce praesenti ac memoria posteritatis carent, toto animo petamus nitamurque semper ad optima, quod facientes aut evademus ad summum aut certe multos infra nos videbimus.

[30] Wherefore let us seek with all our hearts that true majesty of oratory, the fairest gift of god to man, without which all things are stricken dumb and robbed alike of present glory and the immortal record of posterity; and let us press forward to whatsoever is best, since, if we do this, we shall either reach the summit or at least see many others far beneath us.

[31] haec erant, Marcelle Victori, quibus praecepta dicendi pro virili parte adiuvari posse per nos videbantur, quorum cognitio studiosis iuvenibus si non magnam utilitatem adferet, at certe, quod magis petimus, bonam voluntatem.

[31] Such, Marcellus Victorius, were the views by the expression of which it seemed to me that I might, as far as in me lay, help to advance the teaching of oratory. If the knowledge of these principles proves to be of small practical utility to the young student, it should at least produce what [value more, — the will to do well.

The Biography

Statue commemorating Quintilian in Calahorra, La Rioja, Spain

LIFE OF QUINTILIAN by H. E. Butler

Marcus Fabius Quintilianus was, like Seneca, of Spanish origin, being born about 35 A.D. at Calagurris. His father was a rhetorician of some note who practised with success at Rome. It is not surprising therefore to find that the young Quintilian was sent to Rome for his education. Among his teachers were the famous *grammaticus* Remmius Palaemon, and the no less distinguished rhetorician Domitius Afer. On completing his education he seems to have returned to his native land to teach rhetoric there, for we next hear of him as being brought to Rome in 68 A.D. by Galba, then governor of Hispania Tarraconensis. At Rome he met with great success as a teacher and was the first rhetorician to set up a genuine public school and to receive a salary from the State. He continued to teach for twenty years and had among his pupils the younger Pliny and the two sons of Domitilla, the sister of Domitian. He was also a successful pleader in the courts as we gather from more than one passage in his works. Late in life he married and had two sons. But both wife and children predeceased him. He died full of honour, the possessor of wide lands and consular rank. The date of his death is unknown, but it was before 100 A.D. He left behind him a treatise "On the causes of the decadence of Roman oratory" (*De causis corruptae eloquentiae*), the present work, and a speech in defence of a certain Naeivius Arpinianus, who was accused of murdering his wife. These are the only works known to have been actually published by him, though others of his speeches had been taken down in shorthand and circulated against his will, while an excess of zeal on the part of his pupils resulted in the unauthorised publication of two series of lecture notes. The present work alone survives. The declamations which have come down to us under his name are spurious. Of his character the *Institutio Oratoria* gives us the pleasantest impression. Humane, kindly and of a deeply affectionate nature, gifted with a robust common sense and sound literary judgment, he may well have been the ideal school-master. The fulsome references to Domitian are the only blemishes which mar this otherwise pleasing impression. And even here we must remember his great debt to the Flavian house and the genuine difficulty for a man in his position of avoiding the official style in speaking of the emperor.

As a stylist, though he is often difficult owing to compression and the epigrammatic turn which he gives his phrases, he is never affected or extravagant. He is still under the influence of the sound traditions of the Ciceronian age, and his Latin is silver-gilt rather than silver. His *Institutio Oratoria*, despite the fact that much of it is highly technical, has still much that is of interest to-day, even for those who care little for the history of

rhetoric. Notably in the first book his precepts as regards education have lasting value: they may not be strikingly original, but they are sound, humane and admirably put. In the more technical portions of his work he is unequal; the reader feels that he cares but little about the minute pedantries of rhetorical technique, and that he lacks method in his presentation of the varying views held by his predecessors. But once he is free of such minor details and touches on themes of real practical interest, he is a changed man. He is at times really eloquent, and always vigorous and sound, while throughout the whole work he keeps the same high ideal unswervingly before him.

The Delphi Classics Catalogue

We are proud to present a listing of our complete catalogue of English titles, with [new titles](#) being added every month. Buying direct from our [website](#) means you can make great savings and take advantage of our instant Updates service. You can even purchase an entire series ([Super Set](#)) at a special discounted price.

Only from our website can readers purchase the special *Parts Edition* of our Complete Works titles. When you buy a Parts Edition, you will receive a folder of your chosen author's works, with each novel, play, poetry collection, non-fiction book and more divided into its own special volume. This allows you to read individual novels etc. and to know precisely where you are in an eBook. For more information, please visit our *Parts Edition* [page](#).
